The most probable theory appears to be the following, since it will account for the inferiority of the arts and for the resemblance of the polity of Mereoe to that of Aegypt:

Strabo, quoting Eratosthenes (xvii. p. 786), says that the Semibitae were subject to Mereoe; and again he relates, from Artemidorsus, that the Semibitae ruled Mereoe. The name of Semibitae, he adds, signifies immigrants, and they are governed by a queen. Pliny (vi. 30. s. 31) mentions four islands of the Semibitae, each containing one or more towns, and which, from that circumstance, are evidently not mere river-islands; but tracts between the rivers. The district of the Semibitae is the modern kingdom of Sennaar. Herodotus, in whom is the earliest allusion to these Semibitae (ii. 30), calls them Autoleni, that is voluntary exiles or immigrants, and adds that they dwell as far above Mereoe, as the latter is from Syene, i.e., a two months' voyage up the river. Now, we know that, in the reign of Psammetichus (c. c. 656—614), the military caste withdrew from Aegypt in anger, because their privileges had been invaded by that monarch, and tradition uniformly assigns Aethiopis, a vague name, as their place of refuge. The number of these exiles was very considerable, enough— even if we reduce the numbers of Herodotus (ii. 31), 240,000, to a tenth—to enable warriors, well armed and disciplined, to bring under subjection the scattered and barbarous tribes of Semenaw. The islands of the Semibitae, surrounded by rivers, were easy of defense: the soil and productions of Mereoe proper would attract exiles accustomed to the rich Nile valley; while, at the distance of two months' journey, they were secure against invasion from Aegypt. Having revolted from a king rendered powerless by his army, they would naturally establish a form of government in which the royal authority was limited; and, recurring to the era when the monarch was elected by or from the sacerdotal caste, they apparently reorganised a theocracy, in which the royal power was so restricted as to admit of its being held by male or female sovereigns indifferently,—for there were kings as well as queens of Mereoe.

Again, the condition of the arts in this southern kingdom points to a similar conclusion. The pyramids scattered over the plains of Mereoe, though copied from the monuments of the Nile valley, and borrowing names from early Egyptian dynasties, are all of a comparatively recent date; long, indeed, posterior to the age when the arts of Aegypt were likely either to be derived from the south, or to be conveyed up the river by conquest or commercial intercourse. The structures of Mereoe, indeed, so far as they have been explored hitherto, indicate less a regular than an interrupted intercourse between the kingdoms above and below Syene. And when it is remembered that these monuments bear also many vestiges even of later Greek and Roman times, we may infer that the original Semibitae were, during many generations, recruited by exiles from Aegypt, to whom the government of their Macedonian or Roman conquerors may have been irksome and oppressive. Finally, the native tribes of Sennaar live principally on the produce of the chase; whereas the population of Mereoe was agricultural. New emigrants from Aegypt would naturally revert to tillage, and avail themselves of the natural productiveness of its alluvial plains. The whole subject, indeed, is involved in much obscurity, since the ancient Mereoe is in many parts inaccessible; partly from its immense tracts of jungle, tenanted by wild beasts, and partly from the fevers which prevail in a climate where a brief season of tropical rain is made up by many months of drought. From the little that has been discovered, however, we seem warranted in at least surmising that Mereoe was indirectly a colony of Aegypt, and repeated in a rude form its peculiar civilization. (See Heeren, African Nations, vol. i. Mereoe; Cooley's Phoeny and the Nile; Cailliaud, Isle de Mereoe, &c.)

MESANITES SINUS. (Mesantides, al. Mesantides keltos), a bay at the extreme north of the Arabian coast of the Persian Gulf. (Ptol. v. 19. § 1, vi. 7. § 19.) Forster finds the modern representative of the ancient name in the Phrant Messan of D'Avicile, at the mouth of the Evphrates, or the Shatt-al-Arab. (Arabia, vol. ii. p. 55.) "The coincidence of names," he says, "is important, as placing it in our power to point out two towns which Potamye disposes close to this bay; viz. Hicara (Bükara) in El-Kader, a town at the mouth of the old bed of the Euphrates, and Jucara (Counceda), in Dojekhere, an ancient town, now in ruins, 20 miles south of El-Kader, now Core Bodhan" (p. 214). [G. W.]

MESAMBRIA (Mesambri, Arrian, Ind. c. 38), a small place, apparently a chersonesus on the southern coast of Persia, the present Abas-shir. (Vincenc, loc. of Greece, i. p. 394.) [V.]

MESAMBRIA. [Mesambria.]

MESCHIE MONS (Meschi et Plei, Ptol. iv. 9. § 6), a mountain of Interior Africa, S. of the equator, which Potamye (l. c) places in W. long. 25°, and which may be identified with part of the chain of the Mahoe or Kong Mountains, to the N. of Dubomoy. [E. B. J.]

MESCHIELA (Meschilia, Diod. xx. 57, 58), a town of Numidia, taken by Eumachus, the general of Achaeus. [E. B. J.]

MESI. [Mesia.]

MESI. [Stoeichades.]

MESEMBRIA (Messembria, Dori. Messembria, Eth. Messembroic). 1. An important Greek city in Thrace, situated on the coast of the Euxine and at the foot of M. Haems (Sevnm. Ch. 738); consequently upon the confines of Moesia, in which it is placed by Potamye (iii. 10. § 8). Strabo (vii. p. 319) relates that it was a colony of the Thracians, and that it was originally called Mesembria (Mesembria) after its founder Menes. Stephanus B. (s. v.) says that its original name was Mesambria (Mesambria) from its founder Meles; and both writers state that the termination -bria was of the Thracian word for town. According to the Anonymous Periploi of the Euxine (p. 14) Mesembria was founded by Chalcedonians at the time of the expedition of Daris against Scythia; and according to Herodotus (vi. 33) it was founded a little later, after the suppression of the Ionian revolt, by Byrantian and Chalcedonian fugitives. These statements may, however, be reconciled by supposing that the Thracian town was originally colonized by Megarians, and afterwards received additional colonists from Byrantian and Chalcis. Mesembria was one of the cities, forming the Greek Pentapolis on the Euxine, the other four being Odessus, Tomi, Istria, and Apoltoniaca. (See Bickh. Inscr. vol. ii. p. 990.) Mesembria is rarely mentioned in history, but it continued to exist till a late period. (Mela, ii. 2; Plin. iv. 11. s. 18; Ptol. L.c.; Tab. Pont.)

2. A Greek city of Thrace, on the Aegaean Sea, and not far from the mouth of the Limnos. (H. ed. vii. 108; Steph. B. s. v.)

MESENE (Mesen, Strab. ii. p. 84), a small tract of land in ancient Mesopotamia, about the exact position of which there has been much discussion, owing to the indistinct and confused accounts of it which have been preserved in ancient authors. The real cause of this would seem to be that there were two districts at no great distance one from the other, both of which, from similar reasons, bore the name of Mesene, or Middle-Land. One of these was near the mouths of the Tigris, where that river is divided into two branches, corresponding to the modern tract called Shatt-al-Arab (Steph. B. s. v. Mesen.) To this Mesene must be referred the passage in Philostergius (H. E. iii. 7), in which he states that the Tigris, before it reaches the sea, is divided into two great branches, forming an extensive island, which is inhabited by the Mesene. To this also belongs the Mesene, mentioned in the history of Trajan by Dion Cassius, who calls it an island in the Tigris, over which Athenobius was the ruler (lxviii. 25). The other was much higher up on the same river, and has derived its chief importance from its capital Apamea. Stephanus speaks of this tract in two places: first (s. v. Arraca), where he states that that city is surrounded by the Tigris, where that river is divided into two streams, of which that on the right hand is called Delas, and that on the left bears the name of Tigris; and secondly (s. v. Opata), where he asserts that Oratha is a town of Mesene, which is near the Tigris, according to Arrian, in the 16th book of his Parthica.

Pliny evidently refers to this Mesene, when he is speaking of Apamea, which town he states to have been 125 miles on this side (i.e. to the N.) of Seleucia; the Tigris being divided into two channels, by one of which it flows to the S. and to Seleucia, washing all along Mesene (vi. 27. s. 31). There might have been some doubt to which Mesene Apamea refers; but as he mentions Tereden, which was near the mouth of the Tigris, it is probable that he is speaking of the former one (xxiv. 9). The district in the neighbourhood of the Apamean Mesene has been surveyed with great care by Lient. Lynch; and, from his observations, it seems almost certain that the more northern Mesene was the territory now comprehended between the Jiegel and the Tigris. (Roy. Geogr. Journ. vol. ix. p. 475.) [V.]

MESIA. [Mesdia.]

MESOA or MESOAO. [Sparta.]

MESOBOA. [Arcadia, p. 193, no. 15.]

MESOGEA. [Attica, p. 522.]

MESOGIS or MESOGIS (Mesogis, Mesowis), the chief mountain of Lydia, belonging to the trunk of Mount Taurus, and extending on the north of the Macedon, into which it sends numerous small streams, from Celenae to Mycale, which forms its western termination. Its slopes were known in antiquity to produce an excellent kind of wine. (Strab. xiv. pp. 629, 636, 637, 648, 650; Steph. B. s. v. Mes. 2. § 13, where Mesogis is, no doubt, only a corrupt form of Mesogis.) Mounts Paconts and Tharanus, near its western extremity, are only branches of Mesogis, and even the large range of Mount Tmolus is, in reality, only an offshoot of it. Its modern Turkish name is Kesintik Dag, that is, chestnut mountain. [L. S.]

MESOPOTAAMIA (Μησοποταμία), an extensive
MESOPOTAMIA.

Though Mesopotamia is for the most part a flat country, the ancients reckoned some mountains which were along its northern boundary, as belonging to this division of Asia. These were Morbs Massus (now Karjat Boghlar), one of the southern outlying spurs of the great range of the Taurus; and M. Singara (now Sinjar), which may be considered as an extension to the S. of the M. Masina. The latter is nearly isolated from the main ranges on the N., and extends on the NE. to the neighborhood of the Tigris. The two most important rivers of Mesopotamia are, as we have stated, those which formed its W. and E. boundaries, the Euphrates and Tigris; but besides these, there are a number of smaller, but not wholly unimportant streams, which traverse it as affluents of the former rivers. These were the Chaboras (Khabur); the Sagoras, perhaps the same as that which Xenophon calls Mascar (Anab. i. 5. § 4); the Belias or Bilecha; and the Mydoniustus (Hermes). Under the Roman Empire, Mesopotamia was divided into two parts, of which the western was called Assyria, while the eastern continued to bear its ancient name. It was conquered by Trajan in a.D. 115, who took Singara and Nisibis, and formed the three Roman provinces of Armenia, Mesopotamia, and Assyria, of which Mesopotamia reached as far as the Persian Gulf. (Dion Cass. Ixviii. 22, 23; Eutrop. viii. 3; Euseb. vii. 165, ed. Scalig.; Malalas, p. 274, ed. Bonn.) But even Trajan could not retain his conquests (Dion Cass. Ixviii. 29), and they were given up by Hadrian of his own accord. (Spartian, Harde. 5; Eutrop. viii. 6.) Under M. Aurelius, Mesopotamia was again conquered by L. Verus, as far as the Median Wall (S. Rufus, Brev. 14); and the conquest was further secured by the foundation of the colonies of Carrhae on the Chaboras and Singara, to which Septimius Severus added those of Nisibis and Rhesena. But this province was a constant cause of war between the Persian and Roman empires; and at length the greater part of it was surrendered to the Persians by Jovian in a.D. 365. After this time Mesopotamia consisted of two coagns: Eshnunna, bounded on the south by the Chaboras, with the capital Edessa; and Mesopotamia, extending as far south as Dura, and having Amida as its capital. The province was governed by a Praeses. (Marquart, in Becker's Konisch. Alterth. vol. iii. pt. i. pp. 204, seq.)

The most important cities of this province were Batinae or Bathnae; Carrhae; Circeium; Nisibis or Antiokia Mydoniæ; and Singara.

MESPLA (Mesarth, Xen. Anab. iii. 4. § 10), an ancient deserted city of Assyria, noticed by Xenophon on his retreat northwards from Babylonia. He describes it as about 6 parasangs from Luriessa, on the same (or left) bank of the Tigris. He mentions, as a report, that on the Medes being conquered by the Persians, the queen, who was a Median, fled to this place; and that, when subsequently the place was besieged by the Persians, they would have been unable to take it, had not Zeus aided them with his lightning. There can be little doubt that Mešpla is represented
by the present Messa.,—the name of which is probably a corruption of the old name,—and that the rains of Kau-prak, in its immediate neighbourhood (now certainly ascertained, by Colonel Rawlinson's decipherment of the inscriptions found there, to have been a vast palace erected by Sennacherib), are those which Nenophen beheld in a state much less injured by time and violence than they are at present. (Layard, Nineveh and Babylon, p. 638.)

[ ]

MESSA (Messana), one of the nine cities of Laconia enumerated by Homer, who gives it the epithet of θαυματωρως, "abounding in pigeons" (II. ii. 502). Strabo says that the position of Messa was unknown (viii. p. 364), but Pausanias mentions a town and harbour, named Messa (iii. 25. § 9), which is identified by most modern scholars with the Homeric town. This Messa, now Messopo, is situated on the western coast of Mami, between Hippola and Oetynus; and the cliffs in the neighbourhood are said to abound in wild pigeons. (Leake, Morea, vol. i. p. 286; Boubaye, Recherches, &c. p. 91; Curtius, Peloponnesos, vol. ii. p. 282.) Leake, however, has subsequently conjectured that Messa corresponds to Mestra in the Spartan plain, partly on account of its site, and partly because the Messa of Pausanias could never, from its situation, have been of much importance. (Peloponnesos, p. 357.) But there does not appear any sufficient reason for rejecting the identity of the Messa of Pausanias with the Messe of Homer.

MESSABATENE (Plin. vi. 27. s. 31.; Messab Dentik, Strab. xi. p. 524; Eth. Messabatia, Ptol. vi. 4. § 3), a narrow district in the mid-land of Susiana (as indeed its name implies), situated according to Pliny under Mt. Cambalidus (one of the southern spurs of Mt. Zagros), to the E. of the tribe of the Cassi. Strabo states that it lies under Zagros, and is either a part of Media, or, as others hold, of Elymae (xi. p. 524); in another place he calls Massabatic an eparchate of Elymae, and adds that the best pass into Assyria lay through it (xvi. p. 744). Ptolemy (l. c.), who does not mention the district by its name, makes the Messabatae the inhabitants of Paraetace, itself a subdivision of Persia, adjoining Media. [ ]

MESSANA or MESSINA (Messena in almost all Greek authors, but the Dorian form which is found in Pindar, was universally in use among the citizens themselves, and was from them adopted by the Romans, who always write the name Messana; Eth. Mescagnus and Mescagnos, Messenitis; Messina), an important city of Sicily, situated on the strait which divided that island from Italy, nearly opposite to Rhegium, and only a few miles from Cape Pelorus, the NE. extremity of the island. It was originally called Zancle (Zagryia; Eth. Zagyiaidus), a name said to be of Sicilian origin, derived from the fashion of the inhabitants to make use of such a sickle, and was obviously applied to the spot from the peculiar configuration of the curved spot or point of sand which encloses its port. (Thuc. vi. 4; Steph. Byz. s. e. Zagryia; Strab. vi. p. 268; Diod. iv. 85.) From this derivation of the name it would appear probable that there was a Siculian settlement on the spot, before it was occupied by the Greeks; but no mention of this is found in history, and all ancient writers describe Zancle as a Chalcide colony. According to Thucydides it was at first founded by a band of pirates from the Italian Campania, itself a colony of Chalcis; but the advantageous
subjection by Anaxilus must have occurred some years prior to his death in B.C. 476. It is certain that at that period he had been for some time ruler both of Rhegium and Zancle, the latter of which, according to one account, he had placed under the nominal government of his son Cleophron or Leophr. (Diod. xi. 48; Schol. ad Pind. Pyth. ii. 34.) It is certain, also, that before the close of his reign Zancle had assumed the name of Messene or Messa-

n, by which it has ever since been known. The error of Pausanias, who carries back the whole settle-
mement, and with it the reign of Anaxilas to the close of the Second Messenian War, n. c. 668, has been sufficiently refuted by Bentley (Diss. on Pha-

laius, pp. 204—224.) It is probable that he con-

founded the Second Messenian War with the Third, which was really contemporaneous with the reign of Anaxilas (Clinton, F. I. vol. i. p. 257); and it is not unlikely that some fugitives from the latter were among the fresh settlers established by Anaxilas at the time of the colonisation of Messana. It is pro-

bable also that the Samians were by no means absolutely expelled, as stated by Thucydides, but continued to inhabit the city together with the new colonists, though deprived of their exclusive ascend-
cancy. (Herod. vii. 164; Sievert, Zancle-Messana, p. 16.)

The Messanians for some time followed the for-
runes of their neighbours of Rhegium; but they passed

after the death of Anaxilas, under the government of Miurytus, and subsequently of the two sons of Anaxilas; but, after the death of Hieron, and the ex-
pulsion of his brother Thrasylulas from Syracuse, they took the opportunity, in conjunction with the other cities of Sicily, to drive out their despots and assert their freedom and independence, B.C. 461. (Diod. xi. 59, 66, 76.) A large body of the foreign settlers, who had been introduced into Sicily by the tyrants, were upon this occasion established in the territory of Messana, a proof that it was at this period still thinly peopled; but the city seems to have participated largely in the prosperity which the Sicilian republics in general enjoyed during the period that followed, n. c. 460—410. The great fertility of its territory, and the excellence of its port, were natural advantages which qualified it to be one of the first cities of Sicily; and this ap-

pears to have been the case throughout the period in question. In n. c. 426, their tranquillity was, how-

ever, interrupted by the arrival of the Athenian fleet under Laches, which established itself at Rhegium, on the opposite side of the straits; and from thence made an attack on Mylae, a fortress and dependency of the Messanians, which, though occupied by a strong garrison, was compelled to surrender. Laches, with his allies, hereupon marched against Messana itself, which was unable to resist so large a force, and was compelled to accede to the Athenian alliance. (Thuc. iii. 86, 90; Diod. xii. 54.) But the next year (n. c. 425) the Messanians hastened to desert their new alliance, and join that of the Syracuseans; and from thenceforth their port became the chief naval station of the combined Syracusean and Locrian fleets. (Thuc. iv. 1, 24, 25.) They themselves, also, on one occasion, took courage to make a vigorous attack on their Chalcidic neigh-

bours of Naxos, and were able to defeat the Na-

xians themselves, and shut them up within their walls; but were in their turn defeated by the Sicu-

lians and Locitians, who had hastened to the relief of Naxos, and who for a short time laid siege, but

without effect, to Messana itself. (Thuc. iv. 23.) The Messanians were included in the general pacifi-
cation of Sicily, n. c. 424; but were themselves still divided by factions, and appear at one time to have

had for a short period passed under the actual dominion of the Locrians. (Id. v. 5.) At the time of the Athenian expedition to Sicily (n. c. 415) they were again independent, and on that occasion they per-

sisted in maintaining a neutral position, though in vain solicited by the Athenians on one side, and the Syracusan on the other. An attempt of the former to make themselves masters of the city by treachery proved wholly ineffectual. (Diod. xiii. 4; Thuc. vi. 48, 74.) A few years later, the Messa-

nians afforded a hospitable refuge to the fugitives from Himera, when that city was taken by the Carthaginians, n. c. 409 (Diod. xiii. 61), and sent an auxiliary force to assist in the defence of Agrigentum against the same people. (Id. 86.)

It appears certain that Messana was at this period, one of the most flourishing and considerable cities in Sicily. Diodorus tells us, that the Messanians and Rhegians together could equip a fleet of not less than 80 triremes (xiv. 8); and their combined forces were viewed with respect, if not with appro-

hension, even by the powerful Dionysius of Syracuse. (Id. 44.) But though unfavourably disposed towards that despot, the Messanians did not share in the strong sympathy of the Rhegians with the Chalcidic cities of Naxos and Catana (Rhegium), and pursued an uncertain and vacillating policy. (Diod. xiv. 8, 40, 44.) But while they thus sought to evade the hostility of the Syracusean despot, they were visited by a more severe calamity. Himilcon, the Carthaginian general, who had landed in Sicily in n. c. 396, having compelled Dionysius to fall back upon Syracuse, himself advanced with a large army from Panormus, along the N. coast of the island. Messana was the immediate object of the campaign, on account of the importance of its port; and it was so ill prepared for defence, that notwithstanding the spirited resistance of its citizens, it was taken by Himilcon with little difficulty. Great part of the inhabitants made their escape to the surrounding country; but the rest were put to the sword, and not only the walls of the city levelled to the ground, but all its buildings so studiously destroyed as, according to the expression of Diodorus, to leave scarcely a trace of where it had formerly stood. (Diod. xiv. 56—58.)

After the defeat and expulsion of the Cartha-

ginians, Dionysius endeavoured to repeople Messana with the fugitive citizens who survived, to whom he added fresh colonists from Locri and Medma, together with a small body of Messanian exiles, but the latter were soon after transferred to the newly founded city of Tyndaris. (Diod. xiv. 78.) Mean-

while, the Rhegians, who viewed with dissatisfaction the footing thus established by Dionysius on the Sicilian straits, endeavoured to obtain in their turn an advanced post against the Messanians by fortifi-

ing Mylae, where they established the exiles from Naxos, Catana, and other cities, who had been driven from their homes by Dionysius. (Id. xiv. 87.) The attempt, however, proved abortive; the Messanians recovered possession of Mylae, and continued to support Dionysius in his enterprises against Rhegium. (Id. 87, 103.) After the death of that despot, we hear but little of Messana, which appears to have gradually, but slowly, risen again to a flourishing condition. In n. c. 537 the Messa-
nians are mentioned as sending assistance to Dion against the younger Dionysius; and after the death of Dion, they revolted an attempt of Callippos to make himself master of their city. (Diod. xvi. 9; Plat. Dion. 56.) At a somewhat later period, however, they fell under the yoke of a tyrant named Hippion, from whom they were freed by Timoleon, (B. C. 339), and at the same time detached from the alliance of Carthage, which they had been for a time compelled to adhere. (Diod. xvi. 69; Plat. Timol. 20. 34.)

But Messana did not long enjoy her newly recovered freedom. Soon after the establishment of the Mamertines at Syracuse, that monarch turned his arms against Messana, and, though his first attempts, in B. C. 315, were unsuccessful, and he was even compelled to restore the fortress of Mylae, of which he had for a time made himself master, a few years later, in B. C. 312, he succeeded in establishing his power at Messana itself. (Diod. xix. 65, 102.) But the severities which he exercised against the party which had opposed him completely alienated the minds of the Messanians, and they readily embraced the opportunity of the defeat of the tyrant at Corinth in the following year, B. C. 311, to throw off his yoke and declare in favour of the Carthaginian alliance. (Id. xix. 110.) The death of Agathocles, soon after, brought upon the Messanians even heavier calamities than his enmity had done. The numerous bands of mercenary troops, chiefly of Campanian, or at least Oscan, extraction, which the despot had assembled in Sicily, were, after his death, compelled by the Syracuseans, with the support of the Carthaginians, to quit the island. But, having arrived with that object at Messana, where they were hospitably received by the citizens, and quartered in their houses, they suddenly turned against them, massacred the male inhabitants, made themselves masters of their wives, houses, and property, and thus established themselves in undisputed possession of the city. (Pol. i. 7; Diod. xxxi. 18, Exc. H. p. 493; Strab. vi. p. 268.) They now assumed the name of Mamertini (Mamurtiani), or "the children of Mars," from Mamers, an Oscan name of that deity, which is found also in old Latin. (Diod. i. c.; Varr. L. L. v. 73.) The city, however, endeavoured to be called Messanians, though the whole car- tended to change its name to Mamertina: Cicero, indeed, in several instances calls it "Mamertina civitas" (Cic. Verr. ii. 5, 46, iii. 6, iv. 10, &c.), but much more frequently Messana, though the inhabitants were in his time universally called Mamertini. The precise period of the occupation of Messana by the Mamertines is nowhere stated. Polybius tells us that it occurred not long after that of Rhegium by the Campanians under Decius, which may be referred to the year 282 B.C., while it must have taken place some time after the death of Agathocles in B. C. 289: the year 282 is that commonly assigned, but within the above limits this is merely conjectural.

The Mamertines now rapidly extended their power over the whole NE. angle of Sicily, and made them- selves masters of several fortresses and towns. The occupation of Rhegium by the Campanians, under very similar circumstances, contributed to strengthen their position and they became one of the most formidable powers in Sicily. The arrival of Pyrrhus in the island (B. C. 278) for a time gave a check to their aggressions: they in vain combined with the Carthaginians to prevent his landing; but, though he defeated their forces in a battle and took several of their fortresses, he did not attack Messana itself; and on his return to Italy the Mamertines sent a large force across the straits which attacked the army of the king on its march, and inflicted on him severe losses. (Plut. Pyrrh. 23, 24; Diod. xxi. 7. p. 493.) The Mamertines, however, soon found a more formidable enemy in Hieron of Syracuse, who, shortly after the departure of Pyrrhus from Sicily, established himself in the possession of the chief power in that city. His efforts were early directed against the Mamertines; and after the fall of Rhegium, which was taken by the Romans in B. C. 272, he invaded territory with a great army, reduced the fortress of Mylae, and defeated the Mamertines in a battle on the banks of the river Longanus, with such slaughter that they were on the point of surrendering Messana itself without a blow; and the city was saved only by the inter- vention of a Carthaginian force under Hamilcar. (Pol. i. 8, 9; Diod. xxi. 13. pp. 499, 500.) The events which followed are obscurely known to us, and their chronology is very uncertain; but the Mamertines seem to have found that they were no longer able to stand alone against the power of Hieron and, while one party was disposed to throw themselves into the arms of the Carthaginians, another sought protection from the power of the Romans. The latter ultimately prevailed, and an embassy sent by the Mamertines, to invoke the alliance of the Romans, first gave occasion to the intervention of that people in the affairs of Sicily, and became the origin of the First Punic War, B. C. 264. (Pol. i. 10; Diod. xxi. 1; Zonar. viii. 8; Oros. iv. 7; Liv. Epit. xvi.)

Before the arrival of the promised aid from Rome the Carthaginian party had again prevailed, and the citadel was occupied by a Carthaginian garrison; but this was expelled by the Mamertines themselves on the arrival of C. Claudius; and soon after the consul Appius Claudius landed at Messana, and drove off in succession the Carthaginians and Hieron, who had just before concluded an alliance against the Mamertines, and laid siege to the city with their combined forces. (Pol. i. 11, 12; Diod. xxi. 1, 3. p. 501; Zonar. viii. 8, 9; Dion Cass. Exc. Vet. 58—60.) Messana was now protected by a Roman gar- rison, and, during the remainder of the war which followed, continued to be one of their chief strong- holds and the principal station of their fleets. The importance of its harbour, as well as its ready com- munication with Italy, rendered it a point of vital importance to the Romans; and the Mamertines either continued steadily faithful or were kept under by the constant presence of a Roman force. (Pol. i. 21, 25, 38, 52; Diod. xxi. 18. p. 505, xxiv. 1. p. 508; Zonar. viii. 10, 12.) At the close of the war the Carthaginian party again prevailed, and the city continued to enjoy hitherto the nominal privileges of an allied city (foederata civitas), while they in reality passed under the dominion of Rome. (Cic. Verr. iii. 6.) Even in the time of Cicero we find them still retaining this privileged condition; and though this alone would not have sufficed to protect them against the exactions of Verres, the Mamertines appear to have adopted the safer policy of supporting the praetor in all his oppressions and conciliating him by bribes, so that they are represented by the orator as the accomplices, as well as defenders, of all his injustices. (Cic. Tb. ii. 5, 46, iv. 8, 67, &c.)

Messana was certainly at this time one of the most populous and flourishing places in Sicily. Cicero
MessenA.

calls it a very great and very rich city ("civitas maxima et locupletissima," Verr. v. 17), and extols the advantages of its situation, its port, and its buildings. (ib. iv. 22.) Nor does Messana appear to have suffered severely from any of the wars that caused such ravages in Sicily, though it narrowly escaped being taken and plundered by Athenian during the first and second Punic Wars. (Dion Cass. Fr. Val. p. 584.) In the Civil War, B.C. 48, it was the station of a part of the fleet of Caesar, which was attacked there by that of Pompey under Cassius, and the whole of the ships, thirty-five in number, burnt; but the city itself was protected by the presence of a Roman legion. (Caes. B. C. iii. 101.) At a somewhat later period it was the head-quarters and chief stronghold of Sextus Pompeius during his war with Octavian, B.C. 36; and its capacious harbour became the station of the fleet with which he commanded the coast of Sicily, as far as Tauromenium on the one side and Tyndarion on the other. It was from thence also that Pompeius, after the total defeat of his fleet by Agrippa, made his escape with a squadron of only seventeen ships. (Appian, B. C. v. 97, 103, 109, 122; Dion Cass. xiii. 1—12; Strab. vi. p. 268.)

It was in all probability in consequence of this war that Messana lost the privileged condition it had so long enjoyed; but its inhabitants received in exchange the Roman franchise, and was placed in the ordinary position of a Roman municipality. It still continued to be a flourishing place. Strabo speaks of it as one of the few cities in Sicily that were in his day well peopled; and though no subsequent mention of it is found in history under the Roman Empire, it reappears during the Gothic wars as one of the chief cities and most important fortresses in the island,—a rank it had undoubtedly held throughout the intervening period. (Strab. vi. p. 268; Plin. iii. e. 2) Like all other cities of Sicily, it had the three doors and was surrounded with a wall. (Proc. B. G. i. 39.) The wine of the neighbourhood of Messana, known as Vimin Manterium, enjoyed a great reputation in the days of Pliny; it was first brought into vogue by the dictator Caesar. (Plin. xiv. 6. s. 8.)

Throughout the vicissitudes of the middle ages Messana continued to be one of the most important cities of Sicily; and still ranks as the second city in the island. It has, however, but few remains of antiquity. The only vestiges are some baths and tessellated pavements, and a small old church, supposed to have formed part of a Roman basilica. (Smith's Sicily, p. 118.) Another church, called S. Giovanni de' Fiorentini is believed, but wholly without authority, to occupy the site of the Scarrarium or family chapel of Heins, from which Verres purified a bronze statue of Hercules, attributed to Myron, and one of Cupid, which was believed to be the work of Praxiteles. (Cic. Verr. iv. 2, 3.)

The celebrated port of Messana, to which the city owed its chief importance in ancient as well as modern times, is formed by a projecting spit or tongue of sand, which curves round in the form of a crescent or sickle (whence the name of Zancle was supposed to be derived), and constitutes a natural mole, rendering the harbour within perfectly secure. This singular bulwark is called by Diodorus the Acte (Ἀκτή), and its construction was attributed to the giant, which are numerous (Diod. iv. 85), though there can be no doubt of its being of perfectly natural formation. The harbour within is said by Diodorus to be capable of containing a fleet of 600 ships (xiv. 56), and has abundant depth of water, even for the largest ships of modern days. The celebrated whirlpool of the Charbydis is situated just outside the Acte, nearly opposite the modern lighthouse, but out of the track of vessels entering the harbour of Messana. (Smyth's Sicily, p. 128.)

The city itself is built close to the harbour on level ground, immediately at the back of it rise steep hills, forming the underfalls of a range of mountains which extends from the neighbourhood of Cape Pelorus to that of Tauromenium. This ridge, or at least the part of it next to Cape Pelorus, was known in ancient times as the Mons Neptunius; but a part of the same range forming one of the underfalls near Messana is called, both by Dio- dorus and Polybius, the Chalcide mount (Ῥ Χαλκί- διον ὄρος, Pol. i. 11; ὁ Λώφος ή καλκίδης Χαλκιδικός, Dio, v. 11.). This is the position taken up by the Carthaginians at the same time at a place called Samos or Eunus (Σώες, Pol.; Eunæs, Dio.); can be identified with any degree of certainty.

The coins of Messana are numerous and interesting, as illustrating the historical vicissitudes of the city. There exist:—1. Coins of Zancle, before the time of Anaxillas, with the same written on old characters, in DANKAE, a dialectic form of the name. 2. Coins of Messana, with the Ionic legend ΜΕΞΕΝΙΟΝ, and types taken from the coins of Samos. These must be referred to the period of Anaxillas immediately after his conquest of the city, while the Samian colonists still inhabited it. 3. Coins of Messana, with the type of a hare, which seems to have been adopted as the ordinary symbol of the city, because that animal is said to have been first introduced into Sicily by Anaxillas. (Pollux, Onom. v. 75.) These coins, which are numerous, and range over a considerable period of time, show the gradual preponderance of the Doric element in the city; the ruder and earlier ones having the legend in the Ionic form ΜΕΞΕΝΙΟΝ, the latter ones in the Doric

COINS OF MESSANA.
MESSAPIA. 4. Coins struck by the Mamertines, with the name of MESSAPIA. These are very numerous, but in copper only, (Millingen. Trans. of Roy. Soc. of Lit. vol. i. pt. ii. pp. 93—98; Eckhel, vol. i. pp. 219—223.)

MESSAPIA (Messoria), was the name commonly given by the Greeks to the peninsula forming the SE. extremity of Italy, called by the Romans Calabria. But the usage of the term was very fluctuating; Iapygia and Messapia being used sometimes as synonyms, sometimes the latter considered as a part only of the former more general designation. (Pol. iii. 88; Strab. vi. pp. 277, 282.) [This question is more fully discussed under CALABRIA, Vol. i. p. 472.] The same uncertainty prevails, though to a less degree, in the use of the name of the people, the Messapii (Messapii), who are described by Herodotus (vii. 170) as a tribe of the Iapygians, and appear to be certainly identical with the Calabri of the Romans, though we have no explanation of the origin of two such different appellations. The ethnical affinities of the Messapians have already been discussed, as well as their history related, under the article CALABRIA.

Italian topographers in general admit the existence of a town of the name of Messapia, the site of which is supposed to be marked by the village now called Fasole, between Orta and Brindisi; but the passage of Pliny, in which alone the name is found, appears to be corrupt; and we should probably read, with Cluverius and Mommsen, "Varia (Uria) cui cognome ad discrimino Apuliea Messapia." (Plin. iii. 11. s. 16. § 100; Cluver, Ital. p. 1248; Mommsen. Die Unter. Ital. Diakrte. p. 61.)

MESSAPITUM, mountain of Bocotia. [Vol. i. p. 414. a.]

MESSENE. (Mesorhyn: Eth. and Adj. Messorphos; Adj. Messorphos.) The later capital of Messenia, built under the direction of Eaminondas in B. C. 369. (Diod. xv. 66; Paus. iv. 27.) The name of Messene had been applied in ancient times to the country inhabited by the Messeniens; but there was no city of this name till the one founded by Eaminondas. The Thebans and their allies assisted the Messeniens in building it; and the best architects and masons were invited from all Greece to lay out the city with regularity, and to arrange and construct properly the temples and other public buildings. Eaminondas also took special pains with the fortifications, which were regarded by Pausanias as the most perfect in Greece. The walls, as well as the towers and bulwarks, were built entirely of stone; and the excellence and solidity of the masonry are still apparent in the existing remains. (Paus. iv. 31. § 5.) The foundation of the city was attended with great pomp and the celebration of solemn sacrifices. First, sacrifices were offered by Eaminondas, who was received as Oeikist or Founder, to Dionysus and Apollo I-ineni.-by the Argives to the Argive Hera and Zeus Nemesis.—by the Messeniens to Zeus Ithomata and the Dioscuri. Next, prayer was offered to the ancient Heroes and Heroes of the Messenian nation, especially to the warrior Aristomenes, that they would come back and take up their abode in the new city. After this, the ground was marked out and the building begun, under the sound of Argive and Boeotian flutes, playing the strains of Pronomus and Sacadas. (Paus. iv. 28. § 6; Grote's Greece. vol. ix. p. 309.) The history of this town is related under MESSENIA, so that it is only necessary in this place to give an account of the northern side, or scarp of Messene.

Messene is situated upon a rugged mountain, which rises between the two great Messenian plains, and which thus commands the whole country. This mountain, about half-way up, divides into two summits, of which the northern was called Ithome and the southern Eva. The sharp ridge connecting them is about half a mile in length. Mt. Ithome is one of the most striking objects in all Peloponnesus. It rises to the height of 2631 feet, or more than 700 feet higher than the Acrocorinthus; but it looks much lower than it really is, in consequence of its precipitous sides and isolated position. Upon this summit the Acropolis of Messene was built; but the city itself was situated in a hollow somewhat in the form of a shelf, extending on the west side of the sharp ridge which connects Ithome and Eva. The city was connected by a continuous wall with its acropolis. There are considerable remains of the ancient city, and the walls may still be traced in the greater part of their extent. They are the most perfect on the northern side, with the Arcadian or Megalopolitan gate in the centre. They may be followed up to the summit of Ithome, and then along the ridge connecting Ithome and Eva; but here towards the south-east traces of them are sometimes lost. In this part, however, the foundations of the eastern or Laconian gate, as it has been called, are clearly seen. The summit of Mt. Eva was evidently not included within the city walls. The direction of the southern wall is most uncertain. From the eastern gate to the ruins, which are supposed to be those of the southern gate, and near which the present road runs to the southern Messenian plain, no line of walls can be traced; but on the western side the walls may again be clearly followed. The circumference of the walls is about 47 stadia, or nearly 6 English miles; but it includes a large space altogether unfit for the site of buildings; and the great extent was doubtless intended to receive a part of the surrounding population in time of war.

The space included within the city-walls now consists of corn-fields and pastures amid woods of wild olive and oak. Nearly in the centre of the ancient town is the modern village of Messometia; and near the southern gate, at the foot of Mount Eva, are two poor villages, named Simiata. On the eastern slope of Mount Eva is the monastery of Vorkino, embossed in cypress and orange groves, and one of the most...
The northern gate, leading to Megalopolis in Arcadia (Paus. iv. 33. § 3), is one of the finest speci-
mens of Greek military architecture in existence. Its form is seen in the preceding plan. It is a small
fortress, containing double gates opposite to one another, and connected by a circular court of 62
feet in diameter. In front of the outer gate on either side is a strong rectangular tower. Upon enter-
ing the court through the outer gate, there is a niche on each side for a statue, with an inscription
over it. The one on the left hand is still legible, and mentions Quintus Plotius Enphomen as the re-
storer (Böckh, Inscr. No. 1460). Pansanias (iv. 33. § 3) notices in this gate a Hermes in the Attic
style, which may possibly have stood in one of these niches. Leake observes that the interior masonry
of the circular court is the most exact and beautiful he ever saw. The lower course is a row of stones,
each about 53 in length and half as much in height; upon this is placed another course of stones of equal
length and of half the height, the joints of which are precisely over the centre of each stone in the lower
course. The upper part of the walls has fallen: nine courses are the most that remain. Neither
gateway retains its covering, but the flat architrave of the inner one lies in an oblique position upon the
ruins of the wall by which it was formerly supported; it measures 18 feet 8 inches in length by 4 feet 2
inches in breadth, and 2 feet 10 inches in thickness. The road still leads through this gate into the circuit
of the ancient city. The ruins of the towers, with the interjacent curtains, close to the gate on the slope
of Mount Ithome, show this part of the fortifications to have resembled a chain of strong redoubts, each
tower constituting a fortress of itself. "A flight of steps behind the curtain led to a door in the flank of
the tower at half its height. The upper apartment, which was entered by the door, had a range of looph-
holes, or embrasures, on a line with the door, looking along the parapet of the curtain, and was lighted by
two windows above. The embrasures, of which there are some in each face of the towers, have an opening
of 7 inches within, and of 3 feet 9 inches without, so that, with a small opening, their scope is very great.
The windows appear to be too high for any purpose but to give light. Both the curtains and towers in
this part of the walls are constructed entirely of large squared blocks, without rubble or cement. The
curtains are 9 feet thick. The inner face of the towers has neither door nor window. The tower
next to the gate of Megalopolis has had all the stones disjointed, like those of the Propylaea at Athens,
probably by an earthquake." The towers are in general about 23 feet square, projecting about 14 feet
from a curtain varying in length according to the nature of the ground, and 8 or 10 feet in thickness.
MESSENE.

The town was not in general such as has been described at the towers near the gate of Megalopolis, but, as in most Greek works of defence, consisted of an exterior and interior facing of that kind of masonry filled up with rubble.

In describing Messene, Pausanias first mentions the Agora, which contained a fountain called Arisinoe, supplied by a subterranean canal from the source named Clepsydra. In the Agora, probably in the centre, was a statue of Zeus Soter. The various temples, which lie the same extends to enumerate, are either surrounded the Agora, or were in its immediate neighbourhood. These were temples of Poseidon and Aphrodite; a marble statue of the mother of the gods, the work of Damophon, who also made the statue of Artemis Laphria; a temple of Eileithyia, a sacred building of the Curetes, and a sanctuary of Demeter, containing statues of the Dioscuri. But the temple of Asclepius contained the greatest number of statues, all of which were made by Damophon. The temple of Messene contained her statue in gold and Parian marble, while the back part was adorned with pictures representing the Messenian heroes and kings. A building, called Hierosythus, contained statues of all the gods worshipped by the Greeks. Pausanias next mentions the gymnasion, with statues made by Aegyptian artists, a pillar bearing a figure of Aethidas in relief, and the monument of Aristomenes,—the stadium containing a brazen statue of Aristomenes; and lastly, the theatre, with the adjoining temple of Scaphis and Isis. The fountain called Clepsydra occurs in ascending to the summit of Ithomata; and an annual festival, called Ithomea, was celebrated in honour of the god. (Paus. iv. 31. § 6—iv. 33. § 2.)

The Agora must have stood near the modern village of Marrowndi, in the neighbourhood of which most of the foundations of the ancient buildings are found. The rivulet, which now runs unconfined through the village, was in ancient times conducted through a subterranean canal, and formed the fountain Arisinoe mentioned above. The modern village has derived its name from this spring,—Marrowndi meaning Black Spring or Black Eye. South of the site of the Agora are the ruins of the stadium, of which the upper or circular end and more than half of one of the sides still remain. The rivulet of Marrowndi now runs through the length of the stadium. "The stadium was surrounded by a colonnade, which was double at the upper end: here the lower parts of the columns are in their original places; there were about twenty in each row; 1 foot 10 inches in diameter, with Doric flat capitals. Part of the colonnade, on the right side of the stadium, is likewise in its place, and on the left side is the foundation of a public edifice, where are many pieces of columns of the same description as the colonnade round the stadium. Perhaps this was the Hierosythus. The four seats of the stadium did not extend its whole length, but about two-thirds only: at the circular end, they are most perfect." (Leake.) Immediately south of the stadium is a wall, which appears to have been part of the walls of the city. In this wall a small temple is built, like a kind of tower. Between the stadium and the village of Marrowndi, to the west of the rivulet, are the remains of a small theatre, about 60 feet in diameter. North of the stadium the slope is divided into terraces, of which the supporting walls still remain. Here some of the temples mentioned by Pausanias probably stood.

MESSENEIA.

In ascending Mount Ithome, there is about half way up a terrace of considerable size, which commands a fine view of the Messenian gulf. Here the French Commission discovered some ruins overgrown with shrubs, which appear to have been an Ionic temple facing the coast, containing a porch with two columns and a cela. This was probably a temple of Artemis, as an inscription here found contains the names of Messenians, who had held the priesthood of Artemis Limnatis, and the remains of the statue discovered in the cela appear to be those of this goddess. Below the temple are two smaller terraces; and 60 feet further sideways, WsW. of the temple, is a kind of grotto cut out of the rock, with a portico, of which there are remains of five pillars. This was, perhaps, intended to receive the water of the fountain Clepsydra, which Pausanias mentions in his ascent to the summit of the mountain. The summit itself is a small flat surface, extending from SE. to NW. On the northern and eastern sides the wall runs along the edge of the perpendicular cliffs, and middle ages it had ceased to be a place of any importance; and hence the ancient remains have been less disturbed by the hands of man than in most other parts of Greece. (Leake, Moren, vol. i. p. 366, seq.; Mare, Tour in Greece, vol. ii. p. 264; Bahlaye, Recherches, &c., p. 107, seq.; Curtius, Pelo

MESSENEIA (Μεσσηνια), Herod., Thuc.; in older writers, Μεσσηνή, Hom. Od. xxi. 15; Μεσσαδά, Pind. Pyth. iv. 126; shortened Messi, Messan, Steph. B. s. r. Μεσσηνία; Μεσσηνία 79, Thuc. iv. 41: Eth. and Adj. Meσσηνίας; Adj. Meσσηνωνικός, the south-western district of Peloponnesus, bounded on the east by Lacaonia, on the north by Elis and Arcadia, and on the south and west by the sea. It was separated from Lacaonia by Mt. Taygetus, but part of the western slope of this mountain belonged to Lacaonia, and the exact boundary between the two states, which varied at different times, will be mentioned presently. Its southern frontier was the knot of mountains, which form the watershed of the rivers Neda, Pamisus and Alpheus. On the south it was washed by the Messenian gulf (Μεσσηνιακός λόφος, Strab. viii. p. 335), called also the Coro-

nean or Asiatican gulf, from the towns of Corona or Aine, on its western shore, now the Gulf of Ko-

roni. On the east it was bounded by the Sicilian or Ionian sea. The area of Messenia, as calculated by Clinton, from Arrowsmith's map is 1162 square miles.
MESSENIA.

1. General Description of the Country.

Messenia, in its general features, resembles Laconia. The Pamisus in Messenia, like the Eurotas in Laconia, flows through the entire length of the country, from north to south, and forms its most cultivated and fertile plains. But these plains are much larger than those in Laconia, and constitute a considerable portion of the whole country; while the mountains on the western coast of Messenia are much less rugged than on the eastern coast of Laconia, and contain a larger proportion of fertile land. Hence the rich plains of Messenia are often contrasted with the sterile and rugged soil of Laconia; and the climate of the former country is praised by the ancients, as temperate and soft, in comparison with that of the latter. The basin of the Pamisus is divided into two distinct parts, which are separated from each other on the east by a ridge of mountains extending from Mt. Taygetus to the Pamisus, and on the west by Mt. Ithome. The upper part, called the plain of Steneloura or Svesteurous (Σβεστευρούς πεδίον), is of small extent and moderate fertility, and is entirely shut in by mountains. The lower plain, which opens to the Messenian gulf, is much more extensive, and was sometimes called Macaria (Μακαρία), or the "Blessed," on account of its surprising fertility. (Strab. viii. p. 361.) It was, doubtless, to this district that Euripides referred, when he described the excellence of the Messenian soil as too great for words to explain, and the land as watered by innumerable streams, abounding in fruits and flocks; neither too hot in summer, nor too cold in winter. (Eurip. Op. Strab. viii. p. 366.) Even in the present day, although a part of the plain has become marshy by neglecting the embankments of the Pamisus, it is described by travellers as the most fertile district in the Peloponnesus. It now produces oil, silk, figs, wheat, maize, cotton, wine, and honey, and presents as rich a cultivation as can well be imagined. (Leake, Morea, vol. i. pp. 347, 352.) Besides the Pamisus, numerous other streams and springs branch in all directions from the base of the mountains. The most remarkable feature on the western coast is the deep bay of Pylos, now called Navarino, which is the best, and indeed the only really good harbour in the Peloponnesus.

II. MOUNTAINS, PROMONTORIES, RIVERS, AND ISLANDS.

1. Mountains.—The upper plain, in which are the sources of the Pamisus, was the original abode of the Messenians, and the stronghold of the nation. Here was Andania, the capital of the most ancient Messenian kings. Thither the Messenians retreated, as often as they were overpowered by their enemies in the lower plains, for here were their two great natural fortresses, Ithome and Eira, the former commanding the entrance to the lower plain, and the latter situated in the mountains, which rise in the northern part of the upper plain. These mountains, now called Tetrazi, form, as has been already said, the watershed of the rivers Neda, Pamisus, and Alpheus. From this central ridge, which is 4554 feet high, a chain extends towards the west, along the banks of the Neda, and is also prolonged towards the south, forming the mountains of the western peninsula, and terminating at the promontory Acritas. From the same central ridge of Tetrazi, another chain extends towards the east, dividing the Messenian plain from the upper basin of the Alpheus, and then uniting with Mount Taygetus, and forming the barrier between the basins of the lower Pamisus and the Eurotas. These two mountain chains, which, issuing from the same point, almost meet about half-way between Mount Tetrazi and the sea, leave only a narrow defile through which the waters of the Pamisus force their way from the upper to the lower plain. South of this defile the mountains again re-appear to the east and west, leaving a wide opening for the lower plain, which has been already described.

Scarcely in any part of Greece have the names of the ancient mountains been so little preserved as in Messenia. Tetrazi was perhaps the mountains of Evia. The eastern continuation of Tetrazi, now named Magrypneus, formed part of the ancient Mt. Nomia. (Neum. Spen. Panis. viii. 38. § 11.) The western prolongation of Tetrazi along the banks of the Neda was called Elaum (Eldous), now Kurela, and was the boundary of Phigalia. (Paus. vii. 41. § 7.) The mountains Ithome and Evia are so closely connected with the city of Messene that they are described under that head. [Messen.] In the southern chain extending down the western peninsula, the names only of Aegaleum, Buphas, Tonnus or Thathia, and Temathia have been preserved. Aegaleum (Allagiala) appears to have been the name of the long and lofty ridge, running parallel to the western shore between Coryphasion and Coryphaium (Pylos); since Strabo places the Messenian Pyles at the foot of Mt. Aegaleum (p. 359; Leake, Morea, vol. i. pp. 426, 427) in the city of Ithome as near Coryphasion (Pylos), beyond which the Lacedaemonian garrison in the latter place were not to pass. That they were mountains we may conclude from the statement of Stephanus B., who speaks of the Τομαίοι ἄπος near Coryphaium (Steph. B. s. v. Toomia). Temathia (Thathia), and was the boundary of Messenia (the name is doubtful), was situated, according to Pausanias (iv. 34. § 4), at the foot of Cowone, and must therefore correspond to Lykoditmo, which rises to the height of 3140 feet, and is prolonged southward in a gradually falling ridge till it terminates in the promontory Acritas.

2. Promontories.—Of these only four are mentioned by name, ACRITAS (Acritas), now C. Gallo, the most southerly point of Messenia [Acritas]; and on the west coast, CYPARISSIUM, forming the entrance to the bay of Pylos [Pyllus]; PLATAMODES (Πλαταμώδης, Strab. viii. p. 354), called by Pliny (iv. 5. s. 6) Platamones, distant, according to Strabo (l. c.), 120 stadia N. of Coryphaium, and therefore not far from Aia Kyriak (Leake, vol. i. p. 427); and lastly CYPARISSIUM [Cyparissia], a little further north, so called from the town Cyparissia.

3. Rivers.—The Pamisus (Παμίσος) is described by Strabo as the greatest of the rivers within the Isthmus (viii. p. 361); but this name is only given by the ancient writers to the river in the lower plain, though the moderns, to facilitate the description of the geography of the country, apply this name to the whole course of the waters from their sources in the upper plain till they fall into the Messenian gulf. The principal river in the upper plain was called BAI$TRA (Baltra). It rises near the village of Soldani, and flows along the western side of the plain; two of the streams composing it
were the Electra (Haiēcra) and the Coetus (Kötai). Near Ithome the Balyra receives the united waters of the Leucasia (Leukasia) and the Amphitus (Amphitou), of which the former flows from the valley of Logata, in a direction from N. to E., while the latter rises in Mt. Makryphilus, and flows through the plain from E. to W. This river (the Amphitus), which may be regarded as the principal one, is formed out of two streams, of which the northern is the Charadus (Kapēdrus). (On the Balyra and its tributaries, see Paus. iv. 33, §§ 3—6.) The Balyra above the junction of the Amphitus and Leucasia is called Vasilīkō, and below it Macrozimeno, though the latter name is sometimes given to the river in its upper course also. At the junction of the Balyra and the Amphitus is a celebrated triangular bridge, known by the name of the bridge of Macrozimeno. It consists of three branches or arms meeting in a common centre, and corresponding to the three principal rivers through the plain of Sterculius. The arm, running from north to south passes over no river, but only over the low swampy ground between the two streams. At the southern end of this arm, the two others branch off, one to the SW. over the Balyra, and the other to the SE. over the Amphitus, the former leading to Messene and the other to Theria. The foundations of this bridge and the upper parts of the piers are ancient; and from the resemblance of their masonry to that of the neighbouring Messene, they may be presumed to belong to the same period. The arches are entirely modern. The distance of this bridge from the Megalopolitan gate of Messene agrees with the 30 stadia which Pausanias (iv. 33, § 3) assigns as the interval between that gate and the Balyra: and as he says immediately afterwards that the Leucasia and Amphitus there fall into the Balyra, there can be little doubt that the bridge is the point to which Pausanias proceeded from the gate. (Leake, Morea, vol. i. pp. 480, 481.)

**Plan of the Bridge of Macrozimeno.**

The Macrozimeno, shortly after entering the lower plain, received on its left or western side a considerable stream, which the ancients regarded as the genuine Pamisus. The sources of this river are at a north-easterly corner of the plain near the church of St. Floro, and at the foot of the ridge of Skala. The position of these sources agrees sufficiently with the description of Pausanias (iv. 34, § 4) and Strabo (viii. p. 361), of whom the former writer describes them as 40 stadia from Messene, while the latter assigns to the Pamisus a course of only 100 stadia. Between two and three miles south of the sources of the Pamisus there rises another river called Pediakos, which flows SW., and falls into the Macrozimeno, lower down in the plain below Skala, and at no great distance from the sea. Arcis (Aris) was the ancient name of the Pediakos. (Paus. iv. 31. § 2.) The Macrozimeno, after the junction of the Pediakos, assumes the name of Diphitonos, or the double river, and is navigable by small boats. Pausanias describes it as navigable 10 stadia from the sea. He further says that seafish ascend it, especially in the spring, and that the mouth of the river is 60 stadia from Messene (iv. 34. § 1).

The other rivers of Messenia, with the exception of the Neda, which belongs to Arcadia also (Neda), are little more than mountain torrents. Of these the most important is the Neda (Neōs), not to be confounded with the above-mentioned Neda, flowing into the Messenian gulf, east of the Panistias, at Phene. It rises in the mountains on the frontiers of Laconia and Messenia, and is now called the river of Kalochor (it is on it there was a town of the same name, and also a temple of Athena Neda). (Strab. viii. pp. 353, 360; Leake, Morea, vol. i. pp. 344, 345.)

**4. Islanda.—Thegantissa (Θηγαντισσα), now Lenetiko, distant 3200 feet from the southern point of the promontory Arcitis, is called by Pausanias a desert mountain, but it appears to have been inhabited at some period, as graves have been found there, and ruins near a fountain. (Paus. iv. 34. § 12; Ṣηγαντισσα or Θηγαντισσα, Ptol. iii. 16. § 77; the Longovardiko, a little S. of the Island, and the Cyprusus (Κυπαρισσος), or river of Arkhaditha. [See Vol. i. p. 732.]**

**II. HISTORY.**

The earliest inhabitants of Messenia are said to have been Lelges. Polyceon, the younger son of Lelix, the king of Laconia, married the Argive Messene, and took possession of the country, which he named after his wife. He built several towns, and among others Andania, where he took up his residence. (Paus. i. 1.) At the end of five generations Aeolians came into the country under Perieres, a son of Aeolus. He was succeeded by his son Aphareus, who founded Arcne, and received the Aeolian Aeolus, a fugitive from Thebes. Neleus founded Pelus, and his descendants reigned here over the western coast. (Paus. i. 2.) On the extinction of the family of Aphareus, the eastern half of Messenia was united with Laconia, and came under the sovereignty of the Atridae; while the western half con-
timed to belong to the kings of Pylus. (Paus. iv. 3. §1.) Hence Euripides, in referring to the mythic times, makes the Pamisus the boundary of Lacencia and Messenia; for which he is reproved by Strabo, because this was not the case in the time of the geographer. (Strab. viii. p. 366.) Of the seven cities which Agamemnon in the Iliad (ix. 149) offers to Achilles, some were undoubtedly in Messenia; but as only two, Pheneae and Cardamyle, retained their Homeric names in the historical age, it is difficult to identify the other five. (Strab. viii. p. 359; Dind. xv. 66.)

With the conquest of Peloponnese by the Dorians a new epoch commences in the history of Messenia. This country fell to the lot of Cresphontes, who is represented as driving the Noleidæ out of Pylus and making himself master of the whole country. According to the statement of Ephoros (ap. Strab. viii. p. 361), Cresphontes divided Laconia into five parts, of which he made Stenycherus the royal residence.* In the other four towns he appointed viceroys, and bestowed upon the former inhabitants the same rights and privileges as the Dorian conquerors. But this gave offence to the Dorians; and he was obliged to collect them all in Stenycherus, and to declare this the only city of Messenia. Notwithstanding these concessions, the Dorians put Cresphontes and all his children to death, with the exception of Aepytus, who was then very young, and was living with his grandfather Cypselus in Arcadia. When this youth had grown up, he was restored to his kingdom by the help of the Arcadians, Spartans, and Argives. From Aepytus the Messenian kings were called Aepytidæ, in preference to Heracleidæ, and continued to reign in Stenycherus till the sixth generation,—their names being Aepytus, Glauerus, Isthmius, Dotadas, Sytostas, Phintas,—when the first Messenian war with Sparta began. (Paus. iv. 3.) According to the common legend, which represents the Dorian invaders as conquering Peloponnese at one stroke, Cresphontes immediately became master of the whole of Messenia. But, as in the case of Laconia [Laconia], there is good reason for believing this to be the invention of a later age, and that the Dorians in Messenia were at first confined to the plain of Stenycherus. They appear to have penetrated into the plain from Arcadia, and their whole legendary history points to their close connection with the latter country. Cresphontes himself married the daughter of the Arcadian king Cypselus; and the name of his son Aepytus, from whom the line of the Messenian kings was called, was that of an ancient Arcadian hero. (Hom. Il. ii. 604, Schol. ad loc.; comp. Grote, Hist. of Greece, vol. ii. p. 437, seq.)

The Messenian wars with Sparta are related in every history of Greece, and need not be repeated here. According to the common chronology, the first war lasted from B.C. 743 to 724, and the second from B.C. 685 to 668; but both of these dates are probably too early. It is necessary, however, to glance at the origin of the first war, because it is connected with a disputed topographical question, which has only recently received a satisfactory solution. Mt. Taygetus rises abruptly and almost precipitously above the valley of the Eurotas, but descends more gradually, and in many terraces, on the other side. The Spartans had at a very early period taken pos-

* Of the other four parts Strabo mentions Pylus, Rhium, and Hyamæsias; but the passage is corrupt, and the name of Mesola should probably be added to complete the number. (Müller, Dorians, vol. i. p. 111, transl.) Stephanus B. calls Mesola, a city of Messenia, one of the five (z. n. Merdæa); and Strabo in another passage (viii. p. 361) describes it as lying towards the gulf between Taygetus and Messenia; and as the latter name can only apply to the western part of the country, Mesola was probably the district between Taygetus and the Pamisus. Pylus apparently comprehended the whole western coast. Rhium is the southern peninsula, opposite Taenarum. (Strab. viii. p. 350.) The position of Hyamæsias, of which the city was called Hyamæa (Tiiæa, Steph. B. s. c.), is quite uncertain.

a a. Site of the boundary stones.

z 4
session of the western slopes, but how far their terri-
yory extended on this side has been a matter of dis-
pute. The confines of the two countries was marked by a
temple of Artemis Limnatis, at a place called Limnai, where
the Messenians and Laconians offered
sacrifices in common; and it was the mural of the
Spartan king Teleclus at this place which gave occa-
csion to the First Messenian War. (Paus. iii. 2. § 6.
iv. 4. § 2; iv. 31. § 3; comp. Strab. vi. p. 257.,
viii. p. 362.) The exact site of Limnai is not indicated by
Pausanias: and accordingly Leake, led chiefly by
the name, supposes it to have been situated in the
plain upon the left bank of the Pamisus, at the
marshes near the confluence of the Aris and Pamisus,
and not far from the site of the modern town of Nysi
(Nysi, island), which derives that appellative from the
similar circumstance of its position. (Leake, Morea,
viii. p. 363.) But Ross has discovered the ruins
of the temple of Artemis Limnatis on the western
slope of Mt. Taygetus, on a part of the
mountains called Τόλιμνος (Τόλιμνοι), and amidst the
ruins of the church of Panaghia Volimnitiatis (Πα-
ναγία Βολιμνίτιατσα). Τόλιμνος is the name of a
hole in the mountains near a mountain torrent flowing into the Neda, and situated between the vil-
lages of Sfrotoli and Polianti, of which the latter is
about 7 miles N.E. of Kalavrita, the ancient Phe-
rema. The fact of the similarity of the names Τό-
λιμνος and Λήμνωι, and also of Παναγία Βολιμνί-
τιατσα and Άρτεμις Λωμάτις, as well as the ruins
of a temple in this secluded spot, would alone make it
probable that these are the remains of the cele-
brated temple of Artemis Limnatis; but this is ren-
dered certain by the inscriptions found by Ross
upon the spot, in which this goddess is mentioned by
name. It is also confirmed by the discovery of two
boundary stones to the eastward of the ruins, upon
the highest ridge of Taygetus, upon which are in-
scribed Οιορας, from which it derives its name. These
pillars, therefore, show that the boundaries of Mes-
sea and Laconia must at one period have been at
no great distance from this temple, which is always
represented as standing near the confines of the two
countries. This district was a frequent subject of
discipline in the Messenians and Lacedaemonians
even in the times of the Roman Empire, as we shall
see presently. Tacitus calls it the "Detentilians
Acer" (Hist. iv. 43); and that this name, or some-
thing similar, was in the proper appellation of the
district appears from other authorities. Stephanus B.
speaks of a town "Denthalii" (Δενθαλίου, s. v.; others
read Δελθαίου), which was a subject of contention
between the Messenians and Lacedaemonians.
Alemán also (ap. Athen. i. p. 31), in enu-
mmerating the different kinds of Laconian wine, men-
tions also a Denthalian wine (Δενθαλιανος), which
came from a fortress Denthiales (in Δενθαλαδιας
ερυ-
ματος περι), as particularly good. Ross conjectures
that this fortress may have stood upon the moun-
tain of St. George, a little S. of Sfrotoli, where a few
ancient remains are said to exist. The wine of this
mountain is still celebrated. The position of the
above-mentioned places will be best shown by the
accompanying map.

But to return to the history of Messenia. In
each of the two wars with Sparta, the Messenians,
after being defeated in the open plain, took refuge
in a strong fortress, in Ithome in the first war, and
in Eira or Ira in the second, where they maintained
themselves for several years. At the conclusion of
the Second Messenian War, many of the Messenians
left their country, and settled in various parts of
Greece, where their descendants continued to dwell
as exiles, hoping for their restoration to their native
land. A large number of them, under the two sons
of Aristomenes, sailed to Rhegium in Italy, and
afterwards crossed over to the opposite coast of Sicily,
where they obtained possession of Zancle, to which
they gave their own name, which the Romans con-
stantly retained down to the present day. [Messen-]

Those who remained were reduced to the condition
of Helots, and the whole of Messenia was incor-
porated with Sparta. From this time (B.C. 669)
R. the battle of Leuctra (B.C. 371), a period of nearly
300 years, the name of Messenia was blotted out of
history, and their country bore the name of Laconia,
I. fact which it is important to recollect in reading
the history of that period. Once only the Messenians
attempted to recover their independence. The great
earthquake of B.C. 464, which reduced Sparta to a
heap of ruins, encouraged the Messenians and other
Helots to rise against their oppressors. They took
refuge in their ancient stronghold of Ithome; and
the Spartans, after besieging the place in vain for
ten years, at length obtained possession of it, by
allowing the Messenians to retire un molested from
Peloponnesus. The Athenians settled the exiles at
Naupactus, which they had lately taken from the
Loiker Odrai. In the Peloponnesian War they were
among the most active of the allies of Athens.
(Thuc. i. 101—103; Paus. iv. 24. § 5, seq.)

The capture of Athens by the Lacedaemonians compelled the
Messenians to quit Naupactus. Many of them
took refuge in Sicily and Rhegium, where some of
their countrymen were settled; but the greater part
sailed to Africa, and obtained settlements among the
Eve-perata, a Libyan people. (Paus. iv. 26. § 2.)

After the power of Sparta had been broken by the
battle of Leuctra (B.C. 371), Epanoinas, in order to
prevent being recovered by her former foes, defeated
in the Peloponnesus, resolved upon forming an Ar-
cadian confederation, of which Megapoles was to be
the capital, and at the same time of restoring the
Messenian state. To accomplish the latter object, he
not only converted the Helots into free Messenians,
but he despatched messengers to Italy, Sicily, and
Africa, where the exiled Messenians had settled, in-
viting them to return to their native land. His
summons was gladly received to, and in B.C. 369
he was received with a great welcome at the city, of
which the acropolis was placed upon the summit of Mt. Ithome,
while the town itself was situated lower down on
the slope, though connected with its acropolis by a
continuous wall. (Diod. xv. 66; Paus. iv. 27.)

[Messen.] During the 300 years of exile, the
Messenians retained their ancient customs and Doric
dialect; and even in the time of Pausanias they
spoke the purest Doric in Peloponnesus. (Paus.
iv. 27. § 11; comp. Miller, Dor. vol. ii. p. 421,
trans.) Other towns were also rebuilt, but a great
part of the land still continued uncultivated and
deserted. (Strab. viii. p. 362.) Under the protec-
tion of Thebes, and in close alliance with the Arca-
dians (comp. Polyb. iv. 32), Messene maintained its
independence, and the Lacedaemonians lost Messenia
for ever. On the downfall of the Theban supremacy,
the Messenians courted the alliance of Philip of
Macedon, and consequently took no part with the
other Greeks at the battle of Chaeroneia, B.C. 338.
(Paus. iv. 28. § 2.) Philip rewarded them by com-
pelling the Lacedaemonians to cede to them Ithome
and certain districts. (Polyb. iv. 28; Tac. Ann.)

MESENIACUS SINUS.

of the western coast stood Methone, supposed to be the Homerid Peledas. North of Methone, on the W. coast, was Yluss, on the promontory Coryphasium, opposite to which was the island Sphacteria. Further north, was the small town Eran, and then the more important Cyprus; beyond which was a place Aulon, at the entrance of the defile of this channel, through which flowed the river Cy-parissus.

On the geography of Messenia, see Leake, Morea, vol. i. pp. 324, seq.; Boblaye, Recherches, p. 103, seq; Curtius, Peloponnesos, vol ii. p. 121, seq.)

COIN OF MESSENIA.

MESSENIACUS SINUS. [MESSENIA]

MENEA, in Gallia Narbonensis, is described by Mela (ii. 5) "as a hill surrounded by the sea almost on all sides, and it would be an island if it were not joined to the mainland by a narrow agger." The place is supposed to be Meone or Muce, on the border of the Etang de Toul, between Agile and Montpellier.

[210x47]METAGONITAE (Metagonitas, Ptol. iv. 2, § 10), a people of Mauretania, between the Mulucha and the Pillars of Hercules. Their name recalls the Urbes Metagonitae (metagonitos polis, Polyb. iii. 33), or settlements founded by the Carthaginians on the NW. coast, and which seem to have formed a regular chain from their frontier to the Pillars of Hercules (Seyl. p. 81). These marts enabled the republic to carry on inland trade with the human tribes, as well as to keep open a communication by land with Spain. (Ileeren, African Nations, vol i. p. 52, transl.)

[210x47]METAGONITES PROM. (Metagonitias Ægou, Ptol. iv. § 1), a headland of Mauretania Tingitana, W. of the Mulucha, now Cape Tocas Forcas or Rias-ad-Dahir of the natives. [210x47]

[210x47]METAGONIUM (Metagonion, Strab. xvii. pp. 827—829; Pomph. Mela. i. 7, § 1), a headland of N. Africa, which Strabo (l. c.) places over against Carthago Nova, at a distance of 3000 stadia. He describes the district about it as being dry and barren, and bearing the same name; the headland is now called Rias-cl-Hurshah. (Compr. Shaw, Trav. p. 94.)

[210x47]METALLINUM. [Metellinum.]

[210x47]METALLUM. [Matalia.]

METAPA (γ Μεταπα; Eth. Metapados, Meta-paioi), a town in Acrotia, situated on the northern shore of the lake Triphon, at the entrance of a narrow defile, and 90 stadia from Themistium. It was burnt by Artaxerxes, on his invasion of Acrotia, B. C. 218, as he returned from the capture of Themistium. Its site cannot be fixed with certainty, notwithstanding the description of Polybius. Leake places it immediately below Yrakholi, near the eastern extremity of the lake Hyria, or the smaller of the two lakes; supposing that as these two lakes are connected with one another, the larger division may often have given name to the whole. (Vol. v. 7, 13; Steph. B. s. v.;

METAPONTUM.

Liber, Northern Greece, vol. i. p. 150, seq; comp. Thurium.)

METAPONTUM OSTIUM. [Rhodania.]

METAPONTIUM or METAPONTUM (Meta-ponton; Time. Strab., and all Greek writers have this form; the Latin almost universally Metapontum; Dri. Metapontov, Paus. Steph. B. and others; but Herod. has Metapontov; in Lat. Metapontium; Ru. near Torre di Mare), an important city of Magna Graecia, situated on the Gulf of Tarantum, between the river Bradanus and the Caunus. It was distant about 14 miles from Heraclea and 24 from Tarantum. Historically speaking, there is no doubt that Metapontum was a Greek city founded by an Achaeus colony; but various traditions assigned to it a much earlier origin. Strabo ascribes its foundation to a body of Pylians, a part of those who had followed Nestor to Troy (Strab. v. p. 222, vi. p. 264); while Justin tells us it was founded by Epius, the hero who constructed the wooden horse at Troy; in proof of which the inhabitants showed, in a temple of Minerva, the tools used by him on that occasion. (Justin, xx. 2.)

Another tradition, reported by Ephorus (ap. Strab. p. 264), assigned to it a Phocean origin, and called it a city of the Latins, the tyrant of Ciris near Delphi, its founder. Other legends carried back its origin to a still more remote period. Anticebas of Tyracuse said that it was originally called Metalus, from a hero of that name, who appears to have been identified with the Metapontus who figured in the Greek mythical story as the husband of Melanippe and father of Aeolus and Bocotus. (Antioch. ap. Strab. l. c.; Hygin. Fab. 186; Eustath. ad Dionis. Per. 368; Dio. iv. 67.)

Whether there may have been really a settlement on the spot more ancient than the Achaeus colony, we have no means of determining; but we are told that at the time of the foundation of this city the site was unoccupied; for which reason the Achaeus settlers at Crotona and Sybaris were desirous to colonise it, in order to prevent the Tarantines from taking possession of it. With this view a colony was sent from the mother-country, under the command of a leader named Lencippus, who, according to one account, was compelled to obtain the territory by a fraudulent treaty. Another and a more plausible statement is that the new colonists were at first engaged in a contest with the Tarantines, as well as the neighbouring tribes of the Oenotrians, which was at length terminated by a treaty, leaving them in the peaceful possession of the territory they had acquired. (Strab. vi. pp. 264, 265.)

The date of the colonisation of Metapontum cannot be determined with certainty; but it was evidently, from the circumstances just related, subsequent to that of Tarantum, as well as of Sybaris and Crotona: hence the date assigned by Eusebius, who would carry it back as far as B.C. 774, is wholly untenable; nor is it easy to see how such an error can have arisen. (Euseb. Arm. Chron. p. 99.) It may probably be referred to about 700 or 690 B.C.

We hear very little of Metapontum during the first ages of its existence; but it seems certain that it rose rapidly to a considerable amount of prosperity, for which it was indebted to the extreme fertility of its territory. The same policy which had led to its foundation would naturally unite it in the bonds of a close alliance with the other Achaeus cities, Sybaris and Croton; and the first occasion on which we meet with its name in history is as joining with
these two cities in a league against Siris, with the
view of expelling the Ionian colonists of that cit.

Justin, xxi. 2.) The war seems to have ended in
the capture and destruction of Siris, but our account
of it is very obscure, and the period at which it
took place very uncertain. [Siris.] It does not
appear that Metapontum took any part in the war
between Coroia and Sybaris, which ended in the
destruction of the latter city; but its name is fre-
quently mentioned in connection with the changes
introduced by Pythagoras, and the troubles conse-
quent upon them. Metapontum, indeed, appears to
have been more than a common place of refuge, as
induced over B. to view the greater destruction
of those parishes that of that philosopher obtained the finest footing. Even when the Pythia-oereans were expelled from Coroia, they maintained themselves at Metapontum, whither the philosopher himself retired, and where he ended his days. The Metapontines paid the
greatest respect to his memory; they consecrated
the house in which he had lived as a temple to
Ceres, and gave to the street in which it was situa
ted the name of the Museum. His tomb was still
there in the days of Cicero, when Strab. vi. 347,
Mix. 175., Lyc. 166.; Euphr. Vit. Pyth. 56, 57;
Plut. de Gen. Socr. 13; Diod. Lavi. viii. 1. § 49;
Liv. i. 18; Cie. de Fin. v. 2.) The Metapontines
were afterwards called in as mediators to appease
the troubles which had arisen at Coroia; and ap-
pear, therefore, to have suffered comparatively little
themselves from civil dissenisons arising from this
source. (Iambi. 262.)

At the time of the Athenian expedition to Sicily,
B. c. 415, the Metapontines at first, like the other
cities of Magna Graecia, endeavored to maintain a
strict neutrality; but in the following year were
induced to enter into an alliance with Athens, and
furnish a small auxiliary force to the armament
under Demosthenes and Eurymned. (Diod. xiii. 4;
Thuc. vi. 44, vii. 33, 57.) It seems clear that Me-
apontum was at this time a flourishing and opulent
city; nor have we any reason to suppose that its
decline began until long after. From its position
it was secured from the attacks of Dionysias of Syra-
cus; and though it must have been endangered
by the proximity of the other Greek cities by the advan-
cing power of the Lucanians, it does not appear to
have taken any prominent part in the wars with
that people, and probably suffered but little from
their attacks. Its name is again mentioned in
B. c. 345, when Timoleon touched there on his ex-
pedition to Sicily, but it does not appear to have
taken any part in his favour. (Diod. xvi. 66.)
In B. c. 332, when Alexander, king of Ephesus, crossed
over into Italy at the invitation of the Tarentines,
the Metapontines were among the first to conclude
an alliance with that monarch, and support him in
his wars against the Lucanians and Bruitians. Hence,
after his defeat and death at Pandosia, B. c. 326, it
was to Metapontum that his remains were
sent for interment. (Justin. xii. 2; Liv. viii. 24.)
But some years later, B. c. 303, when Cleonymus
of Sparta was in his turn invited by the Tarentines,
the Metapontines, for what reason we know not,
pursued a different policy, and incurred the resenti-
ment of that leader, which, in consequence, turned his
own arms, as well as those of the Lucanians, against
them. He was then admitted into the city on
friendly terms, but nevertheless exacted from them
a large sum of money, and committed various other
excesses. (Diod. xx. 104.) It is evident that Me-
apontum was at this period still wealthy; but its
citizens had apparently, like their neighbours the
Tarentines, fallen into a state of slothfulness and
luxury, so that they were become almost proverbial
for their effeminacy. (Plut. Apophth. Lact. p. 233.)

It seems certain that the Metapontines, as well as
the Tarentines, lent an active support to Pyrrhus,
when that monarch came over to Italy; but we do
not find them mentioned during his wars there;
nor have we any account of the precise period at
which they passed under the yoke of Rome. Their
name is, however, again mentioned repeatedly in the
Second Punic War. We are told in Thuc. ii. 170,
that the first to declare in favour of Hannibal
after the battle of Cannae (Liv. xiii. 61); but not-
withstanding this, we find their city occupied by
a Roman garrison some years later, and it was not
till after the capture of Tarentum, in B. c. 212, that
they were able to rid themselves of this force and
openly espouse the Carthaginian cause. (Id. xxv. 11,
15; Pol. viii. 36; Appian, Anab. 53, 33.) Han-
nibal now occupied Metapontum with a Carthaginian
garrison, and seems to have made it one of his prin-
cipal places of depot, until the fatal battle of
the Metaurus having compelled him to give up the
possession of this part of Italy, B. c. 207, he withdrew
his forces from Metapontum, and, at the same
time, removed from hence all the inhabitants in order
to save them from the vengeance of Rome. (Id. xxvii.
1, 16, 42, 51.)

From this time the name of Metapontum does not
again appear in history; and it seems certain that
it never recovered from the blow thus inflicted on it.
But it did not altogether cease to exist; for its name
was given to one of the principal places of deposit,
with the subject of the Metapontines, at the tomb
of Hannibal; and Cicero speaks of visiting it in
term that show it was still a town. (Cic. de Fin. v. 2; see also Appian. B. C. v. 93.) That orator,
however, elsewhere alludes to the cities of Magna
Graecia as being in his day sunk into almost com-
plete decay; Strabo says the same thing, and Pan-
sanias tells us that Metapontum in particular was
in his time completely in ruins, and nothing remained
of it but the theatre and the circuit of its city
walls. (Cic. de Amic. xii. 11; Strab. vi. 262; Pan.
ix. 19. § 11.) Hence, though the name is still found in
Italymy, and the "ager Metapontinum" is noticed in
the Liber Coliurarianum (p. 262), all trace of the city
subsequently disappears, and it is not even noticed in
the Itineraries where they give the line of route
along the coast from Tarentum to Thurii. The site
was probably already subject to malaria, and from
the same cause has remained desolate ever since.

Though we hear much less of Metapontum than
of Syracuse, Coroia, or Tarentum, yet all accounts
agree in representing it as, in the days of its pro-
sperity, one of the most opulent and flourishing of
the cities of Magna Graecia. The fertility of its
territory, especially in the growth of corn, vied with
the neighbouring district of the Siritis. Hence we
are told that the Metapontines sent to the temple at
Delphi an offering of "a golden harvest" (Στέφανος
χρυσοῦ, Strab. vii. p. 264), by which we must
probably understand a sheaf or bundle of corn
wrought in gold. For the same reason an ear of corn
became the characteristic symbol on their coins, the
number and variety of which in itself sufficiently
attests the wealth of the city. (Millingen. Numi-
matique de l'Italie, p. 22.) We learn also that they
had a treasury of their own at Olympia still existing
in the days of Pausanias (Paus. vi. 19. § 11; Athen.
xi. p. 179.) Herodotus tells us that they paid par-

\[ \text{METAPONTUM.} \]

\[ \text{347} \]
ticular honours to Aristaeus, who was said to have appeared in their city 340 years after he had disappeared from Cyzicus. They erected to him a statue in the middle of the forum, with an altar to Apollo surrounded by a grove of larches. (Herod. iv. 15; Athen. xii. p. 653, e.) From their coins they would appear also to have paid heroic honours to Lenæippus, the founder of the city. But the more common type on the obverse is the head of Ceres, with the legend OK METAPONTIUM.

METAPONTUM. (Metaponti, Plut. ii. 3, § 8), an estuary in Britain; the Wash between Norfolk and Lincolnshire. [C. R. S.]

METARUM (Mærauasp, Steph. B.), a city on the W. coast of Bruttium, at the mouth of the river of the same name. According to Stephanus of Byzantium, it was a colony of the Locrians, but seems never to have risen to any importance; and its name is chiefly known because, according to some accounts, it was the birthplace of the poet Stesichorus, who was more generally regarded as the father of Himera. (Steph. B. s. r.; Suid. s. v. Στραυσι‐χοιρος.) Stephanus erroneously calls it a city of Sicily; but Suidas, who writes the name Metarusa, correctly places it in Italy; and there can be no doubt that both mean the town at the mouth of the Metarum, which is called by Latin writers Metarum. Solinus ascribes its foundation to the Zancanians. Mela mentions it as if it were a still existing town; but Strabo speaks only of the river Metarum, with an anchorage or roadstead on the coast of the same name; and Pliny also notices the river ("Metarum annius") without any mention of a town of the name. (Strab. vi. p. 256; Plin. iii. 5. s. 10, Mel. ii. 4. § 8; Solin. 2. § 11.) [E. H. B.]

METARUM (Mærauasp). 1. A river of Umbria, flowing into the Adriatic sea, near Fano, and one of the most considerable of the numerous streams which in this part of Italy descend from the eastern declivity of the Apennines into the Adriatic. It is still called Metaurus Metrus; and has its sources in the high group of Apennines called the Monte Aveno, from whence it has a course of between 40 and 50 miles to the sea. It flows by Faenza (Forum Scomponii), and throughout the latter part of its course was followed by the great highroad of the Flaminian Way, which descended the valley of the Castellana, one of the principal tributaries of the Metaurus, and emerged into the main valley of the latter river a few miles below the pass of Intercia or II Fului. Its mouth is about 2 miles S. of Fano (Forum Fortunare), but has no port; and the river itself is justly described by Julius Italicus as a violent and torrent-like stream. (Strab. v. p. 227; Plin. iii. 14. s. 19; Mel. ii. 4. § 5; Sil. Ital. viii. 459; Lucan. ii. 405.)

The Metaurus is celebrated in history for the great battle which was fought on its banks in B. C. 207, between Hasdrubal, the brother of Hannibal, and the Roman consuls C. Claudius Nero and M. Livius, in which the former was totally defeated and slain,—a battle which was considered as the real turning-point of the Second Punic War, and therefore one of the most important in history. (Liv. xxvii. 46—51; Oros. iv. 18; Enutrop. iii. 18; Vict. de Tigr. Ill. 48; Hor. Carm. iv. 4. 38; Sil. Ital. vii. 486.) Unfortunately our knowledge of the topography and details of the battle is extremely imperfect. But we learn from Livy, the only author who has left us a connected narrative of the operations, that M. Livius was encamped with his army under the walls of Sena (i.e. Sena Gallica, now Sigena, and Hasdrubal at a short distance from him. But as
soon as the Carthaginian general discovered the arrival of Claudius, with an auxiliary force of 6000 feet and 1000 horse, he broke up his camp and retreated in the night to the Metaurus, which was about 14 miles from Sena. He had intended to cross the river; but missed the ford, and ascended the right bank of the stream for some distance in search of one, till, finding the banks steeper and higher the further he receded from the sea, he was compelled to halt and encamp on a hill. With the break of day the Roman armies overtook him, and compelled him to a general engagement, without leaving him time to cross the river. From this account it is clear that the battle was fought on the right bank of the Metaurus, and at no great distance from its mouth, as the troops of Hasdrubal could not, after their night march from Sena, have proceeded many miles up the course of the river. The ground, which is well described by Arnold from personal inspection, agrees in general character with the description of Livy; but the exact scene of the battle cannot be determined. It is, however, certainly an error to place it as high up the river as *Fossombonum* (Forum Sempronii), 16 miles from the sea, or even, as Cramer has done, between that town and the pass of the Furdo. Both he and Vandenalcon place the battle on the left bank of the Metaurus, which is distinctly opposed to the narrative of Livy. Appian and Zonaras, though they do not mention the name of the Metaurus, both fix the site of the Roman camp at Sena; but the former has confounded this with Sena in Etruria, and has thence transferred the whole theatre of operations to that country. (Appian, Ann. 52; Zonar. ix. 9; Arnold's Rome, vol. iii. pp. 364—374; Vandenalcon, *Campagnes d'Annibal*, vol. iii. pp. 86—94; Cramer's Italy, vol. ii. 14.)

2. (Metalliun), a river of Bruttium, flowing into the Tyrrhenian sea, between Medma and the Scyllaean promontory. It is mentioned both by Pliny and Strabo; and there can be no doubt that it is the river now called the *Marro*, one of the most considerable streams in this part of Bruttium, which flows into the sea about 7 miles S. of *the Messina*, and 18 from the rock of *Scilla*. (Strab. vi. p. 256; Plin. iii. S. 5. 10; Romaneli, vol. i. p. 66.) There was a town of the same name at its mouth. (Metalliun; [E. H. B.])

**METELLINUM.** (Jl. Anton. p. 416; Metelion, Geogr. Rav. iv. 44), or **METALLINUM** (Colonia Metallinensis, Plin. iv. 21. s. 33), a Roman colony of Lusitania on the Anas, 24 Roman miles from Augusta Emerita, now *Medellin*. The modern town lies on the southern side of the river, so that the ancient town ought to have been included in Baetica. Hence some modern writers have conjectured that the Anas may here have changed its bed. The form of the modern name is *Metallinum*. It was founded by Metellus, in which case Metellinum would be a more correct form than Metallinum.

**METEON,** a town of the Labete, to which Gentius removed his wife and family. (Liv. xlv. 32; Medien, Geogr. Rav.) It may perhaps be represented by the village of *Meteves* in the *Richt district of Monte-Negro*, to the N. of *Lake Scutari*.

**METHANA.** (Ptol. iii. 16. § 12; *Metamnos*), a striking rocky peninsula, connected by a narrow isthmus with the territory of Troezen in Argolis, and containing a city of the same name. Pausanias describes Methana as an island opposed to the other (ib. [iii. 16. § 1]). Thucydides more correctly distinguishes between the isthmus and chersonesus (iv. 45); and Ptolemy also speaks of the chersonesus (iii. 16. § 12). The isthmus is only about 1000 feet broad, but it immediately spreads out equally on both sides. The outline of the peninsula is grand and picturesque. The highest mountain, called *Chelone*, which is 2281 (French) feet above the level of the sea, is of a conical form, and was thrown up by a volcano. The whole peninsula bears marks of volcanic agency. The rocks are composed chiefly of that variety of lava called trachyte; and there are hot sulphurous springs, which were used in antiquity for medicinal purposes. Pausanias speaks of hot baths at the distance of 30 stadia from the city of Methana, which were said to have first burst out of the ground in the time of Antigonus, son of Demetrius, king of Macedon, after a violent volcanic eruption. Pausanias adds that there was no cold water for the use of the bathers after the warm bath, and that he could not plunge in the sea in consequence of the sea-dogs and other monsters. (Paus. *l. c.*.) Strabo, in describing the same volcanic eruption to which Pausanias alludes, says that a hill 7 stadia high, and fragments of rocks as high as towers, were thrown up; that in the day-time the plain could not be approached in consequence of the heat and sulphurous smell, while at night there was no unpleasant smell, but that the heat thrown out was so great that the sea boiled at the distance of 5 stadia from land, and its waters were troubled for 20 stadia (i. p. 59). Ovid describes, apparently, the same eruption in the lines beginning

> *Est prope Pittheam tumultus Troezena.*

(Met. xv. 296), and says that a plain was upheaved into a hill by the confined air seeking vent. (Carp. *Lyell's Principles of Geology*, pp. 10, 11, 9th ed.) The French Commission point out the site of two hot sulphurous springs; one called *Vrouna*, in the middle of the coast, and the other called *Vromolimni*, a little above the eastern shore. There are traces of ancient baths at both places; but the northern must be those alluded to by Pausanias.

The peninsula Methana was part of the territory of Troezen; but the Athenians took possession of the peninsula in the seventh year of the Peloponnesian War, n. c. 425, and fortified the isthmus. (Thuc. iv. 45.) There are still traces of an ancient fortification, renewed in the middle ages, and united by means of two fortresses. In the peninsula there are Hellenic remains of three different mountain fortresses; but the capital lay on the west coast, and the ruins are near the small village of the same name. Part of the walls of the acropolis and an ancient town on the north side still remain. Within the citadel stands a church, containing stones belonging to an ancient building, and two inscriptions on marble, one of which refers to the church, and another so called in Macedonia." This form is now found in all the existing MSS. of Thucydides. But there can be no doubt that *Methana*, which has prevailed down to the present day, is the genuine Doric form of the name.

* Strabo says (viii. p. 374), "that in some copies of Thucydides it was written *Methanion*, like the town
to Isis. This, accordingly, was the site of the temple of Isis, mentioned by Pausanias, who also speaks of statues of Hermes and Hercules, in the Agora.

METHONE. (Μήθων, Steph. B.), a town of Pieria in Macedonia, on the Thermaic gulf, mentioned in the Periplus of Scylax (p. 26), and therefore one of the Greek cities, and repeatedly times on this coast. According to Pindar (Onc. ii. 293), a party of Etruscans settled there, who were called by the ancients ἰταοποιηθηκόν, and who appear to have come there nearly at the same time as the occupation of Corecyra by the Corinthians c. 730—729.

The town was occupied by the Athenians with a view of annoying Perdicca, by ravaging its territory, and affording a refuge to its discontented subjects. (Thuc. vi. 7.) It appears to have been in 354—353 B.C. that Philip attacked Methone, the last remaining possession of Athens on the Macedonian coast. The position was a convenient station for Athenian privateers to intercept trading vessels, not merely to and from Macedonian ports, but also from Olymptos and Potidaea. The siege was vigorously pressed by Philip; and the Methoneans, who gallantly held out until all their means were exhausted, were at length compelled to surrender. The inhabitants were allowed to depart with one garment; but the walls were razed to the ground, and the land apportioned among Macedonian colonists. Philip lost the sight of one eye in this siege. (Diod. xvi. 31—34; Dem. Olynth. i. p. 12; Philip, In. p. 41, iii. p. 117; Plut. Per. 8; Luc. de Scirb. Hist. 38; Strab. vii. p. 330; Justin. vii. 6.) Mr. Grace (Hist. of Greece, vol. xi. pp. 363, foll., comp. p. 488) is of opinion that this happened afterwards (B.C. 348), at another place called Methone, situated in the Chalcidice peninsula, near Olynthos and Apollonia. The epiphron of Strabo (vii. p. 330) places Methone at a distance of 40 stadia from Pydna. The Methoneans, says Strabo, the inhabitants of the position assigned by Leake (North. Greece, vol. iii. p. 435) to Methone at Elefthero-khiri, 2 miles from the sea; but the Epitehe is not much to be depended on in this passage. [E. B. J.]

METHONE I. (Μήθων, Strab.; Μηθών, Paus., Steph., p. 17; Eflh Methoneos, Paus. iv. 18, § 1, and Oed.; Methonezos, Steph. B. s. v.: Methoni, Modon), an ancient town in the SW. corner of Messenia, has always been an important place, both in ancient and modern times, on account of its excellent harbour and suburbs situation. It is situated at the extreme point of a rocky ridge, which runs into the sea, opposite the island Sapienza, one of the group called in ancient times Oenaeus. "Of the outer end of the town, is the little insulated rock which Pausanias (iv. 35, § 1) calls Methoni, and which he describes as forming at once a narrow entrance and a shelter to the harbour of his time; it is now occupied by a tower and lantern, which is connected by a bridge with the fortification of Methoni. A rude breach from it, which runs parallel to the eastern wall of the town, and forms a harbour for small vessels. It seems to be exactly in the position of the ancient port, the entrance into which was probably where the bridge now stands." (Leake.) According to the unanimous testimony of the ancient writers (Strab. viii. p. 359; Paus. iv. 35, § 1), Methone was the Homerick Pelasus, one of the seven cities which Agamemnon offered to Achilles. (Hom. II. ix. 294.) Homer gives to Pelasus the epithet ἄμαθεοσ, and Methone seems to have been celebrated in antiquity for the cultivation of the vine. The eponymous heroine Methone, is called the daughter of Oeneus, the "wine-man" (Paus. L. c.); and the same name occurs in the islands Oenaeusae, lying opposite the city. The name of Methone first occurs in the Messenian wars. Methone and Pylos were the only two places which the Messenians pretended to hold in the second war, after they had retired to the mountain fortress of Ira. (Paus. iv. 18. § 1. iv. 23. § 1.) At the end of the Second Messenian War, the Lacedaemonians gave Methone to the inhabitants of Naphia, who had lately been expelled from their own city by the Argives. (Paus. iv. 24. § 4, iv. 33. § 2.) The descendants of the Naphians continued to inhabit Methone, and were allowed to remain there even after the restoration of the Messenian state by Epaminondas. (Paus. iv. 27. § 8.) In the first year of the Peloponnesian War, B.C. 431, the Athenians attempted to obtain possession of Methone, but were repulsed by Brasidas. (Thuc. ii. 25.) Methone suffered greatly from an attack of some Illyrian privateers, who, under the pretext of purchasing wine, entered into intercourse with the inhabitants and carried off a great number of them. (Paus. iv. 33. §§ 6, 7.) Shortly before the battle of Actium, Methone, which had been strongly fortified by Antony, was besieged and taken by Agrippa, who found there Bagratus, king of Macedon, whom he put to death. (Dion Cass. I. 11; Strab. viii. p. 359; Oros. vi. 19.) Methone was favoured by Trajan, who made it a free city. (Paus. iv. 35. § 3.) It is also mentioned by Mela (ii. 3), Pliny (iv. 5. s. 7), and Ptolemy (iii. 15. § 7), and Hierocles (p. 647). Pausanias found at Methone a temple of Athena Anemotis, the "storm-stiller," and one of Artemis. He also mentions a well of bituminous water, similar both in smell and colour to the ointment of Cypreos, but of which no trace is now found. In 1124 Modon, or Methone, is called by the Venetians a permanent possession of the republic till 1204. In the middle of the old Venetian piazza there still stands the shaft of an ancient granite column, about 3 feet in diameter and 12 feet high, with a barbarous base and capital, which appear to have been added by the Venetians, when they fixed upon the top of it, in 1493, a figure of the Lion of St. Mark. Five years afterwards it was taken by the Turks, and remained in their hands till it was recaptured by Morosini. In 1712 the Turks again took possession of it, and retained it till the last Greek revolution, when it was wrested from them by the French in 1828. Like other places in Greece, which have been continuously inhabited, Modon contains few ancient remains. Some Heliconian foundations may be traced in the city-walls, and ancient sepulchres may be seen above the suburb. (Leake, Morea, vol. ii. p. 429, seq.; Bolbey, Richeches, loc. p. 113; Curtius, Peloponnesos, vol. ii. p. 169, seq.)

2. A town of Thessaly, mentioned by Homer (II. ii. 716) as belonging to Philectetes. Later writers describe it as a town of Magnesia, but we have no further particulars respecting it. (Sclayx, p. 25; Strab. ix. p. 436; Plin. iv. 9. s. 16; Solin. c. 14; Steph. B. s. r.)

3. More properly called Methana, a town and peninsula of Troezzena. [Methana.]
METHORA. (Méthôra, Arrian, Indic. 8), a small state in the centre of India, which was subject to the great tribe of the Prassë. It was situated near, if not upon, the Jomates or Janma (Plin. vi. 19. s. 22), and has, with much probability, been assumed to be on the site of the present Allahabad.

METHRIADES (Medhôpiaethês), a group of small islands, lying between Nisaea, the port of Megara, and Salamis. (Plin. iv. 12. s. 19.) Strabo describes them, without mentioning their names, as five small islands, lying before Nisaea to a person sailing into Attica (ix. p. 393), Stephanus B. (s. v.) loosely speaks of them as lying between Aegina and Attica.

METHYMINA (Mêthômiâ, and on coins Mêthôma), a town, the most important next after Mytilene. It was situated on the northern shore of the island, where a channel of 60 stadia (Strab. xiii. p. 618) intervened between it and the coast of the mainland near Assos.

One of the earliest notices of the Methymnæans is, the mention of their conquest of Aria, another town of Lesbos, and their enslaving of its citizens. (Herod. i. 151.) The territory of Methymna seems to have been contiguous to that of Mytilene, and this may have been one cause of the jealousy between the two cities. The poet and fame of Mytilene was on the whole far greater; but in one period of the history of Lesbos, Methymna enjoyed greater prosperity. She did not join the revolt of the other Lesbians from Athens in the Peloponnesian War (Thuc. iii. 2, 18); and she was therefore exempted from the severe punishment which fell on Mytilene. (Thuc. iii. 50.) Hence she retained the old privilege of furnishing a naval contingent instead of a tribute in money. (Thuc. ii. 85, vii. 57.) Shortly before the battle of Arginusae, Methymna fell into the power of the Carthaginians, and it was on this occasion that the magnificent conduct of Callicratidas presented so remarkable a contrast to that of the Athenians in reference to Mytilene. (Xen. Hellen. i. 6. § 14.) After this time Methymna seems to have become less and less important. It comes into notice, however, in every subsequent period of history. It is mentioned in the treaty forced by the Romans (n. c. 154) between Attalus 11, and Ptolemy the Great, by which the freedom of the Samians was secured. (Liv. xiv. 31) and by Pliny (x. 31) to have incorporated the inhabitants of Antissa, with its own. Its coins, both autonomous and imperial, are numerous. It was honourably distinguished [see Lesbos] for its resistance to the Mahomedans, both in the 12th and 15th centuries; and it exists on the same spot at the present day, under the name of Molai.

We have no information concerning the buildings and appearance of ancient Methymna. It evidently possessed a good harbour. Its chief fame was connected with the excellent wine produced in its neighbourhood. (Varr. Georg. ii. 90; Ovid. Art. Am. i. 57; Hor. Sat. ii. 8. 50.) Horace (Od. i. 17. 21) calls Lesbian wine "innocens;" and Athenaeus (ii. p. 45) applies the epithet εὐστάτωμα to a sweet Lesbian wine. In another place (i. p. 32) he describes the medicinal effect of the wine of this name. (See also i. pp. 28, 29, and Anl. Gell. xiii. 5.) Pliny says (iv. 9) that it had a salt taste, and apparently mentions this as a merit. Pausanias, in his account of Delphi (x. 19), tells a story of some fishermen of Methymna dragging in their nets out of the sea a rude image of Bacchus, which was afterwards worshipped.

Methymna was the birthplace of the poet and musician Arion. Myrtilus also, who is said to have written a history of Lesbos, is supposed to have been born here. (J. S. II.)

METROPOLES. (Metrosôpolis, Euth. Metropono- Axios). 1. A town in the Cusanian plain in

COIN OF METHYMINA. METYMINA (Mêthômiâ), a city in Crete, near Rhoca, which Arlian (V. A. xiv. 20) mentions in connection with a curious story respecting a remedy for hydrophobia discovered by a Cretan fisherman, Mr. Fashley (Trans. vol. ii. p. 40) considers that the remains near the chapel of Haghios Georgios, by Nepia, on the extreme eastern edge of the plain of Kisano-kastelli, represent Methymna. (E. B. III.)

METYDRIUM (Mêthôdrion: Euth. Methôdratoi), a town in central Arcadia, situate 170 stadia north of Megalopolis (Paus. viii. 35. § 5), and obtained its name, like Intemea, from being situated upon a lofty height between the two rivers Maloetas and Mylason. (Paus. viii. 36. § 1.) It was founded by Oreadomenus; but its inhabitants were removed to Megalopolis, upon the establishment of that city. It never recovered its former population, and is mentioned by Strabo (viii. p. 385) among the places of Arcadia which had almost entirely disappeared. It continued, however, to exist as a village in the time of Pananikes, who saw there a temple of Poseidon Hippus upon the river Mylason. He also mentions, above the river Maloetas, a mountain called Thamusia, in which was a cave where Rhea took refuge, when pregnant with Zeus. At the distance of 30 stadia from Methydrum was a fountain named Nymphasia. (Paus. viii. 36. 1—3, comp. viii. 12. § 2, 27, §§ 4, 7.) Methydrum is also mentioned in the following passages: Thuc. v. 58; Polyb. v. 10, 11, 13; Plin. iv. 6. s. 10; Steph. B. s. v.

There is some difficulty in determining the exact site of Methydrum. Some writers identify it with the Hellenic remains called Polete; but these are not on a lofty hill between two rivers, but in a low situation above the junction of the rivers on the south bank of one of them. Methydrum should rather be placed 45 minutes further, at the distance of 10 minutes SE. of the village of Nimitza, where there are some ancient ruins, one between two streams, on a height below Pyrgo, otherwise called Pyrýgikos. It is said that this is also not a lofty hill; but Pananikes uses the expression καλαίσκοι υψόμετρα, and ὑψομέτρα has reference to χωλεως, which means only a slight elevation. (Leake, Morea, vol. ii. p. 57; Peloponesiaca, p. 201; Boylby, Recherches, cfc. p. 151; Ross, Reisen im Peloponnese, p. 116; Curtius, Peloponesians, vol. i. p. 309.)

METINA INSULA. (Rhodianus.)

METIOSEUM. (Melodunum.)

METOINES (Mîtopères, Ptol. vi. 4. § 3), a branch of the great robber tribe of the Mardi, who were settled in Persia. Their name is sometimes written Mætopères. [V.]

METROPOLES (Mîtopôles, Euth. Mîtopon- Axios). 1. A town in the Cusanian plain in
METROPOLIS.

Lydia, on the road from Smyrna to Ephesus, at a distance of 120 stadia from Ephesus, and 180 from Smyrna. The district of Metropolis produced excellent wine. (Strab. xiv. pp. 632, 637; Pol. v. 2. § 17; Steph. B. s. v.; Plin. v. 21; Hiero I. p. 600.) Neath the modern town of Korishli, no doubt a corruption of the ancient name Metropolis, some ruins are still seen; and as their distance from Smyrna and Ephesus agrees with that mentioned by Strabo, there can be no hesitation in identifying the place. (Comp. Arundell, Seven Churches, p. 22; &c.; Hamilton, Researches, i. p. 542; Rasche, Lexic. Num. iii. 1, p. 633. &c.)

2. A town in the north of Phrygia, and, as the name seems to indicate, the capital of the ancient kings of Phrygia, through Stephanus Byz. (s. r.) derives the name from the mother of the gods. It was situated to the north of Smyrna (Athen. xi. p. 574), and must not be confounded with another town of the same name in the south of Phrygia. Its site is, in all probability, indicated by the ruins of Pisnerh Kelahi, north of Doganlu, which show a very antique style of architecture, and mainly consist of tombs cut into the rocks; one of these tombs is that of king Midas. Leake (Asia Minor, p. 24) is inclined to think that these ruins mark this site. There are, however, other travellers, apparently with more justice, identify them with Metropolis. (Franz, Five Inscriptions, p. 42.) From the extent of the ruins, it would seem that in the time of the Roman emperors Metropolis was an important town; but afterwards it declined, though it is still mentioned by Hierocles (p. 677).

3. A town in the southern part of Phrygia, belonging to the conventus of Apamea. (Plin. v. 29.) That this town is different from No. 2, is quite evident, even independently of the fact that Stephanus Byz. (s. r.) calls this place one of the towns of the district of Metropolis, and that Hierocles and the Notitia speak of a town of this name in two different provinces of Phrygia. (Hieroc. p. 673; Strab. xii. p. 576; xiv. p. 663; Liv. xxxviii. 15.)

METROPOLIS (Μητροπολίς, Pol. iii. 5. § 22), a town of European Sarmatia, on the Bosphorus, near Olbia. [E. B. J.]

METROPOLIS (Μητροπολίς Εθν. Μητροπολιτ. Ακτα). 1. A town of Histiaea in Thessaly, described by Stephanus B. (s. r.) as a town in Upper Thessaly. Strabo says (ix. p. 438), that Metropolis was founded by three insignificant towns, but that a larger number was afterwards added, among which was Ithome. He further says, that Ithome was within a quadrangle, formed by the four cities Tricca, Metropolis, Pelinnaeaum, and Gomphi. The position of Metropolis is also determined by its being on Caesar's march from Gomphi to Pharsalus. (Curs. B C. iii. 81; Appian, B. C. ii. 64; Dion Cass. xii. 51.) It was taken by Flaminius on his descenting into this part of Thessaly, after the battle of the Aous, n. c. 193. (Liv. xxxvii. 15.) We learn from an inscription that the territory of Metropolis adjoined that of Cierium (the ancient Arne), and that the adjustment of their boundaries was a frequent subject of discussion between the two peoples. [CIERIUM.]

METROPOLIS is mentioned in the sixth century by Hierocles (p. 642), and continued to exist in the middle ages under the name of Neo-Patrae (Nea Τρίπολι, Constant. de Thm., ii. p. 50, ed. Bonn). The remains of Metropolis are placed by Leake at the small village of Potokastro, about 5 miles SW. of Kardhakia. The city was of a circular form, and in the centre of the circle are the vestiges of a circular citadel, part of the wall of which still exists in the yard of the village church of Potokastro, where is a collection of the sculptured or inscribed remains found upon the spot within last 50 years. Among other sculptors Leake noticed one in low relief, representing a figure seated upon a rock, in long drapery, and a mountain rising in face of the figure, at the foot of which there is a man in a posture of adoration, while on the top of the monastoi there are other men, one of whom holds a gob in his hands. Leake conjectured with great probability that the seated figure represents the Aphrodite of Metropolis, to whom Strabo says (l. c.) that hogs were offered in sacrifice. (Leake, Northerne Greece, vol. iv. p. 506.)

2. Another town in Thessaly, which Stephanus B. calls simply a town in Thessaly. This appears to be the Metropolis mentioned by Livy in his account of the campaign of Antiocbus, in B. C. 191, where it is related that the Syrian king having landed at Denetrias, first took Pherae, then Crannon, then Cypsera, Metropolis, and all the neighbouring fortresses, except Atrax and Gyron, and afterwards proceeded to Larissa. (Livy. xxxvii. 10.) From this account it would appear that this Metropolis was in Thessaly, and its site has been discovered by Leake, near the village of Xystha, where the name of Μητροπόλις occurs in an inscription. (Leake, Northern Greece, vol. iii. p. 371.)

3. (Logoritza), a town in the interior of Arcadia, S. of Stratus, and on the road from the latter place to Conope in Aetolia. At a latter time it fell into the hands of the Aetolians, but was taken and burned by Philip in his expedition against the Aetolians, B. C. 219. It is mentioned as one of the towns of Arcadia, in a Greek inscription found at Actium, the date of which is probably prior to the time of Augustus. (Polyb. iv. 64; Steph. B. s. r.; Bickh., Corpus Inscription. No. 1793; Leake, Northern Greece, vol. iii. p. 576.)

4. A town in Amphibia, near Olpa. (Thec. iii. 107.) As to its site, see ARGOS AMPHILOCHEIA.

5. A town of Doris. (Steph. B. s. r.)

6. A town of Euboea. (Steph. B. s. r.)

METULUM. [IAPURES, Vol. ii. p. 36.]

MEVANIA (Μεβανία, Strab., Pol.: Eth. Mevanas, Αδίαs: Beregenos), a considerable city of Umbria, on the Flaminius Way, between Caranule and Fulginium. It was situated on the river Tiina, in a broad and fertile valley, which extends from the neighbourhood of Spoleto to the Tiber, separating the main chain of the Apennines from a lateral mass or offshoot of the same range, which extends from Mevania and Spoleto to Tuder and America. It is this valley, about 8 or 10 miles in breadth, watered by the Clitumnus and Tiina, with several tributary streams, the pastures of which were celebrated for their breed of white oxen, the only ones thought worthy to be sacrificed as victims on triumphal and other solemn occasions. Hence their praises are not less frequently associated with the name of Mevania than with that of the Clitumnus. (Colurn. iii. 8; Sil. Ital. vi. 647, viii. 438; Lucian, i. 473.) Mevania appears to have been an important place before the Roman conquest of this part of Italy. In B. C. 305 it was chosen by the Umbrians as the headquarters of their assembled forces, where they were defeated by Q. Fabius. (Liv. iv. 41.) At a rough
MEVANOLA.

Later period it was occupied by the emperor Vitellius, with the intention of defending the passes of the Apennines against the generals of Vespasian, but he quickly abandoned it again, and retired to Rome. (Tac. Hist. iii. 55, 59.) As it was situated in the plain, it could scarcely be a very strong fortress; but Pliny notices it as one of the few cities of Italy that had walls of brick (xxxv. 14. s. 49). Strabo speaks of it as in his time one of the most considerable towns in the interior of Umbria; it was only of municipal rank, but seems to have continued a flourishing place throughout the period of the Empire. (Strab. v. p. 227; Plin. iii. 14. s. 19; Ptol. iii. 1. § 54; Ren. Ant. p. 311; Orell. Inscr. 98.) The modern Benevento is a very poor and decayed place, with little more than 2000 inhabitants, though retaining its episcopal see, and the title of a city. It contains some remains of an amphitheatre, and mosaic pavements which belonged to the ancient Thermas. (Calidrii, Stat. del Pontif. Stato, p. 104.)

Mevania appears to be indicated by the poet Propertius in the place of his birth (iv. 1. 123), though others understand this passage differently, and regard Hispellum as having the better claim. (Barth. Vit. Propert. ; Kinned, ad l. c.) It was noted for the fogs to which it was subject. (Propert. l. c.; Sil. Ital. vi. 646.) Pliny speaks of its territory (Mevanas ager, xiv. 3. § 37) as producing a particular kind of vine, which he calls Iridia; probably the same now called "Pizzateillo," for which the district is still celebrated. (Hardouin, ad loc.; Ramnoli, Chronica, vol. i. p. 233.) [E.H.B.]

MEVANOLA. [UMBRA.]

MICAUROS or MILOCORUS (Μίλοκόρος, Μί- καυρος; Theopomp. ap. Steph. B. s. r.,) a place which may be assigned to the interior of Chalcedice, (Leake, North Greece, vol. iii. p. 456.) [E. B. J.]

MIBA, in Britain, supposed more correctly Mida, is placed in the Ravennas's Chorography among the towns in the south of Britain. It has been conjectured that Mydonest, in Sussex, is its modern representative; but this is not warranted by the existing remains. (MICHMAS (Μίχμας, L.XX.; Μιχμα, Joseph., Euseb.), a city of the tribe of Benjamin, eastward from Bethel or Bethaven (1 Sam. xiii. 5), held by the Philistines, while Saul and the Israelites were in Gibeah. It was on the line of march of an invading army from the north, and the Assyrians are represented as depositing their baggage there when advancing against Jerusalem. (Isaiah x. 28.) It is placed by Eusebius and St. Jerome in the borders of Asia, and was then a considerable village, retaining its ancient name, 9 miles from Asia, near Rana. (Onomast. s. v.) The same description exactly applies to it at the present day. It is 3 hours distant from Jerusalem, nearly due north. Makhmas stands on a low ridge between two small Wadys running south into the much larger valley named Wady es-Swinit. It bears marks of having been a much larger and stronger place than any in the vicinity. There are many foundations of houses standing throughout the site, and some columns among them. The Wady es-Swinit is the "Passage of Michmas" spoken of in 1 Samuel (xiii. 23), and Isaiah (x. 29). It is an extremely steep and rugged valley, which commences in the neighbourhood of Bethel, and a little below (E.) Makhmas contracts between perpendicular precipices.

The rocks Bizec and Seneh, mentioned in connection with Jonathan's exploit (1 Sam. xiv. 4), may still be recognised in two conical rocky knobs projecting into the valley between Jediah (near Gilgal) and Meckhamas. (Robinson, Bibb. Res. vol. ii. pp. 116, 117.) In the Tabund the soil of Michmas is celebrated for its fertility. (Ireland, Palae- stina, s. v. p. 897.) [G. W.]

MIDAEIUM or MIDAIUM (Μίδαιος) a town in the NE. of Phrygia, on the little river Bathys, on the road from Doryleum to Pessinus, and belonging to the convents of Synnada. (Steph. B. s. r.; Plin. v. 32. s. 41; Ptol. v. 2. § 22; Strab. xii. p. 576; Herod. p. 678, where it is wrongly called Mebidor.) The town, as its name indicates, must have been built by one of the ancient kings of Phrygia, and has become celebrated in history from the fact that Sextus Pompeius, the son of Pompey the Great, was there taken prisoner by the generals of M. Antony, and afterwards put to death. (Dion Cass. xii. 18.) It has been supposed, with some probability, that the town of Mygdon, mentioned by Ammianus Marcellinus (xxvi. 7), is the same as Midaeum.

MIDEIA or MIDEA. 1. (Μίδεα, Paus.; Midea, Strab.; Eth. Midea/τεις), an ancient city of the Argean, was originally called Persepolis (Περσεπόλις, Steph. B. s. r. Μίδεα), and is mentioned by Appollodorus (ii. 4. § 4) in connection with this hero. It was said to have derived its name from the wife of Electryon, and was celebrated as the residence of Electryon and the birthplace of his daughter Alcmene. (Paus. ii. 25. § 5; Schol. ad Pind. Ol. vii. 49.) But it is mentioned in the earliest division of the country, along with the Hermion and Tyros, as belonging to Protessa. (Paus. ii. 16. § 2.) It was the residence of Hippodamia in her banishment. (Paus. vi. 20. § 7.) It was destroyed by Argos, probably at the same time as Tyros, soon after the Persian wars. (Paus. viii. 27. § 1; Strab. viii. p. 373.]

Strabo describes Midea as near Tyros; and from it he mentions Pansaniai, in connection with the Hermion and Tyros, it must be placed on the eastern edge of the Argean plain; but the only clue to its exact position is the mention of Pansaniai, who says that, returning from Tyros into the road leading from Argos to Epidauros, "you will reach Midea on the left."

Two different sites have been assigned to Midea. The French Commission place it at the Hellenic remains at Demdrit, 52 geographical miles direct E. by N. from the citadel of Argos, as this place lies to the left of the road from Argos to Epidauros. But Leake observes, that the distance of Demdrit from this road—more than 3 geographical miles—is greater than is implied by the words of Pansaniai. He therefore places Midea at the Hellenic remains near Katingsir, 2 geographical miles E. of Tyros. The objection to the latter site is that it lies to the right of the road from Argos to Epidauros, from which it is separated by a deep ravine. The ruins at Demdrit stand upon a hill almost inaccessible on three sides, enclosed by four different walls, one of another. In one of them is a gateway formed of three pieces of stone, resembling the smaller gateway of the citadel of Mycenae. The ruins descend from the summit to a fountain, which spring out of a grotto near a chapel of the Panaghia. The surrounding meadows afford good pasture for horses, and thus illustrate the epitaph of Statius (Thb. iv. 44).

MIDEIA. 353
“apart armenia Mide,” and the selection of this place as the residence of the horse-loving Hippodamia in her banishment. (Böhlau, Recherches, etc. p. 52; Leake, Peloponnesiana, p. 268; Curtius, Peloponnesos, vol. ii. p. 395.)

2. A city of Boeotia. [Lebadea]

MIDIANITAE (Μιδανιταί), the descendants of Midian, one of the sons of Abraham by Keturah, whom the patriarch is said to have sent away during his lifetime “eastward, unto the east country” (Gen. xxv. 2, 6), and whom we subsequently find reckoned among “the children of the east.” (Judy. vi. 3.) In the third generation after Abraham they were a distinct people, trading between Gilead and Egypt; but are associated with, or confounded with, another Arab family, the Ishmaelites. (Gen. xxxviii. 25, 28, 36.)

The Midianites were probably a Bedawi tribe, and their situation may be pretty accurately determined, by the following notices, to the territory afterwards occupied by the NABATAEI, to the south and east of Palæstine. Moses led the sheep of Jethro, a priest of Midian, in the peninsula of Mount Herch (Exod. iii. 1); subsequently Jethro came to his son-in-law from the land of Midian, while Israel was encamped in the vicinity of Herch (xviii. 2, &c.); and Moses was glad to avow himself of his local knowledge while traversing the desert to the north of the peninsula. (Num. x. 29—32.) The close alliance between the Midianites and the Moabites, to oppose the progress of Israel, indicates the proximity of the two peoples; and the hostility of the former proves that the alliance of Midianites with one another after their family did not vitiate the national feeling. (Num. xxii. 4, 7, xxx. xxxi. 8—12; Josh. xii. 21.)

The Midianites continued the bitter enemies of the Israelites throughout the period of the Judges, when, in concert with “the Amalekites and the children of the east,” they invaded simultaneously, and in countless numbers, the southern frontier towards Gaza and the trans-Jordanic tribes in Gilead and Bashan (Judy. vi. vii.), from whence they extended their ravages to the west, and north as far as the confines of Naphtali and Asher. After their signal defeat by Gideon, they disappear from the records of history, but their slaughter became proverbial. (Psalm lxxxix. 9; Isiah, ix. 4, x. 25.)

The country of the Midianites, however, had still a traditioonary recollection; and subsequent notice, consistently with the foregoing, place them between Edom and Paran, which bordered on Egypt (1 Kings, xvi. 17, 18), in the country afterwards comprehended under the name of Idumaea, and still later assigned to the Saracen. Indeed Josephus (Ant. iv. 7, § 1) asserts that Petra, the capital of Arabia (i.e. Idumaea), was called by the natives Areumen (Ἀρευμέν), from the Midianitish king Iokem, one of the five slain by Moses. (Num. xxxviii. 8.) Eusebius and St. Jerome mention a city Midian, so named after one of the sons of Abraham by Keturah, situated upon Arabia (i.e. Idumaea) to the south, in the desert of the Saracens, by the Red Sea, from which district it was called; and another city of the same name near the Arnon and Arade; the ruins of which only exist in their days. (Onomast. s. v.; comp. Hieron, Comm. ad Ies., ix. and Ezech. xxv.)

The situation of these two cities would define the limits of the territory of the Midianites in their most palmy days. The former of these two cities is doubtless that mentioned by Josephus (Ant. ii. 11, § 1) under the name of Midian (Μιδαν), situated at the Red Sea, and is properly identified by Relland as the modern Midan (the Midian of Abulfeda), identical with the Midiana of Ptolemy. (Relland, Palæstina, pp. 98—100.) It is situated about half-way down the eastern coast of the Egyptian gulf. (Forster, Geog. of Arabia, vol. ii. p. 116; and see the references in his index under Midian.)

MIEZA (Μιήζα, Eth. Μιήζας, Μιήζα), a Moabian city, the precise limits of which it is most difficult to ascertain. Stephanus of Byzantium (s. c.), on the authority of Theagenes, assigns to an eponymous founder, Mieza, a sister of Berea, and granddaughter of Marcon; this legend implies that it was an important city. From the name it would seem most natural to look for it in the neighbourhood of Berea, which agrees with Ptolemy (iii. 13, § 39), who classed it among the cities of Emathia. Stephanus, on the other hand, still deriving his information apparently from Theagenes, alludes to it as a ἅρτος Σφαγιαν, with others sometimes called Strymenium. Alexander the Great established an Aristotelian school at Mieza (Plut. Alex. M. 7); and it was famed for a stately cavern. (Plin. xxxii. 2. s. 20; Leake, North. Greece, vol. iv. p. 583.) [E. B. J.]

MIGDOL, a Hebrew word signifying “a tower,” and used as a complement of several proper names of places in Holy Scripture.

1. MIGDOL-EDEN, translated in Gen. xxxvi. 21 (γ. 16 in LXX.), τῆς τιταγμον Ραδαπ. Auth. Ver. “the tower,” and in Micah, iv. 13, τιταμων, Auth. Ver. “tower of the flock” (margin, “Eldar”). From the first cited passage, it would appear to have been near Bethlehem; and St. Jerome mentions a shepherd’s tower a mile from Bethlehem, so called, as he suggests, in prophetic anticipation of the angelic announcement of the Nativity. (Onomast. s. v.; Relland, Palæstina, s. v. p. 898.)

2. MIGDOL-EI, a town in the tribe of Naphtali (Josh. xix. 38), where LXX., running two names together, read Μιγδαλανία for “Migdal-Ei, Hydroth. Colenus, and-article,” identifies the place. Eusebius and St. Jerome mention it as a large village named Magdol, i. e. M. P. (St. Jerome writes Μ. P.) from Dora on the road to Ptolemais, probably identical with the modern El-Migdel, in the plain of Esdraelon, a little to the SW. of Shefa Ammar, which is, however, more remote than even Eusebius states from Dora, i.e. the modern Tantura. Neither could this have any connection with the Migdal-el of Naphthali, as Relland, in agreement with his two authors, seems to imagine, seeing it was situated in the tribe of Asher or Issachar. (Relland, Palæstina, p. 898.) The Magdala of Galilee (now El-Migdel) is much more probably the Migdal-el of Naphthali. [MAGDALA.]

3. MIGDAL-GAD (Μιγδαλαγάδ. LXX.), a city of the tribe of Judah. (Josh. xv. 37.)

4. MIGDAL-SENNA, corrupted to Μηγδαλόν Σενα, in Eusebius (Onomast. s. v. Senna), which, however, St. Jerome’s translation enables us to correct to Μηδαλόν Σενα, “quod interpretatur turris Sena.” There is a modern corruption of the Greek corrected in the Latin; the former having zipcode του “θωναίς, the latter, correctly, “termum Judae.” A village of this name existed in their days 7 miles north of Jericho. [G. W.]

MIGONIUM. [Gythium.]
MIGRON.

MIGRON, a town in the tribe of Benjamin, mentioned in 1 Samuel, xiv. 2 (where the LXX. reads Μιγρὼν) as in the extreme border of Gilead, celebrated for its fig trees and vineyards, connected with Amathus (probably Ai) in Isaiah, x. 28 (where the LXX. reads Μιγρὼν). Its site has not been recovered in modern times. Dr. Robinson remarks, "Migron must have been situated between Deir Dinae and Michmash;" and so the line of the Assyrian march in Isaiah would seem to require. But the passage in Samuel implies that it was S. of Michmash, which was then occupied by the Philistine garrison, watched by the Israelites in Gilead, which lay to the E. of Michmash," and with which Migron is connected. (Robinson, Bibl. Res. vol. ii. p. 149.) [G. W.]

MILETUS POLIS (Μίλητος πόλις), a town in the north of Asia Minor, at the confluence of the rivers Maeotus and Rhynchos, and on the west of the lake which derives its name from it. (Strab. xii. p. 575, xiv. p. 681; Steph. B. s. v.; Plin. v. 32, 40.) Some modern geographers, as D'Anville and Manuet, have identified Miletuspolis with the modern Gulya Koy or Balkalei, but this sheet of water is situated too far S.W. of the lake, and identifies it with Mileas, which others regard as the site of the ancient Prieneumum. The most probable view is, that the site of Miletuspolis is marked by the modern Moalitish or Mahulitish, or by the place Hamaniti, near which many ruins of an ancient town are found. (Hamilton, Researches, &c., vol. i. p. 81, &c., vol. ii. p. 91.) [L. S.]

MILETUS POLITIA LACUS (Μίλητοι πόλιοι λίκων), a lake in the north-west of Asia Minor, deriving its name from the town of Miletuspolis, near its western shore. (Strab. xii. pp. 575, 576.) According to Pliny (v. 40) the lake also bore the name Artymia, and probably confounding the river Tarisus with the Rhynchos, he erroneously describes the latter river as having its origin in the lake, whereas, in fact, the Rhynchos enters the lake in the south, and issues from it in the north. It now bears the name of the lake of Monegas (Hamilton, Researches, &c., vol. ii. p. 105, &c.; Steph. B. s. v.) The lake of Miletuspolis, once the most flourishing city of Ionia, was situated on the northern extremity of the peninsula formed, in the south-west of the Latanicus Sinus, by Mount Grion. The city stood opposite the mouth of the Maeander, from which its distance amounted to 80 stadia.

At the time when the Ionian colonies were planted on the coast of Asia Minor, Miletus already existed as a town, and was inhabited, according to Herodotus (i. 116), by Carians, while Ephesians (ap. Strab. xiv. p. 634) related that the original inhabitants had been Leleges, and that afterwards Sarpedon introduced Cretan settlers. The testimony of Herodotus is born out by the Homeric poems, in which (H. ii. 867) Miletus is spoken of as a place of the Carians. That the place was successively in the hands of different tribes, is intimated also by the fact mentioned by Pliny (v. 30), that the earlier names of Miletus were Leleges, Pityusa, and Anaxacotria. (Comp. Pan., xii. 14; Steph. B. s. v.) On the arrival of the Ionians, Naxians, their leader, with a band of his followers, took forcible possession of the town, massacred all the men, and took the women for their wives,—an event to which certain social customs, regulating the intercourse between the sexes, were traced by subsequent generations. It appears, however, that Naxians did not occupy the ancient town itself, but built a new one on the site somewhat nearer the sea. (Strab. l. c.) The town, fortifications, and other remains, attributed to the ancient Leleges, were shown at Miletus as late as the time of Strabo (xiv. p. 611; comp. Herod. ix. 97). As in most other colonies the Ionians had amalgamated with the ancient inhabitants of the country, the Milesians were believed to be the purest representatives of the Ionians in Asia. Owing to its excellent situation, and the convenience of four harbours, one of which was capacious enough to contain a fleet, Miletus soon rose to a great prosperity among the Ionian cities. It became the most powerful maritime and commercial place; its ships sailed to every part of the Mediterranean, and even into the Atlantic; but the Milesians turned their attention principally to the Euxine, on the coasts of which, as well as elsewhere, they founded upwards of 75 colonies. (Plin. v. 31; Suess. Cons. ad Helv. 6; Strab. xiv. p. 653; Athen. xii. p. 523.) The most remarkable of these colonies were Abidos, Lampsis, and Parium, on the coast of the Propontis; Scione, and Mytilene, on the Euxine; while others were founded in Thrace, the Crimea, and on the Bosphor. The period during which Miletus acquired this extraordinary power and prosperity, was that between its occupation by the Ionians and its conquest by the Persians, B. C. 494.

The history of Miletus, especially the earlier portion of it, is very obscure. A tyrannis appears to have been established there at an early time; after the overthrow of this tyrannis, the state was split into two factions, one of which seems to have been an oligarchical and the other a democratic party. (Plut. Quaest. Gr. 32.) The former gained the ascendant, but was obliged to take extraordinary precautions to preserve it. On another occasion we hear of a struggle between the wealthy citizens and the comunality, accompanied with horrible excesses of cruelty on both sides. (Athen. xii. p. 524.) Herodotus (v. 28) also speaks of a civil war at Miletus; the latter was led for two generations, and reduced the people to great distress. It was at length terminated by the mediation of the Persians, who seem to have committed the government to those landowners who had shown the greatest moderation, or had kept aloof from the contest of the parties. All these convulsions took place within the period in which Miletus rose to the summit of her greatness as a maritime state. When the kingdom of Lydia began its career of conquest, its rulers were naturally attracted by the wealth and prosperity of Miletus. The first attempt to conquer it were made by Ardyas, and then by Sadyattles, who conquered the Milesians in two engagements. After the death of Sadyattles, the war was continued by Alyattes, who, however, concluded a peace, because he was taken ill in consequence, it was believed, of his troops having burnt a temple of Athena in the territory of Miletus. (Herod. i. 17, &c.) At this time the city was governed by the tyrant Thra- sybulus, a friend of Persander of Corinth (Herod. v. 92), and a crafty politician. Subsequently Miletus seems to have concluded a treaty with Croesus, whose sovereignty was recognised, and to whom tribute was paid.

After the conquest of Lydia by the Persians, Miletus entered into a similar relation to Cyrus...
as that in which it had stood to Croesus, and was thereby saved from the calamities inflicted upon other Ionian cities. (Herod. i. 131, &c.) In the reign of Darius, the Ionians allowed themselves to be prevailed upon by Histiaeus and his unscrupulous kinsman and successor openly to revolt against Persia, B.C. 500. Miletus having, in the person of its tyrant, headed the expedition, had to pay a severe penalty for its rashness. After repeated defeats in the field, the city was besieged by land and by sea, and finally taken by storm B.C. 494. The city was plundered, and its inhabitants massacred, and the survivors were transplanted, by order of Darius, to a place called Ampe, near the mouth of the Tigris. The town itself was given up to the Carians. (Herod. vi. 6, &c.; Strab. xiv. p. 635.)

The battle of Mycale, in B.C. 479, restored the freedom of Miletus, which soon after joined the Athenian confederacy. But the days of its greatness and glory were gone (Thuc. i. 15, 115, &c.); its ancient spirit of liberty, however, was not yet extinct. For towards the end of the Peloponnesian War, Miletus threw off the yoke imposed upon her by Athens. In a battle fought under the very walls of their city, the Milesians defeated their opponents, and Phrynichus, the Athenian admiral, abandoned the enterprise. (Thuc. viii. 25, &c.) Not long after this, the Milesians demolished a fort which the Persian Tissafernes was erecting in their territory, for the purpose of bringing them to subjection. (Thuc. viii. 85.) In B.C. 334, when Alexander, on his Eastern expedition, appeared before Miletus, the inhabitants, encouraged by the presence of a Persian army and fleet stationed at Mycale, refused to submit to him. Upon this, Alexander immediately commenced a vigorous attack upon the walls, and finally took the city by assault. A part of it was destroyed on that occasion; but Alexander pardoned the surviving inhabitants, and granted them their liberty. (Arrian, Anab. i. 18, &c.; Strab. l.c.) After this time Miletus continued, indeed, to flourish as a commercial place, but was only a second-rate town. In the war between the Romans and Antiochus, Miletus sided with the former. (Liv. xxxvii. 16, xiii. 6.) The city continued to enjoy some degree of prosperity at the time when Strabo wrote, and even as late as the time of Pliny and Pausanias. (Comp. Tac. Ann. iv. 63, 55.) From the Acts (xx. 17), it appears that St. Paul stayed a few days there, on his return from Macedonia and Thessalonica. In the Christian times, Ephesus was the see of a bishop, who occupied the first rank among the bishops of Asia, and in this condition the town remained for several centuries (Hierocv. p. 657; Mich. Desc. p. 14), until it was destroyed by the Turks and other barbarians.

Miletus, in its best days, consisted of an inner and an outer city, each of which had its own fortifications (Arrian l. c.), while its harbours were protected by the group of the Taurianae islands in front of which Lade was the largest. Great and beautiful as the city may have been, we have no means of forming any idea of its topography, since its site and its whole territory have been changed by the deposits of the Maeander into a peninsular swamp, covering the remains of the ancient city with water and mud. Chandler, and other travellers not being aware of this change, mistook the ruins of Myus for those of Miletus, and describe them as such. (Leake, Asia Minor, p. 239.)

Great as Miletus was as a commercial city, it is no less great in the history of Greek literature, being the birthplace of the philosophers Thales, Anaximander, and Anaximenes, and of the historians Ctesias and Hecataeus.

Miletus, like the rest of the Ionians, were notorious for their volupptuousness and effeminacy, though, at one time, they must have been brave and warlike. Their manufactures of couches and other furniture were very celebrated, and their woven cloths and carpets were particularly esteemed. (Athen. i. p. 28, xi. p. 428, xii. 540, 553, xx. 691; Virg. Georg. iii. 306, iv. 335; comp. Rambach, De Miletos eujusque colonia, Halae, 1790, 4°; Schroeder, Comment. de Rebus Miletiorum, part. i. Stralsund, 1817, 4°; Scolon, Rerum Miletiarum Comment. i. Darmstadt, 1829, 4°.) [L. S.]

MILETUS, a town of Mycia, in the territory of Scepsis, on the river Eunus, which was destroyed as early as the time of Pliny (v. 32). Another town of the same name in Phylisidia, on the road between Amathus and Sinope, is mentioned only in the Peck's Table.

MILE'TUS, (Miatross), a town of Crete, mentioned in the Homeric catalogue. (II. ii. 647.) This town, which no longer existed in the time of Strabo, was looked upon by some writers as the mother-city of the Ionian colony of the same name. (Ephorus, op. Strab. xii. p. 573, xviii. 634; Schol. Apoll. Rhod. i. 186; Apollod. iii. 1. 2, 3; Plin. iv. 12.)

Mr. Parkhuy (Trav. vol. i. p. 269) explored the site of this Homeric city not far from Ephip/ddon, at which, considerable remains of walls of polygonal masonry, both of the acropolis and city are still to be seen. (Riick, Vrelia, vol. i. pp. 15, 418.) [E. B. J.]

MILELUM, a Roman "colonia" (Milen colonia, Petu. Tab.) in Numidia, which the Antonine Imperial place at 25 M.P. from Cirta. There can be little doubt that this place, which, from the circumstance of two councils having been held there, was of some importance (Merdilli, Africa Christiana, vol. i. p. 228), was the same as MILLEUM (MIPUR of Mozar. Pot. iv. 3, § 28). [E. B. J.]

MILICHUS, [ACHILLA, p. 13, b.] [L. S.]

MILIOITUM (lit. Aut. p. 322, Melachian, It. Hieros. p. 602; Mytilotin, Geogr. Rev. iv. 6), a town in the interior of Thrace, on the road from Maximianopolis to Trajanopolis. [A. L.]

MILO'XIA. [MARSI.]

MİLYAN (Mileus) is said to have been the ancient and original name of the country afterwards called Lyca (Herod. i. 173); but during the period of the Persian dominion, it was the name given to the whole mountainous country in the north of Lydia, the south of Pisidia, and a portion of eastern Phrygia. (Strab. xii. p. 573.) The boundaries of this country, however, were never properly fixed, and the whole of it is sometimes described as a part of Lydia. (Arrian, Anab. i. 25.) After the accession of the dynasty of the Seleucids in Syria, the name Milyas was limited to the south-western part of
MIMACES.

Piisidia, bordering upon Lycaia, that is, the territory extending from Termessus northward to the foot of mount Cadmus. (Polyb. v. 72; Strab. xii. p. 570, xiii. p. 631, xiv. p. 666.) This district, the western part of which bore the name of Cababia, is afterwards described, sometimes as a part of Lycia (Ptol. v. 3, § 7, 5, § 6), and sometimes as part of Pamphylia or Pisidia. (Plin. v. 42.) After the conquest of Antiocbus the Great, the Romans gave the country to Eumenes (Polyb. Exc. de Leg. 36), though Pisidian princes still continue to be mentioned as its rulers.

The greater part of Milies was rugged and mountainous, but it also contained a few fertile plains. (Strab. xii. p. 570.) The inhabitants were called Miliacae. (Mia-dea, Herod. vii. 77; Strab. xiv. p. 667; Plin. v. 23, 42.) This name, which does not occur in the Homeric poems, probably belonged to the remnants of the ancient Salyani, the original inhabitants of Lycaia, who had been driven into the mountains by the invading Cretans. The most important towns in Milies were Cibyra, Oenoanda, Balbera, and Buron, which formed the Cibyrarian tetrapolis. Some authors also mention a town of Milies (Polyb. v. 72; Ptol. v. 2, § 12; Steph. B. s. v. Miiaea), which must have been situated N. of Termessus in Pisidia. [L. S.]

MIMACES (ΜΙΜΑΙΚΑΠΕΣ), a people in Dyssacus (Cisthenei) (Plut. xvi. 28), and also in Libya (Ptolemy. iv. 6, § 50.) [E. B. J.]

MIMAS (ΜΙΜΑΣ), a mountain range in Ionia, traversing the peninsula of Erythrae from south to north. It still bears its ancient name, under which it is mentioned in the Odyssey (iii. 172.) It is, properly speaking, only a branch of Mount Tmolus, and was in ancient times for its abundance of wood and game (Strab. xiv. pp. 613, 645.) The neck at the south-western extremity of the peninsula formed by Mount Mimas. No little to the north of Teos, is only about 7 Roman miles broad, and Alexander the Great intended to cut a channel through the isthmus, so as to connect the Cystrian and Hermæan bays; but it was one of the few undertakings in which he did not succeed. (Plin. v. 31; Paus. ii. 1, § 5; comp. vii. 4, § 1; Thucyd. viii. 34; Ov. Met. ii. 222; Amm. Marc. xxxi. 42; Calhun. Hymn. ii. 157; Sil. Ital. ii. 494.)

Mount Mimas forms three promontories in the peninsula; in the south Porcyreum (Korab or Karfo), in the west Argennura (Cape Bhoco), and in the north Melaena (Kara Burne). Chandler (Travel. pi. 213) describes the shores of Mount Mimas as covered with pines and shrubs, and garnished with flowers. He passed many small pleasant spots, well watered, and green with corn or with myrtles and shrubs. The summit of the mountain commands a magnificent view, extending over the bays of Smyrna, Chazamenae, and Erythrae, the islands of Samos, Chios, and several others. [L. S.]

MINAEI (ΜΙΝΑΙΙ), a celebrated people of Yemen, in the SW. of Arabia. Strabo names them first of four great nations situated in this extremity of the peninsula, and bordering on the Red Sea: their principal town was Carma or Carana; next to these were the Saudi, whose capital was Maribah. The Catabanians were the third, extending to the straits and the passage of the Arabian Gulf—the Straits of Bab-el Mouneh. Their royal city was Tama. To the east were the Chalarnatoides, whose capital was named Cabatassum. From Ela to the country of the Minaei was 70 days' journey. Thus far Strabo (xxvi. pp. 768, 776); consistently with whose account, Ptolomy (vii. § 23) mentions the Minaei as a mighty people (Μιμάιαι, μεγάλοι θησαυροι), bordering on the inner frankincense country, not far from the Saudi, and places Carma Metropolis in long. 73° 30', lat. 23° 13', which would be on the coast of the Gulf of Arabia, distinct from the Carma or Carana above named, and identical with the Corom of Pliny, a town of the Chalarnatoides, who were contiguous to the Minaei. Pliny represents the Minaei as contiguous to the Aramatans in the interior; which Aramatans—identical no doubt with the Chatramottae of Strabo—he represents as a branch of the Saudi, which last tribe extended along both seas, i. e. the Indian Ocean and the Arabian Gulf; and as the Carma, which he names as a city of the Saudi, is doubtless the Carma which Strabo makes the capital of the Minaei, he would seem to imply that these last were also another division of the same principal tribe of the Saudi. Their country was reported by Aelius Gallus to be exceedingly rich. "Minaeis fertiles agros palmetis arbustisque, in pepe divitis." (Ptol. vi. 32.) They are mentioned by Diodorus (Διοδωρός), in connection with the Gerrhanai, as transporting frankincense and other scented wares from Upper Arabia (εκ των ΄Ακοντων Αραβίας), i.e. the interior (iii. 42). All these notices would serve to fix the seat of this tribe at the SW. part of the peninsula, in the modern Yemen. Pliny says that they were supposed to derive their origin from Minos, the king of Crete, as their neighbours, the Rhadamani, were from his brother Rhadamantus (vi. 32), in which Mr. Forster thinks we may "easily recognise, under the thin veil of classical fiction, the important historical fact of the existence of an open trade between the Greeks and Arabs from very remote times, and of all the facilities implied by commercial intercommunion." ( Arabia, vol. i. p. xxxvii., ii. pp. 74, 75.) In his account of the myrrh and frankincense, Pliny states that this plant, which grew in the country of the Atramicans, one canton (pagus) of the Saudi, was conveyed by one narrow path through the neighbouring canton of the Minaei, who were the first to carry on the trade, and always the most active in it; from which fact the frankincense came to be called Minneum (xii. 30). And in speaking of the various qualities of myrrh, he mentions second, "Minaeas, in qua Aramatam," as most esteemed next to the Troglobytaica (xii. 35).

With regard to the position of this important tribe in the modern map of Arabia, there is a wide difference of opinion among geographers. D'Anville finds their capital Carma in the modern Almaka-rama, which is, he says, a strong place. (Geograph. Anc, tome ii. p. 221; comp. Forster, Arabia, vol. i. p. 33.) Gesselin contends that Almaka-rama is too far south for the Carma of the Minaei, and is disposed to find this capital in Carm-al-Maaiz, as Bochart had suggested (Phalèg, lib. ii. cap. 22, p. 121); which Edrisi alabed two days' journey from Mecca, on the road to Sanaa. (Gesselin, Recherches sur la Geographie des Anciens, tome ii. p. 116.) D. C. Vincent thus attempts to fix their position:—"The site of the Minaeans is not easy to fix; but by a comparison of different accounts, they were 8 of Heufes, N. of Hadramaut, and to the eastward of Solenz; and they were the carriers to all these provinces; their caravans passed in 70 days from Hadramaut to Aila, as we learn from Strabo; and Aila is but 10 miles (7.) from Petra." He re-
Mr. Forster further identifies the principal town of the Miaini (the Carman Regina of Ptolemy) with Karm-al-Maghad; considerate town still in being between 1ayf and Meckka, which former Bochart had already identified with the Carma or Carana of Pliny. "The site of their capital, within a few miles of 1ayf (immediately to the E. of Meckka), suggests the not improbable derivation of their name from that famous seat of the idolatry of ancient Arabia" (p. 234 note); an hypothesis in which, it has been seen, Jonard concides. But, though fixing the original and principal seat of the Miainsi in the S. of the 1ayf, he thinks "it still is certain, from Pliny's statement, that this people possessed a key to the commerce for the incense county, by having obtained the command of one of the two passes into the Djiabat-al-Kamir" (which is in the heart of Hadramaut); and he hence infers that they possessed one of the twoemporiums of the trade in incense and myrrh, mentioned by Pliny, on the southern coast: "an inference which at once conducts us to Thumane or Doxta (NE. of Ras Furtak), and to the mountain pass immediately behind it" (p. 258, comp. vol. i. p. 135, 136). The arguments in proof of this position, and of the connection of the Miainsi with the Joktanite patriarch Jethron, if considered as convincing, are fully stated and enforced by Mr. Forster, in his usual ingenuity (vol. i. pp. 128—136); but it is an unfortunate circumstance that he has removed the central seat of this tribe,—descended, according to this hypothesis, from "the father of Yemen,"—into the territory of 1ayf and for Nefil; he maintains that, "from E. to W. the Miainsi stretched the entire breadth of the peninsula, their eastern frontier touching the Gerhions, on the Persian Gulf; while Carman Regina, now Karm-al-Mulachi, their metropolis, is seated only 21 leagues E.S. of Meckka, in the great province of Al-Kurdi or Yamana" (vol. i. pp. xviii.

The question of the province of the Miainsi has been investigated by M. Fresnel with a widely different result. (Journal Asiatique, 3me Série, tome x. pp. 99—96, 176—200.) He confines them to the central part of Yemen, and denies their connection either with 1ayf, near Meckka, or with Minah, an idol of the Hadhbarides and the Khorzates, between Meckka and Medina. He regards the name as a possible corruption of Yemennae, the first syllable being converted into the Greek article, in its transmission from one language to another; but suggests also another derivation of the name from the patriarch Ayman, found in the native genealogies third in descent from Salma. In confirmation of the former etymology, he maintains that the name Yemen, which now comprehends the eastern quarter of Southern Arabia, was formerly proper to the central portion of that province. He thinks that the capital of the Miainsi—the Carma or Carana of Strabo, the Carman Regina of Ptolemy (to which that geographer assigns too high a latitude, as he does also the Miainsi)—is to be found in the Al-Kurdi of 1ayf, about five or six days' N., or, according to another authority, X.W., of Mokallah. Their other town, Maribah Baramahcin, he places in the same valley. [MAHARA, 2.] The position thus assigned to Carana in the 1ayf Doxta, enables us to fix the extent of the territory of the Miainsi between the Sabacans and

marks, in direct opposition to Gesellin, that Bochart, in placing them at Carna-T-Manouci (l. Karmel-Maghad), only 3 stations S. of Mecca, which he supposes, to be the Carma or Carana of Pliny, brings them too far to the N., for that "Ptolemy places them much farther S." (Priorpas, cap. xxviii. p. 365, and note 234.) But M. Jonard holds that 1ayf, Minous, to the S. (? of Mecca, corresponds with the ancient Miainsi: the distance to Aila he computes as 101 degrees, or 294 hours (ap. Mencin. Histoire de l'Egypte, d. c. p. 377.). Mr. Forster assigns them a wide extent of territory in the modern provinces of Hadjaz, Nefil, and Yemen, even to the borders of Hadramaut. "The seat of this great commercial people, who divided with the Turks in the commerce of the peninsula (transported by D'Arville to the heart of Yemen, and by Vincent to the country of the Asir Arabs), assuredly lay, if any reliance whatever may be placed in the position of Ptolemy, in an inland direction E.S. of Mecca. For the Miainsi, according to him, lay immediately S. of the "regio interior murrifera;" and this, again, was situated due S. of the Maniture. The Maniture being the same with the Mezenee, this description would identify the "interior murrifera" with the fractitud mountain region E. of 1ayf, and the Miainsi, consequently, with the great Attybe tribe described by Bochart, as the most numerous of the tribes of Hijaz, and inhabiting the rich inland country stretching eastward, under those mountains, from Lyse and Kolakh to Turado." (Arabia, vol. ii. pp. 251, 252.) He adds, in a note (*), "Its site (viz. that of the 'interior murrifera'), with that of its inhabitants, the Miainsi, may be determined independently, by the concurrent testimonies of Ptolemy and Pliny: the former places his Chargatha (Naasoud, Pal. Nazafayat), and the latter his Kuratta, in conjunction with the Miainsi. The town thus denominated is clearly that of Kuraitain; but Kuraitain is seated beneath, or rather upon, the mountains of 1ayf." Having thus determined their northern border "S. of Kuraitain, or in the plains below the mountain chain running E.N.E. from 1ayf," he thus defines their southern limits. "On the S., according to Ptolemy, the Miainsi were bounded by the Doreni and the Mokeret, it is impossible to mistake, in the Doreni, the inhabitants of Zokran, or in the Mokeret, those of Mekbara, two adjoining provinces, lying S. of Meccan and 1ayf, and crossing the entire space between the sea and the uninhabited desert. This decisive verification stands in the ancient Miainsi between the mountains of Zokra and Mekbara, and those S. of 1ayf" (p. 235). "The chief towns, the territory, and the national habits of the Miainsi, as described by the ancient geographers, bear a remarkable correspondence to those of the Attybe Arabs, the present inhabitants of this district; and the coincidence of the palm-groves, and other fruit-trees of the Miainsi, and their wealth in cattle, noticed by Pliny, with the excellent pasture-grounds, the great abundance of camels and sheep, possessed by the powerful tribe of Attybe, and with the plantations for which Tarab is remarkable, that furnish all the surrounding country Carma, the author of Baschkardti describes both it and 1ayf to be, with palm-groves and gardens, watered by numerous rivulets, must be allowed to corroborate, in a very remarkable manner, this verification of the ancient seats of the Miainsi." (Forster, Arabia, vol. ii. pp. 254—257.)
MINIACUM.

Their country must have comprehended the eastern half of the territory of Ystis, and the western half of the modern Hadramaut. So that Shilah and Furzem, and the town of Hidramaut, mentioned by the ancients, all belong to the territory of Miniace. (Ritter, Erdkunde von Arabyen, i. pp. 278—284.)

MINIACEUM, in Belgica, is placed on a road from Castellum (Cassell) to Turnacum (Tournais); and a road also ran from Castellum through Miniaceum to Nemetacum (Arva). The distance is xi. (leagues) from Cassell, a well-known place in the latter consulship of Dion. D'Avrille contends that the geographers are mistaken in placing Miniaceum at Mergheim, or, as the French call it, Meurville, on the river Lys, instead of placing it at Estere, also on the Lys. The distances as usual cause a difficulty, and there is nothing else that decides the question. An old Roman road leads from Cassell to Estere, and Roman coins have been found at Estere. (G. L.)

MINAS SABBATHIA (Meinas Sábado, Zosim. iii. 23), a small fortified work in Babylonia, which Zosimus calls the place named which is the site of the celebrated Parthian capital Ctesiphon. Abdulfeda (p. 253) speaks of a place in the neighbourhood called Sabath. (V.)

MINATICUM, in Belgica, is placed by the Antonine Itin. and the Table on a road from Bagaenum (Bever) to Duroctorum (Reims). It is placed in the Itin. between Catusiacum (Chauves) and Axumena or Axuena. (Axuenna.) Catusiacum is omitted in the Table, and Miniaticum appears under the form Nintitaci, or Nintecaci, as D'Avrille writes it in his map; but the name was changed to Axuennus, and the Text. Table appears to be more exact, for Nintitaci is Nicu Le Comte, which stands on an old Roman road that leads from Chauves to Reims. (G. L.)

MINCEDUS (Mincus: Mincin), a considerable river of Gallia Cisalpinia, and one of the most important of the northern tributaries of the Padus. (Plin. iii. 16. s. 20, 19. s. 23; Strab. iv. p. 209.) It has its sources in the Alp Helveticus, at the foot of the Monte Tornale, from which it flows to the lake Benacus, or Lago di Garda, which is marked by the accumulation of its waters; from thence it issues again at Peschiera (the ancient Ardella), and from hence a course of about 40 miles, till it falls into the Po near Gemono, about 10 miles above Hostilia. In the upper part of its course it is a mere mountain torrent; but after it leaves the lake Benacus it is a deep and clear stream, which holds a slow and winding course through the low and marshy plains of this part of Cisalpine Gaul. It is characteristically described by Virgil, who dwelt on its banks. (Virg. Ehd. vii. 125, Geor. iii. 15. Aen. x. 206.) In the immediate neighbourhood of Mantua the waters of the Mincus submerge, so as to form shallow lakes of considerable extent, which surround that city on three sides, the fourth being also protected by artificial inundations. A battle was fought on the banks of the Mincus in n.c. 197, between the consul Cornelius and the combined forces of the Insulaires and Cenomanni, in which the enemy was defeated, and their leader, the Cimbrian Hannibal, taken prisoner. (Liv. xxxii. 30.) At a much later period it was on the banks of the Mincus, near its confluence with the Padus, at a place called by Jornandes Acroventus, Mamboleus, that the celebrated interview took place between Pope Leo I. and Attila, which led the king of the Huns to withdraw his forces from Italy. (Jornand. Got. 42; P. Dac. Hist. Miscell. xxv. p. 549.)

MINERVAM PROMONTORIUM (to 'Aphrodis' épavropivov, Strab.: Ponta della Campanella), a promontory on the coast of Campania, opposite to the island of Capreae, forming the southern boundary of the celebrated Crater or Elys of Naples. It is a bold and rocky headland, constituting the extremity of a mountain ridge, which branches off from the main mass of the Apennines near Nacerta, and forms a great mountain promontory, about 25 miles in length, which projects a little more than 15 miles into the sea. In the latter part of the Roman period it is mentioned as the spot from which the sea was driven by a violent gale, which was then erroneously called the 'Elys of the sea.' (Itin. E. B. Min. i. 197, 198.)

MINIUS. 359

MINERVAE PROMONTORIUM (to 'Aphrodis' épavropivov, Strab.: Ponta della Campanella), a promontory on the coast of Campania, opposite to the island of Capreae, forming the southern boundary of the celebrated Crater or Elys of Naples. It is a bold and rocky headland, constituting the extremity of a mountain ridge, which branches off from the main mass of the Apennines near Nacerta, and forms a great mountain promontory, about 25 miles in length, which projects a little more than 15 miles into the sea. In the latter part of the Roman period it is mentioned as the spot from which the sea was driven by a violent gale, which was then erroneously called the 'Elys of the sea.' (Itin. E. B. Min. i. 197, 198.)

MINIUS (Minos: Minho), a river of Spain, rising in the north of Galicia, in the Cantabrian mountains, and falling into the Ocean. (Strab. iii. p. 153.) Strabo erroneously says that it is the
MINIZUS.

MINITAE.

2. A city of Crete, which belonged to the district of Lycus, and stood on the narrowest part of the island, at a distance of 60 stadia from Hierapyna, (Strab. x. p. 475; Pol. iii. 17. § 5.) Its position has been fixed at Coastl Mirabello, near latrones, (Hieck. Kreta, vol. i. p. 421.) [E.B.J.]

MINOA (Μίνα). 1. A small island in front of Nisaea, the port of Megara. [For details, see Megara.]

3. Another name of the island of Paros. [Paros.]

4. A city of Sicily, usually called Hercleia Minoa. [Hercleia Minoa.]

5. A town in the island of Amorgos. [Amorgos.]

6. A town in the island of Siphnus. [Siphnus.]

MINTHE. [Eliis, p. 817, b.]

MINTURNAE. (Μυτηναία, Pol.; Μυτηνά, Strab.; Ebd. Μυτηνάια, Plut.; Minturnensis.) a city of Latium, in the more extended sense of that term; but originally a city of the Ausonians, situated on the right bank of the Liris (Garyliana), about 3 miles from the sea. It was on the line of the Appian Way, which crossed the Liris. (Strab. v. p. 293.) The name of Minturnae is first mentioned in the context of the Latin Wars b. c. 340—338, when it afforded a refuge to the Latin forces after their defeat in Campania. (Liv. viii. 10.) It was not, however, at that time a Latin city, but belonged to the Ausonians, who appear to have been then in alliance with the Latins and Campanians. For, in b. c. 315, Livy tells us that there were three cities of the Ausonians, Ausona, Minturnae, and Versci, which had declared themselves hostile to Rome after the battle of Lake Butrintae; but were again betrayed into the hands of the Romans by the young nobles in each, and the inhabitants unspiringly put to the sword. (Livy. ix. 25.) Not many years later, in b. c. 296, a Roman colony was established at Minturnae, at the same time with one at Sinusdes, a little further down the coast; they were both of them of the class called "Colonias Maritimae," with the rights of Roman citizens (Liv. x. 21; Vell. Pat. i. 14); and were obviously designed to maintain and secure the communications of the Romans with Campania. During the Second Punic War these facts contributed to their prosperity; and when the Latins were among the colonies which endeavoured, but without success, to establish their exemption from the obligation to furnish military levies (Liv. xxvii. 38); and again, during the war with Antiochus (b. c. 191), they attempted, with equal ill success, to procure a similar exemption from providing recruits and supplies for the naval service. (Id. xxxvi. 3.) Minturnae was situated on the borders of an extensive marsh, which rendered the city unhealthy, but its situation on the Appian Way must have contributed to its prosperity; and it seems to have been already under the Republic, what it certainly became under the Empire, a flourishing and populous town. In b. c. 88 Minturnae was the scene of a celebrated adventure of C. Marius, who, while flying from Rome by sea, to escape from the hands of Sulla, was compelled to put into the mouth of the Liris. He at first endeavoured to conceal himself in the marshes near the sea-coast; but being discovered and dragged from thence, he was cast into prison by order of the magistrates of Minturnae, who sent a slave to put him to death. But the man is said to have been so struck with the majestic appearance of the aged general that he was unable
to execute his task; and hereupon the magistrates determined to send Marius away, and put him on board a ship which conveyed him to Africa. (Plut. Mar. 36—39; Appian, B. c. i. 61, 62; Vell. Pat. ii. 19; Val. Max. i. 5 § 8; I. Cass. ii. 10; Liv. vii. 51. xxviii.; July 3, 276: Cic. pro Flacco. 10; pro Sect. 22.) We hear little more of Minturnae under the Republic, though from its position on the Appian Way it was regrettably noticed incidentally by Cicero (ad Att. v. 1, 3, viii. 13, xvi. 10.) It still retained in his time the title of a colony; but received a material accession from a fresh body of colonists established there by Augustus; and again at a later period under Caligula. (Lib. Colon. p. 203; Hygin. de Limit. p. 178; Joseph. Antiq. p. 335.) We find it in consequence distinguished both by Pliny and Ptolemy by the title of a colony, as well as in inscriptions (Plin. iii. 5. 9; Ptol. iii. 1. § 63; Orell. Insc. 3762; Mommsen, I. R. N. 4058—4061); and notwithstanding its unhealthy situation, which is alluded to by Ovid, who calls it "Minturnae graves" (Met. xv. 716), it appears to have continued throughout the Roman Empire to have been a flourishing and important town. Its prosperity is attested by numerous inscriptions, as well as by the ruins still existing on the site. These comprise the extensive remains of an amphitheatre, of an aqueduct which served to bring water from the neighbouring hills, and the substructions of a temple, as well as portions of the ancient walls and towers. (Romanelli, vol. iii. p. 430; Estacus, Classical Tour, vol. ii. p. 318.) All these remains are on the right bank of the Liris, but according to Pliny the city extended itself on both sides of the river; and it is certain that its territory comprised a considerable part of both banks of the Liris. (Hygin. de Limit. p. 178.) The period of its destruction is unknown; we find it still mentioned in Procopius (B. G. iii. 26) as a city, and apparently a place of some strength; but at the commencement of the middle ages all trace of it is lost, and it was probably destroyed either by the Lombards or Saracens. The inhabitants seem to have withdrawn to the site of the modern Trajetto, a village on a hill about 1½ miles distant, the name of which is obviously derived from this usage of the Liris (Ad Trajectum), though wholly inapplicable to its present more elevated position.

Between Minturnae and the sea-coast, at the mouth of the Liris, was the celebrated grove of Marica [Lucus Maricae], with a temple or shrine of the goddess of that name, which seems to have enjoyed a great reputation for sanctity. (Plut. Mar. 39; Strab. v. p. 253.) She appears to have been properly a local divinity; at least we do not meet with her worship under that name anywhere else in Italy; though many writers call her the mother of Latins, and others, perhaps on that very account, identified her with Circe. (Virg. Aen. vii. 47; Serv. ad loc.; Lactant. Inst. Div. i. 21.) We may probably conclude that she was connected with the old Latin religion; and this will explain the veneration with which her grove and temple were regarded, not only by the inhabitants of Minturnae, but by the Romans themselves. Frequent allusions to them are found in the Latin poets, but always in close connection with Minturnae and the Liris. (Hor. Carm. iii. 17; 7; Lucan. ii. 424; Martial, xiii. 83; Claudian, Prob. et Ol. Cons. 259.)

Strabo calls Minturnae about 80 stadia from Fornix, and the same distance from Sunnassa; the

Itineraries give the distance in each case as 9 miles. (Strab. v. p. 233; Itin. Ant. pp. 108, 121.) After crossing the Liris a branch road quitted the Appian Way on the left, and led by Suscesa to Terracina, where it joined the Via Latina. [E. H. B.]

M'NYA (Myrina), a city of Thessaly, said by Stephans B. (s. v.) to have been formerly called Halmenia (Halménia), and to have derived its name from Mynas. It is mentioned by Pliny (iv. 8. 15) under the name of Almen, and in conjunction with Orchomenus Mintynus in Thessaly. (See Miller, Orchomenos und die Minger, p. 244, 2nd ed.)

M'NYAE (Myrina), an ancient race in Greece, said to have been descended from Minyas, the son of Orychomenos, who originally dwelt in Thessaly, and afterwards migrated into Boetia, and founded Orchomenus. [For details see Orchomenus.]

Most of the Argonautic heroes were Mynaires; and some of them having settled in the island of Lemnos, continued to be called Mynaires. These Lemnian Mynaires were driven out of the island by the Tyrrhenian Pelagians, and took refuge in Lacedaemon, from whence some of them migrated to Thera, and others to Tripbylia in Elys, where they founded the six Mynaire cities. (Herod. iv. 145—148.)

[Elis, p. 818.]

M'NYEUS (Myógoro), the ancient name of the river Anigrus in Elys. (Hom. xii. 721.) [Ant. Grs.]

MIROBRIGA (Míbrígra), 1. Also called MIEOBRICA (Pliin. iv. 12. s. 33; Coins), a town of the Celts in Lusitania, upon the Ocean (Ptol. ii. 5 § 6), identified by some with Odemira, by others with Sines. (Mentelle, Esp. Anc. p. 260; Ubert; i. 1. p. 390.)

2. A Roman municipium, in the territory of the Tardei, in Hispania Baetica, on the road from Emerita to Caesaraugusta, now Capilla, N. of Fuente Oveluna. (Ptol. ii. 4. § 13; Plin. iii. 1. s. 3; It. Anton. p. 444; Iscr. Gruter, pp. 76, 257.)

3. A town of the Oretani, in Hispania Tarraconensis, mentioned only by Ptolemy (ii. 6. § 39).

MISENUM (Míseno), was the name of a remarkable promontory on the coast of Campania (Misenum Promontorium, Ptol. iv. 4. § 13; sometimes also Misen Promontorium, Liv. xxxii. 13; το Mísero ἄκρα, Strab.: Capo di Miseno), together with the adjacent port (Portus Misenus, Flor. i. 16), and a town which grew up adjoining it, after the harbour had become the station of the Roman fleet. The promontory of Misenum forms the northern limit of the celebrated gulf called the Crater or Sinus Cumannus (the Bay of Naples). It is an almost isolated headland, forming a hill of considerable elevation, and of a somewhat pyramidal form, joined to the mainland opposite to Procida only by a narrow strip of low land, between which and the continuation of the coast by Bauli and Baiae is a deep inlet forming the harbour or port of Misenum (Strab. v. p. 243). A large stagnant pool or basin, still deeper in, now called the Mare Morto, communicated with this outer port by a very narrow entrance, which could be closed by a bridge or causeway. It is probable that the headland of Misenum itself at one time formed part of the encircling heights of the crater of a long extinct volcano, of which the Mare Morto occupies the centre, and the Monte di Procida (as the headland opposite to the island of that name is now called) constituted the opposite margin. (Danby On Volcanoes, p. 202, 2nd edit.)
MISENUM.

The name of the promontory of Misenum was derived, according to a tradition very generally adopted by the Roman writers, from the trumpeter of Aeneas, who was supposed to be buried there (Virg. Aen. vi. 163, 212—233; Propert. iv. 18, 3; Sil. Ital. xii. 135; Stat. Silv. iii. 1, 150; M. Val. ii. 4. § 9; Solin. ii. § 13). Another legend, however, seems to have represented Misenum as one of the stations of Ulysses (Strab. v. p. 245). There is no trace of the existence of a town on the spot at an early period, though it is almost certain that its secure and land-locked port (already alluded to by Lyconophron, Alex. 737) must have been turned to account by the Cumaeans during the period of their naval and commercial power. Before the close of the Roman Republic the actual promontory of Misenum, as well as the neighbouring shores of Baiae and Bace, was become a favourite site for the villas of wealthy Romans; but it was not till the reign of Augustus that any considerable population was collected there. That emperor first introduced the custom of maintaining a fleet for the defence of the Tyrrhenian or Lower Sea, of which Misenum was made the permanent station (Suet. Aug. 49; Tac. Ann. iv. 5), as it continued throughout the period of the Empire. Thus we find the "classis Misenumensis" continually alluded to by Tacitus (Ann. xiv. 3, 62, xx. 51, Hist. ii. 100, iii. 56, &c.); and the elder Pliny was stationed at Misenum as one of the companions of Ulysses (Ep. i. 49), and the eruption of Vesuvius broke out, in which he perished, A.D. 79, and of which his nephew has left us so interesting an account (Ep. vi. 16. 20). At a much later period we find the establishment of a fleet at Misenum, with a legion specially organised for its service, referred to as a permanent institution, both by Vegetius and the Notitia. (Veget. v. 1. 2; Notit. Dijn. ii. p. 118.) There can be no doubt that in consequence of this important establishment a considerable town grew up around the port of Misenum; and we learn from several inscriptions that it possessed municipal privileges, and even bore the title of a colony. (Orell. Inscr. 3772; Mommsen, J. R. N. 2573—2577.) But the "Misenumae," whose name frequently occurs in inscriptions, are in general the soldiers of the fleet (Milites classis praetorii Misennatium, Mommsen, l.c. 2725, &c.), not the inhabitants of the town.

Before it became thus memorable as the station of the Roman fleet, Misenum was remarkable in history for the interview between Octavian and Antony and Sextus Pompeius, in which the two former were received by Sextus on board his ship, and a treaty was concluded for the division of the Roman Empire between the three contracting parties. It was on this occasion that his imperial Menas proposed to Pompey to cut the cables and carry the two triremes off to sea. (Plut. Ant. 32; Dion Cass. xlvi. 36; Vel. Pat. ii. 77.) At a somewhat earlier period Cicero notices it as having been infested by the Cilician pirates, who carried off from thence the daughters of M. and L. Antonius, who had himself carried on the war against them. (Cic. pro Leg. Manil. 12.) We learn from Pictarch that C. Marius had a villa there, which he describes as more splendid and luxurious than was suited to the character of the man (Plut. Mar. 54); nevertheless it was then far inferior to what it became in the hands of L. Lucullus, who subsequently purchased it for a sum of 2,500,000 denarii, and adorned it with his usual magnificence. It subsequently passed into the hands of the emperor Tiberius, who appears to have not unfrequently made it his residence; and who ultimately died there, on the 16th of March, A. D. 37. The villa itself is described as situated on the summit of the hill, commanding an extensive view over the sea; but it is evident, from the account of its vast substructions and subterranean galleries, &c., that it must have comprised within its grounds the greater part of the promontory. (Plut. L. c., Lucill. 39, Seneca, Ep. 51; Tac. Ann. vi. 50; Suet. Tib. 72, 73; Dion Cass. lvi. 28; Phaedr. Fab. ii. 36.)

Besides this celebrated villa of Lucullus, we learn from Cicero that M. Antonius the orator had a villa at Misenum, and that the triumvir, his grandson, made it a frequent place of residence. (Cic. de Or. ii. 14, ad Att. x. 8, xiv. 20, Phil. ii. 19.) At a much later period Misenum became the place of exile or confinement of the unhappy Romulus Augustus, the last emperor of the West, whom the villa of Lucullus was assigned as a place of residence by Odoacer after his deposition, A. D. 476. (Jorrand. Got. 46. Marcellin. Chron. p. 44.) Horace notices the sea off Cape Misenum as celebrated for its echiuin or sea-urchins. (Hor. Sat. ii. 4. 33.)

Some ruins, still extant near the summit of the hill, are in all probability those of the villa of Lucullus. Of the town of Misenum the remains are but inconsiderable; they are situated on the S. side of the Portu di Miseno, at a place now called Grata; while the remains of the earlier port, called a spot called Il Forno, a little further to the W., just where the inner basin or Mare Morto opens into the outer port. The two were separated in ancient times by a bridge of three arches, which has recently been replaced by a closed causeway, the effect of which has been to cause both the inner basin and outer harbour to fill up with great rapidity, and the latter has in consequence become almost useless. In the sides of the hill at the head of the port, and on the N. of the Mare Morto are excavated numerous sepulchres, which, as we learn from the inscriptions discovered there, are those of officers and soldiers of the fleet stationed at Misenum. Many of these inscriptions are of considerable interest, as throwing light upon the military and naval institutions of the Roman Empire. They are all collected by Mommsen (Inscr. Rom. Vet. pp. 143—154).

MISI'TUS (Μιστής, a town of Macedonia, the position of which is under consideration, elsewhere (E. B. J.).

MISI'THUM (Μισθοῦς), a town of the mountain tribe of the Omphalioi in the north of Pisidia (Plut. v. 4. § 12), and probably the same as the town of Misthia, which Hierocles (p. 625) places in Lycaonia. The latter name occurs also in other late writers, as Theophanes (Chron. p. 320) and Nicephorus (c. 20).

MISCA. [CARTHAGO, Vol. I. p. 531, a.]

MISULAX (Μισυλάξ)

MITHRIDATIS RICIO (Μιθρίδατος ριχιος, Plut. vi. 9. § 19), a district of Asiatie Sarmatia, E. of the Ilipijaci Montes. It derived its name from Mithridates, king of the Bosporus, whom Vaillant (Achaem. sarmat. Imper. vol. ii. p. 246) calls eighth of that name, and who fled to this country for refuge in the reign of the emperor Claudius. (Plin. iv. 5; Tac. Ann. xii. 15; Dion Cass. lxi. 8.) (E. B. J.)

MITHRIDATIUM (Μιθριδάτιον, a fortress of the Troad, situated on the frontiers of Galatia and Pontus. After the subjugation of Pontus by the Romans, Pompey took Mithridatium from Pontus,
and gave it to a Galatian prince Bogdilatuarus, or Bogdilat, as he is called on coins. (Strab. xii. p. 567; Sestini, p. 129.)

MYTHILENE. [MYTHILENE.]

MYTHYS, a river of Pieria in Macedonia, which the Roman army, in the third campaign against Peneus, under Q. Marcius, reached on the first day after their occupation of Dium. (Liv. xiv. 7.)

This Myth was perhaps the river of Katerina. (Leake, North. Greece, vol. iii. p. 424.) [E. B. J.]

MIZAGUS. [MIZAGUS.]

Mizpah v. MIZPEH (Mas'phá). This Hebrew apppellative (τζαπ), signifying "a commanding height," "a beacon," "watchtower," and the like (καταπεριτετευμένοτο πνουσ σημαίνει κατά την Εβραίαν ἀπονομήν, Joseph. Ant. vi. 2 § 1), served as the proper name of several sites or towns in Palestine, doubtless from their positions.

1. The most important was Mizpah (once written Misphe, Josh. xviii. 26), in the tribe of Benjamin, where a conclave of the tribes of Israel was held on important occasions, during the times of the Judges, and was one of the stations in Samuel's annual circuit. (Judges. xx. 1, 3, xxxi. 1; 1 Sam. vii. 5—17, x. 17, 47.) It was strengthened by a king of Judah, as a frontier garrison against Israel, and he used for his winter quarters brought from the neighbouring Ramah, which Basba, king of Israel, had built on his southern frontier, "that he might not suffer any to go out or to come in to Ass, king of Judah." (1 Kings. xv. 17—22; comp. 2 Chron. xvi. 6.) After the destruction of Jerusalem by Nebuchadnezzar it became, for a short time, the seat of the government, and there it was that Gedalih and his officers were barbarously murdered by Ishmael and his company. (2 Kings. xxv. 22—29; Jer. xxvi. 7.) It is clear from this narrative that it was situated on the highroad between Samaria and Jerusalem (xli. 5, 6); and it is evident from the narrative in Judges that it could not be far distant from Gibeah of Benjamin, as the head-quarters of the Israelites were at Mizpah while they were besieging Gibeah. It was restored and inhabited soon after the captivity (Nehem. ii. 7, 15), and is mentioned in the book of Maccabees as situated over against Jerusalem (Maspaph κατά πέραν τῆς Ἰερουσαλήμ). It has been having been formerly an oratory of Israel; and there it was that Judas Maccabæus and his brothers inaugurated their great work with fasting and prayer. (1 Macc. iii. 46.) It is frequently mentioned by Josephus in his narrative of the Scripture history, but his orthography is far from uniform. Masapha (vi. 2 § 1), Masapha (vi. 4 § 4, x. 9 § 2, 4, 5), Maspha (viii. 13 § 4). In the last cited passage he informs us that Mizpah was in the same place as Banatham (or Beinatham), which is 40 stadia from Jerusalem (§ 3). Eusebius and St. Jerome most unaccountably confound this Mizpah with the Mizpah of Gilead (infra, No. 3). They place it near Kirjathjearim. (Onomast. s. v. Masapha.) Its site has not been satisfactorily identified. Dr. Robinson thinks that either Tell-el-Fel (Beem-hill), lying about an hour south of Er-Ra'm (Raamath) towards Jerusalem, or Nebi Samwil, somewhat further distant from Er-Ra'm, to the west of the former site, would correspond to the works of Mizpah. He inclines strongly to the latter site (Bib. Res. vol. ii. p. 144); which, however, seems to be too far removed from the highroad between Jerusalem and Samaria, on which Mizpah was certainly situated. Possibly the modern village of Shophat, identical in meaning with Mizpah, situated on that road, near to Tell-el-Fel, may mark this ancient site; or another site, between this and Er-Ra'm, on the east of the road, still called 'Ain Nisba, may mark the spot. It is worthy of remark that the high ground to the north of Jerusalem is called by a name of kindred signification with Mizpah, and doubtless derived its name Μασαφά from that town. It is on this ridge that Shophat lies.

2. Mizpah (LXX, Masphá) is mentioned among the cities of Judah (Jos. xvii. 26), and this may be either the one which Eusebius mentions as still existing under the same name, in the borders of Eleutheropolis to the north, or the other in the tribe of Judah, on the way to Aelia. The former of these is probably Tell-es-Saff, the Alba Specula of the middle ages; the latter may be Beit-Saff, a little to the south of Jerusalem, between that city and Bethlehem.

3. Mizpah, in Mount Gilead, probably identical with Banath-Mizpeh Gad (Josch. xiii. 26), derived its name from the incident mentioned in Judges. xxvi. 38—40, and this may be either the one which Eusebius mentions as still existing under the same name, in the borders of Eleutheropolis to the north, or the other in the tribe of Judah, on the way to Aelia. The site was called "Mispah; for, he said, The Lord watch between me and thee, when we are absent one from the other." This is doubtless the Mizpah of Jephtha the Gileadite, which seems to have had somewhat of a sacred character, and to have served for the national con- ventions of the trans-Jordanic tribes, as its name- sake in Benjamin did in Palestine Proper. (Judges. x. 17, xi. 11, 34.) Eusebius notices it as a Levitical city in the tribe of Gad. (Onomast. s. v. Masapha.)

4. A fourth Mizpah is named in Jos. xi. 3, more to the north of Peraea, where we read of "the Hivite under Hormon, in the land of Mizpah," and presently afterwards of "the valley of Mizpah eastward" (ver. 8), which cannot be identical with the Gileadite Mizpah, but must have been at the southern base of Mount Hermon.

5. Mizpah of Moab is mentioned (in 1 Sam. xxii. 3) in a manner which seems to intimate that it was the capital of that country in the time of David, as it was certainly the residence of its king. (Euseb. Onom. s. v. Masapha.) [G. W.]

MZNUS, or MINZUS, a small town in Galatia, between Lagnina and Ancyra, where the Emperor Augustus must have resided for some time, as several of his constitutions are dated from that place, both in the Codex Theodosianus and the Codex Justinianus. (Itin. Hieros. p. 575; It. Ant. p. 142; Notit. Episc. where it is called Mepisios; Hieroc. p. 697, where it bears the name Μεπίσιος; Tab. Punt. calls it Miasgias; Cod. Theod. de his qui ad Eccles. i. 3; de Epist. i. 33; de Pven. i. 16.) Mizus was the sea of a bishop, as we know from several council s at which its bishops are mentioned. Kiepert identifies the place with the modern Ajna. [L. S.]

MOAB (Μωάβ), vallis, regio, campesinaria, Κε [MOABITAE. The notice of Eusebius may be here introduced (Onomast. s. v. Móáb):—"A city of Arabia, now called Areopolis. The country also is called Moab, but the city Rabbath Moab." [Areopolis.]

MOABITAE (Μαωάθαί: the country Moabiti-)... the people descended from Moab, the son of...
Lot, the fruit of his incestuous connection with his eldest daughter. (Gen. xix. 37.) Moses has preserved the very early history of their country in Deuteronomy (ii. 9—11):—"The Lord said unto me, District not the Moabites, neither contend with them in battle, for I will not give thee of their land for a possession; because I have given Ar unto the children of Lot for a possession. The Emims dwelt there in times past, a people great, and many, and tall, as the Anakims." The Moabites, having dispossessed these gigantic aborigines, held possession of their country, which was bounded on the north by the river Arnon, which separated them from the Amorites. At an earlier period, indeed, they had extended their conquests far to the north of the Arnon, but had been forced to retire before the Amorites, to whom they had ceded their northern conquests, even before the children of Israel came into their coasts; and several fragments of the ancient war-songs relating to these times are preserved by Moses. (Num. xxii. 13—15, 26—30.) The boundary question was revived subsequently, in the days of Jephthah, when the Amorites demanded the restoration of the country that Israel had made between the Arnon and the Jabbok south and north, and to the Jordan westward, as of right belonging to them, their title not having been invalidated by 300 years' occupation by the Israelites. It appears from Jephthah's historical review of the facts, that the Israelites had neither invaded nor occupied any part of the territories of which Moab and Ammon were in actual possession at the period referred to; but only so much of their ancient possessions as Sihon king of the Amorites had already forced them to cede them. (Judges, xxi. 10.) 1. It is remarkable that the memorial of the occupation of the territory north of Arnon by the Moabites has been preserved, through the Mosaic records, even to this day, in the name that is popularly assigned to that remarkable mountain district east of the Dead Sea, which forms so conspicuous and remarkable a feature in the distant view from Jerusalem towards the east, still called "the mountains of Moab," as in Deuteronomy that high table land is described as the "plains of Moab." (Deut. xxvii. 1, xxviii. 41.) and it is obvious occasionally uses the same latitude, of the country north of the Arnon, describing the Moabites as still a mighty nation of Canarsia (Ant. i. 11. § 5); and reckoning among the Moabitie cities occupied by the Jews under Alexander Jannaeus, Cheshbon (Heshbon), Medaba, Pella, and others that lay considerably north of the Arnon (Ant. xiii. 15. § 4), although in other passages he makes that river divide the Moabites from the Amorites (Ant. iv. 5. § 1), and describes the country of Moab (Judges, xvi. 18), and the southern limit of Jerom (Bell. Jud. iii. 3. § 3), consistently with which notices he compares the country of the Amorites to an island, bounded by the Arnon on the S., the Jabbok on the N., and the Jordan on the E. (Ant. iv. 5. § 2.) It is then unjustly remarked by Reland (Palaeostina, p. 102), that by "the plains of Moab," where the Israelites were encamped before they crossed the Jordan (Num. xxxii. 48, 49, 50), which is described as being over against Jericho, and by the "land of Moab," in which mount Neba is said to be situated (Deut. xxxii. 49; comp. xxxiv. 1, 5, 6, 8), it is not to be understood as though that district was actually in possession of the Moabites at that time; but is so called because they formerly held it under their dominion. (Num. xxvi. 26.) It may be added, that after it had been occupied by the tribes of Gad and Reuben, to whom Moses assigned it (Num. xxxii. 33—35) the Moabites again conquered it for a time, as it is clear that Eglon must have subjugated that district east of the Jordan, before he could have possessed himself of Jericho, on the west of that river. (Judges, iii. 12—30.) Their long and undisturbed tenure of their own proper country is forcibly described by the prophet Jeremiah. "Moab hath been at ease from his youth, and he hath settled on his beds, and hath not been emptied from vessel to vessel, neither hath he gone into captivity; he did no taste of grief, and his heart was exalted in him, and his heart was not changed." (xliii. 11); and the enumeration of its prosperous cities, in his denunciation, indicates the populousness and richness of the country, to which the Israelites resorted when suffering from famine in their own most fruitful districts (Ruth, i. 1), and which supplied the market of Tyre with grain. (Ezek. xxvii. 17.) [MINNITH.] The country is described by Josephus as fertile, and capable of supporting a number of men on its produce. (Ant. iv. 5. § 1.) This account both of its population and produce, is confirmed by modern travellers, and the existing monuments of its numerous cities. Thus Irbî and Mangles, proceeding south from Kerok, "ascended into a country of downs, with verdure so close as to appear almost like turf, and with cornfields at intervals." They passed many ruined cities, the names of several of which they obtained; "in short," they add, "the whole of the fine plains in this quarter are covered with sites of several towns, on every eminence or spot convenient for the construction of one; and as the country appears to have been inhabited with great fertility" (Travels, p. 371, compare under June 5, p. 456); and it is to this quarter that the Arabs referred, when they reported to Volney "that there are to the SE. of the lake Asphaltites, within three days' journey, upwards of three hundred ruined towns absolutely deserted; several have large edifices with columns." (ib. p. 310.) He indeed assigns the country of the Nabathaeans, the most potent of the Arabs and of the 1st century, to this quarter, which is more probably to be referred to the earlier inhabitants of the country, who, we know, lived in settled habitations, while the Nabathaei were a Bedawi tribe, living for the most part in tents. In any case the present aspect of the country furnishes a striking commentary on Jeremiah xlviii., e.g. "Joy and gladness is taken from the plentiful field, and from the land of Moab; and I have caused wine to fail from the wine-presses: none shall tread with shouting; as the land shall be no那样 cultive." (C.W.)

MOCISUM, or MOGUSUM (Μωγισύς, Μωγοσύς), a fort in the north western part of Cappadocia, which the Emperor Justinian, at the time when he divided the country into three provinces, raised to the rank of the capital of Cappadocia III. On that occasion the place was considerably enlarged, and its name was changed into Justinianopolis. (Procop. de Aed. v. 4; Hieroc. p. 701, where it is miswritten Pegenwosios, &c. "Pegenwosios, Const. Parph. de Them. i. 2; Porph. B. z. v. Montesius; Const. Coment. ii. p. 96.) Its modern name is Kir Sheker. [L. S.]

MOCICIA (Μωκία), a city of Gaspilne Gaul, situated on the river Lumburn, about 12 miles N. of Milan, the name of which is not found during the period of the Roman Empire, and it was probably in
MODIN.

ogeneity of Mediolanum, but the Gothic king Theodoric constructed a palace there, and made it his summer residence. It continued to be a favourite abode of the Lombard kings, and Queen Theodolinda founded a Basilica there, which has ever since been one of the most celebrated churches in the N. of Italy, and still contains many interesting relics of the celebrated Lombard queen. (P. Duc. Hist. Lang. iv. 22, 43.) [E. H. B.]

MODIN (Μοδίν, LXX.; Modeia, Modeis, Joseph; Modia, Euseb.) The residence of Mattathias, the father of John Hyrcanus, on the island of Modeia in the Gulf of peas and his four valiant brothers, who was however only a sojourner at Modin, being a native of Jerusalem, and a priest of the course of Jorib. It was probably the native place of the sons, as it was also their burying-place. Here it was that the first opposition to the impious edict of Antiochus Epiphanes was made, when Mattathias slew with his own hand the renegade Jew who had offered idolatrous sacrifice, and demolished the altar. (Jos. Anti. xii. 10, 7 ff.; 1 Macc. xvi. 27-30.)

As already stated, it was Eusebius and S. Jerome who first identified the remains of the Jewish cemetery in the vicinity of Lydda. The author of the 1st Book of Maccabees writes that upon the pillars which were set about the pyramids, Simon e made all their armour for a perpetual memory, and by the honourable ships carried, that they might be seen of all that sail upon the sea.” (ibid. 26, 20.) This would imply that these pyramids were not very far distant from the sea, and so far confirm the report of Eusebius and S. Jerome, who place the sepulchres in the vicinity of Lydda, and perhaps afford some countenance to the idea that the name “Macabee” was derived from the root מַכָּבָא the final medials of the names of the three patriarchs Abra- ham, Isaac, and Jacob, which the tribe of Dan, on whose borders Modin was situated, are said to have carried on their banner, (Ireland, s.v. p. 901.)

A comparatively modern tradition has placed Modin on a remarkable conical hill, named Shibah, 21 hours from Jerusalem, on the left of the Jaffa road; but this is, as Dr. Robinson has remarked “several hours distant from the plain, upon the mountains, and wholly shut out from any view of the sea.” (Lilb. Rev. vol. ii. p. 529.) He suggests that it may have been at Latron, which is also on the Jaffa road, on the very verge of the plain (ibid. note 4, and vol. iii. p. 20, n. 4.) But this is too far from Lydda, and so near to Nicopolis [Ex. 60; 3. 29] that Eusebius and S. Jerome must have erred in placing it, and Modin has doubtless described it by its vicinity to that city, rather than to Diospolis. Its site has yet to be sought. [G. W.]

MODOGULLA (Μοδογούλλα, Ptol. vii. 1 § 89), a town mentioned by Ptolemy, on the western side of Hindostan. It is probably the present Madgup, at no great distance from Calliany. [V.]

MODOMASTICE (Μοδομαστική, Ptol. vi. 6 § 2), one of the four divisions into which Ptolemy divides the province of Carmania Deserta (now Kirman). [V.]

MODRA (νδ. Μόδρα), a small town, which, according to Strabo (xii. p. 540), was situated in Thyrigia Epitetas, at the sources of the river Gal- lus; but as this river flows down from the norther part of Mount Arabia, which forms the boundary between Phrygia and Bithynia, Strabo must be mistaken, and Modra probably belonged to the south-west of Bithynia, and was situated at or near the modern Atine Gndl. (Paul. Lycas, Soc. Voy. i. 14.) As Strabo’s expression is είν Μόδρα, some have supposed that Modra was no town at all, but only a name of a district; but it is known from Constantine Porphyrogenthus (de Them. vi.) that the district about Modra was called Moderne. [L. S. J. C.

MODUBAE (Μοδούβας, Ptol. vii. 1 § 89), the name of one of the unknown tribes or nations placed by Pliny beyond the Ganges, in that part of India which was formerly called India extra Ganges. [V.]

MODUTTI (Μοδοττύος, Hom. vii. 4 § 7), a port in the island of Taprobane or Ceylon, mentioned by Ptolemy. The strong resemblance of the name makes it extremely probable that it is the same with the present Mentatte, where there are still the remains of a great city, and where a great number of Roman coins of the times of the Antonines have been dug up. It appears to have been situated at the northern point of the island. The inhabitants were called Modottori. [V.]

MOENUS (the Minus), a navigable river of Germany, which has its sources in the Sudeti Montes, near the town of Mesogasia, and after flowing in a western direction through the country of the Her- munduri and the Agri Decumates, empties itself into the Rhine, a little above Mungtau (P technological and artistic, including the Nile, the canal of Joseph (Baal- Juarf). A portion of its ancient bed is represented by the modern Birket-al-Kerin. Of all the remarkable objects in a land so replete with wonders, natural and artificial, as Egypt, the lake of Moeris was the most enigmatic to the ancients. Herodotus (ii. 149), who is followed by Pliny (v. 9. s. 9), regarded it as the work of man, and ascribes it to
king of the same name. This supposition is incredible, and runs counter both to local tradition and actual observation. "Nothing," says a modern traveller (Browne, Travels in Egypt, p. 169), "can present an appearance so unlike the works of men. On the NE. and S. is a rocky ridge, in every appearance primordial;" and Strabo (xviii. p. 112) observes upon the marine calcification of its shores and the diluvial sediment of its waters.

So far as it has been hitherto surveyed, indeed, Moeris is known to have been inclosed by elevated lands; and, in early times, the bed of the Nile was too low to admit of its waters flowing into the basin of the lake, even if there had been a natural communication between the river and Moeris. Strabo believed it to be altogether a natural reservoir, and that the canal which connected it with the Nile was sole the work of human art. His opinion is doubtless the correct one, but admits perhaps of some modification. The whole of the Arsinote nome was indebted to human enterprise for much of its extent and fertility. Geologically speaking, it was, in remote periods, a vast limestone valley, the reservoir of waters descending from the encompassing hills, and probably, if connected with the Nile at all, the communication was subterranean. As the accumulated waters gradually subsided, the summits and sides of the higher ground were cultivated. The richness of the soil—a deposit of clay andomite of lime, like that of the Oases—would induce its occupiers in every age to rescue the land from the lake, and to run dams and embankments into the water. In the dry season, therefore, Moeris would exhibit the spectacle of a body of water intersected by peninsulas, and broken by islands, while, at the period of inundation, it would wear the aspect of a vast basin. Accordingly, the accounts of eye-witnesses, such as were Strabo and Herodotus, would vary according to the season of the year in which they inspected it. Moreover, there are grounds for supposing that ancient travellers did not always distinguish between the connecting canal, the Bahr-Jusuf, and Moeris itself. The canal was unquestionably constructed by man's labour, nor would it present any insuperable difficulties to a people so laborious as the Egyptians. There was also a further motive for redirecting the Moerite district generally, for the lands opposite to it, on the eastern bank of the Nile, were generally barren, being either a sandy level or stone quaries, while the soil of the Arsinote nome was singularly fertile, and suited to various crops, corn, vegetables, and fruit. If then we distinguish, as Strabo did, the canal (Dioskou) from the lake (Alipy), the ancient narratives may be easily reconciled with one another and with modern surveys.

Even the words of Herodotus (ἀλιευτικὸς ἕλετο καὶ ὅρθρυτος) may apply to the canal, which was of considerable extent, beginning at Hermopolis (Abydon), and running 4 leagues W., and then turning from N. to S., and remaining 3 leagues more, until it reaches the lake. Modern waters frequently approach the ancients with assigning an incredible extent to the lake, and some of them surmise that Herodotus and Strabo do not speak of the same waters. But the moorings have mostly restricted themselves to the canal, and have either not explored Moeris itself, the NW shores of which are scarcely known, or have not made allowance for its diminution by the encroaching sands and the detritus of fallen embankments.

We infer, therefore, that the lake Moeris is a natural lake, about the size of that of Geneva, and was once only a depression of the limestone plateau, which intersects in this latitude the valley of the Nile. Even in its diminished extent it is still at least 30 miles long, and 7 broad. Its direction is from SW. to NE., with a considerable curve or elbow to the E. The present level of its surface is nearly the same with that of the Mediterranean, with which indeed, according to a tradition mentioned by Herodotus, it was connected by a subterranean outlet into the Syrtes. If the lake, indeed, ever discharged any portion of its waters into the sea, it must have been in pre-historic times.

The waters of Moeris are impregnated with the alkaline salts of the neighbouring desert, and with the depositions—murrate of lime—of the surrounding hills. But, although brackish, they are not suitable as is to be pursued to fish or to the crocodile, which in ancient times were kept in preserves, and tamed by the priests of the Arsinote nome. (Strab. xviii. p. 112; Aelian, Hist. A. x. 24.) The fisheries of the lake, especially at the point where the shores regulated the influx of the Bahr-Jusuf, were very productive.

The revenue derived from them was, in the Pharaonic era, applied to the purchase of the queen's wardrobe and perfumes. Under the Persian kings they yielded, during the season of inundation, the capital of the pre-historic days, a talent of silver daily to the royal treasury (150L). During the rest of the year, when the waters ebbed towards the Nile, the rent was 30 minae, or 60L, daily. In modern times the right of fishing in the Birket-el-Keorrin has been farmed for 13 purses, or about 84L, yearly. (Labarte, Recue Francaise, 1829, p. 67.) It is probable, indeed, that a copious influx of Nile water is required to render that of Moeris palatable to man, or saltatory for fish.

To Thoutmose III. the Egyptians were probably indebted for the canal which connected the lake of Moeris with the Nile. It may have been, in part, a natural channel, but its dykes and embankments were constructed and kept in repair by man. There is, indeed, some difficulty respecting the influx and reflux of the water, since the level of the Bahr-Jusuf is much higher than that of the Arsinote nome and the lake; and Herodotus seems to say (ii. 149) that the waters returned by the same channel by which they entered Moeris. As however, they entered it in all probability by a short point of suction, it is possible that a series of floodgates retained or impelled the water. The main dyke ran between the Memphite and Arsinote nomes.

Belzoni found remains of ancient cities on the western side of Moeris, and is disposed to place the Great Labyrinth in that quarter. But if we may trust the accounts of the best ancient writers, it certainly was not on that side of the lake. Its shores and islands were, however, covered with buildings and ruins of Arsinote mention that have been made already. But Herodotus tells an extraordinary story of 'pramis' seated in the lake itself ( σατ):—"About the middle of it are two pyramids, each rising 300 feet above the water; the part that is under the water is just the same height. On the top of each is a colossal of stone seated in a chair." This account is singular, as implying that pyramidal buildings were sometimes employed as the bases of statues. But it is impossible to reconcile it with the accentuated depth of the Birket el-Keorrin, on which an average does
MOESIA.

not exceed 12 feet, and even where it is deepest is only 28. We may indeed admit, that so long as the fisheries formed a royal monopoly, a larger body of water was admitted from the Nile, and the ordinary depth of the lake may thus have been greater than at present. It is also possible that much of the surrounding country, now covered with sand, may formerly, during the inundation, have been entirely submerged, and therefore that the pyramids which Herodotus saw, the sides of which even now bear traces of submersion (Vyme, *On the Pyramids*, vol. iii. p. 84), may have been the frames of these submerged pyramids. Thus, now beyond the reach of the Birket-el-Kerf, but within the range of the ancient Moeris. Herodotus, if, as is probable, he visited the Arsinoite nome in the wet season, may have been struck with the elevation of these monuments above the lake, and exaggerated their proportions as well above as below its surface. Pococke (Travels, vol. i. p. 63) tells us that he saw on its western extremity, "a head of land setting out into the lake, in a semicircular figure, with white cliffs and a height that was thought might be the upper part of the two pyramids described by Herodotus. And Pére Lucas ("Voyages en Egypte", vol. ii. p. 48) observed an island in the middle of the lake, a good league in circumference. He was assured by his guides that it contained the ruins of several temples and tombs, two of which were lotter and broader than the rest.

The region of Moeris awaits more accurate survey. The best accounts of it, as examined by modern travellers, will be found in Belzoni, *Traverses Champseliens, l'Egypte*, vol. i. p. 329; Jomard, *Description de l'Egypte*, vol. i. p. 79; Ritter, *Erdkunde*, vol. i. p. 803. [W. B. D.]

MOESIA, a Roman province in Europe, was bounded on the S. by M. Haemus, which separated it from Thrace, and M. Orbichus and Scordus, which separated it from Macedonia, on the W. by M. Scordus and the rivers Drusus and Savus, which separated it from Illyricum and Pannonia, on the N. by the Danube, which separated it from Dacia, and on the E. by the Po and Poitus Euxinos, which corresponded to the present Servia and Bulgaria. The Greeks called it Mysia (Moesia), and the inhabitants Mysians (Moeos), and sometimes European Mysia (Mysia ή επί Epyopοi, Dion Cass. xlix. 36; Appian, Ill. 6), to distinguish it from Mysia in Asia.

The original inhabitants of Moesia were, according to Strabo, a tribe of Thracians, and were the ancestors of the Mysians of Asia (vii. p. 295). Of the early history of the country, little or nothing is known. In n. c. 277, a large body of Gaulish invaders entered Moesia, after the defeat and death of their leader Brennus, and settled there under the name of the Scordisci. The Romans first entered Moesia in n. c. 75, when C. Scribonius Curio, consul of Macedonia, penetrated as far as the Danube, and gained a victory over the Moesians. (S. Ruf. Bren. 7; Jornand. de Regn. Suec. 50; Eutrop. vi. 2.) But the permanent subjugation of Moesia was probably effected by M. Licinius Crassus, the grandson of the triumvir, who was proconsul of Macedonia in n. c. 29. (Liv. Ep. 134, 135; Dion Cass. ii. 25—27; Flor. iv. 12, 15.) This may be inferred from the statement of Dion Cassius (ii. 7), who represents Augustus two years afterwards (n. c. 27) speaking of the subjugation of Gallia, Mysia, and Asia. Further, in a.d. 6, Dion Cass. mentions the governor of Mysia (iv. 29), and in a. d. 14 Tacitus speaks of the legatus Moesiae (Ann. i. 79); so that there can be no doubt that it was reduced into the form of a province in the reign of Augustus, and that the statement of Appian is incorrect, that it did not become a Roman province till the reign of Tiberius. (Ill. 30.) In the reign of Tiberius, Moesia was laid waste by the Dacians and Sarmatians, being then without a garrison, contrary to the usual Roman practice, for a legion was generally stationed there. (Suet. Tiber. xvi. 4.) As a frontier province of the empire, it was strengthened by a line of stations and fortresses along the south bank of the Danube. A Roman wall was built from Axiopolis to Tomis, as a defence against the Sarmatians and Scythians, who inhabited the delta of the Danube. Moesia was originally only one province, but was divided into two provinces, called Moesia Superior and Inferior, probably at the commencement of Trajan's reign. (Maurand, in Beeker's *Römische Altheth.,* vol. iii. p. 106.) Each province was of a regular legatus, and was divided into smaller districts (regions et rictures). Moesia Superior was the western, and Moesia Inferior the eastern half of the country; they were separated from each other by the river Cebren or Cibarus, a tributary of the Danube. (Ptol. iii. 9, 10.) They contained several Roman colonies, of which two, Rataria and Oescus, were made colonies by Trajan, and Viminacium by Gordian III. (Maurand, l. c.) The conquest of Dacia, by Trajan, removed the frontiers of the empire further north, beyond the Danube. The emperor Hadrian visited Moesia, as we are informed by his medals, in his general progress through the empire, and games in his honour were celebrated at Pincenum. In a. d. 250 the Goths invaded Moesia. Decius, who was then emperor, marched against them, but was defeated and killed in a battle with them in 251. What the value of Decius could not affect, his successor, Trebonianus Gallus, obtained by bribery; and the Goths withdrew to the Danubian frontier. When Aurelian gave way to the Goths, and withdrew his troops and part of the inhabitants to the south side of the river, he formed a settlement in the heart of Moesia, which was named from him Dacia Aureliana. (Dacia, Vol. i. p. 743.) In 395 the Ostrogoths, being hard pressed by the Huns, requested permission of the Romans to pass the Danube, and settle in Moesia. The request was acceded to by Valens, who was then emperor, and a large number took advantage of the privilege. They soon, however, quarrelled with the Roman authorities, and killed Valens, who marched to oppose them. The Goths, who settled in Moesia, are sometimes called Moeso-Goths, and it was for their use that Ulphilas translated the Scriptures into Gothic in the middle of the fourth century. In the seventh century the Slavonians entered Moesia, and the Bulgarians about the same time, and founded the kingdoms of Bulgaria and Servia. Moesia was occupied by various populations; the following are enumerated by Ptolomy in his *Geography* (Ptol. iii. 9; Phin. ii. 26): the Dardani, Celgeri, Triballi, Timarchi, Moesi, Thracae, Scythae, Tricen- nesis, Pincenni, Trögloydites, and Peucini, to which may be added the Scordisci. (Liv. xli. 57.) The relative situations of these people were somewhat as follows: the Dardani, said to be a colony from Dar- dania in Asia, dwelt on the borders of Macedonia. The Triballi dwelt near the river Cibarus; the
Tinnacili by the river Rhindius. The Tinnacii, who derived their name from Triconium, were on the confines of Dalmatia. The Prenchii inhabited the island of Peace, at the mouth of the Danube. The Thracians were near their own country; the Scordisci, between the Dardani and Dalmatia. The Moesii, or Myposi, proper, inhabited the heart of the country to which they gave their name, on the banks of the river Chieirus. [A. L.]

MOGETIANA or MOGENTIANA, a place in Lower Pannonia, on the road from Sopianae to Sabaria. (It. Ant. pp. 263, 233.) Its exact site is uncertain.

MOGONTIACUM or MAGONTIACUM (Maine), a city of Gallia, on the Rhine. On this spot was built a monument in honour of Darius the father of Germanicus. (Eutrop. viii. 13.) Magontiacum, as it is written in the text of Tacitus, is often mentioned in the history of the war of Civits. (Tacit. Hist. iv. 15, 24. &c.) Ptolemy (ii. 9, § 14) writes the name MONROXOIKOS, and places the town in Germany inferior. In Eutropius the form of the word is Mogontiacum (ed. Verheyk); but the MSS. have also the forms Magnus and Magontica, whence is easily derived the French form MAGENNE, and the German Maine. The position of Mogontiacum at Maine on the Rhine is determined by the Rhine, which place it 18 M. P. from Bingen (Bingen), also on the Rhine. It was an important post under the Roman empire, but no great events are connected with the name. Ammianus Marcellinus (xxv. 11) calls it a Municipium, which means a town that had a Roman form of administration. [G. L.]

MORGUS (Μοργός), a navigable river in Cœtis, flowing into the Exime between the Phinisus in the north, and the Isis in the south; its mouth is just midway between the two, being 90 stadia distant from each. (Arrian, Perip. Pont. Exu. p. 7, Plin. vi. 4.) As an ancient reading in Pliny is Morygos, and in the Codex Veyssonii, it is possible that the real name of the river may have been Morgus, and that in Arrian also we must read Morygos.

MOLADA (Moladai), a town of Palatine, reckoned among the uttermost cities of the tribe of Judah toward the coast of Edom southward (Judg. xxvi. 21, 26), and indeed in that part which fell to the tribe of Simeon, "whose inheritance was within the inheritance of the children of Judah." (ib. xix. 1, 2; 1 Chron. iv. 24, 28.) In the Adolph's Atlas, "Videtur esse calidum ac Malatha" (Adolph. s. v. p. 901.), which Malatha is mentioned by Josephus as a castle of Idumea, to which Agrippa, the son of Aristobulus and son-in-law of Herod the Great, retired in his distress after his return from Rome, and where he meditated suicide. (Ant. xvii. 7, § 2.) It is mentioned also by Eusebius and S. Jerome as iv. M. P. distant from Arad (Arasud), which they describe as an ancient city of the Amorites, situated in the wilderness of Kedus (Kulmûn), x. M. P. from Hebron, and the road to Antioch. (Onomast. s. v. 'Arasud, Αρωσαίδα; Ireland, Polycrates, s. v. Molatha, pp. 885, 886.) The site of Arad is still marked by a ruin of the same name, at the required distance S. of Hebron; near to which are wells and runs named EL MILK, which Dr. Robinson was disposed to regard as marking the site of the ancient Moladah of the Old Testament, the Malatha of the Greeks and Romans." (Lib. Hist. vol. ii. p. 621.)

MOLINDAE (Plin. vi. 19, s. 22), a people mentioned by Pliny, who lived in the eastern part of India extra Gangem. It seems probable that they are the same as those noticed by Ptolemy with the name Mandarunia (Mandarunia, vili. 2, § 14). [V.]

MOL十六条 [Μολόσθενη]

MOLOEUS [Μολόος].

MOLOSSI, MOLNSSI [Μολοσσις].

MOLURIS [Μολύρης]. (Nasban, Vol. ii. p. 317, a.)

MOLYCRIA, MOLYCRIAE, or MOLYCRJA (Molycrion, Thuc. ii. 84; Molycera, Strab. x. p. 451, et alii; Molycerius, Polyb. v. 94 ; Paus. ix. 31. § 60; Eth. Molyceros, more rarely Molyceris, Molyceris, fem. Molycerissa, Molyceris), a town of Aetolia, situated near the sea-coast, and at a short distance from the praemunia Antirrhium, which was hence called Ρηιον τοιο Molycerion (Thuc. ii. 86), or Molycerom Flav. (Strab. viii. p. 336.) Some writers call it a Locrian town. It is said by Strabo to have been built after the return of the Heraclidae into Pellanopseus. It was colonised by the Corinthians, but was subject to the Athenians in the early part of the Peloponnesian War. It was taken by the Spartan commander Eurylochus, with the assistance of the Aetolians, c. 426. It was considered sacred to Poseidon. (Strab. x. p. 451, 460; Scyl. p. 14; Thuc. ii. 84, iii. 102 : Dial. xii. 60 ; Polyb., Pass., ll. ce.; Plin. iv. 2, s. 3; Pol. iii. 15. § 3; Steph. Byz. s. v. MoL)

MOMPHIS (Μομφήμης), Strab. xxvii. p. 803; Diod. i. 66, 97; Steph. B. s. v.), the capital of the nome Mo-Memphis, in the Delta. It was seated in lat. 31°5' N., on the eastern shore of the lake Mareotis, N. of the Natrix Lakes. Both its ancient and its modern appellation—Μομφήμης—indicate its position as the Lower Memphis, or Memphis in the marshes. During the troubles which led to the Dodecarchy, Memphisa was a place of some strength, owing to the difficulties of its approaches. It was chiefly remarkable for its exportation of mineral waters, notable for their medicinal properties. A cow, worshipped at Memphisa. [W. B. D.]

MONA (Μόνα, Poll. iii. 2, § 12; Μόνα, Dion Cassii. xi. 7), an island in Britain, off the coast of the Orдовices, the Isle of Anglesey.

Cæsar describes Mona as situated in the middle of the passage from Britain to Ireland (B. G. v. 13), but by Mona in this passage he must mean the Isle of Man, which Pliny calls MONAFIA (ib. xvi. s. 30); and Pliny refers to MONARIA or MONOIDA (Μοναρία, Μονώιδα).—The Isle of Anglesey was first invaded by S Wennius Paulinus, governor of Britain under Nero, a.D. 61. Previous to the appointment of S Wennius Paulinus, the Romans had met with some reverses in the west of Britain. From the vigorous measures adopted by Paulinus on entering upon the government of Britain, it may be inferred that the Druids of Mona had excited the Ordives and the Siures to rise in rebellion; or had assisted them; probably both. Tacitus states that Mona was a re- captura for fugitives. The island was well populated, and there the priests of the Druidical religion had established themselves in great strength. Paulinus was recalled from the conquest of Anglesey by the revolt of the Britons under Boudicca, and its subjugation was not completed till a.D. 78 by Agricola. (Tac. Agric. pp. 15, 18, Ann. xiv. 29.) [C. R. S.]

MONAIA. [MONAIA.]

MONA. [MONA.]

MONESI, one of the many peoples of Aquitania.
emmerated by Pliny, who places them below the Saltus Pyrenaeus (iv. 19). The name seems to be preserved in that of Moncium, which is between Pons and Naturrarems, where it is said that there are traces of Roman camps. Moncium is in the department of Basses Pyrénées.

[6. L.]

MONETIUM (Mokétrou), a town of the Iapodes in Iliria. (Strab. iv. p. 207, vii. p. 314.)

MONOECI PORTUS (Monoecia lucis, Strab. i. 41), or more correctly PORTUS HERCULIS MONOECI (Plin. vii. 5, § 7; Tac. Hist. iii. 42), sometimes also PORTUS HERCULIS alone (Val. Max. i. 6, § 7: Monoec.), a port and town on the coast of Liguria, at the foot of the Maritime Alps, distant rather more than 200 stadia from Antipolis. (Strab. iv. p. 202.) Its name was obviously derived from the existence there of a temple of Hercules; and the Greek form of the epithet by which it was characterised, at once shows that it must have owed its foundation to the Greeks of Massilia. But Strabo, who derives the same inference from the name, had evidently no account of its origin found on which he was naturally connected by later writers with the fables concerning the passage of Hercules, so that Ammianus ascribes the foundation of "the citadel and port" of Monoecus to Hercules himself. (Amm. Marc. xx. 10, § 9.) The port is well described by Strabo (l. c.) as of small size, so as not to admit many vessels, but well sheltered. Lucan, however, who gives a somewhat detailed notice of it, says it was exposed to the wind called by the Gauls Circus (the Venit de Eise) which rendered it at times an unsafe station for ships (Lucan. i. 405—408); and Silvanus Italicus dwells strongly on the manner in which the whole of this part of the coast of Liguria was swept by the same wind, which he designates under the more general name of Boreas. (Sil. Ital. i. 586—593.) The port was formed by a projecting rocky point or headland, on which stands the modern town of Monoec, and which was doubtless occupied in like manner in ancient times, at first by the temple of Hercules, afterwards by the town or castle of Monoecus (are Monoeci, Ammian. l. c.) The town, however, does not seem to have ever been a place of much importance; the advantage of its port for commercial purposes being greatly neutralised by the want of communication with the interior. It was, however, frequently resorted to by the Roman fleets and ships, on their way along the coast of Liguria into Spain; and hence was a point of importance in a naval point of view. (Val. Max. i. 6, § 7; Tac. Hist. iii. 42.) The headland of Monoec itself is of comparatively small height, and lies immediately under a great mountain promontory, formed by one of the spurs or projecting ridges of the Maritime Alps; and which was regarded by many writers as the natural termination of the great chain of the Alps. [Alpes, p. 107.] * The passage of this mountain must always have been one of the principal difficulties in the way of constructing a high road along the coast of Liguria; this was achieved for the first time by Augustus, and on the highest point of the passage (called in the Itineraries "in Alpe summa" and "in Alpe maritima," Itin. Ant. p. 296; Tab. Pent.), be erected a trophy or monument to commemorate the complete subjugation of the different nations inhabiting the Alps. The inscription of this monument has been preserved to us by Pliny (iii. 20. s. 24), and is one of our chief authorities for the geography of the Alpine tribes. The ruins of the monument itself, which was of a very massive character, still remain, and rise like a great tower above the village of Turbia, the name of which is evidently a mere corruption of Tropaeum Augusti (Tropauria Seduvcoi, Ptol. iii. i. § 2), or Tropaeum Alpium, as it is termed by Pliny (l. c.).

The line of the Roman road, cut in the face of the mountain, may be traced for some distance on each side of Turbia, and several ancient milestones have been found, which commemorate the construction of the road by Augustus, and its reparation by Hadrian. (Millin. Voy. en Picmont, vol. ii. pp. 135, 138; Durante, Choreographie du Comté de Nice, pp. 23—30.)

The port of Monoecus seems to have been the extreme limit towards the E. of the settlements of Massilia, and hence both Pliny and Ptolemy regard it as the point from whence the Ligurian coast, in the more strict sense of the term, began. (Plin. iii. 5. s. 7; Ptol. iii. i. §§ 2, 3.) Ptolemy has made a strange mistake in separating the Portus Herculis and Portus Monoeci, as if they were two distinct places.

[M. H. B.]

2. A town on the Danube, at the foot of the mountain, 23 miles from Singidunum. (Tab. Pent.)

[6. L.]

MONS BALBUS, a mountain fastness of N. Africa, to which Masinissa retired. (Liv. xxix. 31.)

Shaw (Trav. p. 184) places the range in the district of Dakkul, E. of Tunis; perhaps Sablet-es-Salih.

[M. B. J.]

MONS BRISIACUS. This is one of the positions in the Roman Itins. along the Rhine. They place it between Helvétum or Helcelus [Helcerus] and Trunci. There is no doubt that is Vienz-Brisach or Altbrisach, as the Germans call it. All the positions of the Itins. on the Rhine are on the west or Gallic side of the river, but Vienz-Brisach is on the east side. The Rhine has changed its bed in several parts, and this is one of the places where there has been a change. Brisach is described by Luitprand of Pavia (quoted by D'Anville), as being in the tenth century surrounded by the Rhine "in modum insulae." It may have been on an island in the Roman period. The hill (mons) of Altbrisach is a well marked position, and was once crowned by a citadel. Altbrisach is now in the duchy of Baden, and opposite to Neubrisach on the French side of the Rhine.

[6. L.]

MONS MARIORUM, a town in Hispania Baetica, on the Mons Mariamans, and on the road leading from the mouth of the Anas to Emerita, now Minervas, in the Sierra Morena. (It. Ant. p. 442; Inser. ap. Cavo, Ant. i. 20; Spon. Miscell. p. 191; Fiorez, Esp. Segr. ix. p. 23.)

MONS SACER (Sacer usque, Ptol. iii. i. § 4), a mountain range on the SE. coast of Crete, near Hierapytna, identified with the Pythok (Πυθωκ) of Strabo (x. p. 472; comp. Groskurd, ud loc.; Höck, Kroto, vol. i. p. 16.)

[6. B. J.]

MONS SELEUCUS, in Gallia Narbonensis, is placed in the Antonine Itin. next to Vapincum (Giap), on a road from Vapincum to Vienna (Vienne). D B
MOPSIIUM.

It is 24 M. P. from Vapincum to Mons Seleucus, and 26 M. P. from Mons Seleucus to Lucus (Luci). The Jerusalem Itin. has two Mutations (Ad Fines, and Davianum) between Vapincum and the Mansio Mons Seleucus, and the whole distance is 31 M. P. The distances would not settle the position of Mons Seleucus, but the name is preserved in Selúna. The Đuktic Mont-Sélun is only an abbreviation of the Bactiana Moutis Seléve, a name that appears in some of the old documents of Dauphine. Many remain exist or did exist at Mons Seleucus; certain evidence that there was a Roman town here.

Magnentius was defeated A. D. 353 by Constantius at Mons Seleucus. (Tillieux, Histoire des Empereurs, vol. iv. p. 383.) The memory of the battle is preserved in several local names, as Le Champ Timpéries, and Le Champ Batuilla. (Ubert, Gallien, p. 448.)

MOPSIIUM (Μόπσιον: Eth. Μόπσιον, Steph. B., Ἔμφατον; a dialectic form of Μόπσιον; a town of Pelaqáscis in Thessaly, situated upon a hill of the same name, which, according to Story, was situated in a midway between Larissa and Tempe. Its ruins are still conspicuous in the situation mentioned by Livy, near the northern end of the lake Koréfai or Nessonis. (Steph. B. s. e.; Strab. ix. pp. 441, 443; Liv. xii. 61, 67; Luke, Northern Greece, vol. iii. p. 377.)

MOPSOTA. [ΠΑΜΠΡΙΛΛΑ]

MOPSOTIA (Μόπσοτια), an ancient name of Attica, derived from the hero Mopsos or Mopsus. (Strab. iv. p. 397; Lycoarch. 1595; Steph. B. s. e.)

MOPSOEUSÆNE (Μόπσοευένη) was a town in the eastern part of Cílicia, on the river Cydnus, and is nearly to the frontier of Cataracta; to which Pliny (v. 7. § 7), in fact, assigns it. Its site was on the southern slope of Mount Taurus, and in the neighborhood of the mountain pass leading from Cílicia into Cappadocia, twelve miles north of Tarsus. It is celebrated in history as the place where the emperor Constantius died, A. D. 361. (Sozom. v. 1; Philostorg. vi. 5; Eutrop. x. 7; Amm. Marc. xxii. 29; Itin. Ant. p. 143, where it is called Namesion; H. Hieros. p. 579, where its name is mutilated into Mamurión.)

MOPSUESTIA (Μόπσευστεία ή Μόπσουσσεία; Eth. Μόπσευστια; a considerable town in the extreme east of Cílicia, on the river Pyramus, and on the road from Tarsus to Issus. In the earlier writers the town is not mentioned, though it traced its origin to the ancient soothsayer Mopsus; but Pliny (v. 22), who calls it Mopses, states that in his time it was a free town. (Comp. Strab. xiv. p. 676; Cic. ad Fam. iii. 8; Steph. B. s. r.; Procop. de Aed. v. 5; Amm. Marc. xiv. 8.; Phot. Cod. 176; Ptol. v. 7. § 7; It. Ant. p. 763; Hieroc. p. 705; H. Hieros. p. 680, where it is called Mansèia.) A splendid bridge across the Pyramus was built at Mopsuestia by the emperor Constantius. (Malal. Chron. xiii.) It was situated only 12 miles from the coast, in a fertile plain, called Αἱμιανον πεδίον. (Arruan, Arab. ii. 5; Eustath. ad Dionys.)

MORGANTIA. Per. 872.) In the middle ages the name of the place was corrupted into Mumista; its present name is Messis or Messia. Ancient remains are not mentioned, and travellers describe Messis as a dirty and uninteresting place. (Leake, Asia Minor, p. 217; Otte's Reisen, i. c. 8.)

MORBIMIUM, in Britain, is mentioned in the Notitia as the quarters of a body of horse Cataphractarii ("a praedectus equitum Cataphractariorum Morbimii"). We are justified by an inscription in placing Morbium at Morekley near Witchetown, where the remains of a Roman camp are yet to be traced. The inscription, preserved in a MS. of Dr. Stukeley, but not read by him, is upon a monument to the memory of a soldier of the Cataphractarii, which was found within the precincts of the Camp. (C.R.S.)

MORDULAMNE (Μορδουλάμνη, Ptol. viii. 4. § 5), a post on the eastern coast of Tapinokhorne (Ceyox). The name is probably a corruption of the MSN, and ought to be Μορδουλάμνη or Μορδουλάμνη. It is, perhaps, represented by the present Kitiot, where there are still extensive ruins. (Barr, London, vol. ii. p. 22; Davy, Account of Ceylon, p. 420.)

MORGANTIA, MURGANTIA, or MORGAN'TIUM (Μοργάντιον, Strab.; Μοργαντίον; Diod.; Eth. Μοργαντίων. The name is variously written by Latin writers Murgantia, Murgantia, and Morgantia; the inhabitants are called by Cicero and Pliny, Murgentiai), a city of Sicily, in the interior of the island, to the SW. of Catana. It was a city of the Siculi, though Strabo assigns its foundation to the Morganthi, whom he supposes to have crossed over from the southern part of Italy. (Strab. vi. p. 529.) He justifies the inference from the resemblance of name; Stephanus of Byzantium (s. v.), who is evidently alluding to the same tradition, calls Morgenium, or Murgantia (as he writes the name), a city of Italy, but no such place is known. (Morgentius.) Strabo is the only authority who notices the existence of the Morganthi in Sicily; and it is certain that when Morgantia first appears in history it is as a Sienian town. It is first mentioned by Diodorus in n. c. 359, when he calls it a considerable city (πολὺς Αμφίσκοι, Diod. xi. 78): it was at this time taken by Ducezios, who is said to have built a temple to his father and family by the causeway but after the fall of that leader, it became again independent. We next hear of it in n. c. 424, when, according to Thucydides, it was stipulated, at the peace concluded by Hermocrates, that Morgantia (or Morganthus, as he writes the name) should belong to the Camarinesians, they paying for it a fixed sum to the Syracusians. (Thuc. iv. 65.) It is impossible to understand this arrangement between two cities at such a distance from one another, and there is probably some mistake in the name. It is certain that in n. c. 396, Morgantia again appears as an independent city of the Siculi, and was one of those which fell under the arms of Dionysius of Syracuse, at the same time with Agrigum, Menenium, and other places. (Diod. xiv. 78.) At a later period it afforded a refuge to Agathocles, when driven into exile from Syracuse.

* It has been suggested that we should read Karavaios for Καραβαϊούς; but the error is more probably in the other and less-known name. Perhaps we should read Μοσουκάνη for Μοσούκανον, the district of Mosysca immediately adjoining that of Camarina.
MORGANTIA

and it was in great part by the assistance of a body of mercenary troops from Morgantia and other towns of the interior, that that tyrant succeeded in establishing his despotic power at Syracuse, n.c. 317. (Justin. xxii. 2; Diod. xix. 6.) Morgantia is repeatedly mentioned during the Second Punic War. During the siege of Syracuse by Marcellus it was occupied by a Roman garrison, and great magazines of corn collected there; but the place was betrayed by the inhabitants to the Carthaginian general Himilco, and was for some time occupied by the Syracuse-san leader Hippocrates, who from thence watched the proceedings of the siege. (Liv. xxiv. 36, 39.) It was ultimately recovered by the Roman general, but revolted again after the departure of Marcellus from Sicily, n. c. 211; and being retaken by the praetor M. Cornelius, both the town and its territory were assigned to a body of Spanish mercenaries, who had deserted to the Romans under Mericus. (Id. xxvi. 21.)

Morgantia appears to have still continued to be a considerable town under the Roman dominion. In the great Servile insurrection of n. c. 102 it was besieged by the leaders of the insurgents, Tryphon and Athenion; but being a strong place and well fortified, offered a vigorous resistance; and it is not clear whether it ultimately fell into their hands or not. (Diod. xxvi. 4, 7; Exe. Phot. pp. 553, 554.) Cicero repeatedly mentions its territory as one fertile in corn and well cultivated, though it suffered severely from the excursions of Verres. (Cic. Terr. iii. 18, 43.) It was in his time still a municipal town, and we find it again mentioned as such by Pliny (iii. 8, s. 14); so that it must be an error on the part of Strabo, that he speaks of Morgantia as a city that no longer existed. (Strab. vi. p. 270.) It may, however, very probably have been in a state of great decay, as the notice of Pliny is the only subsequent mention of its name, and from this time all trace of it is lost.

The position of Morgantia is a subject of great uncertainty, and it is impossible to reconcile the conflicting statements of ancient writers. Most authorities, however, concur in associating it with the Sicilian towns of the interior, that border on the valleys of the Syracusae and its tributaries, Meletum, Agrigyn, Assarous, &c. (Diod. xi. 78, xiv. 78; Cic. Terr. l. c.; Sil. Ital. xiv. 263); and a more precise testimony to the same effect is found in the statement that the Carthaginian general Mago encamped in the territory of Agrigyn, by the river Clerus, on the road leading to Morgantia. (Diod. xiv. 95.) The account of its siege during the Servile War also indicates it as a place of natural strength, built on a lofty hill. (Diod. xxxvi. l. c.) Hence it is very strange that Livy in one passage speaks of the Roman fleet as lying at Morgantia, as if it were a place on the sea-coast; a statement wholly at variance with all other accounts of its position, and in which there must probably be some mistake. (Liv. xxiv. 27.) On the whole we may safely place Morgantia somewhere on the borders of the fertile tract of plain that extends from Catania inland along the Simeto and its tributaries, and probably on the hills between the Dittino and the Gurna Longa, two of the principal of those tributaries; but any attempt at a nearer determination must be purely conjectural.

There exist coins of Morgantia, which have the name of the city at full, MOPANTINUS: this is unfortunately effaced on the one figured in the preceding column. [E. H. B.]

MORGETES (Morgytes), an ancient people of southern Italy, who had disappeared before the period of authentic history, but are noticed by several ancient writers among the earliest inhabitants of that part of the peninsula, in connection with the Oenotrians, Ital, and Siculi. Antiocbus of Syracuse (ap. Dionys. i. 12) represented the Siculi, Morgetes and Italiates as all three of Oenotrian race; and derived their names, according to the favourite Greek custom, from three successive rulers of the Oenotrians, of whom Italas was the first, Morges the second, and Siculus the third. This last monarch broke up the nation into two, separating the Siculi from their parent stock; and it would seem that the Morgetes followed the fortunes of the younger branch; for Strabo, who also cites Antiocbus as his authority, tells us that the Siculi and Morgetes at first inhabited the extreme southern peninsula of Italy, until they were expelled from hence by the Oenotrians, when they crossed over into Sicily. (Strab. vi. p. 257.) The geographer also regards the name of Morgantia in Sicily as an evidence of the existence of the Morgetes in that island (Ibid. pp. 257, 270); but no other writer notices them there, and it is certain that in the time of Timochides their name must have been effectually merged in that of the Siculi. In the Etymologicum Magnum, indeed, Morges is termed a king of Sicily; but it seems clear that Morges is the Siculi is intended; for the fable there related, which calls Siris a daughter of Morges, evidently refers to Italy alone. (Ety. M. v. 295.) All that we can attempt to deduce as historical from the legends above cited, is that there appears to have existed in the S. of Italy, at the time when the Greek colonists first became acquainted with it, a people or tribe bearing the name of Morgetes, whom they regarded as of kindred race with the Chones and other tribes, whom they included under the more general appellation of the Oenotrians. [OENOTRIA.] Their particular place of abode cannot be fixed with certainty; but Strabo seems to place them in the southern peninsula of Bruttia, adjoining Rhegium and Locri. (Strab. vi. p. 257.) [E. H. B.]

MORIDUNUM, in Gallia Narbonensis, is placed by the Table on the road from Vienna (Tennie) to Alpis Cetiss, and 14 M. P. short of Cularo (Gremble). The place is Morinias. [G. L.]

MORIJA. [JERUSALEM.]

MORICAMBA (Moricamb, Ptol. ii. 3, § 3), an estuary of Britain, Morcambe Bay, on the coast of Lancashire. [C. R. S.]

MORIDUNUM, in Britain, placed both by the Antonine Itin. and Geogr. Rav. near Isca of the Dumnonii (Exeter): it was one of the stations termed mansiones and mutationes, probably the latter: its site has by no means been agreed upon by

COIN OF MORGANTIA.
topographers, and three or four localities have been proposed. Of these, Seaton and Hembury, near Honiton, appear to have the best claims for consideration, and the portions next to large towns were often merely establishments for relays of horses and other purposes connected with posting, they were the least likely to be constructed on a large or substantial scale; and thus we have often great difficulty in detecting even a vestige of them. [C.R.S.]

MORIMARUSA. [OCEANUS SEPTENTRIONALIS.]
MORIMARUSA (Moraevi), a district in the north-west of Cappadocia, comprising both banks of the river Halys, is said to have been fit only for pasture land, to have had scarcely any fruit-trees, and to have abounded in wild asses. (Strab. xii. pp. 534, 537, 539, 540; Plin. II. N. vi. 3.) The Romans regarded it as a part of Galatia, whence Polonen (sv. 6) does not mention it among the districts of Cappadocia.

[L.S.]

MORINI, a nation of Belgica. Virgil is the authority for the quantity:

“Extremique hominum Morini.” (Arn. viii. 727.)

It has been shown in the article MENAPII that on the north the Morini were bounded by the Menapii. On the west the ocean was the boundary, and on the south the Ambiani and the Atrebates. The eastern boundary cannot be so exactly determined. The element of Morini seems to be the word mor, the sea, which is a common Flemish word still, and also found in the Latin, the German, and the English languages.

Caesar, who generally speaks of the Morini with the Menapii, has fixed their position in general terms. When he first invaded Britannia he went into the country of the Morini, because the passage from there to Britannia was the shortest (B. G. iv. 21). In the next expedition, n. c. 54, he sailed from Portus Itius, having ascertained that the passage from this port to Britain was the most commodious. Portus Itius is in the country of the Morini [ITIUS PORTUS.]. Polonen (ii. 9, § 8) mentions two cities of the Morini, Gesoricam or Bononia (Bonologue), and Tarinum (Therioneum), east of it, in the interior.

If we add Castellum Morimorum (Cassel), in the interior, south of Dunkerque, “we see that, besides the diocese of Bonologue, the territory of the Morini comprises the new dioceses of St. Omer and Ypern, which succeeded to that of Themarn.” (D'Anville.) But if Cassel is not within the limits of the Morini, their territory will not be so extensive as D'Anville makes it. [MENAPII.]

Caesar's wars with the Morini were more successful than with the Menapii. A large part of the territory of the Morini did not offer such natural obstacles as the land of the Menapii. The marches of the Morini would be between Calais and Dunkerque. The force which the Morini were supposed to be able to send to the Belgic confederation in n. c. 57 was estimated at 25,000 men. Though most of the Morini were subdued by Caesar, they rose again in the time of Augustus, and were put down by C. Carinas (Dion Cassius, li. 21). When Bononia was made a Roman port, and Tarinum a Roman town, the country of the Morini would become Romanized, and Roman usage and the Roman language would prevail. There were Roman roads which terminated at Bononia and Castellum.

An inscription mentions the Decemviri of the Colonia Morimorum, but it is unknown what place it is.

[M. L.]

MOSCHIA PORTUS.

MORIUS. [DORETA. Vol. i. p. 412, b.]

MOROX (Moraevi), a town of Lusitania upon the Tagus, which Brutus Calcicus made his headquarters in his campaign against the Lusitanians. (Strab. iii. p. 152.) Its exact site is unknown.

MORONTABAIA (a Morontabaros, Arrian, Indic. c. 22), a place on the coast of Gethrosa, at no great distance W. of the mouths of the Indus, noticed by Arrian in his account of Nearchus's expedition with the fleet of Alexander the Great. It does not appear to have been satisfactorily identified with any modern place.

[M.]

MOROSLI, a town of the Vardulus in Hispania Tarraconensis, identified by Ucrt with St. Sebastianus, which, however, more probably represents Meponia. (Plin. iv. 20, s. 24; Ucrt, ii. i. p. 446; Forbiger, iii. p. 80.)

MORTEMARE. [Palaestina.]
MORTEMARE. [SEPTENTRIONALIS (OCEANUS.]

MORYLLUS. [MYGONION.]

MOSA in Gallia is placed by the Antonine Itin. between Andonatum (Longres) and Tullum (Toul). It is 18 M. P. from Andonatum to Mosas, which is supposed to be Meceae, situated on a passage over the Mosa, and in the line of an old Roman road. (G.L.)

MOSA (Moesa), a river of Gallia, which Caesar supposed to rise in the Vagosus (Voysses) within the limits of the Ligiones. (B. G. iv. 10.) This passage of Caesar, in which he speaks of the Mosae in the lower part of its course receiving a part of the Rhine, called Vahalis (l'Adé), is very obscure. This matter is discussed in the article BATAVIA. D. Casins writes the word in the form Möas (xiv. 42); and Polonen (ii. 9, § 3) has the form Moda in the genitive.

Cæsar (B. G. vi. 35) says that the Scaldis (Schelde) flows into the Mossa; a mistake that might easily be made with such knowledge of the coast of Belgium and Holland as he possessed. The only branch of the Mosae which Caesar mentions is the Sable (Sambure), which joins the Mosae on the left bank at Charleroi in Belgium.

The Mossa, called Meuse by the French, rises about 45° N. lat. in the Faucille, which unite the Cale d'Or and the Vosges. The general course of the Mossa is north, but it makes several great bends before it reaches Liége in Belgium, from which its course is north as far as Grave, where it turns to the west, and for 80 miles flows nearly parallel to the Waul. The Mosse joins the Waul at Gourdon, and, retaining its name, flows past Rotterdam into the North Sea. The whole length of the Mosas is about 500 miles.

[M. L.]

MOSAEUS (Mosaeus, Ptol. vi. 3, § 2), a small stream, placed by Polonen between the Eulenaus and the Tigris. It is probably the same as that called by Marcian (p. 17) the Mayoioi. It was, no doubt, one of the streams which together form the mouths of the Tigris, and may not impassably be the same which Pliny names the Aduna (vi. 27, 31), and which he appears to have considered as a feeder of the Eulenaus.

[M.]

MOSTELI (MORTUS, Ptol. vi. 7, p. 133 comp. p. 151). Mr. Foster thinks there is no such

[OCEANUS.]

[M.]

MOSTELI (MORTUS, Ptol. vi. 7, p. 133 comp. p. 151). Mr. Foster thinks there is no such
culty in identifying it with Kesenn, the last seaport westward of Cape Farzusk, his "Syagros extrema."

2. A second harbour of this name is mentioned by the author of the Peripius, on the east of the Syagros Promontorium, in the large bay named by Ptolemy Sachaites Sinus (Σαχαλίτις κόλπος), and east of the smaller one, named Omana (Ομάα), by the author of the Peripius, who places this Mosch Portus 1100 stadia east of Syagros. He calls it a port appointed for the huling of the Sachaites ince (βαρος αποδημητου του Σαχαλιτου αειθαν πος έδωκεν), frequented by ships from Cane, and a wintering-place for late vessels from Limyra and Baryzara, where they bartered fine linen, and corn, and oil for the native produce of this coast. Mr. Forster furnishes an ingenious etymological explanation of the recurrence of this name on the coast of the Sachaites Sinus. "The Arabic Moscha, like the Greek χαςασ, signifies a hide, or skin, or a boy of skin or leather blown up like a bladders. Now, Ptolemy informs us that the pearl divers who frequented his Sinus Sachaites (unquestionably the site of Arrian's Moscha Portus), were noted for the practice of swimming, or floating about the bay, supported by inflated hides or skins. What more natural than that the parts frequented by these divers should be named from this practice? . . . And hence, too, the name of the Asciate of Ptolemy ('floaters on skins'), the actual inhabitants of his Moscha Portus immediately west of his Syagros."

It is a remarkable fact mentioned by modern travellers, that this practice still prevails among the fishermen on this coast; for "as the natives have but few canoes, they generally substitute a single inflated skin, or two of these having a flat board across them. On this frail contrivance the fisherman seats himself, and either casts his small hand-net or plays his hook and line."

(Plin. xxvii. pp. 79, 80, cited by Forster, Arabia, vol. ii. p. 175. note*. The identification of Arrian's Moscha with the modern Omana, is complete. Arrian reckons 600 stadia from Syagros across the bay which he names Omana. This measurement tallies exactly with that of the Bay of Seher, in Commodore Owen's chart of this coast; and from the eastern extremity of this bay to Moscha Portus, Arrian assigns a distance of 500 stadia, which measures with nearly equal exactness the distance to Ras-al-Steir (the Aousa of Ptolemy), situated about 60 Roman miles to the east of the preceding. The identity of the Moscha Portus of Arrian with the Aousa of Ptolemy is thus further corroborated. "Arrian states his Moscha Portus to have been the emporium of the insect trade; and Pliny proves Aousa to have been a chief emporium of this trade, by his notice of the fact that one particular kind of insect here named the name of Assarinus." (Plin. xii. 35; Forster, L. c. pp. 176, 177.)

(G. W.)

MOCHI (Μοχει, Ηενατ. Fr. 188, ap. Steph. B. s. c.), a Cœcilian tribe, who have been identified with the Mesemh of the prophet Ezekiel (xxvii. 13; Rosemary: Alterthumsk, vol. i. pt. i. p. 248). Along with the Tiburini, Mosmaei, Maecrones, and Mardae, they formed the 19th satrapy of the Persian empire, extending along the SE. of the Exone, and bounded on the S. by the lofty chain of the Armenian mountains. (Herod. iii. 94, vii. 78.) In the time of Strabo (xi. pp. 497—499) Moschice (Μοχηχίς) — in which was a temple of Leneothea, once famous for its wealth, but plundered by Pharmaces and Mithridates — was divided between the Greeks and the Iberians. (comp. Mela, iii. 5. § 4; Plin. vi. 4.)

Procopius (B. G. iv. 2), who calls them Meryx, says that they were subject to the Iberians, and had embraced Christianity, the religion of their masters. Afterwards their district became the appanage of Liparites, the Abasian prince. (Cedren. vol. ii. p. 770; Le Bas, Exemp. Emper. vol. xiv. p. 335; St. Martin, Memoires sur l'Arménie, vol. ii. p. 222.)

(Moschici Montes (Μοσχίχικα όρη, Strab. i. p. 61, xi. pp. 492, 497, 521, 527, xii. p. 548; Plut. Pompey, 34; Mela, ii. 19; Plin. Nat. Hist. vii. 6. § 13; Moschici, M. Plin. v. 27.), the name applied, with that of Paryadres, and others, to the mountain chain which connects the range of Anti-Taurus with the Caucasus. Although it is obviously impossible to fix the precise elevation to which the ancient assigned this name, it may be generally described as the chain of limestone mountains, with volcanic rocks, and some granite, which, branching from the Caucasus, skirts the E. side of Irinaria, and afterwards, under the name of the Pergeh Teig, runs nearly SW. along the deep valley of Aijvok, in the district of Tchidil; from whence it turns towards the S., and again, to the W., along the valley of the Acampis, to the W. of which, bearing the name of the Kop Teig, it enters Lesser Asia. (Ritter, Erdkunde, vol. x. p. 816; Chesney, Expedit. Empir. vol. i. p. 235.)

MOSE in Galil appears in the Table on a road from Dorocortorum (Rictus) to Mediamunt. (Mediamunt.) The place appears to be Monsen on the Mesa. D'Anville says that the place is called Moscanus in the oldest middle age records. (G. L.)

MOSELLA (Μοσελλα), a river of Galilias, which joins the Rhine at Coblenz (Conflicentes). The name bears with it the epithet Tenetheri Caesar (B. G. iv. 15) speaks of driving them into the water "ad confluentes Moscae et Rheni." One of the latest and best editors of Caesar, who however is singularly ignorant of geography, supposes this confluence of the Mosca and the Rhenus to be the junction of the Mosca and a part of the Rhenus which is mentioned by Caesar in another place (B. G. iv. 10; Mosane.) But this is impossible, as D'Anville had shown, who observes that the Usipetes [Menaphe] had crossed the Rhine in the lower part of its course, and landed on the territory of the Menapii. Having taken them up, the invaders entered the country of the Eburones, which we know to be between the Rhine and the Mosca, and higher up than the country of the Menapii. From the Eburones the Germans advanced into the Condusi in the latitude of Liege; and they were here before Caesar set out after them. (B. G. iv. 6.) Caesar's narrative shows that the German invaders were not thinking of a retreat: their design was to penetrate further into Galil, where they had been invited by some of the Gallic states, who hoped to throw off the Roman yoke. After the defeat of the Germans on the river, Caesar had his wooden bridge over the Rhine, the position of which was certainly somewhere between Coblenz and Andernach. The conclusion is certain that this confluence of the Rhenus and the Mosca is the confluence of the Rhenus and the Mosella at Coblenz; and we must explain Caesar's
MOTENI.

mistake as well as we can. It is possible that both rivers were called Mos; and Mosella or Mosina, as Thuc. has it, seems to be a diminutive of Mos, but that reading is somewhat doubtful. (Thuc. ii. 10, ed. Duk.) There is no variation in Caesar's text in the passage where he speaks of the confines of the Rhenus and the Moses. (Caesar, ed. Schneider.) Several of the affluents of the Mosel are mentioned in the ancient writers, and chiefly by Ausonius; the Sura (Sor), Prunca (Prum), Nenereis (Nama), Gelis (Kill), Erubrus (Ruer), Lesara (Loer), Didonous (Dron), Saravus (Saur), and Salmuna (Salu).

The Mosella is celebrated in one of the longer poems of Ausonius, who wrote in the 4th century A.D. The river at times changed the slopes of the hills and the cliffs which bound this deep and picturesque river valley in its course below Trier:

"Qua sublimis apex longo super ardua tractu,
Et rapaces et apicis juvi, flexusque sinuusque
Vitium ab-saurumy naturalique theatro."

(v. 13-4.)

There is a German metrical translation of this poem by Böcking with notes.

The Mosel rises on the western face of the Vosges, and its upper course is in the hill country, formed by the offsets of the mountains. It then enters the plain of Lorriane, and after passing Tullium (Toul), it joins the Moselle on its right bank. From the junction of the Moselle it is navigable, and has a general north course past Disduranum (Metz), and Thionville, to Augusta Trevirorum (Trir or Trêves). From Trir its general course is about NNE. with many great bends, and in a bed deep sunk below the adjacent country, to its junction with the Rhine at Coblenz. The whole course of the river is somewhat less than 300 miles. It is navigable for steamboats in some seasons as far as Metz.

A Roman governor in Gallia proposed to unite the Mosella and the Arar (Stube) by a canal, and thus effect a navigation from the Mediterranean to the North Sea [GALLIA TRANSALPINA, Vol. I. p. 967.]

[C. L.]

MOTENI (Moste), a town of Lydia in the Hyrcanian plain, south-east of Thyatira, and on the road between this latter town and Sardis. In A.D. 17, Mosteni and many other towns of that country were visited by a fearful earthquake. (Ptol. v. 2. § 16; Tac. Ann. ii. 17; Herod. p. 671, where it is erroneously called Moste or Mosteia; Cencil. Chalc. p. 240, where it bears the name Moste.) Its exact site is unknown. (Comp. Racine, loc. cit. iii. 1. p. 869; Scob.)

[1. S.]

MOSCHULUS. [Lemnos.]

MOSYNOECI, MOSYNOOEI, MOSXYNI, MOS-
SYNI (Moesynucke, Mesynoei, Mosiyni, Mos-
ynoi), a tribe on the coast of Pontus, occupying the district between the Tiberuni and Macrones, and containing the towns of Ceunaks and Pharnacia. The Mesynoei were a brave and warlike people, but are at the same time said to have been the rudest and most uncivilized among all the tribes of Asia Minor. Many of their peculiar customs are noticed by the Greeks, who planted colonies in their districts. They are said to have lived on trees and in towers. (Strab. xix. p. 549.) Their kings, it is said, were elected by the people, and dwelt in an isolated tower rising somewhat above the houses of his subjects, who watched his proceedings closely, and provided him with all that was necessary; but when he did nothing that displeased them, they stopped their supplies, and left him to die of starvation. (Xen. Anab. v. 4. § 26; Apollon. Rhod. ii. 1027; Dion. xiv. 30; Symm. Fargam. 166.) They used to cut off the heads of the enemies they had slain and carry them about amid dances and songs. (Xen. Anab. iv. 4. § 17; v. 4. § 15.) It is also related that they knew nothing of marriage (Xen. Anab. v. 4. § 33; Dion. l.c.), and that they generally tattooed their bodies. Eating and drinking was their greatest happiness, whence the children of the wealthy among them were regularly fattened with salt dolphins and chestnuts, until they were as thick as they were tall (Xen. Anab. v. 4. § 32.). Their arms consisted of heavy spears, six cubits in length, with round or globular buttes; large shields of wicker-work covered with ox-hides; and leather or wooden helmets, the top of which was adorned with a crest of hair. (Xen. l.c. v. 4. § 12; Herod. vii. 78.) The fourth chapter of the fifth book of Xenophon's Anabasis is full of curious information about this singular people. (Comp. also Strab. xi. p. 528; Hecat. Fargam. 193; Steph. B. s. v.; Herod. iii. 94; Sibyl. xxx. p. 33; Ann. Marc. xxii. 8; Orph. Argon. 746; Mela, i. 19; Thibull. iv. 146; Curtius, iv. 17; Plin. vii. 14; Val. Flacc. v. 152; Dionys. Per. 766.)

[2. S.]

MOTYEA. [Otene.]

MOTYA (Morey; Eth. Morvaor; S. Pantaleo), a city on the W. coast of Sicily, between Drepanum and Lilybaeum. It was situated on a small island, about three quarters of a mile (six stadia) from the mainland, to which it was joined by an artificial causeway. (Diod. xiv. 48.) It was originally a colony of the Phoenicians, who were fond of choosing similar sites, and probably in the first instance merely a commercial station or emporium, but gradually rose to be a flourishing and important town. The Greeks, however, according to their custom, assigned it a legendary origin, and derived its name from a woman named Motya, whom they connected with the fabulous story concerning Hercules. (Steph. B. s. v.) It possessed, in common with the other Phoenician settlements in Sicily, at a later period under the government or dependency of Carthage, whence Diodorus calls it a Carthaginian colony; but it is probable that this is not strictly correct. (Thuc. vi. 2; Diod. xiv. 47.) As the Greek colonies in Sicily increased in numbers and importance the Phoenicians gradually abandoned their settlements in the immediate neighbourhood of the new comers, and concentrated themselves in the three principal colonies of Solus, Panormus, and Motya. (Thuc. l.c.) The last of these, from its proximity to Carthage and its opportune situation for communication with Africa, as well as the natural strength of its position, became one of the chief strongholds of the Carthaginians, as well as one of the most important of their commercial cities in the island. (Diod. xiv. 47.) It appears to have held, in both these respects, the same position which was attained at a later period by Lilybaeum. [LILYBAEUM.] Notwithstanding these accounts of its early importance and flourishing condition, the name of Motya is rarely mentioned in history until just before the period of its memorable siege. It is first mentioned by Hecataeus (ap. Steph. B. s. v.), and Thucydides notices it among the chief colonies of the Phoenicians in Sicily, which still subsisted at the period of the Athenian expedition. (b. c. 415. (Thuc. vi. 2.) A few years later (b. c. 409) when the Carthaginian army under
Hamilcar landed at the promontory of Lilybaenum, that general laid up his fleet for security in the gulf around Motya, while he advanced with his land forces along the coast to attack Selinus. (Diod. xiii. 54, 61.) After the fall of the latter city, we are told that Hermocrates, the Syracusean exile, who had established himself on its ruins with a numerous band of followers, laid waste the territories of Motya and Panormus (Id. xiii. 63); and again during the second expedition of the Carthaginians under Hamilcar (c. 407), these two cities became the permanent station of the Carthaginian fleet. (Id. xiii. 88.)

It was the important position to which Motya had thus attained that led Dionysius of Syracuse to direct his principal efforts to its reduction, when in n. c. 397 he in his turn invaded the Carthaginian territory in Sicily. The citizens on the other hand, relying on succour from Carthage, made preparations for a vigorous resistance; and by cutting off the causeway which united them to the mainland, compelled Dionysius to have recourse to the tedious and laborious process of constructing a mound or mole of earth across the intervening space. Even when this was accomplished, and the military engines of Dionysius (among which the formidable catapult on this occasion made its appearance for the first time) were brought up to the walls, the Motyans continued a desperate resistance; and after the walls and towers were carried by the overwhelming forces of the enemy, still maintained the defence from street to street and from house to house. This obstinate struggle only increased the previous, but previously known to the Sicilian Greeks against the Carthaginians; and when at length the troops of Dionysius made themselves masters of the city, they put the whole surviving population, men, women, and children, to the sword. (Diod. xiv. 47—53.) After this the Syracusean despot placed it in charge of a garrison under an officer named Biton; while his brother Leptines made it the station of his fleet. But the next spring (n. c. 396) Himilco, the Carthaginian general, having landed at Panormus with a very large force, recovered possession of Motya with comparatively little difficulty. (Id. vi. 55.) That city, however, was not destined to recover its former importance; for Himilco, being apparently struck with the superior advantages of Lilybaenum, founded a new city on the promontory of that name, to which he transferred the few remaining inhabitants of Motya. (Diod. xxii. 10. p. 498.) From this period the latter altogether disappears from history; and the little islet on which it was built, has probably ever since been inhabited only by a few fishermen.

The site of Motya, on which earlier geographers were in mistake, and in many places has been confused and described by Captain Smyth. Between the promontory of Lilybaenum (Coppe Bordo) and that of Agrigallus (S. Tedoro), the coast forms a deep and narrow inlet, in front of which lies a long group of low rocky islets, called the Stagno. Within these, and considerably nearer to the mainland, lies the small island called S. Pantaleo, on which the remains of an ancient city may still be distinctly traced. Fragments of the walls, with those of two gateways, still exist, and coins as well as pieces of ancient brick and pottery—the never failing indications of an ancient site—are found scattered throughout the island. The circuit of the latter does not exceed a mile and a half, and it is inhabited only by a few fishermen; but is devoid of fertility. (Smyth's Sicily, pp. 235, 236.) The confined space on which the city was built agrees with the description of Diodorus that the houses were lofty and of solid construction, with narrow streets (στενοπαλιον) between them, which facilitated the desperate defence of the inhabitants. (Diod. xiv. 48, 51.)

It is a singular fact that, though we have no account of Motya having received any Greek population, or fallen into the hands of the Greeks before its conquest by Dionysius, there exist coins of the city with the Greek legend MOTTAION. They are, however, of great rarity, and are apparently imitated from those of the neighbouring city of Segesta. (Eckhel, vol. i. p. 225.) [E. H. B.]

COIN OF MOTYA.

MOTYCA, or MUTYCA (Μότυκα, Phol.: Eth. Mutycensis, Cie. et Plin.: Moticea), an inland town in the SE. of Sicily, between Syracuse and Camarina. It was probably from an early period a dependency of Syracuse; and hence we meet with no mention of its name until after the Roman conquest of Sicily, when it became an independent municipality, and apparently a place of some consequence. Cicero tells us that previous to the exactions of Verres, its territory (the "ager Mutycensis") supported 187 farmers, whence it would appear to have been at once extensive and fertile. (Cic. Ferr. iii. 43, 51.) Motya is also mentioned among the inland towns of the island both by Pliny and Ptolemy; and though its name is not found in the Itineraries, it is again mentioned by the Geographer of Hanno (Plin. iii. 8. § 14; Ptol. iii. 4. § 14); Geogr. Rav. v. 23). Silius Italicus also includes it in his list of Sicilian cities, and immediately associates it with Notum, with which it was clearly in the same neighbourhood. (Sil. ital. xiv. 268.) There can be no doubt that it is represented by the modern city of Modica, one of the largest and most populous places in the "Val di Noto." It is situated in a deep valley, surrounded by bare limestone mountains, about 10 miles from the sea.

Ptolemy notices also a river to which he gives the name of Motychanos (Μωτυχανός τοποπάδος), which lies on the S. coast, and must evidently derive its name from the city. It is either the trifling stream now known as the Fiume di Scille, which rises very near Modica; or perhaps the more considerable one, now known as Fiume di Ragusa, which flows within a few miles of the same city. [E. H. B.]

MOTYUM (Μωτύμ), a small town or fortress of Sicily, in the territory of Agrigentum. It was besieged in n. c. 451 by the Sicilian chief Ducietus, and fell into his hands after a battle in which he defeated the Agrigentines and their allies; but was recovered by the Agrigentines in the course of the following summer. (Diod. xi. 91.) No other mention of it is found, and its site is wholly unknown. [E. H. B.]

MOXOENE, one of the five provinces beyond the Tigris, coeled by Names to Galerius and the Romans, and which Sapor afterwards recovered.
from Jovian. (Ann. Mare. xxv. 7. § 9, comp. xxvit. 3. § 5; Le Beau, Bass Empire, vol. i. p. 380; vol. iii. p. 161; Gibbon, c. xvir. xxvit.) Its exact position cannot be made out, though it must have been near Karēsdēn. (Ritter, Erdkunde, vol. x. F. B. J.)

MUCIIIRESIS (Mucius, Cse. Mucius Cse. Proc. B. G. iv. 2, 15, 16), a canton of Lazicis, populous and fertile; the vine, which does not grow in the rest of Colchis, was found here. It was watered by the river Rhénon (Pisēo). Archachorulis, its chief town, was the capital of Colchis, and a place of considerable importance in the Lazic war. (Le Beau, Bass Empire, vol. ix. p. 217; Gibbon, c. xvir.)

MUCRÆI or NUCRÆI (the reading is uncertain), a town of Sullûnum, mentioned only by Silius Italicus (viii. 566), the situation of which is wholly unknown. [E. B. J.]

MUCUNI. [Mucutanus.]

MUDUTTI. [Moretti.]

MUGILLA, an ancient city of Lazicis, mentioned only by Döyssius (viii. 36), who enumerates the Magilûn (Magælaouous) among the places conquered by Coriolanus, at the head of the Volscian army. He there mentions them (as well as the Albicetis, who are equally unknown) between the cities of Polibasca and Coelboi, and it is therefore probable that Mugilla lay in the neighbourhood of these cities; but we have no further clue to its site. The name does not again appear, even in Pliny's list of the extinct cities of Lazicis, and we should be apt to suspect some mistake, but that the cognomen of Magillanus, borne by one family of the Papirian gens, seems to confirm the correctness of the name. [E. H. B.]

MUCURUM (Mucosprov), a place on the coast of Illyricum, near Salona, which was taken by Titull, king of the Goths, by Haufr. (Proc. B. G. iii. 32; Le Beau, Bass Empire, vol. ix. p. 82.) [E. B. J.]

MULCHAJA, a town upon a promontory of the same name on the W. coast of Africa (Polyb. ap. Pline. v. 1), now Mahe Bu Sbilinu, the old Munara of our charts. (Comp. London Geog. Journ. vol. iv. p. 302.) [F. B. J.]

MULCHA, a river of Munretania, which Sallust (Jug. 92, 110). Mela (i. 5. §§ 1, 5), and Pliny (v. 2) assign as the boundary between the Mauri and Massaevi, or the subjects of Becchus and Zirnath. As Strabo (xiv. pp. 827, 829) makes the Muloscatu (Molosxai, Molosxai, Ptol. iv. 1. § 7) serve the same purpose, there can be no doubt that they are one and the same river. The Mala (Mala, Ptol. l. c.) of Pliny (1. c.), or the Malaui, which forms the frontier between Maracco and Algerie, is the same as the river which bounded the Moors from the Mauraean province. This river, rising at or near the S. extremity of the lower claim of Atlas, and stretching through a diversified country, as yet almost untouched by Europeans, falls into the sea nearly in the middle of the Gulf of Mélith of our charts. (Saw, Trav. pp. 10—16.) [E. B. J.]

MUNDA (Mundu). 1. An important town of His-pania Baetica, and a Roman colony belonging to the conventus of Asturii. (Strab. iii. p. 141; Pline. iii. 1. s. 3.) Strabo (l. c.) says that it is 1400 stadia from Carteia. It was celebrated on account of two battles fought in its vicinity, the first in B.C. 216, when Cn. Scipio defeated the Carthaginians (Liv. xxv. 42; Sib. Ital. iii. 400), and the second in B.C. 45, when Julius Caesar gained a victory over the sons of Tampy. (Dion Cass. xiii. 39; Aucl. Bell. Hisp. 30, seq.; Strab. iii. pp. 141, 160; Flor. iv. 2; Val. Max. vii. 6.) It was taken by one of Caesar's generals, and, according to Pliny, from that time it ceased to exist. ("Pon Munda cum Pompeii filio rapta," Pline. iii. 1. s. 3.) But this cannot be traced by E. B. J. Strabo (l. c.) describes it as an important place in his time. It is usually identified with the village of Monde, SW. of Malaga; but it has been pointed out that in the vicinity of the modern Monda, there is no plain adapted for a field of battle, and that the ancient city should probably be placed near Cordova. It has been supposed that the site of Munda is indicated by the remains of ancient walls and towers lying between Martos, Alcañete, Espejo, and Bena. At all events this site agrees better with the statement of Strabo, that Munda is 1400 stadia from Carteia, for the distance from the modern Monda to the latter place is only 400 stadia; and it is also more in accordance with Pliny, who places Munda between Attuli and Uso. (Forbgür, vol. iii. p. 51."

2. A town of the Celtiberi in Hispania Tarraconensis, probably near the frontiers of the Carpretanis. (Liv. 43.)

3. A river on the W. coast of Lusitania, falling into the sea between the Tagus and Diarius, near the Mundula. (Pline. iv. 21. s. 33; Molobis, Ptol. iii. p. 153; Muvosa, Ptol. ii. 5. § 4; Mare. p. 43.)

MUNDORIGA. [Munodriga.]

MUNIMENTUM CORBULONIS. [Corbulo- nes Munimentum.]

MUNIMENTUM TRAJANI, a fort in the country of the Mattiacei. (Ann. Mare. xviii. 1.) Its site is not certain, though it is generally believed that the Roman remains near Heochat are the ruins of this fort. (Wilhelm, Toponymien, p. 148.) [L. S.]

MUNYCHIA. [Athienae, p. 306.]

MURANUM (Murora), a town of the interior of Lucania, the name of which is not found in any ancient author, but its existence is proved by the Itinerary of Antoninus, which places a station Sumuranus, evidently a corruption of Sub Murana, on the road from Nermalum to Consentia; and this is confirmed by the inscription found at Le Pultu (Forum Pultum), which gives the distance from that place to Muranum at 74 M. P. It is, therefore, evident that Muranum must have occupied the same site as the modern town of Morone, on a considerable hill, at the foot of which still runs the high road from Naples to Reggio, and where was situated the station noticed in the Itinerary. Near it are the sources of the river Cosille, the ancient Silaris. (Itin. Ant. pp. 105, 110; Orell. Inscr. 3300; Romamelli, vol. i. p. 387.) [E. B. B.]

MURBÖÖI (Murbodi, Ptol. ii. 6. § 52), a people in His-pania Tarraconensis, on the same neighbourhood of the Contrasacti, are the same as the people called Thurbodi by Pliny (iii. 3. s. 4) and Orisius (vi. 21). This may be inferred from the fact that Pliny calls Scirumen a town of the Turmodigii, and Polenun calls Deobrigula a town of the Murb-gii; while in the Antonine Itinerary (p. 449) these two towns are only 15 miles apart. (Forبغür. vol. iii. p. 102.)

MURGANTIA. 1. A city of Sumumia, mentioned only by Livy, who calls it "a strong city" (valdum urbe, x. 17), notwithstanding which it was taken by assault, by the Roman consul P. Hiormas (Pliny; iii. 216), and its possession is fixed by Romanelli at Balshei, a considerable town near the sources of the Fortore (Freuto), in the territory of
the Hirpini, about 20 miles W. of Luceria. An inscription found here would seem to attest that Murgantia existed as a municipal town as late as the reign of Severus; but considerable doubts have been raised of its authenticity. (Romaneli, vol. ii. p. 481; Mommsen, Topografia deglir Irpini, pp. 4, 5; in Bull. dell' Inst. Arch. 1848.) The coins, with an Ocean legend, which have been generally attributed to Murgantia, in reality belong to Teates (Friedländer, Statistik der Münzen, p. 49.)

2. A city of Sicily, the name of which is variously written Murgantia, Margentia, and Morgantia. [Montgantia.] [E. H. B.]

MURGIS (Moöypoi), a town of Hispania Baetica, near the frontiers of Tarraconensis, and on the road from Castulo to Malaca, probably near Puenta de la Guadaira vieja. (Ptol. ii. 4. § 11; Plin. iii. 3. s. 4; Itin. Ant. p. 403; Ubert, ii. 1. p. 352; Færinger, iii. p. 56.)

MURISTE (Mouisaou), one of the four districts of Catanis in Cappadocia, on the west of Iovianae, E. of the town, and south-west of Meditea. It is mentioned only by Ptolemy (v. 7. § 8), and must not be confounded with Marimene. [L. S.]

MURIS (Mahr), a tributary of the Drave (Dravus), which is mentioned only in the Peuting. Table, though the antiquity of the name is un doubted, and attested by the station "in Muris," which was situated on the road leading from Augusta Vindelicorum through Noricum. (Macchar, Noricum, l. p. 280.) [L. S.]

MURCOCRITA, an imperial villa in Panamia, where Valentinian II. was residing with his mother Joviniana, when he was proclaimed emperor. (Amm. Marc. xxx. 10.)

MURSA or MUTSINA (Moipora, Mouopia), also called Mursa Major, to distinguish it from Mursella (Mersella) or Mursa Minor, was an important Roman colony, founded by Hadrian in Lower Pannonia, and had the surname Aelia. It was the residence of the governor of the country, on the Drava, and there the roads met leading from Aquincum, Celcena, and Petovio. In its neighbourhood, Gallienus gained a victory over Ingelians; and Constantine the Great made the town the seat of a bishop, A.D. 338. Its modern name is Esek, the capital of Bavarovia. (Ptol. ii. 16. § 8, viii. 7. § 6; Annel. Vict. de Caes. 33; Zosim. ii. 43; Stephan. B. s. v. Moipora; Geogr. Rav. iv. 19; Itin. Ant. pp. 243, 265, 267, 331; It. Hieros. p. 562; Orelli, Inscriptiones Ital. 3066, 3281.)

The Lesser Mursa (Mursa Minor or Mursella) was likewise situated in Lower Pannonia, ten miles to the west of Mursa Major, on the road from this latter place to Petovio, near the modern village of Petroveci, on the right bank of the Danube. (Ptol. ii. 16. § 7; Geogr. Rav. iv. 19; It. Hieros. p. 562; Th. Pesth.) [L. S.]

MUSSELLA. [Mursa.]

MURSA CAESARIS. [Helveth. vol. i. p. 1042.]

MUSAGORES (Moöypoiyo, Pomp. Mela, ii. § 17), three islands lying off the E. coast of Crete, § 13, the position of which is described by Pliny (iv. 12. s. 20): "Circumventis Crinotopon, tres Musagores appellatae." In Mr. Pashley's map they are represented by Elaphonoeia. (Comp. Höck. Kreto, vol. i. p. 575.) [E. B. J.]

MUSARNA (Mouarvoa, Ptol. iv. 21. § 5, vol. iii. § 9; Marcian, Peripl. 29—32, ap. Geogr. Graec. Min. ed. Müller, 1585), a spot on the shore of Gedrosia, as may be inferred from the comparison of the authority of Ptolemy mentions two places of the name one in Gedrosia, and the other in Caramania; but there can be no doubt that the same place is intended. Arrian speaks of a place which he calls τά Μουαρώα, on the coast of Gedrosia, which was occupied by the Ichthyophagi (Indic. 26). Vincent, who has examined this geographical question with much care, thinks that this port must have been situated a little west of the modern cape Possenna or Passenne. (Voyage de Nearchus, vol. i. p. 242.) The difference in the ancient geographers may be accounted for by the fact that Mursa must have been situated on the boundary between Gedrosia and Caramania. Ptolemy speaks of a tribe, whom he calls Musurumae (Μουαρωματις, vi. 21. § 4). There can be little doubt that they were the people who lived around Mursa. [V.]

MUSONES (Amm. Marc. xxxix. 5. § 27; Moöypoi, Ptol. iv. 3. § 24; Marinini, Plin. iv. 4. § 4; Musaurumae, Pest. Tob.), a Moorish tribe, who joined in the revolt of Firmus. (Amm. Marc. l. c.; comp. St. Martin, Le Beau, Bas Empire, vol. iii. p. 475.) [E. B. J.]

MUSII (Mourowé, Ptol. iv. 3. § 33), a town of Numidia, which the Antonine Itinerary places at 34 M. P. (32 M. P. Pest. Tob.) from Sica Venaria, 52 M. P. from Safeltan, 86 M. P. from Carthage, 119 M. P. (by Tipasa) to Carta; all which distances agree with the position assigned to it by Shaw (Trav. p. 179) and Barth (Wanderungen, p. 221) at 'Abder-Rabbi, so called from the tomb of a "Marabou." According to Vitus Sequester (de Flumin. § 7), it was near the river Bagrodas; but Shaw (l. c.), who first discovered the site, by the remains of a triumphal arch, and a stone with an inscription bearing the ethnic name "Musteiciunum," speaks of it as being at some distance from the present course of the Mejerdah. [E. B. J.]

MUSULAMBI (Tac. Ann. ii. 52, iv. 24; Mouöypoi, Ptol. iv. 3. § 24; Musulanii, Pest. Tob.), a Moorish tribe, whom Ptolemy (l. c.) places to the S. of Carta, at the foot of Aurima. Tacitus (l. c.) gives them a more westerly position, and describes the defeat of this powerful tribe under Tacfarinas, their leader. [E. B. J.]

MUTENUM, a place in Upper Pannonia, on the road from Vinodolica to Celcena, and probably occupying the same site as the modern Mucon. (It. Ant. pp. 233, 266; Claver, Vindel. 5.) [L. S.]

MUTHIL, a river of Numidia, which, from its being in the division belonging to Atherbal, must be looked for towards the E. of that country. (Sail. Jug. 48.) [E. B. J.]

MUTINIA (Mariana, Strab.; Merion, Ptol.; Mouöypoi, Ptol.; Eth. Mutienia, Jodown), an important city of Gallia Cispadana, situated on the Via Aurelia, between Parma and Bologna. It was 33 miles distant from the former, and 25 from the latter city. (Strab. v. p. 216; Itin. Ant. p. 127; Itin. Hier. p. 616.) It appears to have certainly existed previous to the conquest of this part of Italy by the Romans, and was not improbably of Etruscan origin. Livy tells us, that the district or territory in which it was situated, was taken from the Boans, and had previously belonged to the Etruscans (Liv. xxxix. 55); but he does not mention the name of the town, or the period the latter fell into the hands of the Romans, though it was probably during the Gallic War (B.C. 225—222), as we find it in their undisputed
Mutina.

Posession shortly after, at the commencement of the Second Punic War, B.C. 218. At that period Mutina must have already been a considerable place and well fortified: as we are told that, when thecombined arms of the Gauls interrupted the proceedings of the triumvirs who were appointed to found the new colony of Placentia, and compelled them to fly for safety, they took refuge within the walls of Mutina, which afforded them an effectual protection against the arms of the barbarians. (Liv. xxi. 23, 26, xxvii. 21; Pol. iii. 40.) Polybius calls it at this period a Roman colony; but it seems probable that this is a mistake; for we have no account of its foundation as such, nor does Livy ever allude to Mutina as a colony, where he expressly notices those of Cremona and Placentia (xxvii. 10). But whether it had been established by the Romans, or was a regular walled city previously existing (in which case it must have been, like its neighbour Bononia, of Etruscan origin), we have no means of determining, though the latter supposition is perhaps the more probable. In any case it continued to be held by the Romans not only during the Second Punic War, but throughout the long wars which followed with the Cisalpine Gauls and Ligurians. (Liv. xxxiv. 4, 6.) It was not till after the final defeat of the Boians in B.C. 191, on which occasion they were deprived of a large portion of their lands, that the Romans determined to secure the newly acquired territory, by planting there two colonies of Parma and Mutina, which were accordingly established in B.C. 183. (Liv. xxxix. 55.) They were both of them "coloniae civium;" so that their inhabitants from the first enjoyed the full rights of Roman citizens: 2000 settlers were planted in each, and these received 5 jugera each for their portion. (Liv. l.c.) The construction of the great military high road of the Via Aemilia a few years before, B.C. 187 (Liv. xxxix. 2), must have greatly facilitated the foundation of these new colonies, and became the chief source of their prosperity.

But shortly after the foundation of Mutina sustained a severe disaster. The Ligurians who still occupied the heights and valleys of the Apennines bordering on the Boian territory, in B.C. 177 made a sudden descent upon the new colony, and not only ravaged its territory, but actually made themselves masters of the town itself. This was, however, recovered with little difficulty by the consul G. Claudius, 8000 of the Ligurians were put to the sword, and the colonists re-established in the possession of Mutina. (Liv. xlii. 14. 16.) For a considerable period after this, we do not again meet with its name in history; but it appears that it must have risen rapidly to prominence, and become one of the most flourishing of the towns along the line of the Via Aemilia. Hence it bears a con-piacentum in the Civil Wars. When Lepidus, after the death of Suilia, B.C. 78, raised an insurrection in Cisalpine Gaul against the senate, Mutina was almost the only place which was able to offer any resistance to the arms of Pompeius, and was held against him by Brutus for a considerable period. (Plut. Pomp. 16.) But it was the siege which it sustained, and the battles fought in its neighbourhood after the death of Caesar, B.C. 44, that have rendered the name of Mutina chiefly celebrated in history, and are referred to by Suetonius under the name "Bellum Mutinense." (Suet. Aug. 9.) On that occasion D. Brutus, to whom the province of Cisalpine Gaul had been decreed by the senate, threw himself into Mutina with three legions and a large body of auxiliary troops. Here he was besieged by M. Antonius with a numerous army; but the senate having declared against the latter, the two consuls, Brutus and Pansa, as well as the young Octavius, were despatched to the relief and succour of Brutus. (Jan. B.C. 43.) Antonius at this time occupied Bononia, as well as Parma and Regium, with his garrisons, while he himself, with the bulk of his forces, maintained the siege, or rather blockade, of Mutina. Brutus on his arrival seized on Ceturna, while Octavian occupied Forum Cornelii (Impho). From thence they advanced after considerable delays, took possession of Bononia, and approached Mutina itself, but were unable to open communications with Brutus. Meanwhile the other consul, C. Pansa, was advancing with a force of 40,000, and raised legions to their support, when he was attacked by Antonius, at a place called Forum Gallorum, about 8 miles from Mutina on the road to Bononia. (Forum Gallorum.) A severe contest ensued, in which Pansa was mortally wounded; but the other consul, Brutus, having fallen on Antonius's army in the rear, completely defeated it, and compelled him to retire to his camp before Mutina. A second battle took place some days afterwards (April 27, B.C. 43), under the walls of that city, in which Brutus was slain; but the forces of Antonius were again worsted, and that general found himself compelled to retire to the base (which had now lasted for above four months), and retire westward, with a view of crossing the Alps. (Appian B.C. iii. 49—51, 61, 65—72; Dion Cass. xlvi. 35—38; Cic. ad Fam. x. 11, 14, 30, 33, Phil. v.—vii.; Vet. Palt. ii. 61; Suet. Aug. 10.)

Mutina was evidently at this period a flourishing and important town, as well as strongly fortified. Cicero calls it "firmissima et splendidissima populi Romani colonia" (Phil. v. 9); and these praises are confirmed by Appian (B.C. iii. 49), who calls it "a wealthy city," as well as by the fact, that it was the residence of Mutara under the Roman empire until a late period, though the still extant inscriptions attest the fact of its continued prosperity. Some of these give to the city the title of Colonia, as do also Mela and Pliny. (Mela, l.c.; Plin. iii. 15, s. 20; Cavedoni, Marmi Modenese, pp. 120, 165.) We learn also from Pliny and Strabo, that it was famous for the excellence of the wool produced in its territory, as well as for its wine, and the city itself possessed considerable manufactures of earthenware, as well as woolen goods. (Strab. v. 218; Plin. xiv. 3. 4, xxxv. 12. 46, Colum. v. 2. § 3.)

In A.D. 312, Mutina was taken by Constantine during his war with Maxentius, but appears to have suffered but little on this occasion. (Nazar, Paneg. 27.) Before the close of the century, however, both
the city and its territory had begun to feel severely the calamities that were pressing upon the whole of this fertile and once flourishing tract of country. In A. D. 377, the remains of the conquered tribe of the Taifali were settled, by order of the emperor Gratianus, in the country around Mutina, Regionum, and Parna (Ann. March. 377. p. 8).—A plain indication that the population was already deficient; and St. Ambrose, writing not long after the same date, describes Mutina, Regionum, and the other cities along the Aemilian Way, as in a state of ruin and decay, while their territories were uncultivated and desolate. (Ambros. Ep. 39.) The same district again suffered severely in A.D. 432, from the ravages of Attila, who laid waste all the cities of Aemilia with fire and sword. (Hist. Miscell. v. p. 549.) They, however, survived all these calamities, from which, nevertheless, Mutina appears to have suffered more severely than its neighbours. Under the Lombard kings, it became the frontier city of their dominions towards the Exarchate; and though taken by the Greek emperor Mauricius in 590, it was again annexed by Agilolphus to the Lombard kingdom of Italy. (Muratori, Antiq. Ital. vol. i. p. 63.) At this period it fell into a state of great decay. P. Dionysius, who mentions Bononia, Parna, and Regionum as wealthy and flourishing cities, does not even notice the name of Mutina (Hist. Lang. ii. 18); and a writer of the 10th century draws a lamentable picture of the condition to which it was reduced. The numerous streams which irrigated its territory having been then neglected, inundated the whole surrounding tracts; and the site of the city had become in great part a mere morass, in which the ruins that attested its ancient grandeur, were half buried in the mud and water. (Murat. Ant. vol. ii. pp. 154, 155.)

At a later period of the middle ages, Modena again rose to prosperity, and became, as it has ever since continued, a flourishing and opulent city. But the truth of the description above cited is confirmed by the fact, that the remains of the ancient city are wholly buried under the accumulations of alluvial soil on which the buildings of the modern city are founded, and are only brought to light from time to time by excavations. (Murat. L. C.) Large portions of the ruins were also employed at various periods, in the construction of the cathedral and other churches; and no remains of ancient buildings are now extant. But a valuable collection of sarcophagi and inscriptions, discovered at various periods on the site of the modern city, is preserved in the museum. These have been fully illustrated by Cavodoni in his Antichi Marmi Modenesi (Svo. Modena, 1829), in which work the facts known concerning the various phases of ancient history of the city are well brought together.

Modena is situated between the river Secchia, which flows about 3 miles to the W. of the city, and the Panaro, about the same distance on the E. The latter is unquestionably the ancient Scultenna, a name which it still retains in the upper part of its course. The Secchia is probably the Gabellus of Pliny; but seems to have been also known in ancient times as the Secia; for the Jerusalem Itinerary marks a station called Pons Seciae, 3 miles from Modena, where the Aemilian Way crossed this river. (Itin. Hierosolym. p. 12.) It is now known, however, to rise about 10 miles to the S. of the city; and the ancient territory of Mutina seems to have included a considerable extent of these mountains, as Pliny notices a prodigy which occurred “in agr. Mutinensi,” when two mountains were dashed against one another with great violence, so that they appeared to recoil again from the shock. (Plin. ii. 63. s. 85.) This phenomenon, which occurred in B. C. 91, was doubtless the result of an earthquake, and not, as has been sometimes supposed, of a volcanic outburst. [E. H. B.]

MUTUSCAE. [Trebula Mutusca.] MUTYCA. [Motyca.]

MUZA (Μοῦζα, Arrian; Modова and Moda ed eptpóteron, Ptol.), an important mercantile town on the Arabian coast of the Red Sea, not far north of the Straits of Bab-el-Mandeb, in the country of Elhari: placed by Ptolemy in long. 74° 30', lat. 14°, or 30° west, and 24° north of Oedocis (Οἴδοκηs εὐτοποημα) close to the straits. (Ptol. vii. 15. p. 159.) He states that its longest day is 122 hours, that it is 1° east of Alexandria, and within the tropics (vii. Tab. vi. Asina, p. 241). Pliny (vi. 23) names Musa as the third port of Arabia Felix "quens Indice navigatio non petit, nec nisi turis odoramque Arabicorum mercatores." The author of the Peripus frequently alludes to it, and gives a full account of it and its trade. He describes it as situated in the southernmost gulf of this coast, a regular mart; inhabited altogether by Arab mariners and merchants, distant about 12,000 stadia from Berenice to the south, and 300 north of the straits. (Vincenl, Periplus, p. 296. n. 100; Gosselin, Recerches, &c. tome ii. pp. 265, 266.) It was not only an emporium of Indian merchandise—a manifest contradiction of Pliny's statement already cited—but had an export trade of its own. It was distant three days' journey from the city of Save (Σαῦαω), which was situated inland, in the country of Maphorites. It had no proper harbour, but a good roadstead, and a sandy anchorage. Its principal import trade was in fine and common purple cloth; Arab dresses with sleeves—probably the kendia—some plain and common, others embroidered with needlework and in gold; saffron; an aromatic plant, named cyperus (κυπερος); fine linen; long robes—the other; quilts; striped circles; par-
as it had not been inhabited within a few centuries, and there was no mention of it in any ancient geographical works. It was said to have been a fishing village, but it was deserted and deserted.

This Mosek or Massili is a village, a small town, on the coast of the Tyrrhenian Sea, near the entrance of the Strait of Messina, which separates Italy from Sicily. It was founded by the Phoenicians, and was one of the most important cities of ancient Greece. It was the capital of the Magna Graecia, and was one of the seven cities of Magna Graecia.

MYCALE (Μυκάλη), the westernmost branch of Mt. Mesogis in Lydia; it forms a high ridge and terminates in a promontory called Trachylon, now Cape S. Mavri. It runs out into the sea just opposite the island of Syme, from which it is separated only by a narrow channel seven stadia in breadth. It was in this channel, and on the mainland at the foot of Mount Mycale, that the Persians were defeated, in the year 479 B.C. It is probable that at the foot of Mount Mycale there was a town called Mycale or Mycanae; for Stephanus Byz. (x. 165) and Stephanus (p. 37) speak of a town of Mycale in Caria or Lydia. The whole range of Mount Mycale now bears the name of Sounio. (Herr. ii. 869; Herod. i. 148, vii. 80, ix. 96; Thuc. i. 14, 89; vii. 79; Diod. ix. 34; Paus. v. 7. § 3, vii. 4. § 1; Strab. xxvi. pp. 621, 629; Ptol. v. 2. § 13; Agath. p. 3.)

MYCAENAE (Μυκηναία), a town in Crete, the foundation of which was attributed by an historian of the Augustan age (Vell. Pat. i. 1) to Agamemnon. Harduin (ad Pline, iv. 12) proposed to read Mycenae for Mykina, which is mentioned as a city of Crete in the text of Pline (i. c.). Sieber (Reise, vol. ii. p. 280) believed that he had discovered the remains of this city at a place called Meca or Maste, on the river Armys. (Hick, Kreis, vol. p. 435.)
geian plain, which spread out under its walls towards the west and south; and secondly the most important roads from the Corinthian gulf, the roads from Phlius, Nemea, Cleone, and Corinth, unite in the mountains above Mycenae, and pass under the height upon which the city stands. It was said to have been built by Perseus (Strab. viii. p. 377; Paus. ii. 13. § 4, ii. 16. § 3), and its massive walls were believed to have been the work of the Cyclopes. Hence Euripides calls Mycenae πόλις μα Περσείως, Κυκλο- πίων πάνω χερσόν (Iphig. in Aul. 1500). It was the favourite residence of the Pelopids, and under Agamemnon was regarded as the first city in Greece. Hence it is called παλαιόπολις by Homer (Il. vii. 180, xi. 46), who also gives it the epithets of εὕρωγον (Il. ix. 32) and εὐκτίμων πτελεόν (Il. ii. 569). Its greatness belongs only to the heroic age, and it ceased to be a place of importance after the return of the Ieracideans and the settlement of the Dorians in Argos, which then became the first city in the plain. Mycenae, however, maintained its independence, and sent some of its citizens to the assistance of the Greeks against the host of Xerxes, although the Argives kept aloof from the common cause. Eighty Mycenaean were present at Thermopylae (Herod. vii. 202), and 400 of their citizens and of the Tirynthians fought at Plataea (Herod. ix. 28). In B.C. 468, the Dorians of Argos, resolving to bring the whole district under their sway, laid siege to Mycenae; but the massive walls resisted all their attacks, and they were obliged to have recourse to a blockade. Famine at length compelled the inhabitants to abandon the city; more than half of them took refuge in Macedonia, and the remainder in Cle- one and Ceryneia. (Pind. xi. 65; Strab. viii. pp. 372, 377; Paus. ii. 16. § 5, v. 23. § 3, vii. 25. § 8, viii. 27. § 1.) From this time Mycenae remained uninhabited, for the Argives took care that this strong fortress should remain desolate. Strabo, how- ever, committed a gross exaggeration in saying that there was not a vestige of Mycenae extant in his time (viii. p. 372). The ruins were visited by Pausanias, who gives the following account of them (ii. 15, 16):—"Returning to the pass of the Tretus, and following the road to Argos, you have the ruins of Mycenae on the left hand. Several parts of the enclosure remain, and among them is the gate upon which the lions stood. These also are said to be the work of the Cyclopes, who built the walls of Tiryns for Proetus. Among the ruins of the city there is a fountain named Persea, and subterranean build- ings (εἰκονία αἰολούσιμα) of Atreus and his sons, in which their treasures were deposited. There are likewise the tombs of Atreus, of his charioteer Eurymedon, of Electra, and a sepulchre in common of Telephus and Pelope, who are said to have been twin sons of Cassandra. But Clytemnestra and Agisthus were buried at a little distance from the walls, being thought unworthy of burial where Aga- memnon lay." 

The ruins of Mycenae are still very extensive, and, with the exception of those of Tiryns, are more ancient than those of any other city in Greece. They belong to a period long antecedent to all historical records, and may be regarded as the genuine relics of the heroic age.

![Plan of the Ruins of Mycenae](image)

**PLAN OF THE RUINS OF MYCENAE.**

A. Acropolis.
B. Gate of Lions.
C. Subterranean building, usually called the Treasury of Atreus.
D. Subterranean building.
E. Village of Kharvati.

Mycenae consisted of an Acropolis and a lower town, each defended by a wall. The Acropolis was situated on the summit of a steep hill, projecting from a higher mountain behind it. The lower town lay on the south-western slope of the hill, on either side of which runs a torrent from east to west. The Acropolis is in form of an irregular triangle, of which the base fronts the south-west, and the apex the east. On the southern side the cliffs are almost precipitous, overhanging a deep gorge; but on the northern side the descent is less steep and rugged. The summit of the hill is rather more than 1000 feet in length, and around the edge the ruined walls of the Acropolis still exist in their cutive cir-
exit, with the exception of a small open space above the precipitous cliff on the southern side, which perhaps was never defended by a wall. The walls are more perfect than those of any other fortress in Greece; in some places they are 15 or 20 feet high. They are built of the dark-coloured limestone of the surrounding mountains. Some parts of the walls are built, like those of Tiryns, of huge blocks of stone of irregular shape, no attempt being made to fit them into one another, and the gaps being filled up with smaller stones. But the greater part of the walls consists of polygonal stones, skilfully hewn and fitted to one another, and their faces cut so as to give the masonry a smooth appearance. The walls also present, in a few parts, a third species of masonry, in which the stones are constructed of blocks of nearly quadrangular shape; this is the case in the approach to the Gate of Lions. This difference in the masonry of the walls has been held to prove that they were constructed at different ages; but more recent investigations amongst the ruins of Greece and Italy have shown that this difference in the style of masonry cannot be regarded as a decisive test of the comparative antiquity of walls; and Col. Mure has justly remarked that, as there can be no reasonable doubt that the approach to the Gate of Lions is of the same remote antiquity as the remainder of the fabric, it would appear to have been the custom with these primitive builders to pay a little more attention to symmetry and regularity in the more ornamental portions of their work.

The chief gate of the Acropolis is at the NW. angle of the wall. It stands at right angles to the adjoining wall of the fortress, and is approached by a passage 50 feet long and 20 wide, formed by that wall and by another wall exterior to it. The opening of the gateway widens from the top downwards; but at least two-thirds of its height are now buried in ruins. The width at the top of the door is 9½ feet. This door was formed of two massive uprights, covered with a third block, 15 feet long, 4 feet wide, and 6 feet 7 inches high in the middle, but diminishing at the two ends. Above this block is a triangular gap in the masonry of the wall, formed by an oblique approximation of the side courses of stone, continued from each extremity of the lintel to an apex above its centre. The vacant space is occupied by a block of stone, 10 feet high, 12 broad, and 2 thick, upon the face of which are sculptured two lions in low relief, standing on their hind-legs, upon either side of a covered pillar, upon which they rest their fore-feet. The column becomes broader towards the top, and is surmounted with a capital, formed of a row of four circles, enclosed between two parallel fillets. The heads of the animals are gone, together with the apex of the cone that surmounted the column. The block of stone, from which the lions are sculptured, is said by Leake and other accurate observers to be a kind of green basalt; but this appears to be a mistake. We learn from Mure (Tour in Greece, vol. ii. p. 324) that the block is of the same palombino, or dove-coloured limestone, of which the native rock mainly consists, and that the erroneous impression has been derived from the colour of the polished surface, which has received from time and the weather a bluish green hue. The column between the lions is the customary symbol of Apollo Agyieus, the protector of doors and gates. (Müller, Dor. ii. 6. § 5.) This is also proved by the invocation of Apollo in the Agamemnon of Aeschylus (1078, 1089, 1271), and the Electra of Sophocles (1874), in both of which tragedies the scene is laid in front of this gate.

GATE OF THE LIONS AT MYCENAE.

It has been well observed that this pair of lions stands to the art of Greece somewhat in the same relation as the Hind and the Odyssey to her literature; the one, the only extant specimens of the plastic skill of her mythical era, the other, the only genuine memorials of its chivalry and its song. The best observers remark that the animals are in a style of art peculiar to themselves, and that they have little or nothing of that dry linear stiffness which characterises the earlier stages of the art of sculpture in almost every country, and present consequently as little resemblance to the Archaic style of the Hellenic works of a later period as to those of Egypt itself. "The special peculiarities of their execution are a certain solidity and rotundity amounting to clumsiness in the limbs, as compared with the bodies. The hind-legs, indeed, are more like those of elephants than lions; the thighs, especially, are of immense bulk and thickness. This unfavourable feature, however, is compensated by much natural ease and dignity of attitude. The turning of the body and shoulders is admirable, combining
MYCENAE.

strength with elegance in the happiest proportions. The bellies of both are slender in comparison with the rest of the figure, especially of the one on the right of the beholder. The muscles, sinews, and joints, though little detailed, are indicated with much spirit. The finish, both in a mechanical and artistic point of view, is excellent; and in passing the hand over the surface, one is struck with the smooth and easy blending of the masses in every portion of the figure." (Mure, vol. ii, p. 171.)

Besides the great Gate of Lions, there was a smaller gate or postern on the northern side of the Acropolis, the approach to which was fortified in the same manner as that leading to the great gate. It is constructed of three great stones, and is 5 feet 4 inches wide at the top.

Near the Gate of Lions the wall of the lower city may be traced, extending from X. to S. In the lower town are four subterranean buildings, which are evidently the same as those described by Pausanias, in which the Atreidae deposited their treasures. Of these, the most celebrated, called by the learned men the "Treasury of Atreus," and by the Greek ciceroni the "Grave of Agamemnon," is situated under the acenthet which now conveys the water from the stream on the northern side of the Acropolis to the village of Khareviti. (See Plan, C.) This building is in nearly a perfect state of preservation. It is approached by a passage now in ruins, and contains two chambers. The passage leads into a large chamber of a conical form, about 50 feet in width and 40 in height; and in this chamber there is a doorway leading into a small interior apartment. The ground-plan and a section of the building are figured in the Dict. of Antiq. p. 1127. The doorway terminating the passage, which leads into the large chamber, is 8 feet 6 inches wide at the top, widening a little from thence to the bottom. "On the outside before each door-post stood a semi-column, having a base and capital not unlike the Tuscan order in profile, but enriched with a very elegant sculptured ornament, chiefly in a zigzag form, which was continued in vertical compartments over the whole shaft. These ornaments have not the smallest resemblance to anything else found in Greece, but they have some similarity to the Persepolitan style of sculpture." (Leake, Moree, vol. ii, p. 374.) There are remains of a second subterranean building near the Gate of Lions (Plan, D.); and those of the two others are lower down the hill towards the west.

There has been considerable discussion among modern scholars respecting the purpose of these subterranean buildings. The statement of Pausanias, that they were the treasuries of the Atreidae, was generally accepted, till Mure published an essay in the Rheinisches Museum for 1839 (vol. vi, p. 240), in which he endeavoured to establish that all such buildings were the family vaults of the ancient heroes by whom they were constructed. In the great edifice at Mycenae he supposes the inner apartment to have been the burial-place, and the outer vault the heron or sanctuary of the deceased. This opinion has been adopted by most modern scholars, but has been combated by Leake, who adheres to the ancient doctrine. (Peloponnesica, p. 256.) The two opinions may, however, be to some extent reconciled by supposing that the inner chamber was the burial-place, and that the outer contained the arms, jewels, and other ornaments most prized by the deceased. It was the practice among the Greeks in all ages for the dead to carry with them to their tombs a portion of their property; and in the heroic ages the burial-places of the powerful rulers of Mycenae may have been adorned with such splendour that the name of Treasuries was given to their tombs.

There is, indeed, good reason for believing, from the remains of brazen nails found in the large chamber of the "Treasury of Atreus," that the interior surface of the chamber was covered with brazen plates.

At the foot of the lower town stands the modern village of Khareviti. (Leake, Moree, vol. iii, p. 365, seq.; Mure, Tour in Greece, vol. ii, p. 163, seq.; Curtius, Peloponnesos, vol. ii, p. 400, seq.)

MYCENI. [Maurkantia.]

MYCIHUS. [Bulis.]

MYCONUS (Μυκόνος: Eph. Mykonos: Mio-ko), a small island in the Aegean sea, lying E. of Delos, and N. of Naxos. Pliny says (iv. 12, s. 22) that it is 15 miles from Delos, which is much greater than the real distance; but Scylax (p. 55) more correctly describes it as 40 stadia from Rheneia, the island W. of Delos. Myconos is about 10 miles in length, and 6 in its greatest breadth. It is in most parts a barren island, whence Ovid gives it the epithet of hinnula (Met. vii. 465); and the inhabitants had in antiquity a bad reputation on account of their avarice and meanness (Athen. i. p. 7; hence the proverb Μυκόνοι παραάρων, Xenod. Prov. v. 21; Suidas, Hesch., Phot.). The rocks of Myconos are granite, and the summits of the hills are strewn with immense blocks of this stone. This circumstance probably gave rise to the fable that the giants subdued by Hercules lay under Myconos; whence came the proverb, "to put all things under Myconus," applied to those who ranged under one class things naturally separate. (Strab. x. p. 487; Steph. B. s. v.) The tomb of the Lorian Ajax was also shown at Myconos. (Tzetza, ad Lycophr. 401.) Of the present of the island we have no account, except the statement that it was colonised from Athens, by the Neide Hippocles. (Xenod. v. 17; Schol. ad Dionys. Per. ap. Geogr. Min, vol. iv. p. 37, Hudson.) Myconos is mentioned incidentally by Hero- dotus (vi. 118) and Thucydides (iii. 29). Ancient writers relate, as one of the peculiarities of Myco- nos, that the inhabitants lost their hair at an early age. (Strab. l. c.; Plin. xi. 37. s. 47; "Myconi fulva omnis juvenantur," Donat. ad Ter. Hecri. iii. 4. 19.) The highest mountain, which is in the northern part of the island, has a summit with two peaks, whence it is called Dimastus by Pliny (iv. 12, s. 22). The promontory of Phormia (Φορμία, Pol. ti. 15. § 29) was probably on the eastern side of the island. Scylax mentions two cities (Μυκόνος, αὕτη διόπαλος, p. 22). Of these one called Myconos occupied the site of the modern town, which presents, however, scarcely any ancient remains. The name and position of the other town are unknown. The coins of Myconos are rare; and in general very few remains of antiquity are found in any part of the island. (Ross, Reisen auf den griechischen Inseln, vol. ii. p. 28, seq.)

MYGDONES (Mygdones), a tribe dwelling in Bithynia, about the river Oizysses and the coast of the Propontis, but extending into Mysia, where they occupied the district about Mount Olympus and lake Dascylitis. They had immigrated into Asia Minor from Thrace, but were afterwards subdued or expelled by the Bithynians. (Strab. vii. p. 235, xii. pp. 564, 575.) The district inhabited by them was called Mygdonia. (Strab. xii. pp. 550, 558, 576; Plin. v. 41; Solin. 40, 42.)

[1839.]
MYGDONIA (Μυγδονία: Εἰθ. Μυγδόνες, Strab. B.), a district of Macedonia, which comprised the plains round Thessalonica, together with the valleys of Kladia and Beodor, extending towards the E. as far as the Axios (Herod. vii. 120), and including the Lake Bolbe to the E. (Thuc. i. 58x.) To the N. it was joined by Cretonia, for the Echidnus, which flowed into the gulf near the marshes of the Axios, had its sources in Cretonia (Herod. vii. 124), while the pass of Assin or Assithna was probably the boundary of Mygdonia towards Bisitina. The maritime part of Mygdonia formed a district called Amphaxitis, a distinction which first occurs in Polybius (v. 98), who divides all the great plain at the head of the Thracian gulf into Amphaxitis and Botlhis, and which is found three centuries later in Ptolemy (iii. 13. § 95). The latter introduced Amphaxitis twice under the subdivisions of Macedonia,—in one instance placing under that name the mouths of the Echidnus and Axios, with Thessalonica as the only town, which agrees with Polybius, and particularly with Strabo (vii. p. 330). In the other place, Ptolemy includes Staura and ArcthIna in Amphaxitis, which, if it be correct, would indicate that a portion of Amphaxitis, very distant from the Axios, was separated from the remainder by a part of Mygdonia; but as this is improbable, the word is perhaps an error in the text. The original inhabitants, the Mygdonians, were a tribe belonging to the great Thracian race, and were powerful enough to keep their name attached to it, even after the Macedonian conquest. (Thuc. ii. 99.) The cities of this district were ThessaLonica, Sindus, Chalastra, Altus, Stereipsa, Cissus, Millauluris, Heracleustes. Besides these, the following obscure towns occur in Ptolemy (L.c.):—Chaetae, Mycalina, Antigania, Callinada, Boreus, Phry-ca, Treplins, Carabia, Xylopolis, Assorus, Lote, Phibeios. As to the towns which occupied the fertile plain between Mt. Chris and the Axios, their population was no doubt absorbed by Thessalonica, on its foundation by Cassander, and remains of them are not likely to be found. Several attempts have been made to indicate their sites. One of these would seem to be an ancient inscription which was found at Khidcaia, to have stood in that position, and others probably occupied similar positions on the last falls of the heights which extend nearly from Khidcaia to the Axios. One in particular is indicated by some large "tunuli" or barrows, situated at two-thirds of that distance. (Leake, North Greece, vol. ii. p. 44.)

[Ε.Β. Ζ.]

MYGDONIA (Μυγδονία, Plut. Lucull. c. 32; Polyb. x. 31), a district in the NE. part of Messoponlia, adorning the country now called the Sm disappointing to Strabo, the people who were named Mygdones came originally from Macedonia, and occupied the district extending from Zezma to Thasus (xvi. p. 747): as, however, he states in the same place that Nisibi was called by the Macedonians "Antiochia in Mygdoniat," and places it in the "most northern" portion of M. Masius, he would appear to have thought that it was on the eastern side of Messoponlia. But the most should be the same story of the Greek name of Nisibis (Li. vi. c. 32). In Strabo's Buc. the name is written Mygdonia, which is probably an error. In many other cases of the earlier writers of Nisibis, a people are spoken of as occupying the land of Mygdonia; the later and larger nation, however, Mygydonia, which is the same place (M. 199. B. 3. § 4).

MYLAGAE.

MYGDONIUS (Μυγδόνιος, Julian, Orat. p. 27), the river which flows by the town of Nisisb (now Nisbat). It takes its rise, together with the Khabur and one or two other streams, in the M. Masius (now Narja Bolbher). Its present name is the Hermon or Nahr-ul-Tal. [V.]

MYLAGAE (Μυλαία: Εἰθ. Μυλαρδύς, Steph. B.; Mylaener, Dict.; Milazzo), a city on the N. coast of Sicily, about 30 miles from Cape Pelorus, and 20 from Tyndaris, though Strabo calls it 25 miles from each of these points. (Strab. vi. p. 206.) It was situated on the narrow neck or isthmus of a projecting peninsular headland, about 5 miles in length, the furthest point of which is only about 15 miles from the island of Hiera or Vulcano, the nearest to Sicily of the Lipari islands. Mylae was undoubtedly a Greek colony founded by the Sicanians, and appears to have been continued subject to, or dependent on its parent city of Zancle. (Strab. vi. p. 272; Scymn. Ch. 288.) Hence Thucydides speaks of Himera as in his time the only Greek city on the N. coast of the island, omitting Mylae, because it was not an independent city or state. (Thuc. vi. 62.) The period of its foundation is wholly uncertain. Siefert would identify it with the city called Chersonesus by Eusebius, the foundation of which that author assigns to a period as early as B.C. 716, but the identification is very questionable. (Euseb. Chron. ad ΟΙ. 161; Siefert, Zimble-Messana, p. 4.) It is certain, however, that it was founded before Himera, B. C. 649, as, according to Sestum, the Sicanians at Mylae took part in the colonisation of the latter city. (Strab. vi. p. 272.) Mylae itself does not appear to have ever risen to any great importance; and after the revolution which changed the name of Zancle to that of Messana, still continued in the same dependent relation to it as before. It was, however, a strong fortress, with a good port; and these advantages which it derived from its natural situation, rendered it a place of importance to the Messanians as securing their communications with the N. coast of the island. Siatay speaks of it as a Greek city and port (§ 139). It is mentioned by several ancient writers. The earliest historical notice of the city is found in n. c. 427, when the Athenian fleet under Lachus was stationed at Rhegium, made an attack upon Mylae. The place was defended by the Messanians with a strong garrison, but was compelled to surrender to the Athenians and their allies, who thenceforth marched against Messana itself. (Thuc. iii. 90; Diod. xii. 54.) After the destruction of Messana by Carthage, the Messanians recovered possession of Mylae. (Diod. xiv. 87.) That city is again noticed during the war of Timoleon in Sicily; and in n. c. 315 it was wrested by Agathocles, from the Messanians, though he was soon after compelled to restore it to them. (B. vi. 63; Plut. Timo. 57.) It was in the immediate neighbourhood of Mylae also (δήν Μυλαῖας πολιος) that the forces of the Mamertines were defeated in a great battle, by Hieron of Stracene, B. C. 270 (Polyb. i. 9; Diod. xxii. 13); though
the river Longama, on the banks of which the action was fought, cannot be identified with certainty.

Longanus.

It is probable that, even after the Roman conquest of Sicily, Mylae continued to be a dependency of Messana, as long as that city enjoyed its privileged condition as a "feederata civitas;" hence no mention is found of its name in the Verine orations of Cicero; but in the time of Pliny it had acquired the ordinary municipal privileges of the Sicilian towns. (Plin. iii. 8. s. 14; Ptol. iii. 4. § 2.) It never, however, seems to have been a place of importance, and was at this period wholly eclipsed by the neighbouring colony of Tynarla. But the strength of its position as a fortress caused it in the middle ages to be an object of attention to the Norman kings of Sicily, as well as to the emperor Frederic II.; and though now much neglected, it is still a military position of importance.

The modern city of Mylae is a tolerably flourishing place, with about 8000 inhabitants; it is built for the most part on a sandy rock of land, separated from the mainland by a narrow neck. The city has also been occupied by the mainland. But the old town, which probably occupied the same site with the ancient city, stood on a rocky hill, forming the first rise of the rocky ridge that constitutes the peninsula or headland of Capo di Milazzo. The modern castle on a hill of greater elevation, commanding both the upper and lower town, is probably the site of the ancient Acropolis. (Thuc. iii. 90; Smyth's Sicily, pp. 103, 104; Hare's Classical Tour, vol. ii. p. 215.)

The promontory of Mylae, stretching out abruptly into the sea, forms the western boundary of a bay of considerable extent, affording excellent anchorage. This bay was memorable in ancient history as the scene of two great naval actions. The first of these was the victory obtained by the Roman fleet under C. Duilius, over that of the Carthaginians in the First Punic War, n. c. 260, in which the Roman consul, by means of the engines called Corvi (then used for the first time), totally defeated the enemy's fleet, and took fifty of their ships. (Ptol. i. 23.) More than two centuries later, it was in the same bay that Agrippa, who commanded the fleet of Octavian, defeated that of Sextus Pompeius, n. c. 36. Agrippa advanced from the island of Hiera, where his fleet had been before stationed, while the ships of Pompey lined the shores of the bay of Mylae. After their defeat they took refuge at the mouths of the numerous small rivers, or rather mountain torrents, which here descend into the sea. After this battle, Agrippa made himself master of Mylae as well as Tynarla; and some time afterwards again defeated the fleet of Pompeius in a second and more decisive action, between Mylae and a place called Nanoucharis. The latter name is otherwise unknown; it seems to have been situated somewhere in the neighbourhood of Cape Bonaparte, the Phalacrian promontory of Ptolemy. (Appian, B. C. v. 195—109, 115—122; Dion Cass. xliii. 2—11; Vell. Pat. ii. 79; Suet. Aug. 16.)

In the account of this campaign Appian speaks of a small town named Artemesium, which is noticed also by Dion Cassius, and must have been situated a little to the E. of Mylae, but is not mentioned by any of the geographers. (Appian, B. C. v. 116; Dion Cass. xliii. s.) It is, however, obviously the same place alluded to by Silius Italicus as the "seces Facellis " (Sil. Ital. xiv. 260), and called by Lucilius, in a fragment of his satires, "Faceldis templum Diane." (Lucil. Sat. iii. 13.)

Vibius Sequester also mentions a river which he calls Phaceinus, and describes as " juncta Pe- loridem, coninis templum Diane." (Vib. Seq. p. 16.) It is, however, obvious, from Appian, that the temple was not situated in the neighborhood of Polorum, but at a short distance from Mylae, though the precise site cannot be determined. It was designated by popular tradition as the spot where the sacred cattle of the Sun had been kept, and were slaughtered by the companion of Ulysses, (Appian, l. c.; Plin. ii. 98. s. 101.) The Moys Thomaï, mentioned by Diodorus in his account of the battle of the Longanai (Diod. xxi. 13.), must have been one of the underfalls of the Neptunian Mountains, which throughout this part of Sicily descend close to the sea-shore; but the particular mountain meant is wholly uncertain. (E. H. B.)

Mylae. Pliny (iv. 12) speaks of two islands of this name, lying off the coast of Crete. They belonged to the group of three islands off Phasaeasarm (Katiiri), called by the Anonymous Coast-describer Menades (Steph. B. s. v.), but Mylae (Mill. B. s. v.) is the name of the northernmost of the three little islands; the second, opposite to which is Karabiz, is called Megalosani, in spite of its very moderate size; and the third Prozone. (Ashley, Trav. vol. ii. p. 61.)

Mylae (Μυλαία: Eth. Μυλαίος), a town of Pera- rhënia in Thessaly, taken by Persians in b. c. 171. (Liv. xlii. 54; Steph. B. s. v.) As Livy describes it as a strong place near Cyretae, it is placed by Leake at Dimani, " which is not only strong in itself, but very important, as commanding the pass of the Titarus, leading into Pera rhënia from the Pelasgicots," (Northern Greece, vol. iv. p. 151.)

Mylae, or Myile (Μυλαία), a promontory on the coast of Cilicia, between cape Aphrodias in the west and cape Sarpedon in the east. On or close to it was a small town of the same name (Plin. v. 22; Stadiæm. Mar. Mag. §§ 165, 166.) As the Statidiano calls Mylas a cape and chersonese, Leake (Asia Minor, p. 205) is inclined to identify it with cape Cavaliere, which answers exactly to that description. (L. S.)

Mylassa or Mylassa (Μυλασσά, or Μυ- λασσα: Eth. Μυλασσάος), the most important town of Caria, was situated in a fertile plain, in the west of the country, at the foot of a mountain, abounding in beautiful white marble, of which its buildings and temples were constructed. Hence the city was exceedingly beautiful on account of its white marble temples and porticoes, and many wondered that so fine a city was built at the foot of a steep overhanging mountain. The two most splendid temples in the city were those of Zeus Osogos and Zeus Labrandemus, the latter of which stood in the neighbouring village of Labranda, on a hill, and was connected with the city by a road called the sacred, 60 stadia in length, along which the processions used to go to the temple. The principal citizens of Mylassa were invested with the office of priests of Zeus for life. The city was very ancient, and is said to have been the birthplace and residence of the Carian kings before Halicarnassus was raised to the rank of a capital. Its nearest point on the coast was Phlyssus, at a distance of 80 stadia, which was the port of Mylassa; though Stephanus B. calls Passala its port-town. (Strab. xiv. p. 638, &c.; Aeschyl. Fragm. 48, where it is called Mylas; Stephan. B. s. v.; Herod. i. 171. Ptol. v. 2. § 39; Plin. v. 29; Paus. viii. 10. § 5.) The splendour of Mylassa is attributed by an
MYNDUS.

... anecdote preserved in Athenaeus (viii. p. 348) of the witty musician Stratomenus, who, on coming to Myndus, and observing its many temples, but few inhabitants, placed himself in the middle of the market-place, and exclaimed, "Hear me, oh ye temples." As to the history of this city, we know that Philip of Macedon, the son of Demetrius, endeavoured in vain to obtain possession of it; and it was probably to reward the place for its opposition to him that the Romans, after the war with Antiochus, declared its citizen free (Polyb. xvi. 24. xxii. 27; Liv. xxxviii. 39). In a petty war with the neighbouring Eumarmats, the Myldessans were victorious, and took some of their towns; but were afterwards compelled to submit to the Rhodiens (Polyb. xxx. 5; Liv. xiv. 25.) In the time of Strabo, the town appears to have been still flourishing, and two eminent orators, Euthydemos and Hybreas, exercised considerable influence over their fellow-citizens. Hybreas, however, incurred the enmity of Labienus, his political adversary, whose pretensions he tried to resist. But he was obliged to take refuge in Rhodes; whereupon Labienus marched with an army against Myndus, and did great damage to the town. (Strab. xiv. p. 660.) It is mentioned, however, as late as the time of Hierocles (p. 688). It is generally admitted that the site of the ancient Myndus is marked by the modern Meliaso or Melassa, where considerable ancient remains have been observed by travellers. A temple, erected by the people of Myndus in honour of Augustus and Roma, considerable ruins of which had existed until modern times, was destroyed about the middle of last century by the Turks, who built a new mosque with the materials (Porock, Travels, tom. ii. p. 2. c. 6.) Chandler (Asia Minor, p. 234) saw beneath the hill, on the east side of the town, an arch or gateway of marble, of the Corinthian order; a broad marble pavement, with vestiges of a theatre; and round the town ranges of columns, the remains of porticoes. (Comp. Leake, Asia Minor, p. 220; Fellows, Journal of an Exc. p. 260, Discoveries in Lycia, p. 67, who saw many ancient remains scattered about the place; Racine, Lex. Num. iii. 1. p. 999, &c.)

COIN OF MYNDUS.

MYNDUS (Μύνδος; Fth. Μύνδος), a Dorian colony of Troaden, on the coast of Caria, situated on the northeasternmost of the three Dorian peninsulas, a few miles to the northwestern of Halicarnassus. It was protected by strong walls, and had a good harbour. (Paus. ii. 30. § 8; Strab. xiv. p. 658; Arrian, Anat. i. 20, ii. 5.) But otherwise the place is not of much importance in ancient history. Both Pliny (v. 29) and Stephanus Byz. (s. v.) mention Myndusius as a place close by Myndus; and this Phocianus seems to have been the ancient place of the Carians which became deserted after the establishment of the Dorian Myndus. (Comp. Strab. xiii. p. 611.) Mele (i. 16) and Pliny (L. c.) also speak of a place called Neopolis in the same peninsula; and no other authors mention such a place in that part of the country, it has been supposed that Myndus (the Dorian colony) and Neopolis were the same place. But it ought to be remembered that Pliny mentions both Myndus and Neopolis as two different towns. Myndian ships are mentioned in the expedition of Arryngoras against Naxos. (Herod. v. 33.) At a later time, when Alexander besieged Halicarnassus, he was anxious first to make himself master of Myndus; but when he attempted to take it by surprise, the Myndians, with the aid of reinforcements from Halicarnassus repulsed him with some loss. (Arrinn, L. c.; comp. Hecat. Fragm. 229; Polyb. xvi. 15. 21; Strab. xiv. p. 38; Ptol. v. 2. § 9; Liv. xxviii. 13; Hieroc. p. 687.) Athenaeus (i. 32) states that the wine grown in the district of Myndus was good for digestion. It is generally believed that Myndus or Myndessa marks the site of Myndus; but Odi. Leake (Asia Minor, p. 228) identifies Myndus with the small sheltered port of Gumilukia, where Captain Beaufort remarked the remains of an ancient pier at the entrance of the port, and some ruins at the head of the bay. (Comp. Racine, Lex. Num. iii. 1. p. 1092, &c.; Eckel, Doctr. Num. vol. ii. pt. 1. p. 585.)

Ptolemy (v. 2. § 30) mentions a small island called Myndus in the Icarian Sea.

[L. S.]

COIN OF MYLASSA.

MYNDUS.

COIN OF MYNDUS.

MYNDUS or MYON (Μύνδος, Μύων; Μύων, Steph. B.; Fth. Moioveis, Paus., Thuc.), a town on the Locri Ozaeis, situated on the most difficult of the passes leading from Actole into Locri. (Thuc. iii. 101.) Pausanias describes it as a small town (πολλαμα), situated upon a hill 300 yards from Amphissa island, containing a grave and an altar of the gods called Melichib, and above the town a temple of Poseidon. (Paus. x. 38. § 8, comp. vi. 19. § 4.) Leake (Northern Greece, vol. ii. p. 592) and other authorities place Myon on Aktph Thymia, or Athymia, a small village, containing Helicene remains, distant 11 hour from Solon (Amphissa) on the road to Galatasoli on the coast; but this cannot be correct, as, according to the passage in Pausanias, Myonia lay further inland than Amphissa. (Ἀμφιθα) μίαν αὐτῷ μετὰ Ἐμφιλίον νομίζω... Οὕτω (including the Melissus) μίαν ἐν δὲ ἄπειρον Ἀμφιθαίαν, τὴν τελείαν τοῦ ὕδατος). Accordingly Kirpott places Myonia in his map N. of Amphissa, on the road from the latter place to Cythium in Doris.

MYÓNUNES (Μυόνηνες or Μυόνερος), a promontory on the south-west of Lebedus, on the coast of Ionia, at the northern extremity of the bay of Ephesus. It is celebrated in history for the naval victory there gained by the Romans under L. Aemilius over Antiochus the Great, in B.C. 190. (Steph. B. s. v.; Strab. xiv. p. 643; Thucyd. iii. 42; Liv. xxxvii. 27.) Livy describes the promontory as situated between Samos and Teos, and as rising from a broad basis to a pointed summit. There was an approach to it on the land side by a narrow path, while on the sea side it was girt by rocks, so rugged, as in some parts the overhanging cliffs extended further into the sea than the ships stationed upon them. On this promontory there was also a small town of the name of Myonnes
MYONNESUS.

(Steph. B., Strab. l. c.), which belonged to Teos. The rocks of Myonnesus are now called Hypalli- 
domos.

Diodor. (H. N. v. 37) mentions a small island of the 
name of Myonnesus near Ephesus, which, together 
with two others, Anthinae and Diarrheusa, formed 
a group called Pisistrati Insulae.

[LS]

MYONNESUS (Μύοννέσις; Ethis. Μυοννέσις), a 
small island lying off the coast of Pithiotis in 
Thessali, in the bay between Larissa Cremaste and 
Antrom. (Strab. i. p. 435; Steph. B. l. c.)

MYOS-HORMOS (Μῦος Ὑρμώς, Diod. ἔπ. 39; 
Strab. xvi. p. 760—781, xvii. p. 813; Polyb. iv. 5. 
§ 14, viii. 15, § 18; Peripl. Mar. Eryth. pp. 1, 6, 
9, 11; Αἰγυπτίων Ὑρμώς, Agatharch. p. 54; Veneris 
Hortus. Plin. vi. 29. § 32) was founded by Polemy 
Philadelphus (c. c. 274) upon a headland of 
similar name.

(Mela, iii. 8. § 7.) He selected it for the 
principal harbour and station of the trade of 
Egypt with India, in preference to Arsinon at the 
head of the Red Sea, on account of the tedious and 
difficult navigation down the Herseolipolit gulf. 
The name Myos-Hormos, which indicates its Greek 
origin, may signify the "Harbour of the Mouse, 
but more probably means "the Harbour" of the 
Mouse" (μους, to close, e.g. the shell), since on the 
neighbouring coast the pearl-muscle and Pinna 
mareine (comp. the Hebrew pisim, Job, xxviii. 
18; Prov. xxxvi. 10) is collected in large quantities. 
(Bruce, Travels, vol. vii. p. 314, 8vo. ed.) The 
name was afterwards changed, according to Aga- 
thurchides and those writers who copied him, to that 
of Aphrodite-Hormos; but the older appellation is 
more generally retained. Myos Hormos seems to 
have obtained the designation of Aphrodite (Island 
of the sea), from the abundance of sea-sponge found in 
it bay.

The latitude of Myos-Hormos is fixed by Bruce. 
D'Anville, &c., at 27° 2 N. Its situation is deter-
dined by a cluster of islands, called Jaffataven by 
modern navigators, of which the three largest lie 
but opposite to an indentation of the Egyptian coast. 
Behind these islands and on the curve of the 
shore was the harbour. Its entrance was oblique (Strab. 
vi. p. 769); but it was spacious and sheltered, and 
the water, even to the land's edge was deep enough 
for vessels of considerable burden.

Myos-Hormos owed its prosperity, as well as its 
foundations, to the trade with Africa, Arabia, and 
India. The ves-sels bound for Africa or the S. coast 
of Arabia left this harbour in the month of Sep-
tember, and thus fell in with the wind, which at the 
equinoxe blows steadily from NW., and carried 
them down the African coast, bringing them back in 
the following May. The further S. point of the 
African trade was the town of Raphatum, in the 
Regio Barbarica, about 10° S. of the equator. 
The vessels bound for India (the coast of Malabar or 
Ceylon) left Myos-Hormos in July; and if they 
cleared the mouth of the Red Sea before the 1st of 
September, they had behind them the monsoon for 
early three months. The voyage out usually 
occupied about 40 days. We are not informed of 
the extent of the Indian trade under the Ptolemies; 
but in the reign of Claudius, when the route through 
Egypt to Malabar first became really known to the 
Romans, we have a detailed account of it in Pliny 
vi. 23. s. 26). That writer calculated the worth 
of gold and silver sent yearly from Rome to the 
est at 400,000, sterling, in exchange for which 
goods were received of at least four times the value 
of that amount, when sold again in Rome or Con-
stantinople. The caravans went up the Nile as far 
as Coptos, whence they travelled through the 
desert for 7 or 8 days to Berenice or Myos-Hormos, 
and exchanged their gold for silk, spices, porcelain, 
and perfumes. A pound of silk was considered 
equivalent to a pound of gold. Philadelphia first 
opened the road between Coptos and Myos-Hormos. 
At first the caravans carried their water with them 
across the desert, and employed camels for the 
transport of merchandise. But afterwards caravans-
saries (στραβαί) were built for the use of travellers; 
and wells were sunk and cisterns dug for the 
collection of rain water; although the supply of the 
 latter must have been scanty and precarious, since rain 
in that latitude seldom falls.

The prosperity of Myos-Hormos as an emporium, 
however, seems to have been fluctuating, and it was 
finally supplanted as a depot at least by Berenice, 
which, being lower down the Red Sea, was yet more 
convenient for the southern trade. That it was fluc-
tuating may be inferred from the mention of it by 
the geographers. Agatharchides, who composed his 
work in the reign of Philiomor (n. c. 180—145), in his 
account of the Indian trade, makes no mention of 
Berenice. Diodorus, who wrote in the age of Augus-
tus, speaks of Myos-Hormos, but not of its rival. 
Strabo, who was nearly contemporary with Diodorus, 
says that Berenice was merely a roadstead, where the 
Indian vessels took in their cargo, but that they lay 
in port at Myos-Hormos. Pliny, on the other hand, 
in his description of the voyage to India does not 
notice Myos-Hormos at all, and speaks of it inci-
dentally only in his account of the W. coast of the 
Red Sea. Accordingly, in the reigns of Vespasian 
and Trajan it must have been on the decline.

There is one difficulty in the relations between 
these harbours—their distance from each other. 
According to the Periplus, Berenice was 1800 
stadia, or 225 miles, from Myos-Hormos, and even 
this is under the mark, if Cape Ras-el-ainf be the 
Leppe Pontometorium of Polemy. As the pretext 
for founding either city was the superior convenience 
of each, as compared with Arsinon (Sue.), for the 
Indian trade, it seems strange that the ships should 
have been kept at Myos-Hormos, but the ladings 
taken in at Berenice. It is more reasonable to 
suppose that the latter became the principal empo-
rium of the Indian traffic; and as that increased in 
importance, the port where it was principally carried 
on became the more frequented and opulent place of 
the two.

It is uncertain whether the ruins at the village of 
Absucaor represent the site of the ancient Myos-
Hormos.

[WB. D.]

MYRA (τὰ Μύρα or Μυράκια; Eth. Muyrak), one 
of the most important towns of Lycia, situated on 
the river Andracus, partly on a hill and partly on 
the slope of it, at a distance of 20 stadia from the 
sea. (Strab. xiv. p. 666; Steph. B. s. v.; Plin. 
xxii. 8; Polyb. v. 6. § 3, viii. 17. § 83.) The small 
town of Andracia formed its port. It is remarkable 
in history as the place where the apostle Paul landed 
(Acts, xxv. 5); and in later times the importance 
of the place was recognized in the fact that the 
emperor Theodosius II. joined it to the rank of the 
capital of all Lycia. (Hierocl. p. 684.) The town 
still exists, and bears its ancient name Myra, though 
the Turks call it Desubre, and is remarkable for its 
fine remains of antiquity. (Leake (Asia Minor, p. 
183) mentions the ruins of a theatre 355 feet in dia-

...
MYRCINUS. A town on the coast of 

Troy, "opposite," as Steph. Byz. (s. e.) says, "to Tenedos and Lesbos," where it is impossible to guess its situation. It is not mentioned by any other writer.

MYRNAS (Μυρνα). one of the 

Aeolian cities on the western coast of Myia, about 40 stadia to the south-west of Gymeion. (Herod. i. 149.) It is said to have been founded by one Myrinas before the other Aeolian cities (Mela, i. 18), or by the Amazon Myrna (Strab. xii. p. 505, xiii. p. 573, xvii. p. 623, Dion. iii. 64). Artaxerxes gave Gymeion and Myrina to Gyges, an Etrurian, who had been banished from his native city for favouring the interests of Persia. (Xenoph. Hel. iii. 1. § 4.) Myrina was a very strong place (Livy. xxxii. 30), though not very large, and had a good harbour. (Seday, p. 36; Agath. Proef. p. 9, ed. Bomm.) Play (v. 32) mentions that it bore the surname of Sebastopolis: while, according to Syncellus, it was also called Smyrna. For some time Myrina was occupied by Philip of Macedon; but the Romans compelled him to evacuate it, and declared the place free. (Liv. l. e.; Polyb. viii. 27.) It was twice visited by severe earthquakes; first in the reign of Tibellus (Tac. Ann. ii. 47), on which occasion it received a remission of duties on account of the loss it had sustained; and a second time in the reign of Trajan (Oros. vii. 12). The town was restored each time, and continued to exist until a late period. (Steph. Byz. s. e.; Pol. v. 2. § 6; Apoll. Rhod. i. 604; Hier. l. p. 661; Geor. IV. v. 9, where it is called Myrena, while in the Peut. Tab. it bears the name Martinus.) Its site is believed to be occupied by the modern Semladorik.

[388]

MYRIA. [Lemnos]

MYRINAE. [Myrcinae, No. 1.]

MYRLEA. [Apaneia, No. 4.]

MYRMECIUM (Μυρμηκιος, Strab. xii. p. 494; 

Pomp. Mela, ii. § 3; Plin. iv. 26; Amm. Peripil. p. 4; Steph. B.; Jordand. Get. 5), a Mileian colony on the Cimmerian Bosporus, 20 stadia N. of Panticapaenum. (Strab. vii. p. 310.) Near the town was a promontory of the same name. (Pol. iii. 6. § 4; Leo Diaec. ix. 6.) It is the modern Ventikali or Jurkali, where many ancient remains have been found. (Clarke, Trav. vol. ii. pp. 98, 102; Dabois de Montereaux, Voyage au Caucase, vol. v. p. 213.)

MYREX (Μυρέξ, Pol. iv. 4. § 15), an island off the coast of Cymeiria, which is identified with the Aegaeia (Ἀγαίης) of Hecataeus (Fr. 300), where the charts show an islet between Pelothen and Phycus. [E. B. J.]

MYRIMONES. [Aegina.]

MYRINAE. [Attica. p. 332, No. 93.]

MYRINAE. [Myricum.]

MYRITIS, surnamed Julia (Ἰουλία Μύριτις, 

Pol. ii. 3. § 5), a town of the Tarentines in Lissitania, on the Ams, which had the Jus Latii; now Miletos. (Plin. iv. 21. s. 53; Mela, iii. i. H. Ant. p. 431; Sestini, Med. p. 11; Mommt, Suppl. i. p. 61; Leake, Geogr. xiv. pp. 208, 208; Forbiger, p. 36.)

MYRTIUM or MYRTENUM (Μυρτίους, Μυρ 

τογοῦ), a place in Thrace mentioned by Demo- 

sthenes along with Scythium, but otherwise unknown (de Cor. p. 234).

MYRTOS. [Aegaeum Mare.]

MYRTOS MARE. [Aegaeum Mare.]

MYRTIUM (Μυρτίους) called Myrzt 

nius (Μυρτσίως) by Homer, who mentions it among the towns of the Epeii. It was a town of Elis, and is described by Strabo as situated on the road from the city of Elis to Dyrrhaciu, at the distance of 70 stadia from the former place and near the sea. Leake remarks that the last part of the description must be incorrect, since no part of the road from Elis to Dyrrhaciu could have passed by the sea; but Curtius observes that Myruntium would at one time have been near the sea-coast, supposing that the 

Gang of Koiki was originally a gulf of the sea. The ruin near Kobilites probably represents this place. (Hom. Il. ii. 616; Strab. viii. p. 341; Steph. B. s. e. 

Mystos; Leake, Moria, vol. ii. p. 169; Boecke, Recherches, q. e. p. 120; Curtius, Peloponnese, vol. ii. p. 36.)

MYSARIS (Μυσάρις al. Morapis, Pol. ii. 5. 

§ 8), the W. promontory of the Achillesio 

Hemias. [E. B. J.]

MYRIA (Μυρία; Εθν. Μυρίας, Μυρίνας), the name
of a province in the north-west of Asia Minor, which according to Strabo (xii. p. 572) was derived from the many beech-trees which grew about Mount Olympus, and were called by the Lydians μυσία. Others more plausibly connect the name with the Celtic moere, a marsh or swamp, according to which Myisia would signify a marshy country. This supposition is supported by the notion prevalent among the ancients that the Myrians had immigrated into Asia Minor from the marshy countries about the Lower Danube, called Moesia, whence Myisia and Moesia would be only dialectic varieties of the same name. Hence, also, the Myrians sometimes mentioned with the distinctive attribute of the "Asiatic," to distinguish them from the European Myrians, or Moesians. (Eustath. ad Dion. Per. 809; Schol. ad Apollon. Rhod. i. 1115.)

The Asiatic province of Myisia was bounded in the north by the Propontis and the Hellespont, in the west by the Aegean, and in the south by Mount Tmolus and Lydia. In the east the limits are not accurately defined by the ancients, though it was bounded by Bithynia and Phrygia, and we may assume the river Rhynaeus and Mount Olympus to have, on the whole, formed the boundary line. (Strab. xii. pp. 564, &c., 571.) The whole extent of country bearing the name of Myisia, was divided into five parts:—1. Myisia Minor (Μυσία ὑπὸ μυκῆς), that is, the northern coast-district on the Hellespont and Propontis, as far as Mount Olympus; it also bore the name of Myisia Hellespontica, or simply Hellespontus, and its inhabitants were called Hellesponti (Ptol. v. 2. §§ 2, 3, 14; Xenoph. Ages. i. 14); or, from Mount Olympus, Myisia Olympea (Μυσία ὑπὸ Ολυμ-πεύχης; Strab. xii. p. 571). This Lesser Myisia embraced the districts of Morene, Abderene and the Asian plain (Ἀσία περιοχή; Strab. xii. pp. 574, 576). 2. Myisia Major (Μυσία ὑπὸ μυγᾶς), forming the southern part of the interior of the country, including a tract of country extending between Tros and Aeolis as far as the bay of Adramyttium. The principal city of this part was Pergamum, from which the country is also called Myisia Pergaune (Μυσία ὑπὸ Περγαμους; Strab. l. c.; Ptol. v. 2. §§ 5, 14.) 3. Troas (Τρώας), the territory of ancient Troy, that is, the northern part of the western coast, from Sigeium to the bay of Adras-myturn. 4. Aeolis, the southern part of the coast, especially that between the rivers Caelus and Hermus. 5. Teuthrainia (Τευθραίαια), or the district on the southern frontier, where in ancient times Teuthræs is said to have formed a Myrian kingdom. (Strab. xii. p. 551.)

These names and divisions, however, were not the same at all times. Under the Persian dominion, when Myisia formed a part of the second satrapy (Herod. iii. 90), the name Myisia was applied only to the north-eastern part of the country, that is, to Myisia Minor; while the western part of the coast of the Hellespont bore the name of Lesser Phrygia, and the district to the south of the latter that of Troas. (Seylau, p. 33.) In the latest times of the Roman Empire, that is, under the Christian emperors, the greater part of Myisia was contained in the province bearing the name of Hellespontus, while the southern districts as far as Tros belonged to the province of Asia. (Herod. p. 638.)

The greater part of Myisia is a mountainous country, being traversed by the north-western branches of Mount Taurus, which gradually slope down towards the Aegean, the main branches being

Mount Ida and Mount Témnus. The country is also rich in rivers, though most of them are small, and not navigable; but, notwithstanding its abundant supply of water in rivers and lakes, the country was in ancient times less productive than other provinces of Asia Minor, and many parts of it were covered with marshes and forests. Besides the ordinary products of Asia Minor, and the excellent wheat of Assas (Strab. xv. p. 729), Myisia was celebrated for a kind of stone called lapis assimus (σαρ-κυαφιτος), which had the power of quickly consuming the human body, whence it was used for coffins (sarcophagi), and partly powdered and strewn over dead bodies. (Dioscor. v. 141; Plin. ii. 98, xxxvi. 27; Steph. B. s. v. "Ἀστερος.") Near the coasts of the Hellespont there were excellent oyster beds. (Plin. xxxii. 21; Catull. xviii. 4; Virg. Georg. i. 207; Lucan, ix. 959; comp. Theophrast. Hist. Plant. i. 6. 13.)

The country of Myisia was inhabited by several tribes, as Phrygians, Trojans, Aeolians, and Myrians; but we must here confine ourselves to the Myrians, from whom the country derived its name. Myrians are mentioned in the Iliad (ii. 588, x. 430, xiii. 5), and seem to have been conceived by the poet as dwelling on the Hellespont in that part afterwards called Myisia Minor. Thence they seem, during the period subsequent to the Trojan War, to have extended themselves both westward and southward. (Strab. xii. p. 665.) Herodotus (vii. 74) describes them as belonging to the same stock as the Lydians, with whom they were always stationed together in the Persian armies (Herod. i. 171), and who probably spoke a language akin to theirs. Strabo (vii. pp. 295, 303, xii. pp. 542, 564, &c.) regards them as a tribe that had immigrated into Asia from Europe. It is difficult to see how these two statements are to be reconciled, or to decide which of them is more entitled to belief. As no traces of the Myrian language have come down to us, we cannot pronounce a positive opinion, though the evidence, so far as it can be gathered, seems to be in favour of Strabo's view, especially if we bear in mind the alleged identity of Moesians and Myrians. It is, moreover, not quite certain as to whether the Myrians in Homer are to be conceived as Asatics or as Europeans. If this view be correct, the Myrians must have crossed over into Asia either before, or soon after the Trojan War. Being afterwards pressed by other immigrants, they advanced farther into the country, extending in the south-west as far as Pergamum, and in the east as far as Cattaæacæumene. About the time of the Aeolian migration, they founded, under Teuthræs, the kingdom of Teuthrainia, which was soon destroyed, but gave the district in which it had existed its permanent name. The people which most pressed upon them in the north and east seem to have been the Bithynians.

In regard to their history, the Myrians shared the fate of all the nations in the west of Asia Minor. In B.c. 190, when Antiochus was driven from Western Asia, they became incorporated with the kingdom of Pergamum; and when this was made over to Rome, they formed a part of the province of Asia. Respecting their national character and institutions we possess scarcely any information; but if we may apply to them that which Posidonius (in Strab. vii. p. 296) states of the European Moesians, they were a pious and peaceable nomadic people, who lived in a very simple manner on the produce of their flocks, and had not made great advances in c c 3
civilisation. Their language was, according to Strabo (xii. p. 572), a mixture of Lydian and Phrygian, that is, perhaps, a dialect akin to both of them. Their comparatively low state of civilisation seems also to be indicated by the armour attributed to them by Herodotus (vii. 74), which consisted of a common helmet, a small shield, and a javelin, the joint of which was hardened by fire. At this time, the influence of the Greeks by whom they were surrounded seems to have done away with everything that was peculiar to them as a nation, and to have drawn them into the sphere of Greek civilisation. (Comp. Forliger, Handbuch der alten Geographie, vol. ii. p. 110, &c.; Cramer, Asia Minor, i. p. 30, &c.; Niebuhr, Lect. on Anc. Hist. vol. i. p. 83, &c.)

MYTHIUS (Μυτιος), a tributary of the Caeius, on the frontiers of Myasia, having its sources on Mount Tenmus, and joining the Caeius in the neighbourhood of Pergamum. (Strab. xiii. p. 616.) According to Ovid (Met. xv. 277) Mytius was another name for Caeius, whence some have inferred that the upper part of the Caeius was actually called Mytius. It is generally believed that the Mytius is the same as the modern Bergama. [L. S.]

MYSOCARAS (Μυσοκαρας, Ptol. iv. 1. § 3), a harbour on the W. coast of Mauretania, near the Phuth, probably the same as the Carinus Murcus (Καρινος τευχος) of Hanno (p. 2, ed. Hudson; comp. Euphr. ap. Steph. B. s. r. c.) now Agiosa, near the Wad Tenath, where Roman's map of Marocco marks ruins. (Geyg. Geogr. Mm., vol. i. p. 4, ed. Müller, Paris, 1853.) [E. B. J.]

MYSOYAKION (Μυσούακιον), a tribe of the Myasians, probably occupying the district about the sources of the small river Mytius. (Ptol. v. 2. § 15; Plin. v. 31.) In the time of the Romans this tribe belonged to the conventus of Ephesus; but further particulars are not known of them. [L. S.]

MYSTIA (Μυστια: Eth. Μυστιανος: Μυστιανος), a town of Bruttium, which seems to have been situated on the E. coast of that province, between Seydala and the Zephyrian promontory, apparently not far from Cape Coetanus (Capo di Silo). (Mela. ii. 4. § 8; Plin. iii. 10. s. 15.) Stephans of Byzantium cites Phyllius as calling it a city of the Sunnite, by which he must evidently mean their Lucanian or Bruttian descendants. (Steph. B. s. r.) Its position cannot be more exactly determined, but it is placed conjecturally at Monastecca near the Capo di Silo. (Cluver. Ital. p. 1305; Romancelli, vol. i. p. 175.) [E. B. B.]

MYTHETOLIS or MYTHOTOLIN (Μυθητολις, Μυθητολος), a town of Bithynia, of uncertain site, probably slightly situated in the north-west side of the Lucania, It is said that during the winter all the artificial wells of the place were completely dried of water, but that in summer they became filled again by the brim. (Aristot. Mf. Anim. 55; Ant. C. 188.) Stephans Byz. (s. v. θητολος) and Pliny (v. 43) mention a town of the name of Pytholus in Myasia, which may possibly be the same as Mythetolis. [L. S.]

MYTHILENE or MYTIILENE (Μυθιλες ου Μυτιληνης): Eth. Μυτιληνας or Μυτιληνας, the most important city in the island of Lesbos. There is some uncertainty about the orthography of the name. The Cæsars, both in their inscriptions and in their MSS. have generally Mythilene; but Velleius Paterculus, Pomponius Mela, and sometimes Pliny, have Mytilene. In some cases we find the Latin plural form Mythilenas. (Suet. Cæs. 2, Tib. 10; Liv. Epit. 89.) Tacitus has the adjective Mythilenus (Ann. xii. 33). It is generally agreed now that the word ought to be written Mytilene; but it does not seem necessary to alter those passages where the evidence of MSS. preponderates the other way. A full discussion of this subject may be seen in Plién (Lesbiacorum Libri). The modern city is called Mytilone, and sometimes Castro.

The chief interest of the history of Lesbos is concentrated in Mytilene. Its eminence is evident from its long series of coins, not only in the autonomous period, when they often bore the legend ΠΡΩΤΗ ΑΕΚΒΟΥ ΜΥΤΙΛΗΝΗ, but in the imperial period down to the reign of Gallienus. Lesbos, from the earliest to the latest times, has been the most distinguished city of the island, whether we consider the history of poetry or politics, or the annals of naval warfare and commercial enterprise.

One reason of the continued pre-eminence of Mytilene is to be found in its situation, which (in common with that of Methymna) was favourable to the coatage trade. Its harbours, too, appear to have been excellent. Originally it was built upon a small island; and thus (whether the small island was united to the main island by a causeway or not) two harbours were formed, one on the north and the other on the south. The former of these was the harbour for ships of war, and was capable of being closed, and of containing fifty triremes, the latter was the mercantile harbour, and was larger and deeper, and defended by a mole. (Strab. xiii. p. 617; Paus. viii. 30.) The best elucidation of its situation in reference to the sea will be found in the narratives contained in the 3rd book of Thucydides and the 1st book of Xenophon's Hellanikes. The northern harbour seems to have been called ΜΑΘΥΝΗ (Malea). This harmonises with what we find in Thucydides, and with what Aristotle says concerning the action of the NE. wind (καταιρησις) on Mytilene. All statements of Archimedes are drawn from clean, unless, with Mr. Grote (Hist. of Graec. vol. viii. p. 230), we suppose the Ενωρίς of Mytilene to be that arm of the sea which we have mentioned, in the article Lesbos, under the name of Portus Hieraicus, and which runs up into the interior of the island, to the very neighbourhood of Mytilene. A rude plan is given by Turennefort, but for accurate information the English Admiralty charts must be consulted. The beauty of the ancient city, and the strength of its fortifications, are celebrated both by Greek and Roman writers. (See especially Cic. Rutil. lib. 16.) Plutarch mentions a theatre (Deip. 42), and Athenaeus a Pythumecium (x. p. 425). Vitruvius says (i. 6) that the winds were very troublesome in the harbour and in the streets, and that the changes of weather were injurious to health. The products of the soil near Mytilene do not seem to have been distinguished by any very remarkable peculiarities. Theophrastus and Pliny make mention of its mushrooms: Galen says that its wine was inferior to that of Methymna. In illustration of the appearance of Mytilene, as seen from the sea, we may refer to a view in Choiseul-Gouffier; and to another, which shows the most striking forms of the mountains immediately behind, in Cuniberti and Howson's Life and Exp. of St. Paul.
MYTILENE.

The first passage in which the history of Mytilene comes prominently into view is in the struggle between the Aeolians and Athenians for Sigeum (n.c. 606), at the NW. corner of Asia Minor. The place and the time are both remarkable, as illustrating the early vigour with which Mytilene was exercising its maritime and political power. We see it already grasping considerable possessions on the mainland. It was in this conflict, too, that Pittacus, the sage and lawgiver of Mytilene, acted so noble a part, and that Alexenus, her great poet, lost his shield. The mention of these two names reminds us that this time of rivalry with Athens coincides with the famous internal contests of the nobles and commons in Mytilene. For the history and results of this struggle, see the lives of Alexenus, Pittacus, and Sappho, in the Dict. of Biography.

It may be difficult to disentangle the history of the Mytileneans from that of the Aeolians in general, during the period of the Persian ascendancy on these coasts. But we have a proof of their mercantile enterprise in the fact that they alone of the Aeolians took part in the building of the Hellenium at Naucratis (Herod. ii. 178); and we find them taking a prominent part in the invasion of Egypt by Cambyses. (Ib. iii. 13, 14.) They supplied a contingent to Daris in his Scythian expedition (Ib. iv. 97). They were closely connected with the affairs of Histiaeus (Ib. vi. 5); and doubtless, though they are not separately mentioned, they were the best portion of those Aeolians who supplied sixty ships to Aresus in his invasion of Greece. (Ib. vii. 95.)

The period of the Athenian supremacy and the Peloponnesian War is full of the fame of Mytilene. The alliance of its citizens with those of Athens began soon after the final regale of Persia. They held a very distinguished position among the allies which formed the Athenian confederacy; but their revolt from Athens in the fourth year of the Peloponnesian War brought upon them the most terrible ruin. Though the first dreadful decision of the Athenian assembly was overruled (Thucyd. iii. 36), the walls of Mytilene were pulled down, and her fleet given up; her territory was divided among Athenian shareholders, and she was deprived of her possessions and forts on the mainland. (Ib. iii. 50.)

Towards the close of the Peloponnesian War, Conon was defeated by Callirhodidas of Mytilene, and blockaded in the harbour. (Xen. Hell. i. 6) We pass now to the period of Alexander, with whose campaigns this city was conspicuously connected. The Lesbians made a treaty with Macedonia. Menon reduced the other cities of the island; and his death, which inflicted the last blow on the Persian power in the Aegean, took place in the moment of victory against Mytilene. It was retaken by Hesiodochus, in the course of his general reduction of the islands, and received a large accession of territory. Two Mytileneans, Lomonom and Erigynus, the sons of Larchus, were distinguished members of Alexander's staff. The latter fell in action against the Bactrians; the former was governor of Syria even after Alexander's death.

The first experience of the Roman power in the Aegean was disastrous to Mytilene. Having espoused the cause of Mithridates, and having held out to the last, it was sacked by M. Thermus, on which occasion J. Caesar honourably distinguished himself. Pompey's friendship with Thermaples led to the recognition of Mytilene as a free city. (Plin. v. 31.) After the defeat of Pharsalia, Pompey touched there for the last time to take Corinna on board. His son Sextus met with a friendly reception there, after his defeat at sea, by Agrippa. (Dion Cass. xlix. 17; App. B. C. v. 133.) Agrippa himself resided there for some time in retirement, ostensibly on account of his health, but really through mortification caused by the preference shown to M. Aurelius (Tac. Ann. iv. 53; Suet. Aug. 66, Tib. 10); and this residence is commemorated by an inscription still extant. (See Pococke.) The last event which we need mention in the imperial period is the crossing over of Germanicus with Agrippina from Euboea to Lesbos, and the birth of Julia. (Tac. Ann. ii. 54.) This event, also, was commemorated both by coins and inscriptions. (See Eckel and Pococke.) It appears that the privilege of freedom was taken away by Vespasian, but restored by Hadrian. (Plink, Lesb. p. 83.)

Mytilene is one of the few cities of the Aegean, which have continued without intermission to flourish till the present day. In the course of the middle ages it gradually gave its name to the whole island. Thus, in the Synecdemus of Hierocles, Мнтилсей and Мнтилсн are both mentioned under the Province of the Islands; but in the later Byzantine division, Mytilene is spoken of as an island, like Lemnos and Chios, in the Theme of the Aegean Sea. (Const. Porphyry, de Them. i. pp. 32, 43, ed. Bonn.)

The fortunes of Mytilene during the last advances of the Mahomedans in the Levant, and during the ascendancy of the Venetians at a later period, are noticed in Finlay's History of the Byzantine and Greek Empires, vol. ii. pp. 72, 171, 223. The island of Lesbos was not actually part of the Mahomedan empire till nearly ten years after the fall of Constantinople.

With the exception of the early struggles of the time of Alexeus and Pittacus, there is little to be said of the internal constitutional history of Mytilene. It shared, with all Greek cities, the results of the struggles of the oligarchical and democratical parties. We find a commonality (Σεισα) and a council (βέλτικα) mentioned on coins of the period of Alexander; and the title of magistrates, called ἄρχων (archon), appears on coins of Lucius Verus. In connection with this part of the subject we may allude to two creditable laws; one which enacted (doubtless in consequence of the great quantity of wine in the island) that offences committed by the drunk should be more severely punished than those committed by the sober (Arist. Pol. ii. 9. 9); the other making a singular provision for the punishment of faithlessness in tributary allies, by depriving them of the privilege of educating their children. (Aehan, Ver. Hist. vi. 15.)

[J. S. H.]
taint. It was in both, but a small town, though strongly fortified, whence Philostratus (ap. Steph. B. s. r.) called it "a fortress of Sicily." It is con-
spicuously mentioned during the First Punic War, when it was in the hands of the Carthaginians, and was besieged by the Romans, but for some time with- out success, on account of the great strength of its
position; it was at length taken by the consul A.
Atius Calatinus in b.c. 238. The inhabitants
were either put to the sword or sold as slaves, and
the town itself entirely destroyed. (Pol. i. 24: Di-
d. xiiii. 9, Exc. Hossch. p. 503; Zonar. Vide.) It
was, however, again inhabited at a later period, as
we find the Mutustratui mentioned by Poly by among the municipal towns of the interior of Sicily, (Plut. in
s. s. 14.) But no notice of its name occurs in the
interval, and Chreucus (who has been followed by
many modern geographers) would, therefore, identify
Mylustratui with Amestrasus; an assumption for
which there are certainly no sufficient grounds, nei-
er names being perfectly well attested. [Amestra-
(Moysi: Eeb. Moosiror), an Ionian town in
Caria, on the southern bank of the Maeander, at a
distance of 30 stadia from the mouth of that river.
Its foundation was ascribed to Cyrrhus, a natural
son of Cadmus. (Strab. xiv, p. 653.) It was the
smallest among the twelve Ionian cities, and in the
days of Strabo (xiv. p. 636) the population was so
reduced that they did not form a political commu-
nity, but became incorporated with Miletus, whereby
in the end the Myians transferred themselves,
abandoning their own town altogether. This last
event happened, according to Pausanias (viii, 2, 7),
on account of the great number of thieves which an-
eraged the inhabitants; but it was more probably on
account of the frequent inundations to which the
place was exposed. (Vitrub. i. 4.) Myus was one
of the three towns given to Thessaly by the Per-
thean king (Thucyd. i. 138; Diod. Sic. xii. 57;
Plut. Thou. 29, Athen. i. 29, Nep. Them 10.)
During the Peloponnesian War the Athenians ex-
perienced a check near this place, and the Carian
(Tabula II, 19.) Philip of Macedon, who had
obtained possession of Myus, ceded it to the Mag-
nesium. Athen. iii. 78.) The only edifice noticed
by the ancients at Myus was a temple of Dionysus,
built of white marble. (Paus.-Lc.) The immense
quantity of deposits carried down by the Maeander have considerably removed the east-line,
so that even in Strabo's time the distance between
Myus and the sea was increased to 40 stadia (xi.,
p. 579), while originally the town had no doubt
be extended to the east itself. There still are some
ruins of Myus, especially traverse, forgetting the
changes which has wrought by the Maeander, have
been made for three years, while those of Myus
have been mistaken for those of Myus. (Comp. Leake,
Asia Minor, p. 239, 380.) The mistake is repeated
p. 263), though it had been pointed out long before
his time. [L. S.]

N.

NAARDA (Naadza, Plut. v. 18, § 7; Steph. B.
s. r.; Naadwa, Joseph. loc. xxi, 12.), a small place
in Magnesia, near Sparta. It is probably the
same as that called in the Priscian Table Naarda.
Josephus speaks (l. c.) of Naarda as a place in

BABARAEI.

By this means, possessing an extensive range of territory,
and defended from hostile attack by the Euphrates, which
flows round it. When Tiberius overthrew the Jews in the East, the remnant of that people
took refuge in Naardsa and Nileia; and the ever-
city long remained a place of refuge for the Jews.
In the intermediate records of the Christian East
we find occasional notices of this place, under the
titles of Naarardia and Beth-Nabharda. Thus, in
A. D. 421, a bishop of Nabardia is mentioned (As-
sem. Bibliol. Orient. iii. p. 204); in A. D. 555, Jonas
is bishop of Beth-Nabharda (Assem. ii. p. 111);
and as late as A. D. 1285, another person is record-
ed as "Episcopus Nabhardensis." (Assem. ii. p. 249.)
During all this period Naarda is included within
the episcopal province of Mosul. Lastly, in the Travels
of Benjamin of Tudela, which took place towards
the end of the 12th century, the traveller mentions
going to "Juba, which is Pumbeditha, in Nabardia,
containing about two thousand Jews." (p. 92, Asher's edit.); from which it appears that, at that
period, Naarda was considered to comprehended
a district with other towns in it. Pumbeditha and Lura
were two celebrated Jewish towns situated near one
another, at a great distance from Bagnahed. [V.]

362, a.]

NABAUS (Naadza, Plut. ii. 3, § 1), a river in
the extreme north of Britannia Baroda or Caledonia,
probably the Nazearus river, east of C. Wrath.

NABALLA, in the text of Antipater (Hist. v, 26),
is a river in or near the Batavorum Insula, over
which there was a bridge. During the war between
Civilians and the Romans, there was a conference
between Civilians and Cereals on this bridge, which
had been cut asunder for safety's sake, each party
at the conference keeping on his own side of the
river. It is uncertain if the name Nabala is right;
and if it is right, it is also uncertain what the river
is. It must, however, be some stream about the
lower part of the Rhine; and Walekener (Geog.
loc. vol. i. p. 298) conjectures that it is the dscd
or eastern branch of the Rhine. [G. L.]

NABATAEI (Nabataioi, Avartisoi, Plut. vi. 7.
§ 21; Nabara, Suid. s. r.; Naara, LXX., Nabat-
ane, Sen. Herb. Oct. 160; the country, Nabara,
Stab. Narda, Joseph.,) a numerous and import-
ant people of Arabia Petraea, celebrated in the clas-
sical geographers. Josephus describes the country as
comprehending all from the Euphrates to the Red
Sea, i.e. the whole of the Gulf of Acre; and he
mentioned the "name of Nabardia" in connexion
with the "Aedes of Kherdon" (Jos. i. 7, 7),
impresses that they existed as a distinct pastoral
tribe. But they occur frequently in history after

NABATUM, a name given to many Barbary
towns, and by the ancients often interchanged with
"Babylonia," a term derived from the Babylonian
name for Babylon. Shechem, "Babylonia," is said

the captivity. They were the friends and allies of the Jews in their struggle for independence; for when Judas Maccabaeus, with his brother Jonathan, found them 3 days S. of the Jordan (cir. n. c. 164), they received him amicably, and gave him information which led to the defection of the house of Hasmonaeus. Jews descended from the Ammonites, under Time-theus (Joseph. Ant. xii. 8, § 3; 1 Maccab. v. 24, &c.); and when preparing for an engagement with Baccidhas (cir. n. c. 161), the same Jonathan proposed to place all their movable property in their custody. (Ib. xiii. 9, § 2; 1 Maccab. ii. 33.) But the earliest and fullest notice of this people and of their country occurs in Diodorus Siculus, who mentions them frequently. In n. c. 312, Antigonus, having recovered Syria and Palestine out of the hands of Ptolemies, resolved on an expedition against the Nabataeans, and detached his general Athenacus on this service, with 4000 light-armed troops and 600 light cavalry. The manners of these Arabs and their country is described by the historian in this connection. They inhabited tents in a vast desert tract, which offered neither streams nor fountains to an invading army. Their institutions, as described by him, bear a striking resemblance to those of the Rechabites in every particular, "to drink no wine, nor to build houses, nor to have vineyard, nor field, nor seed, but to dwell in tents." (Jer. xxxv. 6—11.) Diodorus mentions that the violation of any of these customs was a capital crime. Their occupations were chiefly pastoral; some possessing camels and others sheep in much greater abundance than the other Arabs, although their number did not exceed 10,000; but they also acted as carriers of the aromatic drugs of Arabia Felix, which were discharged at their great mart at Petra, and by them transported to the Mediterranean, at Rhinocorura. The love of liberty was a passion with them; and their custom, when attacked by a more powerful enemy, was to retire to the wilderness, whither the invaders could not follow them for want of water. They themselves had provided for such emergencies, subterranean and the watercourses of rain water, dry in the clayey soil, or excavated in the soft rock, and plastered, with very narrow mouths,—which could be easily stopped and concealed from sight, but which were marked by indications known only to themselves,—but gradually expanding until they attained the dimensions of 100 feet square. They lived on flesh and milk, and on the spontaneous produce of the country, such as pepper and wild honey, which they drank mixed with water. There was an annual fair held in their country, to which the bulk of the males used to resort for purposes of trade; leaving their flocks with their most aged relatives, and the women and children at Petra, naturally a very strong place, though unwalled, two days distant from the inhabited country. Athenacus took advantage of the absence of the Nabataeans at the fair, to attack Petra; and making a forced march of 3 days and 3 nights from the ephraim of Iudamae, a distance of 2200 stadia, he assaulted the city about midnight, slaughtered and wounded many of its inhabitants, and carried off an immense booty in spicery and silver. [Peta.] On his retreat, however, he was surprised by the Nabataeans, and all his forces cut to pieces, with the exception of 50 horsemen. Shortly afterwards Antigonus sent another expedition against Petra, under the command of Demetrius; but the inhabitants were prepared, and Demetrius was glad to withdraw his army on receiving such gifts as were most esteemed among them. (Diod. xix. 44—48, comp. ii. 48.) In the geographical section of his work the author places them on the Lamanites Sinus, a bay of the Aralitic gulf, and describes their country as being mountainous, both on the coast and in the interior. Their country was most populous, and incredibly rich in cattle; but their national character had degenerated when he wrote (cir. n. c. 8). They had formerly lived honestly, content with the means of livelihood which their flocks supplied; but from the time that the kings of Alexandria had rendered the gulf navigable for merchant vessels, they not only practised violence as wreckers, but made piratical attacks from their coasts on the merchantmen in the passage through the gulf, imitating in ferocity and lawlessness the Taurs in Pontus. Ships of war were sent against them, and the pirates were captured and punished. (Ib. iii. 42, comp. Strabo, xvi. p. 777.) The decrease of their transport trade and profits, by the new channel opened through Egypt, was doubtless the real cause of this degeneracy. The trade, however, was not entirely diverted; later writers still mention Petra of the Nabataeans as the great entrepôt of the Arabian commerce (Arrian, Periplus, p. 11, ap. Hudson, vol. i.), both of the Germaei of the west, and of the Minuet of the south of that peninsula. (Strabo, xvi. p. 776.) The account given by Strabo agrees in its main features with the earlier record of Diodorus Siculus; and he records at length the deception practised on his friend Aelius Gallus by Syllaenus, the procurator (eisirporos) of the Nabataeans, under the king Oboadas; a false friend of the Romans, through whose territory he first led them on leaving Leuce Come, where they had landed. The policy of Syllaenus illustrates the remark of Strabo (xvi. p. 783), that the Nabataeans are prudent and acquisitive; so much so, that those who wasted their property were punished, and those who increased it rewarded by the state. They had few slaves among them; so they either waited on themselves, or practised a species of slavery in families, even in the royal family. They were addicted to feasting, and their domestic manners marked considerable progress in luxury and refinement, from the rude simplicity of the primitive times described by the more ancient author (p. 783, seq.). He mentions that they were fire-worshippers, and sacrificed daily to the sun on their house-tops. Their government may be styled a limited monarchy, as the king was subject to be publicly called to account, and to have to defend himself before the people. Their cities were walled, and their country fruitful in everything but the climate. The limits of their country are not clearly defined; Strabo places them above the Syrian, with the Sabaee, in Arabia Felix (xvi. p. 779); but this must be a corrupt reading, and is inconsistent with his other notices of them. Thus he speaks of the promontory near Seal Island—the peninsula of Mount Sinai—as extending to Petra of the Arabs called Nabatae (p. 776), which he describes as situated in a desert region, particularly towards Judaea, and only three or four days' journey from Jericho (p. 779). The approach to Egypt from the east, towards Phœnicis and Judaea, was difficult by way of Petæum (city of Arabia Nabataea it was easy. All these and similar notices serve to show that from the age of Antigonus to this period, the Nabataeans had in-
NACTAEI.

and, therefore, according to Josephus and other ancient authorities, Israelite Arabs. How or when they had dispossessed the Edomites does not appear in history, nor what had become of the remnant of the Edomites. (Robinson in Bib. Res. vol. ii. pp. 558, 559.) But while Judas Macabaeus was on terms of friendship with the Nabataei, he was carrying on a war of extermination against the Edomites. (Joseph. Ant. xii. § 1 ; 1 Maccab. v. 3.) It is worthy of remark, however, that the Edomites with whom Hyrcanus was in alliance, or whom Aretas reigned, and from whom Herod was sprung, are expressly said to be Nabataeans (Ant. xiv. 2, § 3, 3 §§ 3, 4), whose alliance was refused by Pompey, on account of their inaptitude for war. And this identity is further proved by Strabo, who writes that the Idumaeans and the lake (A-phalades) occupy the extreme west (?) corner of Judaea: — "These Idumaeans are Nabataeans; but being expelled thence in a sedition, they withdrew to the Jews and embraced their customs." (xvi. p. 760.) This recognition of the Nabataean origin of the Edomites must be regarded as a geographical, rather than as a genealogical designation. Pliny (vi. 22) throws little light upon the subject, merely making the Nabataei contiguous to the Seennite Arabs, with whom they were more probably identical, and stating that the ancients had placed the Thimanae next to them (i.e. on the E.); in the place of whom he names several other tribes, as the Tavreni, Sudebii, Arracceni, &c. (Ibid.) But the statement of Josephus that the Nabataei extended from the Emphrates to the Red Sea, is confirmed by the fact that the name Nabat appears in a map, as a marshy district, described by Golias as part of the "palustria Chaldaea," between Wusith and Bosra, which was called "paludes Nabatilorum," (Golias, cited by Forster, Geog. of Arabia, vol. i. p. 214 &c.), while at the other extremity the name Nubat is given to a town two days beyond (i.e. south) of El-Houra in the Hedjaz, by an Arabian geographer (Sihouit, cited by Quartemele, Memoire sur les Nabatans, p. 38), near where Jehel Nabit is marked in modern maps. The existence of this name in this locality is regarded by M. Quartemule as an admissible element for the identity of El-Houra with Jehel Nabit, provided that the country of the Nabataeans actually extended so far south. The fact of the origin of the Nabataeans from Nabat, the son of Ishmael, resting as it does on the respectable authority of Josephus, followed as it is by S. Jerome (Quoest. Hebr. in Genes. tom. ii. p. 530), and in full and considerable writers in the western world, has been called in question by M. Quartemule in the Memoire above referred to; who maintains that they are in no wise Ishmaelites, nor connected by race with any of the Arab tribes, but were Arabian, and identical with the Chaldaean. He cites a host of ancient and most respectable native Arabic authors in proof of this theory; according to whose statements the name Nabats or Nabataeans designated the primitive and indigenous population of Chaldaea and the neighbouring provinces, probably those whom Edomians designates Babylonians in contradistinction from the Chaldaei. They occupied the whole of

that country afterwards called Irak-Arab, in the most extended sense of that name, even comprehending several provinces beyond the Tigris; and it is worthy of remark, that Masoudi mentions a remnant of the Babylonians and Chaldaeans existing in his day in the very place which is designated the marches of the Nabataeans, i. e. in the villages situated in the swampy ground between Wusith and Bosra. (ib. p. 66.) Other authors mention Nabataeans near Jathirib or Medium, which would account for the Jebel Nilbod in that vicinity; and another section of them in Babrein, on the eastern coast of the peninsula, who had become Arabs, as the Arab population of the present country. However, it is probable that the place of the Nabataeans in the Persian Gulf may be alluded to by Strabo, who relates that the Chaldaeans, banished from their country, settled themselves in the town of Gerra, on the coast of Arabia (xvi. p. 766); which fact would account for the commercial intercourse between the merchants of Gerra and those of Petra above referred to; the Nabataei of Petra being a branch of some family also from Babylon and perhaps driven from their country by the same political revolution that dispossessed the refuges of Gerra. However this may have been, it must be admitted of the present that there were various and opposite traditions and contending arguments of M. Quatremere leave little doubt that this remarkable people, which appears so suddenly and comparatively late on the stage of Arabian history, to disappear as suddenly after a brief and brilliant career of mercantile activity and success, were not natives of the soil, but aliens of another race and family into which they were subsequently merged, again to reappear in the annals of their own original seats. (ib. pp. 88—90.) Rehav gives a different account of the identity of the names in the two quarters. (Palataeia, p. 94.)

NABATIARE. [Arab.]

NABIANI (Nabaoai), a tribe of the Canaenites, whom Strabo (xi. p. 506) couples with the Panzani (Panxaoi), about the Palaus Mecetis. [F. B. J.]

NABLIS, a river of Germany, flowing into the Danube from the north, and probably identical with the Naab in Bavaria. (Venat. Fort. vi. 11; Geogr. liv. iv. 26, who calls it Nubus or Naurus.) [L. S.]

NABRISSA or NEBRISSA (Nabroser, Strab. iii. pp. 140, 141; Ptol. ii. 4. § 12; Nebrixa, in old vett. of Plin. iii. 1. s. 3, but Sillig reads Nabrissa; Nebrissa, Sil. iii. 393), surrounded Veneria, a town of the Turdacti in Hispanic Baetica, situated upon the estuary of the river Baetis. According to Silinus (lic.) it was celebrated for the worship of Dionysus. Now Laberico. (Flor. Espr. Sagr. xii. p. 60.)

NABRI M, a river of Galicia, mentioned by Pliny (vi. 23. s. 26.). It must have been situated near the mouth of the Arabs, between this river and the Indus; but its exact position cannot be determined. It is not mentioned in the voyage of Neareus. [V.]

NACMUSI. [Maëvirtania.]

NACOLEIA, NACOLIA (Nakoldia, Nakollia), a town in Phrygia Episcetos, between Dorylaeum and Clyteaum, on the upper course of the river Thymberus. (Strab. xii. p. 576; Steph. B. s. p.; Ptol. v. § 22.) In the earlier times, the town does not seem to have been of much consequence, but later writers often mention it. It has acquired some celebrity from the fact that the emperor Valerius defeated the usurper Procopius. (Annae. Mar. xxvii. 27; comp. Zosim. iv. 8; Socrat. Hist. Eccl. iv. 5; Socrat. iv. 8.) In the reign of
NACONAH.

Arcadius, Nacoelia was occupied by a Gothic car-

rissian, which revolted against the emperor. (Philosor. xi. 8; comp. Hieroc. p. 678; Conc. Chal.
ced. p. 524.) The Peuting. Table places it 20
miles south of Dorylacum, and Col. Leake (Asia
Minor, p. 274) is inclined to identify the place with
Tissesh Kalesi, near Doganli, where he saw some
very remarkable, apparently sepulchral, monuments.
But the remains alluded to by Leake seem to
have belonged to a more important place than Na-
colia, and Texier (Descript. de l'Asie Min. vol. i.)
asserts that it is proved coins that Nacoelia was
situated on the site of the modern Siddi Kerral on
the north-west of Doganli.

NACONA (Νακώνα, Steph. B. E. Ἐθ. Νακεωνα-
νας), a town of Sicily mentioned only by Stephanus
of Byzantium, who cites Philistus as his authority.
The accuracy of the name is, however, confirmed by
coins, the earliest of which bear the legend NAKO-
NAYON, while those of later date have NAKO-
NAYN. From one of the latter we learn that the
town had been occupied by the Campanians, ap-
parently at the same period with Actea and Entelia.
(Millingen, Ancient Coins, pp. 33-35; Sestini, Lett. Num. vol. vii. pl. 1.) There is no clue to its
position.

[N. S.]

NACRASA (Νάκρασα), a town in the north
of Lydia, on the road from Thyatira to Pergamum.
(Prot. v. § 16; Hieroc. p. 670, where it is called
Ἀκρασᾶς.) Chishull (Ant. Asiait. p. 146) has
identified the place by means of coins with Bakhir,
or Bakri, somewhat to the north-east of Samnaa.
(Comp. Arundell, Seven Churches, p. 276.) [L. S.]

NAEBIS or NEBUS. [Gallaeus, Vol. i. p. 933;
Minoris.]

NAELUS (Ναίλος, Prot. ii. 6. § 5), a river on
the north-east coast of Hispania Tarraconensis, in the
territory of the Paeisici, a tribe of the Astures. Now
the Nalon.

NAGADIBA (Ναγαδιβα, Prot. vii. 4. § 7, 8;
Ἐθ. Ἡραλδεο, Prot. vii. 4. § 9), a town in the NE.
corner of the island of Taphobane or Cyclon, at no
great distance from the capital Anuogrammum.
Polyena gives the same name to one of a group
of islands which, he states, surrounded Cyclon.
(viii. 4. § 13). The name may be a corruption of
the Sumerian Nagsadeiya, which would mean Island
of Snakes.

[V.]

NAGARA (Νάγαρα), a city in the NW. part
of India intr. Gangem, distinguished in Ptolemy
by the title ΝΑΓΑΡΑ καὶ Διονυσίας (vii. 1. § 43).
It is no doubt the present Nagar, between the Kibul
river and the Indus. From the second name which
Ptolemy has preserved, we are led to believe that
this is the same place as Nysa or Nyass, which was
spared from plunder and destruction by Alexander
because the inhabitants asserted that it had been
founded by Bacchus or Dionysus, when he conquered
the Indians. (Arrian, Anat. v. 1; Curt. viii. 10. § 7.) A mountain called Moron was said to over-
hang the city, which was also connected with the
legend of Bacchus having been reared in the thigh of
Zeus.

[V.]

NAGARAS (Marsabab.)

NAGEIRI (Ναγειρι or Ναγειρη, Prot. viii. 4. §
9), one of the two most southern tribes of Taphro-
bane (Cyclon). They appear to have lived in the
immediate neighbourhood of what Ptolemy calls, and
what are still, "the Elephant Pastures," and to have
had a town called the city of Dionysus (Διόνυσος
τοις or Ἐπαφον), which is probably represented now
by the ruins of Kattregam (Davy, Account of Cyl-
on, p. 420; Ritter, Erdkunde, vi. p. 22); if these
are not, as some have supposed, the remains of
Musulman.

[N. V.]

NAGIDUS (Ναγιδος: Ἐθ. Ναγιδες), a town of
Cilicia on the coast, said to have been colonised by
the Samians. Stephanus B. mentions an island
named Nagidusa, which corresponds to a little rock
about 200 feet long, close to the castle of Anamour.
(Stab. xiv. p. 670; Mela, i. 13. § 5; Scalix, p. 40;
Steph. B. s. r. Beaufort, Karmania, p. 206; Cra-

COIN OF NAGIDUS.

NAGNATA (Ναγναιτα, Prot. ii. 2. § 4, in the old
edit. Ναγναιτα), an important town (πόλις ἔρι-
σημος) on the west coast of Ireland, in the territory
of the NAGNATAE (Ναγναται, Prot. ii. 2. § 5),
probably situated upon Sligo Bay.

NAHALAL (НАΔΑΛ, LXX.), a city of the tribe
of Zabulon, mentioned only in Joshua (xix. 13).
Eusebius identifies it with a village named Nila
(Νηλα), in Bashan, but Beland justly remarks that
this is without the territory of the remarks of
Zabulon. (Palaeestina, s. v. p. 904.) [G. W.]

NAHARVALI, one of the most powerful tribes
of the Lygii, in the north-east of Germany. Tacitus
(Germ. 43) relates that the country inhabited by them
(probably about the Vistula) contained an ancient
and much revered grove, presided over by a priest in
female attire. It was sacred to twin gods called Aleiis, whom Tacitus identifies with Castor
and Pollux. (Latham on Tac. Germ. i. c. Spen-
gel, Erleuter zu Tac. Germ. p. 140.) [L. S.]

NAIN (Ναιν), a village of Palestine, mentioned
by St. Luke as the scene of the raising of the widow's
son (vii. 11). Eusebius places it two miles S. of
Mount Tabor, near Endor, in the district of Seytho-
polis (Οινονατ. s. v. ᾿Ησιδρος καὶ Ναϊν), where
a poor village of the same name is found at the present
day, on the northern slope of Little Hermon, and
at a short distance to the W. of 'Ain-dor. (Robinson,
Rib. Rev. vol. iii. p. 226.) [G. W.]

NAIOTH (Ναϊωθ εἰς Ρααγα), LXX. in I Sam.
vi. 18, 19, 22, 23. [Rama.]

NAISUS (Νάϊςρ, Steph. B. s. r.; Ναϊςρον,
Prot. iii. 9. § 6; Ναϊςρον, Zeism. iii. 11; Νάϊςρον,
Hieroc. p. 654;), an important town in Upper Mes-
sia, situated in the district Bardania, on an eastern
tributary of the river Margus, and upon the military
road running through this country. It was in the
neighbourhood of Naisus that Claudius II. gained
his victory over the Goths in A.D. 269 (Zosim. i. 43); but the town is chiefly memorable as the birthplace of Constantine the Great. (Steph. B. s. v.; Const. Perp. de Thum. ii. 9. p. 56, ed. Bonn.) It was destroyed by the Huns under Attila (Priscus, p. 171, ed. Bonn.), but was restored by Justinian (Hieron. ii. 5.) where it is called Nisopolis. It still exists under the name of Vizea, upon the river Nissa. as an affluent of the Morava.

NALATA. [Halmatia.]

NAMADUS (Nâmadus, or Nâmadav, Pol. vii. 1 §§ 3, 31, 62, 63), a great river of Western India, which, after rising in the M. Vindiusi (Vindhyâ Mountains), falls into the S. Kasyazenus (Gulf of Cambay), not far from the town of Bharchan. In the Preip. M. Ergilr. (Geogr. Graec. vol. i. p. 291, ed. Müller) the river is called Namnadium (Nânadav). The present name is Nirbadha, which, like the Greek form, is doubtless derived from the Sanscrit Nirmandâ, "pleasant." (Forbes, Oriental Men. ii. pp. 104—112.)

NAMNETES, NANNETES (Nânnâvita, Pol. ii. 8 § 9), for there is authority for both forms, were a Gallic people on the northern side of the Liger (Loire), and on the sea. The river separated them from the Frigones or Pictavi. (Strab. iv. p. 190.) Their chief town was Condivinum (Nantes). When Caesar was carrying on his war with the Veneti, these maritime Galli called in to their aid the Osomi, Namnetes, and other neighbouring people. (Cass. B. G. iii. 8.) The Brivates Portus of Plemen is within the limits of the Namnetes. The former horse of Namnatis exceeded the limits of the Namnates.

[Gal. L.]

NANAGUINA (Nânâgûvina, Pol. vii. 1 §§ 7, 32, 36), a considerable river of Western India, which rises, like the Nabobita, in the Vindhyâ Mountains, and flows into the Indian Ocean to the S. of the former river, not far from Saur. Its present name is the Japati or Jupati. (Lassen, Ind. Alterth. vol. i. p. 88.)

NANGERI. [Naghiri.]

NAGERES, people who bordered on the Allobroges, who in Caesar's time were included within the limits of the Provincia. Caesar (B. G. iii. 1) at the close of the campaign of n. c. 57 left Servius Galba with some troops into the country of the "Namnetes Veragi and Seduni, who extend from the borders of the Allobroges, the Lucus Leonamus and the river Rhone to the summits of the Alps." The position of the Seduni in the valley of the Rhone about Sitten or Sion, and of the Veragi lower down at Martigny or Martinach, being ascertained, we must place the Namnetes in the Chablais, on the south side of the Leman lake, a position which is confirmed to Caesar's text by Strabo (iv. p. 204) who probably got his information from Caesar's work, speaks "of the Veragi, Namnatae, and the Leman lake," from which we might infer that the Namnetes were near the lake. An inscription in honour of Augustus, which according to Guilleme's testimony was found at Maurice, which is in the Valais lower down than Martigny, contains the words "Namnatae patroii," and if the inscription belongs to the spot where it is found, it is some evidence that the Namnetes were in the lower part of the Valais. But if the Namnatae were not inhabitants of the Allobroges, they must have extended westward along the south bank of the lake into the Chablais. The Chablais is that part of Savoy which lies along the Leman lake between the Arve and the Talais. It is not certain how far the Allobroges extended along the Leman lake east of Geneva, which town was in their territory. It has been observed that the word Nant in the Celtic language signifies running water; and it is said that in the dialect of Savoy every little mountain stream is called Nant, and that there are many streams of this name. Nant is also a Welsh word for stream.

There is another passage in Caesar, where the name Nautantes occurs in the common texts (B. G. iv. 10), which has caused great difficulty. He says that the Rhenus rises in the country of the Lepontii who occupy the Alps, and that it flows by a long distance (longo spatio) through the country of the Nautantes, Helvetii, and others. Walckenaer affirms (Géog. sce. vol. i. p. 558) that the best and the greater part of the Miss. of Caesar have Nautantes; but this is not true. The readings in this passage are Nautnantes, Nautantium, Nautantum, and some other varieties. (Caesar, ed. Schneid.) Strabo (iv. p. 192) says that the Actuatae (Airoucata) inhabit the first part of the course of the Rhine, and that the sources of the river are in their country near Mount Adulas. Casaubon changed Actuatae into Nautantes to make it agree with Caesar's text, and Oliver changed it into Helvetii. Both changes are opposed to sound criticism. The name in Caesar's text is not certain, and in Strabo it may be wrong, but nothing is plainer than that these people, whatever is their name, are in the valley of the Rhine. Oebelin in his edition of Caesar has put the name "Sarunetium" in place of "Nuntantum," but the Sarunetes of Pliny were in the valley of Sargans. Groskurd (Transl. Strab. vol. i. p. 192) has adopted the alteration "Helvetii" in his translation; and very injudiciously, for the Helvetii were not in the high Alps. Ubert (Gallien, p. 349) would also alter Strabo's Actuatae into Nautantes to fit the common text of Caesar; and he gives his explanation of the position of the Nautantes, which is a very bad explanation. The Namnetes occur among the Alpine peoples who are mentioned in the Trophy of Augustus (Plin. in. 29), and they are placed thus: "Lepontii, Uleri, Nautantes, Seduni, Veragri," from which, if we can conclude anything, we may conclude that these Nautantes are the Nautantes of the Lower Talais.

[Gal. L.]

NAPAEI. [Taurica Cheesoneses.]

NAPARIS (Nâparis, Herod. iv. 48), an affluent of the Ister, identified by Schafarik (Slavische Alterthümer, vol. i. p. 506) with the Aspers of the Peuntinger Table. It is one of the rivers which take their source in the Transalpine Alps, probably the Aidroucata or Arboucata of Caesar.

NAPATA. (Nâpâra, Strab. xvii. p. 820; Pol. iv. 7. §§ 19, viii. 16. §§ 8; Nâpâra, Steph. B. s. e.; Tavâna, Dion Cass. liv. 5), was the capital of an Aethopian kingdom, north of the insular region of Meroe, and in about lat. 19° N. There is, however, great difficulty in determining the true position of Napata, as Strabo (L. c.) places it much farther N. than Pliny, and there is reason for supposing that it is the designation of a royal residence, which might be moveable, rather than of a fixed locality. Ritter (Erdekunde, vol. i. p. 591) brings Napata as far north as Portus (Ibra), and the ruins at Ipsembol, while Munsert, Ubert, and other geographers believe it to have been Jurave, on the further northern point of the region of Meroe. It is, how-
ever, generally placed at the E. extremity of that great bend of the Nile, which skirts the desert of Bah- 
ouda (Nacra), and near Mount Birkel (Gebel-el- 
Birkel), a site which answers nearly to the descrip-
tion of Napata, in Flinn (L. C.). Napata was the 
furthest point S. beyond Egypt, which the arms of 
Romae penetrated, and it was taken and plundered 
by the Pharaohs, the lieutenants of the Pharaohs, 
in n. c. 22. (Dion Cass, liv. 5.) Nor does Napata seem ever 
to have recovered its earlier greatness; for Nero's sur-
veyors found only an insignificant town there, and 
afterwards all traces of this city vanish. The govern-
ment of Napata, like that of Meroe, was often com-
thened to the hands of women, who bore the title of 
Candace (Acts of Apost. viii. 27; Euseb. Hist. 
Eccles. ii. 1; Tatian, chiliad, iii. v. 883); and in the 
kingship of Schendy, Burekhaiti found in the present 
century a similar regimen. Napata, if not a colony, 
was probably at one time among the dependencies of 
Meroe. The government and religion were the 
same in both; and from the monuments discovered 
in either, both seem to have been in a similar state 
of civilisation. If Merarce, indeed, represent the 
ancient Napata, it seems to follow that the latter 
was the second city of the Mesopotamian region of 
Meroe.

Napata owed much of its wealth and importance 
to its being the terminus of two considerable car-
avan routes;—(1) One crossing the desert of Bah-
ouda; (2) The other further to the N. running from 
the city to the island G Mageedas in the Nile (Plin. 
vi. 36), the modern Argo. (Rassaggger, Karte von 
Nubien.) Although Napata was surrounded by 
Nomad hordes, its proper population was probably 
as civilised as that of Meroe, at least its wealth pre-
supposes settlement and security. Its commerce 
consisted in an interchange of the products of Libya 
and Arabia, and it was near enough to the marshes 
of the Nile to enjoy a share in the profitable trade 
in ivory and hides which were obtained from the 
chase of the hippopotamus and elephant. If the 
ruins which are found near Mount Birkel represent 
Napata, the city can have been second only to the 
golden city of the Aethiopians, Meroe itself. ( Dio-
dor. iii. 6.) On the western bank of the Nile are 
found two temples and a considerable necropolis. 
The former were dedicated to Osiris and Ammon; 
and the sculptures representing the Ammonian and 
Osirian worship, are inferior in execution and design 
to none of the Nubian monuments. Avenues of 
spinaxes lead up to the Ammonium, which exhibits in 
sits ruins the plan of the great temples of Aegypt. 
On the walls of the Osirian temple, which Calli-
aud (L'Ile de Merco) calls a Typhonium, are re-
presented Ammen-Ra and his usual attendants. 
The inscriptions exhibit Ammon or Osiris receiving 
gifts of fruit, cattle, and other articles, or offering 
sacrifice; strings of captives taken in war are 
kneeling before their conqueror. On the gateway 
leading to the court of the necropolis, Osiris was 
carved in the act of receiving gifts as lord of the 
lower world. The pyramids themselves are of con-
siderable magnitude; but having been built of the 
sandstone of Mount Birkel, have suffered greatly 
from the percolating rains, and have been still more 
injured by man.

Among the ruins, which probably cover the site 
of the ancient Napata are two lions of red granite, 
one bearing the name of Amenep III. The other of 
Amenophis. They were brought to England by 
Lord Prudhoe, and now stand at the entrance to the 

gallery of Antiquities in the British Museum. The 
style and execution of these figures belong to the 
most perfect period of Aegyptian art, the athenian 
dynasty of the Pharaohs. Whether these lions once 
marched the southern limit of the dominions of 
Aegypt, or whether they were trophies brought 
from Aegypt, by its Aethiopian conquerors cannot 
be determined. (Hoskianus, Travels, p. 161. 288; 
Callinich, L'Ile de Merco; Transact. of Regal Soc. 
Lit. 2d Ser. vol. i. p. 54.)

[N. B. D.]

NAPETNUS SINUS (ἡ Ναπητνίου κόλπος) was the name given by some writers to the gulf on the 
W. coast of Brittium more commonly known as the 
Termaeus Sinus, and now called the Gulf of St. 
Eugenius. We have no account of the origin of the 
name, which is cited from Antechus of Syracuse 
both by Strabo and Dionysius. (Strab. vi. p. 255; 
Dionys. i. 55.) Aristotle calls the same gulf the 
Lamister Gulf (ὁ λαμίστερος κόλπος, Arist. Pol. 
vii. 19), from a town of the name of Lamister or 
Lametini; and in like manner it has been generally 
assumed that there was a town of the name of Nape-
tnus, situated on its shores. But we have no other 
evidence of this; an inscription, which has been 
frequently cited to show that there existed a town 
of the name as late as the time of Trajan, is almost 
App. No. 936.)

[N. E. B.]

NAPHTALI. [Palestina.]

NAPOCA. [Dacia, Vol. i. p. 744, b.]

NAR (ὁ Νάρ, Strab. xvi. 4) a considerable river 
of Central Italy, and one of the principal tributaries 
of the Tiber. It rises in the lofty group of the 
Apennines known as the Monti della Sibilla (the 
Mons Fiscellus of Pliney), on the confines of 
Umbria and Picenum, from whence it has a course 
of about 40 miles to its confluence with the Tiber, 
which it enters 5 miles above Orictium, after 
flowing under the walls of Intermanna and Narnia. 
(Strab. v. pp. 227, 235; Plin. iii. s. 9; Lucan. 
i. 475; Vilk. Sean. p. 13.) About 5 miles above the 
former city, it receives the tributary stream of the 
Velinus; a river as large as itself, and which 
brings down an abundant water to the Lacus 
Veneti, with those of the valleys that open out at 
Beato. The Nar and Velumins together thus drain 
the whole western declivity of the Central Apennines 
through a space of above 60 miles. The Nar is 
remarkable for its white and sulphureous waters, 
which are alluded to by Emnius and Virgil as well 
vi. 517; Plin. iii. 12. s. 17.) It is singular that 
the last writer has confounded the Nar with the 
Velinius, and speaks of the former as draining the 
Lacus Veneti, into which it falls near Beato. Both 
Cecro and Tasitus, on the contrary, correctly repre-
sent the course of the lake as carried off into the 
Nar, which is now effect by an artificial cut 
forming the celebrated Cascade of the Velinus, or 
Falls of Termo. This channel was first opened by 
M. Curious, about n. c. 272, but there must always 
have been some natural outlet for the waters of 
the Velinus. (Plin. l. c.; Cic. ad Att. iv. 13; Tac. 
Ann. i. 79.) The Nar was reckoned in ancient 
times navigable for small vessels; and Tactitus 
speaks of Fiso, the murderer of Germanicus, as 
embarking at Narina, and descending from thence 
by the Nar and the Tiber to Rome. (Tac. Ann. 
iii. 9; Strab. v. p. 227.)

NARAGGERA, a town of Numidia, near which 
P. Cornelius Scipio pitched his camp, and had an
NARBASOllUJI

interview with Hannibal, before the great battle of the 19th of October, B. C. 202 (Liv. xxx. 29, the reading Mápýgarp . Polyb. xx. 5, is false). Narra-
gera was 30 or 32 M. P. to the W. of Sicca (12 M. P. Post. Tob.), and 20 M. P. to the E. of Thagrum. (Anton. Itin.) Shaw (Trav. p. 130) found at Cæse's Jebr, some fragments of an aqueduct with other foot-steps of an ancient city, which, with the foundations close adjoining, and the absence of good water in the neighborhood, induced him to believe that this was the spot near which Scipio is said to have encamped for the benefit of the water.

These ruins at Kæse Jebr are marked in the Carte de la province de Constantine, Paris, 1837. Comp. Barth, Karze Vom Nord Afrikanischen Gischland. [E. B. J.]

NARBASORUM FORUM. [GALLACIA, Vol. I. p. 934. a.]

NARBO MARTIUS (γ Narbér: Fth. Narcob-
rhósio, Narbirúv, Næpobrius. Narobesios, Narbèsios. Narbènus: Nar-
bonnus), a town of the Province or Gallia Narb-
ènus. Polyben (ii. 10. § 9) enumerates it among the inland towns of the Volcae Tectosages, and Cicero calls the name of Narbo, in his speech to T. Aufidius. He places it five minutes-south of the latitude of Massalia (Mar-
sehle), and in 43° N. lat. It is, however, some minutes north of 43° N. lat., and more than five minutes south of Massalia. Hipparchus placed Narbo and Massalia nearly in the same latitude. (Strab. ii. p. 106.) Narbo was on the Atax (Aulde) and xii. M. P. from the sea. (Plin. iii. 4.) Pliny seems to place Narbo in the territory of the Volcae Tectosages, but his text is obscure. Strabo (iv. p. 180) distinctly places Narbo in the territory of the Volcae Arecomici, but he adds that Nemenuis was their chief city. It seems, indeed, more probable that the Volcae Arecomici possessed the word about Narbo, for the chief city of the Tectosages was Tolosa (Tolusus), in the basin of the Garonne. Mola (ii. 5) calls Narbo a colony of the Atacini (Atax) and the Decumani. Aquætus (de Claris Urbibus, Narbo) does not say, as some have supposed, that Narbo was in the territory of the Tectosages, but that the Tectosages formed the western part of Narbonensis, which is true. The conclusion from Caesar (B. G. vii. 6) is that Narbo was not in the country of the Arecomici; but Caesar did not trouble himself about such matters.

Narbonnae, mentioned by Pliny as Narbonne, is probably Narbo at Narbona, the only town thus determined, by the name, by the river Atax, and by the mountains along the road from Italy into Spain. The road from Arles (Arles) through Nemausus (Nîmes), Césere (St. Tibéry), and Béziers (Bé-
sière) to Narbo, is in the Antonine Itin. There is also a route both in the Antonine Itin. and in the Table from Béziers (Béziers), through Tolosa (Tolusus) and Carcassos (Carcasone), to Narbo.

The name Narbon (γ Narbér) was also one name of the river Atax, for Polybius calls the river Narbon (Atax). The form Narbo occurs in inscriptions; and there is authority for this form also in the MSS. of Cass. (C. G. ii. 20, l. 139, and viii. 46.) According to Stephanius (z. a.) Marcius calls it Narbèsios; but this is clearly an adjective form. Herodian, who is the authority for the Etruscan name Napobrius, must have supposed a name Narbo or Narbo. The origin of the name Martius is not certain. The Roman colony of Narbo was settled, B. C. 118, in the consulsip of Q. Mar-
cius Rex and M. Pomponius Cato; but the founder of the colony was the L. Licinius Crassus. (Cic. Brut. c. 43.) It has been conjectured that the name Martius was given to the place because of the war-
like natives of the country against whom the settlers had to protect themselves. But this is not probable. Others, again, have conjectured that its name is derived from the Legio Martia (Vell. Pater. ii. 8. ed. Barmanni); and the orthography Martia is defended by an inscription, Narbo Mart. (Gruter, ccxxix.), and a coin of Goltzius. To this it is ob-
jected, by a writer quoted by Ukert (Gallicc, p. 410), that the Legio Martia was first formed by Augustus, and that Cicero mentions the title Martius. (Ad Fam. x. 33.) Forbiger copies Ukert. It appears that neither of them looked at Cicero's letter, in which he speaks, not of Narbo Martius or Marcus, but of the Legio Martia, which existed before the time of Augustus. Cicero, however, does speak of Narbo Marcus, as it stands in Orelli's text. (Pro Font. c. 1.) The Latin MsS. write the word both Marcini and Martius; and the same variation occurs in many other words of the same termination. The most probable conclusion is, that the name Martius or Marcii is the name of the consul Marcus (n. c. 118), who was a Narbo Martius. It is, again, in the name of some of the Etruscan people, named Stesul. The name may have been written Narbo Marcus in Cicero's time, and afterwards corrupted.

Narbo was an old town, placed in a good position on the road into Spain and into the basin of the Garonne; a commercial place, we may certainly assume, from the earliest time of its existence. There was a tradition that the country of Nar-
bonne was once occupied by Betyrees. (Dion Cass. Freg. Vales. vi. ed. Reim, and the reference to Zo-
mar.) The earliest writer who mentions Narbo is Heptaeus, quoted by Stephanius; and, accordingly, we conclude that Narbo was well known to the Greeks in the fifth century before the Christian era. The first Roman settlement in South Gallia was Aquæ Sextiae (Tolosa), on the east side of the Rhone. The second was Narbo Marcus, by which the Romans secured the road into Spain. Cicero calls Narbo "a colony of Roman citizens, a watch tower of the Roman people, and a bulwark opposed and placed in front of the nations in those parts." During Caesar's wars in Gallia this Roman colony was an important position. When P. Crassus inva-
ded Aquitanias (n. c. 56) he got help from Tolosa, Carca, and Narbo, at all which places there was a master-roll of the fighting men. (B. G. ii. 20.)

In the great rising of the Galli (n. c. 52), Narbo was threatened by Lactarius, but Caesar came to its relief. (B. G. vii. 7.) A second colony was settled at Narbo, or the old one rather strengthened by a supplementation under the dictator Caesar (Sanct. Tiber. c. 4) by Tiberius Claudius Nero, the father of the emperor Tiberius. Some of the tenth legion, Caesar's favorite legion, were settled here, as we may infer from the name Decumanorum Colonia. (Plin. iii. 4.) The name Julia Paterna, which appears on inscriptions and in Martialis, is derived from the dictator Caesar. The establish-
ment of Narbo was the cause of the decline of Massilia. Strabo, who wrote in the time of Aug-
ustus and Tiberianus, says (iv. p. 186): "that Narbo is the port of the Volcae Arecomici, but it might more properly be called the port of the rest of Celtica; so much does it surpass other towns in trade." (The latter part of Strabo's text is corrupt here.) The tin of the north-west part of the Spanish peninsula and of Britain passed by way of Narbo, as
it did also to Massalia. (Diod. v. 38.) There was at Narbo a great variety of dress and of people, who were attracted by the commercial advantages of the city. It was adorned with public buildings, after the fashion of Roman towns. (Martial, viii. 72; Anon. Narbo; Sidon. Apollin. Carm. 23.) A temple of Parian marble, probably some pastical temple dedicated to Flora, is spoken of by Ausonius; and Sidonius enumerates, in half a dozen miserable lines, the glories of ancient Narbonne, its gates, porticoes, forum, theatre, and other things. He speaks of a minstrel, and a bridge over the Atea. The coast of Narbonne was and is famed for oysters.

Not a single Roman monument is standing at Narbonne, but the sites of many buildings are ascertained. Numerous architectural fragments, friezes, bas-reliefs, tombs, and inscriptions, still remain. Some inscriptions are or were preserved in the courts and on the great staircase of the episcopal palace. There is a museum of antiquities at Narbonne, which contains fragments of mosaic, busts, heads, cinerary urns, and a great number of inscriptions. [G. L.]

NARDINIUM (Napštov, Pol. ii. 6. § 34), a town of the Sachtii, a tribe of the Astures, in Hispasia Tarraconensis, probably near Villapandor on the Esla. (Sestini, p. 172.)

NARISC, a German tribe of the Suevi, occupying the country in the west of the Gabreta Silva, and east of the Hermunduri. They extended in the north as far as the Sudeti Montes, and in the south as far as the Danube. In the reign of M. Aurelius, 3000 of them emigrated southward into the Roman province. (Dion Cass. lxxi. 21, where they are called Narstari.) After the Marcomannian war, they completely disappear from history, and the country once occupied by them is inhabited, in the Peuting, Table, by a tribe called Armanalci. (Tac. Germ. 42; Jul. Capitol. M. Ant. 22.)

Ptolemy (ii. 11. § 23) calls them Varisti (Ovirus), which is possibly the more genuine form of the name, since in the middle ages a portion of the country once inhabited by them bore the name of Provincia Varisa. (L. S.)

NARNIA (Napria, Strab., Pol. Eit. Narminia: Narni), one of the most important cities of Umbria, situated on the left bank of the river Nar, about 8 miles above its confluence with the Tiber. It was on the line of the Via Flaminia, by which it was distant 85 miles from Rome. (Itin. Ant. p. 125; Itin. Hier. p. 613; Westphal, Rom. Komp. p. 145.) It appears to have been an ancient and important city of the Umbrians, and previous to the Roman conquest bore the name of Nequinum. (Plin. iii. 14. s. 19; Liv. x. 9; Stephan. Byz. writes the name Necrigia.) In n. c. 500, it was besieged by the Roman consul Appuleius; but its natural strength enabled it to defy his arms, and the siege was protracted till the next year, when it was at length surprised and taken by the consul M. Fulvius, n. c. 299. (Liv. x. 9, 10.) Fulvius was in consequence honoured with a triumph "de Numitionibus Nepuinatibusque" (Fast. Capitol.) and the Roman senate determined to secure their new conquests by sending thither a colony, which assumed the name of Narnia from its position on the banks of the Nar. (Liv. x. 16.) It is strange that all mention of this colony is omitted by Vellius Paterculus; but its name again occurs in Livy, in the list of the thirty Latin colonies during the Second Punic War. On that occasion (n. c. 209), it was one of those who professed themselves exhausted and unable any longer to bear the burdens of the war; for which it was subsequently punished by the imposition of a double contingent and increased contribution in money. (Liv. xxviii. 9; xxxix. 15.) Yet the complaint seems, in the case of Narnia at least, to have been well founded; for a few years afterwards (n. c. 199), the colonists again represented their dear state to the senate, and obtained the appointment of tria triumvirs, who recruited their numbers with a fresh body of settlers. (Id. xxxi. 2.) During the Second Punic War, Narnia was the point at which, in n. c. 207, an army was posted to oppose the threatened advance of Hasdrubal upon Rome; and hence it was some Narnian horsemen who were the first to bring to the capital the tidings of the great victory at the Metaurus. (Liv. xxvii. 43. 50.) These are the only notices we find of Narnia under the republic, but it seems to have risen into a flourishing municipal town, and was one of the chief places in this part of Umbria. (Strab. v. p. 227; Plin. iii. 14. s. 12; Pol. iii. 1. § 54.) It probably owed its prosperity to its position on the great Flaminian highway, as well as to the great fertility of the subjacent plain. In the civil war between Vitellius and Vespasian, Narnia bore an important part, having been occupied by the generals of the former as a stronghold, where they hoped to check the advance of the army of Vespasian; but the increasing disaffection towards Vitellius caused the troops at Narnia to lay down their arms without resistance. (Tac. Hist. iii. 58—63, 67, 78.) The natural strength of Narnia, and its position as commanding the Flaminian Way, also rendered it a fortress of the utmost importance during the Gothic wars of Belisarius and Narses. (Procop. B. G. i. 16, 17; ii. 11; iv. 33.) It became an episcopal see at an early period, and continued throughout the middle ages to be a considerable town.

The position of Narnia on a lofty hill, precipitous on more than one side, and half encircled by the waters of the Nar, which wind through a deep and picturesque wooded valley immediately below the town, is alluded to by many ancient writers, and described with great truthfulness and accuracy by Claudian, as well as by the historian Procopius. (Claudian. de L. Cons. Hym. 515—519; Procop. B. G. vi. 458; Martial. vii. 93; Procop. B. G. i. 17.)

It was across this ravine, as well as the river Nar itself, that the Via Flaminia was carried by a bridge constructed by Augustus, and which was considered to surpass all other structures of the kind in boldness and elevation. Its ruins are still regarded with admiration by all travellers to Rome. It consisted originally of three arches, built of massive blocks of white marble; of these the one on the left bank is still entire, and has a height of above sixty feet; the other two have fallen in, apparently from the foundations of the central pier giving way; but all the piers remain, and the imposing style of the whole structure justifies the admiration which it appears to have excited in ancient as well as modern times. Martial alludes to the bridge of Narnia as, even in his day, the great pride of the place. (Procop. l. c.; Martial. vii. 93. 8; Oliver. Ital. p. 636; Eustace's Italy, vol. i. p. 339.) The emperor Nerva was a native of Narnia, though his family would seem to have been of foreign extraction. (Vict. Epit. 11; Ctes. 12.) [E. H. B.]

NARO. (Naro, Ptol. ii. 16. § 5; Plin. iii. 26; Nar, Pomp. Mel. ii. 3. § 13; Narnum, Geogr. Rav. iv. 16; Naranta), a river of Illyricum, which Seyclaux (pp. 8, 9) describes as navigable from its
mouth, for a distance of 80 stadia up to its "estu-
arium" now Fort Opia, where there are some
vestiges of Roman buildings. The Massi occupied
this district. In the interior was a vast lake, ex-
tending to the Autarhatae. A fertile island of
150 stada in circuit was in the lake (Paludo Covo,
or Poporan). From this lake the river flowed, at a
distance of one day's sail from the river Arion
(Apicius, Sicul. l. c.: Orodia; comp. Fouqueville,
Voyage dans la Grecce, vol. 1. p. 25.) This river
formed the S. boundary of Dalmatia, and its banks
were occupied by the Duroeci, Ardiaei, and Paraeti.
(Strab. vili. pp. 315, 317.) These banks were
famous in former times among the professors of
pharmacy, who are advised by Nicander (Therica,
v. 607) to gather the "iris" there. (Plin. xiii. 2,
xxi. 19; Theophr. ap. Athen. n. p. 681.) Strabo (vii.
p. 317) rejects the statement of Theopompos that
the potters' clay of Chios and Thassos was found in
the bed of the river. For the valley of the Narona,
see Wilkinson, Dalmatia and Montenegro, vol. ii.
NARONA, a mistake for Napóa, Ptol. iii. 17, 8.
ii. 7, 8), a town in Dalmatia, and a Roman "colonia." It appears from the letters of P.
Vatinius to Cicero (ad Fam. v. 9, 10), dated Narona,
that the Romans made it their head-quarters during
their conquest of Dalmatia. (Comp. Pomp. Mela,
iv. 16.) Narona was a "conventus," at which, according to M. Varro (ap Plin. iii. 26) 89 cities
assembled; in the time of Pliny (l. c.) this number
had diminished, but he speaks of as many as 340
"decuriae," submitting to its jurisdiction.
The present city stood upon a hill quite occupied
by the village of Vela, and extended probably to
the marsh below; from the very numerous inscriptions
that have been found there, it appears that there
was a temple to Liber and Libera, as well as other
buildings dedicated to Jupiter and Diana. (Lanza,
supra locitca citi di Naronunt, Brev. 4, 1842;
Nagelmann, Die Slav-Slovan, pp. 116, 122.) A coin
of Titus has been found with the epigraph C. L.
Narona. (vulgi, Thesaurus, p. 241; Risse, vol. ii.
loc. tit. p. 1048.)

When the Scyths or W. Slaves occupied this
country, it was in the reign of Herodotus, Narona, as it
is called, was out of the four "islanda" into which the
Serbs were divided. The Xaventine pirates, who
for three centuries had been the terror of Dalmatia,
and the Venetian traders, were in A. D. 997
conquered by the fleet of Venice, commanded by
the Doge in person. (Schafarik, Slav. Alt. vol. ii.
p. 260.)

[EB. J.]

NARHACUM (Narhac in C. E. N. Neptunae),
the name of a city and mountain of Phthiotis in
Thessaly, in the lower end of which Agapeleus,
in his return from Asia in n. c. 394, landed a
young son of the Thessalian commander. The Thes-
salians, after this exploit, took refuge on Mount
Narthacium, between which and a place named
Pres. Agapeleus lay a trap. On the follow-
ing day he crossed the mountains of the Achaean
Phthiotis. (Nep. Herod. vi. §§ 3—6; Ages. 2,
§§ 3—5; Polyb. i. p. 211; Diod. xiv. 82.)
Narhacum as a name is used by Leake and
Kiepert, in Vindob. in the valley of the Alpen; and the mountain of the name is probably
the one which rises conveniently in the southward of
Ferati. It appears that the town of Narhacum
must have been on the south side of Lake Iznarhi.
NASAVA.

iv. 7.) Their modern representatives are equally inhospitable, as the traveller Bruce, who was shipwrecked on their coast, experienced. (Bruce, Travels, Introduction, vol. i. p. 131.) The Nasamines, however, were breeders of cattle, since Herodotus informs us (iv. 172) that in the summer season, “they leave their herds on the coast and go up to Anglia to gather the date harvest”—the palms of that coast being numerous, large, and fruitful. And here, again, in existing races we find correspondences with the habits of the Nasamines. For according to modern travellers, the people who dwell on the coast of Derna, gather the dates in the plain of Gergobis, five days’ journey from Angilia. (Proceedings of Afric. Association, 1790, ch. x.)

Herodotus describes the Nasamines as practising a kind of hero-worship, sacrificing at the graves of their ancestors, and swearing by their names. They were polygamists on the widest scale, or rather held their women in common; and their principal diet, besides dates, was dried locusts reduced to powder and kneaded with milk into kind of cake—polenta. Their land produced also a precious stone called by Piny (xxxvii. 10. s. 64) and Solinus (c. 27) Nasanomitis; it was of a blood red hue with black veins.

Herodotus introduces his description of this tribe, with a remarkable story relating to the knowledge possessed by the Nasamines of the sources of the Nile. He says (ii. 32) that certain Nasamines came from the neighbourhood of Cyrene, and made an expedition into the interior of Libya; and that they explored the continent as far as the kingdom of Timbuctoo, is rendered probable by his account of their adventures. For, after passing through the inhabited region, they came to that which was infested by wild beasts; next their course was westward through the desert (Sahara), and finally they were taken prisoners by black men of diminutive stature, and carried to a city washed by a great river flowing from W. to E. and abounding in crocodiles. This river, which the historian believed to be the upper part of the Nile, was more probably the Niger. The origin of the story perhaps lies in the fact that the Nasamines, a wandering race, acted as guides to the caravans which annually crossed the Libyan continent from the territories of Carthage to Aethiopia, Merot, and the ports of the Red Sea.

[W. B. D.]

NASAVA (Nasaim, al. Nasawati). (Ptol. iv. 2. § 9.) a river near Memphis Caesariensis, the mouth of which is to the E. of Saldia. This river of Borjeighah, is made by a number of rivulets which fall into it from different directions, and, as the banks are rocky and mountainous, occasion inundations in the winter. (Shaw, Trav. p. 90.)

[E. B. J.]

NASCI. [Ekhaps Montes.]

NASCUS (Nākou, al. Mădokōs mechrois). an inland city of Arabia Felix, in long. 81° 17’, lat. 20° 40’ of Polemen. (Ptol. vi. 7. § 35.) Mr. Forster takes it to be the present chief town of the Amathaei, who occupied the present district of Yemana. (Geography of Arabia, vol. ii. pp. 266, 267.)

[G. W.]

NASI. [Captaha.]

NASIUM (Navios), in Gallia. Polemen names two of the Leci, Tullum (Toul) and Nasium, which he places 20 minutes farther south than Tullum, and as many minutes east. Both these indications are false, as the Ituns, show, for Nasium is a river from Dunocertorum (Retium) to Tullum, and consequently west of Toul, and it is not south. An old chronic places Nasian on the Orsina or

NAUCRATIS. 401

Ormes, a branch of the Maos; and its name exists in Naix or Naı̂s, above Limyra. The Antonine Itin. makes it 16 leagues from Nasium to Tullum. The Table places Ad Fines between Nasium and Tullum, 14 leagues from Nasium and 51 from Tullum. [As to Ad Fines, see Fines, No. 14.] [G. L.]

NASUS. [Moenidius.]

NATISO (Navr., Strab.; Natissomor), a river of Venetia, which flowed under the walls of Aquileia, on the E. side of the city, and is noticed in connection with that city by all the geographers as well as by several other ancient writers. (Plin. iii. 18. s. 22; Strab. v. p. 214; Mela, ii. 4. § 3; Ptol. iii. 1. § 26; Ammian. xxi. 12. § 8; Jornand, Hist. 42.) Pliny speaks of the Natiso together with the Turrus (Natiss om Turrro), as flowing by the colony of Aquileia. At the mouth of this river is a considerable stream which descends from the Alps near Cividale, falls into the Turrus (of Pliny), and that again into the Isenzo; so that neither of them now flows by Aquileia; but it is probable that they have changed their course, which the low and marshy character of the country renders easy. A small stream, or rather canal, communicating from Aquileia with the sea, is still called Natissi; but it is clear that the Natissa of Jornandes, which he describes (l. c.) as flowing under the walls of Aquileia, must be the far more important stream, now called the Natisson, as he tells us it had its sources in the Mons Picos, and it would be vain to look for any mountains nearer than the Alps. Strabo (l. c.) also speaks of the Natissi as navigable for ships of burden as far as Aquileia, 60 stadia from the sea; a statement which renders it certain that a considerable river must have flowed under the walls of that city. [E. H. B.]

NAV.A, the river Nava in Tacitus (Hist. iv. 70) and in Ausonius (Musella, v. 1.) is the Natis, a small stream which flows into the Rhine, on the left bank just below Bingem (Bingen). [G. L.]

NAVALIA or NABALIA (Navalá), a small river on the north-west coast of Germany (Tac. Hist. v. 26), either an eastern branch of the Rhine, at the mouth of which Polomyen (ii. 11. § 28) places the fort Navalay, or some river in the country of the Frisians. [L. S.]

NAVAR. [Nécher.]

NAVARUM. [Néuel.]

NAVARUS (Navártis, Herod. ii. 179; Strab. xvii. p. 801; Ptol. iv. 5. § 9; Callimach. Epigr. 41; Plin. v. 10. s. 11; Steph. B. s. v.; Eth. Návaratíns or Návarátiñís), was always an emporium for trade, founded by colonists from Miletus, in the Saitic zone of the Delta. It stood upon the eastern bank of the Canopic arm of the Nile, which, from the subsequent importance of Nacraties, was sometimes called the Nile of Egypt. (Ptol. v. 10. s. 11.) There was, doubtless, on the same site an older Aegyptian town, the name of which has been lost in that of the Greek dockyard and haven. Nacraties first attained its civil and commercial eminence in the reign of Amasis (B. c. 550) who rendered it, as regarded the Greeks, the Canton of Aegypt. From the date of his reign until the Persian invasion, or perhaps even the founding of Alexandria, Nacraties possessed a monopoly of the Mediterranean commerce, for it was the only Delicte harbour into which foreign vessels were permitted to enter; and if accident or stress of weather had driven them
into any other port or mouth of the Nile, they were compelled either to sail round to Naucratis, or to transmit their cargoes thither in the country boats. Besides these commercial privileges, the Greeks of Naucratis received from Amasis many civil and religious immunities. They appointed their own magistrates and officers for the regulation of their trade, customs, and harbour dues, and were permitted the free exercise of their religious worship. Besides its docks, wharves, and other features of an Hellenic city, Naucratis, contained four celebrated temples, of Zeus, of Aesculapius, founded by colonists from Aegina; (2) of Hera, built by the Samians in honour of their tutelary goddess; (3) of Apollo, erected by the Milesians; and (4) the most ancient and sumptuous of them all, the federal temple entitled the Hellenium, which was the common property of the Ionians of Chios, Teos, Phocaea, and Chiosomene; of the Dorians of Rhodes, Cnidus, and Halicarnassus; and of the Aetolians of Mytilene. They also observed the Dionysiac festival of the Mystae. (xvii. 256; xv. p. 676), devout worshippers of Aphrodite.

The two principal manufactures of Naucratis were that of porcelain and wreathes of flowers. The former received from the silicious matter abounding in the earth of the neighbourhood a high glaze; and the potteries were important enough to give names to the Potter's Gate and the Potter's Street, where such wares were exposed for sale. (Id. xi. p. 480.)

The garlands were, according to Athenaeus (xv. p. 671, seq.), made of myrtle or, as was sometimes said, of flowers entwined with the filaments of the poppy-plant. Either these garlands must have been artificial, or the makers of them possessed some secret for preserving the natural flowers, since they were exported to Italy, and held in high esteem by the Roman ladies. (Boetticher, Sabina, vol. i. pp. 228, seq.) Athenaeus gives a particular account (iv. pp. 150, seq.) of the Pythian dinners of the Naucratians, as well as of their general disposition to luxurious living. Some of their feasts appear to have been of the kind called the σπάφῳδα, where the city provided a banqueting-room and wine, but the guests brought their provisions. At wedding entertainments it was forbidden to introduce either eggs or pastry sweetened with honey. Naucratis was the birthplace of Athenaeus (iii. p. 73, vii. p. 301); of Julius Pollux, the antiquary and grammarian; and of certain obscure historians, cited by Athenaeus, e.g. Lyceus, Phibar-Gious, Psycharnus, Herostratus, &c. Heidelotus (Anthrop., vi. p. 229) absurdly says that Aristophanes, the comic poet, was born there. Naucratis, however, was the native city of a person much more conspicuous in his day than any of the above mentioned, viz., of Cleomenes, commissioner-general of finances to Alexander the Great, after his conquest of Egypt. But neither the city nor Egypt in general had much reason to be proud of him; for he was cruel, oppressive and dishonest in his administration, and having excited in the Delta a general and widespread discontent against the Macedonians, he was put to death by Ptolemy Lagus. (Arrrian, Ept. Alexandrinus, iii. 5. viii. 23; Diodor. xviii. 14. Pseud. Aristot. Oeconom. ii. 34. 40.)

Herodotus probably landed at Naucratis, on his entrance into Egypt; but he did not remain there. It was, however, for some time the residence of the legislator Solon, who there exchanged his Attic oil and honey for Egyptian millet; and is said to have taken sundry hints for his code of laws from the statutes of the Pharaohs. (Plutarch, Solon, 26.)

Naucratis, like so many others of the Deltaic cities, began to decline after the foundation of Alexandria. Situated nearly 30 miles from the sea, it could not compete with the most extensive and commodious havens then in the world; and with the Macedonian invasion its monopoly of the Mediterranean traffic ceased. Its exact site is unknown, but is supposed to correspond nearly with that of the modern hamlet of Sulhodchar, where considerable ruins of the city are to be seen. There are also remains of Tauroctonos, said to be the birthplace of Alexander in Arabia, p. 97.) The coins of Naucratis are of the age of Trajan, and represent on their obverse a laureated head of the emperor, and on their reverse the figure of Anubis, or a female holding a spear. (Kusche, Lectic. R. Nummus, s. r.)

NAVILUBIO (Phn. iv. 20. 34; Ναυσιλο-υβίοιος παισυμον εκδοθαλ, Pol. ii. 6. § 4), a river on the N. coast of Hispania Tarraconensis, now Narcea.

NAVIOCHUS, an island, or rather reef, off the Samosian promontory, in Crete (Phn. iv. 12), the same as the NAVACHOS of Pomponius Mela (ii. 7. § 13; HICK. Kretta, vol. i. p. 439.)

NAUINCHE or NAVILUBA (Ναυίλοπα, Appian), a place on the N. coast of Sicily, between Myale and Cape Pelorus. It is known only from the great sea-fight in which Sextus Pompeius was defeated by Agrippa, a. c. 36, and which was fought between Myale and Naucratus. (Suet. Ang. 16; Appian B. C. iv. 112—122.) [ΜΥΛΑΙ.] Pompeius himself during the battle had been encamped with his land forces at Naucratus (Appian L. C. 121), and after his victory, Octavian, in his turn, took up his station there, while Agrippa and Lepidus advanced to attack Messana. (Ib. 122.) It is clear from its name that Naucratus was a place where there was a good roadstead or anchorage for shipping; but it is probable that there was no town of the name, though Silenus Italicus includes it in his list of Sicilian cities. (Sil. Ital. xiv. 264.) From the description in Appian it is clear that it was situated between Myale and Cape Rasoculmo (the Phalerian Promontory of Poleni), and probably not very far from the latter point; but there is nothing to fix its site more definitely. [E. H. B.]

NAUROCTOS (Ναυροκτος), a small port on the coast of Thrace, belonging to Mesembria, called by Pliny Tetrameronocles. (Strab. vii. p. 319, 1x. p. 440; Phn. iv. 11. 18.)

NAVEUCHOS. [NAVEUCHOS, No. 1.]

NAUACTUS (NAUACTUS, ELE. NAVACTUS: ΕΠάκτατα, by the Greeks, Lepanto by the Italians), an important town of the Locri Oetiae, and the best harbour on the northern coast of the Corinthian gulf, was situated just within the entrance of this gulf, a little east of the promontory Antirrhinus. It is said to have derived its name from the Iberoleis having here built the fleet with which they crossed over to Peloponnesus. (Strab. ix. p. 426; Paus. x. 38. § 10; Appol. ii. 8. § 2.) Though Naustactus was indebted for its historical importance to its harbour at the entrance of the Corinthian gulf, it was probably originally chosen as a site for a city on account of its strong hill, fertile plains, and copious supply of running water. (Leake, Northern Greece, vol. ii. p. 608.) After the Persian wars it fell into the power of the Athenians, who settled there the Messenians, who had been compelled to leave their country at the end of the
NAUPLIA

Third Messenian War, n. c. 425; and during the Peloponnesian War it was the head-quarters of the Athenians in all their operations in Western Greece. (Paus. iv. 24. § 7; Thuc. i. 103, ii. 83, seq.) After the battle of Aegospotami the Messenians were expelled from Naupactus, and the Locrians regained possession of the town. (Paus. x. 38. § 10.) It afterwards passed into the hands of the Achaeans, from whom, however, it was wrested by Pausanias. (Diod. xv. 75.) Philip gave it to the Aetolians (Strab. i. p. 427; Dem. Phil. iii. p. 120), and hence it is frequently called a town of Aetolia. (Sylvax, p. 14; Meis, ii. 3; Plin. iv. 2. s. 3.) The Aetolians vigorously defended Naupactus against the Romans for two months in n. c. 191. (Liv. xxxv. 30, seq.; Polyb. v. 103.) Ptolemy (iii. 15. § 3) calls it a town of the Locri Osaclae, to whom it must therefore have been assigned by the Romans after their time.

Pausanias saw at Naupactus a temple of Poseidon near the sea, a temple of Artemis, a cave sacred to Aphrodite, and the ruins of a temple of Asclepius (x. 38. §§ 12, 13). Naupactus is mentioned by Herodotus (p. 649); but it was destroyed by an earthquake in the reign of Justinian. (Procop. B. Goth. iv. 25.) The situation and present appearance of the town are thus described by Leake:—"The fortress and town occupy the south-eastern and southern sides of a hill, which is one of the roots of Mount Kephissus, and commands a view to the sea. The place is fortified in the manner which was common among the ancients in positions similar to that of E'fapko, —that is to say, it occupies a triangular slope with a citadel at the apex, and one or more cross walls on the slope, dividing it into subordinate enclosures. At E'fapko there are no less than five enclosures between the summit and the sea, with gates of communication from the one to the other, and a side gate on the west leading out of the fortress from the second enclosure on the descent. It is not improbable that the modern walls follow exactly the ancient plan of the fortress, for in many parts they stand upon Hellenic foundations, and even retain large pieces of the ancient masonry amidst the modern work. The present town occupies only the lowest enclosure; in the middle of which is the small harbour which made so great a figure in ancient history: it is now choked with rubbish, and is incapable of receiving even the larger sort of boats which navigate the gulf." (Nauplia, in Greece, vol. ii. p. 608.)

NAUPLIA (Ναυπλία), a rock above Delphi. (Delph. p. 764, s. n.)

NAUPLIA (Ναυπλία): Eth. Naupliacēs), the port of Argos, was situated upon a rocky peninsula, connected with the mainland by a narrow isthmus. It was a very ancient place, and is said to have derived its name from Nauplius, the son of Poseidon and Anymone, and the father of Palamedes, though it more probably owed its name, as Strabo has observed, to its harbour (ἀνά τὸν ταύτα ρωμ. ἐρέχθε)-Strab. viii. p. 368; Paus. ii. 38. § 2.) Pausanias tells us that the Nauplians were Egyptians belonging to the colony which Damans brought to Argos (iv. 35. § 2); and from the position of their city upon a promontory running out into the sea, which is quite different from the site of the earlier Grecian cities, it is not improbable that it was originally a settlement made by strangers from the East. Nauplia was at first independent of Argos, and a member of the maritime confederacy which held its meetings in the island of Calanrea. (Strab. viii. p. 374.) About the time of the Second Messenian War, it was conquered by the Argives; and the Lacedaemonians gave to its expelled citizens the town of Methone in Messenia, where they continued to reside even after the restoration of the Messenian state by Eumenes. (Paus. iv. 24. § 4, iv. 27. § 8, iv. 35. § 2.) Argos now took the place of Nauplia in the Calaurean confederacy; and from this time Nauplia appears in history only as the seaport of Argos (§ Ναυπλίος Ἀργούς, Τό Αντίρριον, οἱ τά Ἀναπλίας, but has now resumed its ancient name. It became a place of considerable importance in the middle ages, and has continued so down to the present day. In the time of the Crusades it first emerges from obscurity. In 1205 it was taken by the Franks, and became the capital of a small duchy, which commanded the plain of Argos. Towards the end of the 15th century it passed to the Venetians, who regarded it as one of their most important places in the Levant, and who successfully defended it both against the Turks and Mahomet II. and Salamon. They ceded it to the Turks in 1540, but wrested it from them again in 1636, when they constructed the strong fortifications on Mt. Palamitikē. This fortress, although reckoned impregnable, was stormed by the Turks in 1715, in whose hands it remained till the outbreak of the war of Grecian independence. It then became the seat of the Greek government, and continued such, till the king of Greece removed his residence to Athens in 1804.

The modern town is described by a recent observer as having more the air of a real town than any place now existing in Greece under that title; having continuous lines of houses and streets, and offering, upon the whole, much the appearance of a second-rate Italian seaport. It is built on the peninsula; and some remains of the Hellenic fortifications may be seen in the site of the walls of Fort Itakale, which is the lower citadel of the town, and occupies the site of the ancient Acropolis. The upper citadel, called Palamitidi (Παλαμίτιδι), is situated upon a steep and lofty mountain, and is one of the strongest fortresses in Europe. Although its name is not mentioned by any ancient writer, there can be little doubt, from the connection of Palamedes with the ancient town, that this was the appellation of the hill in ancient times. (Leake, Morea, vol. ii. p. 356, Peloponnesia, p. 252; Murc, Tour in Greece, vol. ii. p. 187; Böhl, Keekerch. J. g. p. 50; Curtius, Peloponnesus, vol. ii. p. 389.)

NAUPORTUS (Ναυπορτος): 1. (Loubech), a small but navigable river in the south-west of Pannonia, flowing by the town of Nauportus, and emptying itself into the Savus a little below Aemona. (Strab. iv. p. 207, comp vii. p. 314, where some read Ναυπόρτος; Plin. iii. 23.)

2. A town in the south-west of Pannonia, on the small river of the same name, was an ancient and once flourishing commercial town of the Taurisci, which carried on considerable commerce with Aquileia. (Strab. vii. p. 314; Tac. Ann. i. 10; Plin. iii. 22; Vell. Patrec. ii. 116.) But after the
NAUSTALO, a place on the south coast of Gallia, west of the Rhodanus, mentioned in the Attar of Arrian (y. 613) —

"Tuo Muza vicus, opifidumque Naustalo Et urbem."

The name Naustalo looks like Greek, and if it is genuine, it may be the name of some Greek settlement along this coast. Nothing can be determined as to the site of Naustalo further than what Ucet says (Peripl., p. 412): it is somewhere between Casta and the Rhodanus. [G. L.]

NAUSTATIMUS (Naustatamos), a port-town on the Euxine, in the western part of Pontus, on a lake connected with the sea, and 90 stadia to the east of the river Halys. (Arrian, Peripl. p. 16; Murex. ff. 74; Anonym. Peripl. p. 9; Tard. Post, where it is erroneously called Nautanis.) The Periplus of the Anonymous places it only 40 stadia east of the mouth of the Halys. (Carp. Hamilton, Researches i, p. 295.) It has been identified with the modern Humandi; but remains of Naustatimous have been found.

[1. 8.]

NAUSTATIMUS (Naustatamos), an haven on the coast of Ctesiphon, 100 stadia from Apollonia. (Bk. ii. vi. 45; Steph. Byz. § 56; Strab. xii. p. 838; Plin. n. l. 4. § 5; Pomp. Mela, l. 8. § 2.) It is described by E. Hild, in his Itinerary, to the NW coast of Africa, p. 473) as a point on which lay a bay in which large ships might find shelter. The remains which have been found there indicate a gulf 35 feet wide. (Carp. Pseudo. Lugus, p. 144; Wundt, Wandertageb. pp. 461, 493; Tylor, Hist. Antiquities, p. 101.) [F. B. J.]

NAXIA (Naxia), a town of Scolica, in the neighbourhood of the Oticus (Dion.), on its eastern bank. It has been suggested by Professor Wilson that it may be the Na.xes. (Arrian, p. 163.) [V.]

NAIYAS or NAXOS (Na.α.; Eth. Naikos; Capo Fero), an ancient city of Sicily, on the E. coast of the island between Catana and Messana. It was settled on a low point of land at the mouth of the Acetas (Acdasus), and at the foot of which was afterwards built the city of Tau-

Naxos the most ancient of all the Greek colonies in Sicily: it was founded the year before Syracuse, or B.C. 734, by a body of colonists from Chalcis in Euboea, with whom there was mingled, according to Ephorus, a certain number of Ionians. The same writer represented Thucydides or Thucle, the leader of the colony and founder of the city, as an Athenian by birth; but Thucydides takes no notice of this, and describes the city as a purely Chalcidian colony; and it seems certain that in later times it was generally so regarded. (Thuc. iii. 3; Eubor. ap. Strab. vi. p. 257; Sic. iv. 270—277; Diod. xiv. 88.) Concerning the date of its found-
probable that enmity to their neighbours at Messana was a strong motive in inducing them to join the Athenians; and during the hostilities that ensued, the Messanians having on one occasion, in B.C. 425, made a sudden attack upon Naxos both by land and sea, the Naxians vigorously repulsed them, and in their turn inflicted heavy loss on the assailants. (Id. iv. 25.)

On occasion of the great Athenian expedition to Sicily (B.C. 415), the Naxians from the first espoused their alliance, even while their Lindian cities of Rhegium and Catana held aloof and not only furnished them with supplies, but received them freely into their city (Diod. xiii. 4. Thuc. vi. 50). Hence it was at Naxos that the Athenian fleet first touched after crossing the straits; and at a later period the Naxians and Carthaginians are enumerated by Thucydides as the only Greek cities in Sicily which sided with the Athenians. (Thuc. vii. 57.) After the failure of this expedition the Chalcidian cities were naturally involved for a time in hostilities with Syracuse; but these were suspended in B.C. 409, by the chief Carthaginians, it seems, to threaten all the Greek cities alike from the Carthaginians. (Diod. xiii. 56.) Their position on this occasion preserved the Naxians from the fate which beset Agrigentum, Gela, and Camarina; but they did not long enjoy this immunity. In B.C. 403, Dionysius of Syracuse, deeming himself secure from the power of Carthage as well as from domestic sedition, determined to turn his arms against the Chalcidian cities of Sicily; and having made himself master of Naxos by the treachery of their general Procles, he sold all the inhabitants as slaves and destroyed both the walls and buildings of the city, while he bestowed its territory upon the neighbouring Siculi. (Diod. xiv. 14, 15, 66, 68.) It is certain that Naxos never recovered this blow, nor rose again to be a place of any consideration; but it is not easy to trace precisely the events which followed. It appears, however, that the Siculi, to whom the Naxian territory was assigned, soon after formed a new settlement on the hill called Mount Tauro, which rises immediately above the site of Naxos, and that this gradually grew up into a considerable town, which assumed the name of Tauromenium. (Diod. xiv. 58, 59.) This took place about B.C. 396; and we find the Siculi still in possession of this stronghold some years later. (Ib. 88.) Meanwhile the exiled and fugitive inhabitants of Naxos and Catana formed, as usual in such cases, a considerable body, who as far as possible kept together. An attempt was made in B.C. 394 by the Rheginians to settle them again in a body at Mylane, but without success; for they were speedily expelled by the Messanians, and from this time appear to have been dispersed in various parts of Sicily. (Diod. xiv. 87.) At length, in B.C. 358, Andromachus, the father of the historian Timaeus, is said to have collected together again the Naxian exiles from all parts of the island, and established them on the hill of Tauromenium, which thus rose to be a Greek city, and became the successor of the ancient Naxos. (Diod. xvi. 7.) Hence Pliny speaks of Tauromenium as having at one time been called Naxos, an expression which is not strictly correct. (Plin. iii. 8. s. 14.) The fortunes of the new city, which quickly rose to be a place of importance, are related in the article TAUROMENIUM. The site of Naxos itself seems to have been never again inhabited; but the altar and shrine of Apollo Archegetes continued to mark the spot where it had stood, and are mentioned in the war between Octavian and Sextus Pompey in Sicily, B.C. 36. (Appian. B. C. v. 109.)

There are no remains of the ancient city now extant, but the site is clearly marked. It occupied a low but rocky headland, now called the Capo di Schisò, formed by an ancient stream of lava, immediately to the N. of the Alcantara, one of the most considerable streams in this part of Sicily. A small bay to the N. affords good anchorage, and separates it from the foot of the bold and lofty hill, still occupied by the town of Taormina; but the situation was not one which enjoyed any peculiar natural advantages.

The coins of Naxos, which are of fine workmanship, may almost all be referred to the period from B.C. 460 to B.C. 403, which was probably the most flourishing in the history of the city. [E. H. B.]

COIN OF NAXOS IN SICILY.

NAXOS or NAXUS (Ναξ) [Suid, s. v.], a town of Crete, according to the Scholastik (ad Phot. Isth. vi. 107) celebrated for its wheat-stones. Ηöck (Cretia, vol. i. p. 417) considers the existence of this city very problematical. The islands Cretae and Naxos were famed for their wheat-stones (Plin. xxxvi. 22; comp. xviii. 28), and hence the confusion. In Mr. Phasley's map the site of Naxos is marked near Spina Lünga. [E. B. J.]

NAXOS or NAXUS (Ναξ) [Eth. Ναξ]: Ναξία, the largest and most fertile of the Cyclades, situated in the middle of the Aegean sea, about halfway between the coasts of Greece and those of Asia Minor. It lies east of Paros, from which it is separated by a channel about 6 miles wide. It is described by Pliny (iv. 12. s. 22) as 75 Roman miles in circumference. It is about 19 miles in length, and 15 in breadth in its widest part. It bore several other names in ancient times. It was called Strongyle (Στρογγύλης) from its round shape. Dionysias (Διονυσίας) from its excellent wine and its consequent connection with the worship of Dionysus, and the Smaller Sicily (μικρὰ Σκιάλα) from the fertility of its soil (Plin. iv. 12. s. 22; Diod. v. 50—52); but the poets frequently give it the name of DIO (Δία) (comp. Oc. Met. ii. 690, viii. 174.) It is said to have been originally inhabited by Thracians, and then by Carins, and to have derived its name from Naxos, the Carian chieftain. (Diod. v. 50, 51; Steph. B. s. v. Ναξώς.) In the historical ages it was colonised by Ionians from Attica (Herod. viii. 46), and in consequence of its position, size, and fertility, it became the most powerful of the Cyclades. The government of Naxos was originally an oligarchy, but was overthrown by Lygdamis, who made himself tyrant of the island. (Aristot. op. Ath. viii. p. 348.) Lygdamis, however, appears not to have retained his power long, for we find him assisting Peisistratus in his third restoration to Athens, and the latter in return subduing Naxos and committing the tyranny to Lygdamis. (Herod. i. 61, 64; comp. Aristot. Pol. v. 5.) But new revolutions followed. The

D D 3
NAXOS.

and suasion upper after and great nations portal p. clades over time Athens; battle were city 490 tioned by the people, and applied for assistance to Aristogoras of Mileta, but the request was not acceded to on the persuasion of Aristogoras, sent a large force in n. c. 501 to subdue Naxos: the expedition proved a failure; and Aristogoras, fearing the anger of the Persian court, persuaded the Ionians to revolt from the great king. (Herod. v. 30—34.) At this period the Naxians had 8000 hoplites, many ships of war, and numerous slaves. (Herod. v. 30, 31.) From the 8000 hoplites we may conclude that the free population amounted to 50,000 souls, to which number must be added, as many slaves. In n. c. 490 the Persians under Datis and Artaphernes landed upon the island, and in revenge for their former failure laid it waste with fire and sword. Most of the inhabitants took refuge in the mountains, but those who remained were reduced to slavery, and their city set on fire. (Herod. v. 96.) Naxos became a dependency of Persia; but their four ships, which were sent to the Persian fleet, deserted the latter and fought on the side of Grecian independence at the battle of Salamis. (Herod. viii. 46.) They also took part in the battle of Plataea. (Diod. v. 52.)

After the Persian wars Naxos became a member of the confederacy of Delos under the headship of Athens; but about n. c. 471 it revolted, and was subdued by the Athenians, who reduced the Naxians to the condition of subjects, and established 500 Athenian Cleruchs in the island. (Thuc. i. 98, 137; Plat. Pericl. 11; Paus. i. 27, § 6.) From this time Naxos is seldom mentioned in ancient history. It was off Naxos that Chabrias gained a signal victory over the Persians. (Herod. vii. 52.) They also took part in the battle of Plataea. (Diod. v. 52.)

NAXO'IAN.

Zia, rises to the height of 3000 feet. From its summit 22 islands may be counted; and in the distance may be seen the outline of the mountains of Asia Minor. This mountain appears to have been called Drius (Aplor) in antiquity (Diod. v. 31); their modern name is probably derived from the ancient name of the island (Dia). On it there is a curious Hellenic tower; and near the bottom, on the road towards Philito, an inscription, Ios Diose Mylasos. Another mountain is called Koroneon (tô Kéronos), which is evidently an ancient name, and reminds one of the Naxian nymph Coronis, who brought up the young Dionysus (Diod. v. 52). The mountains of Naxos consist partly of granite and partly of marble, the latter being scarcely inferior to that of Paros. Good whetstones were also obtained from Naxos. (Hesych. s. v. Naxiâ/lidôs; Plin. xxxvi. 6. s. 9.)

There are several streams in the island, one of which in ancient times was called Bibulus (Béklos, Steph. B. s. v. BékloV). The fertility of Naxos has been equally celebrated in ancient and modern times. Herodotus says that it excelled all other islands in prosperity (v. 28). It produces in abundance her common forms of the finest description. In consequence of the excellence of its wine Naxos was celebrated in the legends of Dionysus, particularly those relating to Ariadne. [See Dict of Biol. art. ARiADNE.] Moreover, the priest of Dionysus gave his name to the year, like the Archon Eponymus at Athens, (Böckh, Inscrip. 2265.) The finest wine of Naxos is now produced at a place called Aperuthos. It is a superior white wine, and is celebrated in the islands of the Aegean under the name of Bacchuswine.

One of the most remarkable curiosities in the island is an unfinished colossal figure, still lying in an ancient marble quarry near the northern extremity of the island. It is about 34 feet in length, and has always been called by the inhabitants a figure of Apollo. On the side of the hill, at the distance of five minutes from the statue, we still find the inscription, Ios xoáuos iepow 'Aπôklíwos. Ross conjectures that the statue may have been intended as a dedicatory offering to Delos. (Thvenot, Travels, p. 103, Engl. transl.; Tournefort, Voyage, vol. i. p. 163, Engl. transl.; Leake, Northern Greece, vol. iii. p. 92; Ross, Reisen auf den Griech. Inseln, vol. i. p. 29, seq.; Grüner, De Naxo Insula, Hal. 1833-1834, Curtius, Berl. 1846.)

COIN OF THE ISLAND OF NAXOS.

NAXI'A NA (Nâxhôvoûa, Prov. v. 13. § 12), a city on the N. bank of the river Anaxos, now Nach'thos, a city of some importance in Armenian his-
torv, and connected, by tradition, with the first
habitation of Noah, and the descent of the patriach
from the ark. (Comp. Joseph. Antig. i. 55 ; St.
Martin. Mém. sur l'Armenie, vol. i. p. 131; Ritter,
vol. i. p. 145.) [E. B. J.]
NAZARETH (Naçapũt: Eth. Naçapoyps, Na-
qamča, an important city of Galilee, celebrated in
the New Testament as the residence of our Lord for thirty
years, before He commenced His public ministry
(S. Mark, i. 9; S. Luke, iv. 16, 29), from which circumstance
he was called a Nazarene. (S. Mark, i. 24, xiv. 67; S. Matt. xxvi. 71.) It was appar-
ently in bad repute, even among the despised Gall-
leans themselves. (S. John. i. 46.) It was visited by
our Lord immediately on His entering on His ministry,
when an attempt was made upon His life (S. Luke,
iv. 16-30); and He appears only to have visited it
once subsequently, again to exemplify the prophets,
that "no prophet is accepted in his country." (S. Matt. xiii. 54-58; S. Mark, vi. 1-6.) Its
site is well described by Eusebius as over against
Legio, 15 miles distant from it towards the E.,
next to Mount Tabor. Its site has never been lost in
Christian times, and in all ages travellers have made
mention of it. (Rohdel, Palaestina, pp. 905—
907.) The town of Nazareth, called in Arabic  추진طلا, lies upon the western side of a narrow
valley, the gulf of which extends about from SSW. to NNE.,
perhaps 20 minutes in length by 8 or 10 in breadth.
The houses stand upon the lower part of the slope
of the western hill, which rises steep and high above
them. Towards the N. the hills are less high; on
the E. and S. they are low. In the SE. the basin
contracts, and a valley runs out narrow and winding
in the great plain." The precipitous rocky wall of
this valley is called the Mount of Precipitation. The
elevation of the valley of Nazareth is given as 821
Paris feet above the sea, and that of the mountains
above Nazareth 1500 or 1600 feet; but Dr. Robinson
thinks this estimate too high. The houses of
the town are well built of stone. The population
amounts to about 780 taxable males, of whom 170
are Moslems; the remainder, Christians of various
denominations. (Biblical Res. vol. iii. pp. 183—
185.)
NAZIANZUS (Naçawûs), a town in the south-
west of Cappadocia, in the district called Gar-
sauria, 24 miles to the southwest of Archa-
laeus. The place is not mentioned by the early
writers, and owes its celebrity to the fact that it was
the place where Gregory of Nazianzus was edu-
cated, and where he afterwards became bishop.
(Hieroc. p. 700; Socrat. Hist. Eccles. iv. 11; Greg.
Nazi. Vita Carm. v. 25, Epist. 50; Conc. Const.
ii. p. 97; It. Ant. p. 144; It. Hieros. p. 577, where
it is misspelt Nazianthus; comp. Dioecesareia.)
Hamilton (Researches, vol. ii. p. 228) is inclined to
believe that the modern place called Euraq Skaih,
near Nazianzus, marks the site of Nazianzus,
though others identify the village of Mimius with
it. [L. S.]
NEAF (Nâa), a small island near Lemnos, in
which Philoletes, according to some authorities,
was bitten by a water-snake. (Steph. B. s. c.; comp.
Antig. Caryst. Mirab. c. 9.) Fliny places it be-
tween Lemnos and the Hellespont (G. 87, s. 89).
It is called in the charts Stratin, and by the modern
Greeks Αγως στρατινιος, the holy war-
ier, that is, St. Michael. (Walpole, Traveels, 6vo,
p. 55.)
NEAPATRÆ. [Πυθατα.]
NEAETHUS (Ναηθος, Strab.; Νηθθος,
Theocr.; Ναταθος, Lycojphr.), a river on the E.
coast of Brittum, falling into the gulf of Ta-
rentum about 10 miles N. of Crotona, still called
the Nito or Nuto. Strabo derives its name from the
circumstance that there was here the Trojan
women who were conducted as captives by a Greek
fleet, set fire to the ships of the victors, and thus
compelled them to settle in this part of Italy. (Strab.
vi. p. 262; Plin. iii. 11. s. 15.) It is well known that
the same legend is transferred by other writers to
many different localities, and appears to have been
one of those which gradually travelled along the
coast of Italy, in the same manner as the myths
relating to Aeacus. The form of the name Naethus
employed by Lycojphon (Aez. 921) points evi-
dently to the same fateful derivation (from Ïaw and
anw.) Theocritus alludes to the rich and va-
ried herbage which grew on its banks (Iid. iv. 24),
and for which, according to a modern traveller, it
is still remarkable. (Swinburne, Traveels, vol. i. p.
313.) [E. B. J.]
NEANDREIA, NEANDRIUM, NEANDRUS
(Ναιανδρεια, Ναιανδριον, Ναιανδρος: Eth. Ναιαν-
δριας or Ναιανδρειας), a town in Tros, probably founded by
Aeolians; in the time of Strabo it had disappeared,
and in the middle ages the place was a very small
burning places, having removed to Alexandreia.
(Stab. xiii. pp. 604, 606.) According to Sylax
(p. 36) and Stephans Byz. (s. e.), Neandria was
a maritime town on the Hellaspon; and Strabo
might perhaps be supposed to be mistaken in
placing it in the interior above Hamaxitus; but he
is so explicit in his description, marking its dis-
tance from New Illium at 130 stadia, that it is
scarcely possible to conceive him to be in the wrong.
Hence Leake (Asia Minor, p. 274) adopting him
as his guide, wrote of Neandria as the chief town of
the lower valley of the Scamander, near the modern
town of Eno. [L. S.]
NEANDRIA. [Ναιανδρεια.]
NEANISUS (Ναιανδρειος or Ναιανδρος), a town in

between this latter town and Dioecesareia. (Ptol.
v. 6. § 14.) No further particulars are known about
the place. [L. S.]
NEAPOLIS, i. e. "the New City." 1. In Eu-
rope. 1. (Ναιαπολις: Eth. Ναιανδριας, and
Steph. B.; but coins have Ναιανδριας, Neapo-
litans: Napoli; in French and English Naples),
one of the most considerable cities of Campania,
situated on the northern shore of the gulf called
the Crater or Simm Caimans, which now derives from
it the name of Bay of Naples. All ancient writers
agree in representing it as a Greek city, and a
colony of the neighbouring Cuma; but the circu-
stances of its foundation are very obscurely related.
Sycnmaus Chius tells us that it was founded in pursuance
of an oracle; and Strabo calls it a Cumaean colony,
but adds that it received subsequently a received an
additional body of Chalcidic and Athenian colonists, with
some of the settlers from the neighbouring islands of
the Pithecussae, and was on this account called Neapolis,
or the New City. (Strab. v. p. 246; Sycnma Ch. 253;
Vell. Pat. i. 4.) Its Chalcidic or Euboean origin is
repeatedly alluded to by Statius, who was himself a
native of the city (Sil. i. 2. 263, ii. 94, iii. 5. 12);
but these anecdotes probably refer to the beginning
of a colony from the Chalcidice city of Chalkis. The
name itself sufficiently points to the fact that it was
447

DID
NEAPOLIS.

A more recent settlement than some one previously existing in the same neighbourhood; and that this did not refer merely to the parent city of Cumae, is proved by the fact that we find mention (though only at a comparatively late period) of a place called Palaeopolis or "the Old City." (Liv. viii. 22.) But the relations between the two are very obscure. No Greek author mentions Palaeopolis, of the existence of which we should be ignorant were it not for Livy, who tells us that it was not far from the site of Neapolis. From the passage of Strabo above cited, it seems clear that this was the original settlement of the Cumanian colonists; and that the name of Neapolis, by a later convention, was given to the later city by the Chalians and others who established themselves on a site at no great distance from the former one. A different version of its history, but of much more dubious authority, is cited by Philargyrus from the historian Lutatius, according to which the Cumaeans abandoned their first colony from an apprehension lest it should eclipse the parent city, but were commanded by an oracle to restore it, and gave to the colony thus founded the name of Neapolis. (Philarg. ad Georg. iv. 564.) The original name of Palaeopolis (which obviously could not be so designated until after the foundation of the new city) appears to have been Parthenone (Plin. iii. 5. s. 9; Philargyr. l.c.), a name which is used by the Romans as a poetic appellation of Neapolis. (Verg. Georg. iv. 564; Ovid. Met. xv. 711, &c.) Stephans of Byzantium notices Parthenone as a city of Opicia (the ancient designation of Campania); but it is singular enough that both he and Strabo call it a colony of the Chalians, without mentioning either the Palaeopolis or Cumaea. (Steph. B. s. c.; Strab. xiv. p. 654.) On the other hand, Lympheus alludes to the place where the Siren Parthenone was cast on shore, by the name of Parthenum (Φαληρου τύρις, Lymp. Aek. 717); and Stephans also says that Palamium was a city of Opicia, the same which was afterwards called Neapolis. (Steph. B. s. v. Φαληρου.) The name of Palamium has a Tyrrhenian or Pelasgic aspect; and it is not improbable, as suggested by Abeken (Mittel. Italien, p. 90), that there was originally a Tyrrhenian settlement on the spot. The legendary connexion of the Siren Parthenone with the site or neighbourhood of Neapolis was well established, and never retailed: hence Dionysius designates the city as the abode of Parthenone; and Strabo tells us that even in his time her tomb was still shown there, and games celebrated in her honour. (Strab. v. p. 246; Dionys. Per. 358; Eustath. ad loc.; Plin. iii. 5. s. 9.)

The site of the original settlement, or Old City (Palaeopolis), is nowhere indicated, but it seems most probable that it stood on the hill of Paestum or Paestum, a long ridge of moderate elevation, which separates the bay of Pozzuoli or Baiae from that of Neapolis itself. The new town, on the contrary, adjoining the river Seleusia, a small stream still called the Sele, and must, therefore, have occupied the same site with the more easterly portion of the modern city of Naples. (Abeken, Mittel. Italien, p. 111; Niebur, vol. iii. p. 179.) The latter city, surrounded by the sea on three sides, was of the greatest prosperity, and, in great measure, eclipsed the older settlement; but it is clear from Livy that Palaeopolis continued to subsist by the side of the new colony, until they both fell under the dominion of the Sibyls. It does not appear that either the old or the new city was reduced by force of arms by the Campanian conquerors; they seem rather to have entered into a compromise with them, and admitted a body of the Campanians to the rights of citizenship, as well as to a share of the government. (Strab. v. p. 246.) But notwithstanding this, the Greek element still greatly preponderated; and both Palaeopolis and Neapolis were, according to Livy, completely Greek cities at the time when they first came into contact with Rome, nearly a century after the conquest of Campania by the Samnites. (Liv. viii. 22.)

On that occasion the Palaeopolitans, who had had the temerity to provoke the hostility of Rome by insurrection, and had even given occasion to the declaration of war which followed (b. c. 328), admitted within their walls a garrison of 2000 troops from Nola, and 4000 Samnites; and were thus enabled to withstand the arms of the consul Publius Philo, who occupied a post between the two cities so as to prevent all communication between them, while he laid regular siege to Palaeopolis. This was protracted into the following year; but at length the Palaeopolitans became weary of their Samnite allies, and the city was given over to the hands of the Romans by Chalians and Neapolitans, two of the chief citizens. (Liv. viii. 22, 23, 25, 26.) The Neapolitans would appear to have followed their example without offering any resistance; and this circumstance may explain the fact that while Publius celebrated a triumph over the Palaeopolitans (Liv. viii. 26; Fast. Capit.), the Neapolitans were admitted to peace on favourable terms, and their liberties secured by a treaty (fœdus Neapolitanum, Liv. i. c.) From this time all mention of Palaeopolis disappears from history. Livy tells us that the chief authority, which appears to have been previously enjoyed by the older city, was now transferred to Neapolis; and it is probable that the former town sank gradually into insignificance, while the community or "populus" was merged in that of Neapolis. So completely was this the ca. e, that Dionysius, in relating the commencement of this very war, speaks only of the Neapolitans (Dionys. Exc. Leg. pp. 2314—2319); while Livy, evidently following the language of the older annalists, distinguishes them from the Palaeopolitans, though they seem as really to have formed only one community ("duabus urbibus populis idem habitat," Liv. viii. 22).

From this time Neapolis became, in fact, a mere dependency of Rome, though retaining the honourable title of an allied state (fœderata civitatem), and enjoying the protection of the powerful republic, with but a small share of the burdens usually thrown upon its dependent allies. So favourable, indeed, was the condition of the Neapolitans under their treaty that at a later period, when all the cities of Italy obtained the Roman franchise, they, as well as the Herculeans, were long unwilling to accept the proffered boon. (Cic. pro Balb. 8, 24.) Hence it is no wonder that they continued throughout faithful to the Roman alliance, though more than once threatened by hostile armies. In b. c. 280, Pyrrhus approached the walls of Neapolis, with the view of making himself master of the city, but withdrew without accomplishing his purpose (Zonar. viii. 4); and in the Second Punic War, Hamilcar, though he repeatedly ravaged its territory, was deterred by the strength of its fortifications from assailing the city itself. (Liv. xxiii. 1, 14, 15, xxiv. 13.) Like the other maritime allies of Rome, the Neapolitans continued to furnish ships and sailors for the Roman
NEAPOLIS.

flows throughout the long wars of the Republic. (Vol. i. 20; Liv. xxxv. 16.)

Though Neapolis thus passed gradually into the condition of a mere provincial town of the Roman state, and, after the passing of the Lex Julia, became an ordinary municipal town (Cic. pro Balb. 8, ad Fam. xiii. 30), it continued to be a flourishing and populous place, and retained, to a far greater extent than any other city in this part of Italy, its Greek character and institutions; while its soft and luxurious climate rendered it the favourite resort of the indolent and effeminate. Hence Horace terms it "etiosa Neapolis;" and Ovid, still more strongly, "in ota natum Parthenopem." (Hor. Epod. 7. 54; Ovid, Met. xvi. 711; Stat. Silv. iii. 78–88; Sil. Ital. iii. 31.) The coasts on both sides of it were lined with villas, among which the most celebrated was that of Vedius Pollio, on the ridge of hill between Neapolis and Puteoli, to which he had given the name of Pausilypus (Παυσιλύπος); an appellation afterwards extended to the whole hill on which it stood, and which retains to the present day the name of Monte Posilipo. ( Dion Cass. liv. 23; Plin. ix. 53. s. 78.) Neapolis was a favourite residence of the emperor Nero, as well as of his pre- successor Claudius, and it was in the theatre there that the former made his first appearance on the stage, before he ventured to do so publickly at Rome. (Tac. Ann. xiv. 10, xv. 33; Dion Cass. ix. 6.) It is well known also that it was for a considerable period the residence of Virgil, who composed, or at least finished, his Georgics there. (Virg. Georg. iv. 564.) Thither, also, his remains were transferred after his death; and his tomb was still extant there in the time of the poets Statius and Silius Italicus, who paid it visits and who, who paid to it certain visits and who, and who, in several passages, appears to allude to it as the place of his birth. (Donat. Vit. Virg.; Plin. Ep. iii. 7; Martial, xi. 49; Stat. Silv. iii. 5. 13, iv. 4. 51–55.)

It is clear that Neapolis was at this period a provincial city of the first class; and though we meet with little historical mention of it during the later ages of the Empire, inscriptions sufficiently prove that it retained its reputation and importance. It appears to have escaped the ravages of the Goths and Vandals, which inflicted such severe blows upon the prosperity both of Capua and Nola (Hist. Missell. xv. p. 553); and under the Gothic king Theoderic, Cassiodorus speaks of it as still possessing a numerous population, and abounding in every kind of delight, both by sea and land. (Cassid. Var. vi. 23.) In the Gothic wars which followed, it was taken by Belisarius, after a long siege, and a great part of the inhabitants put to the sword, A. D. 556. (Procop. B. G. i. 8–10.) It was retaken by Totila in A. D. 542 (J. B. iii. 6–8), but again recovered by Narses soon after, and continued from this time subject to the supremacy of the Byzantine Empire, as a dependency of the Exarchate of Ravenna, but under the government of its own dukes. In the eighth century Paulus Diaconus still speaks of it as one of the "equilibriterium urbes" of Campania. (Hist. Langi. ii. 17.) It was about this period that it threw off the yoke of the Byzantine emperors, and once again continued to enjoy a state of virtual independence, until it was conquered in A. D. 1140 by the Normans, and became thenceforth the capital of the kingdom of Naples.

It is certain that the ancient city of Neapolis did not occupy nearly so great a space as the modern Naples, which is the largest and most populous city in Italy, and contains above 400,000 inhabitants. It appears to have extended on the E. as far as the river Sebetoth, a small stream still called the Scato,
though more commonly known as the Fiume della Maddalena, which still forms the extreme limit of the suburbs of Naples on the E. side; from hence it probably extended as far as the mole and old castle, which bound the port on the W. The bay speaks of the small island which he calls Megaris, and which can be no other than the rock now occupied by the Castle dell’ Ovo, as situated between Paestum and Neapolis (Plin. iii. 6. s. 12); it is therefore clear that the city did not extend so far as this point. Immediately above the ancient portion of the city rises a steep hill, now crowned by the Castle of St. Elmo; and from thence there runs a narrow volcanic ridge, of no great elevation, which continues without interruption in a SW. direction, till it ends in a headland immediately opposite to the island of Nisida or Nisida. It is the western portion of this ridge which was known in ancient times as the Mons Paestum, and is still called the Hill of Posilipo. It formed a marked barrier between the immediate environs of Neapolis and those of Puteoli and Baiae, and must have been a great obstacle to the free communication between the two cities; hence a tunnel was opened through the hill for the passage of the highway, which has served that purpose ever since. This passage, called in ancient times the Crypta Neapolitana, and now known as the Grotta di Posilipo, is a remarkable work of its kind, and has been described by many modern travellers. It is 2244 feet long, and 21 feet broad; its height is unequal, but, towards the entrance, is not less than 70 feet. It is probable, however, that the work has been much enlarged in later times. Seneca, in one of his letters, gives a greatly exaggerated view of its fancied horror, stem and alarming darkness (Sen. Ep. 57). Strabo assigns its construction to Coccus, probably the M. Coccus Nerva, who was superintendent of aqueducts under Tibereus, and who constructed a similar tunnel from the lake Avernus to Cumae (Strab. v. p. 245); and there is no reason to doubt this statement, though many Italian antiquarians have maintained that the work must be more ancient. On the hill immediately above the E. entrance of the grotto is an ancient sepulchre designated by tradition as the tomb of Virgil; and this popular tradition is a very good guide in such cases, there seems in this instance no sufficient reason to reject its testimony. We know, from the precise statement of Donatus, that the poet was buried on the road to Puteoli, within less than two miles from Naples ("via Puteolana intra lapidem solum in," Donat. Vit. Virg.; Hieron. Chron. ad in. 190), which agrees well with the site in question, especially if (as is probable) the high-road at that time passed over the hill, and not through the present forsaken village of the same name (Sen. Ep. 57). The above argument, if not conclusive, is certain to point to the spot, and to confirm the tradition, if the tomb of Virgil was at the foot of Mount Vesuvius, is certainly untenable. (Chaver. Ital. 1153; Eustace’s Classical Tour, vol. ii. pp. 370—380; Jorio, Guida di Posillupi, pp. 118, &c.)

Near the Capo di Posilipo, as the headland opposite to Nisida is now called, are the extensive ruins of a Roman villa, which are supposed to be those of the celebrated villa of Vesuvius Pollio, which gave name to the whole hill, and which he bequeathed by his will to Augustus. (Dict. Ital. iv. 23; Plin. ix. 53. s. 78.) Immediately opposite to the headland, between it and the island of Nisida (Nisius), lie two small inlets, or rather rocks, one of which now serves for the Lazzaretto,—the other, which is uninhabited, is called La Goleta; these are supposed to be the islands called by Statius Lipari and Eneploa. (Stat. Silv. ii. 2. 79, iii. 1. 149.) From their trifling size it is no wonder that they are not noticed by any other author. Recent excavations on the supposed site of the villa of Pollio have brought to light far more extensive remains than were previously known to exist, and which afford a strong illustration of the magnificent scale on which these edifices were constructed. Among the ruins thus brought to light are those of a theatre, the seats of which are cut out of the two rocks; an Odeon, or theatre for music; a Basilica; besides numerous porticoes and other edifices, and extensive reservoirs for water. But the most remarkable work connected with these remains is a tunnel or gallery pierced through the promontory, which is actually longer than the Grotta di Posilipo. This work appears from an inscription to have been restored by the emperor Honorius; the period of its construction is wholly uncertain. (Bullett. d. Inst. Arch. 1841, pp. 147—160; Arcillini, Bullet. Arch. 1843, p. 184; Magomeo and Eneploa.)

Though the neighbourhood of Naples abounds on all sides in ancient remains, those which are still extant in the city itself are incalculable. Two arches of a Roman theatre in the street called Anticaenlia, a fragment of an aqueduct known by the name of the Ponti Rosi, and the remains of a temple dedicated to Castor and Pollux, incorporated into the church of S. Paolo, are all the ancient ruins now visible. But the inscriptions which have been discovered on the site, and are for the most part preserved in the museum, are numerous and interesting. They fully confirm the account given by ancient writers of the Greek character so long retained by the city, and notice its division into Fratries, which must have continued at least as late as the reign of Hadrian, since we find one of them named after his favourite Antinous. Others bore the names of Eumenidae, Eunostidae, &c., the origin of which may probably be traced back to the first foundation of the Cumaean colony. From some of these inscriptions we learn that the Greek language continued to be used there, even in public documents, as late as the second century after the Christian era. (Boeckh, C. T. vol. iii. pp. 714—750; Mommsen, Inscri. Regn. Neap. pp. 127—131.)

**COIN OF NEAPOLIS IN CAMPANIA.**

2. (Nabul), a city of Sardinia, and apparently one of the most considerable places in that island, was situated on the W. coast, at the southern extremity of
NEAPOLIS.

The gulf of Oritiano. The Itineraries place it 60 miles from Salci, and 18 from Othoca (Oritiano). (Itin. Ant. ii. p. 84.) The name would clearly seem to point to a Greek origin, but we have no account of its foundation or history. It is noticed by Pliny as one of the most important towns in Sardinia; and its name is found also in Ptolemy and the Itineraries. (Plin. iii. 7, s. 13; Ptol. iii. 3, § 2; Itin. Ant. i. c.; Tab. Peut.; Geogr. Rav. v. 26.) Its ruins are still visible at the mouth of the river Po- libus, where that stream forms a great estuary or lagoon, called the Stagno di Mareccti, and possesses considerable remains of ancient buildings as well as the vestiges of a Roman road and aqueduct. The spot is marked by an ancient church called Sta Maria di Natale. (De la Marmona, Voy. en Sar- dineig, vol. ii. p. 357.)

The AQUAE NEapolitanae, mentioned by Ptolemy as well as in the Itinerary, which places them at a considerable distance inland, on the road from Othoca to Caralis, are certainly the mineral sources now known as the Baioni di Sardara, on the high road from Othoca to Oritiano. (Itin. Ant. ii. p. 82; Ptol. iii. 3, § 7; Geogr. Rav. v. 26; De la Marmona, l. c. p. 406.)

3. A city of Apulia, not mentioned by any ancient writer, but the existence of which is attested by its coins. There seems good reason to place it at Polignano, between Barium and Egnatia, where numerous relics of antiquity have been discovered (Romarelli, vol. ii. p. 148—152; Millingen, Namism. de Italia, p. 147.)

4. A town on the isthmus of Pallettro, on the E. coast between Apulitis and Aequus. (Herod. viii. 123.) In Leake's map it is represented by the modern Polignacora.

5. A town of Macedonia, and the haven of Philip- pic, from which it was distant 10 M.P. (Strab. viii. p. 330; Ptol. iii. 13, § 9; Seyrm. 685; i.Plin. iv. 11; Hierocel; Precip. Adr. iv.; Itin. Hierocel.) It probably was the same place as Datum (Δαθός), famous for its gold-mines (Hierocel. ix. 75; comp. Böckh, Pub. Econ. of Athens, pp. 82, 228, trans.) and sepulchre, as Strabo (vii. p. 331) intimates; whereas the poet of Silius Italicus celebrates Datum for its "good things." (Zenob, Pros. Grac. Cent. iii. 71; Harpocrat. s. v. Δαθός.) Scylax (p. 27) does, indeed, distinguish between Neapolis and Datum; but, as he adds that the latter was an Athenian colony, which could not have been true of his original Datum, his text is, perhaps, corrupt in this place, as in so many others, and his real meaning may have been that Neapolis was a colony which the Athenians had established at Datum, Zenobia (l. c.) and Eustathius (ad Dion. Perii. 517) both assert that Datum was a colony of Thess; which is highly probable, as the Thessans had several colonies on this coast. If Neapolis was a settlement of Athens, its foundation was, may be inferred, later than that of Amphipolis. At the great struggle at Philippi the galleys of Brutus and Cassius were moored off Neapolis. (Appian, B. C. iv. 106; Dion Cass. xlvii. 55.) It was at Neapolis, now the small Turkish village of Kàrdal (Leake, North. Greece, vol. iii. p. 180, com. Am. 217, 224), that Paul (Acts xvi. 11) landed. The shore of the mainland in this part is low, but the mountains rise to a considerable height behind. To the W. of the channel which separates it from Thasos, the coast recedes and forms a bay, within which, on a promontory with a port or a town, the site was situated. (Corybæare and Howson.

NEAPOLIS.

Life and Epist. of St. Paul, vol. i. p. 306.) Traces of paved military roads are still found, as well as remains of a great aqueduct on two tiers of Roman arches, and Latin inscriptions. (Clarke, Trav. vol. viii. p. 49.) For coins of Neapolis, see Eckhel, vol. ii. p. 72; Rusche, vol. iii. pt. i. p. 1149.

COIN OF NEAPOLIS IN MACEDONIA.

NEAPOLIS. II. In Asia. I. An important city of Palaestina is supposed to be identical with the SICHEL or SICHEM of the Old Testament. Thus Euphrosus uses the names as synonyms (νων Σίχανος, τοι'ιστων την τινι νοον Νεάπολις, ade. Hears. lib. iii. tom. i. 1055, comp. 1065.) Eusebius and St. Jerome, however, place Sicem (Σίχανος, Σίκης, Σίχεια) in the suburbs of Neapolis (Onomast. s. vv. Terebthis, Σειχης) and Lus is placed near to, and according to the former, viii. M. P., according to the latter, iii. M. P., from Neapolis (s. v. Αφιλά), which would imply a considerable interval between the ancient and the modern city. In order to reconcile this discrepancy, Reland suggests that, while the ancient city gradually decayed, the new city was extended by gradual accretion in the opposite direction, so as to widen the interval; and he cites in illustration the parallel case of Urebbe and Vejeben. (Palestina, pp. 1004, 1005.) Another ancient name of this city occurs only in one passage of St. John's Gospel (iv. 3), where it is called Sicchar (Σιχάρα); for although St. Jerome says it would be a corrupt reading for Sichem (Επιστ. Paulus, Ep. lxxvi. Op. tom. iv. p. 676, Quast. in Genes. cv. xlv. ver. 22, tom. ii. p. 514), his correction of what he allows was an ancient and common error, even in his age, has no authority in any known codex or version. Another of its ancient names which has exercised the ingenuity of the learned, occurs in Pliny, who reckons among the cities of Samaria, "Neapolis quod antea Mamorthea diceratur" (v. 12), evidently a mistake for Malbortha, which Josephus gives for the native name of Neapolis (B. J. iv. 8. § 2); unless as Roland conjectures, both readings are to be corrected from coins, which he shrewdly remarks are less liable to corruption than MSS., and which read Mortha (Μόρθα), which that learned writer takes to be the classical form of the Hebrew word Môrkh, which was associated with Sichem, both in the Old Testament and the Rabbinical commentaries. (Gen. xii. 6; Dent. xii. 50; Roland, Dissertations Miscell. pars i. pp. 135—140.) The same writer explains the name Sichem in St. John, as a name of reproach, contemptuously assigned to the city by the Jews as the seat of error (the Hebrew שֵׁנֶּא כ meaning mendacious, false), and borrowed from the prophet Habaokk, where the two words Môrkh Shaker (שַׁקֶר) 712) occur in convenient

the name of the city written among its branches. (Eckhel, vol. iii. pp. 433—435: see Gerazin, Vol. 1. p. 992. a.)

[16 W.]

2. A town of Colchis, south of Dioscuria, and north of Phasis, on the river Chobas or Choruses. (Sylv. p. 27; Ptol. v. 10. § 2.)

3. A town on the coast of Ionia, south of Ephesus, on the road between Anaea and Marathusium. It was a small place which at first belonged to the Ephesians, and afterwards to the Samians, who received it in exchange for Marathusium. (Strab. xiv. p. 639.) Most writers identify its site with the modern Scala Nova, at a distance of about three hours’ walk from the site of ancient Ephesus, but C. L. Leander (Edin. Minor, p. 261) believes that this place marks the site of the ancient Marathusium, and that the ancient remains found about halfway between Scala Nova and Tahanli, belong to the ancient town of Napeolis. (Comp. Turnefort, Letters, xx. p. 402: Fellows, Journal of an Exc. in As. Min. p. 271, who identifies Napeolis with Tahanli or Chanyli itself.)

4. A town in Caria, between Orthossa and Aphrodisias, at the foot of Mount Cadmus, in the neighbourhood of Harpaean. (Ptol. v. 2. § 19; Hieroc. p. 688.) Richter (Walt.) p. 593) identifies it with the modern Jenibola, near Arcas Kalesi, the ancient Harpaean. Another town of the same name is mentioned on the coast of Caria by Mela (i. 16) and Pliny (v. 29); and it is clear that this cannot be the same town as that near Harpaean it is probably only another name for New Mydonas [Myndes].

5. A town in Pisidia, a few miles south of Antioch. (Ptol. iv. § 11; Hieroc. p. 672.) Pliny (v. 42) mentions it as a town of the Roman province of Galatia, which embraced a portion of Pisidia. (Frau (Fünf Inschriften, p. 35) identifies its site with Tatinke, where some ancient remains still exist. (L. S.)

6. A small place situated on the Ephrates, at the distance of 14 schoeni (about 40 miles) below Beschenaba. Ritter has tried, but unsuccessfully (if the present numbers be correct) to identify it with Maita. (Isid. Mass. Purt. i. 12, ed. Müller, 1855.) [V.]

NEAPOLIS. III. In Africa. 1. In Egypt.

[Caenepolis.

A town of Cyrene, which Ptolemy (iv. 4. § 11) places in 31° 10’ lat. and 49° long. The town of Mahby or Mahby, which with it has been identified, and which appears to be a corruption of the old name, with no other change than what might be expected from the Arabic pronunciation, does not quite agree with the position assigned by Ptolemy to Napeolis. (Beesby, Exper. to the N. Coast of Africa, p. 350; Barth, Wanderungen, pp. 391. 405.)

[4. LEVENT MAGNA.

A town of Lycytria with a harbour (Sylv. p. 47; Stadium. § 107.), the same as the Macomaides of Pliny (v. 3; Max. ad Aet., Ptol. iv. 3. § 11); a "municipium," as it appears from the Antonine Itinerary ("Macomades Minores," Pelt. Tab.; Geog. Rav. iii. 5); this latter name indicates a Phoenician origin. (Movers, Phoen. Alterth. vol. ii. p. 494.) It has been identified with Kasser Omaga, on the N. of the Gulf of Hammamat.

5. A factory of the Carchagines upon the Sinus Neapolitans, from which it was the shortest distance to Sicily—a voyage of two days and a night. (Thuc. vii. 50; Sylv. p. 49; Stadium. § 107; Strab. xvii. p. 834.) It was taken by Agathocles in

his African campaign. (Diodor. xx. 17.) Under the earlier emperors it was a "liberum oppidum" (Plut. v. 3.), afterwards under Hadrian a "colonia." (Ptol. iv. 3. § 8: Hist. Antim.: Pelt. Tab.; Geog. Rav. iv. 5.) The old name is retained in the modern Nibo, where Barth (Wanderungen, p. 141; comp. Shaw, Trav. p. 161) found some remains of antiquity. [E. B. J.]

NEBIS. [Gallaecia, Vol. i. p. 933, a.]

NEBO. 1. (Nasae, LXX.), the mountain from which the patriarch Moses was permitted to view the Promised Land. Its situation is thus described:—"Get thee up into this mountain Nebairin, unto Mount Nebo, which is in the land of Moab, that is over against Bethpeor." (Deut. iv. 49.) and Moses went up from the plains of Moab unto the mountain of Nebo, to the top of Pisgah, that is over against Jericho." We have here three names of the mount, of which, however, Abraham may designate the range or mountain region rising from the high table-land of Moab (comp. Numbers, xxvii. 12, xxxiii. 47); while Pisgah is an apppellative for a hill, —as it is rendered in our margin, wherever the name occurs in the text (Num. vii. 20; Dent. iii. 27, xxxiv. 1), and in several oriental versions (Lex. s. e. V. 19.).—Nebo the proper name of some one particular peak. This name is regarded by M. Quatremere de Quincy as of Phoenician origin, being derived from one of the celebrated Chaldean divinities (Isaiah, xlvii. 1.) so frequently compounded with the names of their most eminent kings, etc.; and he discovers other names of like origin in the same parts. (Mémoire sur les Nabateens, p. 87.) It is placed by Eusebius and St. Jerome 6 miles west of Esbus (Heshbon), against Jericho, on the road from Livias to Esbus, near to Mount Phogor [Ptech.] it was still called by its ancient name (Onomast. s. e. Naban, Abriosis), Dr. Robinson has truly remarked that over against Jericho "there is no peak or peak perceptibly higher than the rest; but all is apparently one level line of summit, without peaks or gaps." ..."... "Setseem, Burchhardt, and also Troy and Mangles, have all found Mount Nebo in Jebel Attâvi, a high mountain south of the Zârka Mata" (Arm.) This, however, is far south of the latitude of Jericho. (Bib. Res. vol. iii. pp. 306, 307.)

2. A town of the tribe of Ruben, mentioned with Hebron, Elealeh, and other (Num. xxxii. 38); doubtless the site now marked by Nebi Nebi the Belah, south of Es-Solt (Robinson, Bib. Res. vol. ii. p. 307, n. 1, vol. iii. appendix, p. 170), j. e. in the same district with Hebron and El-Ali, the modern representatives of Hebron and Elealeh. Whether this town was connected with the synonomous mountain is very uncertain.

3. A town in Judah. (Ezra, ii. 29; Nehem. vii. 33.)

NEBRISSA. [NABRISA.]

NEBRODES MONS. (va Neapologi, Strab.: Monti di Madonna), one of the most considerable ranges of mountains in Sicily. The name was evidently applied to a part of the range which comprises near Cape Peleorus, and extends along the northern side of the island, the whole way to the neighbourhood of Panormus. Though broken into various mountain groups, there is no real interruption in the chain throughout this extent, and the names applied to different parts of it seem to have been employed as usual in such cases, with much vagueness. The part of the chain nearest to Cape Peleorus, was called Monti Neptunius, and therefore the Mona Nebrodes must have been further to the
NECTIBERES.

WEST. Strabo speaks of it as rising opposite to Actina, so that he would seem to apply the name to the mountains between that peak and the northern coast, which are still covered with the extensive forests of Caronia. Silius Italicus, on the other hand, tells us that it was in the Mons Nebrosed the two rivers of the name of Himera had their sources, which can refer only to the more westerly group of the same name, the most westerly range in Sicily after Actina, and this identification is generally adopted. But, as already observed, there is no real distinction between the two. Silius Italicus speaks of the Mons Nebrosed as covered with forests, and Silius derives its name from the number of fawns that wandered through them; an etymology obviously fictitious. (Strab. vi. p. 274; Solin. 5. §§ 11, 12; Sil. Ital. xiv. 236; Oliver. Sicil. p. 564; Fazell. de Reb. Sil. x. 2, p. 414.)

NECTIBERES. [MAURITANIA.]

NEIDA (Nœsia), in Dalmatia, is a river of Peloponnesus, rises in Mt. Ceraunus, a branch of Mt. Lycaeus in Arcadia, and flows with many windings in a westerly direction past Phigalia, first forming the boundary between Arcadia and Messenia, and afterwards between Elis and Messenia. It falls into the Ionian sea, and near its mouth is navigable for small boats. (Pans. iv. 20. §§ 1, 2, iv. 36. § 7, v. 6. § 3, viii. 98. § 3, viii. 41. §§ 1, 2; Strab. viii. pp. 344, 349; Leake, Morea, vol. i. pp. 56, 453; Ross, Reisen im Peloponnes, vol. 3, p. 84; Curtius, Peloponnesus, vol. ii. pp. 132, 185.)

NEDAI, a river of Pannonia, mentioned only by Juvanudes (de Reb. Get. 50), as the river on the banks of which the Huns were defeated by the Gepidae. The name is in some MSS. Neda, and the river is believed to be the modern Neýra. [L. S.]

NEDINUM (Neýnou, Ptol. ii. 16. § 10; Geog. Rav. iv. 16; Nellitate, Orelli. Inscr. 3432), a town of the Liburni, on the road from Siscia to Istalera (Pent. Tab.), identified with the ruins near Nadia. Orelli. (Lc.) refers the inscription to Navarin. (Wilkinson, Dalmatia and Montenegro, vol. i. p. 93.) [E. B. J.]

NEDON. [Messenia. p. 342, b.]

NEGRA. [Marsybarae, pp. 284, 285.]

NELCYNDA (ναίκυνδα, Peripl. §§ 53, 54, ed. Müller, 1555), a port on the W. coast of India, in the province called Linyrica, without doubt the same as that now called Nélaém. It is in lat. 12°. 10' N. It is mentioned in various authorities under names slightly modified one from the other; thus, it is the Melkylma of Ptolemy (vii. 1. § 29), in the country of the Ali; the "portus gentis Nélyndon" of Pliny (vi. 26. s. 164), which was also called Bacare or Barace; the Nicylda of the Peutingerian Table; and Nikelina of the Geogr. Rav. (ii. 1). The name is certainly of Indian origin, and may be derived, as suggested by Ritter (v. p. 515) from Nalkhanda, the blue county. Other derivations, however, have been proposed for it. (Vincent, Periplus, ii. p. 446; Renell, Mem. Hindostan, p. 489; Joselin, iii. p. 227.) [V.]

NELGHS. [Epirus, pp. 872, a.]

NELIA (Nïkia), a town of Magnesia in Thessaly, between which and Iolcos Demetrias was situated. Leake identifies it with the remains of a small Hillicen town above Lekbonia. (Strab. iv. p. 436; Leake, Northern Greece, vol. iv. p. 379.)

NELO, a small river of Haliazaraiconensis, in the territory of the Astures, and on the N. coast of Spain; probably the Río de la Puebla. (Plin. iv. 26. s. 34; Ucrt, vol. ii. pt. i. p. 299.) [T. II. B.]

NEMALUSUS. [Némalusus: Eth. Némalusos, Nemalasus; Nimes,] a city of Gallia Narbonensis on the river Gard. The Arteson or Gard (Narbonne) is crossed by him in Spain, and goes by Narbo (Narbonne) into Spain. Ptolemy (ii. 10. § 10) calls it Nemalusus Colonia, but he places it in the same latitude as Arausio (Orange), and more than a degree north of Arelate; which are great blunders. Nemalusus was the chief place of the Volca Aremcini: "with respect to number of foreigners and those engaged in trade (says Strab. iv. p. 186) much inferior to Narbo, but with respect to its population much superior; for it has subject to it twenty-four villages of people of the same stock, populous villages which are contributory to Nemalusus, which has what is called the Latium (Jus Latii or Latinitas). By virtue of this right those who have obtained the honour of an aedileship and quaestorship in Nemalusus become Roman citizens; and for this reason this people is not under the orders of the governors from Rome. Now the city is situated on the road from Iberia into Italy, which road in the summer is easy travelling, but in the winter and spring is muddy and washed by streams. Some of these streams are passed by boats, and others by bridges of wood or stone. The wintry torrents are the cause of the trouble from the water, for these torrents sometimes as late as the summer descend from the Alps after the melting of the snow."

Strabo fixes the site of Nemalusus about 100 stadia from the Rhone, at a point opposite to Tarascon, and 720 stadia from Narbo. In another place (iv. p. 178) Strabo estimates the distance from Narbo to Nemalusus at 88 M. One of the Itin. routes makes it 91 M. from Nimes to Nemalusus. Strabo's two distances do not agree, for 720 stadia are 80 M. The site of the place is certain. In the middle age documents the name is written Nemese (D'Anville). There seems to be no authority for writing the modern name Nemse; and yet Nimes, as it is now properly written, supposes a prior form Names. Nimes is the present capital of the arrondissement of Gard, the richest in Roman remains of all the districts of France.

The twenty-four smaller places that were attached (attributa) to Nemalusus are mentioned by Pliny (iii. 4). The territory of Nemalusus produced good cheese, which was carried to Rome (Plin. xii. 42). This cheese was made on the Cévennes, and Pliny appears to include Mons Lesbura in the territory of Nemalusus. Latera [Latara] on the Lézus (Lez) west of Nemalusus was in the territory, which probably extended through Uergernos eastward to the Rhone. Nemalusus was an old Gallic town. The name is the same that Strabo gives with a slight variation (Nemosus) to Augustonum and Clermont in Aquitaine. The element Nem appears in the name of several Gallic towns. Nemalusus was made a Colonia probably by the emperor Augustus. An inscription on one of the gates, called the gate of Augustus, records the eleventh or twelfth consulship of Augustus, and that he gave gates and walls to the colony. There is a bronze medal of Nemalusus in the Museum of Arqueon, the so-called Pict de Biche, on one side of which there is the legend COL. NEM. with a crocodile chained to a palm-
NEMAUSUS.

The famous fountain of Nemausus, which Anonius mentions (Ordo Nob. Urb., Burdigala)—

"Non Aponus potu, vitrea non luce Nemausus Purior"—

still exists; and there are some traces of the ancient construction, though the whole is a modern restoration. But the great supply of water to Nemausus was by the aqueduct now called the Pont du Gard, and it is said that this aqueduct terminated by a subterraneous passage in the side of the rock of the fountain. A building called the Temple of Diana, and a large edifice called Tour Magna (Turris Magna), which appears to have been a sepulchral monument, the gate of Augustus, and the gate called of France, are the chief remaining monuments of Nemausus.

The noblest Roman monument in France is the aqueduct called the Pont du Gard, which is between three and four leagues from Nimes. Over this aque-

arches in the ground story, all of the same size except four entrances, larger than the rest, which correspond to the four cardinal points. These arches open on a gallery, which runs all round the interior of the building. The story above has also sixty arches. All along the circumference of the attic there are consoles, placed at equal distances, two and two, and pierced in the middle by round holes. These holes received the poles which supported an awning to shelter the spectators from the sun and rain. When it was complete, there were thirty rows of seats in the interior. At present there are only seventeen. The stones of the upper seats are of enormous dimensions, some of them 12 feet long, and 2 feet in width.

The temple now called the Maison Carrée is a parallelogram on the plan, about 76 English feet long, and 40 wide. It is what is called pseudo-peripteral, with thirty Corinthian fluted pillars, all of which are engaged in the walls, except six on the face and two on each side of the front portico, ten in all. The portico has, consequently, a considerable depth compared with the width. The columns are ten diameters and a quarter in height. The temple is highly enriched in a good style. Séguier (1758) attempted to prove that this temple was dedicated to C. and L. Caesar, the sons of Agrippa by Julia the daughter of Augustus. But M. Auguste Pellet has within the present century shown that it was dedicated to M. Aurelius and L. Verus. The excavations which have been made round the Maison Carrée since 1821 show that it was once surrounded by a colonnade, which seems to have been the boundary of a forum, within which the temple was placed. The Maison Carrée, after having passed through many hands, and been applied to many purposes, is now a museum of painting and antiquities. Arthur Young (Travels in France, 2nd ed. vol i. p. 48) says "that the Maison Carrée is beyond comparison the most light, elegant, and pleasing building I ever beheld." Nobody will contradict this.

COIN OF NEMAUSUS.

Nimes contains many memorials of its Roman splendour. The amphitheatre, which is in good preservation, is larger than that of Verona in Italy; and it is estimated that it would contain 17,000 persons. It stands in an open space, cleared of all buildings and obstructions. It has not the massive and imposing appearance of the amphitheatre of Arles; but it is more complete. A man may make the circuit on the flat which runs round the upper story, except for about one-sixth of the circuit, where the cornice and the flat are broken down.

The greater diameter is about 437 English feet, which includes the thickness of the walls. The exterior height on the outside is nearly 70 English feet. The exterior face of the building consists of a ground story, and a story above, which is crowned by an attic. There are sixty well proportioned trees, which may probably commemorate the conquest of Egypt; on the other are two heads, supposed to be Augustus and Agrippa, with the inscription IMP. F. P. DIVI. F. This medal has also been found in other places. It is figured below.
duct the waters of the springs of the Eukore in the plain near Una, were brought to Nemea. The 
Gordon, the ancient Vardos, is deep just above the aqueduct. The channel is sunk between rugged rocks, on which scattered shrubs grow. The river rises in the Cercomes, and is subject to floods, which would have destroyed a less solid structure than this Roman bridge. The bridge is built where the valley is contracted by the rocks, and in its ordinary state all the water passes under one arch. The best view of the bridge is from the side above it. The other side is disfigured by a modern structure of the same dimensions as the lower range of arches; it is a bridge attached to the lower arches of the Roman bridge, and is used for the passage of carts and horses over the Gordon.

There are three tiers of arches. The lowest tier consists of six arches, that under which the water flows is the largest. The width of this arch is said to be about 50 English feet, and the height from the surface of the water is about 65 feet. The second tier contains eleven arches, six of which correspond to those below, but they appear to be wider, and the piers are not so thick as those of the lowest tier. The height of the second tier is said to be about 64 feet; but none of these dimensions may not be very accurate. The third tier has thirty-five

**ROMAN ARCHITECTURE NEAR NEMEA, now called the Pont du Gard.**

The stone of this bridge is a yellowish colour. Seen under the sun from the west side, the bridge has a brightish yellow tint, with patches of dark colour owing to the weather. The stone in the lowest tier is a concretion of shells and sand, and that in the lower tiers appears to be the same. In the rocks in the highest tier there are halves of a Travertine shell completely preserved. The stone also contains bits of rough quartz rock, and many shell-coated pebbles. In the fields the Travertine is 50 feet above its ordinary level, and the water will then pass under all the arches of the bridge. The rise of this tier show some marks worn by the water. But the bridge is still in a fine state of preservation, and of the beneficial effects of its construction.

There are the grooves which treat of the antiquity of Nemea. Some are quoted and extracts from them are printed in the Guide du voyageur, par l'Europe (1862). [G. L.]

N. W. A. (τος Νεμα, ιδια Νεμα, Adj. Νεματος, Νεμεας, Νεμεως), the town of a valley in the territory of Corinth, where Heraclides the Nemean (called, and on which the Nemean games were celebrated every other year. It is described by Strabo as situated between Chelum and Phthius (vi. p. 377). The valley lies in a direction nearly north and south. It is about two or three miles long, and from half to three-quarters of a mile in breadth. It is shut in by mountains, and is hence called by Pindar a deep vale (Σαμοιδόν, Nem. iii. 18). There is a remarkable mountain on the N.E., called in ancient times Apesas (Ἀπεσας), now Fuka, nearly 3000 feet high, with a flat summit, which is visible from Argos and Corinth. On this mountain Persaeus is said to have first sacrificed to Zeus Apessantus. (Paus. ii. 15. § 3; Steph. B. s. v. Απεσας; Stat. Theb. iii. 460, seq.) Theorictus gives Nemea the epithet of "well-watered" (εὖ νεμῶν, νεμεών, Theor. xxv. 182). Several rivulets descend from the surrounding mountains, which collect in the plain, and form a river, which flows northward through the ridges of Apessas, and falls into the Corinthian gulf, forming in the lower part of its source the boundary between the territories of Sicyon and Corinth. This river also bore the name of Nemea (Strab. viii. p. 382; Diod. xiv. 83; Liv. xxxiii. 15); but as it was dependent for its supply of water upon the season of the year, it was sometimes called the Nemean Chamela. (Aen. de Fusa. Leg. § 168, ed. Bekker; ιξον. Νεμας, Xen. Hell. iv. 2, § 15.)

The mountains, which enclose the valley, have several natural caverns, one of which, at the distance of 15 stadia from the sacred grove of Nemea, and on the road named Tretas, from the latter place to Myceaea, was pointed out as the cave of the Nemean lion. (Paus. ii. 15. § 2.)

The name of Nemea was strictly applied to the sacred grove in which the games were celebrated. Like Olympia and the sanctuary at the Corinthian
LEMNITURI.

Itin., it was not a town. The sacred grove contained only the temple, theatre, stadium, and other monuments. There was a village in the neighbourhood called Bemhna (Bémnna), of which, however, the exact site is unknown. (Strah. viii. p. 377; Steph. B. s. v.) The haunts of the Ne- menian lion are said to have been near Bemhina. (Theoc. xxv. 202.)

The chief building in the sacred grove was the temple of Zeus Nemesus, the patron god of the place. When visited by Pausanias the roof had fallen, and the statue no longer existed. (B. iii. 15, § 23.) Three columns of the temple are still standing, amidst a vast heap of ruins. Two of these columns belonged to the pronaoi, and were placed as usual between natae; they are 4 feet 7 inches in diameter at the base, and still support their architrave. The third column, which belonged to the outer range, is 5 feet 3 inches in diameter at the base, and about 34 feet high, including a capital of 2 feet. Its distance from the corresponding column of the pronaoi is 18 feet. The total height of the three men of the entablature was 8 feet 2 inches. The general intercalibration of the peristyle was 7 feet; at the angles, 5 feet 10 inches. From the front of the pronaoi to the extremity of the cell within, the length was 95 feet; the breadth of the cell within, 31 feet; the thickness of the walls, 3 feet. The temple was a hexastyle, of about 65 feet in breadth on the upper step of the stylobate, which consisted of three steps: the number of columns on the sides, and consequently the length of the temple, I could not ascertain." (Leake.) Though of the Doric order, the columns are as slender as some of the specimens of the Ionic, and are so different from the older Doric examples, that we ought probably to ascribe to the temple a date subsequent to the Persian wars.

Among the other monuments in the sacred grove were the tombs of Opheltes, and of his father Ly- corus. The former was surrounded with a stone enclosure, and contained certain altars; the latter was a mound of earth. (Paus. ii. 15. § 3.) Pau- sanias also mentions a fountain called Adrastein. The latter is, doubtless, the source of water near the Turkish fountain, which is now without water. At the foot of the mountain, to the left of this spot, are the remains of the stadium. Between the stadium and the temple of Zeus, on the left of the path, are some Hellenic foundations, and two fragments of Doric columns. Near the temple are the ruins of a small church, which contains some Doric fragments. (Leake, Morea, vol. iii. p. 327, seq.; Curtius, Pe- loponnesos, vol. ii. p. 505, seq.)

For an account of the Nemean festival, see Dict. of Ant.) s. v.

LEMNITURI, one of the several Alpine peoples enumerated by Pliny (iii. c. 29) among the nations inscribed on the Trophy of the Alps. Their position is unknown. (G. L. v.)

LEMNES, a river of Gallia mentioned by An- sonius (Mostelh, v. 353), is the Nina, which joins the Pronae (Prum). The united streams flow into the Sura (Sour), and the Sura into the Mo- selle. (G. L. v.)

NEMETACUM or NEMETOCENNA (Arras), the chief town of the Atrebates, a Belgic people. Caesar (B. G. viii. 46) spent a winter at Nemetocennum at the close of his Gallic campaigns. In the inscription of Speak there is a route from Castellum (Casae) to Nemetocennum, which is the same place as Nemetocenna. The distance from Casae through Bréheme to Arras is 43 M. P. The distance according to the Antonine Itin., from Casae through Miniacicum [Miniacatum] is 55 M. P. There is also a route from Tarcentum (Thiéronne) of 33 M. P. to Nemetacum. There is no place where these roads can meet except Arras. In the Greek texts of Ptolemy (ii. 9. § 7) the capital of the Atrebatic is Origacum (Origianac); but it is said that the Palatine MS. has Metacon, and all the early editions of Ptolemy have Metacum. It seems possible, then, that Ptolemy's Metacon represents Nemetacum. But Ptolemy incertly places the Atrebatic on the Seine; he also places part of their territory on the sea-coast, which may be true. Origiacum is supposed to be Orchies, between Tarrauic and Donaut. The town Nemetacum afterwards took the name of the people Atrebatic or Atrebaticus, and the name was finally corrupted into Arras. [ATRE- BAT.] The traces of the Roman roads from Arras to Thiéronne and to Cambrai are said to exist. It is also said that some remains of a temple of Jupiter have been discovered at Arras, on the Place du Cloître; and that there was a temple of Iaix on the site of the Hôtel-Dieu. (D'Anville, Notice, &c.; Walckenaer, Géog. &c. vol. i. p. 431.) [G. L.]

NEMETATAE. [Galliae, Vol. i. p. 933, a.]

NEMETES (Neýtaa). This name first appears in Caesar (B. G. i. 51), who speaks of the Nemetes as one of the Germanic tribes in the army of Ari- vistus. In another passage (B. G. vi. 25) he describes the Hereynia Silva as commencing as the west to the borders of the Helvetii, the Nemetes, and the Taufri; and as he does not mention the Nemetes as one of the nations on the left bank of the Rhine (B. G. iv. 10), we may probably infer that in his time they were on the east or German side of the Rhine. The Vangiones and Nemetes were afterwards transplanted to the west side of the Rhine. (Tac. Germ. c. 28.) Ptolemy makes Novo- mognaces (Speyer) the capital of the Nemetes, but he incorrectly places them north of the Vangiones, whose capital was Barbotomagus (Worms). Pliny (iv. 17) mentions the Nemetes, Triboci, and Vangiones in this order; but Tacitus mentions them only in the reverse order, Vangiones, Triboci and Nemetes. From none of these writers could we determine the relative positions of these peoples; but the fact that Novomogonacis (Novomogyos) is mentioned by Ptolemy as the chief town of the Nemetes, and that Novomogonacis is proved to be Speyer by the Itineraries along the west bank of the Rhine, determine the position of the Nemetes.

In Ammianus Marcellinus (xv. 11) and the Not. Imp., Novomogonacis appears under the name of the people Nemetes or Nemetae. Ammianus calls it a municipium, by which he probably means a Roman town. In the Notitia of the Galic provinces, Civitas Nemetum belongs to Germania Prima. In some later writings the expression "Novomogonacum" indicates that the Nemetae called the place Spira." The name of Speyer is from the Speyerbach, which flows into the Rhine at Speyer. (D'Anville, Notice, &c.; Walckenaer, Géog. &c. vol. ii. p. 277.) [G. L.]

NEMETOBRIA (Nymètobria), a town of the Triburi in Asturica, on the road from Bracara to Asturica, now Menabia, in the district of Tripolis. (Ptol. ii. 6. § 37; Itin. Ant. p. 428; Ubert, vol. ii. p. 442.) [T. H. D.]

NEMETOCENNA [Nemetacum.]
NEORENSESIS LACUS.

NEORENSESIS LACUS. [Arca.]

NEOMOSSUS. [Augustonemus.]

NEUMUS DIANAÉ. [Arca.]

NENTIDAVA. [Dacia, Vol. 1, p. 774. b.]

NEOCAESARIAE (Neoacéasaris: Eth. Neoacésarapatris). 1. A town in Pontus Polemonianus, which, on account of its late origin, is not mentioned by any writer before the time of Tiberius; was situated on the eastern bank of the river Lyca, 65 miles to the east of Amasia. (Pinn. vi. 3; Tab. Peutinger.) It was the capital of the district, and celebrated for its size and beauty, and is of historical importance on account of the ecclesiastical council held there in A.D. 314. We possess no information about the date of its foundation; but the earliest coins we have of it bear the image of the emperor Tiberius; whence it is probable that Neoacesaræa was founded, or at least received that name, in the reign of Tiberius, when Strabo, who does not notice it, had already composed his work. It must have rapidly risen in extent and prosperity, as in the time of Gregorius Thaumaturgus, who was a native of the place, it was the most considerable town in Pontus. (Greg. Nazian. Epit. p. 577; Amm. Marc. xxvii. 12; Hieroc. p. 702; Basil, Epist. 210; Acta Euthych. c. 7; comp. Steph. B. s. v.; Sohmi. 43; Postel v. 6. § 10.) According to Paulus Diaconus (Hist. Misc. ii. 18), the town was once destroyed by an earthquake, and the Stephanus B. it seems that at one time it was called Adriampos. The town still exists under a corrupt form of its ancient name, Nicetar or Nicetas, at a distance of two days' journey north of Tepeth. As to the supposed identity of Cahira and Neoacesaræa, see Cahira.

NEOCLAUDIOPOLIS. [Andrapa.]

NEOCHOMUM. [Comum.]

NEON (Néon; Eth. Neox)., an ancient town of Phociæ, said to have been built after the Trojan war (Strab. ix. p. 439), was situated at the foot of Mt. Tithorea, one of the peaks of Mt. Parnassus. Herodotus relates that, when the Persian army invaded Phociæ, many of the Phociæans took refuge in Tithorea near Neon (viii. 32), and that the latter city was destroyed by the Persians (viii. 33). It was, however, afterwards rebuilt; but was again destroyed by the Phociæans. (Steph. B. s. v.) It is situated at the end of the Sacred War. (Paus. x. 3. § 2.) In its neighbourhood, Philomelus, the Phociæan general, was defeated, and perished in the flight by throwing himself down from a lofty rock. (Paus. x. 2. § 4.)

Neon now disappears from history, and in its place we read of a town Tithorea, which is described by Pausanias (x. 32. § 8, seq.). This writer regards Tithorea as situated on the same site as Neon; and relates that Tithorea was the name applied to the whole district, and that when the inhabitants of the neighbouring villages were collected in the city, the name of Tithorea was substituted for that of Neon. This, however, is not in accordance with the statement of Pindar, according to whom Tithorea, in the time of the Mithridatic war, was a fortress surrounded by precipitous rocks, where the Phociæans took refuge from Xerxes. He further states that it was not such a city as the one existing in his day. (Pind. Sull. 13.) If the view of Pindar is correct, that the fortress, the site of which was afterwards occupied by the city Tithorea, was the place where the Phociæans took re-

NEONTIECHIOS. (Neos teixos), an Aeolian town not far from the coast of Myaia, situated between the Hermus and the town of Larissa, from which its distance was only 30 stadia. It is said to have been founded by the Aeoliæans, as a temporary fasti on their first arrival in Asia. According to Strabo (xiii. p. 621), the place was more ancient than Cyme; but according to a statement in the Vita
HOMEI (c. 10), it was built eight years later than Cyrene, as a protection against the Pelagians of Larissa. (Plin. v. 32; Hor. i. 149; Syls. p. 28; Steph. B. s.c.) Remains of this town, says Crane, ought to be sought for on the right bank of the Hermans, and above Quieiz-Hisser, on the road from Smyrna to Bergama. [L. S.]

NEONTEICOS (Νέων τείχος), a fortress on the coast of Thrace, mentioned by Sylax (p. 28) and by Xenophon (Arab. vii. 5. § 8), supposed to be the modern Amfipolis. [T. H. D.]

NEOPTOLEMUS RHEIS (Νεοπτολέμους τός Ῥιής), Strab. viii. p. 306), a place on the NW. coast of the Euxine, 120 stadia from the river Tyros, and the same distance from Cremnisci (Anon. Peripil. p. 9), now Aktevron. [E. B. J.]

NEPETE (Νέπητα Πτολ.; Νεπέτρα, Strab.; Εθν. Nepesinos; Νεφί), a city of Etruria, situated in the southern part of that province, at a distance of 30 miles from Rome and 8 miles E. of Sutrium. There is no doubt that it was an ancient Etruscan town, though we know it first from a Roman inscription of the 2nd century, a probability of Veii. Hence we meet with no mention of the name, any more than of its neighbour Sutrium, until after the fall of Veii; but from that period these two cities became places of much importance as the frontier fortresses of the Roman dominion on the side of Etruria (Liv. vi. 9). The name of Nepete is first mentioned in n. c. 356, when it was in alliance with Rome, and being attacked by the Etruscans, sent to sue for assistance from the Romans. But before the military tribunes Valerius and Furius could arrive to their support, the city had surrendered to the Etruscan arms, and was occupied with a strong garrison. It was, however, speedily retaken, and the leaders of the party who had been instrumental in bringing about the surrender were executed (Liv. vi. 9, 10). A few years later a more effectual step was taken to secure its possession by sending thither a Roman colony. The establishment of this is fixed by Livy in n. c. 353, while Velucius Patricius would date it 10 years later, or 17 years after the capture of Rome by the Gauls (Liv. vi. 21; Vell. Pat. i. 14). It was a Latin colony like most of those established at this period. In n. c. 297, Nepete is again mentioned as one of the frontier towns on this side against the Etruscans (Liv. x. 14); but with this exception we hear no more of it during the wars of the Romans in Etruria. In the Second Punic War it was one of the twelve Latin colonies which declared themselves exhausted with the burdens of the war, and unable to furnish any further supplies; for which it was punished, before the end of the war, by the imposition of double contributions (Liv. xxvii. 9, xxix. 15). From this time Nepete seems to have sunk into the condition of a subordinate provincial town. Like the other Latin colonies, it obtained the Roman franchise by the Lex Julia, in n. c. 90, and became from thenceforth a municipium; which rank it appears to have retained under the Empire, though it is said in the Liber Coloniense to have received a colony at the same time with that sent to Furerei (Fest. s. v. Municipium, p. 127; Gruter, Insocr. p. 308. 2, p. 441. 7; Lib. Col. p. 217; Zumpt, de Colon. p. 357.). Its existence as a municipal town throughout the period of the Roman Empire is proved by inscriptions as well as by Pliny, Ptolemy, and the Tabula (Strab. v. p. 226; Plin. iii. 5. 8; Ptol. iii. 1. § 50; Tab. Pent.; Orell. Insocr. 879, 3991); but no mention occurs of it in history till after the fall of the Western Empire, when it figures in the Gothic wars as a place of some importance from its strength as a fortress, and was one of the last strongholds maintained by the Goths against Narses (Procop. B. G. iv. 34.). It early became an episcopal see, a dignity which it has retained without intermission till the present time, though now but an insignificant town with about 1500 inhabitants.

The only remains of antiquity now visible at Nepe are some ancient sepulchres hewn in the rock, and some portions of the ancient walls, much resembling in their construction those of Sutrium and Faletan. These are considered by Denys as belonging to the ancient Etruscan city; but it is more probable that they date only from the Roman colony. (Denys's Etruria, vol. i. p. 111; Kidby, Diastom., vol. ii. p. 398.)

NETHELIS (Νεθήλης), a small town on the coast of Cilicia, situated, according to Ptolemy (v. 8. § 1), between Antioch and Anemurium; but if, as some suppose, it be the same place as the Ζεφηνος mentioned in the Stadiasmus Marii Magni (§§ 181, 182), it ought to be looked for between Sidon and Celendeera. Near the place was a promontory of the same name, where, according to Livy (xxxii. 20), the fleet of Antiochus the Great was stationed, when, after reducing the towns of Cilicia as far as Sollins, he was engaged in the siege of Coracesium, and where he received the ambassadors of the Rhodians. (Comp. Leake, Asia Minor, p. 119.)

NEPHERIS (Νέφηρης), a natural fortress situated on a rock, 180 stadia from the town of Carthage. (Strab. xxvii. p. 834.)

NEPUXNUS MONS. [Pelorus.]

NEQUINUM. [Narnia.]

NEEAE, a tribe, mentioned with several others, who are equally unknown, by Pliny, and placed by him in the neighbourhood of the Insula Paltaliense, the modern Stauroschein (vi. 20. s. 23). [V.]

NERETUM, or NERITUM (Neritov, Ptol.; Ehd. Nereitnum: Neritó), a city of the Salentini, in the ancient Calabria, mentioned both by Ptolemy and Pliny among the inland towns of that people. Its name is also found in the Tabula, which fixes its position 29 M. P. from Manduria on the road to Usentum (Ugonio), and 20 M. P. from the latter city. These data enable us to identify it with certainty with the modern town of Nardò, a considerable place about 9 miles N. of Gallipoli. It is clear from Pliny that it was a town of municipal rank, and the same thing is confirmed by inscriptions; but there are no ancient remains at Nardò. (Plin. iii. 11. 16; Ptol. iii. 1. § 76; Tab. Pent.; Orell. Insocr. 3108.) Other inscriptions, with the name of Munici, Nertil, published by Muratori, vol. ii. pp. 1113, 1120, and by Romaneili, vol. ii. pp. 49, 50, are probably spurious. See Orelli, 138.) [E. H. B.]

NERICUS. [Leucarc.]

NERIGOS. Pliny (iv. 16. s. 30), in speaking of the islands in the north of Britain, says that, according to some, Nerigos was the largest, and that from it people used to sail to Thule. As besides this passage we have no other information, it is impossible, with absolute certainty, to say what island is meant; but as Norway is in Danish still called Norge, and in Swedish Norrige, it is now generally assumed that Nerigos is the modern Norway; the south-western headland of which, projecting into the sea, might easily lead the ancients to the belief that it was an island. In the same passage Pliny mentions the island of Bergi, which may possibly be only the
NERVIS.

north-western coast of Norway, the most important commercial town in that part still bearing the name of Bergen. The island of Dornna lastly, which is mentioned along with those spoken of above, has been identified with Dunaen, belonging to the abbey of Brethen. But all this is very doubtful, as Pliny, besides being vague, may have misunderstood it here as in other parts of his work; for, according to some, Bergen seems to have been an ancient name of Hibernia or Ireland (P. Mol. ii. 5. § 4); and Dunna is distinctly called by Ptolemy (ii. 3. § 31, viii. 3. § 10), an island off the north of Britain. [Camp. Ord. Ades.] [L. S.]

NERIS. [Cynilus.]

NERITUS. [Philaca.]

NERIUM. [Artadur.]

NERVIA. [Artaxatar.]

NERTERANEUS (Nerperaeanu), a small German tribe, which is mentioned at a late period in the country once occupied by the Chatti, on the east of Mass-Aboda (Ptol. ii. 11. § 22). [L. S.]

NEROBIRGA (Nerpiörga). 1. A town of Hispania Baetica (Ptol. ii. 4. § 12), also called by Pliny (iii. i. 3) Corduba Julia, the modern Valeria la vici'a. It is named Erobiargae in the copies of Polybius (xxxv. 2), by an omission of the N. (Ukert, vol. ii. pt. 1. p. 381.)

2. A town of the Celtiberi in Hispania Tarraconensis, on the road from Emerita to Caer-Augustus. It is called by Appian Neripörga (Hisp. 50), and by Suidas Nerphiörga: now Almanin. (Ptol. ii. 6. § 58; Florus, ii. 17; Ant. Hui. 437; Ukert, vol. ii. pt. 1. p. 460.) [T. H. D.]

NERVA (Nepra). Ptol. ii. 6. § 7), a small river in the N. of Hispania Tarraconensis, in the territory of the Antigones; according to Ukert (vol. ii. pt. 1. p. 2000), the modern Grenaun, near Bilboa; though by other writers it is variously identified with the Ilmes and the Nervion. [T. H. D.]

NERVICONICUS TRACTUS, is mentioned in the Not. Imp. as a continuation of the Armoricanus Tractus. There is also a middle age authority for the expression "Nervici litoris tractus." A port on this coast, named Portus Apactatu, was guarded by some Nervian troops according to the Notitia. D'Arvillie concludes that the Nervii extended from their inland position to the coast, and had part of it between the Morini and the mouth of the Scheldt: a conclusion for which there is little evidence, and a great deal against it. [Melaphi; Morini.] [C. L.]

NERVII (Negari, Negari), a nation of Belgica, whose capital according to Ptolemy (ii. 9. § 11) was Barcumen (Barrai). When Caesar was preparing (n.c. 57) to march against the Belgian confederates, he was informed that the Nervii had promised to supply 50,000 men for the general defence, and that they were considered the most savage of all the federates. (B. G. ii. 4.) The neighbours of the Nervii on the south were the Ambiani. (B. G. ii. 15.) In Caesar's time the Nervii had not allowed "the cattle" to come into their country; they would not let wine be imported and other things which encouraged luxury. When Caesar had marched for three days through their territory, he learned that he was not more than 10 Roman miles from the Sabae (Sander), and the Nervii were waiting for him on the other side with the Atrebates and Veramundii, their border people. Thus we ascertain that the Atrebates, whose chief town is Atrea, and the Veramundii, whose chief place was St. Quentin, were also neighbours of the Nervii.

NERVII.

The Nervii had no cavalry, and their country was made almost impenetrable to any attack from the cavalry of their neighbours by quickset hedges which a man could not get through, and indeed hardly see through them. (B. G. ii. 17.) On the banks of the Somme Caesar had a desperate fight with the Nervians commanded by Bodulcus. During this invasion the old men, the women, and children of the Nervii, were removed to the estuaries and marshes, somewhere near the coast. The Nervii lost a great number of men in this battle: "the nation and the name were nearly destroyed." (B. G. ii. 27.) Their "senators" as Caesar calls them, their chief men, were reduced from 600 to three, and out of the 60,000 who were in the battle there were said to be only 560 left capable of bearing arms. After this terrible slaughter the Nervii rose again in arms against Caesar (n. c. 54), when they joined the Eburones and others in the attack on Quintus Cicero's camp. (B. G. v. 38.) Some of the commentators have found a difficulty about the appearance of the Nervii again in n. c. 54, after having been nearly destroyed in n. c. 57. We must suppose that Caesar wrote of the events as they occurred, and that he did not alter what he had written. In n. c. 57 he supposed that he had destroyed most of the fighters of the Nervii. Thus, when he found that he was mistaken, in n. c. 53 the Nervii were again preparing to give trouble to the Roman governor; but he entered their country in the winter season, and before they had time to rally or to escape, he took many prisoners, drove off many head of cattle, and ravaged their land, and so compelled them to come to terms. (B. G. vi. 2.) When the meeting of the Gallic states in n. c. 52 was settling the forces that each nation should send to the relief of Alesia, the contingent of the Nervii was 5000 men. (B. G. vii. 75.)

Some of the nations between the Seine, the sea, and the Rhine, were Germans in Caesar's time, but these Germans were invaders. The Nervii (Tac. Germ. c. 28) claimed a Germanic origin, and they may have been a German or a mixed German and Gaulish race; but there is no evidence which can settle the question. Appian (de Bell. Gall. i. 4) says that the Nervii were descendents of the Teutos and Cimbri; but this is worth very little. Appian had probably no authority except Caesar, whom he used carelessly; and he may have applied to the Nervii what Caesar says of the origin of the Aduatici. (B. G. ii. 29.) Strabo (p. 194) also says that the Nervii were a Germanic nation, but he does not even know the position of the Nervii, and he misplaces them.

Caesar mentions some smaller tribes as dependent on the Nervii (B. G. v. 39); these tribes were Grudii, Levaci, Plemossii, Gudulli, of all whom we know nothing.

Pliny (iv. 17) mentions in Belgica as inland people, the Castolici (apparently a corrupted name), Atrebates, Nervii liberi, Veramundii; an order of enumeration which corresponds with the position of the Nervii between the Atrebates and the Veramundii; for the chief place of the Atrebates is Arras, of the Nervii Barrai; and of the Veramundii St. Quentin. (Atquesta Veramundorum.) As Pliny calls the Nervii liberi, we must suppose that in his time they were exempt from the payment of taxes to the Romans, and retained their own internal government; probably in Pliny's time the Romans had not yet fully reduced their country.
NERULUM.

The territory of the Nervii did not extend beyond the limits of the old diocese of Cambrai, which was, however, very large. The capital of the Nervii was Bagacum (Barat), but Cambrai was also a town of the Nervii. [Camaracum.]

NERULUM, a town in the interior of Lunelia, mention a road in the wars of the Romans in that country, when it was taken by assault by the consul Aemilius Barbula, b. c. 317 (Liv. ix. 20).

The only other notice of it is found in the Itineraries, from which we learn that it was situated on the highway from Capua to Rhegium, at the point of junction with another line of road which led from Venosa by Potentia and Grumentum towards the frontier of Bruttium (Itin. Ant. pp. 105, 110; Toh. Pest). The names and distances in this part of the Tabula are too corrupt and confused to be of any service: the Itinerary of Antoninus places it 14 miles (or according to another passage 16 miles) N. of Muranum, of which is clearly ascertained.

If the former distance be adopted as correct, it must have been situated at, or in the neighbourhood of, La Rotonda, near the sources of the river Lao (Hobden. Not. ad Cler. p. 293; Romalleni, vol. i. p. 389).

[N. E. B.]

NERUSHI (Neporus). This name of a people occurs in the Trophy of the Alps (Plin. iii. 20, s. 24), between the Oratelli and Velanum. Potompy (iii. 1. § 41) places them within Italy among the Maritime Alps. Their chief town was Vintum, which is Venes, on the west side of the Tav, and not far from Nicum (Nesum).

[G. L.]

NESACTIUM (Nesacton, Ptol.). a town of Istria, situated to the E. of Pula, on the Fluminatis Sinus, and not far from the river Aris, which was the boundary of Istria on this side. Upon Ptolemy calls it the last city of Italy. It is mentioned by Livy as a city of the Istrians before their conquest by Rome, and a strong fortress, so that it stood a long siege, and was only taken by the Roman consul C. Claudiu Pulcher, by cutting off its supply of water (Livy. xlii. 11). It afterwards appears both in Pliny and Ptolemy as a municipal town of Istria under the Romans, and seems to have survived the fall of the Western Empire, but the period of its destruction is unknown (Plin. iii. 19, s. 23); Ptol. iii. 1. § 27; T. Pest.; Anon. Rav. iv. 31). The fact of its proximity to the Aris (Aris), combined with Livy's mention of a river flowing by the walls, render it probable that it was situated immediately on the right bank of the Aris; but its exact site has not been determined. [E. H. B.]

NESAEA (Nesia), a district mentioned in two places in Strabo, with slightly differing descriptions: 1. as a country belonging to Hyrcania, and watered by the Ochus, now Tekjjan (xi. p. 509); 2. as a distinct and independent land (xi. p. 511). The geographer probably meant to imply a narrow strip of land, whose boundaries were Hyrcania, Ariana, and Parthia respectively, and corresponding with the present Khorassan. It may be identified with the existing Nisa, a small town to the N. of the Albaras chain of mountains, between Astarabad and Meshed. (Wilson, Ariana, pp. 142-145).

There has been some doubt as to the orthography of the name, which, in some of the editions, is called Nisaa; but, on the whole, the above is probably the best. It is not unlike that the place called by Isidorus Parthysa, "which the Greeks call Nisa," must also be identified with the present Nissa. The same district answers to the "regio Nisiana Parthynes nobilis" in Pliny (vi. 25. s. 29).

NESCANDIA, a municipal town in Hispania Baetica, stood on the site of the modern village El Valle de Abidaleca; 2 leagues W. from Antequera. It is still famed for her natural opera, which is a creation of which in ancient times is attested by inscriptions. (Ubert, vol. ii. pt. 1. p. 363).

[N. E. B.]

NESSITIS (Nestis), a district of Asia Minor, situated on the west side of the Euphrates, between the Aasae, Matedus, and Phithestrophii.

[B. E. B.]

NESSIS (Nissa, Ariana Peripl. p. 18), a small river, 60 stadia from the Borgys, which discharges itself into the Euxine by the Prom. Herculis, Cape Constantihskau (Cape Adler of Gauntier's map), where there is now a river called Mezouanta. [E. E. B.]

NESSON. [Nessonis Lacus.]

NESSONIS LACUS (Nessonis Lym.) a lake of Pelasgia in Thrace, lying east of Larissa, now called Karatjevir or Mavrolim. In summer it is only a marsh, and contains very little water, but in winter it is filled by the overflowing of the Peneius. When the basin is filled, its superfluous waters are conducted by a channel into the lake Boebeis, now called Karla. (Strabo. x. p. 440; Leake, Northern Greece, vol. i. p. 443, vol. iv. p. 408). Strabo regards the lakes Nessonis and Beoeis as the remains of the great lake which covered Thessaly, before the waters found an outlet through the vale of Tempe to the sea; but he is mistaken in saying that Nessonia is larger than Boebeis. (Strabo, i. p. 430). Nessonia received its name from a town Nesson, which is mentioned only by Stephano B. (s. v. Nisa).

NESSAEI. [Nesti.]

NESSANE. [Martelea, Vol. II. p. 264. b.]

NESSI, NESTAEI (Nestos, Sylax, p. 8; Nes- tera, Fratins, ap. Sol. Apol. xiii. p. 1296), a people of Illyricum, with a town of the same name, near the river Nestus (Nestos, Sylax, l. c.; Artemidors, ap. Steph. B. e. r.), which has been identified with the Kerka. [E. E. B.]

NESTUS or NESSUS (Nestos, Sylax, pp. 8, 29; Scymn. 672; Pomp. Melia, ii. 2. §§ 9, 2; Plin. E. E. 3

Netini (Nort studied the coast of 

Citizens and Seleucia, 60 stadia c. 

(Studimnus Men. Mag. §§ 166, 

167.)

NETOPHALL (Netoni), a town of Judah, mentioned by Ezra (ii. 22) and Nehemiah (vii. 26), between Beithlehem and Anathoth, if anything may be concluded from the order in which the names occur, which is so questionable, that Belt-Nettif may be, perhaps, safely regarded as its modern representative. It is situated on the highest point of a lofty ridge, towards the NW. of the ancient tribe of Judah. (Robinson, Bib. Res. vol. ii. pp. 341— 

342; B.I. Palaeus, p. 650, 908) (G.W.

SICELIA, or SICILY (Sicilia), a considerable town in the S. of Sicily, near the sources of the little river Asinarius (Falcоворi), and about 20 miles SW. of Syracuse. We find no mention of it in early times, but it was probably subject to Syracuse; and it is in accordance with this, that, by the treaty concluded in the year 263 between the Romans and Hieron king of Syracuse, Sicelium was noticed as one of the cities let in subjection to that monarch. (Diod. xxiii. Exc. ii. p. 502). We have no account of the circumstances which subsequently earned for the Neturn the peculiarly privileged position in which we afterwards find them: but in the days of Cicero, Neturn enjoyed the rights of a "faderita civitas" like Messana and Tanrnonium; while, in Phiny's time, it still retained the rank of a Latium town (civitas Latinum conditionis), a favour then enjoyed by only three cities in the island. (Cic. Fam. iii. 26, v. 22, 51; Plin. iii. 8, 8, 14; Ptol. I. c.; Sil. Ital. xiv. 268.) Ptolemy is the last ancient writer who mentions the name; but there is no doubt that it continued to exist throughout the middle ages; and under the Norman kings rose to be a place of great importance, and the capital of the southern province of Sicily, to which it gave the name of "Pal di Neto." But having suffered repeatedly from earthquakes, the inhabitants were induced to emigrate to a site nearer the sea, where they founded the modern city of Neto, in 1703. The old site, which is now known as Noto Vecchio, was on the summit of a lofty hill about 8 miles from the modern town and 12 from the sea-coast; some remains of the ancient amphitheatre, and of a building called a gymnasium, are still visible, and a Greek inscription, which belongs to the time of Hieron I. (Favart, de Reb. Sc. iv. 2; Castell, Inscr. Sicil. p. 101.)

NEUDRUS (Neudor, Arrian, Indic. c. 4), a small stream of the Panidhi, which flowed into the Hydaspes (Ituri or Ivrutai) from the country of the Ataennae. It has not been identified with any modern river.

NEVIRNUN [NOVIRGNUM.]

NEUTI (Neuti), a nominal people of the N. of Europe, whom Herodotus (iv. 17, 51, 100, 125) places in the centre of the region which now comprises Poland and Lithuania, about the river-basin of the Bug. They occupied the district (the Neutixia γης) which lay to the NW. of the lake out of which rose the Tyrrhenian Sea, as the name in Slavonic of Norskaaemaz, with its chief town Nir, and a river Niria. Some time before the expedition of Dareius, they had been obliged to quit their original seats, on account of a quantity of serpents with which it was infested, and had taken refuge with the Budini in the district about the Bug, which had till then belonged to that people. Though not of the same origin, in customs they resembled the Scythians, and bore the reputation of being encanters (γυρνεις), like the "Sambas" among the Siberian nomads of the present day. Once a year — so the Scythians and the Greeks of Olbia told Herodotus—each of them became for a few daya a wolf; a legend which still lingers among the people of Volhynia and White Russia. Pomponius Mela (ii. 1 §§ 7, 13) repeats this story from Herodotus. (Comp. Plin. viii. 34; Croizer, Sygothilia, vol. ii. p. 131.) The Sarmatian NAVARI of Ptolemy (Nauariis, ii. 5, 25) are the same as the name appearing in a Grecized form; but there is some difficulty in harmonising his statements, as well as those of Empiricus (ap. Anon. Poet. vulgo Scymn. Ch.), v. 843; Anon. Peripl. p. 2) and of Anuimius Marcellinus (xxii. 1. § 14), with the more trustworthy accounts of Herodotus. Schafarik (Slov. Alt. vol. i. pp. 194—199) refers the Neuri to the Wendish or Servian stock.

NIA (Niia), a river of Interior Libya, discharging itself into the Hesperian bay, in 15° 30' E. long., and 30° N. lat. (Ptol. iv. 6. § 7). Colonel Leake (Journ. Geog. Soc. vol. ii. p. 18) has identified it with the Rio Grande, which takes its rise on the border of the highland of Sceneiambia, according to Mollers map (Trac. in the Interior of Africa, 1820), in 10° 37' N. lat and 13° 37' W. long.

NICAEA, NICÉ (Niké), or NICAAE (Nikaia), a town of Thrace, not far from Adriamne, the scene of the defeat and death of the emperor Valens by the Goths (Proc. Hist. Skim, i. 5, 23) and the summer retreat of Constantine the Great (Proc. Hist. Siam, ii. p. 183; Sosum. iv. 19; Theophil. p. 772.) It has been variously identified with Kewelj and Kuladej.

[N. II . D.]

NICAEA. I. In Asia. 1. (Nicæa; Eth. Nicæus or Nicæis; Iskilia), one of the most important towns of Bithynia, of which Strabo (xii. p. 565) even calls it the metropolis, was situated on the eastern shore of lake Ascania or Ascanius, in a wide and fertile plain, which, though it was somewhat unhealthy in summer. The place is said to have been colonised by the Scythians, and to have originally borne the name of Ancore (Steph. B. z. v.) or Helicore (Geogr. Min. p. 40, ed. Hudson); but it was subsequently destroyed by the Myssians. A few years after the death of Alexander the Great, Antigonus, probably after his victory over Eumenus, in n. c. 316, rebuilt the town, and called it, after himself, Antigonia. (Steph. B. l. c.; Eustath. ad Hom. II. ii. 863.) Not long after Lysimachus, having made himself master of a great part of Asia Minor, changed the name of Antigonia into Nicea, in honour of his wife Nicaea, a daughter of Antipater. (Steph. B., Eustath. Strab., II. ec.)
Nicaea.

According to another account (Nemnon, op. Phot. Cod. 224, p. 233, ed. Bekker), Nicea was founded by men from Nicea near Thessalonica, who had served in the army of Alexander the Great. The town was built with great regularity, in the form of a square, measuring 16 stadia in circumference; it had four gates, and all its streets intersected one another at right angles, so that from a monument in the centre all the four gates could be seen. (Strab. xii. pp. 565. sc.) This monument stood in the gymnasium, which was destroyed by fire, but was restored with increased magnificence by the younger Pliny (Epist. x. 48), when he was governor of Bithynia. Soon after the time of Lysimachus, Nicea became a city of great importance, and the kings of Bithynia, whose era begins in B.C. 288 with Zipoetes, often resided at Nicea. It has already been mentioned that in the time of Strabo it is called the metropolis of Bithynia; an honour which is also assigned to it on some coins, though in later times it was enjoyed by Nicomedia. The two cities, in fact, kept up a long and vehement dispute about the precedence, and the 38th oration of Dion Chrysostomus was expressly composed to settle the dispute. From this oration, it appears that Nicomedia alone had a right to the title of metropolis, but both were the first cities of the country. The younger Pliny makes frequent mention of Nicea and its public buildings, which he undertook to restore when governor of Bithynia. (Epist. x. 40, 48, sc.) It was the birthplace of the astronomer Hipparchus and the historian Dion Cassius. (Suid. s. v. "Terrapox.") The numerous coins of Nicea which still exist attest the interest taken in the city by the emperors, as well as its attachment to the rulers; many of them commemorate great festivals celebrated there in honour of gods and emperors, as Olympia, Isthmia, Dionysia, Pythia, Commodia, Severia, Philadelphia, &c. Throughout the imperial period, Nicea remained an important place; for its situation was particularly favourable, being only 25 miles distant from Prusa (Ptol. v. 32), and 44 from Constantinople. (I. Ant. p. 141.) When the last mentioned city became the capital of the Eastern Empire, Nicea did not lose in importance; for its present walls, which were erected during the last period of the Empire, enclose a much greater space than that ascribed to the place in the time of Strabo. In the reign of Constantine, A.D. 325, the celebrated Council of Nicea was held there against the Arian heresy, and the prelates there assembled drew up the creed called the Nicean. Some travellers have believed that the council was held in a church still existing; but it has been shown by Prokesch (Eirin. 111. i. 234) that that church was built at a later period, and that the council was probably held in the now ruined mosque of Orchan. In the course of the same century, Nicea suffered much from an earthquake; but it was restored in A.D. 368 by the emperor Valens. During the middle ages it was for a long time a strong bulwark of the Greek emperors against the Turks, who did not conquer it until the year 1078. During the first crusade, in 1097, it was recovered from them by the Christians, but in the peace which was afterwards concluded it was ceded to the Turks. In the 13th century, when Constantinople was the capital of the Latin empire, Theodore Lascaris made Nicea the capital of Western Asia; in the end, however, it was finally conquered and incorporated with the Ottoman empire by Orchan. Many of its public buildings were then destroyed, and the materials used by the conquerors in erecting their mosques and other edifices. The modern Lendik is a very poor place, of scarcely more than 100 houses, while in Pococke's time, there still existed about 300. The ancient walls, with their towers and gates, are in tolerably good preservation; their circumference is 14,800 feet, being at the base from 15 to 20 feet in thickness, and from 30 to 40 feet in height; they contain four large and two small gates. In most places they are formed of alternate courses of Roman tiles and large square stones, joined by a cement of great thickness. In some places have been inserted columns and other architectural fragments, the ruins of more ancient edifices. These walls seem, like those of Constantinople, to have been built in the fourth century of our era. Some of the towers have Greek inscriptions. The ruins of mosques, baths, and houses, dispersed among the gardens and cornfields, which now occupy a great part of the space within the Greek fortifications, show that the Turkish town, though now so inconsiderable, was once a place of importance; but it never was so large as the Greek city and it seems to have been almost entirely constructed of the remains of the Greek Nicea, the walls of the ruined mosques and baths being full of the fragments of Greek temples and churches. On the north-western parts of the town, two moles extend into the lake and form a harbour; but the lake in this part has much retreated, and left a marshy plain. Outside the walls remains of an ancient aqueduct are seen. (Comp. Leake, Asia Minor, pp. 10, foll.; Von Prokesch-Osten, Eirin. 111. iii. pp. 521, foll.; Pococke, Journey in Asia Minor, ii. pp. 181, foll.; Wulpole, Turkey, ii. p. 146; Eckhel, Doctr. Num. i. pp. 423, foll.; Rasche, Lexic. Rei Num. iii. i. pp. 1374, foll.) [L.s.]

Coin of Nicea in Bithynia.

2. (Nicaea, Arrian, v. 19; Strab. xvi. p. 698; Curt. ix. 3. 23), a city in the Punjab, on the banks of the Hyphasis (or Jelum), built by Alexander the Great to commemorate his victory over Porus, who ruled the flat country intermediate between that river and the Aecesines. It was at Nicea or Bucephalia, which appears to have been on the opposite bank, that Alexander (according to Strabo, L c.) built the fleet which Nearchus subsequently commanded, the country in the immediate neighbourhood having abundance of wood fit for ship-building. No town now exists which can with any probability be identified with [V.C.]

NICAEEA. II. In Europe. 1. (Nicaea; Eth. Nicasei; Nizee, in French Nice), a city on the coast of Liguria, situated at the foot of the Maritime Alps, near the frontier of Gallia Narbonensis. On this account, and because it was a colony of Massilia, it was in early times commonly reckoned as belonging to Gaul (Steph. B. s. c.); and this attribution is still followed by Mela (ii. 5. § 3): but from the time that the Varas became fixed as the limit of Italy, Nicea, which was situated about 4 miles

E 4
to the E. of that river, was naturally included in
Italy, and is accordingly so described by Strabo,
Pliny, and Ptolemy. (Strab. iv. p. 184; Plin. iii.
5. s. 7; Ptol. iii. 1. § 2.) We have no account of
its early history, beyond the fact that it was a
colony of Massilia, and appears to have continued
always in a state of dependency upon that city.
(Strab. iv. pp. 180, 184; Plin. l.c.; Steph. B. v.)
It was situated on the borders of the Ligurian tribes
of the Early and Decades, and, as well as its
neighbour Aegidos, was continually harassed by
the incursions of these barbarians. In b. c. 154
both cities were actually besieged by the Ligurians,
and the Massilians, finding themselves unable to re-
pair the assaults, applied to Rome for assistance;
the consul Q. Opimius, who was despatched with
an army to their succour, quickly compelled the
Ligurians to lay down their arms, and deprived them
of a considerable part of their territory, which was
annexed to the dependency of Massilia. (Pol. xxxii.
4. 7; Liv. Epit. xlvii.) From this time, nothing
more is heard in history of Nicaea, which continued
to belong to the jurisdiction of Massilia, and, even
after it came to be subject to the Romans, and in-
cluded geographically in Italy, was still for munici-
pal purposes dependent upon its parent city. (Strab.
v. p. 184.) At a later period, the new division of
the province again transferred to Gaul the towns of
Nicaea and Cemenelum, together with the whole
district of the Maritime Alps, westward of the
Tresetia Augusti. Hence, we find Nicaea described
by Ammianus (xxv. 11. § 15) as belonging to Gaul;
and during the decline of the Empire, after it had
become an episcopal see, the names of its bishops are
found among the Gaulish prelates. It does not ap-
pear to have ever been a town of much importance
under the Roman Empire; and was apparently
obscured by the city of Cemenelum (Cimate), in its
immediate neighbourhood. But it had a good
port, which must always have secured it some share
of prosperity, and after the fall of Cemenelum, it
rose to be the most important city in this part of Gaul,
and became the capital of an independent district
called the Contado di Nizza (County of Nice).
This eventually fell into the hands of the House of
Savoy, and now forms part of the dominions of the king
of Sardinia. Nicaea itself is a flourishing place, with
about 30,000 inhabitants, but has no remains of
antiquity. The ancient city probably occupied the
height, now the site of the castle, and the immediate
neighbourhood of the port, which though small,
is secure. Nicae is situated at the mouth of the
river Entione, a considerable mountain torrent, evi-
dently the stream called Patilo by Pliny and Mel.
(Plin. l.c.; Mel. ii. 4. § 9.)

About 2 miles E. of Nicae is a deep bay or inlet
between two rocky promontories, forming a spacious
natural harbour now known as the Gulf of Ville-
franche, from a town of that name, which has
however existed only since the 13th century. This
is probably the Portus Oluscus of the Maritime
Itinerary (p. 504). The Anxio Portus of the
same itinerary is probably a small cove, forming a
well-sheltered harbour for small vessels on the E.
side of the headland, called Capo di S. Ospizio,
which forms the eastern boundary of the Gulf of
Villefranche. (See also p. 504.) A similar cove a few miles farther E.
just below the resorting village of Eze is probably
the Avisto Portus of the same authority; but the
distances given between these points are greatly
overstated. [E. II. B.]

2. (Nicaea: Frh. Nikaöys), a fortress of the
Lucii Epiceneridi, situated upon the sea, and close
to the pass of Thermopylae. It is described
by Aeschnes as one of the places which commanded
the pass. (De Fals. Leg. p. 43, ed. Steph.) It was
the first Lucian town after Alpenos, the latter being
at the very entrance of the pass. The name of
Nicaea by Phalanecus to Philip, in b. c. 346, made
the Macedonian king master of Thermopylae, and
brought the Sacred War to an end. (Biod. xvi.
59.) Philip kept possession of it for some time, but
subsequently gave it to the Thessalians along with
c. Cleon. p. 73, ed. Steph.) But in b. c. 340 we
again find Nicaea in the possession of Philip.
(Dem. in Phil. Ep. p. 153.) According to Memnon
(ap. Phot. p. 234. a., ed. Bekker; c. 41; ed. Gis.)
Nicaea was destroyed by the Phocians, and on its in-
habitants founded the Byzantine Nicaea. But even
if this is true, the town must have been rebuilt soon
afterwards, since we find it in the hands of the Ac-
tolians during the Roman wars in Greece. (Polyb.
x. 42. xvii. 1; Liv. xxxvii. 5, xxxii. 32.) Subse-
tently the town is only mentioned by Strabo (ix.
p. 426). Leake identifies Nicaea with the castle of
Pandaiusna, where there are Helicen remains.
(Northern Greece, vol. ii. p. 5, seq.)

3. Nicaea (Nicaiea), in the territory of the
Episcopal city of Zentea, near the Rhine, on the
right bank of the river Rhone, at the point where
it joins the river Moselle, is a village of
considerable antiquity in Mesopotamia, on the river
Encrato. According to Isidorus (Mons. Paeth.
i. ed. Miller) and Pliny (v. 24. s. 21, vi. 26. s. 30),
it owed its foundation to Alexander the Great; ac-
according, however, to Appian, to Seleucus I., which
is much more likely (Synec. c. 57). It is men-
tioned by Dion Cassius (xl. 13) and by Tacitus
(Ann. vi. 40), but simply as one of many towns
founded by the Macedonians. Strabo calls it a
town of the Modernians (Mesopotamia, p. 537).
Nothing is known of its intermediate history;
but Justinian erected a fortress here (Procop. de
Aedific. ii. 7); and the emperor Leo, who possibly
added several new works to it, is said to have
changed its name to Leontopolis. (Cf. Hieroc.
p. 715; and Chron. Edess. ap. Asenn. i. p. 403.)

NICEPHORUS (Nicopephros, Strab. xvi. p. 747;
Ptol. v. 18. § 6; Steph. B. s. r.), a place of
considerable importance in Mesopotamia, on the river
Encrato. According to Isidorus (Mons. Paeth.
i. ed. Miller) and Pliny (v. 24. s. 21, vi. 26. s. 30),
it owed its foundation to Alexander the Great; ac-
according, however, to Appian, to Seleucus I., which
is much more likely (Synec. c. 57). It is men-
tioned by Dion Cassius (xl. 13) and by Tacitus
(Ann. vi. 40), but simply as one of many towns
founded by the Macedonians. Strabo calls it a
town of the Modernians (Mesopotamia, p. 537).
Nothing is known of its intermediate history;
but Justinian erected a fortress here (Procop. de
Aedific. ii. 7); and the emperor Leo, who possibly
added several new works to it, is said to have
changed its name to Leontopolis. (Cf. Hieroc.
p. 715; and Chron. Edess. ap. Asenn. i. p. 403.)

NICEPHORUS, an affluent of the Tigris, which
washes the walls of Tigranocerta (Tac. Ann. xv.
4), now the Bittis-chai, which runs at Bagh Khan
on the S. of Jebel Nimrud, and of Lake Uin,
(Chesney, Explo. Environ. vol. i. p. 18; Ritter,
Erdkunde, vol. x. p. 88.) Kiepert's map identifies
it with the Jezdehane Su. [E. B. J.]

NICER (the Necker), a tributary of the Rhine,
having its sources not far from those of the Danube,
and discharging itself into the Rhine in the neigh-
bourhood of Mannheim. Its course forms a sort of
semicircle, as it first flows in a north-eastern and
afterwards in a north-western direction. The Nicer
is not mentioned until a late period of the Roman
Empire. In a. d. 319, the emperor Valentinian had
to make great efforts in turning some part of the
NICIA.

river into a new channel for the purpose of protecting the walls of a fort erected on its banks from being undermined and washed away by its waters. (Amm. Marc. xxviii. 2; Vopisc. Probl. 13, where it is called Niger; Auson. Mosell. 423; Siden. Apollin. Paneg. ad Art. 324; Eunaeus. Paneg. Const. 13; Synmach. Land. in Valentin. ii. 9, 10.) The remains of Roman antiquities on the banks of the Nicia are very numerous, and a few of the fragments of the Armasia (Eurus) and Murra (Murr), are mentioned in inscriptions found in the country. [L. S.]

NICIA. [Castra, Vol. i. p. 662, a.]

NICHEUM or NICIEU (Νικηεθ 1ηνγρήσθαι, Ptol. iv. 5. § 9), a principal town in the Nomos Prosopises of Lower Aegypt; lay just above Monemvis and nearly midway between Memphis and Alexandria. It was one of the military stations on the main road between those cities which ran nearly parallel with the Canopic arm of the Nile. (Prosopt. [W. B. D.]

NICOMEDEA (Νικομήδεια; Eben. Νικομήδειας: Τασιμικίδι or Τασιμικά), the capital of Bithynia, situated on the north-eastern coast of the Sinus Astaeus, a part of the Propontis. The town of Astacus, a little to the south-east of Nicomedia, was destroyed, or greatly damaged, by Lysimachus; and some time after, B.C. 264, Nicomedia I. built the town of Nicomedia, to which the inhabitants of Astacus were transferred (Steph. B. z. v.; Strab. xil. p. 563; Paus. v. 12. § 3; Euseb. Chron. Ol. 129. 1). The founder of the new city made it the capital of his kingdom, and in a short time it became one of the largest and most flourishing cities, and continued to prosper for more than six centuries. Phiny, in his letters to the emperor Trajan, mentions several public buildings of the city, such as a senate-house, an aqueduct, a forum, a temple of Cybele, &c., and speaks of a great fire, during which the place suffered much (Epist. x. 42, 46). Respecting its rivalry with Nicasa, see Nicasa. According to Pliny (v. 43), Nicomedia was 62½ miles to the south-east of Chalcedon, while according to others it was only 60 or 61 miles distant (It. Ant. pp. 124, 140; It. Hieros. p. 572; Tab. Pent.). Under the Roman Empire Nicomedia was also the residence of the emperors, such as Diocletian and Constantine, especially when they were engaged in war against the Parthians or Persians. (Aurel. Vict. de Caes. 39; Niephor. vii. in fin.) The city often suffered from earthquakes, but owing to the manufacturer of the cupola, it was always restored (Amm. Marc. xvii. 7; Philostorg. iv. p. 506). It also suffered much from an invasion of the Sarmatians (Amm. Marc. xxi. 9, 12, 13). The orator Libanius (Orat. 62, tom. iii. p. 337, ed. Reiske) mourns the loss of its theatres, basilicas, temples, gymnasia, schools, public gardens, &c., some of which were afterwards restored by Justinian (Procop. de Aed. iv. 1; comp. Ptol. v. I. § 3, viii. 17. § 4; Hieroc. p. 691). From inscriptions we learn that in the later period of the empire Nicomedia enjoyed the honour of a Roman colony (Orelli, Inscript. No. 1060). The city is also remarkable as being the native place of Arrian, the historian of Alexander the Great, and as the place where Hannibal put an end to his chequered life. Constantine breathed his last at his villa Ancyron, near Nicomedia (Cassiod. Chron. Const.; Philostorg. ii. p. 484). The modern Imild still contains many interesting remains of antiquity respecting which see Poecile, vol. iii. p. 143, &c.; Description de l'Asie Mineure, tom. i.; comp. Basch, Lexie. Reg. Num. iii. 1. p. 1435, &c. [L. S.]

NICONIS BROMUS (Νικόνις βρόμους, Perip. Marc. Erythr. p. 9, ed. Hubsn; Taviani, Ptol. iv. 7. § 11: Nic, Ptol. i. 17. § 12), one of the "Runns" of Azania, on the E. coast of Africa, seven (days' stations) in all. Passing the Noti Corna of Tolemy (El-HeiifI), the voyager arrived at the "Strands" (αρακάλες), the Little and the Great, extending six days according to the Peripicus, eight according to Ptolemy's authorities, though he would reduce the distance to four natural days. The Little Strand, which occurs first, is doubtless the Си My She, or "Long Sword," of the Arab pilots, so called from its curvature. The Great Strand is probably the district now called Meritt, "Dry Desert." These have an extent of 300 miles. Next comes the peoples shore where Ptolemy (i. 17. § 11) places 3 towns, Edesa ("Εδέσα") and Ninus ("Νίνους") and Pontes (Σαγαπελάς), and Tonice or Nic, the Nicon of the Peripicus. These towns must be placed in the Baro Сомали, or the land of the Сомали, or Sinuasis, a mild people of pastoral habits, confined to the coast, which they occupy from the Red Sea to the river Juba. The "Port of Sarapiion" corresponds with Markhah, while the "Runn of Nic" agrees with the point called Torre in Owen's map. (Narrative of Voyages to explore the Shores of Africa, Arabia, and Madagascar; Ptol. iv. 129. 1.) The "Nic" remains of antiquity, as also the "Runn of Nic," agrees with the point called Torre in Owen's map. (Narrative of Voyages to explore the Shores of Africa, Arabia, and Madagascar, 1833; comp. Coolev, Claudius Ptolemy and the Nile, p. 64.)

[N. J. B.]

NICONIUM (Νικόνιον, Seyliam, p. 29), a city of European Sarmatia, which Strabo (vii. p. 306) places at 180 stadia from the mouth of the Tyrs, while the anonymous Coast-describer (p. 9) fixes it at 300 stadia from the Issicorum Portus, and 30 stadia from the Tyrs on the coast. Stephanus of Byzantium (c. v.) states that it was at the mouth of the Ister; Tyrs, which remains of antiquity, as also the "Runn of Nic," agrees with the point called Torre in Owen's map. (Narrative of Voyages to explore the Shores of Africa, Arabia, and Madagascar, 1833; comp. Coolev, Claudius Ptolemy and the Nile, p. 64.)

[N. J. E. E. J.]

NICOPOLOS (Νικοπόλεις; Eten, Nικοπολίτης), i. e., the "City of Victory." 1. In Asia. 1. A town of Bithynia, on the coast of the Besorus, a few miles north of Chalcedon. (Plin. v. 43; Steph. B. z. v.)

2. A town in Cappadocia or Armenia Minor, founded by Pompey on the spot where he had gained his first decisive victory over Mithridates. (Strab. xii. p. 555; Appian, Mithrid. 101, 105; Dion Cass. xxxv. 33; Cass. Bcl. Alex. 36; Plin. vi. 10.) It was situated in a valley of the river Lycus, a tributary of the Iris (Aeta Martyr. tom. iii. Jul. p. 46), at a distance of 100 miles to the north-west of Salata, and 98 to the north-east of Scasilia. It was a populous town as early as the time of Strabo; but during the last period of the Empire it appears to have suffered much, and its deserted walls were restored by Justinian. (Procop. de Aed. iii. 4; comp. Ptol. v. 7.)

COIN OF NICOMEDIA.
NICOPOLIS.

§ 3; *Ibn. Ant.* pp. 183, 207, 215; *Hieroc.* p. 703; Steph. B. s. e.). Most travellers and antiquaries are agreed, that Nicopolis is represented by the modern Turkish town of *Derrichi*; but as this place is situated on a tributary of the *Euphrates*, the opinion is opposed to the statements of our authorities, especially the "Acta Martyrum." Others are inclined to regard *Karaca-hissar* on the *Lykeus*, as marking the site of Nicopolis; but still the routes indicated in the itineraries are in favour of *Derrichi*; whence D'Anville too identifies this place with Nicopolis, assuming that the error lies with the author of the "Acta Martyrum," who expressly places Nicopolis on the river *Lycus*.

3. An episcopal see of uncertain site, in Lydia or Ionia, mentioned by Hierocles (p. 660). [L. S.]

4. A town in Cilicia. [Ist.]

5. A town in Palestine. [Emmav., No. 2.]

NICOPOLIS. II. In *Africa*. A town in Aegypt, founded by Augustus Caesar, in B. C. 24, on the field where he defeated, for the last time, M. Antonius, and in commemoration of the surrender of Alexandria. (Strab. xvii. p. 792; Joseph. B. s. e.) 18. The conqueror was at the moment highly incensed with the Alexandrians; and, by the foundation of a Roman town in their immediate neighborhood, sought to inflict a permanent blow on their political and commercial supremacy. Nicopolis was built a little W. of the Delta proper, on the banks of the canal which connected Canopus with the capital, and about three and a half miles from its eastern gate. That it was intended for a city of the first rank appears from its ground plan, which, however, was never executed. Its founder built an amphitheatre and a temple, and established there Ludii Quinennales, in honour of his victory (*Aegyptius*, Spanheim, *Epit.* v. § 3, ed. Morell); and coins bear on their reverse the legend ΝΙΚΟΠΟΛΙΣ ΣΕΒΑΣΤ. ΚΥΣΙΣ. He also designed to erect several temples, and to transfer to them the principal sacrifices and priest-colleges of the Macedonian capital. But the whole scheme was a failure; the natural advantages of Alexandria were insuperable; and the Roman "City of Victory" was never more than than a suburb of its rival. Within less than a century after its foundation, the name of Nicopolis disappears from history. A town called *Julopolis*, mentioned by Pliny alone (vi. 23. s. 26), as seated on the same canal, and about the same distance (20—30 stades) from Alexandria, is apparently Nicopolis (see Mannert, vol. x. p. 626). [W. B. D.]

NICOPOLIS. III. In Europe. 1. A city of Epirus, erected by Augustus, in commemoration of the victory of Actium, B.C. 31. It was situated near the entrance of the Ambraciot gulf, on the promontory of Epirus, which is immediately opposite that of Actium in Aetolia. The extremity of the *Epireot* promontory is now occupied by the town of *Preveza*; and Nicopolis lay 3 miles to the N. of this town, on a low istmus separating the Ionian sea from the Ambraciot gulf. It was upon this istmus that Augustus was encamped before the battle of Actium. His own tent was pitched upon a height immediately above the istmus, from whence he could see both the outer sea towards Paxi, and the Ambraciot gulf, as well as the ports towards Nicopolis. He fortified the camp, and connected it by walls with the outer port, called *Comaruni.* (Dion Cass. l. 12.) After the battle he surrounded with stones the place where his own tent had been pitched, adorned it with naval trophies, and built within the enclosure a sanctuary of Neptune open to the sky. (Dion Cass. l. 12.) But, according to Suetonius (Aug. 18), he dedicated this place to Neptune and Mars. The city was peopled by inhabitants taken from Ambraic, Aetolion, Taurion, Ithaca, Amphilochian, and Calydon. (Dion Cass. l. 1; Suet. Aug. 12; Strab. vii. pp. 324, 323; Paus. v. 23. § 3, vii. 18. § 8, x. 38. § 4.) Augustus instituted at Nicopolis a quinquennial festival, called *Actia,* in commemoration of his victory. This festival was sacred to Apollo, and was celebrated with music and gymnastic games, horse races, and naval-fights. In 183, it was the revival of an old festival, since there was an ancient temple of Apollo on the prementary of Actium, which is mentioned by Thucydes (i. 29), and was enlarged by Augustus. The festival was declared by Augustus to be a sacred contest, by which it was made equal to the four great Grecian games; it was placed under the superintendence of the Lacedaemonians. (Dion Cass., Suet., Strab., *B. C.*) Augustus caused Nicopolis to be admitted into the Amphictyonic Assembly at Delphi, and declared it a Roman colony. (Plin. iv. 1. s. 2; *Tab. Anc.* v. 10.) A Christian church appears to have been founded at Nicopolis by the Apostle Paul, since he dates his letter to Titus from Nicopolis of Macedonia, which was most probably the colony of Augustus, and not the town in Thrace, as some have supposed. Nicopolis continued to be the chief city in Western Greece for a long time, but it had already fallen into decay in the reign of Julian, since we find that this emperor restored both the city and the games. (Mannert, *Julian.* 9.) At the beginning of the fifth century it was plundered by the Goths. (Procop. B. Goth. iv. 22.) It was again restored by Justinian (de *Aedif.* iv. 2), and was still in the sixth century the capital of Epirus. (Hieroc. p. 631, ed. Wessel.) In the middle ages Nicopolis sunk into insignificance, and the town of *Preveza* was built at the extremity of the promontory, at length absorbed all its inhabitants, and was deserted, as in similar cases, chiefly constructed out of the ruins of the ancient city.

The ruins of Nicopolis are still very considerable. They stretch across the narrowest part of the isthmus already described. Strabo (vii. p. 324) erroneously describes the isthmus as 60 stadia in breadth; but the broadest part, from the south-eastern extremity of the lagoon called *Mazaoma* to *Mytika*, is only three miles; while the narrow part is less than half that distance, since the eastern half of the isthmus is occupied by the lagoon of *Mazaoma*.

This lagoon is separated from the Ambraciot gulf only by a narrow thread of land, which is a mile long, and has openings, where the fish are caught in great numbers, as they enter the lagoon in the winter and quit it in the summer. This illustrates the statement of an ancient geographer, that fish was so plentiful at Nicopolis as to be almost disgusting. (*Geo@r. Græc.* Min. vol. iii. p. 13, ed. Hudson.) Nicopolis had two harbours, of which Strabo (vii. p. 324) says that the nearer and smaller, which was called *Mazaoma*, was so narrow, that while one ship was in, another, and better one, was near the mouth of the gulf, distant about 12 stadia from Nicopolis. It would appear, that Strabo conceived both the ports to have been on the western coast out-side the gulf; but it is evident from the nature of the western coast that this cannot have been the case. Moreover, Dion Cassius (l. 12) calls *Comaruni*
The ruins of Nicopolis are now called Paleokastron. On approaching them from Prokessa, the traveller first comes to some small arched buildings of brick, which were probably sepulchres, beyond which are the remains of a strong wall, probably the southern enclosure of the city. Near the south-western extremity of the lagoon Mzoma, is the Paleokastron or castle. It is an irregular pentagonal enclosure, surrounded with walls and with square towers at intervals, about 25 feet in height. On the western side, the walls are most perfect, and here too is the principal gate. The extent of the enclosure is about a quarter of a mile. The variety of marble fragments and even the remains of inscriptions of the time of the Roman Empire, inserted in the masonry, prove the whole to have been a repair, though perhaps upon the site of the original acropolis, and restored so as to have been sufficiently large to receive the diminished population of the place. It may have been, as Leake conjectures, the work of Justinian, who restored Nicopolis. Three hundred yards westward of the Paleokastron are the remains of a small theatre but little dilapidated. Col. Leake says that it appears to be about 200 feet in diameter; but Lient. Wolfe describes it as only 60 feet in diameter. Being built upon level ground, the back or highest part is entirely supported upon an arched corridor. Between this theatre and the shore, are the ruins of a quadrangular building of brick, which was perhaps a palace, as it has numerous apartments, with many niches in the walls for statues, and some remains of a stone pavement. It stands just within an aqueduct, supported upon arches, which entered Nicopolis on the north, and was 30 miles in length. Considerable remains of it are met with in different parts of Epirus.

Further north, at the foot of a range of hills, are the remains of the great theatre, which is the most conspicuous object among the ruins. It is one of the best preserved Roman theatres in existence. The total diameter is about 300 feet. The scene is 120 feet long, and 30 in depth. There are 27 rows of seats in three divisions. From the back of the theatre rises the hill of Mikhalitse, which was undoubtedly the site of the tent of Augustus before the battle of Actium. Close to the theatre are the ruins of the stadium, which was circular at both ends, unlike all the other stadia of Greece, but similar to several in Asia Minor, which have been constructed or repaired by the Romans. Below the stadium are some ruins, which are perhaps those of the gymnasium, since we know from Strabo (vii. p. 325) that the gymnasium was near the stadium. The accompanying map is taken from Lient. Wolfe's survey. (Leake, Northern Greece, vol. i. p. 183, seq.; Wolfe, in Journal of Geogr. Soc. vol. iii. p. 92, seq.)

**MAP OF THE NEIGHBOURHOOD OF NICOPOLIS.**

E. Prokessa.
F. Actium. La Punta.
1. Paleokastron.
2. Small Theatre.
3. Palace.
4. Large Theatre.
5. Stadium.
6. Aqueduct.

**COIN OF NICOPOLIS IN EPIRUS.**

2. A town of Thrace, not far from the mouth of the Eusus, and therefore called by Ptolemy (iii. 11. § 13) Nysus, węp Νύσσον. It appears to have been founded by Trajan, as it is surnamed Ulpi upon coins. The Scholiast upon Ptolemy says that it was subsequently named Christophi; but it is still called Nicopolis by Socrates (H. E. vii. 36) and Hierocles (p. 635).

3. A town of Thrace at the foot of Mt. Haemus. (Ptol. iii. 11. § 11.)

4. A town of Thrace, situated at the place where the Istrus flows into the Danube, and erected by Trajan in memory of his victory over the Dacians. (Amm. Marc. xxxi. 5; Jornand. de Reb. Get. c. 18; Hieroc. p. 636.)

NICO'HERA (Nicodera), a town of Bruttium, known only from the Antonine Itinerary (pp. 106. 111), which places it 18 M. P. south of Vibo Valentia, on the road to Rhegium. It is repeatedly mentioned in the middle ages, and still exists under its ancient name as a considerable town and an episcopal see. [E. B. H.]

NIDUM or NIDUS, a town of Britain, situated according to the Itinerary (p. 484), on the road from Isca Dumnorum to Isca Silurum, and consequently in the territory of the Belgae. This site, however, is in all probability false; and it appears rather to have been a town of the Silures, the modern Neath, on the river of that name in Glamorganshire. (Gurnell, p. 793.) [T. H. D.]
NIGER.

It should be remembered that the word ἄσπρος, translated "divergent," simply indicates the point of junction of two streams, without any reference to the course of their waters. At present, our acquaintance with the geography of the Niger is so slight that the number of its divergents; and even were there data, by which to institute a comparison, the imperfection of Ptolemy's information will probably leave these particulars in obscurity. After having stated that the Geir and Niger are the two principal rivers of the interior, he describes the one, as flowing together from the mountain Usarga; and the latter, as uniting in the same way. It is plain that he considers them to be rivers beginning and ending in the interior, without any connection with the sea. If two opposite branches of a river, rising in two very distant mountains, flow to a common receptacle, the whole may be described as joining the two mountains. Of the general direction of the current of the Niger there can be no doubt, as the latitudes and longitudes of the towns on its banks (§§ 24—29) prove a general bearing of E. and W.; and from its not being named among the rivers of the W. coast, it must have been discovered from W. to E. The lake Libye, to which there was an E. divergent, though its position falls 300 geog. miles to the NW. of Lake Tschad, may be presumed to represent this, the principal lake of the interior; it was natural that Ptolemy, like many of the moderns, should have been misinformed as to its position, and communication of the river with the lake. It is now, indeed, known that the river does not communicate with Lake Tschad, and that it is not a branch of a larger river. There are two divergent which its sources are in a very different latitude from that in which it has given; and its course varies considerably from the enormous extent of direction to the E., which results from its position of the towns on its banks. But recent investigations have shown that the difference of longitude between his source of the river and the W. coast is the same as that given by modern observations,—that Tamondaca, one of his towns on the Niger, coincides with Timbuktu, as laid down by M. Jouard from the coast; and the statement of the Niger is nearly equal to that of the Quorra, as far as the mountain of Kong, with the addition of the Shadde or Shorj of Fanda,—while Mt. Thala is very near in that which it may be supposed that the Shadde has its origin. In the imperfect state of our information upon the countries between Borni and Darfur, it would be hazardous to identify the lakes Chelly-hides and Nuna. In comparing Ptolemy's description of the central country between the Nile and Niger, there are reasons for concluding that he had acquired an obscure knowledge of it, similar to that which had reached Europe before the discoveries of Denham, Clapperton, and Lauder. The other great river, the Geir or Gir (Feip, § 13), is the same as the river called Müssulid by Browne, and Om Teyman, in Arabic, by Burchhardt; while the indigenous name Dijir recalls that of Ptolemy, and which takes a general course from SE. to NW. Burchhardt adds, that this country produces ebony, which (§ 7) must have been supplied to be an authority, though, like an African, he confines all the rivers of his country with the Nile; but, in another passage (I. Consul. Stilich. i. 229), he represents the Ger as a separate river, rivalling...
the Nile in size. Claudian could not have intended by this river, the Ger of Pliny (v. 1), at the foot of Mt. Atlas, and a desert of black sand and burnt rocks (Ven?), at which Paulinus arrived in a few days' journey from the maritime part of Mauretania; though it is probable that he may have intended, not the Ger of Potoleny, but the Niger. The termination Ger was probably a generic word, applied to all rivers and waters in N. Africa, as well as the prefix Ni; both were probably derived from the Semitic, and came through the Phoenicians to the Greeks. By a not unnatural error, the word became connected with the Nile; and the name Nigrita or Nigerete was synonymous with Sudan (the Blacks); the real etymology of the name tends to explain the common belief of the Africans, that all the waters of their country flow to the Nile. It is from this notion of the identity of all the waters of N. Africa that Pliny received the absurd account of the Nile and Niger, from the second Jula of Numidia. He reported that the Nile had its origin in a mountain of Lower Mauretania, and in the middle of the lake called Nile; that it flowed from thence through sandy deserts, in which it was concealed for several days; that it reappeared in a great lake in Mauretania Caesariensia; that it was again hidden for twenty days in deserts; and that it rose again in the sources of the Niger, which river, after having separated Africa from Aethiopia, and then flowed through the middle of Aethiopia, at length became the branch of the Nile called Astapus. The same false, though without the Niger being mentioned, is alluded to by Strabo (xvi. p. 826; comp. Vitruv. viii. 2 § 16); while Mela (iii. 9 § 8) adds that the river at its source was also called Dara, so that the river which now bears the name El-Dhara would seem to be the stream which was the reputed commencement of the Nile. The Niger of Pliny was obviously a different river, both in its nature and position, from the Ger of the same author. It was situated to the S. of the great desert on the line separating Africa from Aethiopia; and its magnitude and productions, such as the hippopotamus and crocodile, cannot be made to correspond to any of the small rivers of the Atlas. Neither of these swell at the same season as the Nile, being fed, not by tropical rain, falling in greatest quantity near the mountain substrate, but by the waters of the maritime ridges, which are most abundant in winter. The Niger is not mentioned by the Geographer of Ravenna, nor yet the Arabs, until the work of Joannes Leo Africanus — a Spanish Moor — which was written at Rome, and published in Latin, A.D. 1556. Though his work is most valuable, in being the only account extant of the foundation of the Negro empires of Sudán, yet he is in error upon this point, as though he had sailed on the river near Timbuktu; he declares that the stream does not flow to the L., as it is known to do, but to the W. to Genia or Jenne. This mistake led Europeans to look for its estuary in the Senegal, Gambia, and Rio Grande. The true course of the river, which has now been traced to its mouth, confirms the statements of the ancients as to the great river which they uniformly describe as flowing from W. to E.

[See map, Fig. 1, p. 434.]

NIGERIA. [NIGRITAE.]

NIGER-PULLUS, Nigrippulam, or Nigripulpo, in North Gallia, is placed by the Theodosian Table on a road from Lagdumum Bataverum (Leiden) to Noviomagus (Nijmegen). The distance is marked

11 from Albiniama (Alfen), ascending the Rhine. Ucber (Gallein, p. 533) quotes a Dutch author, who says that there is a village near 111torren still called Zucroo Kuikenkorn. (D‘Anville, Notice, &c.)

[See map, Fig. 2, p. 434.]

NIGRITAE, NIGRITES (Nigrizi, Strab. ii. p. 131, xviii. p. 826; Itol. iv. 6: § 16; Agathem. ii. 5; Mela, i. 4. § 3, iii. 10: § 4; Plin. v. 8; Nigerites, Strab. xviii. p. 828; Dianys. v. 215; Steph. B.), an African tribe who with the Pharusii were said to have destroyed the Tyrian settlements on the coast of the Atlantic, and through adjacent to the W. Aethiopians, were dispossessed of their lands in their journeys from the S. of Siberia to the S. of Fezzan. But if he was so ignorant of Libya, and particularly of the position of the W. Aethiopians (comp. p. 839), no great weight can be attached to his testimony, that the Nigritae and Pharusii, whom he expressly states to have been near those Aethiopians, were thirty years after to cross the Niger, particularly when he accompanies the remarks with the doubtful word saeci, and with his marvellous stories about the productions of Mauretania. Potolany (L.C.) places them on the N. of the river Niger, from which they took their name. It may be inferred, therefore, that they are to be sought in the interior between the Quoica or Djolbi and the Sandara in the Bihed-i-Sidân. Their chief town was called NIGEREA (Negrâa nepôsioa, Itol. iv. 6: § 27): the NIGRITE LACUS (Nigreti Anyn, § 14) may be identified with the lake Dibbeh in the N. of Timbuktu.

[See map, Fig. 3, p. 434.] NIGRISMANA. [Candimiana.]

NIGRITIS LACUS. [Nigritae.]

NIGRUS. [Menugus.]

NILI PALULES (ai toö Nileou Niumis, Itol. iv. 9: § 3; Strab. xvii. p. 786) were described by the ancient geographers as two immense lagoons, which received the first floods of the periodical rains that from May to September fall upon the Abyssinian highlands, and swell all the rivers flowing northward from that table-land. From these lagoons the Astapus (Bahr-el Azrek, Blue River) and the Bahar-el-Abiad, or White River, respectively derived their waters; and since they were the principal tributaries of the Nile, the lakes which fed them were termed the Nilotic Marshes. The ancients placed the Nil Paludes vaguely at the foot of the Luneu Montes; and the exploring party, sent by the emperor Nero, described them to Seneca the philosopher as of boundless extent, covered with floating weeds, and containing black and slimy water, impassable either by boats or by wading. There is, however, some probability that this exploring party saw only the series of lagoons produced by the level and sluggish stream of the White River, since the descriptions of modern travellers in that region accord closely with Seneca’s narrative (Nat. Quasit. vi. 9). The White River itself, indeed, resembles an immense lagoon. It is often from five to seven miles in width, and its banks are so low as to be covered at times with slime to a distance of two or three miles from the real channel. This river, as less remote than the Abyssinian highlands from the ordinary road between Syene and the S. of Memph (Senaaar), is more likely to have fallen under the notice of Nero’s explorers; and the extent of slimy water overspread with aquatic plants, corresponds
with Senea's description of the Nile Palus as "immenses quarn exitus nec inediae novans nec sperans quietum potest." [NILUS.] [W. B. D.]

NILUS (Νίλος, Philol. v. 5. § 57; Steph. B. s. r.; Νείλος, Hesiod, Theog. 300; merely and nor.)

NILUS (ΝΙΛΟΣ), the river Nile in Egypt. Of all the more important rivers of the globe known to the Greek and Roman writers, the Nile was that which from the remotest periods attracted their liveliest curiosity and attention. It ranked with them as next in magnitude to the Ganges and the Indus, and as surpassing the Danube in the length of its course and the volume of its waters. (Strab. xv. p. 702.) Its physical phenomena and the peculiar civilisation of the races inhabiting its banks attracted alike the historian, the mathematician, the satirist, and the romance-writer; Herodotus and Diodorus, Eratosthenes and Strabo, Lucian and Heliodorus, expatiate on its marvels; and as Asævat was the resort of the scientific men of Greece in general, the Nile was more accurately surveyed and described than any other river of the earth.

The word Nilus, if it were not indigenous, was of Semitic origin, and probably transmitted to the Greeks by the Phoenicians. Its epiteths in various languages—e. g. the Hebrew Sihbor (Isshûh, xxiii. 3; Jerem. ii. 18), the Egyptian Zemi, and the Greek πέλας (Servius, ad Virgil. Georg. iv. 291)—point to the same peculiarity of its waters, the lake imparted by their dark slime. The Hebrews entitled the Nile Nahal-Misraim, or river of Asævat; but the natives called it simply p-leros (whereby probably the Nabulian kier) or the ir ier (i. e. rivers). Lydus (de Mensibus, c. 8) says that it was sometimes termed Ias or dark; and Pliny (v. 9. s. 9; ερύσινον, Dionys. Perieg. v. 213) observes, somewhat vaguely, that in Aethiopia the river was called Siris, and did not acquire the appellation of Nilus before it reached Syene. With few exceptions, however, the Greeks recognised the name of Nilus as far south as Syene, and their most eminent geographer Herodotus, in his time, may truly claim to which of its tributaries they should assign the principal name. Homer, indeed (Od. iii. 300, iv. 477, &c.), calls the river Asævat, from the appellation of the land which it intersects. But Herod (Theog. 338) and Hecataeus (Fragm. 279—280), and succeeding poets and historians uniformly designate the river of Asævat as the Nile.

It is unnecessary to dwell on a theory at one time received, but generally discredited by the ablest of the ancient geographers—that the Nile rose in Lower Moabitis, not far from the Western Ocean (Juba, op. Phil. v. 9. s. 10; Dion Cass. lxxv. 13; Solin. c. 37;) that it flowed in an easterly direction; was engulfed by the sands of the Sabrâ; reappeared as the Nigar; again sunk in the earth, and came to light once more near the Great Lake of Deboga as the proper Nile.

Historically, the Nile derives its principal importance from the civilisation, to which it contributed so materially, of the races inhabiting its shores, from the S. of Meroë northwards to the Mediterranean. But for geographical purposes it is necessary to examine its course, in the first instance, through less known regions, and to ascertain, if possible, which of its feeders above Meroë was regarded by the ancients as the true Nile. The course of the stream may be divided into three heads:—(1) the river S. of Meroë; (2) between Meroë and Syene; and (3) between Syene, or Philae, and the Mediterranean.

(1.) The Nile above Meroë. —The ancients briefly described the Nile as springing from marshes (Nilus Paludes) at the foot of the Mountains of the Moon. But as all the rivers which flow northward from the Abyssinian highlands rise from lagoons, and generally expand themselves into broad marshes, this description is too vague. Neither is it clear whether they regarded the White River, or the Blue, or the Astaboras (Tacaee) as the channel of the true Nile. The names of rivers are often given capriciously: it by no means follows that they are imposed upon the principal arm or tributary; and hence we can assign neither to the Astapus nor to the White River, usually considered as the main stream, the distinction of being absolutely the "true Nile."

The Nile, as Strabo sagaciously remarks (xi. p. 493), was well known because it was the channel of active commerce; and his observation, if applied to its southern portions, may lead us to the channel which was really regarded as the principal river even in remotest ages. The stream most frequented and accessible to navigation, and whose banks were the most thickly peopled, was doubtless the one which earliest attracted attention, and this we believe to have been the Astapus (Bahr-el-Azurek, or Blue River).

As the sources both of the Blue River and of the Bahr-el-Ahmed or the White River are uncertain, it will be proper to examine these streams above their point of junction near the modern military station at Khartum, lat. 15° 37' N., long. 33° E. The Astapus (Tacaee) may for the present be dismissed, both as an inferior tributary, and as below the meeting of the two main streams.

The White River, which has been often designated as "the true Nile," has at no period been either a road for traffic nor favourable to the settlement of man on its banks. It is rather an immense lagoon than a river, is often from 3 to 7 miles in breadth, and it is said of general usage to be covered at times with alluvial deposit to a distance of from 2 to 3 miles beyond the stream. On its shores there is neither any town, nor any tradition of there having ever been one; nor indeed, for many leagues up the stream, do there occur any spots suited either to the habitation of men, to pasture, or to tillage. On the contrary, it is represented by travellers much in the same terms in which Nebec (Natur. Quaesit. vi. 8) speaks of the Nile Paludes, as seen by Nero's surveyors. The latter are described by the Roman philosophus as "treasuries of immense paludes, quorum exitus nec inediae naves, nec sperante quisquam potes, itaque implicitae aquis herbace sunt," &c.; the former by recent explorers as "an interminable sea of grass," "a fetid stagnant marsh," &c. As the White River indeed approaches the higher table-land of the S., its banks become less depressed, and are inhabited; but the weedy lagoons extend nearly 100 miles S.W. of Khartum.

But if we trace upwards the channel of the Blue River, a totally different spectacle presents itself.
The river nearly resembles in its natural features and the cultivation of its banks the acknowledged Nile below the junction lower down. The current is swift and regular; the banks are firm and well defined: populous villages stand in the midst of clumps of date-trees or fields of millet (dhounra), and both the land and the water attest the activity of human enterprise.

A difference corresponding to these features is observable also in the respective currents of these rivers. The White River moves sluggishly along, without rapids or cataracts; the Blue River runs strongly at all seasons, and after the periodical rains with the force and speed of a torrent. The diversity is seen also on the arrival of their waters at the point of junction. Although the White River is fed by early rains near the equator, its floods ordinarily reach Khartoum three weeks later than those of the Blue River. And at their place of meeting the superior strength of the latter is apparent. For while the stronger flood discharges itself through a broad channel, free from bars and shoals, the White River is contracted at its mouth, and the more rapid current of its rival has thrown up a line of sand across its influx. Actual measurement, too, has proved the breadth of the Blue River at the point of junction to be 768 yards, while that of the White is only 483, and the body of water poured down by the former is double of that discharged by the latter. From all these circumstances it is probable that the Bahr-el-Azab, rather than the Bahr-el-Abied, belongs the name of the "true Nile," and this supposition accords with an ancient tradition among the people of Senmaar who hold the Blue River in peculiar veneration as the "Father of the Waters that run into the Great Sea."

The knowledge possessed by the ancients of the upper portions and tributaries of the Nile was not altogether in a direct proportion to the date of their intercourse with those regions. Indeed, the earlier track of commerce was more favourable to acquaintance with the interior than were its later channels. The overland route declined after the Ptolemies transferred the trade from the rivers and the roads across the desert to Axum, Adulis, Berenice, and the ports of the Red Sea. Eratosthenes and other geographers, who wrote while Aethiopia still flourished, had thus better means of information than their successors in Roman times, Strabo, Ptolemy, &c., Dionysos (i. 30), for example, says that a voyage up the Nile to Meroe was a costly and hazardous undertaking; and Herodotus (i. 20) observes that the Nile is divided into two by the desert of Bahiouda, the region of the ancient Nubae, and E. by the Arabian Desert, inhabited, or rather traversed, by the nomade Blemmyes and Megabari. Throughout this portion of its course the navigation of the river is greatly impeded by rapids, so that the caravans leave its banks, and regain them by a road crossing the eastern desert at Derr or Syene, between the first and second Cataracts. No monuments connect this region with either Meroe or Egypt. It must always, indeed, have been thinly peopled, since the only cultivable soil consists of strips or patches of land extending about 2 miles at furthest beyond either bank of the Nile.

While skirting or intersecting the kingdom of Meroe, the river flowed by city and necropolis, which, according to some writers, imparted their forms and civilisation to Egypt, according to others derived both art and pohty from it. The desert of Baboonda severs the chain of monuments, which, however, is resumed below the fourth Cataract at Nouri, Gebel-el-Birkel, and Meroe. (Lat. 20° N.) Of thirty-five pyramids at Nouri, on the left bank of the river, about half are in good preservation; but the purpose which they served is uncertain, since no ruins of any cities point to them as a necropolis, and they are without sculptures or hieroglyphics. On the western side of Gebel-el-Birkel, about 8 miles lower down, and on the right bank, are found not only pyramids, but also the remains of several temples and the vestiges of a city, probably Napata, the capital of Can- dance, the Aethiopian queen. [NAPATA—(Cail- liaud, l'Isle de Meroë, vol. iii. p. 197; Hoskins, Travels, p. 136—141.) About the 18th degree of N. latitude the Nile resumes its northerly direction, which it observes generally until it approaches the second Cataract. In resuming its direct course to N., it enters the kingdom of Dongola, and most of the features which marked its channel through the
NILUS.

desert now disappear. The rocky banks sink down, the inundation fertilizes the borders to a considerable distance; and for patches of arable soil fine pastures abound, whence both Arabia and Egypt imported a breed of excellent horses. (Russeger, Karte von Nubien.) But after quitting Nagata (?) no remains of antiquity are found before we arrive at the Gagandes Insula of Phyn (No. 29. s. 35.), lat. 19°35', the modern Argo, a little above the third Cataract. The quays of this island, which is about a mile in length, and causes a considerable eddy in the river, were worked both by Ethiopians and Egyptians. A little to N. of this island, and below the third Cataract, the Nile makes a considerable bend to the E., passing on its right bank the ruins of Seghi, or Socchi. On its left bank are found the terrains of the temple of Sokh, equally remarkable for the beauty of its architecture, and for its picturesque site upon the verge of the rich land, "the river's gift," and an illimitable plain of sand stretching to the horizon. (Cailliaud, Le Idee de Meroe, vol. i. p. 375; Hoskins, Travels, p. 245.)

The Nile is once again divided by an island called Sais, and a little lower down is contracted by a wall of granite on either side, so that it is hardly a stone's-throw across. At this point, and for a space of several miles, navigation is practicable only at the season of the highest floods.

Below Sais are found the ruins of the small temple of Amara, and at Semna those of two temples which, from their opposite eminence on the left and right banks of the river, probably served as. fortresses also at this narrow pass of the Nile. That a city of great strength once existed here is the more probable, because at or near Semna was the frontier between Ethiopia and Egypt. We have now arrived at the termination of the papyrus and granite rocks: henceforward, from about lat. 21° N., the river-banks are composed of sandstone, and acquire a less rugged aspect. The next remarkable feature is the Cataract of Wad-Holya, the Great Cataract of the ancient geographers. (Strab. xvii. p. 786.)

In remote ante-historic periods a bar of primitive rock, piercing the sandstone, probably spoiled the Nile at this point (lat. 22° N.) from shore to shore. But the original barrier has been broken by some natural agency, and a series of banks now divides the stream which rushes and dives between them. It is indeed less a single fall of water than a succession of rapids, and is here and there hemmed in by the inundation. (Travels in Nubia, p. 85.) The rear of the waters may be heard at the distance of half a league, and the depth of the fall is greater than that of the first Cataract at Syene. On the left bank of the river a city once stood in the immediate neighbourhood of the rapids; and three temples, exhibiting on their walls the names of Sesostris, Thothmes III., and Amenophis II., have been particularly surveyed here. Indeed, with the second Cataract, we may be said to reach the proper NW. branch of the Nile itself. For thenceforward to Syene — a distance of 220 miles — either bank of the Nile presents a succession of temples, either excavated in the sandstone or separate structures, of various sizes and styles of architecture. Of these the most remarkable and the most thoroughly explored is that of Amosadelphia or Ispinambut, the ancient Icshab, on the left bank, and two days' journey below the Cataract. This temple was first cleared of the inundent sand by Belzoni (Researches, vol. i. p. 316), and afterwards more completely explored, and identified with the reign of Rameses III., by Champollion and Rosellini. Primis (Ibrim) is one day's journey down the stream; and below it the sandstone hills compress the river for about 2 miles within a mural escarpment, so that the current seems to force itself rather than to flow through this barrier. (3.) The Nile below Syene. — At Syene (As- soman) 24° 23' N., lat. 12° 45' N., the Nile is called Proper; and from this point, with occasional curvatures to the E. or NW., preserves generally a due northerly direction as far as its bifurcation at the apex of the Delta. Its bed presents but a slight declivity, the fall being only from 500 to 600 feet from Syene to the Mediterranean. The width of the valley, however, through which it flows varies considerably, and the geological character of its banks undergoes several changes. At a short distance below Syene, begins the Ganges and the Arabian hills, which pass into limestone below Latopolis, lat. 25° 30' N.; and this formation continues without any resumption of the sandstone, until both the Libyan and the Arabian hills diverge finally at Ceracsum. The river thus flows beneath the principal quarries out of which the great structures of the Nile valley were built, and was the high road by which the blocks were conveyed to Thebes and Apollinopolis, to Sais and Babas, to the great Labyrinth in the Arsinoe nome, to the Pyramids and Memphis, and finally to the Greek and Roman architects of Alexandria and Antinoopolis. Again, from Syene to Latopolis, the shores of the river are sterile and dreary, since the inundation is checked by the rock-walls E. and W. of the stream. But at Apollinopolis Magna, lat. 25°, and at Latopolis, 25° 30', the rocks leave a broader verge for the fertilising deposit, and the Nile flows through richly cultivated tracts. At Thebes, for the first time, the banks expand into a broad plain, which is again closed in at the N. end by the hills at Comoseb. Here the river is divided by small islands, and is a mile and a quarter in breadth. It has hitherto followed a northerly direction; but at Coptos, where a road connected the stream with the ports of the Red Sea (Berenecke), it bends to the NW., and follows this inclination for some distance. At Amanopolis, however, it resumes its general N. bearing, and retains it to the fork of the Delta.

Near Dusopolis Farra (Hose), on the left bank, and opposite Chenoboscin, on the right, begins the canal, or, perhaps, an ancient branch of the Nile, called the Canal of Joseph (Botl-Jounf). This lateral stream flows in a direction nearly parallel to the main one, through the Arsinoe nome (El-Fayum). From this point the Nile itself presents no remarkable feature until it reaches Speos-Artemides, or the grottos of Bemihassan, where the eastern hills, approaching close to the river, limit its inundation, and consequently also the cultivable land. In lat. 23° N. the Libyan hills, for a space, recede, and curving at first E. but resuming a SE. direction, embrace the Arsinoe nome. Lastly, a little below Memphis, and after passing the hills of Gebel-el-Mokattam, both the eastern and western chains of rocks finally diverge, and the river expands upon the great alluvial plain of the Delta.

At Ceracsum, where the bifurcation of the river begins, or, perhaps, at a remoter period, still nearer Memphis, the Nile probably met the Mediterranean, or at least an estuary, which its annual deposits of
time have, in the course of ages, converted into Lower Egypt. In all historical periods, however, the river has discharged itself into the sea by two main arms, forming the sides of an isosceles triangle, the boundaries of the Delta proper, and by a number of branches, some of which run down to the sea, while others discharged their waters into the principal stream. The Delta is, indeed, a net-work of rivers, primary and secondary; and is further intersected by numerous canals. The primary canals were usually accounted for the ancient seven in number (Herod. i. 17; Sclav., p. 43; Strab. xvii. p. 501; seq.); Diodor. i. 33; Ptol. iv. 5. § 10; Plin. v. 10. s. 11; Mela, i. 9. § 9; Ammianus, xxii. 15, 16; Wilkinson, M. & C. Med. Egypt and Thebes, &c., and may be taken in the order following. They are denominated from some principal city seated on their banks, and are enumerated from E. to W.

1. Beginning from the E. was the Pelusian arm (το Πελοουσιανον αστικα, Strab. xvii. p. 501; Ostitm Pelusiacum, Plin. v. 9. s. 9). This has now become dry; and even when Strabo wrote a little before the first century A.D., Pelusium, which stood on its banks, and from which it derived its name, was nearly 2 miles from the sea (xvii. p. 806). The remains of the city are now more than four times that distance. Upon the banks of the Pelusian arm stood, on the eastern side, and near the apex of the Delta, Heliopolis, the Ον of Scripture; and 20 miles lower down, Bubastus (Tel Basta).

2. The Tanitic arm (το Τανιτικον αστικα, or το Σαργικον, Herod. i. 17; comp. Strab. xvii. p. 802; Mela, i. 9. § 9, Catapystum). The present canal of Moeotes probably coincides nearly with the Tanitic branch, which, however, together with the Ostian Bucolicum, has been absorbed in the lower portion of its course by the lake Menczaleh. It derived its name from Tanis, the Ζον of Scripture, the modern San, in lat. 31°, one of the oldest cities of the Delta.

3. The Mendesian arm (το Μενδησιον αστικα, Strab, &c.) was a channel running from the Schenkin Nile-arm. It is now lost in the lake Menczaleh.

4. The Phatnitic or Pathmetic arm (το Φατνητικον αστικα, Strab.; Φατνητικα, Diod. i. 33.; Φατνητικον, Ptol. iv. 5. §§ 10, 40; Pathmeticum, Mela, i. 9. § 9.) This was the Βουκολικον αστικα of Herodotus (i. 17); but it seems doubtful whether it was an original channel, and not rather a canal. It corresponded with the lower portion of the present Damietta branch of the Nile.

5. The Schenkin arm (το Σεινθετικον αστικα) derived its name from the city of Schenkinus, the present Semnonia. As far as this city the Damietta branch represents the ancient Schenkinus; but northward of this point, lat. 31°, the earlier channel is lost in the marshes or sands, which separate the present Delta from the Mediterranean; and its mouth, which was nearly due N. of Memphis, is now covered by the lake of Bourlos. The Schenkin arm, continuing in the direction of the Nile before its division, i. e. running nearly in a straight course from N., has some claims to be regarded not so much as one of the diverging branches as the main stream itself. This channel, together with the most easterly, the Pelusian, and the most westerly, the Canopic, were the three main arms of the Nile, and carried down to the sea by far the greater volumes of water.

6. The Bolbitic or Bolbitine arm (το Βολβιτικον αστικα, Strab. xvii. p. 803; Sclav. p. 43; or Βολβιτητον, Herod. i. 17; Diodor. i. 33.; Βολβιτικα, Ptol. iv. 5. §§ 10, 43; Bolbiticum, Mela, i. 9. § 9; Ammianus, xxii. 15), was, like the Phatnitic, originally an artificial canal, and seems in the time of Herodotus to have been a branch connecting the Schenkin with the Canopic channels (i. 17), having, however, an outlet of its own, possibly as a backwater during the inundation, to the Mediterranean. The Bolbitic arm is now represented by so much of the Rosetta branch of the Nile as runs between the sea and the ancient course of the Ostian Canopic.

7. The Canopic arm (το Κανωτικον αστικα, Strab. l. c.; comp. Aristot. Meteorol. i. 14; Ostium Canopicum, Mela, i. 9. § 9; Plin. v. 10. s. 11) was also termed the Naucratite arm of the Nile, Ostium Naucraticum (Plin. l. c.), from the city of Naucratis, which was seated on its left bank. This was the most westerly, and one of the three great branches of the Nile (see Pelusian, Schenkinopic). In the first portion of its descent from the point of the Delta the Canopic arm skirted the Libyan desert. At the city of Ternuthis (Tercenthe), a road, about 30 miles in length, through the channel of the Nile, was crossed by a bridge, connected it with the Naton Lakes. On its right bank, below this point, stood the ancient city of Nais, and a few miles lower down, Naucratis. From its vicinity, at first, to this city, the Canton of Aegypt, and afterwards, by means of the canal which connected it with the lake Maretis on the one hand, and Alexandria on the other, the Canopic branch retained its importance; and its embankments were the care of the government of Aegypt long after its rival branches, the Schenkinopic and Pelusian, were deserted or had been suffered to flow uselessly into the marshes. It is now represented in the upper portion of its channel by the Rosetta branch of the Nile. But they diverge from each other at lat. 31°, where the elder arm turned off to the W., and discharged itself into the Mediterranean near the present bay and foreland of Aboukir. Its mouth is now covered by a shallow lagoon, intersected by strips of sand and alluvial deposit, called the lake of Aboukir. The Canopic arm, although not actually the western boundary of Aegypt, was, at least, in the Pharaonic era, the limit of its commerce on the N.W. base of the Delta, since beyond it, until the building of Alexandria, there was no town of any importance.

The canals which were derived from the Nile for the convenience of local intercourse and irrigation, were very numerous; and the prosperity of Aegypt, especially on the Arabian side of the river, depended in great measure upon their being kept in good repair, and conveying to the arid waste a sufficient supply of water. Hence the condition of the canals was almost synonymous with the good or bad administration of Aegypt; and we find that among the first cares of Augustus, after adding this kingdom to his provinces, in B. c. 24, was to repair and rehabilitate the canals, which had fallen into decay under the misrule of the later Ptolemies. (Suc. Aug. 18; Dion. ii. 68; Aurel. Vict. Epit. i. 5.) For national commerce, however, there were only two of these artificial channels upon a large scale between Syene and the sea. (1) The canal called, in different ages, the river of Potomey (Ποτομαιον ποταμος, Diodor. i. 33; Plin. v. 29. s. 23), and the river of Tanjum (Τανουσιον ποταμος, Ptol. iv. 5. § 54). This had been commenced by Pharaoh Necho II. (B. c. 480), was
NILUS.

continued by Darius Hystaspis (n. c. 520—527), but my completed by Ptolemy Philadelphus (n. c. 274). It began in the Pelusian branch of the Nile, a little above the city of Bubastus (Tl-Basta), and passing by the city of Thmoum or Patamunus, was carried by the Persians as far as the Bitter Lakes, N.E. of the Delta. Here, however, it was suspended by the troubles of both Aegypt and Persia, under the successors of Dareius, and was, in a great measure, choked up with sand. (Herod. ii. 158.) At length Philadelphia, after cleansing and repairing the channel, carried it onward to Arsinoe, at the height of the country (Plin. vii. 29). The Pelusian canal, however, suffered the fate of its predecessor, and even before the reign of Cleopatra had become useless for navigation. The connection by water between Arsinoe and the Nile was renewed by Trajan, A. D. 106; but his engineers altered the direction of the cutting. They brought the stream from a higher part of the river, in order that the current might run into, instead of from, the Red Sea, and that the intervening sandy tracts might be invaded by fresh instead of partially salt water. The canal of Trajan accordingly began at Babylon, on the eastern bank of the Nile, opposite Memphis, and, passing by Helopisa, Scene Veteranorum, Heropolis, and Serapion, entered the Red Sea about 20 miles S. of Arsinoe, at a town called Klysmus, from the locks in its neighbourhood. The work of Trajan was either more carefully preserved than that of the Macedonian and Persian kings of Aegypt had been, or, if like them, it fell into decay, it was repaired and reopened by the Mahomedan conquerors of the country. For, seven centuries after Trajan's decease, we read of Christian pilgrims sailing along its canal on their route from England to Palestine. (Ducure, de Monn. Orbis. vi. ed Letronne.)

2. The Canopic canal (i) Kawauch & bâdeq, Strab. xvii. p. 800; Steph. B. s. c.) connected the city of Canopus with Alexandria and the lake Mareotis. Its banks were covered with the country houses and gardens of the wealthy Alexandrians, and formed a focus of water supply both of the Egyptian and Macedonian cities. [Canopites.]

Physical Character of the Nile.

The civilisation of all countries is directly influenced by their rivers, and in none more so than in Aegypt, which has been truly called the gift of the Nile. (Herod. ii. 5; Strab. xi. p. 493.) To its stream the land owed not only its peculiar cultivation, but its existence also. Without it the Libyan waste would have extended to the shores of the Red Sea. The limestone which lies under the soil of Aegypt, the sands which bound it to E. and W., were rendered by the deposits of the river fit for the habitation of man. The Delta, indeed, was absolutely created by the Nile. Its periodical floods at first narrowed a bay of the Mediterranean into an estuary, and next filled up the estuary with a plain of teeming alluvial soil. The religion, and many of the peculiar institutions of Aegypt, are derived from its river; and its physical characteristics have, in all ages, attracted the attention of historians and geographers. Its characteristics may be considered under the heads of (1) its deposits; (2) the quality of its waters; and (3) its periodical inundations.

(1) Its deposits.—Borings made in the Delta to the depth of 45 feet, have shown that the soil consists of vegetable matter and an earthy deposit, such as the Nile now brings down. The ingredients of this deposit are clay, lime, and siliceous sand; but their proportion is affected by the soil over which the river flows. Calcareous and argillaceous matter abound in the neighbourhood of Cairo and the Delta; siliceous preponderates in the granite and sandstone districts of Upper Aegypt. The amount of this deposit corresponds generally to the slope of the banks and the distance from the river. In Lower Nubia and Upper Aegypt alluvial cliffs are formed to the height of 40 feet; in Middle Aegypt they sink to 30; at the point of the Delta to about eighteen. The eroded matter is deposited in a convex form; the larger quantity lying close to the stream, the smaller at the verge of the inundation. As a consequence of this fall from the banks towards the desert, the limit to which the inundation reaches is slowly extending itself; but as the Nile raises its own bed as well as its banks, their relative proportion is preserved. The deposit of the Nile is found to consist of (1) clay, constituting 45 in 100 parts; (2) carbon, 9 parts; (3) sand, 45 parts; (4) of lime 18 parts; (5) of carbonate of magnesia, besides portions of silica and oxide of iron. These form a compost so rich, that the land on which they are perennially deposited requires no other manure, and produces without further renovation successive harvests of corn. (Atten. ii. 41, 42; Plin. xviii. 19. s. 21.)

(2) The quality of its waters.—The water itself is not less important to Aegypt than the ingredients which it precipitates or holds in solution. Except some summer streams in the Arabian desert, one season and dry at another, the Nile is the only river in Aegypt. Natural springs do not exist in the upper country; and the wells of the Delta afford only a turbid and brackish fluid. The river is accordingly the single resource of the inhabitants; and the frequent ablations enjoined by their religion rendered a copious supply of water more than ordinarily important to them. Between its highest and lowest periods, the water of the Nile is clear. When lowest, it is feculent (Atten. ii. 42); and at the beginning of the inundation is considerably more brackish than is the water that comes from the sea. It has no taste. (Sp. c. v. 7.) When Rational, it is said, to cause erup- tive disease. But even when most turbid, it is not unwholesome, and is always capable of filtration. The water in its medium state was pure and delicious to the taste. The Persian kings, after the conquest of Aegypt, imported it for their own drinking to Syria and Ecbatana (Atten. ii. 54, 67); and the emperor Pescennius Niger replied to his soldiers' demand for wine, "Have you not the water of the Nile?" (Sp. c. vii. 7.) The changes in the hue and quality of the water were ascribed to the overflowing of the Nubian lakes, or to the passage of the stream over various strata. But until the channels of the White and Blue Rivers have been explored to their sources, we must be content to remain ignorant of the real causes of these phenomena.

(3) Its periodical inundations.—The causes of the inundation early attracted the curiosity of ancient observers; and various theories were devised to account for them. It was believed to arise from the melting of the snow on the Abyssinian mountains (Schol. in Apoll. Rhod. iv. 269; Eurip. Helen. init.); and Herodotus rejects this supposition, because, as he conceived, although erroneously, that snow was unknown in Aethiopia (ii. 22). It was ascribed to the Etesian winds, which, blowing from the N. in summer, force back the waters
from the mouth of the river upon the plain of the Delta. (Diodor. i. 38—40.) This, however, though partially true, will not account for the inundation of Upper Aegypt, or for the periodical rising of the rivers N. of Aethiopia. It was attributed to the connection of the Nile with the great Southern Ocean, whose waters, from long exposure to the sun, were deprived, it was thought, of their saline ingredients in their course through the Nile-valley. (Diodor. i. 40.) By Ephorus (ed. Marx, p. 23) it was derived from exudation from the sands; while Herodotus suggested that the vertical position of the sun in winter reduced the waters of Southern Libya to the lowest ebb. But this hypothesis kept out of sight their overflow in summer. Agatharchides of Cnidus, who wrote in the second century n. c., was the first to divine the true cause of the inundation. The rains which fall in May upon Aethiopia occasion the rise of the rivers that flow northward from it. As the sun in his progress from the equator to the tropic of Cancer becomes successively vertical over parts of the equatorial region, the air becomes rarified, and the cold currents set in from the Mediterranean to restore the equilibrium. They pass over the heated plains of Aegypt; but as soon as they reach the lofty mountains of Abyssinia, they descend in torrents of rain. Sheets of water fall impetuously from their northern slope upon the grand tableau, from the grand tableau upon the plains which contain the sources of the White and Blue Rivers, and through their channels and confluentd pass into the Nile. In the last days of June, or at the beginning of July, the rise is visible in Aegypt; about the middle of August the dykes are cut, and the flood drawn off E. and W. by innumerable canals; and between the 20th and 30th of September the maximum height is attained. For a fortnight the flood remains stationary; about the 10th of November, it has perceptibly diminished, and continues to decrease slowly until it attains its minimum; at this time its depth at Cairo is not more than 6 feet, and in the Delta its waters are nearly stagnant. In the time of Herodotus (i. 13) the height of a good Nile was 15 or 16 cubits; and around the statue of the Nile, which Vespasian brought from Aegypt and set up in the Temple of Peace, were grouped sixteen diminutive figures emblematic of these measures. (Plin. xxxvi. 9. s. 14.) The rise of the Nile was carefully noted on the Nilometers at Prinias (Ierima), Elephantine, and Memphis; and the progress or decline of the inundation was reported by letters to different parts of Aegypt, in order that the farmers might calculate on the time when sowing might commence. A flood of the height of 30 feet is ruinous,—undermining houses, sweeping away cattle, and destroying the produce of the fields. The land, also, is rendered too spongy for the ensuing seed-time; the labours of tillage are delayed; and epidemic diseases arise from the lingering and stagnant waters. On the other hand, if the waters do not rise 24 feet, the harvest is scanty; and if they are below 18, terrible famines are the consequence, such as that of which Diodorus speaks (i. 84), and which are not unknown in more recent times (Volney, l'voyage en Syrie et en Egypte, vol. i. ch. 11; Aballatiph's Hist of Egypt, p. 197, White's edit.), during which the starving population had been driven to feed on human flesh.

Upper and Middle Egypt during the inundation present the appearance of a vast inland lake, bounded by mountains. But the usual means of intercourse are not interrupted, since the immediate banks of the river are seldom under water, which is discharged through the frequent apertures of the dykes, at first upon the verge of the desert, and afterwards upon the land nearer the flood. The Delta, however, being devoid of hills, is, during an extraordinary rise, hid entirely under water, and the only means of communication between the towns and villages are boats and rafts. Herodotus (ii. 97) compares the appearance of Lower Aegypt at this season to the Aegean sea, studied by the Sperides and Cycloades. As the direct highway between the Mediterranean and Morea, the Nile, in all periods, at least during the prosperous ages of Aegypt, presented a busy and animated spectacle. The Egyptians, who shunned the sea as the element of the destroying Typhon, regarded their river with affection and reverence, as the gift and emblem of the creating and preserving Osiris. Its breadth and capacious basin was in all seasons of the year studded with river-craft, from the raft of the poorer Elymaian Beris or Nile barges. Up the Nile to the markets of Decapolis passed the grain and fruits of the Delta; and down the stream came the quarried limestone of the Thebaid to the quays of Sais and Canopus. No bridge spanned the river during its course of 1500 miles; and the ferrying over from bank to bank was an incessant cause of life and movement. The fishermen and fowlers of the Nile diversified the scene. Respecting the qualities of the fish there is considerable discrepancy among ancient writers. Some describing it as coarse or insipid, others as highly nutritive and delicate in its flavour. (Athen. vii. p. 312.) Fifty-two species of fish are said to be found in the Nile. (Russegerg, Reisen, vol. i. p. 300.) Of these the genus Silurus was the most abundant. Fish diet is well suited to the languid appetites of a hot climate; and the Israelites, when wandering in the desert, regretted the fish as well as the vegetables of Aegypt. (Numbers, xi. 5.) They were caught in greatest abundance in the pools and lakes during the season of inundation. In the marchy districts of the Delta, where grain, owing to the spongy and fibrous character of the soil, could not be raised, the inhabitants lived principally upon fish dried in the sun; and, in later times at least, they were salted, and exported in great quantities to the markets of Greece and Syria. The modes of catching them are represented in the paintings, and were the line, the net, and the prong. (See Abdallatif, ap. Rosellini, M. C. vol. i. p. 250.) The great extent of man-borne land in Aegypt, and the long continuance of the inundation, caused it beyond all other countries to abound in water-fowl. The fowlers are represented in the paintings as spreading nets, or as rowing in their boats among the aquatic plants, in which the birds nestled, and knocking them down with sticks. The use of decoy-birds was not unknown; and smoked or salted wild-fowl were an article of export. The edible water-fowl are mostly of the goose and duck (anas) tribe; the quail also is mentioned by Herodotus (ii. 77) as among the game birds we catch at the rising of the sun and slightly salted for home consumption and export. The Fauna of the Nile were the hippopotamus and the crocodile, with many lesser species of the saurian genus. In the more remote ages both were found through the whole course of the river (Diodor. i. 33), although at present the hippopotamus rarely descends below the second Cataract, or the crocodile below 27° N. lat. The chase of the
The Nile was also frequently the stage on which the great religious festivals or pageantries were celebrated. On such solemnities the population of entire nomes poured themselves forth. On the day of the feast of Artemis at Bubastis, the inhabitants of the Delta throned the canals and main streams, while thousands descended from the middle kingdom and the Thebaid to be present at the ceremonies. The decks of the Baris were crowded with devotees of either sex, and the loud music of the pipe and cymbal was accompanied by songs and hymns, and clapping of hands. As they neared any town the passengers ran the barges along shore and recruited their numbers with fresh votaries. As many as 700,000 persons, exclusive of children, were sometimes assembled at Bubastis, or at the annually popular festival of Isis at Busiris. Numerous sacrifices were offered in the temples of the goddesses, and, whether in lustrations or in revelry, more wine was consumed on these occasions than in all the rest of the year. (Comp. Herod. ii. 61, 62, with Clemens Alexand. Cohort. vol. i. p. 17.)

That the Nile should have been an object of worship with the Egyptians, and that its image and phenomena should have entered deeply into their whole religious system, was unavoidable. As regards its external aspect, it flowed between sand and rock, the sole giver and sustainer of life in that valley of death; it was, both in its increment and its decrease, in its course through vast solitudes, and throned populations alternately, the most suggestive and expressive of emblems for a religion which represented in such marked contrast, the realms of creation and destruction, of Osiris and Typhon.

The Nile—as Oceanus, or the watery element—was a member of the first Ogdoad of the Egyptian theology (Diodor. i. 6—26), the opponent of Ptah, the elemental fire, and the representation of the earth (Demeter), the air (Nith), Zeus or Amin, the quickening spirit, Osiris and Isis, the Sun and Moon. It was thus one of the primitive essences, higher than any member of the second Ogdoad, or the visible objects of adoration. (Heliod. Aethiop. ix. 9: Schol. in Pind. Pyth. iv. 99.) It had its own hieratic emblem on the monuments, sometimes as the ocean embracing the earth, sometimes, as in the temple of Osiris at Philae, the assistant of Ptah in the creation of Osiris. The wild crocodile was a national emblem of Typhon (Pintarch, Is. et Osir. p. 371); but the tamed crocodile was the symbol of the gently swelling, beneficent Nile. (Euseb. Prorp. Evangel. iii. 11.) Osiris is sometimes, but incorrectly, said (Tibull. Eleg. i. 7, 27) to be the Nile itself (Plut. Is. et Osir. c. 33); there is no doubt, however, that it was personified and received divine honours. A festival called Niloa was celebrated at the time of the first rise of the waters, i.e., about the summer solstice, at which the priests were accustomed to drop pieces of coin, and the Roman prefect of the Thebaid golden ornaments, into the river near Philae (Seneca. Nat. Quaest. iv. 2. 7); indeed there must have been a priesthood specially dedicated to the great river, since, according to Herodotus (i. 101), none but a priest of the Nile could bury the corpse of a person drowned in its waters. Temples were rarely appropriated to the Nile alone; yet Hecateus (I. c.) says that at Niles was the town of Niltus, which stood in the Heracleopolite nome, near the entrance of the Fayum. In the quarries at Silsulis several stele are inscribed with acts of adoration to the river, who is joined with Phe and Ptah. Its symbol in hieroglyphics is read Moen, and the last in the group of the characters composing it, is a symbol of water. According
to Lucian, indeed (Jupiter Traged. § 42), the Egyptians sacrificed to the element of water, not locally, but universally. Pictorially, the Nile was represented under a round and plump figure, of a blue colour, and sometimes with female breasts, indicative of its productive and nutritive powers. On the base of the throne of Amenophis-Meunemun, at Thebes, two figures represent the Nile, similar in all other respects, except that one is crowned with lotus to denote the upper courses of the river, the other with papyrus to designate the lower. [See AEYPT.
p. 37.] (Rosellini, Mon. del. Cult.; Keunick's Ancient Egypt, vol. i. pp. 349—463.) [W.B.D.] NINIGUM. [Istria.] NINIVE. [Nile.] NOSA. [MINATUMCUM.] NINUS (ý Ninos or Ninus, Herod. i. 193, ii. 150; Potl vii. 1, § 3; Nīvī, kal Nīwā; Potl. viii. 21. § 3; Nīvē, Joseph. Ant. Jud. ix. 10. § 7; Ninus, Tacit. Ann. xii. 13; Ninive, Aun. Marc. xviii. 7, xxii. 6; Eth. Ninive, Stephan. B. s. v.), a great city, and for many centuries the capital of ancient Assyria. It will be convenient to notice here such accounts as we have from the Bible and ancient historians, and then to state succinctly the curious results of the recent discoveries of Mr. Layard, Colonel Rawlinson, and other modern travellers.

1. Nineveh is first mentioned in the Bible among the eight primeval cities in Genesis (x. 11), and is there stated to have been founded either by Ninrīd himself, or, according to another reading, by his lieutenant, Assur, the Aššur-šēpā of Joseph. Ant. Jud. i. 6. § 4, and the Epynomus of Assyria. The latter view is the most agreeable to the construction of the Hebrew text. From this period we have no mention of it in History, nor for more than a thousand years and when it is noticed again, on Jonah being sent thither to preach repentance, it is described as a "city of three days' journey" (Jonah, iii. 3), and as "that great city wherein are six score thousand persons, that cannot discern between their right hand and their left hand." (Jonah, iv. 11.) Subsequently to this time, it is not referred to by name, except in 2 Kings, xix. 37, and Isaias, xxxvi. 37, as the residence of Sennacherib, after his return from the invasion of Judaea; in the prophet Nahum and Zephaniah, who predict its speedy downfall; and in the apocryphal books of Tobit and Judith, of the former of whom long lived in the great city.

2. The earliest classical mention of Nineveh is by Herodotus, who places it on the Tigris (i. 193, ii. 150), but does not state on which bank it stood; in this he is confirmed by Arrian (Hist. Ind. c. 42) and Strabo, who in one place calls it the metropolis of Syria, i.e. Assyria (ii. p. 84), in another states it to have been a city more vast than even Babylon, lying in the plain of Aratra (a dialectical change of name for Assyria), beyond the Lynus (or Great Zib) with reference to Arbela (xvi. p. 737). Pliny places it on the east bank of the Tigris "ad solis occasum spectans" (vi. 13. s. 16); Polodny, along the Tigris, but without accurate definition of its position (vi. 1. § 8). The same may he said of the notice in Tacit.

2. Asumal. xii. 13), and in Ammianus, who calls it a city west of the Euphrates. On the other hand, Diodorus, professing to copy Ctesias, places it on the Euphrates (ii. 3, 7), which is the more remarkable, as a fragment of Nicandrus Dausacenscni, who has preserved a portion of Ctesias, is still extant, in which Nineveh occupies its correct position on the Tigris. (Frog. Hist. Græc. vol. iii. p. 885, ed. Müller.) It may be remarked that in much later times the name appears to have been applied to more than one town. Thus Ammianus in one passage seems to think that Hierapolis was the "vetus Ninus" (xiv. 8). Philostratus (Vit. Apoll. Tyian. i. 19) speaks of a Ninus on this side of the Euphrates; and Eusebius, in his Chronicon, in his Chronicon, in his Chronicon, in his Chronicon, in his Chronicon, in his Chronicon, in his Chronicon, in his Chronicon, in his Chronicon, in his Chronicon, in his Chronicon, in his Chronicon, in his Chronicon, in his Chronicon, in his Chronicon, in his Chronicon, in his Chronicon, in his NINUS.

or **Eriophy** of the LXX., Rawlinson, *As. Journ., 1850,* as in *Hier., xx. 232; Post. Homeric., vi. 143; Virg. Aen. v. 127; Juven. Sat., x. 259, &c. It is therefore, perhaps, less remarkable, that though Nineveh had so early in history ceased to be a city of any importance, the tradition of its former existence should remain in its own country till a comparatively recent period. Thus, as we have seen, Tacitus and Ammianus allude to it, while come exist (of the class termed by numismatists, Greek Imperial) struck under the Roman emperors Claudius, Trajan, Maximinus, and Gordianus Pius, proving that, during that period, there was a Roman colony established in Assyria, bearing the name of Ninua Chaldopolitan, and, in all probability, occupying its site. (Sestini, *Mus. de Chauldor,* tab. ii., fig. 12, *Clas. General,* p. 159.) In later times the name is still extant. Thus, Ibn Athir (quoting from Bibi Atheri, in the annals of those years) speaks of the forts of Nineveh to the east, and of others to the west of Abdulah Ibn Melenzer, *Arab. d. 16* (A. d. 637), and of other Ibn Farkad, *Arab. d. 20* (A. d. 641). (Rawlinson, *As. Journ., 1850.* Again, Benjamin of Tudela, in the twelfth century, speaks of it as opposed to Mosul (Travels, p. 91, ed. Asher, 1840); and Abulfaraj notices it in his *Hist. Dynast.* (pp. 404—441) under the name of Nine (cf. also his *Chronicon,* p. 464).

Lastly, Assennani, in his account of the mission of Saluak, the patriarch of the Chaldeans, to Romans in 1552, when describing Mosul, says of it, "a qua non alia ripa parte abinum Nivis mille passus" (*Bibl. Orient.* i. p. 524). In the same work of Assennani are many notices of Nineveh, as a Christian bishopric, first under the metropolitan of Mosul, and subsequently under the bishop of Assyria and Adiabene. (*Bibl. Orient.* vol. ii. p. 459, vol. iii. pp. 104, 263, 344, &c.)

We have already noticed under Assyria the chief points recorded in the Bible and in the classical historians relative to the history of Nineveh, and have stated that it is impossible entirely to reconcile the various conflicting statements of ancient authors. It only remains to mention here, as briefly as possible, the general results of the remarkable discoveries which, within the last few years, have thrown a flood of light upon this most obscure part of ancient history, and have, at the same time, afforded the most complete and satisfactory confirmation of those notices of Assyrian history which have been preserved in the Bible. The names of all the Assyrian kings mentioned in the Bible, with the exception, perhaps, of Shalmaneser, who, however, occurs under his name in Isaiah, Sargon, are now clearly read upon the Assyrian records, besides a great many others whose titles have not as yet been identified with those in the lists preserved by the Greek and Roman chronicists.

111. It is well known that in the neighbourhood of Mosul travellers had long observed some remarkable mounds, resembling small hills; and that Mr. Layard, thirty years ago, called attention to one called Koyunjik, in which fragments of sculpture and pottery had been frequently discovered. In the year 1843, M. Botta, the French consul at Mosul, at the suggestion of Mr. Layard, commenced his excavations,—first, with little success, at Koyunjik, and then, with much greater good fortune, in a mound called Khorsabad, a few miles NE. of Mosul. To M. Botta’s success at Khorsabad the French owe all the Assyrian monuments in the collection of the Louvre. In 1846, Mr. Layard began to dig into the still greater mound of Nimrud, about 17 miles S. of Mosul; and was soon rewarded by the extensive and valuable collection now in the British Museum. These researches were continued by Mr. Layard during 1846 and part of 1847, and again during 1850 and 1851; together with a far more satisfactory examination of the remains at Koyunjik than had been made by M. Botta. Some other sites, too, in the neighbourhood were partially explored; but, though of undoubted Assyrian origin, they yielded little compared with the greater mounds at Nimrud, Khorsabad, and Koyunjik. It would be foreign to the object of this work to enter into any details of the sculptured monuments which have been brought to light. A vast collection, however, of inscriptions have been disinterred during these same excavations; and from these we have been enabled by the labours of Colonel Rawlinson and Dr. Hincks to give names to many of the localities which have been explored, and to reconstruct the history of Assyria and Babylonia on a foundation more secure than the fragments of Ctesias or the history of Herodotus. It is also necessary to state that very extensive researches have been made during 1854 in Southern Babylonia by Messrs. Loftus and Taylor in mounds now called Warka and Muqayah; and that from these and other excavations Colonel Rawlinson has received a great number of engraved tablets, which have aided him materially in drawing up a picture of the earliest Babylonian and Assyrian history. Muqayah he identifies as the site of the celebrated "Ur of the Chaldees." From these various sources, Colonel Rawlinson has concluded that the true Nineveh is represented by the mounds opposite to Mosul, and probably by that one which bears the local name of the Nabi Yunus; that this city was built about the middle of the thirteenth century B.C.; and that, from it, the name of Nineveh was in after times transferred to several other sites in the neighbourhood. The great work of Nimrud (the seat of Mr. Layard’s chief labours), which it was natural, on the first extensive discoveries, to suppose was the real Nineveh, is proved beyond question by both Col. Rawlinson and Dr. Hincks to have been called by the Assyrians Calah, or Calah. We cannot doubt but that this is the Calah of Genesis (x. 12), and the origin of the Calahence of Strabo (xi. p. 529, xvi. p. 735), and of the Calahence of Ptolemy (vi. 1. § 2). From the inscriptions, it may be gathered that it was founded about the middle of the twelfth century B.C. The great ruin of Khorsabad (the scene of the French excavations), which has also been thought by some to have formed part of Nineveh, Colonel Rawlinson has ascertained to have been built by the Sargon of Isaiah (xx. 1),—the Shalmaneser of 2 Kings, xvi. 3,—about the year n. c. 729; and he has shown from Yacit that it retained the name of Sargans down to the time of the Muhammadan conquest. Koyunjik, the principal ruin opposite to Mosul, and adjoining the Nabi Yunus, we know from the inscriptions to have been constructed by Sennacherib, the son of Shalmaneser, about n. c. 700. The whole of this district has been surveyed with great care and minute-ness by Capt. Jones, within the last few years; and his account, with three elaborate maps, has been published in the *Journal of the Asiatic Society* for 1855. From this we learn that the whole enclosure of Koyunjik and the Nabi Yunus (which we may
NINUS.

fairly presume to have been, in an especial sense, the city of Nineveh) comprehends about 1800 English acres, and is in form an irregular trapezium, about 74 miles round. The two moords occupy respectively 100, and 40 acres of this space, and were doubtless the palaces and citadels of the place. Capt. Jones calculates that, allowing 50 square yards to each inhabitant, the population may have amounted to about 174,000 souls.

From an elaborate examination of the inscriptions preserved on slabs, on cylinders, and on tablets, Colonel Rawlinson has arrived at the following general conclusions and identifications in the history of the Babylonian and Assyrian empires.

He considers that the historical dates preserved by Berosus, and substantiated by Callisthenes (who sent to Aristotle the astronomical observations he had found at Babylon, extending as far back as 3003 years before the time of Alexander, i.e. to n. c. 2233), are, in the main, correct; and hence that authentic Babylonian chronology ascends to the twenty-third century n. c. The Chaldaean monarchy which followed was established in n. c. 1576, and continued to n. c. 1518; and to this interval of 45 years we may assign the destruction of the mounds of Nineveh, in the ruins of which we now find bricks stamped with the names of the Chaldaean founders. At the present time, the names of about twenty monarchs have been recovered from the bricks found at Sippara, Niffer, Warba, Senkerch, and Maguyer (Ur), belonging to the one genuine Chaldaean dynasty of Berosus, which reigned from n. c. 1796—1518. Among the Scriptural or historical names in this series, may be noticed those of Amraphel and Arioch, Belus and Horus, and possibly the Talgammus of Assian. An Arab family succeeded from n. c. 1518 to n. c. 1273, of whom, at present, no certain remains have been found. The independence of Assyria, or what is usually called the Ninus dynasty, commenced, Colonel Rawlinson believes, in n. c. 1273, 245 years after the extinction of the first Chaldaean line, and 526 years before the era of Nabonassar in n. c. 747. Of the kings of this series, we have now nearly a complete list; and, though still, from want of references in the reading of parts of some of the names, we may state that the identifications of Dr. Hincks and Colonel Rawlinson agree in all important particulars. To the kings of this race is attributable the foundation of the principal palaces at Ninruid. The series comprehends the names of Ashurbanipal, probably the warlike Sardanapal of the Greeks, the founder of Tarus and Asshuel (Schol. ad Aristoph. Ares, 1021), and the contemporary of Abah, about n. c. 930; and Phal-ukha, the Phaex of the LXX., and the Pal of 2 Kings (xx. 19), who received a tribute from Menahem, king of Israel; and Semiramis, the wife of Phal-ukha, whose name with her husband's has been lately found on a statuette of the god Nebu, excavated from the SE. palace at Ninruid.

Colonel Rawlinson considers the line of the family of Ninus to have terminated with Phal-ukha or Pul in n. c. 747, and that the celebrated aera of Nabonassar, which dates from this year, was established by his successor, either on a revision of all the preceding, or as a conquest in that year, at Babylon. The last or Scriptural dynasty, according to this system, commences with Tiglath Pileser in n. c. 747. It is probable that he represents the Balear of Polyhistor and Ptolemy's Caecon, and possibly the Deceas of Ctesias, who is said (Diod. iii. 27) to have been the actual taker of Nineveh. From this period the names on the Assyrian inscriptions are coincident with those in the Bible, though, naturally, many additional particulars are noticed on them, which are not recurred in Sacred History. Some of the individual facts the inscriptions describe are worthy of notice; thus, the campaigns with the king of Samaria (Hoshea) and with a son of Rezin, king of Syria, are mentioned in those published by the British Museum (pp. 66—72); the names of Jehud and of Hazael have been read (independently) by Colonel Rawlinson and Dr. Hincks on the black obelisk from Ninruid, the date of which, therefore, must be early in the ninth century n. c.; and the latter scholar has detected on other monuments the names of Menahem, Mosh Green, kings respectively of Israel and Judah. Lastly, the same students have discovered in the Annals of Sennacherib (which are preserved partly on slabs and partly on cylinders) an account of the celebrated campaign against Hezekiah (described in 2 Kings xvii. 14), in which Sennacherib states that he took from the Jewish king "30 talents of gold," the precise amount mentioned in Scripture, besides much other treasure and spoil.

There is still considerable doubt as to the exact year of the final destruction of Nineveh, and as to the name of the monarch then on the throne. From the narratives in Tobit and Judith (if indeed these can be allowed to have any historical value), compared with a prophecy in Jeremiah written in the first year of the Jewish captivity, n. c. 605 (Jerem. xxv. 18—26), it might be inferred that Nineveh was still standing in n. c. 609, but had fallen in n. c. 605. Colonel Rawlinson, however, now thinks (and his view is confirmed by the opinion of many of the elder chronicologists) that it was overthrown n. c. 625, the Assyrian sovereignty being from that time merged in the empire of Babylon, and the Canon of Ptolemy giving the exact dates of the various succeeding Babylonian kings down to its capture by Cyrus in n. c. 536, in conformity with what we now know from the inscriptions. We may add, in conclusion, that among the latest of the discoveries of Colonel Rawlinson is the undoubted identification of the name of Belshazzar as the son of Nabonassar, the last king of Babylon; and the finding the names of the Greek kings Seleucus and Antiochus written in the cuneiform character on tablets procured by Mr. Loftus from Warba. (Rawlinson, As. Journ. 1850, 1852, 1855; Athanaeaum, Nos. 1577, 1381, 1383, 1388; Hincks, Roy. Soc. of Liter. vol. iv.; Trans. Roy. Irish Acad. 1850, 1852, 1855; Layard, Nineveh and Babylon; and, for an entirely new view of the Assyrian chronology, Bosanquet, Sacred and Profane Chronology, Lond. 3vo. 1853.)

[SEP]
The structure of this elevated chain, consisting of the latter group of Sir Noth, (at a flanked glacier of Mee Khan, the Ali Togha, Spunik, Nemrud, and Darikah, Tugha, which are probably the highest range of Tauors, rising above the line of perpetual snow (10,000 feet?)), remains yet undetermined. Limestone and gysanum prevail, with basalt and other volcanic rocks. Deep valleys separate the parallel ridges, and also break their continuity by occasional passes from the N. to the S. sides. (Ainsworth, Asegra, Babylonia, and Chaldæan, p. 18; Chesney, Erpet. Expyrunt. vol. i. p. 69; Ettin. Erbdkynde, vol. ii. p. 11.)

NISA. [NISUS.]
NISA. [N¥ZA.]
NISAEA. [NESAEÆ.]
NISIA. [MEGARÀ.]
NISAEL CAMPI, plains of considerable extent in the mountain district of Media, which were famous for the production of a celebrated breed of horses. According to Strabo, they were on the road of those who travelled from Persis and Babylon in the direction of the Caspian Gates (vii. p. 203), and fed 50,000 brood mares for the royal stables. In another place, the same geographer states that the Nisaean horse were reared in the plains of Armenia (xi. p. 530), from which we infer that the plains themselves extended from Armenia southward through Media. Again, in the Epitome of Strabo (vii. p. 536, ed. Kraemer), the Nisaean plain is stated to be near the Caspian Gates, which lead into Parthia. The fact is, the district was not accurately defined. Herodotus states that the place, from which the best white horses (which were reserved for the use of the king) came, was a great plain in Media (vii. 40). And the same view is taken by Eustathius in his Commentary on Dionysius (v. 1017), and confirmed by the notice in Arrian's account of Alexander's march (vii. 13). Ammianus, on the other hand, states that the Nisaean horses were reared in the plains S. of M. Coronus (now Demawend). It appears to have been the custom on the most solemn occasions to sacrifice these horses to the sun (vii. 20); and it is inferred from Herodotus that they were also used to draw the chariot of the Sun (vii. 40.) (Cf. also Steph. B. s. v.; Synes. Epist. 40; Themist. Orat. xiv. p. 72; Heliodor. Aeth. ix. p. 437; Suid. s. v. Nisaæa.) Colonel Rawlinson has examined the whole of this geographical question, which is much perplexed by the ignorance of the ancient writers, the whole of his ability, and has concluded that the statements of Strabo are, on the whole, the most trustworthy, while they are, in a great degree, borne out by the existing character of the country. He states that in the rich and extensive plains of Alishtar and Khâvar he recognizes the Nisaean plains, which were visited by Alexander on his way from Baghistane to Susa and Ecbatana; and he thinks that the Nisaean horse came originally from the Nisaea of Khorisan, which is still famous for its Turk-man horses. Colonel Rawlinson further believes that Herodotus, who was incorrect in his statements, mentions the Caspian Gates as the point from which the horse descended into the plains of Khorisan from Khorisan to Media, and hence was the cause of much of the confusion which has arisen. Strabo, on the other hand, describes correctly the great horse pastures as extending along the whole line of Media, from the road which led from Babylon to the Caspian Gates to that conducting from Babylon into Persia. The whole of this long district, under the names of Khâvar, Alishtar, Hara, Sîlkhâr, Bahâvar, Kapot, and Persistan, is still famous for its excellent grazing and abundance of horses. Colonel Rawlinson, indeed, thinks that Strabo's epithet, ἠπειροτός, is a translation of Sîlkhâr, which means "a full manger." It was from this plain that Pyton brought his supply of beasts of burthen to the camp of Antigonus (B. xii. 2) after the perilous march of the Greeks across the mountains of the Cossæans. (Rawlinson, Royal Geog. Journ. vol. ix. p. 100.)

NISIBIS (Nisibis). 1. A small place in Arria, mentioned by Ptolemy (v. 18. § 11) and Ammianus (xxii. 6). It would appear to have been at the foot of the chain of the Paropamæus. There are some grounds for supposing it the same place as the Nil of Isaurius [Nî], and that the latter has undergone a contraction similar to that of Bitáxa into Bîsa.

2. The chief city of Mydœnia, a small district in the NE. end of Mesopotamia, about 200 miles S. of Tigran-receita; it was situated in a very rich and extensive plain, a rich agricultural country, and had an extensive trade, and the great northern empire for the merchandise of the E. and W. It was situated on the small stream Mydœnius (Julian, Orat. i. p. 27; Justin. Excerpt. c. Legat. p. 173), and was distant about two days' journey from the Tigris. (Procop. Bell. Pers. i. 11.) It was a town of such great antiquity as to have been thought by some to have been one of the primeval cities of Genesis, Accad. (Hieron. Quest. in Genes. cap. 2. xvi. 10; and of Michael. Syncelius, i. 226.) It is probable, therefore, that it existed long before the Greeks came into Mesopotamia; and that the tradition that it was founded by the Macedonians, who called it Antiochea Mydœnia, ought rather to refer to its rebuilding, or to some of the great works erected there by some of the Seleucid princes. (Strab. xvi. p. 747; Plut. Lucull. c. 32; Plin. vi. 13. s. 16.) It is first mentioned in history (under its name of Antiochea) in the march of Antony against the satrap Molon (Polyb. v. 51); in the later wars between the Romans and Parthians, it was constantly taken and retaken. Thus it was taken by Lucullus from the brother of Tigranes, after a long siege, which lasted the whole summer (Dion Cass. xxxiv. 6, 7), but, according to Plutarch, towards the close of the autumn, without much resistance from the enemy. (Plut. c. 4) Again it was taken by the Romans under Trajan, and was the cause of the title of "Parthicus," which the senate decreed to that emperor. (Dion Cass. livi. 24.) Subsequently to this it appears that it has been besieged by the Osroeni and other tribes who had revolted, but who were subdued by the arms of Sept. Severus. Nisibis became on this occasion the chief-quarters of Severus. (Dion Cass. lxxv. 2, 3.) From this period it appears to have remained the advanced outpost of the Romans against the East, till it was surrendered by the Persians on the treaty which was made with that people by Jovian, after the death of Julian. (Zosim. ii. 33; Arm. Mgr. xxxv. 9. l. 3.) Its present name is Nisibin, in the neighbourhood of which are still extensive ruins of the ancient city. (Xieburt, vol. ii. p. 379.)

NISYRUS (Nisypos). A rocky island opposite to Cnidus, between Cos in the north and Telos in the south, about 12½ Roman miles distant from Cape Triopion in Caria. (Plin. v. 36; Strab. xiv. p. 656;
NITAZI (It. Ant. p. 144), Nitazo (Geogr. Rav. ii. 17; Tab. Pent.), or Nitalis (It. Hist. p. 576), a town in Cappadocia, on the road between Moechus and Archelaus, but its site is uncertain. [L. S.]

NITIOBRIGES (Ntioobryges), a people of Aquitania. In Pliny (iv. 19) the name Antobriges occurs: "rurus Narbonenses provinciae conventimini Ruteni, Cadurci, Antotriges. Terraque amne discreti a Toleasen Petrocrii." There is no doubt that Antobriges is an error, and that the true reading is Nitiobriges or Nitiobriges. The termination briges appears to be the same as that of the word Allobroges. The chief town of the Nitiobriges, Aginnum (Agenn), is mentioned by Ptolemy (ii. 7 § 4), who places them next to the Petrocrii on one side, and to the Vaatii on the other. Strabo enumerates them between the Cadurci and the Petrocrii (Strab. iv. p. 190): "the Petrocrii, and next to them the Nitiobriges, and Cadurci, and the Bituriges, who are named Cubi." The position of the Nitiobriges is determined by these facts and by the site of Aginnum, to be on the Gerone, west of the Cadurci and south of the Petrocrii. D'Anville makes their territory extend beyond the then limits of the diocese of Agenn, and into the diocese of Condom.

When Caesar (B. G. vii. 46) surprised the Galli in their encampment on the hill which is connected with the plateau of Gerone, he found the Nitiobriges narrowly escaping being made prisoners. The element Tent in this king's name is the name of a Gallic deity, whom some authorities suppose to be the Gallic Mercury (lacl. De falsa Relig. i. 21; and the schol. on Lucan, i. 445, ed. Ouden-dorp). Others have observed that it is the same element as Tent in the Tentician language, and as Dis, from whom the Galli pretended to spring (Pele-loutier, Hist. des Celts. Liv. i. c. 14). The Nitio-briges sent 5000 men to the relief of Alesia; when it was blockaded by Caesar (B. G. vii. 75). [G. L.]

NITRA (Nipfa), a place which Ptolemy calls an epiparos, on the W. coast of Hindostan, in the province of Limyricus. There can be no doubt that it is the same as that called by Pliny Nitrae (vi. 23 s. 26), which he states was held by a colony of pirates. The author of the Periplius speaks of a place, in this immediate neighbourhood, named Naura, and which is, in all probability, the same as Nitrae. (Perpil. Mar. Engler. p. 63 ed. Muller.) It is most likely the present (Khorang) V.]

NITRIAE (Nipirai, Strab. xvii. p. 803; Sozomen, H. E. vi. 31; Socrat. H. E. iv. 23; Steph. B. s. v. Ntiraios, Ptol. v. § 25; Nitriarai, Plin. xxxi. 10. s. 16; Ech. Ntiraios kai Nitriowys), the Natron Lakes (Birket-al-Draor), were six in number, lying in a valley SW. of the Egyptian Delta. The valley, which is bounded by the limestone terrace which skirts the edge of the Delta, runs in an NW. direction for about 12 miles. The sands which stretch around these lakes were formerly the bed of the sea, and were strongly impregnated with saline matter, e. g. nitrate, sulphate, and carbonate of soda. Rain, though rare in Egypt, falls in this region during the months of December, January, and February; and, consequently, when the Nile is lowest, the lakes are at high water. The salt with which the sands are encrusted as with a thin coat of ice (Vitr. viii. 3), is carried by the rains into the lakes, and held there in solution during the wet season. But in the summer months a strong evaporation takes place, and a glaze or crust is deposited upon the surface and edges of the water, which, when collected, is employed by

NISYRUS. x. p. 488; Steph. B. s. e.) It also bore the name of Porphyry, on account of its rocks of porphyry. The island is almost circular, and is only 80 stadia in circumference; it is said to have been formed by Poseidon, with his trident, knocking off a portion of Cos, and throwing it upon the giant Polybotes. (Strab. x. p. 489; Apollod. i. 6 § 2; Paus. i. 2 § 4; Eustath. ad Dion. Perig. 530, ed. Homili. ii. 670.) The island is evidently of volcanic origin, and was gradually formed by volcanic eruptions of lava from a central crater, which in the end collapsed, leaving at its top a lake strongly impregnated with sulphur. The highest mountain in the north-western part is 2271 feet in height; another, a little to the north-east, is 1800, and a third in the south is 1700 feet high. The hot springs of Nisyros were known to the ancients, as well as its quarries of millstones and its excellent wine. The island has no good harbour; but near its north-western extremity it had, and still has, a tolerable roadstead, and there, on a small bay, was situated the town of Nisyros. The same spot is still occupied by a little town, at a distance of about 10 minutes' walk from which there are very considerable remnants of the ancient acropoles, consisting of mighty walls of black trachyte, with square towers and gates. From the acropole two walls run down towards the sea, so as to embrace the small islands, which were built by the ancient Greeks on the slope of the hill. Of the town itself, which possessed a temple of Poseidon, very little now remains. On the east of the town is a plain, which anciently was a lake, and was separated from the sea by a dike, of which considerable remains are still seen. The hot springs (βρύον) still exist at a distance of about half an hour's walk east of the town. Stephanus B. (s. e.) mentions another small town in the south-west of Nisyros, called Argos, which still exists under its ancient name, and in the neighbourhood of which hot vapours are constantly issuing from a chasm in the rock.

As regards the history of Nisyros, it is said originally to have been inhabited by Carians, until Thessalus, a son of Hercules, occupied the island with his Doriens, who were governed by the kings of Cos. (Diol. v. 54; Rom. ii. 676.) It is possible that after Agamemnon's return from Troy, Arcges settled in the island, as they did in Calymnis, which would account for the name of Argos occurring in both islands. (Hirt. his. ii. 100.)

There is an ancient inscription in the island of Nisyros Epidaurians. Subsequently the island lost most of its inhabitants during repeated earthquakes, but the population was restored by inhabitants from Cos and Rhodes settling in it. During the Persian War, Nisyros, together with Cos and Calymnis, was governed by queen Artemisia (Herod. l. c.). In the time of the Peloponnesian War it belonged to the tributary allies of Athens, to which it had to pay 100 drachms every month; subsequently it joined the victorious Lacedaemonians; but after the victory of Cnidus, n. c. 364, Conon induced it to revolt from Sparta. (Diol. xiv. 84.) At a later period it was for a time probably governed by the Potomies of Egypt. Throughout the historical period the inhabitants of Nisyros were Dorians; a fact which is attested by the inscriptions found in the island, all of which are composed in the Doric dialect. An excellent account of Nisyros, which still bears its ancient name Nipetos or Nipeta, is found in L. Ross, Reisen aul der griech. Inseln, vol. ii. pp. 67—81. [L. S.]

NISYRUS, a town in the island of Carpathius.
be the bleachers and glassmakers of Egypt. Parallel with the Natrix Lakes, and separated from them by a narrow river, is the Bahir-be-lu-Mu, or Waterless River, a name given by the Arabs to this and other hollows which have the appearance of having once been channels for water. It has been surmised that the lake Moris (Birket-el-Keroun) may have been connected with the Mediterranean at some remote period by this outlet. The Bahir-be- lu-Mo contains agatized wood. (Wilkinson, *Mod. Egypt and Thebes*, vol. i. p. 234.) The valley in which the Natrix Lakes are contained, was denominated the Nitriote nome (*νῆμος Νιτριώτης or Νιτριώτης*, Strab. xvii. p. 803; Steph. B. s. r. *Νιτρια*). It was, according to Strabo, a principal seat of the worship of Scarpis, and the only nome of Egypt in which sheep were sacrificed. (Comp. Macrob. *Saturn. i. 7.*) The Scarpian worship, indeed, seems to have prevailed on the western side of the Nile long before the Sinae is the name of that nome (Zeus Sinapotis) was introduced from Pontus by Ptolemy Soter, since there was a very ancient temple dedicated to him at Bha- cotis, the site of Alexandria (Tac. *Hist. iv. 83*), and another still more celebrated outside the walls of Memphis. The monasteries of the Nitriote nome were notorious for their rigorous asceticism. They were many of them strong-built and well-guarded fortresses, and offered a successful resistance to the recruiting sergeants of Valens, when they attempted to enforce the imperial rescript (*Cod. Theodos. xii. tit. 1. lex. 63*), which decreed that monastic vows should not exempt men from serving as soldiers. (Photius, p. 84, ed. Bekker; Dionys. Perig. v. 255; Eustath. *ad loc. *Pans. i. 18; Strab. *xvii.* p. 807; Clem. Alex. *Strnon. i. 43.* [W. B. D.])

**NIVARIA INS.** [*Fortunatian Ins.*, vol. i. p. 906, l.]

**NOARUS (Nōaros),** a city of Sicyon, the name of which is not mentioned in history, but is found in Stephanus of Byzantium (*s. v.*), who cites it from Apollodorus, and in Pliny, who enumerates the Naeoi among the communities of the interior of Sicily (*Plin. iii. 8. s. 14.*). We have none to its place, but the resemblance of name renders it probable that it is represented by the modern village of *Nora*, on the N. slope of the Neptunian mountains, about 10 miles from the sea and 13 from Tyanziris. (Clariv. Sicel. P. 536.)

**NOAURUS (Nōauōs),** a river of Pannonia, into which, according to Strabo (*vii.* p. 314), the Draus emptied itself in the district of Segestece, and thence flowed into the Danube, after having received the waters of another tributary called the Colapis. This river is not mentioned by any other writer; and as it is well known that the Draus flows directly into the Danube, and is not a tributary to any other river, it has been supposed that there is some mistake in the text of Strabo. (See Grossk. *Sterno*, vol. i. pp. 357, 552.)

**NOEGA (Nōgā),** a small city of the Astures, in Hispmania Tarraconensis. It was seated on the coast, not far from the river Merus, and from an estuary which formed the boundary between the Astures and Cantabri, in the neighbourhood of the present Gijon. Hence Ptolemy (*c. 6. § 6*), who gives it the additional name of Uceia (Uceianorciis), places it in the territory of the Cantabri. (*Strab. iii. p. 167; Mela, iii. 1.*; *Plin. iv. 20. s. 34.* [T. H. D.])

**NOEODU'NUM (Noiodonum),** was the chief city of the Diabintes (*Diabintes*), or of the Audricii Diabintae, as the name appears in the Greek texts of Ptolemy (*ii. 8. § 7*). There is no doubt that the old Gallic name of the town was exchanged for that of the modern peoples, which name survives in the age document, referred to by D'Anville, is written *Jubelant*, and hence comes the corrupted name *Jubelins*, a small place a few leagues from Magnan. There are said to be some Roman remains at Jubelins.

A name Nodiumus occurs in the Theodosian Table between Araecenus and Sublimium (*Muns*), and it is marked as a capital town. It appears to be the *Nodiumium of the Diabintes.* [G. L.]

**NOEAGAMUS (Naudemur),** a town of Gallia Lugdunensis, and the capital of the Vadacvassii (*Ptol. ii. 8. § 16*). The site is uncertain. *D'Anville* supposes that it may be *Vesia*, a name apparently derived from the Vinducasses. Others suppose it to be *Neuvilla*, apparently because *Neuvilla* means the same as *Noeagamus.* [G. L.]

**NOÉS (Noé, Herod. iv. 49) or NOBIS (Valer. *Flacc. vi. 100*), a river which takes its source in Mount Haemus, in the territory of the Carpathi, and flows into the Danube. It has not been satisfactorily identified; but the name indicates that there was an extensive valley near this part of Italy. [T. H. D.]

**NOHODENOLEX,** a place in the country of the Helvetii, which is shown by inscriptions to be *Ienx Châtel*, near *Neychâtel*. Foundations of old buildings, pillars and coins have been found there. One of the inscriptions cited by *Ukert* (*Gallien, p. 494*) is: "*Publ. Martini Miles Veteranus Leg. xxi. Civium Novodoneolicis curator.*" [G. L.]

**NOIDU'NUM.** [*Colonia Equestris Noiduncum.*]

**NOÉNGA (Nōnga; Eth. *Nōgnai, Nōnains; Nola*), an ancient and important city of Campania, situated in the interior of that province, in the plain between Mt. Vesuvius and the foot of the Apennines. It was distant 21 miles from Capua and 16 from Nuceria (*Itin. Ant. p. 109*.) Its early history is very obscure; and the accounts of its origin are contradictory, though they may be in some degree reconciled by a due regard to the successive populations that occupied this part of Italy. *Hecataeus*, the earliest author by whom it is mentioned, appears to have called it a city of the Ausones, whom he regarded as the earliest inhabitants of this part of Italy. (*Hecat. ap. Stephan. Bza. s. v.*). On the other hand, it must have received a Greek colony from Camæa, if we can trust to the authority of Justin, who calls both Nola and the neighbouring Abella Chalcidice colonies (*Justin, xx. 1.*) and this is confirmed by Silins Italicum (*Chalcidicum Nolam, xii. 161.*). Other authors assigned it a Tyrrhenian or Etruscan origin, though they differed widely in regard to the time of its founding. *D'Anville* inserted it, together with that of Capua, to a date as early as n. c. 800, while *Cato* brought them both down to a period as late as n. c. 471. (*Vell. Pat. i. 7.* This question is more fully discussed under the article *Capua.*) But whatever be the date assigned to the establishment of the Etruscans in Campania, there seems no doubt that Nola was one of the cities which they then occupied, in the same manner as the
NOLA.

neighbouring Capua (Pol. ii. 17); though it is probable that the city already existed from an earlier period. The statement of Solinus that it was founded by the Tyrrians is clearly erroneous; perhaps, as suggested by Nie buhr, we should read "a Tyrreniis" for "a Tyrrius." (Solin. 2. § 16; Niebuhr, vol. i. p. 74, note 235.) We have no account of the manner in which Nola afterwards passed into the hands of the Samnites; but there can be little doubt that it speedily followed in this respect the fate of Capua (CAPUA); and it is certain that it was, at the time of the first wars of the Romans in this part of Italy, a Campanian city, occupied by an Ocean people, in close alliance with the Samnites. (Liv. viii. 23.) Dionysius also intimates clearly that the inhabitants were not at this period, like the Neapolitans, a Greek people, though he tells us that they were much attached to the Greeks and their institutions. (Dionys. Fr. xv. 5. p. 2315. R.)

We may probably infer from the above statements, that Nola was originally an Anatolian or Ocean town, and subsequently occupied by the Etruscans, in whose hands it appears to have remained, like Capua, until it was conquered by the Samnites, who subsequently assumed the name of Campanians, about B.C. 440. The supremacy in favour of its having ever received a Greek colony is very slight, and is certainly outweighed by the contrary testimony of Hecataeus, as well as by the silence of all other Greek writers. The circumstance that its coins (none of which are of early date) have uniformly Greek inscriptions (as in the one figured below), may be sufficiently accounted for by that attachment to the Greeks, which is mentioned by Dionysius as characterizing the inhabitants. (Diod. i. c.)

The first mention in history occurs in b.c. 328, just before the beginning of the Second Samnite War, when the Greek cities of Paestum and Neapolis having rashly provoked the hostility of Rome, the Nolans sent to their assistance a body of 2000 troops, at the same time that the Samnites furnished an auxiliary force of twice that amount. (Liv. viii. 23.) But their efforts were frustrated by defection among the Paestopolitanis; and the Nolans retired from the city seemingly as if it had fallen into the hands of the Romans. (Dh. 25, 26.) Notwithstanding the provocation thus given, it was long before the Romans were at leisure to avenge themselves on Nola; and it was not till b.c. 313 that they laid siege to that city, which fell into their hands after a short resistance. (Id. ix. 28.) It appears certain that it continued from this period virtually subject to Rome, though enjoying, it would seem, the privileged condition of an allied city (Liv. xxiii. 44; Festus, s. v. Monopolis, p. 127); but we do not meet with any subsequent notice of it in history till the Second Punic War, when it was distinguished for its fidelity to the Roman cause, and for its successful resistance to the arms of Hannibal. That general, after making himself master of Capua in b.c. 216, hoped to reduce Nola in like manner by the cooperation of a party within the walls. But though the lower people in the city were ready to invite the Carthaginian general, the senate and nobles were faithful to Rome, and sent in all haste to the praetor Marcellus, who threw himself into the city with a considerable force. Hannibal in consequence withdrew from before the walls; but shortly after, having taken Nuceria, he renewed the attempt upon Nola, and continued to threaten the city for some time, until Marcellus, by a sudden sally, inflicted upon him considerable loss, and led him to abandon the enterprise (Liv. xxiii. 14—17; Plut. Marc. 10. 11; Eutrop. iii. 12; Flor. ii. 6. § 29.) The advantage thus obtained, though inconsiderable in itself, was of importance in restoring the spirits of the Romans, which had been almost crushed by repeated defeats, and was in consequence magnified into a great victory. (Liv. l. c.; Sil. Ital. xii. 270—280.) The next year (n. c. 215) Hannibal again attempted to make himself master of Nola, to which he was encouraged by fresh overtures from the democratic party within the city; but he was again anticipated by the vigilance of Marcellus, and, having encamped in the neighbourhood of the town, with a view to a more regular siege, was attacked and defeated by the Roman general (Liv. xxiii. 39, 42—46; Plut. Marc. 12.) A third attempt, in the following year, was not more successful; and by these successive defences the city earned the praise bestowed on it by Silius Italicus, who calls it "Poeno non pervia Nola." (Sil. Ital. viii. 534.)

Nola again bears a conspicuous part in the Social War. At the outbreak of that contest (n. c. 90) it was protected, as a place of importance from its proximity to the Samnite frontier, by a Roman garrison of 2000 men, under the command of the praetor L. Postumius, but was betrayed into the hands of the Samnite leader C. Papius, and became from thenceforth one of the chief strongholds of the Samnites and their allies in this part of Italy. (Liv. Epit. lxxiii.; Appian, B. C. i. 42.) Thus we find it in the following year (n. c. 89) affording shelter to the shattered remains of the army of L. Quintus, after its defeat by Sulla (Appian, i. 50); and even after the greater part of the allied forces had made peace with Rome, Nola still held out; and a Roman army was still occupied in the siege of the city, when the civil war first broke out between Marius and Sulla. (Vell. Pat. ii. 17, 18; Diod. xxxvii. Exc. Phot. p. 540.) The new turn thus given to affairs for a while retarded its fall: the Samnites who were defending Nola joined the party of Marius and Cinna; and it was not till after the final triumph of Sulla, and the total destruction of the Samnite power, that the dictator was able to make himself master of the refractory city. (Liv. Epit. lxxxiii.) We cannot doubt that it was severely punished; we learn that its fertile territory was divided by Sulla among his victorious soldiers (Lib. Colon. p. 256), and the old inhabitants probably altogether expelled. It is remarkable that it is termed a Colonia before the outbreak of this war (Liv. Epit. lxxxiii.); but this is probably a mistake. No other author mentions it as such, and its existence as a municipium, retaining its own institutions and the use of the Oriental language, is distinctly attested at a period long subsequent to the Second Punic War, by a remarkable inscription still extant. (Mommsen, Uster Ital. Dial. p. 125.) It afterwards received a second colony under Augustus, and a third under Vespasian; hence Pliny enumerates it among the Coloniae of Campania, and we find it in inscriptions as late as the time of Dio Chlorid, bearing the titles of "Colonia Felix Augusta Nolana." (Lib. Colon. l. c.; Plin. iii. 5. s. 9; Zumpt, de Colon. pp. 454, 530; Gruter, Insen. 573, 19; Litt. 14.)

It was at Nola that Augustus died, on his return from Beneventum, whither he had accompanied Tiberius, A. D. 14; and from thence to Bovillae his funeral procession was attended by the senators of the cities through which it passed. (Suet. Aug. 98; Dion Cass. lvi. 29, 31; Tac. Ann. i. 5; Vell. Pat. l. i. 14.)
NOLA.

123. The house in which he died was afterwards consecrated as a temple to his memory (Dion Cass. lvi. 40). From this time we find no historical mention of Nola till near the close of the Roman Empire; but there is no doubt that it was still a town throughout this period, to be one of the most flourishing and considerable cities of Campania. (Strab. v. p. 247, 249; Ptol. iii. 1 § 69; Itin. Ant. p. 109; Orell. Inscr. 2420, 3855, &c.; Mommsen, Inscr. R. N. p. 101—107.) Its territory was ravaged by Alaric in A. D. 410 (Augustin, Civ. Dei. i. 10); but the city itself would seem to have escaped, and is said to have been still very wealthy (“urbis sitissimis”) as late as A. D. 455, when it was taken by Genseric, king of the Vandals, who totally destroyed the city, and sold all the inhabitants into captivity. (Hist. Miscell. xiv. pp. 552, 553.) It is probable that Nola never recovered this blow, and sank into comparative insignificance in the middle ages; but it never ceased to exist, and is still an episcopal city, with a population of about 10,000 souls.

There is no doubt that the ancient city was situated on the same site with the modern one. It is described both by Livy and Silius Italicus as standing in a level plain, with various defences and owing its name to a fortress solely to its walls and towers (Liv. xxiii. 44; Sil. Ital. xii. 163); a circumstance which renders it the more remarkable that it should have held out so long against the Roman arms in the Social War. Scarcely any remains of the ancient city are now visible; but Ambrose Leo, a local writer of the early part of the 16th century, describes the remains of two amphitheatres as still existing in his time, as well as the foundations of several ancient buildings, which he enumerates as temples, beautiful pavements, &c. (Ambrosi. Leonis de Urbis Nolat., i. ed. Venet. 1514.) All these have now disappeared; but numerous inscriptions, which have been discovered on the spot, are still preserved there, together with the interesting inscription in the Oscan language, actually discovered at Abella, and thence commonly known as the Cicippus Abellanus [ABELLA]. From this curious monument, which records the terms of a treaty between the two cities of Nola and Abella, we learn that the name of the former city is Nola, in the Oscan language “Novla.” (Mommsen, Unter. Ital. Dialekte, pp. 110—127.) But the name of Nola is most celebrated among antiquarians as the place from whence a countless multitude of the painted Greek vases (commonly known as Etruscan) have been supplied to almost all the museums of Europe. These vases, which are uniformly found in the ancient sepulchres of the neighbourhood, are in all probability of Greek origin: it has been a subject of much controversy whether they are to be regarded as productions of native art, manufactured on the spot, or as imported from some other quarter; but the latter supposition is perhaps on the whole the most probable. The great love of these objects of Greek art which appears to have prevailed at Nola may be sufficiently accounted for by the strong Greek predilections of the inhabitants, noticed by Dionysius (Exc. Leg. p. 2315), without admitting the existence of a Greek colony, for which (as already stated) there exists no sufficient authority. (Kraemer, über den Stil u. die Herkunft Griechischen Thongefässes, p. 143—159; Aleker, Mittel. Italien, pp. 332—339.)

Nola is celebrated in ecclesiastical history as the see of St. Paulinus in the 5th century; and also as the place where, according to tradition, the use of bells was first introduced in churches; hence were derived the names of “nola” and “campana,” usually applied to such bells in the middle ages. (Du Cange, Glossar. s. v.)

The territory of Nola, in common with all the Campanian plain, was one of great natural fertility. According to a well-known anecdote related by Anius Gellius (vii. 20), it was originally mentioned with great praise by Virgil in the Georgics (ii. 225); but the people of Nola having given offence to the poet, he afterwards struck out the name of their city, and left the line as it now stands. [E. H. B]

NOMINENTUM.

NOLIBA or NOBILI, a town of the Oretani in Hispania Tarraconensis, probably situated between the Aenus and Tagus; but its site cannot be satisfactorily determined. It is mentioned only by Livy (xxxv. 22). [T. H. D.]

NOMADES. [Numida].

NOMAE (Nœuti), a town of Sicily, mentioned only by Diodorus (xi. 91) as the place where Dacetus was defeated by the Syracusans in n. c. 451. Its site is wholly uncertain. Some authors identify it with Nona (NOAE); but there is no authority for this. [E. H. B.]

NOMENTUM (Nòmentum : Etr. Numenrivas, Steph. B.; Nomentannus : Mentana), an ancient city of Latium, situated on the Sabine frontier, about 4 miles distant from the Tiber, and 14½ from Rome, by the road which derived from it the name of Via Nomentana. It was included in the territory of the Sabines, according to the extension given to that district in later times, and hence it is frequently reckoned a Sabine town; but the authorities for its Latin origin are decisive. Virgil enumerates it among the colonies of Alba Longa (Aen. vii. 779); and Dionysius also calls it Nomentana, which was the only city in that state, founded at the same time with Cursanum and Fidenae, both of which are frequently, but erroneously, called Sabine cities. (Dionys. ii. 53.) Still more decisive is the circumstance that its name occurs among the cities of the Prisei Latini which were reduced by the elder Tarquin (Liv. i. 34; Dionys. iii. 50), and is found in the list given by Dionysius (v. 61) of the cities which concluded the league against Rome in n. c. 493. There is, therefore, no doubt that Nomentum was, at this period, one of the 30 cities of the Latin League (Niebuhr, vol. ii. p. 17, note); nor does it appear to have ever fallen into the hands of the Sabines. It is again mentioned more than once during the wars of the Romans with the Fidenates and their Etruscan allies; and a victory was gained under its walls by the dictator Servius Priscus, n. c. 435 (Liv. iv. 22, 30, 32); but the Nomentan themselves are not noticed as taking any part. They, however, joined with the other cities of Latium in the great Latin War of n. c. 338; and by the peace which followed it obtained the full rights of Roman citizens. (Liv. viii. 14.) From this time we hear no more of Nomentum in history; but it seems to have continued a tolerably flourishing town; and we
find it retaining its municipal privileges down to a late period. Its territory was fertile, and produced excellent wine; which is celebrated by several writers for its quality as well as its abundance. (Plin. xiv. 4. s. 5; Colum. R. R. ii. 3; Athen. i. p. 27, b; Martial, x. 48. 19.) Seneca had a country house and farm there, as well as Martial, and his friends Q. Ovidius and Nepos, so that it seems to have been a place of some resort as a country retirement for people of quiet habits. Martial contrasts it in this respect with the splendour and luxury of Baiae and other fashionable watering-places; and Cornelius Nepos, in like manner, terms the villa of Atticus, friends house Alt. (Plin. and territory discrepancy its pied from tana) one tana the questionable Via and Salaria, Porta 1. the the more. in this line gave Nomentum, 14.) Pliny, who appears to have considered the Sabines as bounded by the Anio, naturally includes the Nomentani and Fidenates among them (iii. 12. 17); though he elsewhere enumerates the former among the still existing towns of Latium, and the latter among those that were extinct. In like manner Virgil, in enumerating the Sabine followers of C. Cascaus (Aen. v. 712), includes “the city of Nomentum,” though he had elsewhere expressly assigned its foundation to a colony from Alba. Ptolemy (iii. 1. § 62) distinctively assigns Nomentum as well as Fidenae to Latium. Architectural fragments and other existing remains prove the continued prosperity of Nomentum under the Roman Empire; its name is found in the Tabula; and we learn that it became a bishop’s see in the third century, and retained this dignity down to the tenth. The site is now occupied by a village, which bears the name of Lamentana or Lamentana, a corruption of Civitas Nomentana, the appellation by which it was known in the middle ages. This stands on a small hill, somewhat steep and difficult of access, a little to the right of the Via Nomentana, and probably occupies the same situation as the ancient Sabine town; the Roman one appears to have extended itself at the foot of the hill, along the high road, which seems to have passed through the midst of it. The road leading from Rome to Nomentum was known in ancient times as the Via Nomentana. (Orell. Inscr. 203; Tab. I. est.) It issued from the Porta Collina, where it separated from the Via Salaria, crossed the Anio by a bridge (known as the Ponte Nomentanu, and still called Ponte Lamentana) immediately below the celebrated Mos Sacer, and from thence led almost in a direct line to Nomentum, passing on the way the site of Ficulna, from whence it had previously derived the name of Via Ficulna. (Strab. v. p. 328; Liv. iii. 52.) The remains of the ancient pavement, or other unquestionable marks, trace its course with accuracy throughout this distance. From Nomentum it continued in a straight line to Eretum, where it rejoined the Via Salaria. (Strab. l. c.) The Tabula gives the distance of Nomentum from Rome at xiv. M. P.; the real distance, according to Nibby, is half a mile more. (Nibby, Distorni, vol. ii. p. 409, vol. iii. p. 335.)

NOMIA. [Lycaeus.]

NOMISTE‘HUM (Noaçtrptqwo), a town in the country of the Marcomanni (Bohemia), not far from the banks of the Alcis; but its site cannot be determined. (Ptol. ii. 11. § 29; Wilhelm, Germanien, p. 222.) [L. S.]

NONA'CRIS (Nâvovkris: Eft. NâvovkriqtwV, NâvovkriqtwV). 1. A town of Arcadia, in the district of Pheneatis, and NW. of Pheneas, which is said to have derived its name from Nonaema, the wife of Lycaon. From a lofty rock above the town rose the waters of the river Styx. (Strv.) Pliny speaks of a mountain of the same name. The place was in ruins in the time of Pausanias, and there is no trace of it at the present day. Leake conjectures that it may have occupied the site of Mesovriachi. (Herod. vii. 74; Paus. xii. 17. § 6; Steph. B. s. v.; Plin. iv. 6. s. 10; Sen. L. N. iii. 23; Leake, Morcut, vol. iii. pp. 165, 169.) From this place Heres, also, the Cnomafris (Nômâcris), Steph. B. s. v.), Frander, Nonacris (Orv. Post. v. 97), Atalanta Nonacris (Orv. Met. viii. 426), and Callisto Nônnacriv wifro (Orv. Met. ii. 409) in the general sense of Arcadian.

2. A town of Arcadia in the territory of Orchoemenus, which formed, together with Callia and Dipoena, a Tripolis. (Paus. viii. 27. § 4.)

NOORDA. [Nearda.]

NOïA (Nôia: Eft. Nôirvus, Steph. B.; Nor- reisnis: Capo di Palo), a city of Sardinia, situated on the S. coast of the island, on a promontory now called the Capo di Palo, about 20 miles S. of Ca- gliari. According to Pausanias (x. 17. § 5) it was the most ancient city in the island, having been founded by an Iberian colony under a leader named Norax, who was a grandson of Geryones. Without attaching much value to this statement, it seems clear that Nora was, according to the traditions of the natives, a very ancient city, as well as one of the most considerable in later times. Pliny notices the Noreneses among the most important towns of the island; and their name occurs repeatedly in the fragments of Cicero’s oration in defence of M. Ae- milius Scæurus. (Cic. pro Scaur. 1, 2, ed. Orell.; Plin. iii. 7. s. 13; Ptol. iii. 3. § 3.) The position of Nora is correctly given by Ptolemy, though his authority had been discarded, without any reason, by several modern writers; but the site has been clearly established by the recent researches of the Comte de la Marmora: its ruins are still extant on a small peninsular promontory near the village of Pula, marked by an ancient church and cross on which, as we learn from ecclesiastical records, was erected on the ruins of Nora. The remains of a theatre, an aqueduct, and the ancient quays on the port, are still visible, and confirm the notion that it was a place of importance under the Roman government. Several Latin inscriptions with the name of the city and people have also been found; and others in the Phoenician or Punic character, which must belong to the period of the Carthaginian occupation of Sardinia. (De la Marmora, Voyage en Sardaigne, vol. ii. p. 355.)

The Antoinie Itinerary (pp. 84, 84), in which the name is written Nara, gives the distance from Car- lalis as 32 M. P., for which we should certainly read 22: in like manner the distance from Solci should be 59 (instead of 69) miles, which agrees with the true distance, if we allow for the windings of the coast. (De la Marmora, ib. p. 441.) [E. H. B.]

NOIBA (rd Nêa), a mountain fortress of Cappa- docia, on the frontiers of Lycosia, at the foot of Mount Taurus, in which Lumenes was for a whole
NORBA.

winter besieged by Antigonus. (Diod. xvii. p. 41; Plat. Eum. 10; Corn. Nep. Eum. 5; Strab. xii. 5. 537.) In Strabo's time it was called Norbaeum (Νωρβαίον), and served as a treasury to Sicius, who was striving to obtain the sovereignty of Cappadocia. [L. S.]

NORBA (Νορβά), Eth. Νορβάβως. Norbanius: Norma, an ancient city of Latium, situated on the border of the Volscian mountains, overlooking the Pontine Marshes, and about midway between Corna and Setia. There seems no doubt that Norba was an ancient Latin city; its name is found in the list given by Dionysius of the thirty cities of the Cypselid League; and again, in another passage, he expressly calls it a city of the Latin nation. (Dionys. v. 61, vol. ii. Niebuhr, vol. ii. note 21.) It appears, indeed, certain that all the three cities, Corna, Norba, and Setia, were originally Latin, before they fell into the hands of the Volscians. The statement that Norba received a fresh colony in B.C. 492, immediately after the conclusion of the league of Rome with the Latins, points to the necessity, already felt, of the extension of the influence and authority of Rome, which was well calculated, as it is expressed by Livy, to strengthen the authority of the country in "qua arx in Pomptino esset" (Liv. iii. 34; Dionys. vii. 13.). But it seems probable that Norba, as well as the adjoining cities of Corna and Setia, fell into the hands of the Volscians during the height of their power, and received a fresh colony on the breaking up of the latter. (Niebuhr, vol. ii. p. 108.) For it is impossible to believe that these strong fortresses had continued in the hands of the Romans and Latins throughout their wars with the Volscians so much nearer Rome; while, on the other hand, when their names reappear in history, it is as ordinary "coloniae Latiniae," and not as independent cities. Hence none of the three are mentioned in the great Latin War of B.C. 340, or the settlement of affairs by the treaty that followed it. But, just before the breaking out of that war, and again in B.C. 327, we find the territories of Corna, Norba, and Setia ravened by their neighbours the Pibractes, whose principal town was situated upon the nearer slope to the right of Rome. (Liv. vii. 42, viii. 1, 19.) No further mention occurs of Norba till the period of the Second Punic War, when it was one of the eighteen Latin colonies which, in B.C. 209, expressed their readiness to bear the continued burthen of the war, and to whose fidelity on this occasion Livy ascribes the preservation of the Roman state. (Liv. xxvii. 10.) It seems to have been chosen, from its strong and secure position, as one of the places where the Carthaginian hostages were kept, and, in consequence, was involved in the servile conspiracy of the year B.C. 198, of which the neighbouring town of Setia was the centre. (Liv. xxxi. 2, 26.) [SETIA.]

Norbai played a more important part during the civil wars of Marcus and Sulla; having been occupied by the partisans of the former, it was the last city of Italy that held out, even after the fall of Praeneste and the death of the younger Marius, B.C. 82. It was at last betrayed into the hands of Sulla by a general of Sulla's but the garrison put themselves and the other inhabitants to the sword, and set fire to the town, which was so entirely destroyed that the conquerors could carry off no booty. (Appian, B.C. i. 94.) It seems certain that it was never rebuilt: Strabo omits all notice of it, where he mentions all the other towns that bordered the Pontine Marshes (p. 237); and, though Pliny mentions the Norbani among the existing "populi" of Latium, in another passage he reckons Norba among the cities that in his time had altogether disappeared (iii. 5. p. 9 § 85; 64, 68). The absence of all subsequent notice of it is confirmed by the evidence of the existing remains, which belong exclusively to a very early age, without any traces of buildings that can be referred to the period of the Roman Empire.

The existing ruins of Norba are celebrated as one of the most perfect specimens remaining in Italy of the style of construction commonly known as the Roman. Great part of the circuit of the wall is still entire, composed of very massive polygonal or roughly squared blocks of solid limestone, without regular towers, though the principal gate is flanked by a rude projecting mass which serves the purpose of one; and on the E. side there is a great square tower or bastion projecting considerably in advance of the general face of the walls. The position is one of great natural strength, and the defences have been skilfully adapted to the natural outlines of the hill, so that the line of the wall is still a formidable barrier to the ground. On the side towards the Pontine Marshes the fall is very great, and as abrupt as that of a cliff on the sea-coast: on the other sides the escarpment is less considerable, but still enough to render the hill in great measure detached from the adjoining Volscian mountains. The only remains within the circuit of the ancient walls are some foundations and substructions, in the same massive style of construction as the walls themselves; these probably served to support temples and other public buildings; but all traces of the structures themselves have disappeared. The site of the ancient city is wholly uninhhabited, the modern village of Norma (a very poor place) being situated about half a mile to the S. on a detached hill. In the middle ages there arose, in the plain at the foot of the hill, a small town which took the name of Ninfia, from the sources of the river of the same name (the Nymphaeum of Pliny), close to which it was situated; but this was destroyed in the 15th century, and is now wholly in ruins. The town of Norba seems to have been described in detail in the first volume of the Annali dell' Instituto di Corrispondenza Archeologica (Rome, 1829); and views of the walls, gates, &c. will be found also in Dodwell's Pelagia Remains (vol. Lond. 1834, p. 72—80). [E. H. B.]

NORBA CAESARIA'NA or CAESAREA (Νορ- βα Κασαρεία, Ptol. ii. 5, § 8, vii. 4, § 4), a Roman colony in Latania, on the left bank of the Tagus, lying NW. of Emerita Augusta, and mentioned by Pliny (iv. 20, s. 35) as the Colonia Norbena Caesariana. It is the modern Alcántara, and still exhibits some Roman remains, especially a bridge of six arches over the Tagus, built by Trajan. This structure is 600 feet long by 28 broad, and 245 feet above the usual level of the river. One of the arches was blown up in 1809 by Col. Mayne, to prevent the French from passing; but it was repaired in 1812 by Col. Sturgis. It is still a striking monument of Roman magnificence. The architect, Caetius, to whom the work was assigned near the bridge, and at its entrance a chapel still exists containing an inscription to his memory. (Ford, Handbook of Spain, p. 272; Gruter, Inscr. p. 162; Maratteri, Nor. Thea, Inscr. 1064. 6; Ukert, vol. ii. p. 396; Sestini, Moneta Vetus, p. 14; Florez, Esp. S. xiii. p. 128.)

NORIEJA (Νωριεία or Naupplia), the ancient
capital of the Taurisci in Noricum, which province seems to have derived its name from it. The town was situated a little to the south of the river Marisius, on the road from Virunum to Ovilaba, and formed the central point of the traffic in gold and iron in Noricum; for in its neighbourhood a considerable quantity of gold and iron was obtained. (Strab. vi. p. 214; Tab. Pent.) The place is celebrated in history on account of the defeat there sustained, in n. c. 113, by Cn. Carbo against the Cimbri, and on account of its site by the Bœl, about b. c. 50. (Strab. li. c. liv. Epit. lib. xlvii.; Caes. B. G. 1. 5.) Pliny (iii. 23) mentions Norica among the towns which had perished in his time; but this must be a mistake, for Norica is still mentioned in the Punician Table, or else Pliny confounds this place with another of the same name. The site of the ancient Norica is now occupied by the town of Neusarnack in Styria. (Muehar, Noricum, p. 271.) [L. S.]

NORICUM (Noriciæ, Norici, Noricium).—Noricum, a country on the northern slope of the Danube, between the Danube and the Taurisci, and on Ilia and Vindelicia, from which it was separated by the river Acenus; in the north the Danube separated it from Germania Magna; in the east it bordered on Pannonia, the Mons Cestius forming the boundary, and in the south on Pannonia and Italy, from which it was divided by the river Savus, the Alpes Carnicae, and mount Oera. It accordingly comprised the modern Upper and Lower Austria, between the Inn and the Danube, the greater part of Styria, Carinthia, and portions of Carniola, Bavaria, Tyrol, and the territory of Salzburg. (Plot. i. 13.) The name Noricum, is traced by some to Noris, a son of Hercules, but was in all probability derived from Norica, the capital of the country. Nearly the whole of Noricum is a mountainous country, being surrounded in most parts by mountains, sending its ramifications into Noricum; while an Alpine range, called the Alpes Noricæ, traverse the whole of the country in the direction from west to east. With the exception of the north and south, Noricum has several plain districts, but numerous valleys and rivers, the latter of which are all tributaries of the Danube. The climate was on the whole rough and cold, and the fertility of the soil was not very great; but in the plains, at a distance from the Alps, the character of the country was different and its fertility greater. (Isid. Orig. xiv. 4.) It is probable that the Romans, by draining marshes and rooting out forests, did much to increase the productivity of the country. (Copt. Claudian, Bell. Got. 365.)

But the great wealth of Noricum consisted in its metals, and gold and iron. (Strab. iv. pp. 208, 214; Ov. Met. xiv. 711, &c.; Plin. xxxiv. 41; Suid. Appol. v. 51.) The Alpes Noricæ still contain numerous traces of the mining activity displayed by the Romans in those parts. Norican iron and steel were celebrated in ancient times as they still are. (Clem. Alex. Strom. i. p. 507; Horat. Carm. ii. 16, 9, Epod. xvii. 71; Martial, iv. 55. 12; Rutil. Hist. iii. 351, &c.) The produce of the Norican iron mines seems to have been sufficient to supply the material for the manufactories of arms in Pannonia, Moesia, and Northern Italy, which owed their origin to the vicinity of the mines of Noricum. There are also indications to show that the Romans were not unacquainted with the salt in which the country abounds; and the plant called Salineca, which grows abundantly in the Alpes Noricæ, was well known to the Romans, and used by them as a perfume. (Plin. xxii. 20.)

The inhabitants of Noricum, called by the general name Norici (Noripol, Plin. iii. 23; Polyb. xxiv. 10; Strab. iv. pp. 206, 298), were a Celtic race (Strab. vii. pp. 293, 296), whose ancient name was Taurisci (Plin. iii. 24.) The Celtic character of the people is sufficiently attested also by the names of several Norican tribes and towns. About the year n. c. 38, the Bœl, a kindness race, emigrated from Boiohemum and settled in the northern part of Noricum (Caes. B. G. i. 5). Strabo (v. p. 213) describes these Boii as having come from the north of Italy. They had resisted the Cimbri and Teutones, but were afterwards completely annihilated by the Goths, and their country became a desert. Ptolemy does not mention either the Norici or the Bœl, but enumerates several other tribes, such as the Severae (Σεβεα) in the west, the Alumi or Halaumii (Alexander) in the south, and the Ambisenti (Ἀμβησθρῖον), the inhabitants of the banks of the Isenta. In the east the same authority mentions the Noricæ (Noricum, Norici, Noricæ) of the Mans. (Caes. B. G. i. 3, ; Strab. vii. pp. 304, 313;) and some writers speak of a region called Noricum even after the country had been incorporated with the Roman Empire. (Vell. Pat. ii. 39, 109; Suet. Tib. 16.) From early times, the Noricans had carried on considerable commerce with Aquileia (Strab. iv. p. 207, vii. p. 314); but when the Romans, under the command of Tiberius and Drusus, made themselves masters of the adjoining countries south of the Danube, especially after the conquest of Rhaetia, Noricum also was subdued; and about b. c. 13, the country, after desperate struggles of its inhabitants with the Romans, was conquered by Tiberius, Drusus, and P. Silius, in the course of one summer. (Strab. iv. p. 206; Dion Cass. liv. 20.) The country was then changed into a Roman province, probably an imperial one, and was accordingly governed by a procurator. (Tac. Hist. i. 11, Ann. ii. 63.) Partly to keep Noricum in subjection, and partly to protect it against foreign invasions, a strong body of troops (the legio ii. Italica) was stationed at Laureacum, and three fleets were kept on the Danube, viz. the classic Conaginesis, the cl. Araknepis, and the cl. Laureacensis. Roads were made through the country, several Roman colonies were founded, as at Laureacum and Ovilaba, and fortresses were built. In the time of Toulouse, the province of Noricum was not yet divided; but in the subsequent division of the whole empire into smaller provinces Noricum was cut into two parts, Noricum Ripense (the northern part, along the Danube), and Noricum Mediterreneum (embracing the southern and more mountainous part), each of which was governed by a praeses, the whole forming part of the diocese of Illyricum. (Not. Imp. Occid. p. 5, and Orient. p. 5.) The more important rivers of Noricum, the Savus, Dravus, Mirus, Aulape, Iseis, Joyavus or Isenta, are described under their respective heads. The ancient capital of the country was Noria; but, besides this, the country under the Roman
NOROSES.

Empire, contained a great many towns of mere or less importance, as Bordubum, joyeum, uchala, lenita, laucramum, arelate or arlape, namare, cethum, bedaum, juvaenum, yrichum, celhia, aguentem, longum, and trexina.

An excellent work on Noricum in the time of the Roman is Machia. *Ius Romaece Noricum*, in two volumes, 1832-3; compare also *Enea Dici Deutschen*, p. 240, etc. [L.S.]

NOROSSES. [Norosses.s.]

NOROSS. [Norosses.]

NOROSSUS (Norgaus ʿurpa, Potl. vi. 14, §§ 5, 11), a mountain of Scythia in innam, near which were the tribes of Noroseses (Norgausı) and Norossus (Norgausı) and cachagae (Kagawya). It must be referred to the S. portion of the great meridian chain of the Urals. [E.B.J.]

NOSAILEX (Nosaila), a town of Armenia Minor, on the northern slope of Mount Araman, in the district called Lavainesine. (Potl. v. 7, § 10.) [L.S.]

NOTI-CORNU (Nhot ʿurpa, Strab. xvi. p. 774; Potl. iv. 7, § 11), of south horn, was a promontory on the eastern coast of Africa. Pottery was the first to name this headland Aromylia. [W.B.D.]

NOTI-CORNU (Nhot ʿurpa, Hannu, ap. Geogr. Graece. Min. p. 13, ed. Miller; Potl. iv. 7, § 8), a promontory on the W. coast of Africa. Jodolosy. The Greek version of the voyage of Hanno gives the following statement: "On the third day after our departure from the Chariot of the Gods (Steph ʿurpa), having sailed by those streams of fire (previously described), we arrived at a bay called the Southern Horn, at the bottom of which lay an island like the former, having a lake, and in this lake another island, full of savage people, the greater part of whom were women, whose bodies were hairy, and whom our interpreters called Grrilane. Though we pursued the men, we could not seize any of them; but all fled from us, escaping over the precipices, and defending themselves with stones. Three women were, however, taken; but they attacked their conductors with their teeth and hands, and could not be prevailed upon to accompany us. Having killed them, we flayed them, and brought their skins with us to Carthage. We did not sail further on, our provisions failing us." A similar story is told by Eudesus of Cyzicus, as quoted by Melas (iii. 5; comp. Plin. v. 13). These fires do not prove volcanic action, as it must be re-}

NOROBET. [Norges.]

The modern city of Norovia is a flourishing place, with about 16,000 inhabitants, but has no ancient remains. [E.B.]
NOVAS, AD.

NOVAS, AD, a fortress of Upper Moesia, situated on the Danube, and on the road from Viminacium to Nicaea. (Itin. Ant. p. 218.) It lay about 48 miles E. of the former of these towns. It is identified with Kolumbat, where there are still traces of ancient fortifications. [T. H. D.]

NOVAS, AD, a station in Illyricum (Anton. Itin.), which has been identified with Removac in the Itin. Laur., under which several Latin inscriptions have been found, principally dedications to Jupiter, from soldiers of the 1st and 13th legions, who were quartered there. (Wilkinson, Dabnatiu and Montenegro, vol. ii. p. 149.) [E. B. J.]

NOVEM CRARIS, in South Gallia, is placed by the Jerusalem Itin. between LectoCte and Acunum, supposed to be Anconae on the Rhone. [G. L.]

NOVEM PAGI is the name given by Pliny (iii. 5. s. 8) to a "populus" or community of Etruria, the site of which is very uncertain. They are generally placed, but without any real authority, in the neighbourhood of Forum Clodii. (Dennis's Etruria, vol. i. p. 273.) [E. H. B.]

NOVESIUM, a fortified place on the Gallic side of the Rhine, which is often mentioned by Tacitus (Hist. iv. 26, 33, 35, &c., v. 22). It is also mentioned in the Antonine Itin. and in the Table. There is no difficulty about the position of Novesium, which is between Colonia Agrrippina (Culis) and Gelda (Cobol or Gellep). [Gell. 14. 35.] Novesium fell into ruins, and was repaired by Julian, A.D. 359. (Amm. Marc. xviii. 2.) [G. L.]

NOVIMAGUS, in Gallia, is placed in the Table after Mosa (Moesus). Mosa is placed by the Antonine Itin. on the road between Andomatunum (Longro) and Tullium (Toaul). Novimagus is Noviscauturn, on the same side of the river Mosa as Moesus, but the distance in the Table is not correct. [G. L.]

NOVIOUD'NUM (Noviodunum). 1. A town of the Bituriges, in Gallia. Caesar, after the capture of Genabum (Orleon), b. c. 52, crossed the Loire, to relieve the Boii, who were attacked by Vercingetorix. The position of the Boii is not certain [Boil]. On his march Caesar came to Noviodunum of the Bituriges (B. G. vii. 12), which surrendered. But on the approach of the cavalry of Vercingetorix, the townspeople shut their gates, and manned the walls. There was a short fight between the Romans and Vercingetorix before the town, and Caesar got a victory by the help of the German horse. Upon this the town again surrendered, and Caesar marched on to Avaricum (Bourges).

There is nothing in this narrative which will determine the site of Noviodunum. D'Anville thinks that Caesar must have passed Avaricum, leaving it on his right; and so he supposes that Noviem, a name something like Noviodunum, may be the place. De Valetia places Noviodunum at Neuvy-sur-Beuron, where it is said there are remains; but this proves nothing.

2. A town of the Aedui on the Loire. The place was afterwards called Novinum, as the name appears in the Antonine Itin. In the Table it is corrupted into Ehrinum. There is no doubt that Nevinum is Novium, which has its name from the little river Niévre, which flows into the Loire. In b. c. 52 Caesar had made Noviodunum, which he describes as in a convenient position on the banks of the Loire, a dépot (B. G. vii. 55). He had his hostages there, corn, his military chest, with the money in it allowed him from home for the war, his own and his army's baggage, and a great number of horses which had been bought for him in Spain and Italy. After his failure before Gerovia, the Aeduï at Noviodunum massacred those who were there to look after stores, the negotiators, and the travellers who were in the place. They divided the money among them and the horses, carried off in boats all the corn that they could, and burnt the rest or threw it into the river. Thinking they could not hold the town, they burnt it. It was a regular Gallic outbreak, performed in its true national style. This was a great loss to Caesar; and it may seem that he was imprudent in leaving such great stores in the power of treacherous allies. But he was in straits during this year, and probably he could not do otherwise than he did.

Dion Cassius (xxi. 38) tells the story out of Caesar of the affair of Noviodunum. He states incorrectly what Caesar did on the occasion, and he shows that he neither understood his original, nor knew what he was writing about.

3. A town of the Sueviones, mentioned by Caesar (B. G. ii. 12). Caesar (b. c. 57), after leaving the Aoxoa (Alise), entered the territory of the Sueviones, and making one day's long march, reached Noviodunum, which was surrounded by a high wall and a broad ditch. The place surrendered to Caesar.

It has been conjectured that the Noviodunum Suevionum was the place afterwards called Augusta Suevionum, but it is by no means certain. [G. L.]

NOVIODUNUM (Noviodunum). 1. A place in Pannonia Superior, on the great road leading from Aemona to Siscia, on the southern bank of the Savus. (Ptol. ii. 15. § 4; Itin. Ant. p. 259; Geogr. de Civ. iv. 19, where it is called Novinum.) Its modern name is Novigrad.

2. A town and fortress in Lower Moesia, a little above the point where the Danube divides itself into several arms. (Ptol. iii. 10. § 11.) Near this town the emperor Valens constructed a bridge over the Danube for his expedition against the Greuthungi. (Anm. Marc. xxvii. 1.) Some writers have supposed, without any good reason, that Noviodunum is the point at which Darius ordered a bridge to be built when he set out on his expedition against the Scythians. The town, as its name indicates, was of Celtic origin. According to the Antonine Itin. (p. 226) Noviodunum was the station of the legio II. Hercules, while according to the "Notitia Imperii" it had the legio I. Jovia for its garrison. During the later period of the Western Empire, the fortifications of the place had been destroyed, but they were restored by Justinian (Procop. de Aed. iv. 11; comp. Hieroc. p. 637; and Constant. Porph. de Thesm. ii. 1, where the place is called Naobiaouos and Naecedouos). The Civitas Nova in Jornandes (Gct. 5) is probably the same as Noviodunum; and it is generally believed that its site is occupied by the modern Isacvi. [L. S.]

NOVIOMAGUS (Noviomagus). 1. A town in Gallia, which afterwards had the name Lexovii [Lexovii], which was that of a people of Celtica. In the Greek text of Ptolomy (ii. 8. § 2), as it is at present printed, the word Linum (Linum) is put after the name Noiomagus. But this is not true, for Noviomagus is Lusitane, which is not on the sea, though the territory of the Lexovi extended to the sea.

2. Afterwards Nemetes, in Gallia, the capital of the Nemetae or Nemetes [Nemetes]. The name is G G
NOVIOMAGUS.

is Nemausus in Poitou (ii. 9, § 17). In Ammianus Marcellinus (xxv. 11, xvi. 2) and the Notitia Dignitatum it occurs under the name of the people, Nemesati or Nemetini. It is now Speyer, near the small stream called Speyerbach, which flows into the Rhine. In some of the late Notitiæ we read " civitas Nemetnem, id est, Spira." (D'Anville, Notice, etc.)

3. A town of the Batavi, is the Dutch town of Nimegen, on the Vaalser (Waal). It is marked in the Table as a chief town. D'Anville observes that the station Ad Duodecimum [DUODECIMUM, AD] is placed by the Table on a Roman road, and next to Noviomagus; and thus, there shows that Novio-
magus had a territory, for capital places used to reckon the distances from their city to the limits of their territory.

4. A town of the Bituriges Vivisci. (Ptol. ii. 7, § 8.) [BITURIGES VIVISCI.]

5. A town of the Rmai, is placed by the Table on a road which, leaving Ducretorum (Reims) to a position named Moa, must cross the Moas at Manson [MOSIOXAGUS.] Noviomagus is xii. from Ducretorum, and it is supposed by D'Anville to be Xanten.

6. A town of the Treviri, is placed in the Anto-

nii Inizi, xiii. from Trèier, on the Mosel. In the Table it is viii., but as viii. is far from the truth, D'Anville supposes that the vi. in the Table should be x. The river bends a good deal below Trèier, and in one of the elbows which it forms is Neuwagen, the representative of Noviomagus. It is mentioned in Ammianus's poem (Moesilia, v. 11):—

"Novimagnum divi castra Inclita Constantini."

It is said that many Roman remains have been found at Neuwagen.

7. A town of the Veromandui. In the Anto-
nii Inizi, this place is fixed at 27 M. P. from Soissons, and 34 M. P. from Amiens. But their distances, as D'Anville says, are not exact, for Noviodunum is Noyon, which is further from Amiens and nearer to Soissons than the Inizi fixes it. The alteration of the name Noviomagus to Noyon is made clearer when we know that in a middle age document the name is Noviomag, from which to Noyon the change is easy.

[GL.]

NOVIOMAGUS (NOVOGENUS, Ptol. ii. 3, § 28),
capital of the Regni in Britannia Prima, marked in the Inizi. Ant. (p. 472) as the first station on the road from London to Durovernum, and as 10 miles distant from the former town. It has been variously placed at Woodfort in Surrey, and Holwood Hill in Kent. Camden, who adopts the former site in his description of Surrey (p. 192), sees in his description of Kent (p. 219) to prefer the latter; where on the little river Ravenshoun, there still remain traces of ramparts and ditches of a vast extent. This site would also agree better with the distances in the Itinerary.

[T. H. D.]

NOVIOREGWI, in Gallia, is placed by the An-
tonine Itinerary, on a road from Burdigala (Bordeaux) to Mediolanum Santorum (Sarais); and between Tamnum (Tolosa or Tollemaco) and Mediolanum, D'Anville supposes Novirégum to be Royan on the north side of the Gironda; but this place is quite out of the direct road to Saintes, as D'Anville admits. He has to correct the distance also in the Itinerary. Between Tamnum and Novirégum to make it agree with the distance between Talmon and Royan.

[GL.]

NOVUM (NOVUS, Ptol. ii 6 § 22), a town of the Artabri in Hispania Tarraconensis, identified by some with Porto Moure, by others with Noyo [T. H. D.]

NOVIUS (Novus, Ptol. ii. 3, § 2), a river on the W. coast of Britannia Barbara, or Caledonia, flowing into the estuary of Innes (or Solway Firth), now the Nith.

[TH. D.]

NOVUM COMUM. [COMUS.]

NUAESIUM (Nuacentum), a town of Germany, mentioned only by Poitou (ii. 11, § 29). It was probably situated in the country of the Chatti, in the neighbourhood of Fritzlar, though others identify its site with Teutoburgium In-icum in Westphalia, near Neheim. (Wilhelm, Germanien, p. 188.) [L.S.]

NUBA LACUS. [NIGERI.]

NUBAE (NOBÁE, Strab. xvii. pp. 786, 819; Ptol. iv. 7, § 30; Steph. B. s. v.; also NOBÁI and NOBÁDÁI; Nubé, Plin. vi. 50. s. 34), were a negro race, situated S. of Meroe on the western side of the Nile, and when they first appear in history were composed of independent clans governed by their several chieftains. From the Nubaé is derived the modern appellation of Nubia, a region which properly does not belong to ancient geography; yet the ancient Nubae differed in many respects, both in the extent of their country and their national character, from the modern Nubians.

Their name is Egyptian, and came from the Nile-valley to Europe. From remote periods Aegypt and Aethiopia imported from the regions S. of Meroe ivory, ebony, and gold; and gold, in the language of Aegypt, was Noub; and thus the gold-producing districts S. of Scenae, or Meroe, and Kordofan, were designated by the merchants trading with them as the land of Noub. Even in the present day the Copts who live on the lower Nile are called the inhabitants of the country above Assuan (Syene) Nubah,—a name indeed disowned by those to whom it is given, and of which the origin and import are unknown to those who give it. Kordofan, separated from Aegypt by a desert which can be easily crossed, and containing no obstructing population of settled tribes, lay almost within view of Aethiopia and the country N. of it; and the Nubaé, though of a different race, were familiarly known by all who drank of the waters of the Lower Nile. The occupations of the Nubaé brought them into immediate contact with the mercantile classes of their more civilised neighbours. They were the water-carriers and caravan-guides. They were employed also in the trade of Liliba Interior, and, until the Arabian conquest of Eastern Africa, were generally known to the ancients as a nomadic people, who roamed over the wastes between the S. of Meroe and the shores of the Red Sea. Nor, indeed, were they without settled habitations: the country immediately N. of Kordofan is not entirely barren but lies within the limit of the periodical rains, and the hamlets of the Nubaé were scattered over the meadow tracts that divide the upper branches of the Nile. The independence of the tribes was probably owing to their dispersed habitations. In the third century A.D. these people seem to have become more compact and civilised; for when the Romans, in the reign of Diocletian, A. D. 285—305, withdrew from the Nile-valley above Phalae, they placed it in and in the stations up the river colonies of Nobatae (Nubaé, Nubiodas) from the western desert. These settlements may be regarded as the germ of the present Nubia. Supported by the Romans who needed them as a barrier against
the Blemyres, and reinforced by their kindred from SW., civilised also in some measure by the introduction of Christianity among them, these wandering negroes became an agricultural race, maintained themselves against the ruder tribes of the eastern deserts, and in the sixth century A.D. were firmly established as far S. perhaps as the Second Cataract. (Proc. Brit. Arch. Inst. iii. c. 15.) In the following century the Nubae were for a time overthrown by the Arabs, and their growing civilisation was checked. Their employment as caravan-guides was diminished by the introduction of the camel, and their numbers were thinned by the increased activity of the slave-trade; since the Arabian invaders found these sturdy and docile negroes a marketable commodity on the opposite shore of the Red Sea. But within a century and a half the Nubae again appear as the predominant race on the Upper Nile and its tributaries. The entire valley of the Nile, from Dongola inclusive down to the frontier of Aegypt, is in their hands, and the name Nubia appears for the first time in geography.

The more ancient Nubae were settled in the bills of Kordofan, SW. of Meroe. (Rüppell, Reisen in Nubien, p. 32.) The language of the Nubians of the Nile at this day is radically the same with that of northern Kordofan; and their numbers were possibly underrated by the Greeks, who were acquainted with such tribes only as wandered northward in quest of service with the caravans from Ceptos and Philae to the harbours of the Red Sea. The ancient geographers, indeed, mention the Nubae as a scattered race. Pliny, Strabo, and Ptolemy each assign to them a different position. Ptolemy (iv. 6. § 16) disserves them by the Nile, doubtless erroneously, and places them W. of the Abyssinian mountains, near the river Gir and in close contact with the Garamantes. Strabo (xiv. p. 819) speaks of them as a great nation of Lybia, dwelling in numerous independent communities between the latitude of Meroe and the great heads of the Nile,—i.e. in Dongola. Lastly, Pliny (vi. 30. 34) sets them 8 days W. of the island of the Semburriniae (Sennar). All these accounts, however, may be reconciled by assuming Kordofan to have been the original home of the Nubae, whence they stretched themselves N. and W. accordingly as they found room for tillage, caravan routes, or weaker tribes of nomads.

The Pharaohs made many settlements in Nubia, and a considerable Aegyptian population was introduced among the native Aethiopian tribes as far S. as the island of Gazuades (Argo), or even Gebel-el-Birkel. (Lat. 18° 25' N.) It is not certain whether any of the present races of Nubia can be regarded as descendants of these colonists. Their presence, however, is attested by a series of monuments embracing nearly the whole period of Aegyptian architecture. These monuments represent three eras in architectural history: (1) The first comprehends the temples cut in the sides of the mountains; (2) the second, the temples which are detached from the rocks, but emulate in their massive proportions their original types; (3) the third embraces those smaller and more graceful edifices, such as are those of Gartaca and Daudour, in which the solid masses of the first style are wholly laid aside. Of these structures, however, though seated in their land, the Nubae were not the authors; and they must be regarded either as the works of a race conguite with the Aegyptians, who spread their civilisation northward through the Nile-valley, or of colonists from the Thebaid, who carved upon the walls of Ipyanophobia, Semneh, and Sokh the titles and victories of Ianneses the Great. [W. B. D.]

NUCERIA. (Nouceria; Eth. Nuces or Nuceria; Nucerii). 1. Surnamed Alferatnna (Nuceria dei Poeni), a considerable city of Campania, situated 16 miles SE. from Nola, on the banks of the river Sarnus, about 9 miles from its mouth. (Strab. v. p. 247; Plin. iii. 5. s. 9; Itin. Ant. p. 109.)

The origin of its distinctive appellation is unknown; the analogous cases of Tenuam Sulicium and others would lead us to suppose that the Alferatnna were a tribe or people of which Nuceria was the chief town; but no mention is found of them as such. Pliny, however, notices the Alferatnna among the "populi" of Campania, apart from Nuceria (Plin. iii. 5. s. 9); and we learn from their coins that the inhabitant themselves, who were of Ocean race, used the designation of Nuceri Alferatnna ("Nuxarium Alferatum"), which we find applied to them both by Greek and Roman writers (Nouceria ή Άλφατηρη καλουμένη, Didd. xix. 65; Nuceria Alferatnna, Liv. ix. 41; Friedländer, Oekische Monaten, p. 21). The first mention of Nuceria in history occurs in B.C. 315, during the Second Samnite War, when its citizens, who were at this time on friendly terms with the Romans, were invited to abandon the town and make common cause with the Samnitcs (Didd. xix. 65). In B.C. 308 they were punished for their defection by the consul Fabius, who invaded their territory, and laid siege to their city, till he compelled them to an unqualified submission. (Liv. ix. 41.)

No subsequent notice of it occurs till the Second Punic War, when, in B.C. 216, Hannibal, having been foiled in his attempt upon Nola, turned his arms against Nuceria, and with much better success; for though the citizens at first offered a vigorous resistance; they were, at their own request, setled at Atella, the inhabitants of that city being transferred to Campania (Liv. xxxii. 15; Appian, Pun. 63.) After Hannibal had been compelled to abandon his hold on Campania, the fugitive Nuceriens were restored (n.c. 210); but, instead of being again established in their native city, they were, at their own request, settled at Atella, the inhabitants of that city being transferred to Latium (Liv. xxxii. 15; Appian, Amh. 49.) How Nuceria itself was received we are not informed, but it is certain that it again became a flourishing municipal town, with a territory extending down to the sea-coast (Pol. iii. 91), and is mentioned by Cicero as in his day one of the important towns of Campania. (Cic. de Leg. Agr. ii. 31.) Its territory was ravaged by C. Pappus in the Social War, B.C. 90 (Appian, B.C. i. 42); and if we may trust the statement of Florus, the city itself was taken and plundered in the same war. (Flor. iii. 18. § 11.) It again suffered a similar calamity in B.C. 73, at the hands of Spartacus (Id. iii. 20. § 5); and, according to Appian, it was one of the towns which the Triumvirs assigned to their veterans for occupation (Appian, B. C. iv. 3); but from the Liber Coloniarum it would appear that the actual colony was not settled there until after the establishment of the Empire under Augustus. (Lith. Com. p. 215.) It is there termed Nuceria Constantia, an epithet found also in the Itinera, all. (Itin. Ant. p. 129.) Ptolemy also attests its colonial rank (Ptol. iii. 1. § 69); and we learn from Tacitus (G G 2)
NUCUM.

NUCUM. (Naples), a town founded by the Greeks. Its name is written either as 'Nu' or 'Nucum'. It was inhabited by the Sannites, who were later succeeded by the Samnites. The city was destroyed by the Romans in 310 BC.

In 186 BC, the Romans founded a colony here, which was called Colonia Nuceria. It was one of the most important cities in the region, and was the center of a large trading network.

3. NUCERA, a town in Campania, near the southern coast of Italy. It was founded by the Greeks, who named it 'Nucum'. It was later conquered by the Romans, who called it 'Colonia Nuceria'.

In the 5th century AD, the city was sacked by the Visigoths. It was later rebuilt by the Byzantines.

The city was a center of commerce and trade, and was known for its fine wool and leather goods.

A. E. B.

COIN OF NUCERIA IN BRUTTM.

NUDIUNUM, in the Table, is probably the same place as Noedum, near the Diambles. (Nepos, Procop. 8. 1.)

NUDIUM (Nowenow), a town founded by the Myrns in Triphylia is Epi, but which was destroyed by the Romans in the time of Herodotus (iv. 148).

NUITHONES, a German tribe, mentioned by Tacitus (Ger. 40) as inhabiting the banks of the Albus (Elbe), to the SW. of the Longobardi. They were noted for their fanatical devotion to their own gods.

No date.

A. E. B.

NUCIUS (Naucius of Aed. Pol. iv. 6. § 6.), in the Latin translation, "Nucium est", a river of Interior Libya, which discharged itself into the sea to the S. of Mauretaniana Tingitana. It has been identified with that which is called in the Ship. Manual of Livy, Livy, § 53. ed. Moreau, and by Syllax of Carystus (if the present text be correct). No date.

A. E. B.
NUMANA.

angles to its former course, runs to the W., and after passing through the great fresh-water lake of Debad, enters the sea at Cape Num. The name of this cape, so celebrated in the Portuguese discoveries of the 15th century, appears to have a much older origin than has been supposed, and goes back to the time of Ptolemy. Edrisi speaks of a town, Num or Hadh Num, somewhat more to the S., and three days' journey in the interior: Leo Africansus calls it Belad de Num. (Humboldt, Aspects of Nature, vol. i. pp. 118–127; Linn. Soc. J. xiv. 297.)

NUMA (Noiaqwe: Eth. Numana, Umania), a town of Picenum, situated on the sea-coast of that province, 8 miles S. of Ancona, at the southern extremity of the mountain promontory called Mons Camurus. (Plin. iii. 13. s. 18; Ptol. iii. 1. § 21; Mel. ii. 4. § 6; Itin. Ant. p. 312.) Its foundation is ascribed by Pliny to the Siculi; but it is doubtful whether this is not a mistake; and it seems probable that Numana as well as Ancona was colonised by Sicelians Greeks, as late as the time of Dionysius of Syracuse. No mention of it is found in history; but Silius Italicus enumerates it among the towns of Picenum in the Second Punic War; and we learn from inscriptions that it was a municipal town, and apparently one of some consideration, as its name is associated with the important cities of Aesis and Auximia. (Sil. Ital. viii. 431; Gruter, Inscr. p. 446. l. 2; Orell. Inscr. 3899, 3900.) The Itineraries place it 8 miles from Ancona and 10 from Potentia. (Itin. Ant. p. 312; Tach. Pent.) It was in early ages an episcopal see, but this was afterwards united with that of Ancona. The ancient city was destroyed by the Lombards in the eighth century; and the modern Umana is a poor place. [E. H. B.]

NUMANTIA (Novacentia, Ptol. ii. 6. § 56; Novascavia, Steph. B. s. a. v.), the capital of the Are- voci in Hispania Tarraconensis, and the most famous city in all Celtiberia, according to Strabo (iii. p. 162) and Mela (ii. 6). Pliny however (iii. 3. s. 4) places it in the territory of the Pelidones, which also agrees with the Itin. Ant. (p. 442). It is represented as situated on an eminence of moderate height, but great steepness, and approachable only on one side, which was defended by ditches and intrenchments. (Flor. ii. 18; Ors. v. 7; Appian, B. Hisp. 76, 91.) The Darius flowed near it, and also another small river, whose name is not mentioned. (Appian, B. Hisp. 76; Dion Cass. Fr. 82, ed. Fabr. i. p. 33.) It was on the road from Ar- turea to Caesaranquita (Itin. Ant. l. c.), and had a circumference of 24 stadia (Appian, B. Hisp. 90; Ors. l. c.); but was not surrounded with walls. (Florus, l. c.) Its memorable siege and destruction by Scipio Africansus, n. c. 134, are related by Appian (48–98), Europius (iv. 17), Cicero (de Off. i. 11), Strabo (l. c.), &c. The ruins at Puente de Don Guarraty probably mark the site of this once famous city. (Alarcé, Ant. Hisp. l. 6; Flores, Esp. S. vii. p. 276; D'Anville, Mem. de l'Acad. des Inscr. vol. xl. p. 770, cited by Ucet, vol. ii. pt. 1. p. 455.) [T. H. D.]

NUMENIUM (Nomenvius, Stadium. 298), a small island with a spring of fresh water, 55 stadia from Paphos; perhaps the same as that described by Pliny ("contra Neamphaphum Hierocipa," v. 85). Strabo (xiv. pp. 683, 684) has no island here called Hierocipa. [E. B. J.]

NUMICIUS (Nomieus: Rio Torto), a small river of Latium, flowing into the sea between Lavinium and Ardea. It is mentioned almost exclusively in reference to the legendary history of Aeneas, who, according to the poetical tradition adopted by the Roman historians, was buried on its banks, where he was worshipped under the name of Jupiter Indiges, and had a sacred grove and Hermon. (Liv. i. 2; Dionys. i. 64; Vict. Orig. Gent. Rom. 14: Ovid. Met. xiv. 598–608; Tibull. ii. 5. 39–44.) Immediately adjoining the grove of Jupiter Indiges was one of Anna Perenna, originally a Roman divinity, and probably the tutelary nymph of the river, but who was brought also into connexion with Aeneas by the legends of later times, which represented her as the sister of Dido, queen of Carthage. The fables connected with her are related at full by Ovid (Fast. iii. 545–564), and by Silius Italicus (viii. 28–201). Both of these poets speak of the Numicius as a small stream, with stagnant waters and reedy banks: but they afford no clue to its situation, beyond the general intimation that it was in the Laurentian territory, an appellation which is sometimes used, by the poets especially, with very vague latitude. But Pliny, in enumerating the places along the coast of Latium, mentions the river Numicius between Laurentum and Ardea; and from the narrative of Dionysius it would seem that he certainly conceived the battle in which Aeneas was slain to have been fought between Lavinium and Ardea, but nearer the former city. Hence the Río Torto, a small river with a sluggish and winding stream, which forms a considerable marsh near its outlet, may fairly be regarded as the ancient Numicius. It would seem from Pliny that the Lucus Jovis Indigetis was situated on its right bank. (Plin. iii. 5. s. 9; Dionys. i. 64; Nibby, Distorni, vol. ii. p. 418.)

NUMIDIA, the central tract of country on the N. coast of Africa, which forms the largest portion of the country now occupied by the French, and called Algeria or Algerie.

I. Name, Limits, and Inhabitants.

The continuous system of highlands, which extends along the coast of the Mediterranean, was in the earliest period occupied by a race of people consisting of many tribes, of whom, the Berbers of the Algerine territories, or the Kabyles or Quadaily, as they are called by the inhabitants of the cities, are the representatives. These peoples, speaking a language which was once spoken from the Fortunate Islands in the W., to the Catarracts of the Nile, and which still explains many names in ancient African topography, and embracing tribes of quite different characters, whites as well as blacks (though not negroes), were called by the Romans Numidae, not a proper name, but a common denomination from the Greek form Νομίδας. (Strab. ii. p. 131, xvii. pp. 833, 837.) Afterwards Numida and Numidia (Νομίδα and Νομίδα), or Numedie and Numade, Ptol. iv. 3: Pomp. Mela. i. 6; Plin. v. 2, vi. 39) became the name of the nation and the country. Sometimes they were called Marc- us Huseius Numidae (Μαρκο-υσειον Νομίδαι, Appian, B.C. ii. 44), while the later writers always speak of them under the general name of Maure (Amm. Marc. xix. 5; Procop. B. V. i. 4.) The most powerful among these tribes were the Massyla (Μασσυλάς, Polyb. iii. 44; Strab. ii. p. 131, xvii. p. 829; Dionys. 187; Massouâs, Polyb. vii. 19; Massyl. Sil. Ital. xvi. 170; Massylia gent, Liv. xxiv. 48), whose territories extended from the river Ampsaga to Tretum Prom. (Σεκα Ρεία) and the Massaellae (Μασ-
NUMIDIA.

H. Physical Geography.

Recent investigation has shown that the distinction was not called the "greater and the Lesser Atlas" as the ancients believed. There is only one Atlas, formerly called in the native language "Divis;" and this name is to be applied to the foldings, or succession of crests, which form the division between the waters flowing to the Mediterranean and those which flow towards the Sahara lowland. The E. prolongation of the snow-covered W. summits of the Atlas, has a direction or strike from E. to W. Numerous projections from this chain run out into the sea, and form abrupt promontories; the first of these in a direction from E. to W., was HIPTI PHOIM, (HPIIIE PAROS, Polib. iv. 3, § 5: C. de Garde, or Rizel-Hamra; then STOBORUM (ΣΤΕΒΟΡΟΥΜ, Polib. L.C: C. de Fer, Riz Haddi); RUSCHIA; COLLOUS MAGNUS; at THEOS PHOIM, or the cove of Suda Ros, the SINS NUMIDICIS (ΝΟΜΙΔΙΚΩΣ, Polib. iv. 3, § 3), into which the rivers Ampsaga, Anius, and Smar discharged themselves, with the headland ICHNIHOL (ΙΧΝΗΟΛΗ), SALDAS (ΣΑΛΔΑΣ, Cocioton, Bougie, Ichniolaj); after passing IBERICUM and C. Mutij or Rizas Temenfisz, the bold shores of the Bay of Algiers, to which the ancients gave no name.

NUMIDIA.

The chief rivers were the Tusca, the boundary between Numidia and the Roman province, the RUBICATUS or UENS, and the AMPSAGA. The S. boundaries, towards the widely extended low region of the Sahara, are still but little known. From the researches of MM. Forner, Remon, and Carette, it appears that the Sahara is composed of several detached basins, and that the number and the population of the fertile oases is much greater than had been imagined. Of larger wild animals, only gazelles, wild ass. and ostriches are to be met with. The lion of the Numidian desert exists only in imagination, as that animal naturally seeks spots where food and water can be found. The camel, the "ship of the desert," was unknown to the ancient horsemen of Numidia; its diffusion must be attributed to the period of the Ptolemies, who employed it for commercial operations in the valley of the Nile, whence it spread through Cyrene to the whole of the N.W. of Africa, where it was first brought into military use in the train of armies in the times of the Caesars. The later introduction of this carrier of the desert, so important to the nomadic life of nations, and the patriarchal stage of development, belongs to the Muslim epoch of the conquering Arabs. The maritime tract of this country displays nearly the same vegetable forms as the coasts of Andalusia and Valencia. The olive, the orange-tree, the arborescent reicins, the Chamaerops humilis, and the date-tree flourish on both sides of the Mediterranean; and when the warmer sun of N. Africa produces different species, they are generally belonging to the same families as the European tribes. The marble of Numidia, "giacio antico," golden yellow, with reddish veins, was the most highly prized at Rome for its colour. (Plin. xxxv. i, xxxvi. 8.) The pavement of the Canitium at Rome consisted of slabs of this beautiful material. (Niebuhr, Lect. on Anc. Geog. vol. ii. p. 80.)

III. History and Political Geography.

The Romans became acquainted with these tribes in the First Punic War, when they served as the Carthaginian cavalry. After the great victory of Regulus, the Numidians threw off the yoke of Carthage. (Polib. i. 31; Dion. Fragm. Vet. xxiv. 4.) The wild array of their horsemen was the most formidable arm of Numidia, and with the half-caste Maures at their sides, and the date-tree flourishing on both sides of the Mediterranean; and when the warmer sun of N. Africa produces different species, they are generally belonging to the same families as the European tribes. The marble of Numidia, "giacio antico," golden yellow, with reddish veins, was the most highly prized at Rome for its colour. (Plin. xxxv. i, xxxvi. 8.) The pavement of the Canitium at Rome consisted of slabs of this beautiful material. (Niebuhr, Lect. on Anc. Geog. vol. ii. p. 80.)
NUMIDIA NOVA.

sensators, many of whom were bribed by Jugurtha, sought commissioners, who divided the kingdom in such a manner that Jugurtha obtained the most warlike and most productive portion of it. New quarrels broke out between the rival princes, when Jugurtha besieged Aderbal in Cirta, and, after compelling him to surrender, put him to a cruel death. War was declared against Jugurtha by Rome, which, after his death, his brother successively, was finished by his capture and death in B.C. 106. The kingdom was given to Hiempsal II., who was succeeded by his son Juha I., who in the civil wars allied himself to the Pompeians. On the death of Juha I., B.C. 46, Numidia was made a Roman province by Julius Caesar, who put it in the hands of Sallust, the historian. A.D. 39, Caligula changed the government of the province, giving apparently, co-ordinate powers to the proconsul and the legatus. [See the article ÁFRICA, Vol. i. p. 70, where the arrangements are fully described.] The "legatus Aug. pr. pr. Numidiae" (Orelli, Inscr. 3672) re-sided at Cirta, the capital of the old Numidian kingdom, which, since the time of Augustus, had acquired the "jun coloniae." Besides Cirta, there were many other "coloniae," of which the following names are known:—Succa; Thamucadiis; Aphrodissium; Calca; Tabraca; Thriga; Tyridium; Turquena; Thueretis; Medaura; Marsadera; Semitina; Ruside; Hippo Regius; Nileum; Lambræsa; Thelepte Lares. Bulla Regia was a "liberum oppidum." The number of towns must have been considerable as, according to the "Notitia," Numidia had in the fifth century 123 episcopal sees. (Marquardt, in Bekker's Handbuch der Röm. Alt. pt. iii. p. 229.) During the Roman occupation of the country, that people, according to their usual plan, drove several roads through it. Numerous remains of Roman posts and stations, which were of two kinds, those which secured the roads, and others which guarded the estates at some distance from them, are still remaining (London Geog. Journ. vol. viii. p. 53); and such was their excellent arrangement that, at first, one legion, "Illa Aug.," to which afterwards a second was added, "Macriana liberaTrix" (Tac. Hist. i. 11), served to keep the African provinces secure from the incursions of the Moorish tribes. The long peace which Africa enjoyed, and the flourishing state to which it was raised, had converted the wild Numidian tribes into peace- ful peasants, and had opened a great field for Christian exertion. In the fourth century, Numidia was the chosen seat of the Domatian schism. The ravages of the Circumcellions contributed to that destruction, which was finally consummated by the Vandali invasion. Justinian sent forth his troops, with a view of putting down the Arians, more than of winning new provinces to the empire. The work was a complete one; the Vandals were exterminated. Along with the temporary rule of Constantineple, the native population of Africa reappeared. The most signal victory of the cross, as it appeared to that generation, prepared the way for the victory of the crescent a century afterwards. [E. B. J.]

NURSIA. [Africa, Vol. i. p. 71, a.]

NUMIDICA SINUS. [Numidia.]

NUMIDIO PLAT. (Nombrjog, Post.,; Nombrjog Plat.: Edn. Numistroenas), a town of Lucania, apparently near the frontiers of Apulia, near which a battle was fought between Hannibal and Marcellus, in B.C. 210, without any decisive result (Liv. xxvii. 2; Plut. Marc. 21). From the narrative of Livy, which is copied by Plutarch, it is clear that Numistri was situated in the northern part of Lucania, as Marcellus marched out of Samnium thither, and Hannibal after the battle drew off his forces, and withdrew towards Apulia, but was overtaken by Marcellus near Venusia. Pliny also enumerates the Numistrians (evidently the same people) among the municipal towns of Lucania, and places them in the neighbourhhood of the Volturnani. Hence it is certainly a mistake on the part of Ptolemy that he transfers Numistro to the interior of Bruttium, unless there were two towns of the name, which is scarcely probable. Cluverius, however, follows Ptolemy, and identifies Numistri with Nicestra in Calabria, but this is certainly erroneous (Plin. iii. 11. s. 15; Pol. iii. 1 § 74; Cluver Ital. p. 1519). The site conjunctly assigned to it by Romanelli, near the modern Merco, about 20 miles NW. from Potenza, is plausible enough, and agrees well with Pliny's statement that it was united for municipal purposes with Volceii (Buceio), which is about 12 miles distant from Merco (Romanelli, vol. i. p. 434). Some ancient remains and inscriptions have been found on the spot. [E. B. B.]

NURA. [Baleares, p. 574, a.]

NUMISIA (Numperia: Edh. Nurusius; Norcdo), a city of the Sabines, situated in the upper part of the valley of the Tiber, near the foot of the lofty group of the Apennines, now known as the Monti della Sibilla. The coldness of its climate, resulting from its position in the midst of high mountains, is celebrated by Virgil and Silius Italicus. (Virg. Aen. viii. 716; Sil. Ital. viii. 417.) The first mention of it in history is in the Second Punic War (n. c. 205), when it was one of the cities which came forward with volunteers for the armaments of Scipio. (Liv. xxviii. 45.) As on this occasion the only three cities of the Sabines mentioned by name are Nura, Reate, and Amteram, it is probable that Nura was, as well as the other two, one of the most considerable places among the Sabines. It was a municipal town under the Roman government (Orelli, Inscr. 3966; Plin. iii. 12. s. 17; Pol. iii. 1 § 55), and we learn that its inhabitants were punished by Octavian for their zealous adherence to the republican party, and the support they afforded to L. Antonius in the Persian War. (Suet. Aug. 12; Dion Cass. xlviii. 13.) It is said that, at the foot of the lofty group, the mother of the emperor Vespasian; and the monuments of her family existed in the time of Suetonius at a place called Vespasian, 6 miles from Nursia on the road to Spoletium. (Suet. Vesp. 1.) The "ager Nursius" is mentioned more than once in the Liber Colonarium (pp. 227, 257), but it does not appear that it ever received a regular colony. We learn from Columella and Pliny that it was celebrated for its turnips, which are also alluded to by Martial (Colom. x. 421; Plin. xviii. 13. s. 34; Martial, xiii. 20.) From its secluded position Nursia is not mentioned in the Itineraries, but there is no doubt that it continued to exist throughout the period of the Roman Empire. It became an episcopal see at an early period, and is celebrated in ecclesiastical history as the birthplace of St. Benedict, the founder of the first great monastic order. It is said that remains of the ancient walls still exist at Norcia, in the same massive polygonal style as those near Reate and Amteram (Petit-Radet, Ann. d. Inst. Arch. 1829, p. 51), but they have never been described in detail. [E. H. B.]

604
ravine spanned by a bridge, connecting the two parts of the town. (Strab. xiv. p. 650; Hom. Hygn. iv. 17; Plin. v. 29; Pol. v. 2, § 18; Hieroc. p. 659; Steph. Byz. s. v.) Tradition assigned the foundation of the place to three brothers, Athymbros, Athymbrodus, and Hydricus, who emigrated from Sparta, and founded three towns on the north of the Maced.; but in the course of time Nysa absorbed them all; the Nysaeans, however, recognized more especially Athymbros as their founder. (Steph. B. s. e. "Αθυμβρος; Strab. L. c.) The town derived its name from Nysa, one of the wives of Antiochus, the son of Seleucus (Steph. B. s. e. "Αρτάξεια), having previously been called Athymbra (Steph. B. s. e. "Αθυμβρα) and Pythopolis (Steph. B. s. e. Πυθοπόλις).

Nysa appears to have been distinguished for its cultivation of literature, for Strabo mentions several eminent philosophers and rhetoricians; and the geographer himself, when a youth, attended the lectures of Aristodemus, a disciple of Panætius; another Aristodemus of Nysa, a cousin of the former, had been the instructor of Pompey. (Strab. L. c.; Cic. ad Fam. xiii. 64.) Hierocles classes Nysa among the seats of Asia, and its bishops are mentioned in the Councils of Ephesus and Constantinople. The coins of Nysa are very numerous, and exhibit a series of Roman emperors from Augustus to Gallienus. The site of Nysa has been recognized by Chandler and other travellers at Sultan-hisar, above the plain of the Macedon, on a spot much resembling that described by Strabo; who also mentions a theatre, a forum, a gymnasium for youths, and another for men. Remains of a theatre, with many rows of seats almost entire, as well as of an amphitheatre, gymnasium, &c., were seen by Chandler. (Leake, Asia Minor, p. 248; Fellows, Discover. pp. 22, foll.; Hamilton, Researches, i. p. 534.) The country round Nysa is described as bearing evidence of the existence of subterraneous fires, either by exhalations and vapours, or by its hot mineral springs.

COIN OF NYSA IN CARIA.

2. A place in the district of Milyas in Pisidia, situated on the river Xanthus, on the south of Podaleara. (Pol. v. 3, § 7; Hieroc. p. 654, where the name is misspelled.)

3. A town in Cappadocia, in the district called Muriane, not far from the river Ialyis, on the road from Ancyra to Caesarea. (Pol. v. 7, § 8; it. Ant. pp. 505, 506; Hieroc. p. 659; Niceph. xii. 44.) Its site is now occupied by a village bearing the name of Nysa or Nyssa (Hamilton, Researches, ii. p. 263.)

NYSA (Νυσα). II. In Europe. 1. A village in Bœotia on Mt. Helicon. (Strab. ix. p. 405; Steph. B. s. v. Νυσα.)

2. A town in Thrace, in the district between the rivers Strymon and Nestus, which subsequently formed part of Macedonia. It is called Nyssos by Pliny. (Steph. B. s. e.; Plin. iv. 10, p. 17.)
3. In Eabota, where the vine was said to put forth leaves and bear fruit the same day. (Steph. B. c.)

4. In the island of Naxos. (Steph. B. s.v.)

OASES. [NYS]. [in Europe, No. 2.]

O.

OAENEUM, a town of the Penestae, situated on a road leading into the country of the Labaeites, which overlooked a narrow pass, formed by a mountain and the river AITASS. It was taken by Persians in the campaign of B. c. 169. (Liv. xiii. 19.)

OAEONES (Mela, iii. 6. § 8; Solin. 19. § 6) or OONAIE (Plin. iv. 13. a. 27), islands in the Baltic off the coast of Sarmatia, the inhabitants of which were said to live on the eggs of birds and wild cats.

OAEUS (Guar. Pind. ol. v. 25; Frascolari), a small river on the S. coast of Sicily, flowing beneath the walls of Camarina. (Camarina.) [E. B. B.]

OARACTA. [OYGIS].

OARUS. [RIA].

OASES ('Oaiaiai or Odaias, Strab. ii. p. 130, xvii. pp. 790—791; 'Aeiaii polii Aigistou, Steph. B. s.v.: Eth. Adaiai or Adaiai), was the general appellation among ancient writers given to spots of habitable and cultivable land lying in the midst of sandy deserts; but it was more especially applied to those verdant and well-watered tracts of the Libyan desert which connect like stepping-stones Eastern with Western and Southern Africa. The word Oasis is derived from the Coptic Owaath (mansio), a rest-place. (Peyron, Lexic. Ling. Copt. s. v.) Kant, indeed (Phys. Geog. vol. ii. pt. 1, p. 349), traces it, with less probability, to the Arabic Haua, a habitation, and Si or Zi a wilderness (comp. the Hebrew Ziph). Their physical circumstances, rather than their form, size, or position, constitute an Oasis; and the term is applied indifferently to kingless oasis Angila and Phazania (Peyzan) and to petty slips of pasture, such as the Oasis of El-Gerah, which is only four or five miles in circumference. The ancient writers described them as verdant islands, rising above the ocean of sand, and by their elevation escaping from being buried by it with the rest of the cultivable soil. Herodotus, for example (iv. 182), calls them koivai.

But, so far from rising above the level of the desert, the Oases are actually depressions of its surface, dints and hollows in the general bed of limestone which forms its basis. The bottom of the Oases is of sandstone, on which rests a stratum of clay or marl, and these retain the water, which either percolates to them through the surrounding sand, or descends from the edges of the limestone rim that encircles these isolated spots, like a buttress. Within these moist hollows springs a vegetation presenting the most striking contrast to the general barrenness of the encircling wilderness. Timber, of various kinds and considerable girth, wheat, millet, date and fruit trees, flourish in the Oases, and combined with their verdant pastures to gain for them the appellation of "the Islands of the Blest." (Herod. iii. 26.) Both commercially and politically, the Oases were of the greatest importance to Aethiopia and Aegypt, which they connected with the gold and ivory regions of the south, and with the active traffic of Carthage in the west. Yet, although these kingdoms lost no opportunity of pushing their empires or colonies eastward towards the Red Sea and the Regio Aromatum, there is no positive monumental proof of their having occupied the Oases, at least while under their native rulers. Perhaps the difficulty of crossing the desert before the camel was introduced into Aegypt — and the camel never appears on the Pharonic monuments — may have prevented them from appropriating these outposts.

The Persians, after their conquest of Aegypt in B. c. 523, were the first permanent occupants of the Oases. Cambyses, indeed, failed in his attempt to reach Ammonium (Sisach); but his successor Darius Hystaspis established his authority securely in many of them. At the time when Herodotus visited Aegypt, the Oases were already military or commercial stations, permeating Libya from the Red Sea to the Atlantic Ocean. Under the Ptolemies and the Caesars, they were garrisoned by the Greeks and Romans, and were the seats of a numerous fixed population as well as the resting-places of the caravans; under the persecutions of the Pagan emperors, they afforded shelter to fugitives from the magistrate; and when the church became supreme, they shielded heretics from their orthodox opponents.

The natural productions of these desert-islands will be enumerated under their particular names. One article of commerce, indeed, was common to them. Their alum was imported by the Aegyptians, as essential to their industries. The term Ammonium, according to Herodotus (ii. 180), contributed 1000 talents of alum towards the rebuilding of the temple at Delphi; and the alum of El-Kharjeh (Oasis Magna) still attracts and rewards modern speculators.

Herodotus describes the Oases as a chain extending from E. to W. through the Libyan Desert. He indeed comprehended under this term all the habitable spots of the Sahara, and says that they were in general ten days' journey apart from one another (iv. 181). But it is more usual to consider the following only as Oases proper. They are, with reference to Aegypt, five in number; although, indeed, Strabo (xviii. p. 1168) speaks of only three, the Great, the Lesser, and that of Ammon.

1. AMMONIUM (El-Sisach), is the most northerly and the most remote from the Nile. There seem to have been two roads to it from Lower Aegypt; for when Alexander the Great visited the oracle of Ammon, he followed the coast as far as Panaitonium in Libya, and then proceeded inland almost in a direct northerly line. (Arrian, Anab. iii. 4; Quint. Curt. iv. 33.) He appears, however, to have returned to the neighbourhood of Memphis by the more usual route, viz. a WSW. road, which passes the Natron Lakes [Nitria] and runs to Ternion, on the Rosetta branch of the Nile. (Dimitoli, Journey to the Temple of Jupiter Ammon.) There is some difficulty in understanding Herodotus's account of the distance between Thebes and Ammonium. He says that they are ten days' journey apart. (Renouil, Geogr. of Herod. vol. i. p. 577.) But the actual distance between them is 400 geographical miles; and as the day's journey of a caravan never exceeds twenty, and is seldom more than sixteen of these miles, double the time allowed by him — not ten, but twenty days — is required for performing it. Either, therefore, a station within ten days' journey of Upper Aegypt has been dropped out of the text of Herodotus, or he must intend another Oasis, or El-Sisach is not the ancient Ammonium. If we bear in mind, however, that the Greater Oasis (El-
Kharef) and the Lesser (El-Dakkel) were both accounted nomes of Aegypt, we may fairly infer that the ten days' journey to Ammonium is computed from one of them, i.e. from a point considered as the geographical centre. Now, not only does the road from Thébes to Ammonium lie through or beside the Greater and Lesser Oasis, but their respective distances from the extremities of the journey will give nearly the number of days required. For El-Kharef, the Great Oasis, is seven days' journey from Thébes; and thirty hours, or (15 x 2) nearly two days more, are required for reaching the Lesser Oasis; from whence to Ammonium is a journey of eight days, which, allowing two days for passing through the Oasis themselves, give just the twenty days required for performing the distance. There were two roads which led from Thébes to Oasis Magna. The shorter one bearing N. by Abydos, the other bearing S. by Lytopolis. For the former forty-two hours, for the latter fifty-two, were required, to reach the Great Oasis. (Caillaud, Voyage a Oasis de Thébes, 1813.) The Oasis of Ammonium is about six miles in length, and three in breadth. The soil is strongly impregnated with salt of a fine quality, which was anciently in great request, both for the preservation of the annual crops and the fine animal skins of the Persian kings. (Arrian, Anab. iii. 41.) But notwithstanding its saline ingredients, the ground is abundantly irrigated by water-springs, one of which, "the Fountain of the Sun," attracted the wonder of Herodotus, and ancient travellers generally (iv. 181; comp. Wilkinson, Mod. Egypt and Thébes, vol. ii. p. 338). It rises in a grove of dates, S. of the Temple of Ammon, and was probably one of those tepid springs, found in other Oases also, the high temperature of which is preserved, even when the temperature of the surrounding atmosphere is very low. A small brook running from this fountain flows soon into another spring, also arising in the date-grove; and their united waters run towards the temple, and, probably, because their ancient outlets are blocked up, end in a swamp. The vicinity of these streams confirms the statement of Herodotus, that in Ammonium are many wells of fresh water (iv. 181).

The early and high cultivation of this Oasis is still perceptible by the abundance of its dates, pomegranates, and other fruits. The dates are obtained in vast quantities, and are of very fine flavour. In favourable seasons the whole area of Ammonium is covered with this fruit, and the annual produce amounts to from 5000 to 9000 camel-loads of 300 pounds each. Oxen and sheep are bred in considerable numbers; but the camel does not thrive in Ammonium, probably because of the dampness of the soil. The inhabitants accordingly do not export their wool, but use it in weaving the caravans which convey them to Aegypt and the Mediterranean ports. (Minutoli, pp. 89, 90, 91, 174, 175, &c.) The present population of this Oasis is about 8000; but anciently, when it was at once the seat of an oracle, the centre of attraction to innumerable pilgrims, and one of the principal stations of the Libyan land-trade, the permanent as well as the casual population must have been much more considerable. The ruins of the Temple of Ammon are found at Canebha, sometimes called Raphata, and the Cuneiform Temple Ammon (Travels, vol. i. p. 106), about 2 miles from the principal village and castle. Its style and arrangement bespeak its Egyptian origin and its appropriation to the worship of Osiris, the ramheaded god of Thébes; yet the buildings (the oracle itself was much older) are probably not earlier than the Persian era of Aegypt. The remains of the Ammonium consist of two parts—a pronao and a seko, or sanctuary proper. The walls are entirely composed of hewn stones, obtained from quarries about 2 miles off. The surface of the temple, both within and without, was covered with hieroglyphics emblematic of the story and transfigurations of Zeus-Ammon. The plain surface of the walls was highly coloured; and though many of the sculptures are much defaced, the blue and green colours are still bright. The temple itself was of moderate size, and the curtailage or enclosure of the whole is not more than 70 yards. The palace of Kharef is 54 ins. re-

The population of this Oasis was, in the time of Herodotus (i. 32), partly Egyptian and partly Aethiopian,—both nations agreeing in their devotion to Zeus-Ammon. The Greeks, indeed, who must have become acquainted with Ammonium soon after their colonisation of Cyrene in the seventh century B.C., put in their claims to a share, at least, in its foundation. According to one tradition, Danaus led a colony thither (Diodor. xvii. 50); according to another, it was the inhabitants and the temple, which, at that date, was the most ancient oracle of Greece. (Herod. ii. 54.) The name of the king, Eteocles, mentioned by Herodotus in his story of the Nasamones, if the form be correctly given, has also a Greek aspect. (Herod. ii. 32.) There can be no doubt, however, that Ammonium was peopled from the East, and not by colonists from Europe and the North.

At the present day El-Siweh contains four or five towns, of which the principal is Kharef; and about 2 miles north of Kharef is the ancient fort named Kharef, old enough to have been occupied by a Roman garrison. (Minutoli, pp. 165—167.) It is governed by its own chiefs or shieks, who pay a small annual tribute to the vicerey of Aegypt. This Oasis, though known to Arabian writers of the thirteenth century A.D., was first reopened to Europeans by the travels of Browne and Hornemann in the last century.

2. Proceeding in a S.W. direction, and approaching nearer to Egypt, we come to Oasis and El-Farafra, of which the ancient name is not recorded. It lies nearly N. of Oasis Minor, at a distance of about 80 miles, and served as an intermediate station both to Ammonium and Oasis Magna.

3. Oasis Minor (Oasis mpas), Ptol. iv. 5, § 37; &c. Strab. xvii. p. 813; O. Minor, Not. Imp. Or. c. 143: the modern El-Dakkel, was situated SE. of Ammonium, and nearly due W. of the city of Oxyrynychus and the Arinointe nome (El-Fayyum), lat. 29° 10' N. Like El-Siweh, the Lesser Oasis was one of the stations of the caravan route; and it was known to the Romans when it was celebrated for its wheat; but now its chief productions are dates, olives, pomegranates, and other fruits. It has a temple and tombs of the Ptolemaic era. The Lesser Oasis is separated from the Greater by a high calcareous ridge, and the station between them was probably at the little temple of Ain Amour. (Caillaud, Minutoli, &c.) Oasis Minor seems to be the same with that entitled by some Christian writers (e. g. Palladius, 1st. Chrest. p. 152) Umma in El-Farafra, and "Oasa, ubi gentem Maxorum" (Joann. in Ptol. Patrum, c. 12), the Masayi of the Regio Marmarica being the people indicated.

4. Oasis Trinithros, or the Oasis of El-Ba-
OASES.

CHIRR, is the nearest of these desert-islands to the frontiers of Egypt, and nearly due N. from Oasis Magna. It lies in lat. 28°, a little below the parallel of the city Hermopolis in Middle Egypt. There is a road to it from Fyrum, and its principal village is named Zabou. The soil is favourable to fruit; but there are no traces of its permanent occupation either by the Egyptians or the Romans. Its ancient monuments are a Roman triumphal arch, and the ruins of an aqueduct and hypocaust, containing sarcophagi. In this Oasis was made the discovery of some ancient arsenean wells.

The description of the wonders of the Oases by an historian of the fifth century A. D. (Olympiodor. ap. Phot. Bibl. p. 61, ed. Bekker) leaves no doubt of the existence of such artificial springs; but as their construction was unknown to the Greeks and Romans no less than to the Egyptians, the secret of it was probably imported from the East, like the silkworm, at some period anterior to A. D. 400. Several of these wells have recently been discovered and reopened (Russegger, Reisen, vol. ii. pp. 284, 399); and the depth disclosed does not materially differ from that mentioned by Olympiodorus (supra), viz., from 200 to 500 cubits. This far exceeds the bore of an ordinary well; and the spontaneous rise of the water in a rushing stream shows that no pumping, or machinery, was employed in raising it, and that it was collected by a siphon or silkworm, at some depth below the surface. In this Oasis, also, abun dons. (Kenrick, Anc. Egypt, vol. i. p. 74.)

5. OASIS MAGNA (Odaiis merd.p., Plut. iv. 5. § 27; ἡ περίπατη, Strab. xvi. p. 813; ἡ ἀσω, Olympiol. ap. Phot. Bibl. p. 212, ed. Bekker), the Great Oasis, sometimes denominated the Oasis of Thebes, as its centre lies nearly opposite to that city, is called El-Kharga by the Arabs, from the name of its principal town. This, also, is the πρώτη Odaeis and ἡ πρώτη ἀνάπηρη of Herodotus (iii. 265), and is meant when the Oases are spoken of indiscriminately, as by Josephus (c. Apion. ii. 3). In the hieroglyphics its name is Heb, and in the Notitia Imperii Orient. (c. 143) its capital is termed Hibo. The Oasis Magna is distant about 6 days' journey from Thebes, and 7 from Abydos, being about 90 miles from the western bank of the Nile. It is 80 miles in length, and from 8 to 10 broad, stretching from the lat. 23° N. to the lat. of Abydos, 26° N. Anciently, indeed, owing to more extensive and regular irrigation, the cultivable land reached further N. The high calcareous ridge, which separates it from the Lesser Oasis, here becomes precipitous, and girds the Oasis with a steep wall of rock, at the base of which the acacia of Egypt and the dhoom palm form thick woods. The Great Oasis must have received a Greek colony at an early period, since Herodotus (iii. 28) says that the "city Oasis" was occupied by one of the Aeschirian tribe, who had probably settled there in consequence of their alliance with the Greek colonists of Cyrene (Id. iv. 152). Yet none of its numerous monuments reach back to the Pharaonic era. It was garrisoned by the Persians; for the names of Dareius and Anxhractes are inscribed on its ruins (Wilkinson, Mod. Egypt and Thebes, vol. ii. p. 367); but the principal buildings which remain belong to the Macedonian, if not to the Roman era. Its great temple, 468 feet in length, was dedicated to Amun-Ra. The style of its architecture resembles that of the temples at Hermouthis and Apollinopolis Magna. Like other similar spots in the Libyan Desert, the Great Oasis was a place of

OBRINGA. 439

banishment for political offenders (Dig. xlvi. tit. 22. l. 7. § 4), and for Christian fugitives from the pagan emperors. (Socrat. ii. 28.) At a later period it abounded with monasteries and churches. The Greater and the Lesser Oases were reckoned as forming together a single nome, but by the Roman emperors were annexed to the prefecture of the Thebaid. (Ptolemy, v. 9. a. 9, iu. Oschatro, Leg. 7. § 6, of νῖμφας προογάφαται αἱ διὸς Oasiotai; see Hookins, Visit to the Great Oasis; Lappes, Mém. sur les Oasis; Ritter, Erkunde, vol. i. p. 964.)

OAXES, OAXUS. [AXERI.

OBLA (Ośla, Ptol. ii. 5. § 9), a town of the Vettiones in Hispania Tarraconensis, the site of which is difficult to determine, but it is supposed to be the modern Aráis. (Hieron. de Vit. Ill. c. 121, and Flurea, Esp. S. xiv. 3, ap. Uebert, vol. ii. pt. 1. p. 431.) Rechard, however, identifies it with Oive.

T. H. D.

OBLAE. [EAMARE.

OBLIMUM, a place in Gallia Narbonensis, written Obluma in the Table, on a road which passes through the Tarrentaia to the pass of the Alpis Graia, or Little St. Bernard. The site is uncertain, but the distance is marked ill. from Ad Publicanos. [TURRESAN.] G. L.

OBLUVIINES, FULUMEN, called also Apasac, Linius, Liniaco, &c. [GALLAECA, Vol. i. p. 933.] OBOCA (Ośla, Ptol. ii. 2. § 8), a river on the W. coast of Ireland, now the Boyne.

T. H. D.

OBRIMAS, a river of Phrygia, an eastern tributary of the Maeander, had its sources, according to Livy (xxxviii. 15), on the eastern side of Mount Cadmus, near the town of Aspendos, and flowed in the neighbourhood of Apaneza Ciphus (Ptol. v. 29.) This is all the direct information we possess about it, but from Livy's account of the expedition of Manlius, who had pitched his camp there, when he was visited by Seleucus from Apatmus, we may gather some further particulars, which enable us to identify the Obrimas with the Sundakkli Chai. Manlius had marched direct from Sagallasus, and must have led his army through the plains of Dombat, passing in the rear of Apaneza. Thus Seleucus would easily hear of the consul being in his neighbourhood, and, in his desire to precipitate him, would have started after him and overtaken him the next day (Turacco die.) Manlius, moreover, at the sources of the Obrimas required guides, because he found himself hemmed in by mountains and unable to find his way to the plain of Metropolis. All this agrees perfectly well with the supposition that the ancient Obrimas is the modern Sundakkli Chai (Hamilton, Researches, ii. p. 172, &c.). Franz (Franz Inschriften. p. 37), on the other hand, supposes the Kodaka Chai to correspond with the Obrimas. Arundell (Dissert. in Asia Minor. i. p. 231), again, believes that Livy has confounded the sources of the Marsyas and Maeander with those of the Obrimas.

L. S.

OBRINGA (Obringa). Ptolemy (ii. 10. § 17) makes the Obringas river the boundary between Lower and Upper Germany. The most southern place in Lower Germany according to his map is Moguntiacum (Monawandac), Mainz. He places in the following order the cities of Upper Germany, which are south of the Obringas — Noemagnus (Sperius), Borbetomagis (Forum), Argentoratum (Strassburg), and so on. But Hori is north of Sperius; and the relative position of these two places is therefore wrong in Ptolemy. He has also placed
Mogontiacum in Lower Germany, but it was the chief place of Upper Germany. Ptolemy has not mentioned the Mosella (Mosel), and some geographers have assumed that it is the Oiringus; but if this is so, the position of Mainz is wrong in Ptolemy, for Mainz is south of the Mosel. D'Aubucq observes that, according to the Notitiae, in the district of the general who resided at Mainz comprehended Antunmuc or Andemach, on the Rhine, which is below the junction of the Mosel and the Rhine. If Andemach was always in the Upper Germany, and if the boundary between the Lower and the Upper Germany was a river-valley, there is none that seems so likely to have been selected as the rugged valley of the Ahr, which lies between Bonn and Andemach, and separates the north from the hilly country on the south.

OBULCO ("Οὐκυλος", Plut. ii. 4. § 4), called by Pliny (ii. 1. s. 3) Obuleula, and by Arrian (Hist. 68) "Οὐκυλος, a town of Hispania Baetica, on the road from Hispania to Emerita and Corduba (Itin. Ant. pp. 413, 414), now Moncorta. Some ruins are still visible (Caro, Ant. Hist. iv. 19; Florot, Esp. 8. xii. p. 382).

OBULCO ("Οὐκυλος", Strab. iii. pp. 141, 150; "Οὐκυλακις", Plut. ii. 4. § 11); "Οὐκυλακις, Steph. B. s. r. s.), called by Pliny (iii. 1. s. 3) Obuleulo Pontificenses, a Roman municipium of Hispania Baetica, in the jurisdiction of Corduba, from which it was distant about 300 stadia according to Strabo (p. 160). It had the privilege of a mint (Florot, Med. ii. p. 496, iii. p. 101; Mouret, Suppl. i. p. 11; Sestini, p. 71; Gruter, Inscrip. pp. 105, 458; Muratori, p. 1032. 4). It is commonly identified with Forcona. [T. H. D.]

COIN OF OBULCO.

OBULENSII ("Οὐκυλεντσιος", Plut. iii. 10. § 9), a people of Moesia Inferior, on the S. side of the mouth of the Danube. [T. H. D.]

OCLEA or OCALEA ("Οκλεια, Οκελα: Ρθ. Οκελιος"), an ancient city of Bovetia, mentioned by Homer, situated upon a small stream of the same name, at an equal distance from Halicarnassus and Alikonemus. It lay in the middle of a long narrow plain, bounded on the east by the heights of Halicarnassus, on the west by the mountain Taphheuss, on the south by a range of low hills, and on the north by the lake Copais. This town was dependent upon Halicarnassus. The name is probably only a dialectic term of Ochelai. It is identified by several squared blocks on the right bank of the stream. (Itin. ii. p. 501; Hyman. Apoll. 242; Strab. ix. p. 410; Apollod. ii. 4. § 11; Plin. iv. 7. s. 12; Steph. B. s. r. s.; Leske, Northern Greece, vol. ii. p. 205, seq.; Forchhanner, Hellenica, p. 184.)

OCEANUS. [ATLANTICUM MARE.]

OCEANUS SEPTENTRIONALIS, the northern portion of the waters of the all-circling Ocean.
between the Holder and the Cimbrian peninsula; but does not suit the Baltic, in which Timnaeus places the island Baltia. (Plin. xxvii. 11.) Abelius, a day's journey from an "aestuarium," cannot therefore be the Kurische Nehrung. Pytheas probably sailed to the W. shores of Juditani. Tacitus ( Germ. 45), not Pliny, is the first writer acquainted with the "estuarium" of the Baltic shores, in the head of the Aestyans and the Veneti. The more active, direct communication with the Samland coast of the Baltic, and with the Aestyans by means of the overland route through Pannonia by Carpathium, which was opened by a Roman knight under Nero (Plin. l. c.), appears to have belonged to the later times of the Roman Caesars. The relation between the Russian coast, and the Milestian colonies on the Euxine, are shown by the evidence of fine coins, which probably struck more than 400 years B.C., which have been found in the "Netz district."

(Humboldt, Cosmos, vol. ii. note 171, trans.) A curious story is related by Cornelius Nepos (Fragm. vii. 1, ed. Van Staveren; comp. Mela, iii. 5. § 8; Plin. ii. 67) of a king of the Boi, others say of the Suyi, having given some shipwrecked dark-coloured men to Q. Metellus Celer when he was Proconsul of Gaul. These men, who are said to have been of the story, most probably natives of Labrador or of Greenland, who had been driven on these coasts by the effect of currents such as are known now in these seas, and violent NW. winds. [E. B. J.]

OCELIS (Οκελίς ἐκωτίων), a port of Arabia Felix, placed by Ptolemy (i. 7, § 4, i. 13, § 11, vi. 7, § 7, viii. 22, § 7) a little to the north of the straits of the Red Sea (Bab-et-Mandeb). Its geographical position, according to his system, was as follows: its longest day was 121 hours. It was 1° east of Alexandria, between the tropics, 52° 30' removed from the summer tropic. It is placed by the author of the Periplus 300 stadia from Musa, and is identical with the modern Ghalla or Cella, which has a bay immediately within the straits, the entrance to which is two miles wide, and its depth little short of three. (Vincent, Periplus, p. 288; Forster, Arabia, vol. ii. p. 148.) Ocelis, according to the Periplus, was not so much a port as an anchorage and watering-place. It belonged to the Elisari, and was subject to the Cholodes. (Hubison, Geog. Min. tom. i. p. 14; Ptol. vi. 7, § 7.) The same author places it 1200 stadia from Arabia Felix (Aden); but the distance is two short. (Gosseim, Recherches, tom. iii. p. 9.) [G. W.]

OCHELIDURUM, a town of the Vaecei in Hispania Tarraconensis, on the road from Emerita to Caesaraugusta (Ant. lnn. pp. 434, 439); variously identified with Zumaia, Toro, and Femoselle, "estuaria" of the Baltic coast. [T. H. D.]

OCELUM (Οκελω, Uceua), a town of Caesalpin Gaul, mentioned by Caesar as the last place in that province ("ceterioris provinciae extremum," Caes. B. G. i. 10) from whence he had to fight his way through the independent tribes which held the passes of the Alps. In Strabo's time Ocelum was the frontier town of the kingdom of Cottius towards the province of Caesalpin Gaul (Strab. iv. p. 179); and it was frequented by the people on a principal road led over the pass of the Mont Genèvre by Scenogomnium (Sezanne), Brigantum (Briantown), and Eburodunum (Evron), to the territory of the Vexontii. D'Anville has clearly shown that Ocelum was at Uceua, a village in the valley of Venette, and not, as supposed by previous writers, at Oute in the valley of the Dora. (D'Anville, Notice de la Gaule, p. 500.) [E. H. B.]

OCELUM (Οκελω, Ptol. ii. 5, § 9). 1. A town of the Vettusenses in Lusitania, whose inhabitants are called by Pliny (iv. 22. s. 35) Ocelenses and Lucenses. Identified with Calabria, by others with Femoselle or Ciudad Rodrigo. (Ucker, vol. ii. pt. 1, p. 431.)

2. A town of the Callaeci Lucenses in Gallaecia (Ptol. ii. 6. § 23).

3. (Οκελων ἄγωρον, Ptol. ii. 3, § 6), a promontory on the NE. coast of Britannia Romana, and of the mouth of the river Abus or Humber; probably Spurn Head. [T. H. D.]

OCHÆ. [Τηρανα.] OCHOSANES (Οχοσάναις) or OCHTHOMANES, a small river of Paphlagonia, falling into the bay of Armea, a little to the north of Sinope. (Marcian. Heracl. p. 72; Anonym. Peripl. Pont. Enuz. p. 7.) This is probably the same river which Scylax (p. 32) calls Ocheransea. [L. S.]

OCHRS, a place in Cappadocia. (It. Ant. p. 202.) Ptolemy (v. § 12) mentions a place Ologra or Olega, in the district of Chasmannene in Cappadocia, between the river Halys and Mount Argaeus, which is possibly the same as the Ochras of the Antonine Itinerary. [L. S.]

OCHUS (Οχυς, Strab. xi. p. 509; Ptol. vi. 11, §§ 2, 4, 7). A town of Central Asia, which has been attributed to the provinces of Hyrcania and Bactriana by Strabo and Ptolemy respectively, as flowing through both. It took its rise on the NW. side of the Paropamisus (or Hindu-Kisim), and flowed in a NW. direction through part of Bactriana towards the Caspian Sea, and parallel with the Oxus. Pliny makes it a river of Bactriana, and states that it and the Oxus flow from opposite sides of the same mountain (vi. 16, § 18). There can be no reason for doubting that it is represented by the present Tedjin. It is clear that in this part of Asia all Ptolemy's places are thrown too much to the east by an error in longitude. (Wilson, Ariana, p. 145.) [V.]

OCICUS MONS (Οκικής, Arrian, Indic. c. 47, a mountain in Persia, mentioned by Arrian, supposed by Forbiger to be that now called Nakhila. [V.]

OCIL (Οκιλῆς, Appian, B. Hisp. 75), a town of Hispania Baetica, probably near Ilipe or Ilipe, besieged by the Lusitanians, and relieved by Munius (Ucker, vol. ii. pt. 1, p. 372). [T. H. D.]

OCILIS (Οκιλῆς, Appian, B. Hisp. c. 47, sqq.), a town of the Celtiberi, which served the Romans as a magazine in the time of the Celtiberian war. It was probably in the SE. part of Celtiberia and identified by some with Oviana. [T. H. D.]

OCINARUS (Οκιναρός), a river on the W. coast of Brittium, mentioned only by Lyceplorion (Alex. 729, 1009), who tells us that it flowed by the city of Terina. It is generally supposed to be the same with the Salatus of the Itineraries (the modern Saruta); but its identification depends upon that of the site of Terina, which is very uncertain. [Terina.]

OCITIS (Οκίτης, Ptol. ii. 3, § 31), an island on the N. coast of Britain, and NE. from the Orkneys, probably Ronnolda. [T. H. D.]

OCRA MONS (Οκρα), the name given by Strabo to the lowest part of the Julian or Carnic Alps, over which was the pass leading from Aquileia to Aemona (Laibach), and from thence into Pannonia.
and the countries on the Danube. (Strab. ii. p. 207, vol. p. 314.) The mountain meant is evidently that between Aichberg and Lagnach, which now in all ages has been the principal line of communication from the Danube and the valley of the Save with Italy.

[Note: E. H. B.]

OCTODURUM (i.e. *Octoduranus, Strab. *Octodura, Steph. B. *Octoduranus, Ptol.: *Octoduranus, Cepr. *Octodurum, Cepr.); a considerable town of Umbria, situated on the Vr. Flaminia, near the left bank of the Tiber. It was the southernmost town of Umbria, and distant only 44 miles from Rome. (Itin. Hier. p. 613; Westphal, *Rome, Kamp. p. 145.) We learn from Livy that Orculum was a native Umbrian city, and in n. c. 308 it appears to have separated from the other cities of the confederacy, and concluded an alliance with Rome. (Liv. iv. 41.) This is the only notice that we find of it prior to the conquest of Umbria by the Romans; but after that period it figures repeatedly in history as a military station. From these circumstances, it was here that in B. C. 217 Fabius Maximus took command of the army of Scerillus, after the battle of the lake Trasimene. (Id. xxii. 1.) In the Social War Orculum suffered severely; and, according to Florus, was laid waste with fire and sword (Flor. iii. 18, § 11); but it seems to have quickly recovered, and in Strabo's time was a considerable and flourishing town. It is mentioned in Tacitus as the place where the army of Vespasian halted after the battle of the Vitellian legion at Narmania (Tac. *Hist. iii. 75). From its position on the Flaminian Way it is repeatedly mentioned incidentally under the Roman Empire (Plin. *Ep. vi. 25; Amm. Marc. xvi. 10. § 4, xxviii. 1, § 22); and it is evident that it was indebted to the same circumstance for its continued prosperity. The name is found in Pliny and Ptolemy, as well as in the Itineraries; and its municipal importance down to a late period is attested also by inscriptions, in some of which it bears the title of "splendidissima civitas Orciculana." From these combined, with the still extant remains, it is evident that it was a more considerable town than we could have inferred from the accounts of ancient writers (Plin. iii. 5 s. 9, 14 s. 19; Ptol. iii. 1, § 54: *Itin. Ant. pp. 125, 311; Grueter, *Ital. n. p. 422, 8, 9; Orell. *Ital. 3852, 3857; Marini, *Atti del Fratelli Arculi, vol. ii. p. 582). The site of the ancient city is distant about 2 miles from the modern village of Orciolo, in the plain nearer the Tiber. The ruins of ancient edifices are, in their present state, of but little interest; but excavations which were carried on upon the spot in 1780 brought to light the remains of several public buildings on a splendid scale, the plan and arrangement of which could be traced with little difficulty; among these were a Basilica, a theatre, an amphitheatre, Thermenæ, and several temples, besides other buildings, of which the purpose could not be determined. The beauty of many of the architectural decorations and works of art discovered on this occasion (especially the celebrated mosaic floor now in the Vatican, and the colossal head of Jupiter in the same museum) prove that Orculum must have been a municipal town of no ordinary splendour. (Westphal, *Römische Kunstgen., p. 144; Gaettani, *Monumenti Inediti, 1784, where the results of the excavation are described in detail and accompanied with a plan of the ancient remains.) Its proximity to Rome probably caused it to be resorted to by wealthy nobles from the city; and as early as the time of Cicero we learn that Julo had a villa there. (Cic. *pro Mil. 24.) The period of the destruction of the ancient city is uncertain. In a. D. 413 it witnessed a great defeat of Heracleans, Count of Africa, by the armies of Honorius (Hist. Chron. ad ann.), and it is mentioned as an episcopal see after the fall of the Western Empire. But the circumstances that led the inhabitants to migrate to the modern village of Orciolo, on a hill overlooking the Tiber, are not recorded. The corruption of the name appears to have commenced at an early date, as it is written *Urtico from the 4th century, and in many MSS. of the classical authors. [Note: E. H. B.]

OCTODURUM. [Damnonium.]

OCTODURUM (Ocriculum, or Martigny, as the French call it), is in the Swiss canton of Wallis or Valais, on the left bank of the Rhone, near the mouth of the river Yenne, on the shores of the lake of Geneva. The Drance, one branch of which rises at the foot of the Great St. Bernard, joins the left bank of the Rhone at Martigny. The road over the Alp from Martigny ascends the valley of the Drance, and the summit of the road is the Alp Pennina, or Great St. Bernard. This pass has been used from a time older than any historical records. When Caesar was in Gallia (n. c. 57—56) he sent Servius Galba with the twelfth legion and some cavalry into the country of the Nantuates, Veragri, and Sedunii. His purpose in sending this force was to open the pass over the Alps, the pass of the Great St. Bernard, "by which road the merchants had been used to travel at great risk, and with the payment of great tolls." (B. G. iii. 1.) The people of the Alps allowed the Italian merchants to pass, because if they plundered them the merchants would not come; but they got as much out of them as they could. Galba, after taking many strong places, and receiving the submission of the people, sent off two cohorts into the country of the Nantuates, and with the remaining cohorts determined to winter "in a town of the Veragri named Octodurus, which town being situated in a valley with no great extent of level ground near it, is confined on all sides by very lofty mountains." There is some level ground at Martigny, and the valley of the Rhone at this part is not very narrow. Caesar says that the town of Octodurus was divided into parts by a river, but he does not mention the river's name. It is the Drance. Galba gave one part of the town to the Galli to winter in, and assigned the other to his troops. He fortified himself with a ditch and rampart, and thought he was safe. He was, however, suddenly attacked by the Galli before his defences were complete or all his supplies were brought into the camp. The Romans obstinately defended themselves in a six hours' fight; when, seeing that they could no longer keep the enemy out, they made a sortie, which was successful. The Romans estimated the Galli at more than 50,000, and Caesar says that more than a third part were destroyed. The slaughter of the enemy was prodigious, which has been made an objection to Caesar's veracity, or to Galba's, who made his report to the commander. It has also been objected that the valley is not wide enough at Martigny to hold the 30,000 men. There may be error in the number that attacked, and also in the number who perished.
But it is not difficult to answer some of the objections made to Caesar's narrative of this flight. Roesch has answered the criticism of General Warr-ney, who, like many other of Caesar's critics, began his work by misunderstanding the author. (Roesch, Commentar über die Commentarien, öf. p. 220, Helle, 1783.) After this escape Galba prudently withdrew his troops, and marching through the country of the Nautantes reached the land of the Allobroges, where he wintered.

The position of Octodurus is determined by Caesar's narrative and by the Antonine Itin. and the Tab. Plin. (viii. 748), which is described as being near Odessus. (St. Martin, ap. Le Beau, Bas Empire, vol. i. p. 447; Schafarik, Slav. Alt. vol. ii. p. 217.) The autobiographical coins of Odessus exhibit "types" referring to the worship of Serapis, the god imported by Ptolemy into Alexandria, from the shores of Pontus. The series of imperial coins ranges from Trajan to Solomon, the wife of Gallicanus. (Eckhel, vol. ii. p. 36; Boeche, vol. iii. p. 51; Monney, Descri des Méd. vol. i. p. 395, Suppl. vol. ii. p. 350.) [E.B.J.]

- -

**ODRYSAE.**

- -

**ODOMANTI** (Ωδομάντιος, Herod. viii. 112; Thuc. ii. 101, v. 6; Steph. B. s. v.; Odomantes, Plin. iv. 18), a Paeanian tribe, who occupied the district, called after them, **ODOMANTIS** (Οδομάντιος, Steph. B.) This tribe were settled upon the whole of the great mountain Orbelus, extending along the NE. of the lower Strymonic plain, from about Mele-rika and Demetrios to Zikhna inclusive, where they bordered on Pangaesus, the gold and silver mines of which they worked with the Pieres and Satriae. (Herod. l. c.) Secure in their inaccessible position, they defied Megabazus. (Herod. v. 16.) The NW. portion of their territory lay to the right of Stilaeus as he crossed Mt. Cucine; and their general situation agrees with the description of Tintedylides (ii. 101), according to whom they dwelt beyond the Strymon to the N., that is to say, to the N. of the Lower Strymon, where, alone, the river takes such a course to the E. as to justify the expression. Cleon invited Polies, their chieftain, to join him with as many Thracian mercenaries as could be levied. (Thuc. v. 6; Aristoph. Acharn. 156, 164; Snell. s. v. οδομαντιος: Leake, Northern Greece, vol. iii. pp. 210, 306, 465.) [E. B. J.]

**ODOMANTIS.** [Sophine.]

**ODRYSAE** (Οδρύσατιος), a people seated on both banks of the Artius, a river of Thrace, which discharges itself into the Helorus. (Herod. iv. 92.) Their territory, however, must undoubtedly have extended considerably to the W. of the Artius; since Pliny (iv. 18) informs us that the Helorus had its source in their country; a fact that is corroborated by Ammianus Marcellinus (xvi. 4, 10). They appear to have belonged to that northern swarm of barbarians which invaded Thrace after the Trojan War; and their names are often found interwoven in the ancient myths. Thus the Thracian singer Thamyris is said to have been an Odrysian (Paus. iv. 33, § 4); and Orpheus is represented as their king. (Conon, ap. Phot. p. 140.)

A rude and barbarous people like the Odrysians.
cannot be expected to have had many towns; and in fact we find none mentioned either by Thucydides or Xenophon. The first of their towns recorded is Philipopolis, founded by Philip II. of Macedonia, as there will be occasion to recall in the sequel; and it may be presumed that all their towns of any importance were built after they had lost their independence.

The name of the Odrysae first occurs in history in connection with the expedition of Dareius Hydrasapes against the Scythians. (Herod. l. c.) Whilst the Persians oppressed the southern parts of Thrace, the Odrysae, protected by their mountainous country, retained a degree of independence; and it is probable which they thus acquired enabled Teres to incorporate many Thracian tribes with his subjects. He extended his kingdom to the Euxine in spite of a signal defeat which he sustained in that quarter from the Thyni (Xen. Anab. vii. 2, § 22); and the dominion of his son Statelles embraced the greater part of Thrace; having been bounded on the N. by the Danube, and extending from Abdera on the W. to the Euxine on the E. (Thucyd. ii. 96—98.) Indeed, it is more than probable that this latter dominion was eagerly coveted both by the Athenians and Macedonians at the breaking out of the Peloponnesian War. (Thucyd. ii. 29; Herod. vii. 137; Aristoph. Ach.arn. 136—150.) The expedition which he undertook in b. c. 429, at the instance of the Athenians, and of Amyntas, pretender to the throne of Macedonia, against Perdiccas II., the reigning sovereign of that country, is also a striking proof of the power of the Odrysians at that period; as the army which Statelles assembled on that occasion amounted, on the lowest estimate, to 150,000 men, of which one-third were cavalry. (Thuc. ii. 98; Diod. xii. 50.) For the latter force, indeed, the Odrysians were renowned, and the extensive plains of the Hebrus afforded pasture for an excellent breed of horses. (Thuc. l. c.; Polyb. xxiv. 6; Liv. xlv. 42.) With this army Statelles overran Chalcedea, Amynas, Crestonion, and Mygdonia; but the non-appearance of the Athenian contingent, coupled with the approach of winter, obliged him to retire without effecting much成效. In b. c. 424 Statelles fell in an engagement with the Triballi, and was succeeded by his nephew Statelles I. Under his reign the Odrysians attained the highest pitch of their power and prosperity. Their yearly revenue amounted to 400 talents, besides an equal sum in the shape of presents and contributions. (Thuc. ii. 97, iv. 101.) But from this period the power of the Odrysae began sensibly to wane. After the death of Seuthes we find his dominions divided among three sovereigns, Medocus, or Ammedocus, who was most probably his son, ruled the ancient seat of the monarchy; Macabeas, brother of Medocus, reigned over the Thyni, Molae, and Trasimicus, whilst the region above Byzantium called the Delta was governed by Teres. (Xen. Anab. vii. 2, § 32, vii. 5, § 1.) It was in the reign of Medocus that Xenophon and the Ten Thousand passed through Thrace on their return from the Persian expedition, and helped to restore Seuthes, son of the exiled Macedons, to his dominion. We gather from this writer that Seuthes exercised only a subordinate power under Medocus, with the title of Archon, or governor, of the Coast (vii. 3, § 16). Subsequently, however, he appears to have asserted his claim to an independent sovereignty, and to have waged open war with Medocus, till they were reconciled and gained over to the Athenian alliance by Thrasybulus. (Xen. Hell. iv. 8, § 25; Diod. xiv. 94.) When we next hear of the Odrysians, we find them engaged in hostilities with the Athenians respecting the Thracian Chersonese. This was under their king Cotys I., who reigned from n. c. 382 to 333. It was in the reign of the same monarch (n. c. 376) that the Triballi invaded their territories, and penetrated as far as Abdera. (Diod. xv. 36.) When Cersobleptes, the son and successor of Cotys, ascended the throne, the Odrysians appear to have still retained possession of the country as far as the coast of the Euxine; and Cersobleptes was succeeded by his son Seuthes, who was probably his brothers, and to whom Cotys had left some portions of his kingdom. The Athenians availed themselves of these dissensions to gain possession of the Chersonese, which appears to have been finally ceded to them in n. c. 357. (Diod. xvi. 34.) But a much more fatal blow to the power of the Odrysians was struck by Philip II. of Macedon. After nine or ten years of warfare, Philip undertook at last (n. c. 344) in conquering them, and reducing them to the condition of tributaries. (Diod. xvi. 71; Dem. de Chers. p. 105.) The exact nature of their relations with Philip cannot be ascertained; but that their submission must have been complete appears from the fact of his having founded colonies in their territory, especially Philippiopolis, on the right bank of the Hebrus, and in the very heart of their ancient seat. Their subjection is further shown by the circumstance of their cavalry being mentioned as serving in the army of Alexander under Agathon, son of Tyrimmus. (Arrian, iii. 12, § 4.) But a still more decisive proof is, that after Alexander's lieutenant Zephyrius had been defeated by the Getae, the Odrysians were invited by their king, Seuthes III., to rebel against the Macedonians. (Curt. x. 1, § 45; Justin. xii. 1.) After the death of Alexander, Seuthes took the field against Lysimachus, to whom Thrace had devolved, with an army of 20,000 foot and 8000 horse,—a sad falling off from the forces formerly assembled under Seuthes, which amounted to 150,000 men. (Diod. xvi. 5, § 6.) The struggle with Lysimachus was carried on with varied success. Under Philip III. of Macedon, the Odrysians were still in a state of revolt. In n. c. 211 that monarch assembled an army with the ostensible design of marching to the relief of Byzantium, but in reality to overawe the malcontent chieftains of Thrace. (Liv. xxxix. 35.) In 183 we find Philip undertaking an expedition against the Odrysians, Benteleates, and Bessi. He succeeded in taking Philipopolis, which the inhabitants deserted at his approach, and where he established a garrison, which was expelled shortly after his departure. (Liv. xxxix. 53; Polyb. Ex. Leg. xlviii.) It may be assumed from Livy that on this occasion the Odrysians were supported in their revolt by the Romans (xlii. 19, xlv. 42). After the fall of the Macedonian kingdom, the Odrysians appear to have been treated with consideration by the Romans, who employed them as useful allies against the newly-conquered districts, as well as against the other Thracian tribes; amongst whom the Bessi had now raised themselves to some importance. After this period the history of the Odrysians is for some time involved in obscurity, though they were doubtless gradually falling more and more under the Roman dominion. In the year
ODYSSEY

B.C. 42 their king Saddicles, who had no children, bequeathed his kingdom to the Romans, and possession was taken of it by Brutus. (Caes. B. C. iii. 4; Dion Cass. xivii. 25; Lucan, v. 54.) Augustus seems to have left the Odrysians the appearance of independence. In the year B.C. 29, in return for the friendly disposition which they had shown towards the Romans, they were presented by M. Crassus with a territory bailed over by the worship of Bacchus, which he had conquered from the Bessi (Dion Cass. ii. 25). In the year B.C. 20, Rhoeumatakes, who was administering the kingdom as guardian of the three infant sons of the deceased monarch Cotys IV., succeeded, with the assistance of the Romans under M. Lollius, in reducing the Bessi (Id. liv. 20). A few years afterwards, the Bessi again rose under their leader Vologeses, a priest of Bacchus, and drove Rhoeumatakes into the Chersonese; they were, however, soon reduced to submission by Lucius Piso; Rhoeumatakes was restored; and it would appear, from Tacitus, that under his reign the Odrysians acquired the dominion of all Thrace (Dion Cass. liv. 34; Tac. Ann. ii. 64). The last remote prosperity was, however, entirely dependent on the Romans, by whose influence they were governed. Thus, after the death of Rhoeumatakes, we find Augustus dividing his kingdom between his son Cotys and his brother Rhascuporis (Tac. L. c.; Vell. Pat. ii. 98). Again, after the murder of Cotys by Rhascuporis, Tiberius partitioned the kingdom between the children of Cotys and Rhoeumatakes, son of Rhascuporis, at the same time appointing a Roman, Trebellius Rufus, as guardian of the former, who were not of age (Tac. Ann. ii. 67, ii. 98). But, in spite of their subjection, the spirit of the Odrysians was not subdued. Two years after the event just recorded, they rose, in conjunction with the Cœletae, against the Romans, as well as against their own king Rhoeumatakes, whom they besieged in Philippopolis. This rebellion, which was undertaken by leaders of little distinction, and conducted without concert, was soon quelled by P. Velius (Tac. Ann. iii. 39). A more formidable one took place a.D. 26, which Tacitus ascribes to the unwillingness of the Thracian tribes to supply the Roman army with recruits, as well as to the native ferocity of the people. It occasioned the Romans some trouble, and Poppaeus Sabinus was rewarded with the triumphal insignia for his services in suppressing it (Ib. iv. 46—51). At length, under the reign of Vespasian, the Odrysians were finally deprived of their independence, and incorporated with the other provinces of the Roman empire (Suet. Vesp. 8; Eutrop. vii. 19).

In the preceding sketch these circumstances only have been selected which illustrate the history of the Odrysians as a people, without entering into the personal history of their monarchs. The following is a list of the dynasty; an account of the different kings who compose it will be found in the Dict. of Biogr. and Mythol. under the respective heads. 1. Teres. 2. Sitaakes. 3. Seuthes I. 4. Medoeus (or Amadocus) with Maesaides. 5. Seuthes II. 6. Cotys I. 7. Cerselophetes, with Amadocus and Berashes. 8. Seuthes III. 9. Cotys II. 10. Cotys III. 11. Sadales. 12. Cotys IV. 13. Rhoeumatakes I. 14. Cotys V. and Rhascuporis. 15. Rhoeumatakes II. 16. Cotys VI.

The manners of the Odrysians partook of that wildness and ferocity which was common to all the Thracian tribes, and which made their name a byword among the Greeks and Romans; but the horrible picture drawn of them by Ammianus Marcellinus (xxvii. 4. § 9) is probably overcharged. Like most other barbarous nations of the north, they were addicted to intoxication, and their long drinking bouts were enlivened by warlike dances performed to a wild and barbarous music. (Xen. Arab. vii. 3. § 92) Hence it is characteristic that it was considered a mark of the highest distinction to be a table companion of the king's; but whoever enjoyed this honour was expected not only to drink to the king, but also to make him a present (Ib. 16, seq.) Among such a people, we are not surprised to find that Dionysus seems to have been the deity most worshipped. They had a custom of buying their wives from their parents, which Herodotus (v. 6) represents as prevailing among all the Thracian tribes. [T. H. D.]

ODYSSEUS. [HADRIONOPOLIS.] ODYSSEIA (ΟΔΥΣΣΕΙΑ, Strab. iii. pp. 149, 157; ΟΔΥΣΣΕΙΑ, Steph. B. s. v.). A town of hispania Bética, lying N. of Abdera, and, according to tradition, built by Ulysses, together with a temple to Athena. By Solinus (c. 25) and other writers it is identified with Ulyssia (Lisbon); but its site, and even its existence, are altogether uncertain. [T. H. D.]

OEA (ΟΕΑ). [POMP. MEI'A.], i. 7. § 5; Oeaeis civitatis, Plin. v. 4; Tac. Hist. iv. 50; Solin. 27; Amm. Marc. xxviii. 6; Eos, Ptol. iv. 3. § 12), a town in the district of the Syrtis, which, with Leptis Magna, and Sabrata, formed the African Tripolis. Although there had probably been an old Phœnician factory here, yet, from the silence of Sclavus and Strabo, the foundation of the Roman colony (Οες οικονομία, Röm. Anton.) must be assigned to the middle of the first century after Christ. It is situated not far from the ruins of Oea, which assumed the Roman name of the district——the modern Tripoli; Tripolis, the Moorish name of the town, is merely the same word articulated through the medium of Arab pronunciation. At Tripoli there is a very perfect marble triumphal arch dedicated to M. Aurelius Antoninus and L. Aurelius Verus, which will be found beautifully figured in Capian Lyon's Travels in N. Africa, p. 18. Many other Roman remains have been found here, especially glass urns, some of which have been sent to England. For some time it was thought that a coin of Antoninus, with the "epigraph" col. AVG. OEC., was to be referred to this town. (Eckhel, vol. iv. p. 131.) Its right to claim this is now contested. (Duchesnay, Restitution a Obae a Plidie, a Jérusalem et aux Centuries Oed. de la Haute Asie de trois Monnaies Coloniales attribuées a Oea, Revue Numismatique, 1849, pp. 97—103; Beechey, Explo, to the Coast of Africa, pp. 24—52; Barth, Wanderungen, pp. 294, 295, 391.) [E. B. J.]

2. A town in Thessaly. [THERA.]

OEANTHEIA or OEANTHE (ΟΕΑΝΤΗΕΑ, Helian., ap. Steph. B., Polyb., Paus.; ΟΕΑΝΤΗΕ, Heetac. ap. Steph. E., Plin. iv. 3. s. 4; Eusebius, Skylax, p. 14: Eweba, Ptol. iii. 15. § 3: Eth. Oeanteos: Galateodhi), an important town of the Locri Ozieba, situated at the western entrance of the Crissaean gulf. Polybius says that it is opposite to Aegira in Achaia (iv. 57, comp. v. 17), which agrees with...
the situation of Galazidi. The Oeanthians (Oi'xanoides) are mentioned among the Locri Oeadei by Strabo (v. 101). Strabo calls the town Eunathis; and since Strabo says (v. p. 259) that Locri Epizephyrii in Italy was founded by the Locri Oeadei, under a leader named Eunathus, it has been conjectured that Oeanthia or Eunathia was the place where the emigrants embarked. Oeanthia appears to have been the only maritime city in Locris remaining in the time of Pausanias, with the exception of Naupactus. The only objects at Oeanthia mentioned by Pausanias were a temple of Aphrodite, and one of Artemis, situated in a grove above the town (v. 38. § 9). The town is mentioned in the Tab. Peut. as situated at 20 miles from Naupactus and 15 from Anticyra. The remains of antiquity at Galazidi are very few. There are some ruins of Hellenic walls; and an inscription of no importance has been discovered there. (Böckh, Inscr. No. 1764.) The modern town is inhabited by an active seafaring population, who possessed 180 ships when Ulrich visited the place in 1837. (Leake, Northern Greece, vol. ii. p. 594; Ulrichs, Reisen, vl. p. 5.)

OEOASO. OEOASSO (Oi'xarw, Strab. iii. p. 161; Oiarw, Ptol. ii. 6. § 10), a promontory written Olaro by Pliny (iii. 3. 4. iv. 20. § 34), was a maritime town of the Vaesiones in Hispania Tarraconensis, near the promontory of the same name, and on the river Magdra (Mola, iii. 1), most probably Oyargar or Oyarcus, near Irna and Puentearabla. In an Inscri. we find it written Oeana. (Grat. p. 718; Oehlert, Not. Pasc. ii. 8; Florence, Esp. S. xxiv. pp. 13. 62, and xxiii. p. 147.) [T. H. D.]

OEOASSO (Oi'xarw, Ptol. ii. 6. § 10, ii. 7. § 2), a promontory of Hispania Tarraconensis, in the territory of the Vaesiones, formed by the N. extremity of the Pyrenees, now C. Pyreneae. [T. H. D.]

OECATIA (Oi'xas, E. Oyxeas), the name of several ancient towns in Greece. 1. In Messenia, in the plain of Stonyclerus. It was in ruins in the time of Epaminondas (Paus. iv. 26. § 6), and its position was a matter of dispute in later times. Strabo identified it with Andania, the ancient residence of the Messenian kings (vii. pp. 339, 350, 360, x. p. 448), and Pausanias with Carmnus, which was only 8 stadia distant from Andania, and upon the river Charadus. (Paus. iv. 2. § 2, iv. 33. § 4.) Carmnus, in the time of Pausanias, was the name given to a grove of cypresses, in which were statues of Apollo Carmnus, of Hermes Criophorus, and of Porphyrion. It was here that the mystic rites of the great goddesses were celebrated, and that the urn was preserved containing the bones of Eurytas, the son of Meleager. (Paus. iv. 33. §§ 4. 5.)

2. In Euboea, in the district of Eretria. (Hecat ap. Paus. iv. 2. § 3; Soph. Trach. 74; Strab. ix. p. 438. x. p. 448; Steph. B. s. v.)

3. In Thessaly, on the Peneus, between Peinma to the east and Trieca to the west, not far from Ilionne. (Strab. viii. pp. 339, 350, ix. p. 448, x. p. 448; Paus. iv. 2. § 3; Steph. B. s. v.)

4. In the territory of Trachis. (Strab. viii. p. 339, x. p. 448; Steph. B. s. v.)

5. In Aetolia. (Strab. x. p. 448.) Each of these cities was considered by the respective inhabitants as the residence of the celebrated Eurytas, who was conquered by Heracles, and the capture of whose city was the subject of an epic poem called Oyxeas &owis, which was ascribed to Homer or Cresphylites. Hence among the early poets there was a diff-

ference of statement upon the subject. The Messenian Oecheia was called the city of Eurytas in the Ilid (ii. 596) and the Odyssey (xxi. 13), and this statement was followed by Pherecydes (ap. Schol. ad Soph. Troch. 354) and Pausanias (iv. 2. § 3). The Eubeoan city was selected by the writer of the poem on the Capture of Oecheia (Schol. ap. Soph. I. c.), by Hectaeus (ap. Paus. I. c.), and by Strabo (x. p. 448). The Thessalian city is mentioned as the residence of Eurytas in another passage of the Ilid (ii. 730); and K. O. Müller supposes that this was the city of the original fabula. (Doriana, vol. i. p. 426, seq., transl.)

OECCHARDES (Oi'xaphi, Ptol. vi. 16. §§ 3. 4), a river of Serica, the sources of which Ptolemy (I. c.) places in the Axios M., Asmarae M., and Casii M., the latter of which mountain ranges we may safely identify with the chain of Kaschgar. The statement of Ptolemy, coming through Marinus, who derived his knowledge of the trading route of the Seres from Titianus of Macedonia, also called Maes, the son of a merchant who had sent his commercial agents into that country (Ptol. i. 11. § 7), indicates a certain amount of acquaintance with that singular depression in Central Asia which lies to the E. of Parnassus, the structure of which has been inferred from the direction of its water-courses. The Oecharades may be considered to represent the river formed by the union of the streams of Khotan, Yarkand, Kaschgar, and Usbi, and which flows close to the hills at the base of Thien-Schan. The Oecharades (Oi'xaphi, Ptol. vi. 16. § 4) deriving their name from the river must be assigned to this district. [Sterica.]

[ E. B. J.]

OEDANES. [Di'tardanes.]

OENEANDA. [Oenoanda.]

OENEON (Oivwv, Ptol. viii. 4. § 16, 19. §§ 3. 4, 10), a town of the Locri Oeadei, east of Naupactus, possessing a port and a sacred enclosure of the Neumian Zeus, where Heiiotus was said to have been killed. It was from this place that Demostenes set out on his expedition into Aetolia, in n. c. 426, and to which he returned with the remnant of his forces. Leake supposes that the territory of Oeoneon was separated from that of Naupactus by the river Mormo, and that Oeneon perhaps stood at Mygale, or near the fountain Amblo. (Thuc. iii. 95, seq.; Steph. B. s. v.; Leake, Northern Greece, vol. ii. p. 616.)

OENESUS (Oivdus), a river of Pannonia, a tributary of the Savus (Ptol. ii. 17. § 2). In the Pente. Table it is called Indenae, and now bears the name of Uva.

OENIADAE. 1. (Oivdada, Thuc. et alii; Oivdwv, Steph. B. s. r.; Eth. Oivdada: Trithardoi.), a town in Acarnania, situated on the W. bank of the Achelous, about 10 miles from its mouth. It was one of the most important of the Acarnanian towns, being strongly fortified both by nature and by art, and commanding the whole of the south of Acarnania. It was surrounded by marshes, many of them of great extent and depth, which rendered it quite inaccessible in the winter to an invading force. Its territory appears to have extended on both sides of the Achelous, and to have consisted of the district called Paracheloids, which was very fertile. It seems to have derived its name from the mythical Oeneus, the great Aeolian hero. The town is first mentioned about n. c. 455. The Messenians, who had been settled at Naupactus by the Athenians at the end of the Third Messenian War (455), shortly afterwards made an expedition against Oenidae,
which they took; but after holding it for a year, they were attacked by the Acarnanians and compelled to abandon the town. (Paus. iv. 25.) Oeniadae is represented at that time as an enemy of Athens, which is said to have been one of the reasons that induced the Messenians to attack the place. Twenty-three years before the Peloponnesian War (c. 654) Pericles laid siege to the town, but was unable to take it. (Thuc. i. 111; Diod. xi. 85.) In the Peloponnesian War, Oeniadae still continued opposed to the Athenians, and was the only Acarnanian town, with the exception of Astacus, which sided with the Laconians. In the third year of the war (429) Phormion made an expedition into Acarnania to secure the Athenian ascendency; but though he took Astacus, he did not continue to march against Oeniadae, because it was the winter, at which season the marshes secured the town from all attack. In the following year (428) his son Asopius sailed up the Achelous, and ravaged the territory of Oeniadae; but it was not till 424 that Demosthenes, assisted by all the other Acarnanians, compelled the town to join the Athenian alliance. (Thuc. ii. 102, iii. 7, iv. 77.) It continued to be a place of great importance during the Macedonian and Roman wars. In the time of Alexander the Great, the Aetolians, who had extended their dominion on the W. bank of the Achelous, succeeded in obtaining possession of Oeniadae, and expelled its inhabitants in so cruel a manner that they were threatened with the vengeance of Athena. (Diod. xviii. 8.) Oeniadae remained in the hands of the Aetolians till 219, when it was taken by Philip, king of Macedonia. This monarch, aware of the importance of the place, strongly fortified the citadel, and commenced uniting the harbour and the arsenal with the citadel by means of walls. (Polyb. iv. 65.)

In 211 Oeniadae, together with the adjacent Neaius (Νείας) or Nasus, was taken by the Romans, under M. Valerius Laevinus, and given to the Aetolians, who were then their allies; but in 189 it was restored to the Acarnanians by virtue of one of the conditions of the peace made between the Romans and Aetolians in that year. (Pol. ix. 39; Liv. xxvi. 24; Polyb. xxii. 15; Liv. xxxvii. 11.) From this period Oeniadae disappears from history; but it continued to exist in the time of Strabo (x. p. 459).

The exact site of Oeniadae was long a matter of dispute. Dodwell and Gell supposed the ruins on the eastern side of the Achelous to represent Oeniadae; but these ruins are those of Pleuron. (Pleuron.) The true position of Oeniadae has now been fixed with certainty by Leake, and his account has been confirmed by Mure, who has since visited the spot. Its ruins are found at the modern Trikordha, on the W. bank of the Achelous, and are surrounded by morasses on every side. To the N. these swamps deepen into a reedy marsh or lake, now called Leum or Katoikhi, and by the ancients Melite. In this lake is a small island, probably the same as the Nasos mentioned above. Thucydides is not quite correct in his statement (ii. 102) that the marshes around the city were caused by the Achelous alone; he appears to take no notice of the lake of Melite, which afforded a much greater protection to the city than the Achelous, and which has no connection with this river. The city occupied an extensive insulated hill, from the southern extremity of which there stretches out a long slope in the direction of the Achelous, connecting the hill with the plain. The entire circuit of the fortifications still exists, and cannot be much less than three miles. The walls, which are chiefly of polygonal construction, are in an excellent state of preservation, often to a height of from 10 to 12 feet. Towards the N. of the city was the port, communicating with the sea by a deep river or creek running up through the contiguous marsh to Petala on the coast.

Leake discovered the ruins of a theatre, which stood near the middle of the city; but the most interesting remains in the place are its arched passages or sallyports, and a larger arched gateway leading from the port to the city. These arched gateways appear to be of great antiquity, and prove that the arch was known in Greece at a much earlier period than is usually supposed. Drawings of several of these gateways are given by Mure. (Leake, Northern Greece, vol. iii. p. 556, seq.; Mure, Journal of a Tour in Greece, vol. i. p. 106, seq.; see also, respecting the arches at Oeniadae, Leake, Peloponnesiacs, p. 121.)

Strabo (x. p. 450) speaks of a town called Old Oenia (ἡ παλαιὰ Οἰναία), which was deserted in his time, and which he describes as midway between Stratus and the sea. New Oenia (ἡ νέα Οἰναία), which he places 70 stadia above the mouth of the Achelous, is the celebrated town of Oeniadae, spoken of above. The history of Old Oenia is unknown. Leake conjectures that it may possibly have been Erysichne (Εὔρυσχήνη), which Stephanus supposes to be the same as Oeniadae; but this is a mistake, as Strabo quotes the authority of the poet Appolodorus to prove that the Erysichneai were a people in the interior of Aetolia. Leake places Old Oenia at Petea Mani, where he found some Hellenic remains. (Steph. B. s. v. Οινεάδαια; Strab. x. p. 460; Leake, Northern Greece, vol. iii. p. 524, seq.)

2. A city of Thessaly, in the district Oeaena (Strab. i. p. 434, Steph. B. s. c.)

COIN OF OEIADAEC.

OENOANDA (Οἰνοανδά), a town in the extreme west of Pisidia, belonging to the territory of Cibyra, with which and Bithynia and Bucot it formed a tetrapolis, a political confederacy in which each town had one vote, while Cibyra had two. (Strab. xiii. p. 631; Steph. B. s. v.; Liv. xxxvii. 57; Pila. v. 28; comp. CIBYRA.) The town is mentioned as late as the time of Hierocles, who, however (p. 685), calls it by the corrupt name of Enonanda. (L. S.)

* The MSS. of Strabo have "Alaia", which Leake was the first to point out must be changed into Olaia. Kramer, the latest editor of Strabo, has inserted Leake's correction in the text.
OENOBARAN (Oinobars or Oinobarus), a river of the plain of Antioch, in Syria, at which, according to Strabo (xvi. p. 751), Ptolemy Philometer, having conquered Alexander Balas in battle, died of his wounds. It has been identified with the Upheorus, modern Aphrodes, which, rising in the roots of Amanus Mons (Abanadayb), runs southward through the plain of Cyrrhestica, until it falls into the small lake, which receives also the Labatas and the Arceutus, from which their united waters run westward to join the Orontes coming from the south. The Oenobaras is the externalmost of the three streams. It is unquestionably formed by the Arin of Abulafia. (Tobata Syr., Supplementa, p. 152; ed. Kochler; Chesney, Expedition, vol. i. pp. 407, 423.)

[O. W.]

OENOE (Oine). 1. A small town on the northwest coast of the island of Icaria. (Strab. xix. p. 639; Steph. B. s. v.; Athen. i. p. 30.) This town was probably situated in the fertile plain below the modern Messaria. The name of the town seems to be derived from the wine grown in its neighbourhood on the slopes of Mount Prannus, though others believe that the Icarian Oine was a colony of the Attic town of the same name. (Comp. Ross, Reisen auf des Griech. Inseln, ii. pp. 159, 162.)

3. An ancient name of the island of Scillus. [Scin.]

[O. S.]

3. A fortress in the territory of Corinth. [Vol. i. p. 685, b.]

4. Or Oine (Oine, Steph. B. s. v.), a small town in the Argia, west of Argos, on the left bank of the river Charadrus, and on the southern (the Prius) of the two roads leading from Argos to Mantinea. Above the town was the mountain Artemision (Malénis), with a temple of Artemis on the summit, worshipped by the inhabitants of Oene under the name of Oenotis (Oinotis). The town was named by Dionyseus after his grandfather Oenecus, who died here. In the neighbourhood of this town the Athenians and Argives gained a victory over the Macedonians. (Paus. ii. 15, § 2, i. 15, § 1, x. 10, § 4; Apollod. i. 8, § 6; Steph. B. s. v.) Leake originally placed Oene near the left bank of the Charadrus; but in his later work he has changed his opinion, and supposes it to have stood near the right bank of the Ischus. His original supposition, however, seems to be the correct one; since there can be little doubt that Ross has rightly described the course of the two roads leading from Argos to Mantinea. (Leake, Morea, vol. ii. p. 413; Ptolema. p. 269; Ross, Reisen im Peloponnes, p. 135.)

5. Or Benozanos, a town of Elis, near the Homeric Ephysis. (Strab. viii. p. 338.) [Vol. i. p. 839, b.]

OENOLADON (Oinoladon, Studiasm, § 96), a river in the district of the African Syrtes, near the town of Amaha (Amoaplia, Studiasm, i. e.), where there was a tower and a cove. Barth (Wanderungen, pp. 300, 359) refers it to the Wady Misid, where there is a valley with a stream of sweet water in the sandy waste; and Müller, in his map to illustrate the Coast-describer (Tab. in Geogr. Graec. Min. Par. 1835), places Amaha at Ras-al-Umouak, where Admirals Smyth (Mediterraneo, p. 436) marks cave ruins, and Admiral Beechey (Exped. to N. Coast of Africa, p. 72) the ruins of several baths with tessellated pavements, to the W. of which there is a stream flowing from the Wady Mata. [E. B. J.]

OENO'NE or OENOTRIA. [Arg.]

OENOPHYTA (Oinofyta), a place in Bœotia, where the Athenians under Mykonides gained a signal victory over the Boeotians in B. C. 456. As this victory was followed by the destruction of Tanagra, there can be little doubt that it was in the territory of the latter city, not far from the frontier of Attica. Its name, moreover, shows that it was the place where the wine was chiefly produced, for which the territory of Tanagra was celebrated. Leake therefore places it at Ioitia (written Oitina, perhaps a corruption of Osiforina), which stands in a commanding position near the left bank of the Asopus, between Tanagra and Oropus. (Thuc. i. 108, iv. 55; Leake, Northern Greece, vol. ii. p. 463.)

OENOTRIA (Oinotria), was the name given by the Greeks in very early times to the southermost portion of Italy. That country was inhabited at the period when the Greeks first became acquainted with it, and began to colonise its shores, by a people whom they called Oenotri or Oenotri (Oinotria or Oinotria). Whether the appellation was a national one, or was even known to the people themselves, we have no means of judging; but the Greek writers mention several other tribes in the same part of Italy, by the names of Chones, Morgetes, and Itali, all of whom they regarded as of the same race with the Oenotrians; the two former being expressly called Oenotrian tribes [Chones; Morgetes], while the name of Itali was, according to the account generally received, applied to the Oenotrians in general. Antiochus of Syracuse distinctly spoke of the Oenotri and Itali as the same people (op. Strab. vi. p. 254), and defined the boundaries of Oenotria (under which name he included the countries subsequently known as Lucania and Bruttium exclusis de Inapizia) as identical with those of Italy (op. Strab. i. c.). A well-known tradition, adopted by Virgil, represented the Oenotrians as taking the name of Italians, from a chief or king of the name of Italius (Dionys. i. 32, 35; Virg. Aen. i. 533; Arist. Pol. vii. 10); but it seems probable that this is only one of the mythical tales so common among the Greeks; and whether the name of Itali was only the native appellation of the people whom the Greeks called Oenotrians, or was originally that of a particular tribe, like the Chones and Morgetes, which was gradually extended to the whole nation, it seems certain that, in the days of Antiochus, the names Oenotri and Itali, Oenotria and Itali, were regarded as identical in signification. The former names, however, had not yet fallen into disuse; at least Herodotus employs the name of Oenotria, as one familiar to his readers, to designate the country in which the Phocaean colony of Velia was founded. (Herod. i. 167.) But the gradual extension of the name of Italy, as well as the conquest of the Oenotrian territory by the Sabellian races of the Lucanians and Bruttians, naturally led to the disuse of their name; and though this is still employed by Aristotle (Pol. vii. 10), it is only in reference to the ancient customs and
habits of the people, and does not prove that the name was still in current use in his time. Scymnus Chius uses the name Oenoria in a different sense, as distinguished from Italia, and confines it to a part only of Lucania; but this seems to be certainly opposed to the common usage, and probably arises from some misconception. (Scymn. Ch. 244, 340.)

There seems no doubt that the Oenotrians were a Pelasgic race, akin to the population of Epirus and the adjoining tract on the E. of the Adriatic. This was evidently the opinion of those Greek writers who represented Oenotrians as one of the sons of Lycon, the son of Pelasgus, who emigrated from Arcadia at a very early period. (Pierecides, op. Dionys. i. 13; Pass. viii. 3. § 5.) The statement of Pausanius, that this was the most ancient migration of which he had any knowledge, shows that the Oenotrians were considered by the Greeks as the earliest inhabitants of the Italian peninsula. But a more conclusive testimony is the incidental notice in Stephano of Byzantium, that the Greeks in Southern Italy called the native population, whom they had reduced to a state of servitude like the Pelasgians in Thessaly, the Helots in Lucania, by the name of Pelagi. (Steph. Byz. s. r. Xic.) These terms could be no other than the Oenotrians. Other arguments for their Pelasgic origin may be deduced from the recurrence of the same names in Southern Italy and in Epirus, as the Chones and Chones, Panas, and Acheron, &c. Aristotle also notices the custom of όνοματια, or feasting at public tables, as subsisting from a very early period among the Oenotrians as well as in Crete. (Arist. Pol. vii. 10.)

The relation of the Oenotrians to the other tribes of Italy, and their subjection by the Lucanians, a Sabellian race from the north, have been already given in the article ITALIA. [E. H. B.]

OENOTRIDES INSULAE (Οινοτρίδες ἱμίας), were two small islands off the shore of Lucania, nearly opposite Velia. (Strab. vi. p. 252; Plin. iii. 7. s. 13.) Their individual names, according to Pliny, were Pontia and Iscia. Cluverius (Ital. p. 1260) speaks of them as still existing among their ancient names; but they are mere rocks, too small to be marked on ordinary modern maps. [E. H. B.]

OENUS (Οίνος; Eth. Οινωτοί), a small town in Arcadia, celebrated for its wine, from which the river Oenus, a tributary of the Eurotas, appears to have derived its name. From its being described by Athenaeus as near Pitrane, one of the divisions of Sparta, it was probably situated near the junction of the Oenus and the Eurotas. (Steph. B. s. r.; Athen. i. p. 31.) The river Oenus, now called Kedefina, rises in the watershed of Mt. Parnon, and, after flowing in a general south-westly direction, falls into the Eurotas, at a distance of little more than a mile from Sparta. (Polych. ii. 65, 66; Liv. xxxviii. 28.) The principal tributary of the Oenus was the Gogroios (Γογροιός, Polych. ii. 66), probably the river of Grestene. (Leake, Peloponnesica, p. 347.)

OENUSSEAE (Οἰνοσσεα, Οἰνωσσα). 1. A group of islands off the coast of Messenia. [Vol. ii. p. 342, b.]

2. A group of islands between Chios and the Asiatic coast. (Herod. i. 165; Plin. viii. 24; Steph. B. s. r.) They are five in number, now called Spoldodes or Ergoniia. Pliny (v. 31. s. 38) mentions only one island. [T. H. D.]

ÔEÏE (Πλαιαι). [Platoeae].

ÔEÚΣUS. 1. (Οἰονίς, Plit. iii. 10. § 10, viii. 11. § 6), a town of the Triballi in Lower Moesia, seated near the mouth of the river of the same name, and on the road from Viminacium to Nicomedia, 12 miles E. from Valeriania, and 14 miles W. from Utun. (Utin. Ant. p. 220.) It was the station of the Legio V Maced. Procopins, who calls the town Λεόρος, says that it was fortified by Justinian (de Aed. iv. 6). Usually identified with Oresoritis, though some hold it to be Glanum.

2. A river of Lower Moesia, called by Timaeides (ii. 96) Ὠξωρα, and by Herodotus (iv. 49) Ξεος. Phily (iii. 26. s. 29) places its source in Mount Rhodope; Timaeides (l. c.) in Mount Scopasus, which is joined Rhodope. Its true source, however, is on the W. side of Haemus, whence it pursues its course to the Danube. It is now called the Iber or Esker. [T. H. D.]

ÖESTRUMNAIDES. [BRITANNICAE INSULAE, Vol. i. p. 433.]

ÖESTUMÆ (Οεστυμε, Thuc. iv. 167; Scyl. p. 27 (the MS. incorrectly Νεστυμε)); Scymn. Ch. 655; Dio. Cass. xii. 68 (by an error of the MS. Νεστυμε); Plit. iii. 13. § 9; Plin. iv. 18; Armen. op. Athen. p. 91; Eth. Oenotrius, Steph. B.), a Thessalian colony in Pieria, which, with Galipus, was taken by Brasidas, after the capture of Amphipolis. (Thuc. l. c.) Its position must be sought at some point on the coast between Nestor and the mouth of the Strymon. (Leake, Northern Greece, vol. iii. p. 179; Cousinry, Voyage dans la Macédoine, vol. ii. p. 89.)

[EB. J.]

ÖETA (Οητα; Eth. Οηταία), a mountain in the south of Thessaly, which branches off from Mt. Pindus, runs in a south-easterly direction, and forms the northern barrier of Central Greece. The only entrance into Central Greece from the north is through the narrow opening left between Mt. Oeta and the sea, celebrated as the pass of Thermopylae. [Thermopylae]. Mt. Oeta is now called Katedra, and its highest summit is 7071 feet. (Journal of Geogr. Soc. vol. vii. p. 94.) The mountain immediately above Thermopylae is called Calidronum both by Strabo and Livy. (Strab. ix. p. 428; Liv. xxxvi. 15.) The latter writer says that Calidronum is the highest summit of Mt. Oeta; and Strabo agrees with him in describing the summit nearest to Thermopylae as the highest part of the range. In this opinion they were both mistaken, Mt. Patrictikos, which lies more to the west, being considerably higher. Strabo describes the proper Oeta as 200 stadia in length. It is celebrated in mythology as the scene of the death of Hercules, whence the Roman poets give to this hero the epithet of Oetaeum. From this mountain the southern district of Thessaly was called Oetaea (Οεταία, Strab. ix. pp. 430, 432, 434), and its inhabitants Oetaei (Οεταῖοι, Herod. vii. 217; Thuc. iii. 92; Strab. ix. p. 416). There was also a city, Oeta, said to have been founded by Amphipolis, son of Apollo and Depege (Anton. Libr. c. 32), which Stephano B. (s. r.) describes as a city of the Malians. Leake places it at the foot of Mt. Patriktikos, and conjectures that it was the same as the sacred city mentioned by Callimachus. (Hymn. in Del. 287.) [See Vol. ii. p. 255.] (Leake, Northern Greece, vol. ii. p. 4, seq.)

ÖETENSI (Οητενσι, Poll. iii. 10. § 9), a tribe in the eastern part of Moesia Inferior. [T. H. D.]

ÖETYLUS (Οητυλος, Hom., Paus., Steph. B.; Beilors, Böckl, Inscur. no. 1328; Birtola, Poll. iii. 16. § 22; ÖETYLUS—καλείται δ' ὅτι τῶν Βείτων, Strab. viii. p. 560, corrected in accordance with the inscription), a town of Lucania on the eastern side.
of the Messenian gulf, represented by the modern town of Vitylo, which has borrowed its name from it. Pausanias says that it was 80 stadia from Thalames and 150 from Messa; the latter distance is too great, but there is no doubt of the identity of Oitylos and Vitylo; and it appears that Pausanias made a mistake in the names, as the distance between Oitylos and Caeneopolis is 150 stadia. Oitylos is mentioned by Homer, and was at a later time one of the Eleuthero-Boeotian towns. It was still governed by its bishops in the third century of the Christian era. Pausanias saw at Oitylos a temple of Sarapis, and a beautiful wooden statue of Apollo Carneius in the acora. Among the modern houses of Vitylo there are remains of Hellenic walls, and in the church a beautiful fluted Ionic column supporting a beam at one end of the aisle, and three or four Ionic capitals in the wall of the church, probably the remains of the temple of Sarapis. (Hom. H. ii. 383; Strab. viii. p. 369; Paus. iii. 21. § 7, 25. § 10, 26. § 1; Steph. Byz. s. v. Oitylos).—The most ancient Greek work on the mountains of the Peloponnesus is the Turkey, p. 54; Lekke, Morea, vol. i. p. 233; Bidulays, Recerches, etc. p. 92; Curtius, Peloponnesus, vol. ii. p. 283.)

OEUM (Olov), a mountain fortress situated in eastern Locris, above Opus, and destroyed by an earthquake. (Strab. i. p. 60.) According to Gell its ruins are to be seen on a steep hill, 25 minutes above Livaneitii. (Itin. p. 232.)

OEUM or OUM (Olov, Olov, Ι'ων; Eth. Odkvyn, Ι.'Αρυ), the chief town of the district Scirinn in Laconia, commanded the pass through which was the road from Tegea to Sparta. It probably stood in the Klimavos, or narrow pass through the watershed of the mountains forming the natural boundary between Laconia and Arcadia. When the Theban army under Epaminondas first invaded Laconia in four divisions, by four different passes, the only division which encountered any resistance was the one which marched through the pass defended by Oeum. But the Spartan Ischdus, who commanded a body of troops at this place, was overpowered by superior numbers; and the invading force thereupon proceeded to Sellasia, where they were joined by the other divisions of the army. (Nem. Hell. vi. 5, §§ 24—26.) In Xenophon the town is called Ι'ων and the inhabitants Ταρα; but the form Olov or Olov is probably more correct. Such towns or villages, situated upon mountainous heights, are frequently called Oeum or Oca. (Comp. Harpocrat. s. v. Olov.) Probably the Oeum in Scirinn is referred to in Steph. vol. i. p. 264.)

Ostrom (Olov, Olov, Ι'ων; Eth. Οδκριν, Ι.'Αρυ), the chief town of the district Scirinn in Laconia, commanded the pass through which was the road from Tegea to Sparta. It probably stood in the Klimavos, or narrow pass through the watershed of the mountains forming the natural boundary between Laconia and Arcadia. When the Theban army under Epaminondas first invaded Laconia in four divisions, by four different passes, the only division which encountered any resistance was the one which marched through the pass defended by Oeum. But the Spartan Ischdus, who commanded a body of troops at this place, was overpowered by superior numbers; and the invading force thereupon proceeded to Sellasia, where they were joined by the other divisions of the army. (Nem. Hell. vi. 5, §§ 24—26.) In Xenophon the town is called Ι'ων and the inhabitants Ταρα; but the form Olov or Olov is probably more correct. Such towns or villages, situated upon mountainous heights, are frequently called Oeum or Oca. (Comp. Harpocrat. s. v. Olov.) Probably the Oeum in Scirinn is referred to in Steph. vol. i. p. 264.)

Oeum Ceramicum. (Attica, p. 326, a.)

Oeum Dieceliani. (Attica, p. 330, a.)

Ogdaemi. (Marmarica.)

Oglasa, a small island in the Tyrrhenian or Ligurian sea, between Cora and the coast of Ermiia. (Pvin. iii. 6. s. 12.) It is now called Monte Cristo. (E. H. B.)

Oglyria (Ωγρυια) is the name given by Homer in the Iliad to the island inhabited by the nymphet Calypso. He describes it as the central point or navel of the sea (σαλιεις γαρ ανθρωπον, far from all other lands; and the only clue to its position that he gives us is that Ulysses reached it after being borne at sea for eight days and nights after he had escaped from Charystias; and that when he quitted it again he sailed for seventeen days and nights with a fair wind, having the Great Bear on his left hand (i.e. in an easterly direction), until he came in sight of the land of the Phaeacii. (Hom. Odys. i. 50, 83, v. 53, 265—280, ii. 148.) It is hardly necessary to observe that the Homerice geography in regard to all these distant lands must be considered as altogether fabulous, and that it is impossible to attach any value to the distances above given. We are wholly at a loss to account for the localities assigned by the Greeks in later days to the scenes of the Odyssey; it is certain that nothing can less accord with the data (such as they are) supplied by Homer than the identifications they adopted. Thus the island of Calypso was probably fixed on the coast of Bruttia, near the Lachian precipice, where he has imagined the hero to have passed those months of fruitless waiting. (Itin. iii. 10. s. 15; Swinburne's Travels, vol. i. p. 225.) Others, again, placed the abode of the goddess in the island of Gaulos (or Gaus), an opinion apparently first advanced by Callimachus (Strab. i. p. 44, vii. p. 299), and which has at least some semblance of probability. But the identification of Phaeacia with Corcyra, though more generally adopted in antiquity, has really no more foundation than that of Ogygia with Gaulos: so that the only thing approaching to a geographical statement fails on examination. It is indeed only the natural desire to give to the creations of poetic fancy a local habitation and tangible reality, that could ever have led to the associating the scenes in the Odyssey with particular spots in Sicily and Italy; and the view of Eratosthenes, that the geography of the voyage of Ulysses was wholly the creation of the poet's fancy, is certainly the only one tenable. At the same time it cannot be denied that some of the fables there related were founded on vague rumours brought by voyagers, probably Phoenicians, from these distant lands. Thus the account of Scylla and Charybdis, however exaggerated, was doubtless based on truth. But the very character of these marvels of the far west, and the tales concerning them, in itself excludes the idea that there was any accurate geographical knowledge of them. The ancients themselves were at variance as to whether the wanderings of Ulysses took place within the limits of the Mediterranean, or were extended to the ocean beyond. (Strab. i. pp. 22—26.) The fact, in all probability, is that Homer had no conception of the distinction between the two. It is at least very doubtful whether he was acquainted even with the existence of Italy; and the whole episode was probably suggested by some portion of the coast of Asia Minor or the island of Rhodes. He made a region of mystery and fable.

The various opinions put forth by ancient and modern writers concerning the Homerice geography are well reviewed by Uebert (Geographie der Griechen u. Romer, vol. i. part ii. pp. 310—319); and the inferences that may reasonably be drawn from the language of the poet himself are clearly stated by him. (Ib. part i. pp. 19—31.)

Ogyria (Ωγρια), Strab. xvi. p. 766), an island, off the southern coast of Carmania about 2000 stadia, which was traditionally said to contain the tomb of king Erytheus, from which the sea was supposed to have derived its name. It was marked by a huge mound planted with wild palms. Strabo
states that he obtained this story from Nearcurs and Orthogoras (or Pythagoras), who learnt it from Mithra-paste, the son of a Phrygian satrap, to whom he had given a passage in his flight to Persia. The name is given to the island in many other geographers (as in Mel. iii. 8: § 6; Deyans. Per. 607; Plin. vi. 28. s. 32; Frisic. Perieg. 605. p. 362; Avien. 794; Steph. B. s. e. v. Sulcea, s. v.). The other editions of Strabo read Ταυρίδα and Ταυρίκη,—possibly a corruption of Ταυρίωον or Παρίωον,—the form which Vossius (in Mel. L. c.) has adopted. The account, however, preserved in Arrian's Voyage of Nearcurs (Iun. 37), differs much from the above. According to him, the fleet sailing westward passed a desert and rocky island called Organa; and, 300 stadia beyond it, came to anchor beside another island called Ooracta; that there the tomb of Erythraus was said to exist, and the fleet obtained the aid of Mæzene, the chief of the island, who volunteered to accompany it, and pilot it to Susa. It seems generally admitted, that the Organa of Arrian and Podemus (vi. 7. § 46, who, placing it along the Arabian coast, has evidently adopted the distances of Strabo) is the modern Hormuz, which bears also the name of Gerun, or Jerun. Vincent, however, thinks that it is the modern Arek, or L'Arek. (Voy. Nearcurs, i. p. 348.) The distance in Strabo is, perhaps, confounded with the distance the fleet had sailed along the coast of Carmania. Again Nearcurs places the tomb of Erythraus, not in Organa, but in Ooracta; and Agatharchides mentions that the land this king reigned over was very fertile, which applies to the latter, and not to the former. (Agatharch. p. 2, ed. Hudson.) The same is true of what Pliny states of its size (L. c.). Curtius, without mentioning its name, evidently alludes to Ogiris (Oermus), which he places close to the continent (x. 2), while the Geographer of Ravenna has preserved a remembrance of all the places under the head of "Colo Persico," in which he places "Ogiris, Oracla, Duraciana, Rachos, Origma." Ooracta is called in Strabo (L. c.) Διαρκάτη; in Pliny, Oracla (vi. 28. s. 98); in Podemus, Oermus (vi. 8. § 15). The ancient name is said to be Oermus. (Frisic. Perieg. 606. p. 311.) It is the modern Feroz or Eretz. It also derives the name of Kishmi from the quantity of grapes now found on it. Eredi calls Jesireh-tuilekh, the long island (l. p. 364: cf. also Wellsted's Travels, vol. i. p. 62). The whole of this complicated piece of geography has been fully examined by Vincent, Voy. of Nearcurs, vol. i. p. 348, &c.; Ritter, vol. xii. p. 435. [V.]

OLSPORIS (Ολύσπορος, Ptol. iv. 3. § 14; Opinus, Ptol. Tab.); Ταυρίωον, Stadiasmus, § 86), a town of the Great Syrtis, which Barth (Wanderungen, pp. 363, 378) identifies with Lmanent Naine, where there is a sandy bay into which ships might send their boats, with almost all winds, for water, at three wells, situated near the beach. (Beechey, Explo. to N. Coast of Africa, p. 173.) The tower, of which the coast-describer speaks, must be the ruins of Ρύς Εσθί, to the E. of Νοιμ. [E. B. J.]

OLBASA (Ολβάσα). 1. A town in Cilicia Aspera, at the foot of Mount Taurus, on a tributary of the Calycadnus. (Ptol. v. 8. § 6.) Col. Leake (Asia Minor, p. 320) identifies the town of Olbasa with the Olle mentioned by Strabo (xiv. p. 672) who gives another passage (p. 117); for the conjectures that Olbasa has at a later period, and have changed its name into Claudinpolis, with which accordingly he is inclined to identify the former. (Ptol. v. 5. § 8; Hieroc. p. 480.)

OLBIA. [Olbasa, No. 1.] OLBIA (Ολβία, Strab. iv. p. 200, vii. p. 206; Sibin. 806; Ptol. iii. 5. § 38; Arrian. Per. p. 20; Anon. Per. p. 8; Melia. ii. 1. § 6; Jornand. B. Get. 5; with the affix Sabia, Σαβία, Anon. l. c.; on coins in the Ionic form always Ολβία.) Pliny (iv. 26) says that it was unexpectedly called Olbopolis, and Miletpolis; the former of these names does not occur elsewhere, and is derived probably from the ethnic name OLBOPOLITAE (Ολβοπολίται, Herod. i. 14; Suid. s. s. OLBOPOLITAI), which appears on coins as late as the date of Caracalla and Alexander Severus. (Kohler, Mem. de l'Acad. de St. Peterb. vol. xiv. p. 106; Blaranberg, Choix des Mêl. Antiques d'Olbopoliou ou d'Olbia, Paris, 1822; Monnet, Descri. des Méd. vol. i. p. 349.) Although the inhabitants always called their city Olbium, strangers were in the habit of calling it by the name of the chief river of Scythia, BORYSTHENES (Βορυστήνης, Βορυστήρινης), and the people BORYSTHENITAE (Βορυστηνίται, Herod. l. c.; Dion Chrys. Orat. xxvi. vol. ii. p. 74; Lucian, Tosc. 61; Memand. ap. Schol. ad Dion. Tosc. 31; v. 8; Barn. in Amm. Marc. xxii. 8. § 40; Macrob. Sat. i. 10.) A Greco-lycian colony in Scythia, on the right bank of the Hypanis, 240 stadia (Anon. l. c. 200) stadia, Strab. p. 200; 15 M. P., Plin. l. c. from its mouth, the ruins of which are now found at a place on the W. bank of the Bug, called Stonomigi, not far from the village Νόμπιάκε, about 12 Eng. miles below Nicholave. This important settlement, which was situated among the Scythian tribes of the Calapidae and Alazonae, owed its origin to the Ionic Milesians in B. C. 655. (Anon. Peripl. l. c.; Euseb. Chron.) At an early period it became a point of the highest importance for the inland trade, which, issuing from thee, was carried on in an easterly and northern direction as far as Central Asia. It was visited by Herodotus (iv. 17, 18, 53, 78), who obtained his valuable information about Scythia from the Greek traders of Olbium. From the important series of inscriptions in Böckh's collection (Insc. 2058—2096), it appears that this city, although at times dependent upon the Scythian or Sarmatian princes, enjoyed the privileges of a free government, with institutions framed upon the Ionic model. Among its eminent names occur those of Prostobulus (Suidas, s. v.), a sophist and historian, and Sphaguras the stoic, a disciple of Zeno of Citium. (Plut. Chem. 2.) There has been much controversy as to the date of the famous inscription (Böckh. No. 2058)
which records the exploits of Protagenes, who, in
the extreme distress of his native city, aided it both
with his purse and person. This inscription, ap-
propriately belonging to the period n. c. 218–201,
maintains the Galatians and Sciri (perhaps the same
as those who are afterwards found united with the
Herni and Lucuti) as the worst enemies of Olbia, a
clear proof that in the third century n. c. Celtic tribes
had penetrated as far to the E. as the Baysheumo.
Dion Cheyssolom (Hist. xxvii. p. 76), who came
to Olbia when he escaped from Domitian's edict,
relates how it had been destroyed by the Goths
about 150 years before the date of his arrival, or
about n. c. 50, but had been restored by the old
inhabitants. From the inscriptions it appears that
Augustus and Tiberius conferred favours on a cer-
tain Ababars of Olbia (No. 2060), who, in gratitude,
erecited a portico in their honour (No. 2057), while
Antoninus Pius assisted them against the Taurian-Scy-
thians. (Jul. Capit. Anton. 9.) The citizens erected
statues to Cornelia and Geta (No. 2091). The city
was in all probability destroyed in the invasion of
the Goths A. D. 250, as the name does not occur hence-
forth in history. For coins of Olbia, besides the
works already quoted, see Eckhel, vol. ii. p. 3.
(Vallas, Réise, vol. ii. p. 507; Clarke, Trae. vol. ii.
p. 351; Marawin Apostel's Reise, p. 27; Böckh,
Inscr. vol. ii. pp. 86–89; Niehrab, Neue Schrift.
p. 352; Schrafrik, Star. Alt. vol. i. p. 357; Crenzer,
Heldb. Jahrh. 1822, p. 1235; Bahr, Exerc. ad Herod. iv. 18.) [E. B. J.]

COIN OF OLBIA.

OLBIA (Olbia: Eth. 'OlbaAró, Olbinesis: Terranova), one of the most considerable cities of
Sardinia, situated on the N. coast of the island not
far from its NE. extremity, in the innermost recess
or bight of a deep bay now called the Golfo di Ter-
ranora. According to Pausanias it was one of the
most ancient cities in the island, having been founded
by the colony of Tessinach under the leaders, the
companions of Heracles, with whom were associated
a body of Athenians, who founded a separate city,
which they named Ogyrie. (Paus. x. 17. § 5;
Diod. iv. 29; Solin. 1. § 61.) The name of Olbia
is very probably to be identified with Olba, a
Greek town which seems to have been on the coast
of Greece; but, with the exception of this myth-
ical legend, we have no accounts of its foundation.
After the Roman conquest of the island it became
one of the most important towns in Sardinia; and
from its proximity to Italy and its opportune port,
became the ordinary point of communication with
the island, and the place where the Roman governors
and others who visited Sardinia usually landed.
(Cic. ad Q. Fr. ii. 3. § 7, 6 § 7.) In the First Punic
War it was the scene of a naval engagement be-
tween the consuls Cornelius and a Carthaginian
fleet, which had taken refuge in its spacious port;
but was attacked and defeated there by Cornelius,
who followed up his advantage by taking the city,
n. c. 259. (Dion. v. 11; Flor. ii. 2. § 16; Val.
Max. vi. 1. § 2.) In the Second Punic War (n. c.
210) its territory was ravaged by a Carthaginian
fleet. (Liv. xxvii. 6.) Under the reign of Ho-
norius, Olbia is still mentioned by Claudian as one
of the principal sea-ports of Sardinia; and the Itine-
raries give more than one line of road proceeding
from thence towards different parts of the island.
(Claudian, B. Gold. 519; Itin. Ant. pp. 79,80,82.)
The name is there written Olbia: in the middle
ages it came to be known as Civita, and obtained its
modern appellation of Terranova from the Spinairs.

Ptolemy distinguishes the port of Olbia (Oa-
XaXoivs ÑaMtv, iii. 3, § 4) from the city itself: he
probably applies this name to the whole of the
spacious bay or inlet now known as the Gulf of
Terranova, and the position given is that of the
entrance.

[Ε. Η. Β.]

OLBIA (Olbia: Eth. 'Olbaiwovü, and 'Olbai-
Cov). Stephanus (s. v. Olbia) speaks of one
of the Punic settlements of the island, probably
on the coast of Africa, where the city is known to
have existed, but which the description of the city
which we possess is not sufficient to identify. Olbia
between Forum Julii (Frejus) and Massilia
(Marseille). The order of place is this: Forum Julii,
Athenopolis, Olbia, Tannawi, Citharisthe, Massilia.
Strabo (iv. p. 184), who proceeds from west to east
in enumerating the cities of the Mediterranean coast of Gallia, places
Olbia between Forum Julii (Frejus) and Massilia
(Marseille). The order of place is this: Forum Julii,
Athenopolis, Olbia, Tannawi, Citharisthe, Massilia.
Strabo (iv. p. 184), who proceeds from west to east,
in enumerating the cities of the coast of Gallia, mentions
Massilia, Tannawi, Olbia, Antipolis, and Nicea.
He adds that the port of Augustus, which
they call Forum Julii, is between Olbia and An-
tipolis (Antiber). The Massaliots built Olbia, with
the other places on this coast, as a defence against
the Salyes and the Ligures of the Alps. (Strab.
p. 186.) Ptolemy (iv. 16. § 8) places Olbia be-
tween the promontory Citharisthe (Cap Citer)
and the mouth of the river Argentaeus (Argenteus),
west of Frejus. There is nothing that fixes the
site of Olbia with precision; and we must accept
D'Anville's conjecture that Olbia was at a place
now called Eonbie, between Cap Combe and Briegon-
Burgier accepts the conjecture that Olbia was at
St. Tropez, which he supports by saying that Scro-
bo places Olbia 600 stadia from Massilia; but Strabo
places Forum Julii 600 stadia from Massilia. [G. L.]

OLBIA (Olbia). 1. A town in Bithynia, on
the bay called, after it, the Sinus Olbiae. It may
be probably only another name for Astacus
(Astacvs). Pliny (v. 43) is probably mistaken in
saying that Olbia was the ancient name for Nicea
in Bithynia; he seems to confound Nicea with Astacvs.

2. The westernmost town on the coast of Pam-
phylia. (Strab. xiv. pp. 666, foll.; Plin. v. 26.)
Ptolemy (v. 5. § 2), consistently with this descrip-
tion, places it between Puselis and Attaleia. Stephanus
(s. v. Olbia) remarks that the town of Puselis
is situated in the territory of the Salyes, and its real name was Olba;
but the critic is here himself at fault, confounding
Olbia with the Tyrian Olba. Strabo describes
our Olbia as a strong fortress, and its inhabitants
colonised the Lycean town of Cydrena.

3. A town of Cilicia, mentioned only by
Stephanus Byz. (s. v. Olba), who may possibly have been thinking of
the Cilician Olba or Olba.

[Λ. Σ.]

OLBIA. [OLBIA.]

OLBIA NUS SINUS (Olbiaovw N½v), only
another name for the Sinus Astacvs, the town of
Olbia being also called Astacus. (Sclav. p. 35;
comp. Astacvs, and Olbiana, No. 1.)

[Λ. Σ.]
OLCades (Oa̱danes), a people of Hispania Baetica, dwelling N. of Carthago Nova, on the upper course of the Anas, and in the E. part of the territory occupied at a later date by the Oretani. They are mentioned only in the wars of the Carthaginians with the Iberians, and after that period vanished entirely from history. Hannibal during his wars in Italy transplanted a colony of them into Africa. Their chief town was Althnea. (Polyb. iii. 14. 23, and 13. 5; Liv. xxi. 5; Steph. B. s. v.; Suidas, s. v.)

[OLCI'NIIUM (Olaκινων, Polyb. ii. 17. § 5; Olchium, Plin. iii. 26: Eth. Olikinesiato), a town of some importance in Ilyrium, which surrendered to the Romans at the commencement of hostilities with Gentius, and which, in consequence, received the privilege of freedom and immunity from taxation. (Liv. xiv. 26.) Dulceigna or Ullin, as it is still called, is identified with this town. (Hahn, Alba-nestische Studien, p. 262.) [E. B. J.]

OLEARUS. [OLiAran.]

OLASTRUM (Olaκαστρων, Polyb. i. 4. § 14). 1. A town in Hispania Baetica, in the jurisdiction of Gades, with a grove of the same name near it. (Mela, iii. 1. § 4; Plin. iii. i. 3. s.)

2. A town of the Costetani in Hispania Tarraconensis, on the road from Dertosa to Tarracon (Itin. Ant. 499). Probably the same town mentioned by Strabo (iii. p. 159, but erroneously placed by him near Saguntum. It seems also to have given name to the lead mentioned by Pliny (xxxiv. 17. s. 49). Variously identified with Balesoqur, Mironar, and S. Lucar de Barrameda (Marca. Hisp. ii. 11. p. 142.) [T. H. D.]

OLASTRUM PROM. (Olaκαστρων, Polyb. iv. 1. § 6), a promontory of Mauretania, between Rassadar and Abyla, called in the Antonine Itinerary, Bar-bare Prom. Nova Punta di Mazara, in the sight of Tubaièm, or Tétouin. [E. B. J.]

OLENACUM, a fortress in the N. of Britannia Romana, and the station of the Ala Prima Herculea (Nat. Prov.). It lay close to the Picts' wall, and Camden thinks (p. 1022) that it occupied the site of Lusitius Castle in the barony of Croxley, not far from Carlisle. Horsey, however (p. 112) takes it to be Old Carlisle near Wigton, where there are some conspicuous Roman remains. [T. H. D.]

OLENUS (Oλαινος), a town in Galatia, in the west of Ancyra, and belonging to the territory of the Tessagenses, is mentioned only by Ptolemy (v. 4. § 68). [L. S.]

OLENUS (Olaı̊νος; Eth. Oλαίνος). 1. An ancient town in the S. of Aetolia, between the Achelous and the Evenas, was named after a son of Zeus or Hephaestus, and is mentioned in the Homerical catalogue. It was situated near New Pleuron, at the foot of Mount Araecynthus; but its exact site is uncertain. It is said to have been destroyed by the Achaions; and there were only a few traces of it in the time of Strabo. (Strab. x. p. 451, 460; Hom. II. ii. 635; Appollod. i. 8. § 4; Hyg. Poet. Astron. 2, § 13; Stat. Theb. iv. 104; Steph. B. s. v.) The Illyrian poets use Olenus as equivalent to Aetolian; thus Tydus of Calypdon in Aetolia is called Olenus Tydela. (Stat. Theb. i. 402.)

2. A town of Achaia, and originally one of the 12 Achaean cities, was situated on the coast, and on the left bank of the river Peiras, 40 stadia from Dyne, and 80 stadia from Patrae. It was the revival of the Achaean League in B.C. 280, it appears that Olenus was still in existence, as Strabo says that it did not join the league; but the inhabitants subsequently abandoned the town, and retired to the neighbouring villages of Peiras (Hepais), and Eurykaste (Euphras). (Polyb. iii. 2.) The town seems to have been a colony of Polybius, however, Olenus was no longer inhabited; and in the time of Strabo it was in ruins, and its territory belonged to Dyne. There are some remains of the ancient city at Koto or Palea-Akhaia. (Herod. i. 145; Polyb. ii. 41; Strab. viii. pp. 384, 386, 388; Paus. vii. 18. § 1, vii. 22. § 1; Plin. iv. 6; Olenum; Leake, Morea, vol. ii. p. 157, Peloponnesiaca, p. 208; Thirwall, Hist. of Greece, vol. vii. p. 82.)

OLEKURS (Oλεκύρος, Xenian, ap. Steph. B. s. v.; Eth. Ολεκύρος, Böckh, Insscr. vol. ii. No. 2553; Eustath. ad H. ii. p. 664), a town of Crete, situated on a hill, with a temple to Athene. In the struggle between Cnosus and Lyctus, the people of Oleria sided with the latter. (Polyb. iv. 53, where the reading Ολεκύρος appears to be a mistake.) In the Descrizione dellisola di Candia, a.D. 1538 (ap. Mus. Class. Antiq, vol. ii. p. 271), the site is occupied by a place called Castel Messerlerius. (Höck, Kreta, vol. i. pp. 17, 424.) [E. B. J.]

OLGASSY (Oλγασσῶς), a lofty and inaccessible mountain on the frontiers of Paphigonia and Galatia, extending from the Halys in a south-western direction towards the Sangarius, and containing the sources of the Parthenius. The surrounding country was filled with temples erected by the Paphigoneans. (Strab. xii. p. 562.) The mountain mentioned by Ptolemy (v. 4. § 4) under the name of Litis, Gisas, or Oligas, is probably the same as the Oligasses of Strabo. It still bears its ancient name in the corrupt form of Ulygus, and modern travellers state that some parts of the mountain are covered with snow nearly all the year. [L. S.]

OLIARUS (Olilaı̊os, Olearius, Plin., Virg.; Eth. Oλ surreptis : Antiparos), an island in the Aegean sea, one of the Cyclades, said by Heracleides to have been colonised by the Sideneans and to be 38 stadia from Paros. (Heracleid. ap. Steph. B. s. v.; Strab. x. p. 485; Plin. iv. 12. 122; Virg. Aen. iii. 126.) It possesses a celebrated stalactic cavern, which has been described by several modern travellers. (Turnerfort, Voyages, &c. vol. i. p. 146, seq.; Eng. transi.; Leake, Northern Greece, vol. iii. p. 87, seq.; Fiedler, Reise durch Griechenland, vol. ii. p. 191, seq.)

OLIBA (Ολίβα, Polyb. ii. 6. § 55), a town of the Berones in the N. of Hispania Tarraconensis. Ukert (vol. ii. pt. 1. p. 458) takes it to be the same town as Oliba in Iberia, mentioned by Steph. B. [T. H. D.]

OLICANA (Ολίκανα, Polyb. ii. 3. § 16), a town of the Brigantes in the N. of Britannia Romana; according to Camden (p. 867), Ilkley, on the river Wharf in Yorkshire. [T. H. D.]

OLIGYTUS (Oλιγύτος, Polyb. iv. 11. 70; Oλίγυτος, Phl. Clem. 26), a mountain and fortress situated in a pass between Symphus and Capathus. Leake places it on a small advanced height of Mt. Skipezi, projecting into the Symphalan plain, on the crest of which are the foundations of a Hellenic wall, formed of large quadrangular stones. (Leake, Morea, vol. iii. p. 114; Boblaye, Recerreches, &c. p. 154; Curtis, Peloponnesiaca, vol. i. p. 217.)

OLINA. [Gallaecla, p. 934.]

OLINAS (Ολίνα ποταμών υπόλοιποι). Ptolemy (ii. 8. c. 2) places the mouth of the Olnas river on the coast of Celtogalatia Lucadunensis in the country of the Veneli or Unelli; and the next place which
he mentions north of the mouth of the Olinas is Novomagus, or Noviomagus, of the Leuvi or Lexovi. This is the Orne, which flows into the Atlantic below Carn in the department of Calvados. D'Anville says that in the middle age writings the name of the river is Ohna, which is easily changed into Orne. Gosselin supposes the Olinas to be the Sase, and there are other conjectures; but the identity of name is the only evidence that we can trust in this case.

[Ge. L.]

OLINTIGI, a maritime town of Ilippaea Baties, lying E. of Onoba. (Mela, iii. i. § 4.) Its real name seems to have been Olintigis, as many coins are found in the neighbourhood bearing the inscription olont. (Flores, Med. ii. pp. 495, 509, iii. p. 103; Momment, Supp. i. p. 111, ap. Ucort, vol. ii. pt. 1. p. 340.) Variousy identified with Moura and Palos. [Ti. II. D.]

OLISISO (Olaeisiwios, Plin. ii. 5. § 4), a city of Lusitania, on the right bank of the Tagus, and not far from its mouth. The name is variously written. Thus Pliny (iv. 35) has Olisipon: so also the Hrn. Ant. pp. 416, 418, seq. In Mela (iii. i. § 6), Solinus (c. 23), &c., we find Ulysippon, on account probably of the legend mentioned in Strabo, which ascribes its foundation to Ulysses, but which is more correctly referred to Oliscia in Ilippaea Batiae. [Odysseia.] Under the Romans it was a municipium, with the additional name of Felicitas Julia. (Plin. E. c.) The neighbourhood of Olisipo was celebrated for a breed of horses of remarkable fleetness, which gave rise to the fable that the mares were impregnated by the west wind. (Plin. vii. 67; Var. R. R. ii. 1, 19; Col. vi. 27.) It is the modern Lisbon or Lâbora. [IAE. H. D.]

OLMUS. (Olmus), an ancient town of Magnesia in Thessaly, mentioned by Homer, who gives the epithet of "vir gessal." (Hom. H. i. 717.) It possessed a harbour (Seylax, p. 25); and as it was opposite Artemision in Euboea (Plut. Them. 8), it is placed by Leake on the isthmus connecting the peninsula of Trikibiri with the rest of Magnesia. (Strab. ix. p. 436; Plin. iv. 9. s. 16; Steph. B. s. v.; Leake, Northern Greece, vol. iv. p. 384.)

OLLIUS (Oyllus), a river of Cisalpine Gaul, and one of the more considerable of the northern tributaries of the Padus. In its rise in the Alps, at the foot of the Monte Travale, flows through the Vc Camanios (the district of the ancient Camuni, and forms the extensive lake called by Pliny the Lakeus Sessius, now the Lugano e Isola. From thence it has a course of about 80 miles to the Padus, receiving on its way the tributary streams of the Melia or Mella, and the Chiusas or Chiese. Though one of the most important rivers of this part of Italy, its name is mentioned only by Pliny and the Geographer of Hesychius. (Plin. iii. 16. s. 20, 19, s. 23; Geogr. Rav. iv. 36.) [E. H. B.]

OLMIAE. (Olmiaé, Corinthia, vol. i. p. 693, a.]

OLMO'XIS (Olmoxwes, Eth. Olmo'xwnes), a village in Boeotia, situated 12 stadia to the left of Cope, and 7 stadia from Hyttus. It derived its name from Olmus, the son of Scepsus, but eontained nothing worthy of notice in the time of Pausanias. Forchhammer places Olmone in the small island in the lake Cope, SW. of Cope, now called Treto-Yanti. [See the Map, Vol. iv. p. 411, where the island lies SW. of No. 10.] (Paus. ix. 24. § 3; Steph. B. s. v.; Forchhammer, Hellkarter, p. 178.)

OLMOPHYNE (Olmomphyn), a district of Myrea, on the northern slope of Mount Olympus, from which

OLOCRUS (Ol'ocrus, Plut. Aem. Paul. 20), a mountain near Pydna, in Macedonia, represented by the last falls of the heights between Apain and Heliosboro-keri. (Leake, Northern Greece, vol. iii. p. 433.) [E. B. J.]

OLOSSON (Olousson, Eth. Oloussiov), a town of Perkaedon in Thessaly, mentioned by Homer, who gives it to the epitaph of "white", from its white argillaceous soil. In Precondius the name occurs in the corrupt form of Lossonus. It is now called Elussaon, and is a place of some importance. It is situated on the edge of a plain near Tempe, and at the foot of a hill, on which there is a large ancient monastery, defended on either side by a deep ravine. The ancient town, or at least the citadel, stood upon this hill, and there are a few fragments of ancient walls, and some foundations behind and around the monastery. (Hom. II. ii. 739; Strab. ix. p. 440; Lycophr. 905; Steph. B. s. v.; Procop. de Aedif. iv. 14; Leake, Northern Greece, vol. iii. p. 345.)

OLPHYSUS (Olphyo, Herod. vii. 22; Thuc. iv. 109; Syl. p. 27; Strab. viii. p. 331; Steph. B.), a town of Acarnania, the site of which is probably represented by the Artemi of Klythnarki, the tenth and last monastery of the E. shore of the Monte Santo. It is reported that here there were Hellenic remains found, in particular those of a mole, part of which is now left. (Leake, Northern Greece, vol. iii. p. 141, 151.) [E. B. J.]

OLITI, De Velos suggested, and D'Anville adopts his opinion, that we ought to read Olitis instead of Citias in the verse of Sodinum Apollinaris (Propempt.)—

"Citias, Elaris, Atax, Vaecalis."

D'Anville observes that the same river is named Olitis in a poem of Theodulf of Orleans. Accordingly the river ought to be named Olt or L' Olt; but usage has attached the article to the name, and we now speak of Le Lot, and so use the article twice. The Lot rises near Mont Loire in the Lozere, and it has a general west course past Meurthe and Caloue. It joins the Garonne a few miles below Agen, which is on the Garonne. [G. L.]

OLURIS. [Dorium.]

OLURUS. [Pelerene.]

OLUS (Olous, Syl. p. 19; Xenion, ep. Steph. B. s. v.; Plut. iii. 17. § 5; at Olous; Stat. Audam. 350; Ech. Olothreut, Olothri, a town of Crete, the citizens of which had entered into a treaty with those of Lato. (Boeh, Inscri. vol. ii. No. 2354.) There was a temple to Britomartis in this city, a wooden statue of whom was erected by Dendaler, the mythical ancestor of the Dendalaric, and father of Cretan art. (Paus. iv. 40. § 3.) Her effigy is represented on the coins of Oius. (Eckel, vol. ii. p. 316; Momment, Descr. vol. ii. p. 289; Conde, Mus. Hunter.) There is considerable difficulty in making out the position of this town; but the site may probably be represented by Aliedha near Spina Loniga, where there are ruins. Mr. Pasheby's map erroneously identifies these with Xanes. (Comp. Nick, Istev, vol. i. p. 417.) [E. B. J.]

OLYMPENE (Olympynchos), a district of Mysea, on the northern slope of Mount Olympus, from which
OLYMPIA.

The plain of Olympia is open towards the sea on the west, but is surrounded on every other side by hills of no great height, yet in many places abrupt and precipitous. Their surface presents a series of sandy clefts of light yellow colour, covered with the pine, ilex, and other evergreens. On entering the valley from the west, the most conspicuous object is a bold and nearly insalutary eminence rising on the north from the level plain in the form of an irregular cone. (Mure, vol. ii. p. 281.) This is Mount Cronius, or the hill of Cronus, which is frequently noticed by Pindar and other ancient writers. (παρὰ τῆς Κρονίους Κράνους, Pind. Ol. I. 111; πέτρος Κράνους, Ol. vi. 40; βάλτων πέτρας Λιθώτης Κράνους, Ol. vii. 64; Κράνους παρὰ σιπών ὑπόθων, Lycephr. 42; Κράνους, Xen. Hell. vii. 4. § 14; τὸ ὄρος τὸ Κράνος, Paus. v. 21. § 2, vi. 19. § 1, vi. 20. § 1; Ptol. iii. 16. § 14.) The range of hills to which it belongs is called by most modern writers the Olympia, on the authority of a passage of Xenophon. (Hell. vii. 4. § 14.) Leake, however, supposes that the Olympia hill alluded to in this passage was no other than Cronius itself; but it would appear, that the common opinion is correct, since Strabo (vii. p. 356) describes Pisa as lying between the two mountains Olympia and Ossa. The hills, which bound the plain on the south, are higher than the Cronian ridge, and, like the latter, are covered with evergreens, with the exception of one bare summit, distant about half a mile from the Alpheus. This was the ancient Typhaeus (Τυφαύς), from which women, who frequented the Olympic games, or crossed the river on forbidden days, were condemned to be burned headlong. (Paus. v. 6. § 7.) Another range of hills closes the vale of Olympia to the east, at the foot of which runs the rivulet of Misrik. On the west the vale was bounded by the Cladeus (Κλαδέας), which flowed from north to south along the side of the sacred grove, and fell into the Alpheus. (Paus. v. 7. § 1; Κλαδέας, Xen. Hell. vii. 4. § 29.) This river rises at Lala in Mount Phoebii. The Alpheus, which flows along the southern edge of the plain, constantly changes its course, and has buried beneath the new alluvial plain, or carried into the river, all the remains of buildings and monuments which stood in the southern part of the Sacred Grove. In winter the Alpheus is full, rapid, and turbulent; in summer it is scantly, and divided into several torrents flowing between islands or sand-banks on a wide, marshy plain. The temple of Zeus Olympia is now called Anidalo (i.e. opposite to Λαλά), and is uninhabited. The soil is naturally rich, but swampy in part, owing to the inundations of the river. Of the numerous buildings and countless statues, which once covered this sacred spot, the only remains are those of the temple of Zeus Olympia. Pausanias has devoted nearly two books, and one fifth of his whole work, to the description of Olympia; but he does not enumerate the buildings in their exact topographical order: owing to this circumstance, to the absence of ancient remains, and to the changes in the surface of the soil by the fluctuations in the course of the Alpheus, the topography of the plain must be to a great extent conjectural. The latest and most able attempt to elucidate this subject, is that of Colonel Leake in his Peloponnesiacs, whose description is here chiefly followed.

Olympia lay partly within and partly outside of the Sacred Grove. This Sacred Grove here from the most ancient times the name of Altis (ἡ Ἀλτίς), which is the Peloponnesian Aesic form of Ἄλατος. (Paus. v. 10. § 1.) It was adorned with trees, and in its centre there was a grove of plane. (Paus. v. 27. § 11.) Pindar likewise describes it as well wooded (Πίνακος κοινών ἐν' Ἀλφεός Ἄλατος, Ol. viii. 12.) The space of the Altis was measured out by Hercules, and was surrounded by this hero with a wall. (Pind. Ol. xi. 44.) On the west it ran along the Cladeus; on the south its direction may be traced by a terrace raised above the Alpheus; on the east it was bounded by the stadium. There were several gates in the wall, but the principal one, through which all the processions passed, was situated in the middle of the western side, and was called the Pompic Entrance (ἡ Πυμπίκα έντροικος, Paus. v. 15. § 2). From this gate, a road, called the Pompic Way, ran across the Altis, and entered the stadium by a gateway on the eastern side.

1. The Olympia, Olymipium, or temple of Zeus Olympia. An oracle of the Olympican god existed on this spot from the most ancient times (Strab. viii. p. 353), and here a temple was doubtless built, even before the Olympic games became a Pan-Hellenic festival. But after the conquest of Pisa and the surrounding cities by the Eleians in b.c. 572, the latter determined to devote the spoils of the conquered cities to the erection of a new and more splendid temple of the Olympian god. (Paus. v. 10. §§ 2, 3.) The architect was Iphon of Elis. The temple was not, however, finished till nearly a century afterwards, at the period when the Attic school of art was supreme in Greece, and the Parthenon on the Athenian Acropolis had thrown into the shade all previous works of art. Shortly after the dedication of the Parthenon, the Eleians invited Pheidas and his school of artists to remove to Elis, and adorn the Olympic temple in a manner worthy of the king of the gods. Pheidas probably removed at Olympia for four or five years from about 437 to 434 or 433. The colossal statue of Zeus in the cela, and the figures in the pediments of the temple were executed by Pheidas and his associates. The pictorial embellishments were the work of his relative Panaeus. (Strab. viii. p. 354) [Comp. Dict. of Biogr. Vol. iii. p. 248.] Pausanias has given a minute description of the temple (v. 10); and its site, plan, and dimensions have been well ascertained by the excavations of the French Commission of the Morca. The foundations are now exposed to view: and from them several fragments of the sculptures, representing the labours of Hercules, are now in the museum of the Louvre. The temple stood in the south-western portion of the Altis, to the right hand of the Pompic entrance. It was built of the native limestone, which Pausanias called poros, and
which was covered in the more finished parts by a surface of stucco, which gave it the appearance of marble. It was of the Doric order, and a peripteral hexastyle building. Accordingly it had six columns in the front and thirteen on the sides. The columns were fluted, and 76. 4 in. in diameter, a size greater than that of any other existing columns of a Grecian temple. The length of the temple was 230 Greek feet, the breadth 93, the height to the summit of the pediment 68. The roof was covered with slabs of Pentelic marble in the form of tiles. At each end of the pediment stood a gilded vase, and on the apex a gilded statue of Nike or Victory; below which was a golden shield with the head of Medusa in the middle, dedicated by the Lacedaemonians on account of their victory over the Athenians at Tanagra in B.C. 457. The two pediments were filled with figures. The eastern pediment had a statue of Zeus in the centre, with Oecumenes on his right and Pelops on his left, prepared to contend in the chariot-race; the figures on either side consisted of their attendants, and in the angles were the two rivers, Chedens to the right of Zeus, and Alpheus to his left. In the western pediment was the contest of the Centaurs and the Lapithae, Perithoous occupying the central place. On the metopes over the doors at the eastern and western ends the labours of Hercules were represented. In its interior construction the temple resembled the Parthenon. The cells consisted of two chambers, of which the eastern contained the statue, and the western was called the Opisthodomus. The colossal statue of Zeus, the master-work of Pheidias, was made of ivory and gold. It stood at the end of the front chamber of the cela, directly facing the entrance, so that it at once showed itself in all its grandeur to a spectator entering the temple. The approach to it was between a double row of columns, supporting the roof. The god was seated on a magnificent throne adorned with sculptures, a full description of which, as well as of the statue, has been given in another place. [Dict. of Birgr. Vol. III. p. 252.] Behind the Opisthodomus of the temple was the Callistophanes or wild olive tree, which furnished the gariandas of the Olympic victors. (Paus. v. 13. § 3.)

GROUND PLAN OF THE OLYMPIUM.

2. The Pelopium stood opposite the temple of Zeus, on the other side of the Pompic way. Its position is defined by Pausanias, who says that it stood to the right of the entrance into the temple of Zeus and to the north of that building. It was an enclosure, containing trees and statues, having an opening to the west. (Paus. v. 13. § 1.)

3. The Heraeum was the most important temple in the Altis after that of Zeus. It was also a Doric peripteral building. Its dimensions are unknown, Pausanias says (v. 16. § 1) that it was 63 feet in length; but this is clearly a mistake, since no peripteral building was so small; and the numerous statues in the cela, described by Pausanias, clearly show that it must have been of considerable dimensions. The two most remarkable monuments in the Heraeum were the table, on which were placed the garlands prepared for the victors in the Olympic contests, and the celebrated chest of Cypselus, covered with figures in relief, of which Pausanias has given an elaborate description (v. 17—19). We learn from a passage of Dom Chrysostom (Orat. xii. p. 163), cited by Leake, that this chest stood in the opisthodomus of the Heraeum; whence we may infer that the cela of the temple consisted of two apartments.

4. The Great Altar of Zeus is described by Pausanias as equidistant from the Pelopium and the Heraeum, and as being in front of them both. (Paus. v. 13. § 8.) Leake places the Heraeum near the Pompic entrance of the Stadium, and supposes that it faced eastward; accordingly he conjectures that the altar was opposite to the backfronts of the Pelopium and the Heraeum. The total height of the altar was 22 feet. It had two platforms, of which the upper was made of the cinders of the thighs sacrificed on this and other altars.

5. The Column of Oecumenes stood between the great altar and the temple of Zeus. It was said to have belonged to the house of Oecumenes, and to have been the only part of the building which escaped when it was burnt by lightning. (Paus. v. 20. § 6.)

6. The Metroon, or temple of the Mother of the Gods, was a large Doric building, situated within the Altis (Paus. v. 20. § 9.). It is placed by Leake to the left of the Pompic Way nearly opposite the Heraeum.

7. The Prytaneium is placed by Pausanias within the Altis, near the Gymnasion, which was outside the sacred enclosure (v. 15. § 8.)

8. The Bouleuterion, or Council-House, seems to have been near the Prytaneium. (Paus. v. 23. § 1, 24. § 1.)

9. The Philippium, a circular building, erected by Philip after the battle of Chaeronia, was to the left in proceeding from the entrance of the Altis to the Prytaneum. (Paus. v. 17. § 4, v. 20. § 10.)
10. The Theseolos, a building belonging to the Sebeulai or superintendents of the sacrifices (Paus. v. 15. § 8). Its position is uncertain.

11. The Hippodamation, named from Hippodameia, who was buried here, was within the Altis near the Pompic Way. (Paus. vi. 20. § 7.)

12. The temple of the Olympian Eileithyes (Lucina) appears to have stood on the neck of Mount Cronus. (Paus. vi. 20. § 2.)

13. The Temple of the Olympian Aphrodite was near that of Eileithyes. (Paus. vi. 20. § 6.)

14. The Theaum or Treasuries, ten in number, were, like those at Delphi, built by different cities, for the reception of their dedicatory offerings. They are described by Pausanias as standing to the north of the Heraeum at the foot of Mount Cronus, upon a platform made of the stone pores (Paus. vi. 19. § 1).

15. Zanes, statues of Zeus, erected from the produce of fines levied upon athletes, who had violated the regulations of the games. They stood upon a stone platform at the foot of Mount Cronus, to the left of a person going from the Metronum to the Stadium. (Paus. vi. 21. § 2.)

16. The Studio of Pheidias, which was outside the Altis, and near the Pompic entrance. (Paus. vi. 15. § 1.)

17. The Leonidaeum, built by Leonidas, a native, was near the Studio of Pheidias. Here the Roman magistrates were lodged in the time of Pausanias (v. 15. §§ 1, 2).

18. The Gymnasium, also outside the Altis, and near the northern entrance into it. (Paus. vi. 21. § 2.) Near the Gymnasium was (19) the Palaestra. 20 and 21. The Stadium and the Hippodrome were two of the most important sites at Olympia, as together they formed the place of exhibition for all the Olympic contests. Their position cannot be determined with certainty; but as they appear to have formed a continued area from the circular end of the Stadium to the further extremity of the Hippodrome, the position assigned to them by Leake is the most probable. He places the circular end of the Stadium at the foot of the heights to the NE. of the summit of Mount Cronus, and the further end of the Hippodrome on the bank of the Alpheus.

The Stadium is described by Pausanias as a mound of earth, upon which there was a seat for the Hellanodice, and over against it an altar of marble, on which sat the priestess of Demeter Chamyne to behold the games. There were two entrances into the Stadium, the Pompic and the Secret. The latter, through which the Hellanodice and the agonistae entered, was near the Zanes; the former probably entered the area in front of the rectilinear extremity of the Stadium. (Paus. vi. 20. § 8, seq.) In proceeding towards the Hippodrome from that part of the Stadium where the Hellanodice sat was the Hippophaeis or starting place of the horses (ἡ ἱπποφαίης τῶν ἵππων). In form it resembled the prow of a ship, the embolus or beak being turned towards the racecourse. Its widest part adjoined the stoa of Agnaptus. At the end of the embolus was a brazen dolphin standing upon a pillar. Either side of the Hippophaeis was more than 400 feet in length, and contained apartments, which those who were going to contend in the horse-races obtained by lot. Before the horses a cord was extended as a barrier. An altar was erected in the middle of the prow, on which was an eagle with outstretched wings. The superintendent of the race elevated this eagle by means of machinery, so as to be seen by all the spectators, and at the same time the dolphin fell to the ground. Thereupon the first barriers on either side, near the stoa of Agnaptus, were removed, and then the other barriers were withdrawn in like manner in succession, until all the horses were in line at the embolus.

One side of the Hippodrome was longer than the other, and was formed by a mound of earth. There was a passage through this side leading out of the Hippodrome; and near the passage was a kind of circular altar, called Taraxippus (Ταραξιππός), or the terrifier of horses, because the horses were frequently seized with terror in passing it, so that cha-

   m m. Artificial side of the Hippodrome.
   n n. Natural height.
22. Theatre.
riots were broken. There was a similar object for frightening horses both at the Corinthian Isthmus and at Nemea, in consequence of which the difficulty of the race was increased. Beyond the Taraxippus were the terminal pillars, called νέστρα, round which the chariots turned. On one of them stood a brazen statue of Hippodameia about to bind the tautalus on Pelops after his victory. The other side of the Hippodrome was a natural height of no great elevation. On its extremity stood the temple of Demeter Chamysoi. (Paus. vi. 29. § 15—v. 21. § 1.) The course of the Hippodrome appears to have been two dianius, or four stadia. (Δόμοι δέ εἰς τοῦ ἵππου μύσης μὲν διανίου δόο, Paus. vi. 16. § 4.) Muse, indeed (vol. ii. p. 527), understands μύση in this passage to refer to the length of the area; but Leake (Peloponnesian, p. 94) maintains, with more probability, that it signifies the length of the circuit.

22. The Theatre is mentioned by Xenophon (Hell. vii. 4. § 31), but it does not occur in the description of Pausanias. A theatre existed also at the Isthmus and Delphi, and would have been equally useful at Olympia for musical contests. Xenophon could hardly have been mistaken as to the existence of a theatre at Olympia, as he resided more than 20 years at Scillus, which was only three miles from the former spot. It would therefore appear that between the time of Xenophon and Pausanias the theatre had disappeared, probably in consequence of the musical contests having being discontinued.

Besides the buildings already mentioned, there was a very large number of statues in every part of the Sacred Grove, many of which were made by the greatest masters of Grecian art, and of which Pausanias has given a minute description. According to the vague computation of Pliny (xxiv. 7. a. 17) there were more than 3000 statues at Olympia. Most of these works were of brass, which accounts for their disappearance, as they were converted into objects of common utility upon the extinction of Paganism. The temples and other monuments at Olympia were, like many others in different parts of Greece, employed as materials for modern buildings, more especially as quarries of stone are rare in the district of Elis. The chiefs of the powerful Albanian colony at Lale had in particular long employed the ruins of Olympia for this purpose.

The present article is confined to the topography of Olympia. An account of the games and of everything connected with their celebration is given in the Dictionary of Antiquities. (Stanhope, Olympic, Lond. 1824; Krause, Olympia, 1838; Muse, Tour in Greece, vol. ii. p. 260, seq.; Leake, Peloponnesian, p. 4, seq.; Curtius, Peloponnesus, vol. ii. p. 51, seq.)

Olympus (Ολυμπος). 1. One of the loftiest mountains in Greece, of which the southern side forms the boundary of Thessaly, while its northern base encloses the plains of Macedonia. Hence it is sometimes called a mountain of Macedonia (Strab. vii. p. 529; Ptol. iii. 13. § 19), and sometimes a mountain of Thessaly. (Herod. vii. 128; Plin. iv. 8. s. 13.) It forms the external extremity of the Cenomanian range, and extends to the sea as far as the mouth of the Peneius, being separated by the vale of TEMPE. It was the type of the very high mountains which, measured the perpendicular height of Olympus from the town of Pythion, ascertained its elevation to be ten stadia and nearly one plethron (Plut. Aemil. 15); which Holland, Dodwell, Leake, and others regard as not far from the truth, since they estimate its height to be between six and seven thousand feet. But these writers have considerably undercalculated its elevation, which is now ascertained to be 9754 feet. Herodotus relates that Mt. Olympus was seen by Xenæs from Tharmon (vii. 128); and when he, after his return, travelled alone in clear weather it is visible from Mt. Athos, which is 90 miles distant. (Journ. Geogr. Soc. vol. vii. p. 69.) All travellers, who have visited Mt. Olympus, dwell with admiration upon its imposing grandeur. One of the most striking descriptions of its appearance is given by Dr. Holland, who beheld it from Litobhoro at its base:—"We had not before been aware of the extreme vicinity of the town to the base of Olympus; but when leaving it, and accidentally looking back, we saw through an opening in the fog, a faint outline of vast precipices, seeming almost to overhang the place; and so aerial in their aspect, that for a few minutes we doubted whether it might not be a delusion to the eye. The fog, however, dispersed yet more on this side, and partial openings were made, through which, as through arches, we saw the sunbeams resting on the snowy summits of Olympus, which rose into a dark blue sky far above the belt of clouds and mist that hung upon the sides of the mountain. The transient view we had of the mountain from this point shewed as a line of precipices of vast height, forming its eastern front toward the sea; and broken at intervals by deep hollows or ravines, which were richly clothed with forest trees. The oak, chestnut, beech, pine-tree, &c., are seen in great abundance along the base and skirts of the mountain; and towards the summit of the first ridge, large forests of pine spread themselves along the acclivities. Behind this first ridge, others rise up and recede toward the loftier central heights of Olympus. Almost opposite the town of Litobhoro, a vast ravine penetrates into the interior of the mountain, through the opening of which we saw, though only for a few minutes, what I conceive to be the summit,—from this point of view, with something resembling line of each side." (Holland, Travels, vol. ii. p. 27.) "Though the lower sides of Olympus are well wooded, the summit presents a wide extent of a bare light-coloured rock. (Leake, Northern Greece, vol. i. p. 434.) The broad summit of Olympus is alluded to by Homer, who gives it to the epithet of μακρός more frequently than any other. Next to that, is ἀγάνυφος (II. i. 420), from its being covered with snow during the greater part of the year. Hesiod (Theog. 118) also gives it the epithet of νυφιος. Below the summit its rugged outline is broken into many ridges and precipices; hence Homer describes it as πολυδέρφης. (II. i. 499, v. 754.) The forests, which covered the lower sides of Olympus, are frequently alluded to by the ancient poets. (πολυδέρφης, Eurip. Bacch. 566; Ossis frondosum invovei Olympum, Virg. Georg. 281; opacis Olympus, Hor. Carm. iii. 4. 52.) The mountain is now called Ylimbo, i.e. Ελυμπος, by the surrounding inhabitants, which name Leake observes is probably not a modern corruption, but the ancient dialectic form, for the Aeolic tribes of Greece often substituted the epsilon for the omicron, as in the instance of Ορχομηδα, which the Boeotians called Ερχομηιδα. (Dodwell, Tour through Greece, vol. ii. p. 94.) The forests, which covered the lower sides of Olympus, are frequently alluded to by the ancient poets. (ο在里面, Northern Greece, vol. iii. pp. 341, 407.) Olympus was believed to be the residence of Zens and the other gods; and as its summit rose above the clouds into
OLYMPUS.

the calm ether, it was believed that here was an envoiing into the vault of heaven, closed by a thick cloud, as a door. (II v. 751.) [See Dict. of Biog., Vol. III. p. 23; Liddell and Scott, Greek Lex. s. v.]

2. A mountain in Lucania, near Sellasia. [Selia.]

3. A mountain above Olympia in Elis. [Olympia, p. 475, a.]

OLYMPUS (Ολυμπός). 1. A mountain range of Mysea, extending eastward as far as the river Sangarius, and dividing Phrygia from Bithynia. To distinguish it from other mountains of the same name, it often is called the Mysian Olympus. Its height rises towards the west, and that part which is of the greatest height, is the highest mountain in all Asia Minor. The country around this mountain was well peopled, but its heights were thickly clad with wood, and contained many safe retreats for robbers, bands of whom, under a regular leader, often rendered the country unsafe. (Strab. xii. p. 547, comp. x. p. 476, xili. p. 571; Herod. i. 36, vii. 74; Ptol. v. l. § 10; Steph. B. s. v.; Plin. iv. 40, 43; Pompon. Mela, i. 19; Ann. Marc. xxvi. 9; Schol. ad Apollon. Rhod. i. 598.) The lower regions of this great mountain are still covered with extensive forests; but the summit is rocky, devoid of vegetation, and during the greater part of the year covered with snow. The Turks generally call it Anadoli Daghi, though the western or highest parts also bear the name of Keshib Daghi, that is, the Monk's Mountain, and the eastern Tmoundijli or Domonu Daghi. The Byzantine historians mention several fortresses to defend the passes of Olympus, such as Pitheca (Nicet. Chron. p. 35; B. Cinnam. p. 211), Acryna, and Calogroea (B. Cinnam. L. c.; Cedren. p. 553; Anna. Coss. p. 441; comp. Brown, in ita. d'frac. of the Turks, l. c., ii. pp. 109, foll.; Pococke, Travels, l. i. p. 178.)

2. A mountain in the north of Galatia, which it separates from Bithynia. It is, properly speaking, only a continuation of the Mysian Olympus, and is remarkable in history for the defeat sustained on it by the Telistoboi, in a battle against the Romans under Manlius. (Liv. xivii. 18, 20; Polyb. xxii. 20, 21.) Its modern name is Ala Daghe.

3. A volcanic mountain in the east of Lycia, a little to the north-east of Corydalla. It also bore the name of Phoenicus, and near it was a large town, likewise bearing the name Olympus. (Strab. xiv. p. 666.) In another passage (xiv. p. 671) Strabo speaks of a mountain Olympus and a stronghold of the same name in Cilicia, from which the whole of Lycia, Pamphylia, and Pisidia could be surveyed, and which was in his time taken possession of by the Iasian robber Zenicetas. It is, however, generally supposed that this Cilician Olympus is no other than the Lygin, and that the geographer was led into his mistake by the fact that a town of the name of Corycus existed both in Lycia and Cilicia. On the Lygin Olympus stood a temple of Hephaestus. (Comp. Stadium. Mar. Mag. § 205; Ptol. v. 3. § 3.) Scylax (39) does not mention Olympus, but his narrative is evidently another place. (Livy. Asia Minor, p. 189; Fellows, Lycia, pp. 212, foll.; Spratt and Forbes, Travels in Lycia, l. p. 192.) Mount Olympus now bears the name Jnanar Daghe, and the town that of Deliktos; in the latter place, which was first identified by Beanfont, some ancient remains still exist; but it does not appear ever to have been a large town, as Strabo calls it. [L. S.]

OLYMPUS (Ολυμπός), Strab. xiv. pp. 682, 683;

OLYNTHEU. [Olynth.]

OLYNTHIACUS. [Olynthius.]

OLYNTHUS (Ολυνθός), Scyl. p. 26: Strab. vii. p. 330; Steph. B.; Pomp. Mela, ii. 2. § 9; Plin. iv. 17: Eth. Ολυνθός, a town which stood at the head of the Ionic gulf, between the peninsulas of Pallene and Sithonia, and was surrounded by a fertile plain. Originally a Bottician town, at the time of the Persian invasion it had passed into the hands of the Chalidic Greeks (Herod. vii. 122; Strab. x. p. 447), to whom, under Critoibus of Torone, it was handed over, by the Persian Artabanus, after taking the town, and slaying all the inhabitants (Herod. viii. 127). Afterwards Perdiccas prevailed on many of the Chalidic settlers to abandon the small towns on the sea-coast, and make Olynthus, which was several stadia from the sea, their central position (Thuc. i. 58). After this period the Bottii seem to have been the humble dependents of the Chalidici, with whom they are found fighting on two occasions (Thuc. i. 65, ii. 79). The expedition of Brasidas secured the independence of the Olynthians, which was distinctly recognised by treaty (Thuc. v. 19.) The town, from its maritime situation, became a place of great importance, n. c. 392. Owing to the weakness of Amyntas, the Macedonian king, they were enabled to take into their alliance the smaller towns of maritime Macedonia, and gradually advanced so far as to include the larger cities in this region, including even Pella. The military force of the Olynthian confederacy had now become so powerful from the just and generous principles upon which it was framed, including full liberty of intermarriage, of commercial dealings, and landed proprietorship, that Acanthus and Apollonia, jealous of Olynthian supremacy, and menaced in their independence, applied to Sparta, then in the height of its power, n. c. 383, to solicit intervention. The Spartan Eunomidas was at once sent against Olynthus, with such force as could be got ready, to check the new power. Teultaeus, the brother of Agesilas, was afterwards sent there with a force of 10,000 men, which the Spartan assembly had previously voted, and was joined by Doridas, prince of Eolina, with 400 Macedonian horse. But the conquest of Olynthus was no easy enterprise; its cavalry was excellent, and enabled them to keep the Spartan infantry at bay. Teultaeus, at first successful, becoming over confident, sustained a terrible defeat under the walls of the city. But the Spartans, not disheartened, thought only of repairing their dishonour by fresh exertions. Agesipolis, their king, was placed in command, and ordered to prosecute the war with vigour; the young
OLYTHUS.

OMBI.

prince died of a fever, and was succeeded by Polybiades as general, who put an end to the war, b.c. 379. The Olythienses were reduced to such straits, that they were obliged to one for peace, and, breaking up their own federation, enrolled themselves among the Lacedaemonians; under obligation of fidelity to Sparta (Xen. Hell. v. 2, § 12, 3, § 18; Dio. lv. 21—23; Dem. de Falsa Leg. c. 75, p. 425). The subjugation of Olythus was disastrous to Greece, by removing the strongest bulwark against Macedonian aggrandisement. Sparta was the first to crush the bright promise of the confederacy; but it was reserved for Athens to deal it the most deadly blow, by the seizure of Pydna. Me Thone, and Potidaea, with the region about the Thermaic gulf, between n.c. 360—365, at the expense of Olythus. The Olythienses, though humbled, were not subdued; shamed at Philip's conquest of Amphipolis, b.c. 359, they sent to negotiate with Athens, where, through the intrigues of the Macedonians, they were repulsed. Irritated at their advances being rejected, they closed with Philip, and received at his hands the district of Anthemus, as well as the important Athenian possession of Potidaea. (Dem. Philipp. ii. p. 71. s. 22.) Philip was too near and dangerous a neighbour; and, by a change of policy, Olythus concluded a peace with Athens b.c. 352. After some time, during which there was a feeling of reciprocal mistrust between the Olythienses and Philip, war broke out in the middle of b.c. 350. Overtures for an alliance had been previously made by Athens, with which the Olythienses it led prudence to close. On the first recognition of Olythus as an ally, Demosthenes delivered the earliest of his memorable harangues; two other Olythienses speeches followed. For a period of 80 years Olythus had been the enemy of Athens, but the eloquence and statesman-like sagacity of Demosthenes induced the people to send succours to their ancient foes; and yet he was not able to persuade them to assist Olythus with sufficient vigour. Still the fate of the city was delayed; and the Olythienses, had they been on their guard against treachery within, might perhaps have saved themselves. The detail of the capture is unknown, but the struggling city fell, in b.c. 347, into the hands of Philip, "callidus empor Olythi" (Juv. xiv. 47), through the treachery of Lathenides and Eurylectores; its doom was that of one taken by storm. (Dem. Philipp. iii. pp. 123—128, Paus. Lep. p. 426; Diod. xvi. 53.) All that survived—men, women, and children—were sold as slaves; the town itself was destroyed. The fall of Olythus completed the conquest of the Greek cities from the Thessalian frontier as far as Thrace — in all 30 Chalcidian cities. Demosthenes (Philipp. iii. p. 117; comp. Strab. ii. p. 121; Justin. viii. 3), speaking of them about five years afterwards, says that they were so thoroughly destroyed, that it might be supposed that they had never been inhabited. The site of Olythus at Aio Mamia is, however, known by its distance of 60 stadia from Potidaea, as well as by some vestiges of the city still existing, and by its lagoon, in which Artabazus slew the inhabitants. The name of this marsh was Bolyca (Bol Kbol), Hesiod. (ap. Athen. p. 318). The Boeotians (Olythian) and OLYTHIUMS (Olythiaca), flowed into this lagoon from Apollonia (Athen. l.c.). MEYTHA was its harbour; and there was a spot near it, called CANTHAROLETHION (Kantharolethon). Strab. vii. p. 320; Ptole. Ant. Trop. 475. 45; Arist. Mirab. Ause. 120; Plin. iii. 34), so called because black beetles could not live there. Eckehel (vol. ii. p. 73) speaks of only one extant coin of Olythus — the "type" a head of Hercules, with the Iolaus's skin; but Mr. Millingen has engraved one of those beautiful Chaeridilian coins on which the "legend" OLYTHIUMS surrounds the head of Apollo on the one side, and the word XAAXIΔΕΩΝ, his lyre, on the reverse. (Consin. Voyage, vol. ii. p. 161; Leseke, North. Greece, vol. iii. pp. 154. 457—459; Voennel, de Olythi Situ, cicat., pot. ext. ecer. sione, Francof. ad M. 1829; Winiewski, Comm. ad Dem. de Cor. pp. 66.) [E. B. J.]

OMANA ("Oama, Peripl. Mar. Lythgr. c. 27, 36; March. Peripl. c. 28, ed. Miller, 1855), a port of some importance on the coast of Crete, which is noticed also by Pliny (vi. s. 32). Its position was near the modern bay of Tetiabar, perhaps where Manett has suggested, at Cape Tanba (v. 2, p. 421). Vincent places it a little to the E. of Cape Tasus. In Ptolemy, the name has been corrupted into Commana (vi. s. 7). [V.]

OMANA (tA "Oama), a deep bay on the south coast of Arabia east of Syagros, 600 stadia in diameter, according to the Periplus, bounded on the east by lofty and rugged mountains (ap. Hudson, Geog. Min. tom. i. p. 18), doubtless identical with the Omanaemur or Omanaomur, which Ptolemy places in long. 17° 40', lat. 19° 43', which must have belonged to the Omanaemur mentioned by the same geographer (vi. 15), separated only by the Cattabani from the Montes Asinorum, doubtless the mountains mentioned in the Periplus. If Ras Fartak be correctly taken as the ancient Syagros, the ancient Omana must have been far to the west of the district of Arabia now called by that name, and within the territory of Hadramamut. The modern Omam is the south-eastern extremity of the peninsula, and gives its name to the sea outside the mouth of the Persian Gulf, which washes it on the east and south. (Gosselin, Reckehrer, tom. iii. pp. 32, 33; Vincent, iii. 16; Forster, Geogr. of Arabia, vol. ii. pp. 173, 180, note f.) [G. W.]

OMANI or OOMANNI ("Oamna ou Oamaou, or Oamaou), a branch of the Lygii, in the N.E. of Germany, between the Oder and the Vistula, to the S. of the Burgundiones, and to the N. of the Lygii Diduni (Ptol. ii. s. 18). Tacitus (Germ. 43) in enumerating the tribes of the Lygii does not mention the Omani, but a tribe occurs in his list bearing the name of Manamn, which from its resemblance is generally regarded as identical with the Omani. But nothing certain can be said.

OUMB (Oub, Ptol. iv. s. 73; Steph. B. s. s. ; It. Anton. p. 165; Ombes, Juv. xxv. 35; Ambro, Not. Imp. sect. 20; Eth. Oubiri; comp. Aelian, Hist. An. x. 21), was a town in the Thebaid, the capital of the Nomos Ombes, about 30 miles N. of Syene, and situated upon the E. bank of the Nile, lat. 24° 6' N. Oumb was a garrison town under every dynasty of Egypt, Pharaonic, Macedonian, and Roman; and was celebrated for the magnificence of its temples and its hereditary feud with the people of Tentyra.

Ounbi was the first city below Syene at which any remark is made of the remnant of antiquity. The Nile, indeed, at this portion of its course, is ill-suited to a dense population. It runs between steep and narrow banks of sandstone, and deposits but little of its fertilising slime upon the dreary and barren shores. There are two temples at Oumb, constructed of the stone obtained from the neighbouring quarries
of Hadjir-selcukel. The more magnificent of the two stands upon the top of a sand-hill, and appears to have been a species of Pantheon, since, according to extant inscriptions, it was dedicated to Ares (Apollo) and the other deities of the Ombrite nome by the soldiers quartered there. The smaller temple to the NW. was sacred to Isis. Both, indeed, are of an imposing architecture, and still retain the brilliant colours with which their builders adorned them. They are, however, of the Ptolemaic age, with the exception of a doorway of sandstone, built into a wall of brick. This was part of a temple built by Theodosius III. in honour of the crocodile-headed god Sevak. The monarch is represented on the door-jamb, holding the measuring reed and chisel, the emblems of construction, and in the act of dedicating the temple. The Ptolemaic portions of the larger temple present an exception to an almost universal rule in Egyptian architecture. It has no propylon or dromos in front of it, and the portico has an uneven number of columns, in all fifteen, arranged in a triple row. Of these columns thirteen are still erect. As there are two principal entrances, the temple would seem to be two united in one, strengthening the supposition that it was the Pantheon of the Ombrite nome. On a cornice above the doorway of one of the altars is a Greek inscription, recording the erection, or perhaps the restoration of the seклς by Ptolemy Philometer and his sister-wife Cleopatra, B.C. 180-145. The hill on which the Ombrite temples stand has been considerably excavated at its base by the river, which here strongly inclines to the Arabian bank.

The crocodile was held in especial honour by the people of Ombria; and in the adjacent catacombs are occasionally found mummies of the sacred animal. Juvénal, in his 15th satire, has given a lively description of a fight, of which he was an eye-witness, between the Ombitae and the inhabitants of Tentyra, who were hunters of the crocodile. On this occasion the men of Ombria had the worst of it; and one of their number, having stumbled in his flight, was caught and eaten by the Tentyrites. The satirist, however, has represented Ombi as nearer to Tentyra than it actually is, these towns, in fact, being nearly 100 miles from each other. The Roman coins of the Ombrite nome exhibit the crocodile and the clypeus or helmet of the crocodile-headed god Sevak, in the western hamlet of Koutou-Ombos, or the hill of Ombos, covers part of the site of the ancient Ombria. The ruins have excited the attention of many distinguished modern travellers. Descriptions of them will be found in the following works:— Poeecke, Travels, vol. iv. p. 186; Hamilton, Asyptinae, p. 34; Champlinon, L'Egypte, vol. i. p. 167; Desou, Description de l'Egypte, vol. i. ch. 4, p. 1, fol.; Burchhardt, Nabta, 4to. p. 106; Belzoni, Travels, vol. ii. p. 314. On the opposite side of the Nile was a suburb of Ombria, called Contra-Ombos. [W.B.B.D.]

OMBROS. [FORTUNATAE INSE.] OMBROS. [Ombroes, Potl. iii. 5, § 21], a people of European Sarmatia, whose seat appears to have been on the flanks of the Carpathians, about the sources of the Tistica. Schafarik (Slav. Alt. vol. i. p. 389—391, 407) considers them to be a Celtic people, growing his arguments mainly upon the identity of their name with that of the Celtic as he considers them to be—Umbrians, or the most ancient inhabitants of the Italian peninsula. Recent inquiry has thrown considerable doubt upon the derivation of the Umbrians from a Gaulish stock. [Italia, Vol. ii. p. 86, b.] This is one proof, among others, of the futility of the use of names of nations in historical investigations; but, as there can be no doubt that there were Gallic settlements beyond the Carpathians, names of these foreign hordes might still linger in the countries they had once occupied long after their return westward in consequence of the movement of nations from the East. [E. B. J.]

OINOOGARA (Οινονγαρα), a town in the district of Ariaica, in the division of India infra Gangana. There is no reason to doubt that it is the present Amul-nagar, celebrated for its rock fortress. (Ptol. vii. 1. § 82; comp. Ptolemy, Eryth. Forsch., p. 78.)

OMIRAS. [Εινιράς] OMPHALIUM (Ομφαλιον), a plain in Crete, so named from the legend of the birth of the babe Zeus from Reia. The scene of the incident is laid near Thesea, Cnosus, and the river Triton. (Callim. Hygan. Od. 45 ; Dion. v. 70 ; Schol. ad Nician. Alex. Hymn. 7 ; Steph. B. s. v. ; Hök, Kre.., vol. i. pp. 11, 104 ; Pasch. Trar. vol. i. p. 244.)

OMPHALIUM (Ομφαλιον), one of the inland cities of the Chaoes in Epeiros. (Ptol. iii. 14. § 7.) Stephanus B. (a. v.) erroneously calls it a city of Thessaly. Place it at Premedé, in the valley of the Viosà (the Aous). (Northern Greece, vol. iv. p. 120.)

ΟΝ. [Ηελενοπόλις] ONCAE. [Θεραι.] ONCEUM (Οντάιον), a place in Arcadia upon the river Labon, near Thielupa, and containing a temple of Demeter Erinys. (Pans. viii. 25. § 4 ; Steph. B. s. v.) The Labon, after leaving this temple, passed that of Apollo Oncaetes on the left, and that of the boy Asclepius on the right. (Pans. viii. 25. § 11.) The name is derived from Onceus, a son of Apollo, who reigned at this place. Leake supposes that Tymbíki, the only remarkable site on the right bank of the Labon between Thielupa and the Tathia, is the site of the temple of Asclepius. (Morcam, vol. ii. p. 103.) Other writers mention a small town Oncae (Οντάιον) in Arcadia, which is probably the same as Onceum. (Tzctzes, ad Epigr. 1225; Eryth. M. p. 613; Phavorin. s. v.) ONCHEMUS (Οντέμους), a port-town of Chonia in Epeiros, opposite the north-western point of Corea, and the next port upon the coast to the south of Panormus. (Strab. vii. p. 324; Ptol. iii. 14. § 2.) It seems to have been a place of Importance in the time of Cicero, and one of the ordinary points of departure from Epeiros to Italy, as Cicero calls the wind favourable for making that passage an Onchesmites. (Cic. ad Att. vii. 2.) According to Dionysius of Halicarnassus (Ant. Rom. i. 51) the real name of the place was the Port of Anchises (Ανχίσιον λιμήν), named after Anchises, the father of Aeneas; and it was probably owing to this tradition that the name Ouchenisos assumed the form of Anchiesenses under the Byzantine emperors. Its site is that of the place now called the Forty Saints. (Leake, Northern Greece, vol. i. p. 11.)

ONCHESTUS. 1. (Ονχεστός: Ehd. Ονχεστός), an ancient town of Boeotia in the territory of Halaiartus, said to have been founded by Onchestus, a son of Poseidon. (Pans. ix. 26. § 5; Steph. B. s. v.) It possessed a celebrated temple and grove of Poseidon, which is mentioned by Homer (Ουν- 

χεστός θ', ἱππό ταύνη, γάλαν ἀκλόα, II.
ONERIA. (Strab. p. 412.) says that Onesthus was 15 stadia from the mountain of the Sphinx, the modern Festus; and its position is still more accurately defined by Strabo (i. c.).

The latter writer, who censures Alcaeus for placing Onesthus at the foot of Mt. Helicon, says that it was in the Halstatt, now forming the town near the Ternic plain and the Copaic lake. He further maintains that the grove of Poseidon existed only in the imagination of the poets; but Pausanias, who visited the place, mentions the grove as still existing. The site of Onesthus is probably marked by the Helleric remains situated upon the low ridge which separates the two great Boeotian basins, those of lake Copais and of thebes, and which connects Mount Festus with the roots of Helicon. (Leake, *Northern Greece*, vol. ii. p. 213, seq.; Gell, *Itiner.,* p. 125.)

2. A river of Thessaly, flowing near Sostena, through the battle-field of Cyanosephala into the lake Boeotis. It was probably the river at the sources of which Dederiani stands, but which bears no modern name. (Liv. xxxii. 6; Polyb. xviii. 3; Steph. B. s. r.; Leake, *Northern Greece*, vol. iv. p. 473.) It is perhaps the same river as the Oxocineus (Οξώκην), Hered. vii. 129; Plin. iv. 8. s. 15), whose waters were exhausted by the army of Xerxes. It is true that Herodotus describes this river as flowing into the Peneus; but in this he was probably mistaken, as its course must have been into the lake Boeotis. (Leake, *Northern Greece*, vol. iv. p. 314.)

ONERIA. [Corinthiis, Vol. i. p. 674.]

OXEUM (Οξύνω, Plut. ii. 16. § 4; *Sent. Tab.;* Geog. Evk.), a town of Dalmatia, which has been identified with *Alimena*, at the mouth of the Cettina. (Négebaeur, *Die Süd-Seew.,* p. 23.) [E. B. J.]

ONIGIS. [Aurini.] ONTSAI, an island near Crete, on the E. side of the promontory Iamnos. (Plin. iv. 12. s. 20.)

Ο'ΝΟΒΑ ΑΕΣΤΟΥΙΑ (Ονοβα Αστουρια, Plut. ii. 4. § 5), called also simply Ονοβα (Strab. iii. p. 143; Mela, iii. i. § 5). 1. A detached town of the Turdusim in Hispanic Boeotia, between the rivers Amas and Bactis. It was seated on the estuary of the river Luxia, and on the road from the mouth of the Ama to Augusta Emerita. (*Itin. Ant.* p. 431.) It is commonly identified with Huelva, where there are still some Roman remains, especially of an aqueduct; the vestiges of which, however, are fast disappearing, owing to its being used as a quarry by the boorish agriculturists of the neighbourhood. (Murray's *Handbook of Spain,* p. 170.) Near it lay Herulis Insula, mentioned by Strabo (iii. p. 170), called *Epidaena* by Teg.B. (s. v.), now Sotela. Onoba had a mint; and many coins have been found there bearing the name of the town, with a slight alteration in the spelling,—Onuba. (*Florez. Med.* ii. pp. 510, 649; Monnet, i. p. 23, Suppl. pp. 39; Sestini, *Med. Ispr.* 75, ap. Ukert, vol. ii. pt. 1. p. 340.)

2. Another town of Boeotis, near Corduba. (Plin. iii. i. s. 3.) In an inscription in Gruter (p. 1040. 5) it is called Comba. Ukert (vol. ii. pt. 1. p. 366) places it near *Villa del Carpio.* [T. H. D.]

ONOBALAS. [Acac. *No. 1.] ONOBALAS. In a short poem of Apollodorus, as the name stands in the common texts of Pliny (iv. 19); who has "Onobratis, Eleni, Saltus Pyreneus."

D'Anville (Notice, *de*) ingeniously supposes that Onobraties ought to be Onobrates, which is the least possible correction; and he thinks that he discovers the old name in the modern Nebounan, the name of a canto on the left side of the Neste towards the lower part of its course. The Neste is one of the branches of the Garone, and rises in the Pyrenees. [C. L.]

OSSOCIUS. [Onesthus, No. 2.]

ONUGNATHUS (Ουγναθός), "the jaw of an ass," the name of a peninsula and promontory in the south of Laconia, distant 200 stadia south of Messen. It is now entirely surrounded with water, and is called Elafonisi; but it is in reality a peninsula, for the isthmus, by which it is connected with the mainland, is only barely covered with water. It contains a harbour, which Strabo mentions; and Pausanias saw a temple of Athena in ruins, and the sepulchre of Ciusius, the steerman of Menelaus. (Paus. ii. 22. § 10, iii. 29. § 1; Strab. viii. pp. 363, 364; Curtius, *Peloponnesus.,* vol. ii. p. 295.)

OUPHIS (Οὐψ, Herod. ii. 166; Steph. B. s. r.; Plut. iv. 5. § 51; Plin. v. 9. s. 9; *Eth. Ουψοφήρης,* was the chief town of the Nomos Ouphites, in the Aegean Delta. The exact position of this place is disputed by geographers. D'Anville believes it to have been on the site of the modern Borno, on the western bank of the Sebennytic arm of the Nile. Monnet (vol. x. pt. i. p. 573) places it south of the modern Mansour. (Belley, *Mém. de l'Acad. des Inscrip.* tom. xxviii. p. 543) identifies it with the present village of Nymph, in the centre of the Delta, a little to the E. of Buto, about lat. 31° N. Champlain, however, regards the site of this name as altogether uncertain (*L'Egypte sous les Pharaons,* vol. ii. p. 227). The Ouphite name was one of those assigned to the Calasarian division of the native Aegean army. Coins of Ouphis of the age of Haidrian—overse a laureated head that emperor, reverse a female figure, probably Itha, with extended right hand—are described in Fleuche (*Lex. R. Num. III. pars posterior*, s. v.). This town is mentioned by ecclesiastical writers, e.g. by Athanasius (Athanasii Opera, tom. i. p. 776), ed. Paris, 1698; Le Quien, *Oriens Christian.* tom. ii. p. 326, Paris, 1740; comp. Poecoke, *Travels in the East,* vol. i. p. 423.) [W. B. D.]

OONAE. [Oakoneis.] OPHARUS, a small river of Sarmatia Asiafica, mentioned by Pliny (vi. 7. s. 7) as a tributary of the Lagoon, which flowed into the Palus Maritis. Herodotus mentions two streams, which he calls the Lyccus and Oarnas, which had the same course and direction (iv. 123, 124). It is likely that the rivers in Pliny and Herodotus are the same. It is not possible now to identify them with accuracy. [V.]

OPHEL. [Jerusalem, p. 20, b.]

OPHODES (Οφόδης, Strab. xvi. p. 770; Diod. iii. 39; Agatharch, *ap. Hudson, Geog. Grec. Min.* p. 54), or Serpent-Isle, was an island in the Red Sea. In *Foot Bay,* nearly opposite the mouth of the harbour of Berenice; lat 24° N. The topazes produced in this island were greatly prized both in the Arabian and Aegean markets; and it seems from Pliny (v. 29. s. 34) to have been by some denominated Topaz-Isle (Topazos). The cause of its name is said to be debatable; but there has always been a tradition in the East that serpents and precious stones are found near one another. The island of Agathon, i. e. the good genius (*Αγάθων* 112
OPHIOXENES

vīpos. [Ptol. iv. 5, § 77] was probably the same with Ophídes, and answers to the present Zu-
mergort, the isle of Kornakou, opposite the head-
land of Raúl. Anaf. Indeed, by some geographers
supposed to be the true Ophídes Insula. [Castro,

OPHIOXENES or OPHIOXENES. [Actolia,
p. 65, a.]

Ôphídes (Οἡφίς; Οηφή; Σωφή; Σωφί; Σοφή; Σωφή; Σωφί; Σωφί, LXX. i. Joseph. Ant. viii. § 6). A
district, the name of which first occurs in the
ethnographic table of Genesis, x. 29. Solomon
could a fleet to be built in the Euboic ports of the
Red Sea, and Hiram supplied him with Phoe-
nician mariners well acquainted with navigation,
and also Tyrian vessels, "ships of Tarshish." (1
Kings, ix. 28; 2 Chron. viii. 18.) The articles
of merchandise which were brought back once
in three years from Ophir were gold, silver, red
sandal-
wood ("chalmygum," 1 Kings, x. 11; "algummm,
2
Chron. ix. 10), precious stones, ivory, apes,
(\"kopifem\"), and peacocks ("thyhykm," 1 Kings,
x. 22; "thykym," 1 Chron. ix. 21). The gold of Ophir
was considered to be of the most precious quality.
(John, xi. 11, 24, xxvii. 16: Ps. xiv. 9; Is. xii.
12; Ezech. viii. 18.) In Jer. x. 9, God speaks the
gold from Uphaz, and in Dan. x. 5, "the fine gold
of Uphaz," is, by a slight change of pronunciation,
the same as that of Ophir.

Many elaborate treatises have been written upon
the details of these voyages. The researches of
Gesenius (Theaur. Linguæ Hebr. vol. i. p.
141; and in Eroeh und Gruber's Encycl. art.,
Ophir), Bankey (Indian, pp. 30—32) and Lassen
(Ind. Alt. vol. i. pp. 537—539) have made it ex-
 tremely probable that the W. shores of the Indian
peninsula were visited by the Phoenicians, who,
by their colonies in the Persian Gulf, and by their
 intercourse with the Gerrhae, were early acquainted
with the periodically blowing monsoons. In favor
of this Indian hypothesis is the remarkable circum-
stance that the names by which the articles of
merchandise are designated are not Hebrew but Sanscrit.
The peacock, too, is an exclusively Indian bird; al-
though from their gradual extension to the W. they
were often called by the Greeks "Median and Per-
ussian birds;' the Samians even supposed them to
have originally belonged to Samos, as the bird was
reared at first in the sanctuary dedicated to Hera
in that island. Volks, alló, which are first mention
in Ptol. abs. xxx. 22, could alone have been brought
from India. Ophir (O'phira, [Mai. de l'Acad.
Indic. vol. xi. 14. ii. 1845, pp. 349—402) agrees
with Heeren (Researches, vol. ii. pp. 73, 74, trms.),
who places Ophir on the E. coast of Africa, and
explains "thykym" to mean not peacocks, but par-
rals or guncas-fowls. Ptolemy (yi. § 41) speaks of
a Saphara (Σάφαρα) as a metropolis of
Arabia, and again of a Saphara (Σαφαιρα, vi. § 6)
in India, on the Barygazenus Sinus, or Gulf
of Cambay, a name which in Sanscrit signifies "fair-shore." (Lassen, Dissert. de Togrophice
Ins, p. 180; comp. Ind. Alt. vol. i. p. 577.) Saphara, on
the W. coast of Africa, opposite to the island of
Madagascar (London Geog. Journ. vol. iii. p. 207),
is known to Kriesi (ed. Jaubert, vol. i. p. 67) as a
country rich in gold, and subsequently by the Por-
tuguese, after Garcia's voyage of discovery. The let-
ters r and l so frequently interchanged make the
name of the African Saphara equivalent for that of
Saphara, which is used in the Septuagint with several other forms for the Ophir of Solomon's and
Hiram's fleets. Ptolemy, it has been seen, has a
Saphara in Arabia and a Saphara in India. The
significant Sanscrit names of the mother-country
had been repeated or reflected on neighbouring or
opposite coasts, as in the present day occurs in many
instances in the English and Spanish Americas. The
range of the trade to Ophir might thus be en-
larged outside the space, just as a Phoenician
voyage to Tartessus might include touching at Cy-
rene and Carthage, Gadeira and Cerne. (Humboldt,
Cosmos, vol. ii. pp. 133, 133, notes 179—182,
trans.)

OPHNIS or OPHNIS, a river of Pontus, the mouth
of which was 90 stadia to the east of port Bysan,
and which separated Colchis from the country of
the Thianii. (Arrian, Peripl. Pont. Eux. p. 6: An-
onym. Peripl. p. 14, where it is called 'Ophosos.)
This river still bears the name of Ophosos. [L. S.]

OPHIS. [MANTINELLA.]

OPHUSA INS. [PITKUNAE.]

OPHUSA, OPHUSHA. 1. [TITANAS.]

2. An island off the coast of Crete (Plin. iv. 20),
which is probably represented by Gondopulo or
Anti-Gesus, unless it be the same as the Ophia
Ins. (Ophià, Statutum. 321), which the anomalous
Cosmographer places near Lebanon. [E. B. J.]

OPHUSHA (Οφυσώσα), a small island in the
Propontis, off the coast of Mysia, is mentioned only
by Piny (iv. 44) and Stephanus B. (c. Βεομνιν
where it is called 'Οφυσώσα); it still bears its
ancient name under the corrupt form of Ajfiai
(Poesccke, Travels, iii. p. 167.) [L. S.]

OPHILIDUS ('Ophilos), a branch of Mount
Paryades in the north-west of Pontus, enclosing
with Mount Lithirus, the extensive and fertile dis-
tric called Phliarone. (Strab. xii. p. 556.) Ac-
cording to Hamilton (Researches, i. p. 439), it
now bears the name of the village Dugh and the
village Dugh. [L. S.]

OPHRADUS, a river mentioned by Piny (vi. 25.
s. 23) as belonging to the province of Drangiana.
Faribegi conjectures that it may be a tributary of
the Erymanthus (Ehrend), now called the Khous
Kuid. [V.]

OPRAH, a city of Benjamin, written ʕφ̇rəbā
by the LXX. (Joshua, xvii. 23) and ʕφ̇rəb (1
Sam. xiii. 17). It is placed by Eusebius and S
Jerome v. M. P. east of Bethel. (Onomast. a.
Apheba.) Dr. Robinson says that this agrees
well with the position of El-Tayibiyeh, a village of
Greek Christians, on a conical hill on a high ridge
of land, which would probably not have been left
unoccupied in ancient times. (Bib. Res. vol. ii.
pp. 123—125.)

2. Ophrah of the Alcidezites (ʕφ̇rəbā ʕαπαύγ
tου Εθηλ. LXX.: Judea, vi. 11, 24, viii. 27; in
ver. 32, "Aclidean") a town in the half-tribe of
Manasseh, west of Jordan, the native place of
Gi-
dian, where also he was buried. [G. W.]

the north of Thrace, near lake Poteus, and between
Parmation and Rhodoeus, with a grave sacred to
Aja-
(Aujan, viii. 43; Numal. England, 8. 5, where
it is called 'Ophonoil (Strab. xiii. p. 595.) It is
probably the modern Fren-Kerti. (Camp. Escane,

OPII. [Oeol.]

OPIIS ('Opsi, Herod. i. 189), a city of Babylonia,
mentioned first by Herodotus, who simply states that
OPITERGIUM

OPPIDUM NOVUM.

OPITERGIUM (Οπιτέργιον; Ehm. Opitergimus: Oderzo), a city of Venetia, situated about 24 miles from the sea, midway between the rivers Plavis (Plave) and Lignenia (Licenza), on a small stream (now called the Pratto) flowing into the latter. No mention of it is found before the Roman conquest of Venetia; but it appears to have under its rule become a considerable municipal town, and is mentioned by Strabo as a flourishing place, though not a city of the first class. (Strab. v. p. 214.) In the Civil War between Caesar and Pompey a body of troops furnished by the Opitergini is mentioned as displaying the most heroic valor, and offering a memorable example of self-devotion, in a naval combat between the fleets of the two parties. (Liv. Ep. cx.; Flor. iv. 2. § 53; Lecan. iv. 462—571.) Tacitus also notices it as one of the more considerable towns in this part of Italy which were occupied by the generals of Vespasian, Primus, and Varus. (Tac. Hist. iii. 6.) It is mentioned by all the geographers, as well as in the Itineraries; and though Ammianus tells us it was taken and destroyed by an irruption of the Quadi and Marcomanni in A.D. 372, it certainly recovered this blow, and was still a considerable town under the Lombards. (Plin. iii. 19. s. 23; Poli. iii. 1. § 30; Itin. Ant. p. 280; Tab. Peut.; Ammian. xxix. 6. § 1; P. DIac. iv. 40.) In an inscription of the reign of Alexander Severus, Opitergium bears the title of a Colonia; as it is not named such either by Pliny or Titus; it probably obtained that rank under Trajan. (Orell. Inserv. 72; Zumpt, de Colon. p. 492.) It was destroyed by the Lombard king Rotharis in A.D. 641, and again, in less than 30 years afterwards, by Grimoaldus (P. DIac. iv. 47, v. 28); but seems to have risen again from its ruins in the middle ages, and is still a considerable town and an episcopal see.

Opitergium itself stood quite in the plain; but its territory, which must have been extensive, comprised a considerable range of the adjoining Alps, as Pliny speaks of the river Lignitia as rising "eius montium intermissa." (Plin. iii. 18. s. 22.) The Itinerary gives a line of cross-road which proceeded from Opitergium by Feltria (Feltre) and the Val Sugana to Tridentum (Trent). (Itin. Ant. p. 280.)

OPIUS (Οπίου), a small port-town on the coast of Pontus, probably on or near the mouth of the river Opisus. (Ptol. v. 6. § 6; Tab. Peut.) It is placed 120 stadia west of the river Bistis, although its name seems to point to islands that were situated further west, near the river Opisus. [L. S.]

O'ONE (Οιόνη; Ὄιόνη ἡ ἱπποκράτεια, Ptol. iv. 7. § 11; Peripl. Mar. Erythr. p. 9), the modern Ha-
foon or Afijn, was a town situated upon the eastern coast of Africa, immediately N. of the region called Aegyptia (Hekaia). lat. 9° N. The author of the Periplus, in his account of this coast, says that Opone stood at the commencement of the highland called by the ancients Mount Elephas. He further defines its position by adding that since there was only an open roadstead at the Arouatun Emporion, the coast Guardifi or Jerdoffoun of modern charts—ships in bad weather ran down to Tabae for shelter,—the promontory now known as Ras Banannah, where stood the town called by Ptolemy (i. 17. § 8, iv. 7. § 11) Ποιόν κόμη, the Banannah of the Arabians. From thence a voyage of 400 stadia round a sharply projecting peninsula terminated at the emporium of Opone. Here ended to S. the Regio Aromata of the ancients.

Opone was evidently a place of some commercial importance. The region in which it stood was from remote ages the seat of the spice trade of Libya. Throughout the range of Mount Elephas the valleys that slope to the sea produce frankincense, while inland the cassia or cinnamon of the ancients attained perfection. But the Greeks, until a comparatively late period, were unacquainted with this coast, and derived from the Arabians its distinctive local appellations. Opone, which doubtless occupied the site, probably, therefore, represents also the Arabic name of a town called Afijn or Haffoon, i.e., Afijon, fragrant gums and spices; which, again, is nearly equivalent to the Greek designation of the spice-land of Eastern Libya — Aromata. And this derivation is rendered the more probable, when taken in connection with the neighbouring bluff or headland of Guardafai or Jerdoffoun, since Afijn enters into the composition of both names, and Jerd or Guard resembles the Punic word Kartha, a headland. Thus Jerd-Afijn is the promontory of Opone. Ptolemy (iv. 7. § 11) places Opone too far S. of cape Jerdoffoun. The author of the Periplus more correctly sets it a degree further N., six days' voyage from a river which runs at the southern base of Wady Hofsa, or Mount Elephas. The characteristics of the entire tract, of which Opone formed one extremity, are those of an elevated ridge lying between two seas—the Red Sea and the ocean, and which, from its elevation and exposure to the N.E. monsoon, is humid and fertile, affording a marked contrast to the generally sterile and arid shores above and below the highland of Elephas. S. of Opone there is no trace of ancient commerce. The articles of export from this emporium were, according to the author of the Periplus, cinnamon, distinguished as "native," aroma, fragrant gums generally, mout, or cinnamon of inferior quality; slaves of a superior kind (Δούλεια κρέστοντες), principally for the Egyptian market; and tortoise-shell of a superior quality and great abundance. (See Vincent, Commerce and Navigation of the Ancients, vol. ii. p. 152—157.)

OPPIDUM NOVUM (Οπιτέργιον Νέον, Ptol. iv. 2. § 25), a town of Mauretania, colonised in the reign of the emperor Claudius, by the veterans (Ptol. v. 1), which Ptolemy (L c.) places 10° to the E. of 

115
Ori'IDUM, and the Antonine Itinerary 18 M. P. to the W.; Ptolemy's position agrees with the Sinaitab of Shaw (Traut. p. 58), where that traveller found ruins on the W. bank of the Chalaph. The town of the Itinerary corresponds with El Khâdirah, the "Chadra" of Edrisi (Geog. Nob. p. 81), situated on a rising ground, on the brink of the same river, where there are also ruins. [E. B. L.]

OPICTUM NOVUM, of Aquitania in Gallia, is placed by the Antonine Itin. on the road from Aquae Tarbellianae (Ouze) to Tolosa (Toulouse), and between Bearnharum and Aquae Convarnum. [His- nhìnary: Aquae Convarnum.] D'Anville has fixed Opitium Novum at Naye, the chief reason for which is some resemblance of name. [G. L.]

OPISCELLA, a town mentioned only by Strabo (iii. p. 157), and said to have been founded by one of the companions of Antiochus, in the territory of the Cantabri. [T. H. D.]

OPTATIANA. [Pacila, Vol. 1. p. 744, b.]

OPUS (Oπος, contr. of Oποσις, II. ii. 531; Ellh. Oποσταρος), the chief town of a tribe of the Locri, who were called from this place the Locri Opuntii. It stood at the head of the Opuntian gulf (όποσταρος κολχης, Strab. ix. p. 425; Opustus Sinims, Plin. iv. 7. s. 12; Mela, ii. 3. § 6), a small inland, being 15 stadia from the shore according to Strabo (l. c.), or only a mile according to Livy (xxviii. 6). Opus was believed to be one of the most ancient towns in Greece. It was said to have been founded by Opus, a son of Locrus and Progenete; and in its neighbourhood Deucalion and Pyrrha were reported to have residesd. (I. c. ol. ix. 62; 87; Schol. ad loc.)

It was the native city of Patroclus. (Herm. H. xviii. 526), and it is mentioned in the Homeric catalogue as one of the Trojan towns subject to Ajax, son of Oileus (II. ii. 531). During the flourishing period of Greek history, it was regarded as the chief city of the eastern Locrians, for the distinction between the Opuntii and Epicenmildii is not made either by Herodotus, Thucydides, or Polybius. Even Strabo, from whom the distinction is chiefly derived, in one place describes Opus as the capital of the Epicen- mili4 (ix. p. 416); and the same is confirmed by Pliny (iv. 7. s. 12) and Stephanius (c. s. Oποσταρος) from Leoke, Northern Greece, vol. ii. p. 181.) The Opuntii joined Leonidas with all their forces at Thermopylae, and sent seven ships to the Greek fleet at Artemision. (Herod. vii. 203, viii. 1.) Subsequently they belonged to the anti-Athenian party in Greece. Accordingly, after the conquest of Boeotia by the Athenians, which followed the battle of Nopsychyta, n. c. 456, the Athenians carried off 100 of the richest Opuntians as hostages. (Thuc. i. 108.) In the Peloponnesian War the Opuntian privatesmen annoyed the Athenian traffic, and it was in order to check them that the Athenians fortified the small island of Atalanta off the Opuntian coast. (Thuc. ii. 32.) In the war between Antigonus and Cassander, Opus opposed the cause of the latter, and was therefore besieged by Ptolemy, the general of Antigonus. (Diod. iii. 78.)

The position of Opus is a disputed point. Mele- tius has fallen into the error of identifying it with Pardonitza, which is in the territory of the Epicenmildii. Many modern writers place Opus at Talandra, where are several Hellenic remains; but Leoke observes that the distance of Talandra from the sea is too great to correspond with the testimony of Strabo and Livy. Accordingly Leoke places Opus at Kardhentitsa, a village situated an hour to the south-eastward of Talandra, at a distance from the sea corresponding to the 15 stadia of Strabo, and where exist the remains of an ancient city. (Northern Greece, vol. ii. p. 173, seq.)

2. A town in the mountainous district of Accrois in Elys, taken by the Spartans, when they invaded Elis at the close of the Peloponnesian War. The Sbolists on Pindar mentions a river Opus in Elis. The site of the town is perhaps represented by the Hellenic ruins at Skândala, and the river Opus may be the stream which there flows from a small lake into the Penicis. (Diod. xiv. 17; Steph. B. s. r.; Strab. ix. p. 425; Schol. ad Pind. Ol. ix. 64; Leoke, Peloponneseia, p. 220; Curtius, Peloponneseus, vol. i. p. 43.)

ORA ('Opa), a place mentioned by Ptolemy (vi. 8. § 14) in Carmagia, but apparently on the confines of Gordionia. It seems not improbable that he has confounded it with Oras, or Oréas, which was certainly in the latter province. Strabo (xv. p. 223) and Arrian (vi. 24) both apparently quoting from the same authority, speak of a place of this name in Gordionia, — the capital, probably, of the Oraeas. [V.]

ORA (ra 'Opa), a town in the NW. part of India, apparently at no great distance from the Kubul river, of which Arrian describes the capture by Alexander the Great, on his march towards the Punjab (v. c. 27). It does not appear to have been identified with any existing ruins; but it must have been situated, according to Arrian's notice, between the Gurai (Gauri) and the celebrated rock of Aror (Atheras). [V.]

ORAEC (Ora, Arrian, vi. 22, 28), the chief town, in all probability, of the people who are generally called Oratae, though their name is written in different ways. It was situated in Gordionia, and is most likely the same as is called in the Peripius of the Erythrean Sea, the Emporium Oræas (c. 37, ed. Müller). The neighbouring country was rich in corn, wine, barley, and dates. [V.]

ORATHA (Ora, c. vii. 22, 28), a city described by Stephanius B. (x. s. r.), as in the district of Mesene, on the Tegira. As he does not state in which Mesene he supposes it to have been, it is impossible now to identify it. Some commentators have supposed that it is the same as "Ur of the Chaldees." It is, however, more likely that it is "Ur castellum Persaria" (Amm. Marc. xxxv. 8), now believed to be represented by the ruins of Al-Hathir; or, perhaps, the Ur of the Pliny (v. 24. s. 21). [V.]

ORBELES ('Ορβελος), in Herod. vi. 16; Strab. vii. p. 329; Didor. xx. 19; Arrian. Anab. i. 1. § 5; Ptol. iii. 9. § 1, iii. 11. § 1; Pompon. Mel. ii. 2. § 2; Plin. iv. 17), the great mountain on the frontiers of Thrace and Macedonia, which, beginning on the Strymon and lake, extends towards the sources of the Strymon, where it unites with the summit called Scoumis, in which the river had its origin. The amphibious inhabitants of lake Trassias procured their planks and piles, on which they constructed their dwellings from this mountain. (Herod. l. c.) Cassander, after having assisted Audoleon, king of Paeonia, against the Illyrian Autaritae, and having conquered them, transported 20,000 men, women, and children to Mt. Orbelus. (Didor. l. c.) The epitomiser of Strabo (l. c.), who lived not long before the commencement of the 11th century, applies this name to the ridge of Haemus and Rhodope; Gatterer (Comment. Soc. Got. vol. iv. p. 99, vol. vi.}
ORCADES.

p. 33; comp. Poppo, Promachon. in Thuc. pars. i. vol. ii. (p. 321), in consequence, was inclined to believe that there were two mountains of this name. Kiepert (Karte der Europ. Turkei) identifies Orbelus with Perin Dagh. The district called Orbelis (Or-

I. 3. § 31), a group of small islands lying off the northern ex- treme of Britannia Barcicina. According to Ptolemy (l. c.) and Mela (iii. 6. § 7) they were 30 in number; Pliny (iv. 16. § 20) reckons them at 40; Orosins (i. 2) at 33, of which 20 were inhabited and 13 uninhabited. This last account agrees very nearly with that of Jornandes (B. Get. 1), who makes them 34 in number. See also Tacitus (Agric. 10) and the Itinerary (p. 508). The modern Orkney and Shetland Islands.

[ T. H. D. ]

ORCAORICI (Orcaorikoi), a place in a rough district of Galatia, devoid of a sufficient supply of water, near Pessinus, on the borders of Phrygia, if not in Phrygia itself (Strab. xii. pp. 567, 568, 576).—[L. S.]

ORCAS (Orapas, Ptol. ii. 3. § 3), a promontory on the N. coast of Britannia Barcicina, now Dunnet Head. It should be remarked, however, that Ptolemy (l. c.) places it on the E. coast, and gives it the additional name of Tarvedun (Tovved-

svov).—[T. H. D.]

2. An inland town of Thrace. (Ptol. iii. 2. § 114.)—[T. H. D.]

ORCHEX (Orkhex), a city of southern Babylonia, placed by Ptolemy on the Persian Gulf, i.e. to the NE. of his Arabia Felix. (Ptol. v. 19. § 2) They were perhaps the inhabitants of Orchiote mentioned below. [G.W.]

ORCHISTEIE (Orkisthie, Strab. xi. p. 528), a canton of Armenia, which Strabo (l. c.) describes as abounding in horses, but does not mention its position. [E. B. J.]

ORCHOE (Orkho), a city of southern Babylonia, placed by Ptolemy among the marshes in the direction of Arabia Deserta (vi. 20. § 7). There can be little doubt that it is to be identified with one of the great mounds which are readily excavated in those parts, and that the one now called Warka represents its position. It was supposed that another mound in the immediate neighbourhood, Munwywer, was the same as the "Ur of the Chaldees;" and there is now good reason for identifying it as the site of that celebrated place. The name of Warka reads on inscriptions lately discovered by Mr. Taylor, Har or Hurik, which is nearly the same with the Orxh of the LXX. and the Orkho of Ptolemy (l. c.). Moreover, Har and Warka are constantly connected in the inscriptions, just as Erech and Accad are in the Bible. It is most probable that the Orcheni (Orkhoi), described in Strabo as an astronomical sect of Chaldaeans, dwelling near Babylon (xxi. p. 739); in Ptolemy, as a people of Arabia, living near the Persian Gulf (v. 19. § 2); and in Pliny, as an agricultural popula-

tion, which banked up the waters of the Euphrates and compelled them to flow into the Tigris (vi. 27. a. 31), were really the inhabitants of Orchoe and of the district surrounding it. We now know that this country was ruled in very early times by a Chaldaean race, some of the kings of which Berosus has re- corded. (Rawlinson, in Athenaeum, 1854, No. 1377; Euseb. Praepar. Evang. ix. 17.) It is worthy of note that Eusebius has preserved an ancient fragment from Eupedmus, who speaks of a city of Babylonia, Camarina, "which some call Urice (Oropo)."

As the Assyrian name of Warka is written with a monogram which signifies "the Moon," and as the name Camarina would naturally be derivable from the Arabic Kamar, "the Moon," there is an additional connection between the two names. (Orchomenus. l. c.) It is also clear from the inscriptions that the names of the two cities were constantly inter-changed. [V.]

ORCHOMENUS. 1. (Orkhomenos; in ins. and coins, Orchoemenos, Orkhoemenos), usually called the MINYAN ORCHOMENUS (Orcho- menos Minyios, Hom. Il. ii. 511; Thuc. iv. 76; Strab. iv. p. 414), a city in the north of Boeotia, and in ante-historical times the capital of the powerful kingdom of the Minyae. This people, according to tradition, seem to have come originally from Thessaly. We read of a town Minya in Thessaly (Steph B. s. e. v. Maria), and also of a Thessalian Orchomenus Minyaeus. (Plin. iv. 8. s. 15.) The first king of the Boeotian Orchomenus is said to have been Andreas, a son of the Thessalian river Peneus, from whom the country was called Andreas. (Pans. ix. 34. § 6; or Orkhomenoi Aptaios eis Theasal, Schol. ad Apoll. Rhod. ii. 1190.) Andreas assigned part of his territory to the Aeolian Athanas, who adopted two of the grandchildren of his brother Sisyphus: they gave their names to Halartus and Cononcia. Andreas was succeeded in the other part of his territory by his son Etecules, who was the first to worship the Charites (Graces) in Greece. Upon the death of Etecules the sovereignty devolved upon the family of Halmus or Almus, a son of Sisyphus. (Pans ix. 34. § 7—ix. 35.) Halmus had two daughters, Chrysie and Chrysoageneia. Chrysie by the god Ares became the mother of Philegrys, who succeeded the childless Etecules, and called the country Philegynan after himself. He also gave his name to the fierce and sacreligious race of the Philegyae, who separated themselves from the other Orcheniains, and attempted to plunder the temple of Delphi. They were however all destroyed by the god, with the exception of a few who fled into Phocis. Philegrys died without children, and was succeeded by Chrysies, the son of Chrysoageneia by the god Poseidon. Chrysies was the father of the wealthy Minyas, who built the treasury, and who gave his name to the Minyan race. Minyas was succeeded by his son Orchenus, after whom the city was named. (Pans. ix. 36. §§ 1—6.) Some modern scholars have supposed that the Minyae were Aeolians (Thirlwall, Hist. of Greece, vol. i. p. 91); but as they disappeared before the historical period, it is impossible to predicate anything certain respecting them. There is, however, a concurrence of tradition to the fact, that Orchomenus was in the earliest times not only the chief city of Boeotia, but one of the most powerful and wealthy cities of Greece. It has been observed that the genealogy of Orcheniains glitters with names which express the traditional opinion of his unbounded wealth (Chrysies, Chrysoageneia). Homer even compares the treasures which flowed into the city to those of the Egyptian Thebes (II. ix. 381; comp. Eurip. I. c.) It would seem that at an early period Orchomenus ruled over

114
the whole of Northern Boeotia; and that even Thebes was for a time compelled to pay tribute to Erginus, king of Orchomenus. From this tribute, however, the Thebans were delivered by Hercules, who made war upon Orchomenus, and greatly reduced its power. (Paus. ix. 37. § 2; Strab. ix. p. 414; Diod. iv. 18.)

In the Homeric catalogue Orchomenus is mentioned along with Aspicleon, but distinct from the other Boeotian towns, and as sending 30 ships to the Trojan War (II. ii. 511). Thirty years after the Trojan War, according to the received chronology, the sovereignty of the Minyae seems to have been overthrown by the Boeotian immigrants from Thebes; and Orchomenus became a member of the Boeotian confederacy. (Strab. ix. p. 401; comp. Thuc. i. 12.) The city now ceased to be the Minyean and became the Boeotian Orchomenus (Thuc. iv. 76); but it still remained a powerful state, and throughout the whole historical period was second only to Thebes in the Boeotian confederacy. The town of Chaeronea appears to have been always one of its dependences. (Thuc. iv. 76.) In the Persian War Orchomenus, together with the other Boeotian towns, with the exception of Thespiae and Plataea, deserted the cause of Greek independence. Orchomenus possessed an aristocratical government, and continued on friendly terms with Thebes, as long as the aristocratical party in the latter city had the direction of public affairs. But when, after the close of the Peloponnesian War, a revolution placed the government of Thebes in the hands of the democracy, Orchomenus became opposed to Thebes. Accordingly, when war broke out between Sparta and Thebes, and Lyssander invaded Boeotia in n. c. 393, Orchomenus revolted from Thebes, and sent troops to assist Lyssander in his siege of Helice. Orchomenus, however, was restored to the protection of the Boeotian citadel, and its existence was confirmed by the Thebans, who arrayed them against the Thebans. (Xen. Hell. iii. 5. § 6, seq.; Diod. xiv. 81; Corn. Nepos. Lycs. 3.) In the following year (n. c. 394), when all the other Boeotians joined the Thebans and Athenians at the battle of Coronea, the Orchomenians fought in the army of Aeschines, who arrayed them against the Thebans. (Xen. Hell. iv. 3. § 15, Agec. 2. § 9.) It was now the object of the Spartans to deprive Thebes of her supremacy over the Boeotian cities. This they effected by the peace of Antaiadas, n. c. 387, by which Thebes was obliged to acknowledge the independence of Orchomenus and of the cities of Boeotia. (Xen. Hell. v. 1. § 51.) The battle of Lusitra (n. c. 371) changed the nation of Orchomenus, who had deserted the Thebans and made Thebes the undisputed master of Boeotia. Orchomenus was now at the mercy of the Thebans, who were anxious to destroy the city, and reduce the inhabitants to slavery. Epanomidas, however, dissuaded them from carrying their wishes into effect, and induced them to pardon Orchomenus, and re-admit it as a member of the Boeotian confederation. (Diod. xv. 57.) The Thebans appear to have yielded with reluctance to the generous advice of Epanomidas; and they took advantage of his absence in Thebes, in n. c. 368, to carry their original design into effect. The pretext was that the 300 knights of Orchomenus had entered into a conspiracy with some Theban exiles to overthrow the democratical constitution of Thebes. It is not improbable that the whole story was a fiction; but the Thebans eagerly listened to the accusation, condemned the 300 Orchomenians, and decreed that the city should be destroyed. A Theban army was immediately sent against it, which burnt it to the ground, put all the male inhabitants to the sword, and sold all the women and children into slavery. (Diod. xv. 79; Paus. ix. 15. § 3.) This atrocious act of vengeance remained as an indelible stigma upon the Theban character (Dem. c. Lept. p. 490).

Orchomenus remained a long time in ruins, though the Athenians were anxious for its restoration, for the purpose of humbling Thebes. (Dem. Megal. pp. 203, 208.) It appears to have been rebuilt during the Phocian War, when the Phocians endeavoured to expel the Thebans from the northern parts of Boeotia. In n. c. 353 we find the Phocian leader Onomarchus in possession of Orchomenus and Coronea (Diod. vi. 33, 65); and in the following year Phylacus was defeated in the neighbourhood of these towns. (Diod. xvi. 37.) Orchomenus, Coronea, and Corisciae were the three fortified places in Boeotia, which the Phocians had in their power (Diod. xvi. 58); and from which they made their devastating inroads into the other parts of Boeotia. On the conclusion of the Sacred War, n. c. 346, Orchomenus was given by Philip to its implacable enemy the Thebans, who, under Philip's eyes, destroyed the city a second time, and sold all its inhabitants as slaves. (Aesch. de Pal. Legg. p. 369; Dem. Phil. ii. 69, de Pace, p. 62, de Pal. Legg. p. 375.) It did not, however, remain long in ruins; for after the defeat of the Thebans and Athenians at the battle of Chaeronea, n. c. 338, it was rebuilt by Philip's order (Paus. iv. 27. § 10, ix. 37. § 8; according to Arrian, Anab. i. 9, it was rebuilt by Alexander the Great after the destruction of Thebes). From this time the name of Orchomenus is seldom mentioned in history. Under the Romans it shared the common fate of the Boeotian towns, all of which were, in Strabo's time, only ruins and names, with the exception of Thebes and Tanagra. (Dio. lxvi. 28; Xen. Hell. iii. 5. § 6; Paus. vi. 19. § 10, viii. 1. § 10, vii. 9. § 22.) Under the worship of the Charites or Graces, and for the festival in their honour, celebrated with musical contests, in which poets and musicians from all parts of Greece took part. Hence Pindar calls Orchomenus the city of the Charites (Pyth. xii. 45), and Theocritus describes them as the goddesses who love the Minyean Orchomenus (xiv. 104). An ancient inscription records the names of the victors in this festival of the Charites. (Müller, Orchomenus, p. 172, seq.) Pindar's fourteenth Olympic ode, which was written to commemorate the victory of Aspicleon, an Orchomenian, is in behalf of a lyric festival of these goddesses, which was probably sung in their temple. It was in the marshes in the neighbourhood of Orchomenus that the auletic or flute-reeds grew, which exercised an important influence upon the development of Greek music. [See Vol. I. p. 414, b.]

The ruins of Orchomenus are to be seen near the village of Skripis. The city stood at the edge of the marshes of the Copais lake, and occupied the triangular face of a steep mountain. The Copissoi "winds like a serpent" round the southern base of the mountain (δυν όροομοοι ελαφρατοι ευφυς, δρακων ως, Hes. op. Strab. ix. p. 424). At its northern face are the sources of the river Melas. [See Vol. I. p. 413. a.] Leake observes that the "upper part of the hill, forming a very acute angle, was fortified differently from the customary modes. Instead of a considerable portion of it having been enclosed to form an acropolis, there is only a small castle on the summit, having a long narrow approach to it from the body of the town, between walls which, for the last 200 yards, are almost parallel, and not more than 20 or 30 yards asunder. Below this approach to the citadel the breadth of the hill gradually
vindens, and in the lowest part of the town the en-
closed space is nearly square. It is defended on the
lowest side by a wall, which crossed the slope of
the hill along the crest of a ledge of rock, which there
forms a division in the slope. In this wall, which
is at three-fourths of the distance from the castle to
the monastery, there are some foundations of the
gate which formed the lower entrance into the city;
and on the outside are many large masses of wrought
stone, the remains, apparently, of some temple or
other public building. The southern wall of the
city, which follows a line parallel to the Cephissus,
is traceable, with scarcely any intermission, through
distance of three-quarters of a mile; and in many
places several courses of masonry are still extant.
The wall derives its flank defence from square towers,
placed for the most part at long intervals, with an
intermediate short flank or break, in the line of wall.
In a few places the masonry is of a very early age,
but in general it is of the third kind, or almost
regular." The former belongs to the earlier Orcho-
menus, the latter to the later city, and dates from
the time of its restoration either by Philip or the Pho-
cians. "Towards the middle of the northern side the
hill of Orchomenus is most precipitous, and here the
walls are not traceable. The circumference of the
whole was about 2 miles. The citadel occupies a
rock about 40 yards in diameter, and seems to have
been an irregular hexagon; but three sides only re-
main, no foundations being visible on the eastern
half of the rock. At the northern angle are the
ruins of a tower, and parallel to the north-western
side there is a ditch cut in the rock, beyond which
are some traces of an outcry. The hill is com-
manded by the neighbouring part of Mount Acon-
tium, but not at such a distance as to have been of
importance in ancient warfare. The access to the
castle from the city was first by an oblique flight of
44 steps, 6 feet wide, and cut out of the rock; and
then by a direct flight of 50 steps of the same kind."

The monuments, which Pausanias noticed at
Orchomenus, were temples of Dionysus and the
Charites,—of which the latter was a very ancient
building,—a fountain, to which there was a de-
scent, the treasury of Minyas, tombs of Minyas and
Hesiod, and a brazen figure bound by a chain of iron
to a rock, which was said to be the ghost of Actaeon.
Seven stadia from the town, at the sources of the
river Melas, was a temple of Hercules. The Treas-
ury of Atreus was a circular building rising to a
summit not very pointed, but terminating in a stone,
which was said to hold together the entire building.
(Paus. ix. 38.) Pausanias expresses his admir-
ation of this building, and says there was nothing
more wonderful either in Greece or in any other
country. The remains of the treasury still exist at
the eastern extremity of the hill towards the lake, in
front of the monastery. It was a building similar to
the Treasury of Atreus at Mycenae. It was a
circular vault of massive masonry embedded in the
hill, with an arched roof, unmounted probably by a
tunnicus. The whole of the stone-work of the vault
has now disappeared, but its form is vouchsed for by
the circular cavity of the ground and by the descrip-
tion of Pausanias. It had a side-door of entrance,
which is still entire, though completely embedded
in earth up to the base of the architrave. There were
probably two great slabs in the architrave, as at
Mycenae, though one only is left, which is of white
marble, and of which the size, according to Leake,
is 16 feet in its greatest length, 8 in its greatest
breadth, and 3 feet 2i inches in thickness. The
diameter of the vault seems to have been about 41
feet. Respecting the origin and destination of this,
and other buildings of the same class, some remarks
are made under MYCENAE. [Vol. II. p. 383.] Strabo
remarks (ix. p. 416) that the Orchomenus of his
time was supposed to stand on a different site from
the more ancient city, the foundations of the lake
having forced the inhabitants to retire from the plain
by Mount Acotium. And Leake observes, that
this seems to accord with the position of the treasury
on the outside of the existing walls, since it can
hardly have been placed there originally. The aca-
polis, however, must always have stood upon the
hill; but it is probable, that the city in the height
of its power extended to the Cephissus.

COIN OF ORCHOMENUS.

The monastery of Skripi, which stands about
midway between the treasury and the river, proba-
ably occupies the site of the temple of the Charites;
for the pedestal of a tripod dedicated to the Charites,
which is now in the church, was found in an ex-
cavation made upon the spot. Some very ancient
inscriptions, of which two are now in the British
Museum, were found in the church of the monastery.
They are in the Orchomenian-Aeolic dialect, in
which the digamma was used. (O. O. Muller,
Orchomenos und die Minyer, Breslau, 1844, 2nd ed.;
Doddwell, Classical Tour, vol. i. p. 227, seq.; Leake,
ORCHOMENUS.

2. An ancient city of Arcadia, called by Thucydides (v. 61) the Arcadian (ο 'Αρχαίος), to distinguish it from the Boeotian town. It was situated in a plain surrounded on every side by mountains. This plain was bounded on the S. by a low range of hills, called Anthachia, which separated it from the territory of Mantinea; on the N. by a lofty cliff, called Obgyrunt, through which the passes into the territories of Thessaly and Laconia; and on the E. and W. by two parallel chains running from N. to S., which bore no specific name in antiquity; the eastern range is in one part 5100 feet high, and the western about 4000 feet. The plain is divided into two by hills projecting on either side from the eastern and western ranges, and which approach so close as to allow space for only a narrow ravine between them. The western hill, on account of its rough and rugged form, was called Trachy (Τραχύς) in antiquity; upon the summit of the western mountain stood the acropolis of Orchomenus. The northern plain is lower than the southern; the water of the latter runs through the ravine between Mount Trachy and that upon which Orchomenus stands into the northern plain, where, as there is no outlet for the waters, they form a considerable lake. (Paus. viii. 13. § 4.)

The acropolis of Orchomenus, stood upon a lofty, steep, and insulated hill, nearly 3000 feet high, resembling the strong fortress of the Messenian Ithome, and, like the latter, commanding two plains. [See Vol. II. p. 338.] From its situation and its legendary history, we may conclude that it was one of the most powerful cities of Arcadia in early times. Pausanias relates, that a statue of Artemis, founded by an eponymous hero, the son of Lycaen (viii. 3. § 5); but there was a tradition that, on the death of Arcas, his dominions were divided among his three sons, of whom Eliates obtained Orchomenus as his portion. (Schol. ad. Dionys. Per. 415.) The kings of Orchomenus are said to have ruled over nearly all Arcadia. (Heraclid. Pont. ap. Dion. Lact. i. 94.) Pausanias also gives a list of the kings of Orchomenus, whom he represents at the same time as kings of Arcadia. One of these kings, Aristocrates, the son of Archias, was stoned to death by his people for violating the virgin priestess of Artemis Hymina. Arcadia was succeeded by his son Hicetas, and Hicetas by his son Aristocrates II., who, having abandoned the Messenians at the battle of the Trench in the second war against Sparta, experienced the fate of his grandfather, being stoned to death by the Arcadians. He appears to have been the last king of Orchomenus, who reigned over Arcadia, but his family was not deprived of the kingdom of Orchomenus, as is stated in some authorities, since we find his son Aristocrates represented as king of the city. (Paus. viii. 5; Polyb. iv. 3; Heracl. Pont. l.c.) It would appear, indeed, that royalty continued to exist at Orchomenus long after its abolition in most other Greek cities, since Theophratus related that Poseistratus, king of Orchomenus, was put to death by the aristocracy in the Peloponnesian War. (Plut. Parall. 32.)

Orchomenus is mentioned by Homer, who gives it the epithet of θαλαμηνος (Il. i. 605); and it is also called φιρος by Ovid (Met. vi. 416), and φαρυος by Apollodorus Rhodius (ib. 512). In the Persian wars Orchomenus sent 120 men to Thermopylae (Herod. viii. 102), and 600 to Plataea (ix. 28). In the Peloponnesian War, the Lacedaemonians deposited in Orchomenus the hostages they had taken from the Arcadians; but the walls of the city were then in a disabdipated state; and accordingly, when the Athenians and their Peloponnesian allies advanced against the city in B.C. 418, the Orchomenians dared not offer resistance, and surrendered the hostages. (Thuc. v. 61.) At the time of the foundation of Megalopolis, we find the Orchomenians exercising supremacy over Theison, Metherium, and Teuthis; but the inhabitants of these cities were then transferred to Megalopolis, and their territories assigned to the latter. (Paus. vii. 3.) The Orchomenians, through their enmity to the Mantinians, refused to join the Arcadian confederacy, and made war upon the Mantinians. (Xen. Hell. v. 5. § 11; Dod. xvi. 62.) Henceforth Orchomenus lost its political importance; but, from its commanding situation, its possession was frequently an object of the belligerent powers in later times. In the war between Cassander and Ptolemy, it fell into the power of the former, B.C. 313. (Diod. xix. 63.) It subsequently espoused the side of the Aetolians, was taken by Cleomenes (Polyb. ii. 46), and was afterwards retaken by Antigonus Doson, who placed there a Macedonian garrison. (Polyb. ii. 54, iv. 6; Pint. Arat. 5.) It was given back by Philip to the Achaenians. (Liv. xxxii. 5.) Strabo mentions it among the Arcadian cities, which had either disappeared, or of which there were scarcely any traces left (viii. p. 338); but this appears from Pausanias to have been an exaggeration. When this writer visited the place, the old city upon the summit of the mountain was in ruins, and there were only some vestiges of the agora and the town walls; but at the foot of the mountain there was still an inhabited town. The upper town was probably deserted at a very early period; for such is the natural strength of its position, that we can hardly suppose that the Orchomenians were dwelling there in the Peloponnesian War, when they were unable to resist an invading force. Pausanias mentions, as the most remarkable objects in the place, a source of water, and temples of Poseidon and Aphrodite, with statues of stone. Close to the city was a wooden statue of Artemis, enclosed in a great cypress tree, and hence called Cedreitis. Below the city were several heaps of stones, said to have been erected to some persons slain in battle. (Paus. viii. 13.)

The village of Kolpaki stands on the site of the lower Orchomenos. On approaching the place from the south the traveller sees, on his left, tumuli, chiefly composed of collections of stones, as described by Pausanias. Just above Kolpaki are several pieces of white marble columns, belonging to an ancient temple. There are also some remains of a temple at a ruined church below the village, near which is a copious fountain; which is evidently the one described by Pausanias. On the summit of the hill are some remains of the walls of the more ancient Orchomenos. In the territory of Orchomenos, but adjoining that of Mantinea, consequently on the northern slope of Mt. Anchisia, was the temple of Artemis Hymina, which was held in high veneration by all the Arcadians in the most ancient times. (Paus. viii. 5. § 11.) Its site is probably indicated by a chapel of the Virgin Mary, which stands east of Leriohl. In the southern plain is an ancient canal, which conducts the waters from the surrounding mountains.
through the ravine into the lower or northern plain, which is "the other Ovchomian plain" of Pan-
sinus (vii. 13. § 4). After passing the ravine, at the distance of 3 stadia from Ovchomius, the road divides into two. Ovchomius to the left along the northern side of the Ovchomian acropolis to Ca-
pheus, the other crosses the torrent, and passes under Mt. Trachy to the tomb of Aristocrates, beyond which are the fountains called Teneae (Te-
pean). Seven stadia further is a place called Amilianus ("Amilos"). Here, in ancient times, the road divided into two, one leading to Symphalae and the other to Pneusm. (Paus. viii. 13. § 4, seq.)

The above-mentioned fountains are visible just bey-
ond Trachy, and a little further are some Hellenic
rains, which are those of Amilianus. (Doxaell. Clas-
sical Tour, vol. ii. p. 425, seq.; Leake, Morcen, 
vol. iii. p. 99, seq.; Boblagy, Récherches, &c.
P. 149; Curtius, Peloponnesos, vol. i. p. 219, seq.)

3. A town in Thessaly. [See above, p. 487.]

4. A town (Euboea near Carystus. (Strab. ix. 
p. 416.)

ORCISTUS, a town in the north-east of Phrygia, 
not the borders of Galatia. It was the seat of a
(bishop (Geogr. Sacr. p. 256; Concil. Chalcid.; Tab. 
Peuting). It is placed by Col. Leake (Asia Minor, p. 71), on the authority of an inscription found there by Pocceke, at Alekuan, and, perhaps more cor-
rectly, by Hamilton (Researches, i. p. 444) about
3 or 4 miles to the south-east of the village of
Alekiam, where considerable remains of antiquity
are found. [I. S.]

ORDESUS. [Isiacorum Portus.]

ORDESUS. [Omdesus.]

ORDESUS (Orodesos, Herod. iv. 48), an affi-

cient of the Ister, which the commentators usually
associate with the Sceth. (Scharfik, Sacr. Alt. 
vol. i. p. 506.)

ORDOVICES (Orobolites, Ptol. ii. 3. § 18), a
people on the W. coast of Britannia Romana, op-
posite to the island of Mona. They occupied the
NW. portion of Wales, or that lying between Car-
dipen Bay and the river Dee, viz., Montgomery-
shire, Merionethshire, Caernarvonshire, Denbigh-
shire, and Flintshire. (Camden, p. 777; Tac. 
Ann. xiii. 33, Agric. 18.) [T. H. B.]

ORECII (Oôpôtai), a people of Macedonia or Thrace, known only from their coins. These have
been by some writers referred to the Oretae; but it is more probable, as suggested by Leake, that they were one of the Thracian tribes who worked the
silver mines of Pangaeum; a circumstance which will account for our finding silver coins of large size and in considerable numbers struck by a people so
obscure that their name is not mentioned by any
213. Numismata Hellenica, p. 81.) The coins in
question, one of which is annexed, closely resemble
in style and fabric those of the Bisaltes and Eboni
in the same neighbourhood. [L. H. B.]

ORESTÆ (Oôpôtai, Geor. ap. Steph. B. s. r.; 
Thuc. ii. 80; Polyb. xviii. 30; Strab. vii. p. 326, 
ix. p. 434; Plin. iv. 17), a people who are shown
by Thucydides (L. c.) to have bounded upon the
Macedonian Paraetacens and who partly, perhaps, as
having been originally an Epirese tribe (Steph. B.
s. r. terms them a Moesian tribe), were united
with the other Epirotes, under their prince Antiochus,
in support of the expedition of Cnemus and the Amb-
cieniots against Acrania. Afterwards they were
incorporated in the Macedonian kingdom. In
the peace finally granted to Philip, iii. 196, by the
Romans, the Orestae were declared free, because
they had been the first to revolt. (Liv. xxviii. 34.)

ORESTES (Orestiis, Ptol. iii. 13. §§ 5, 22; Steph. B.
s. r.; Liv. xxvii. 33, xxx. 40) or OEKTASLIS (Orestiars, Strab. vi. p. 326), was the name given
to the district which they occupied, which, though
it is not named by Livy and Dionysius among the
countries which entered into the composition of
the Fourth Macedon, was probably included in it,
because the greater part, at least, of Orestis was situ-
ated to the E. of Fundus. This subdivision of Upper
Macedonia is represented by the modern districts
of Gramisstis, Anasalitsa, and Kastoria. (Leake,
124.)

ORESTHIAIUM (Orestiâs, Paus. ; Oret-
sicelium, Tzir. Orestis, Hor., Ear.), a town in the
south of Arcadia, in the district of Maeonia, a little
to the right of the road, leading from Megalopolis
to Parnassus and Tegea. Its inhabitants were
removed to Megalopolis on the foundation of the latter
city. Its territory is called Oresthis by Thucydides
(iv. 134), and in it was situated Lalocceia, which
became a suburb of Megalopolis. (Ladocella.)
Leake places Oresthiaium at or near the ridge of
Tzimbaris, and conjectures that it may have occu-
pied the site of the village of Mavrom or Marmo-
ària, a name often attached in Greece to places where
ancient wrought or sculptured stones have been
found. (Paus. viii. 44. § 2, comp. vii. 3, § 1, 27, 3 
3. 39. § 4; Herod. ix. 11; Plut. Arist. 10; Thuc. v. 
64; Euph. Orest. 1642, Electr. 1274; Steph. B.
v. e.; Leake, Peloponnesiacca, p. 247.)

ORESTIS. [Oresthimnunm.]

ORESTIS. [Orestiae.]

ORESTIAS. [Haddianopolis, No. 1.]

ORETÀNI (Oreytani, Ptol. ii. 6. § 59), a
powerful people in the S. of Hispania Tarracense-
censis, inhabiting the territory E. of Baetica, as far as
Carthago Nova, and spreading to the N. beyond the
river A الأس. The Baets flowed through their
country in its earliest course. (Polyb. vi. x. 31;
Strab. iii. pp. 152, 156; Plin. iii. 3. s. 4; Liv. 
xxii. 11, xxx. 7.) Thus they inhabited the E. part of
Granada, the whole of Málaga, and the W. part of
Mozár. Their chief city was Castulo, now 
Casalona. [T. H. D.]

ORETUM GERMANORUM (Oretam Germani-
num, Ptol. ii. 6. § 59). Germani was another name
for the Oretani ("Oretani, qui et Germani nomi-
nantus," Plin. iii. 3. s. 4), and Oretum was one of
their towns; probably the Orí-a of Ardenius,
quoted by Steph. B. (c. r.), and the Oría of Strabo
(iii. 152). It has been identified with Granata,
a village near Abuqra, where there is a hermitage
still called De Oreti, and close by several ruins, a
Roman bridge, &c. (Morales, Ant. p. 8, b. p. 76. a.; 
p. 152.)

[1. H. D.]
ORCUS.

ORCUS (Ὄρκός; Eth. Ὄρκως; the territory 'Ὅρκα, Strab. x. p. 445), formerly called HISTIAEA ('Ἱστιαία, also Εὐστιαία; Eth. Ἰστιαῖας), a town in the north of Eubea, situated upon the river Callas, at the foot of Mt. Telechirion, and opposite Antron on the Thessalian coast. From this town the whole northern extremity of Eubea was named Histiaeotis ('Ἱστιαιότης, Ion. Ἰστιαιότης, Herod. viii. 23). According to some it was a colony from the Attic demus of Histiaeotis (Strab. x. p. 443); according to others it was founded by the Thessalian Perrhaebi. (Sceym. Ch. 578.) It was one of the most ancient and most important of the Euboean cities. It became of so great importance that the epithet of notable σταύρος (I. ii. 537); and Syra also mentions it as one of the four cities of Eubea (p. 22). After the battle of Artemision, when the Greek fleet sailed southwards, Histiaeotis was occupied by the Persians. (Herod. vii. 23.) Upon the expulsion of the Persians from Greece, Histiaeotis, with the other Euboean towns, became subject to Athens. In the revolt of Eubea from Athens in n. c. 445, we may conclude that Histiaeotis took a prominent part, since Pericles, upon the reduction of the island, expelled the inhabitants from the city, and peopled it with 2000 Athenian colonists. The expelled Histiaeotans were sold by Theopropus to have withdrawn to Macedonia. (Thuc. i. 114; Diod. xiii. 7, 22; Plut. Per. 23; Theopomp. ap. Strab. x. p. 445.) From this time we find the name of the town changed to Orenos, which was originally a demus dependent upon Histiaeotis. (Strab. L c.; Paus. vii. 26, § 4.) It is true that Thucydides upon one occasion subsequently calls the town by its ancient name (vii. 57); but he speaks of it as Orenos, in relating the second revolt of Eubea in n. c. 411, where he says that it was the only town in the island that remained faithful to Athens. (Thuc. viii. 95.) At the end of the Peloponnesian War, Orenos became subject to Sparta, the Athenian colonists were doubtless expelled, and a portion at least of its ancient inhabitants restored; and accordingly we read that this town remained faithful to Sparta and cherished a lasting hatred against Athens. (Diod. xv. 30.) Neogene, supported by Jason of Phereas, made himself tyrant of Orenos for a time; but he was expelled by Thrippolias, the Lacedaemonian commander; and the Athenian Chaireas endeavoured in vain to obtain possession of the town. (Diod. L c.) But shortly afterwards, before the battle of Leucstra, Orenos revolted from Sparta. (Xyn. Ill. v. 4, § 56.) In the subsequent war between Philip and the Athenians, a party in Orenos was friendly to Philip; and the aid of this monarch Philiapides became tyrant of the city (Dein. Phil. iii. pp. 119, 127, de Cor. p. 248; Strab. L c.); but the Athenians, at the instigation of Moshomes, sent an expedition against Orenos, which expelled Philiapides, and, according to Charax, put him to death. (Dein. de Cor. p. 232; Charax, ap. Strab. s. r. Ὄρκας.) In consequence of its geographical position and its fortifications, Orenos became an important place in the subsequent wars. In the contest between Antigonus and Cassander it was besieged by the latter; and, however, obliged to retire upon the approach of Polyden, the general of Antigonus. (Diod. xix. 75, 77.) In the first war between the Romans and Philip, it was betrayed to the former by the commander of the Macedonian garrison, n. c. 207. (Liv. xxviii. 6.) In the second war it was taken by the Romans by assault, n. c. 200. (Liv. iii. 46.) Soon afterwards, in n. c. 196, it was declared free by T. Quintius Flaminius along with the other Greek states. (Polyb. xviii. 28, 30; Liv. LXX. xxxii. 31, 34.) Phily mentions it among the cities of Eubea no longer existent in his time (Plin. iv. 21, 82), but it still occurs in the lists of Ptolemy, under the corrupt form of Ζωόπες (iii. 13, § 25).

Strabo says that Orenos was situated upon a lofty hill named Deunus (x. p. 445). Livy describes it as having two citadels, one overhanging the sea and the other in the middle of the city (xxviii. 6). There are still some remains of the ancient walls at the western end of the bay, which is still called the Styx (Strab. xii. 1, 3, 6; Plut. i. 178). The town was founded by the Quadrians, named in old time Histiaeotis, and later Varona, from the Roman name Varona, the name of a small town, by the river Verona, near the mouth of the Parasus (Liv. i. 13, § 1, 2; Diod. v. 15). It is mentioned by Strabo (xii. 1, 2, 3) and Diodorus (v. 15, § 13), but its modern name is unknown.

ORIGA. [Ilegetes.]

ORGOCYNLI. [Tauria Chersonesis.]

ORIA. ORISA. [Oretum Germanorum.]

ORICUM, ORICUS (Ὄρικος, Hicet. Fr. 75. ap. Steph. B. s. r.; Herod. ix. 92; Syl. p. 10; Polyb. vii. 19; Sceym. 440; Estn. ad Dion. 321; Ὄρικος, Ptol. iii. 14. § 2; Pomp. Mela, ii. 3, § 12; Plin. iii. 26), a town and harbour of Illyricum, not far from Apollonia and the mouth of the Aous. Legend ascribes its foundation to the Euboeans on their return from Troy (Sceym. l. c.); and Apollonius (Argon. iv. 1216) speaks of the arrival of a party of Colchians at this port; and thus Pliny (l. c.) calls it a Colchian colony. Oricum is known in history as a haven frequented by the Romans in their communications with Greece, from being very conveniently situated for the passage from Brundisium and Hydramunt. n. c. 214, the town was taken by Philip V. of Macedonia; but it afterwards fell into the hands of the Romans and M. Valerius Laevinus, who commanded at Brundisium, with a single legion and a small fleet. (Liv. xxiv. 40.) After the campaign of n. c. 167, Aemilius Paulus embarked his victorious troops from Oricum for Italy. (Plut. Aemil. Paul. 29.) Caesar, after he had disembarked his troops at Palaestina (Liv. iv. 460; comp. Caes. B. C. iii. 6, where the reading Pharsalus or Pharsalis, is a mistake or corruption of the MSS.), or the sheltered beach of Patina, surrounded by the dangerous promontories of the Caramanian mountains, within one day of his landing marched to Oricum, where a squadron of the Pompeian fleet was stationed. (Caes. B. C. iii. 11; Appian, B. C. ii. 54.) The Oriici declared their unwillingness to resist the Roman consul; and Torquatus, the governor, delivered up the keys of the fortress to Caesar. The small fleet in which he had brought his force over was laid up at Oricum, where the harbour was blocked up by sinking a vessel at its mouth. Caesar, the son of Pompeius, made a spirited attack on this stronghold, and, cutting out four of the vessels, burnt the rest. (Caes. B. C. iii. 40.) It continued as an important haven on the Adriatic. (Hor. Carm. iii. 7; 5; Propert. Eleg. i. 8, 20; Lucan, iii. 157.) The
ORIGENOMESCI.

name of its harbour was PANORMUS (Hâropos, Strab. vii. p. 316), now Porto Ragusio; while the CELYDENS (Kâlêdôs, Ptol. iii. 13, §§ 2, 5) is identified with the river of Ithkides. It would seem from Virgil (Aen. x. 156) that Orcium was famous for its tartuca, while Nicander (Ther. 516) al- ludes to its boxwood. The town was restored by the munificence of Hercules Atticus. (Comp. II. Atti. 5.) To the E. of the mouth of the river of Ithkides is a succession of lagoons, in the midst of which lies Orcium, on the desert site now called Erikkô, occupied (in 1818) only by two or three huts among the vestiges of a aqueduct. (Smyth, Mediterranean, p. 46.) The present name (Iepôkô, Anna Comm. xiii. p. 389) is accented on the last syllable, as in the ancient word, and is substituted for 0 by a common dialectic change. (Ponqueville, Voyage, vol. i. p. 264; Leake, North. Greece, vol. i. pp. 96, 90.) A coin of Orcium has for type a head of Apollo. (Eckhel, vol. ii. p. 167.)

[**E. B. J.**]

ORIGENOMESCI. [**ARGENOMESCI.**]

ORIGLACUM (Oriqljace). Ptolemy (ii. 9, § 7) makes this town the chief place of the At- ribati or Atrebatres in Belgium. There is nothing that fixes the position of Origlacus except its re- semblance to the name Orchies, which Cluver suggested. Orchies is between Donay and Tourney, and appears to be beyond the limits of the Atrebatres, whose chief town in Caesar’s time was Neum- taeum (Arras). [**G. L.**]

ORIGISSS. [**AURIXN.**]

ORIPPO, a town of Hispania Baetica, on the road from Gades to Hispalis. (Pim. iii. i. 3.; Itin. Ant. p. 410.) Commonly identified with Villa de dos Hermaños, though some have men- tioned Alcala de Guadaira and Torre de los Her- manos. Ancient coins of the place have a bunch of grapes, showing that the neighbourhood was rich in vines, a character which it still preserves. (Caro, Ant. iii. 20; Florez, Esp. Sagr. ix. p. 111, Med. ii. p. 512; Mioniem, i. p. 23, Suppl. i. p. 39; Sestini, Med. p. 77.)

[**T. H. B.**]

**COIN OF ORITTO**

ORITAE (Oreitai), a people inhabiting the sea- coast of Gadesia, with whom Alexander fell in on his march from the Indies to Persia. (Arrian, vi. 21, 22, 24, &c.) Their territory appears to have been bounded on the east by the Arabs, and on the west by a mountain spur which reached the sea at Cape Moran. (Vincent, Voy. of Anarchus, i. p. 217.) There is considerable variation in the manner in which their names are written in differ- ent authors; thus they appear as Oritae in Arrian (Indice. 23, Exped. Alex. vi. 22); Oretai in Strabo (xv. p. 720), Dionysius Periegi. (v. 1056), Plutarch (Alex. c. 66), and Stephanus B.; as Ory in Arrian (vi. 28) and Pliny (vi. 23, § 26); and Hirtiae in Curtius (ix. 10. 6); yet there can be no doubt that they are one and the same people. Arrian and Strabo have described them at some length. According to the former, they were an Indian nation (vi. 21; cf. Dion. xvii. 105), who wore the same arms and dress as these people, but differed from them in manners and institutions (Ind. c. 23). According to the latter they were a race living under their own laws (vi. p. 720), and armed with javelins hardened at the point by fire and poisoned (xv. p. 723). In another place Ar- rian appears to have given the true Indians to the river Arabis (or Purrel), the eastern boundary of the Oritae (Indie. c. 22); and the same view is taken by Pliny (vii. 2). Pliny calls them “ Ichthy- ophagi Oritae” (vi. 23. s. 25); Curtius “ Indi mari- timi” (ix. 10. 8). It is probable that the true form of the name was Horitas, as the Nubian geog- rapher places a town called Haur on the route to Firbaz on in Mectria. (Comp. D’Auloy, Eclaire- cissements, f. c. p. 42; Edrie, Geog. Nub. p. 58.)

ORIUNDUS. [**BAHIAH.**]

ORMENIUM (Oriœniou), a town of Thessaly, mentioned in the Catalogue of Ships along with Hypereia and Asterium as belonging to Euryphylus (Hom. Ill. ii. 734). It was said to have been founded by Ormerus, the grandson of Achilles, and was the birthplace of Phoenix. (Deuter. Scepsias, ap. Strab. ix. p. 438, seq.) Strabo identifies this town with a place in Magnesia named Ormumiot, situated at the foot of Mt. Pelion, at the distance of 27 stadia from Demetrias, on the road passing through Iolcus, which was 7 stadia from Demetrias and 20 from Orminium. (Strab. l. c.) Leake, however, observes that the Orminium of Homer can hardly have been the same as the Orminium of Strabo, since it appears from the situation of Euryphylus that Euryphylus ruled over the plains of Thessaliots, which are watered by the Apidanus and Emepntus. (Leake, Northern Greece, vol. iv. p. 434, seq.)

ORMINIO (Oriœniou ògos), a mountain in the north-eastern part of Bithynia, terminating in Cape Posidum (Pitol. v. i. §§ 10, 11). Alinowsh supposed it to be the same as the mountain now called Demer Janthina. (L. S.)

ORNEAE (Oreôkè; Eth. Oparadyns), a town in the Argelia, mentioned in the Iliad (ii. 571), which is said to have derived its name from Ornos, the son of Ecolithes. Orneus retained its ancient Cy- nurnian inhabitants, when Argos was conquered by the Dorians. It continued independent of Argos for a long time; but it was finally conquered by the Argives, who removed the Orneai to their own city. (Paus. ii. 25. § 6, vii. 27. § 1.) Their- dies mention (v. 67) the Orneai and Cleoneia as allies. (oifh'mâno) of the Argives in n. c. 418; and the same historian relates (vi. 7) that Orneus was destroyed by the Argives in n. c. 416. (Comp. Dion. xii. 81.) It might therefore be inferred that the destruction of Orneus by the Argives in n. c. 416 is the event referred to by Pausanias. But Müller concludes from a well-known passage of Hero- dotus (vii. 73) that Orneus had been conquered by Argos long before; that its inhabitants were reduced to the condition of Perioci; and that all the Perioci in the Argelia were called Orneai from this place. But the Orneai mentioned by Thucydides could not have been Perioci, since they are called allies; and the passage of Herodotus does not require, and in fact hardly admits of, Müller’s interpretation. "The Cynurnians," says Herodotus (l. c.), "have become Doricized by the Argives and by time, being Orneai and Perioci." These words would seem
clearly to mean that, while the other Cymrians became Persicci, the Orotaeatis continued independent,—an interpretation which is in accordance with the account of Thucydides. (Müller, *Aegyptica*, p. 48, seq.; *Iovians*, iii. 4. § 2; Arnold, *ad Thuc*. v. 67.) With respect to the site of Oroeae we learn from Pausanias (v. 23. § 5) that it was situated on the confines of Phildasa and Sicyonia, at the distance of 120 stadia from Argos, being 60 stadia fromLy-rcula, which was also 60 stadia from Argos. Strabo (viii. p. 382) says that Oroeae was situated on a river of the same name above the plain of the Sicyonians; for the other passage of Strabo (viii. p. 578), which states that Oroeae lay between Corinth and Sicyon, and that it was not mentioned by Hesiod, is probably an interpolation. (See Kramer's *Strabo*, vol. ii. p. 186.) Oroeae stood on the northern of the two roads, which led from Argos to Mantinea. This northern road was called Cimax, and followed the course of the Inachus. *(Argos, p. 201.*) Roos supposes Oroeae to have been situated on the river, which flows from the south by the village of *Liou* and thence to form the western extremity of the Askas. Leake places it too far to the east on the direct road from Argos to Philius. (Roos, *Reisen in Peloponnes*, p. 133; comp. Leake, *Morea*, vol. ii. p. 351, vol. iii. p. 414.)

**ORNI (Oroinc).** A town of Thrace mentioned only by Hierocles (p. 632). [T. H. D.]

**ORNIAI (Oropocai).** A town of the Astures in Hispania Tarraconensis. Their chief town was Intercia. [T. H. D.]

**ORNITHON POLIS (Oropoiv polis), a city of the Sidonians, according to Sylax (ap. *Herand*, *Palatii*, p. 431).** It is placed more exactly by Strabo between Tyre and Sidon (p. 758). Pliny mentions together "Sarepta et Ornithon oppida et Sidon" (v. 19). *Herand* suggests that it may be "Tarnegola superior," which the Talmud places above Cesarea. Tarnegola in Hebrew being equivalent to the Gallus of Latin—* appréla* in Greek. *(Palast*, p. 916.) Dr. Robinson, following Pococke, conjectures that it may be represented by an ancient site on the shore of the Phoenician plain, where he noticed "the traces of a former site called Adelin, consisting of confused heaps of stones, with several cisterns. There are also "many sepulchral groves" blown out of the hard limestone rock," in the precipitous base of the projecting mountain which here approaches the coast,—triumphant clear indications of an ancient city in the vicinity. *(J. B. R., vol. iii. p. 411, and note 2; Pococke, *Observations*, vol. ii. p. 84.) [G. W.]

**OROANDA, a town in the mountains of Pisidia, near the south-western shore of lake Trogitis (Liv. xxxviii. 57, 39; Plin. v. 24).** From this town the whole district derive the name of Oroandacus tractus, the inhabitants of which, called Oroandenses or Oroanda (Oroandia or Oroandii), possessed, besides the chief town Oroanda, also Mustula and Pappa (Liv. xxxviii. 18, 19; Polyb. xxii. 23; *Vet. loc.* p. 4. § 12). *Hamilton (Researches*, i. p. 478) believes that the ruins he found on the slope of a hill near lake *Egylid*, may mark the site of Oroanda: but it would seem that its remains must be looked for a little further east. [L. S.]

**ORATIS.** *(Atrois.)

**OROBIAE (Oropiai), a town on the western coast of Eubea, between Atelepsis and Arcae, which possessed an oracle of Apollo Schinaius.* *(Strab. s. x. p. 445, comp. ix. p. 403.) The town was partly destroyed by an earthquake and an inundation of the sea in B.C. 426. *(Thuc. iii. 89.)* This town seems to be the one mentioned by Stephanus under the name of Orope (Oropó), who describes it as "a city of Eubea, having a very renowned temple of Apollo." *(Steph. B. s. v. Kopóv.) There are some remains of the walls of Orobaae at *Rovis*, which was only a corruption of the ancient name. *(Leake, *Northern Greece*, vol. ii. p. 176.)*

**OROBI, a tribe of Cicalpine Gauls, mentioned only by Pliny (iii. 17, 21), upon the authority of Catu, who said that Bernon and Comun had been founded by them, as well as Formi Licinius, by which he must mean the Gaulish town that preceded the Roman settlement of that name. Their original abode, according to Catu, was at a place called Barra, situated high up in the mountains; but he professed himself unable to point out their origin and descent. The statement that they were a Greek people, advanced by Cornelius Alexander (ap. *Plin. l. c.*), is evidently a mere inference from the name, which was probably corrupted or distorted with that very view. *(E. II. B. R.)*

**OROBIS, or OROBIS (Oropo), a river of Narboensis in Gallia. *Ptol. (iv. 10. § 2) places the outlet of the Orobis between the mouth of the Axus (Aude) and the Amuris (Hérault), which shows that it is the *Orbe*. In *Strabo*’s text (iv. 18.2) it is written *Obris*, which Gérouard unnecessarily corrects, for *Obiris* and *Obris* were probably used indiscriminately, and it seems that *Obiris* is the original reading in *Mela* (ii. 5, ed. J. Vossius, note). *Mela* says that the Orobis flows past Baeterrae (*Béziers*), and Strabo also places Baeterrae on the Orobis. In the *Orbis Maritima* (v. 290) the name is *Orites*. The *Orbe rises* in the *Cevennes* in the north-west part of the department of *Hérault*, and has a very winding course in the upper part. It is above 60 miles long. [G. L.]

**OROLACNUM, in the north part of Gallia, is placed by the Antonine Itin. on a road from *Durocorum* (*Reims*) to *Teur*. It is placed halfway between *Epidauros* (*Iptoch*) and Andethanna, which D’Anville supposes to be *Epternach*, by which he means *Eschternach*: others place Andethanna at *Amma*. The name *Arden* clearly represents *Andethanna*, where Ronan remains, as it has been found. *Ardon* is in the duchy of *Luxembourg*. [G. L.]

**OROMAISACI, a people of North Gallia, whose position is thus described by Pliny (iv. 42), who is proceeding in his description from the *Scheide* northwards:—"D'inde Menajai, Morini, Oromasaici juncti per qui gestis amici vocatur." In Harduin’s text the name is written *Oromasaci*, and yet he says that the *Mias* have *Oromasaci*. The name is otherwise unknown. D’Anville supposes that the name *Oromasaci* is represented by the name of a tract of country between *Culais* and *Grevelez*, which is *Mark* or *Merk*, and borders on the *Boulenus*, in which the pagus *Gresserianus* was. [G. S.]**

This is more guess, but it is all that we can have. [G. L.]

**ORONTES (Oropóreis),* the most renowned river of Syria, used by the poet Juvenal for the country "in Tiberim defluit Orontes." (Juv. iii.) Its original name, according to Strabo, was *Typhon* (*Toipor*), and his account both of its earlier and later names, follows his description of Antioch: "The river Orontes flows near the city. Thi:
ORONTES.

river rising in Coele-Syria, then sinking beneath the earth, again issues forth, and, passing through the district of Agamea to Antiochae, after approaching the city, runs into the river Euphrates. It received its name from one Orontes, who built a bridge over it, having been formerly called Typhon, from a mythic dragon, who being struck with lightning, fled in quest of a hiding-place, and after marking out the course of the stream with its trail, plunged into the earth, from whence forthwith issued the fountain. He places its embouchure 40 stadia from Seleucea (xvi. p. 750). He elsewhere places the source of the river more definitely near to Libanus and the Paradeis, and the Egyptian wall, by the course of Agamea and Antioch. Its sources have been visited and described in later times by Mr. Barker in 1835. The river "is called by the people El-A'Ass, the rebel," from its refusal to water the fields without the compulsion of water-wheels, according to Albulfa (Tub. Syr. p. 149), but according to Mr. Barker, "from its occasional violence and windings, during a course of about 200 miles in a northerly direction, passing through Hena and Hamath, and finally discharging itself into the sea at Susewilah near Antioch." (Journal of the Geog. Soc. vol. viii. p. 93.) The most remote of these sources is only a few miles north of Baalbek, near a village called Labweh, "at the foot of the range of Anti-libanus on the top of a hillrock, near which passes a small stream, which has its source in the adjoining mountains, and after flowing for several hours through the plain, falls into the basin from which springs the Orontes." These fountains are about 12 hours north of Labweh, near the village Kurmal, where is a remarkable monument, "square, and solid, terminating above in a pyramid from 60 to 70 feet high. On the four sides hunting scenes are sculptured in relief of which the drawing borders on the grotesque." (Robinson, Journal of Geog. Soc. vol. xxiv. p. 32.) There can be no difficulty in connecting this monument with the Paradise or hunting park mentioned by Strabo near the source of the Orontes, similar, no doubt, in origin and character, to those with which the narrative of Xenophon abounds, within the territories of the Persian monarchs. The rise and course of this river and its various tributaries has been detailed by Col. Chesney (Expedition, vol. i. pp. 394-398), and the extreme beauty of its lower course between Antioch and the sea has been described in glowing terms by Captains Hyde and Mangles. (Travela, pp. 225, 226.)

[ G. W.]

ORONTES (Ο ροντης, Ptol. vi. 2 § 4), a mountain chain of Media, which extended in a south-east direction, passing the Ecbatana of Greater Media (Hamadan). It must be considered as an outlying portion of the still greater chain of the Zagros. It is now called the Evrinc and Evirind. It is probable that the name is preserved in the celebrated mountain of Kurdistain, now called Rovindiz. In Armenian geography this mountain district is called Ervaninain which is evidently connected with the ancient Orontes. (St. Martin, Armenia, vol. ii. pp. 363, 429.)

[V.]

ORONTES, a people of ancient Assyria, described by Pliny as being to the east of Gugamena (vol. 26. s. 30). There can be no doubt that these are the present Rovindiz, a tribe living, as in ancient times, about the great mountain Rovindiz, in Kurdistain, and doubtless connected with the Orontes of Pudemy (vi. 2 § 4). They derive their name from Evrind, a pure old Persian root, which was usually Hellenized into Orodes or Orontes. (Rawlinson, Journ. of Geog. Soc. vol. iii. p. 73.)

OROPUS (Ὄρωπος, rarely Ὄρως), Paus. vii. 11 § 4: comp. Steph. B. s. v. Eth. 'Oupos, and according to Steph. B. 'Oropos, a town on the borders of Attica and Boeotia, and the capital of a district, called after it Oropl (Ὄρωπιλια). This district is a marine plain through, which the Asopus flows into the sea, and extends for 5 miles along the shore. It is separated from the inland plain of Tanarea by some hills, which are a continuation of the principal chain of the Dardanian mountains. Oropus was originally a town of Elis; and, from its position in the maritime plain of the Asopus, it naturally belonged to that country. (Paus. i. 34 § 1.) It was, however, a frequent subject of dispute between the Athenians and Boeotians; and the former people obtained possession of it long before the Peloponnesian War. It continued in their hands till b. c. 412, when the Boeotians recovered possession of it. (Thuc. viii. 60.) A few years afterwards (b. c. 402) the Boeotians, in consequence of a sedition of the Oropi, removed the town 7 stadia from the sea. (Diod. xiv. 17.) During the next 60 years the town was alternately in the hands of the Athenians and Boeotians (comp. Xen. Hell. vii. 4 § 1, &c.), till about 149 c. H. Philopoemen, after the battle of Chaeronea gave it to the Athenians. (Paus. i. 34 § 1.) In b. c. 318 the Oropians recovered their liberty. (Diod. xviii. 56.) In b. c. 312 Cassander obtained possession of the city; but Polemon, the general of Antigonus, soon after expelled the Macedonian garrison, and handed over the city to the Boeotians (Diod. xix. 77.) It has been concluded from a passage of Dicarciusus (p. 11, ed. Hudson) that Oropus continued to belong to Thebes in the next century; but the expression καθιστα Όρωπος is corrupt, and no safe conclusion can therefore be drawn from the passage. Leake proposes to read ἀνακυκλα Όρωπος, Wordsworth καθιστα Όρωπος, but C. Müller, the latest editor of Dicarciusus, reads οἰκους Θησαυρος. Dicarciusus calls the inhabitants Athenian Boeotians, an epithet which he also applies to the inhabitants of Phataea. Strabo also describes Oropus as a Boeotian town (ix. p. 404); but Livy (xlv. 27), Pausanias (l. c.), and Pliny (iv. 7 s. 11) place it in Attica. How long the Oropi inhabited the inland city is uncertain. Pausanias expressly says that Oropus was upon the sea (ἐπὶ ἐδαφους, 34. § 1); and the inhabitants had probably returned to their old town long before his time.

Although Oropus was so frequently in the hands of the Athenians, its name is never found among the Athenian demes. Its territory, however, if not the town itself, appears to have been made an Attic demes under the name of Graea (Ἑ Graία). In Homer Oropus does not occur, but Graea is mentioned among the Boeotian towns (II. ii. 498); and this ancient name appears to have been revived by the Athenians as the official title of Oropus. Aristotle said that Oropus was called Graea in his time (sp. Steph. B. s. v. 'Oropos); and accordingly we find in an inscription, belonging to this period, the Γραῖα (Γραια) mentioned as a demes of the tribe Pandelioi (Kase & Meier, Die Denen von Attica, p. 6, seq.) in the passage of Thucydates (ii. 28) παρωτές δι' Ἄρων τὰν τὴν Πειραιαν καλουμέναν, ἤν νεκ- μονται Ἀρωποὶ Ἀθηναίων ὑπόκου, ὕδας ἕνωσαν, the existing MS. have Πειραιαν, but Stephanus, who quotes the passage, reads Γραιαν, which Πειραιαν.
and other modern editors have received into the text. It is, however, right to observe that the district of Oropus was frequently designated as the border country or country over the border (τῷ πεσώμε γάς, Thuc. iii. 91).

According to Dicaearchus (L. c.) the Oropians were notorious for their grasping exactions, levied upon all imports into their country, and were for this reason satirised by Xenon, a comic poet:—

Πάντες τελκώντες πάντες εσών ἔπθαγες. Κακών τέλος γενοτοί του Ῥωπών.  

The position of Oropus is thus defined by Strabo:—

"The beginning [of Boeotia] is Oropus, and the sacred haven, which they call Delphinium, opposite to which is Eretia in Euboea, distant 60 stadia. After Delphinium is Oropus at the distance of 20 stadia, opposite to which is the present Eretria, distant 40 stadia. Then comes Delium." (Strab. ix. p. 403.)

The modern village of Oropo stands at the distance of nearly two miles from the sea, on the right bank of the Pountias, ancintly the Ambopus, which was some fragments of ancient buildings and sepulchral stones. There are also Hellenic remains at the Σέλανος or wharf upon the bay, from which persons usually embark for Euboea: this place is also called διότι ἄγιος αποστόλου, from a ruined church dedicated to the "Holy Apostles." Leake originally placed Oropus at Oropó and Delphinium at Skíla; but in the second edition of his Deicti he leaves the position of Oropus doubtful. It seems, however, most probable that Oropus originally stood upon the coast, and was removed inland only for a short time. In the Peloponnesian War, Thermopylae speaks of sailing to and anchoring at Oropos (iii. 91, vili. 95); and Pausanias, as we have already seen, expressly states that Oropus was upon the coast. Hence there can be little doubt that Skíla is the site of Oropus, and that Oropó is the inland site which the Oropians occupied only for a time. It is true that the distance of Oropó from the sea is more than double the 7 stadia assigned by Diodorus, but it is possible that he may have originally written 17 stadia. If Oropus stood at Skíla, Delphinium must have been more to the eastward nearer the confines of Attica.

In the territory of Oropus was the celebrated temple of the hero Amphicles, and in the present day the name is still preserved in Pausanias, which (i. 34, § 1) it was 12 stadia distant from Oropus. Strabo places it in the district of Phosphis, which stood between Rhinias and Oropus, and which was subsequently an Attic demus (ix. p. 399). Livy calls it the temple of Amphileucus (xlv. 27), who, we know from Pausanias, was wor-shipped conjointly with Amphicles. Livy further describes it as a place rendered agreeable by fountains and rivers; which leads one to look for it at one of two torrents which join the sea between Skíla and Káthame, which is probably the ancient Phosphis. The mouth of one of these torrents is distant about a mile and a half from Skíla; at half a mile from the mouth there are remains of antiquity. The other torrent is about three miles further to the eastward; on which, at a mile above the plain, are remains of ancient walls. This place, which is near Káthame, is called Mácro-Dhéliasis, the epithet Mácro (black) distinguishing it from Dhéliasis, the seat of Delium. The distance of the Hellenic remains on the first-mentioned torrent agree with the 12 stadia of Pausanias; but, on the other hand, inscriptions have been found at Mácro-Dhéliasis and Káthame, in which the name of Amphiscias occurs. Dicaearchus (L. c.) describes the road from Athens to Oropus as leading through bay-trees (διὰ δασφιόν) and the temple of Amphiscias. Wordsworth very ingeniously conjectures διὰ Αφίδνων instead of διὰ δασφιόν, observing that it is not probable that a topographer would have described a route of about 30 miles, which is the distance from Athens to Oropus, by telling his readers that it passed through "bay-trees and a temple." Although this reading has been rejected by Leake, it is admitted into the text of Dicaearchus by C. Miller. (Leake, Northern Greece, vol. ii. p. 344, seq; Dei. of Attica, p. 112, seq.; Finley, Remarks on the Topography of Oropus and Deneira, in Transactions of the Royal Society of Literature. 1839, p. 396, seq.; Wordsworth, Athens and Attica, p. 22, seq.)

OROSINES, a river of Thrace, flowing into the Euxine. (Plin. iv. 15.)

OROSPEDA (Ὄ Ῥωσπέδα), Strab. iii. p. 161, seq.), called by Polyena Ortopesda (Ὀρτόπεσδα, ii. 6. § 21), a mountain chain in Hispains Tarragonensis, the direction of which is described under Hispains (Vol. i. p. 1086). It is only necessary to add here the following particulars. It is the highest inland mountain of Spain (11,000 feet), at first very rugged and bold, but becoming wooded as it approaches the sea at Calpe. It abounds in silver mines, whence we find part of it called Mons Argentarius. [ARGENTARIUS MONS.] It is the present chain of Sierra del Mundo, as far as Sierra de Alcines and Sierra de Ronda. (T. H. D.)

O'CREA. 1. (Ophela, Ptol. ii. 3. § 14), a town of the Venicenes, on the E. coast of Britannia Barba. Horsley (Brit. Rom. p. 572) identifies it with Orrock, on the little river Orwater in Fife-shire.

2. A town in Moesia Superior (Ptol. iii. 9. § 5). [T. H. D.]

ORISA, a mountain with a bay, on the east coast of Arabia, without the straits of the Persian Gulf. (Plin. vi. 28. s. 32.) Mr. Forster explains the name to mean literally in Arabic "the transverse mountain." He adds: "Its position is effectually determined from the East India Company's Chart, where, about a third of a degree south of Daba, a great mountain, at right angles with the mountains of Luma, runs right down to the sea, while at its base lies the port of Chorofian." (Geog. of Arabia, vol. ii. p. 225.) [G. W.]

ORSINUS, a tributary of the Maeander, flowing in a north-western direction, and discharging itself into the main river a few miles below Antioch (Plin. v. 29). As some MSS. of Pliny have Mosynus, and as Hierocles (p. 665) and other ecclesiastical writers (Notit. Episc. Phryg. Pac. 27.) speak of a town Mosyn in those parts, the river was probably called Mosynus. Its modern name is said to be Ἡγιασία, that is the river described by Col. Leake (Asia Minor, p. 219) as descending from Cheira and Karyagia. [L. 8.]

ORTACEA, a small stream of Elymus, which Pliny states flowed into the Persian Gulf; its mouths were blocked up and rendered unfit for navigation by the mud it brought down (vi. 27. s. 31). [V.]

ORTAGUEA. [Maroneia.]

ORTHAGORIA (Ὀρθαγορία), a town of Macedonia, of which coins are extant. Pliny (iv. 11. s. 18) says that Ortagoea was the ancient name of Maroneia; but we learn from an ancient geographer (Hudson, Geogr. Min. vol. iv. p. 42) that Ortha-
ORTHE.

goria was the ancient name of Stageira, to which accordingly the coins are assigned. (Eckhel, vol. ii. p. 73.)

COIN OF ORTHOGORIA.

ORTHE ('Oπιθη), a town of Pernæa in Thessaly, mentioned by Homer (Il. ii. 759), was said by Strabo (ix. p. 440) to have become the acropolis of Phalanna. [Phalanna.] It occurs, however, in the lists of Play (iv. 9. s. 16) as a distinct town from Phalanna.

ORTHOSIA (Ορθοσία), a town of Syria mentioned by Strabo and Ptolemy, near the river Eleutherus, contiguous to Sinyma, between it and Tripoli. (Strab. xvi. p. 753; Ptol. v. 15. § 4.) The former makes it the northern extremity of Phœnicia, Pelusium being the southern (p. 756), a distance, according to Artemidorus, of 3650 stadia (p. 760). It was 1130 stadia south of the Oronetes. (Ib.) Ptolemy places both Sinyma and Orthosia south of the Eleutherians; but Strabo to the north of it; "agreeable whereunto," writes Shaw, "we still find, upon the north banks of this river (Nahr-el-Berd), the ruins of a considerable city in a district named Ortona. In Ptolemy's table, also, Orthosia is placed 30 miles south of Antaradus and 12 miles north of Tripoli. The situation of it is likewise further illustrated by a medal of Antoninus Pius, struck at Orthosia, upon the reverse of which we have the goddess Astarte treading upon a river; for this city was built upon a rising ground, on the northern banks of the river, within half a furlong of the sea: and as the rugged eminences of Mount Libanus lie at a small distance, in a parallel with the shore, Orthosia must have been a place of the greatest importance, as it would have hereby the entire command of the road (the only one there is) betwixt Phœnicia and the maritime parts of Syria." (Travel. p. 270, 271.) The difficulties and discrepancies of ancient authors are well stated by Pococke. (Observations, vol. ii. pp. 204, 205, notes d. e.) He assumes the Nahr Kibeer for the Eleutherian, and places Orthosia on the river Acar, between Nahr Kibeer and El-Berd. (Mannertell, Journey, March 8. [G. W.])

ORTHOSIA (Ορθοσία), a town of Caria, not far from Alabanda, on the left bank of the Maeander, and apparently on or near a hill of the same name (Strab. xiv. p. 650; Plin. xxxvii. 25). Near this the Rhodians gained a victory over the Carians (Polyc. xxx. 5; Liv. xlv. 25; comp. Ptol. v. 2. § 19; Plin. v. 29, xxxvii. 9, 25; Hieroc. 689). The ancient remains near Karpasli probably mark the site of Orthosia (Leake, Asia Minor, p. 234); though others, regarding them as belonging to Alabanda, identify it with Dokentic-sheer. [L. S.]

ORTHURA (Ορθούρα, Ptol. vii. 1. § 91, viii. 27. § 18), a town on the eastern side of the peninsula of Hindostan, described by Ptolemy as the Palace of Sornax. It was in the district of the Seres, and has been identified, conjecturally, by Forbiger with the present Utwar or Utowar. [V.]

ORTO'SA (Ορτόσα). 1. An ancient city of VOL. II.

ORTOSPANA. (Ορτόσπανα, Strab. x. p. 514, xv. p. 723; καρπων φυί και Ορτόσπανα, Ptol. viii. 8. § 5; Anm. Marcus. xxiii. 6), an ancient city of Bactriana, which there is good reason for supposing is identical with the modern town of Kābul. The name is written variously in ancient authors Ortospana or Ortospanum; the latter is the form adopted by Pliny (vi. 17. s. 21). Three principal roads

Latium, situated on the confines of the Aeuvian territory. It is twice mentioned during the wars of the Romans with the latter people: first, in n.c. 451, when we are distinctly told that it was a Latin city, which was besieged and taken by the Aeuvians (Liv. ii. 43; Diod. viii. 91); and again in 271, when the Aeuvians, by a sudden attack, took Corbio, and, after putting to the sword the Roman garrison there, made themselves masters of Ortona also; but the consil Horatius engaged and defeated them on Mount Algidus, and after driving them from that position, recovered possession both of Corbio and Ortona. (Liv. iii. 30; Dionys. x. 26.) From these accounts it seems clear that Ortona was situated somewhere in the neighbourhood of Corbio and Mount Algidus; but we have no more precise clue to its position. No mention of it is found in later times, and it probably ceased to exist. The name is much corrupted in both the passages of Dionysius; in the first of which it is written Ορῶξα, but the Vatican MS. has Ορῶξα for Ορῶξα: in the second it is written Βροξώα. It is very probable that the Hortenses, a people mentioned by Pliny (iii. 5. s. 9) among the "populi Albenses," are the inhabitants of Ortona; and it is possible, as suggested by Niebuhr, that the Βροξώα (a name otherwise wholly unknown), who are found in Dionysius's list of the thirty cities of the Latin League, may be also the same people. (Dionys. v. 61; Niebuhr, vol. ii. p. 18. note.) The sites which have been assigned to Orto are wholly conjectural.

2. (Ortona a Mare), a considerable town of the Frontani, situated on the coast of the Adriatic, about midway between the mouth of the Aternus (Pescara) and that of the Sagraus (Sangro). Strabo tells us that it was the principal port of the Frontani (v. p. 242). He erroneously places it S. of the Sagraus; but the passage is evidently corrupt, as it is one in which he speaks of Ortona or Histionum (for the reading is uncertain) as a resort of pirates. (Strab. i. c, and Kramer ad loc.) Ptolemy correctly places it between the Sagraus and the Aternus; though he erroneously assigns it to the Peligni. Pliny mentions it among the municipal towns of the Frontani; and there seems no doubt that it was one of the principal places possessed by that people. (Plin. iii. 12. s. 17; Ptol. iii. 1. § 19.) Some inscriptions have been published in which it bears the title of a colony, but these are of dubious authenticity (see Zumpt, de Colon. p. 338, note): it is not mentioned as such in the Liber Coloniarum. The Itineraries place it on the road from the mouth of the Aternus to Anxamum (Loconeum). The name is still retained by the modern town of Ortona; and antiquities found on the spot leave no doubt that it occupies the same site with the ancient one. (Itin. Ant. p. 313; Tab. Peut. ; Romanelli, vol. iii. p. 67.) [E. H. B.]

ORTOPLA (Ορτοπλα, Ptol. ii. 17. § 3; Ortopula, Plin. iii. 25), a town of the Liburni, identified with Carolpago or Carlobagi, in the district of the Marocca, where several Roman remains have been found. (Neugebauer, Die Süd-Slaven, pp. 225, 228.)

ORTOSPANA (Ορτόσπανα, Strab. xi. p. 514, xv. p. 723; καρπων φυί και Ορτόσπανα, Ptol. viii. 8. § 5; Anm. Marcus. xxiii. 6), an ancient city of Bactriana, which there is good reason for supposing is identical with the modern town of Kābul. The name is written variously in ancient authors Ortospana or Ortospanum; the latter is the form adopted by Pliny (vi. 17. s. 21). Three principal roads

K K
leading through Baetica to this place, whence the notice in Strabo (I. c.) of the ἴς ἐκ Βαστοῦντων τριδών, Gossenius has (as appears to us), on no sufficient ground, identified Ortospa with the present Kaudabur. If the reading of some of the MSS. of Ptolemy be correct, Kaudal may be a corruption of Καδούπα.

It is worthy of note, that in the earlier editions of Ptolemy (vi. 18. § 3) mention is made of a people whom he calls Καδούπας; in the latest of Nobbe (Tuchnitz, 1843) the name is changed to Беант. It is not improbable that Ptolemy here is speaking of Kaudal, as Lessan has observed. {Ind. Alterthums, vol. i. p. 29.} The three roads may be, the pass by Bantum, that by the Hindu-Kish, and that from Andirah to Khosar. [V.]

ORTOSPEVA. [Ortospa]  
ORTYGIA [Delos.]  
ORTYGIA. [Syracuse]  
ORU'DU (Παρθ), Ptol. vii. 1. §§ 25, 36, a chain of mountains in India inside Ganges, which were, according to Ptolemy, the source of the river Tyma (now Penins). It is difficult now to identify them with certainty, but Forbiger conjectures that they may be represented by the present Kloth-Melta. [V.]

ORUX. [Arcadia, Vol. i. p. 193, a.]

OSCA. 1. (Ortica, Ptol. ii. 6. § 68), a town of the Baegates in the N. of Hispania Tarraconensis, on the road from Tarace and Herda to Caesaraugusta (Rim. Ant. pp. 391, 451), and under the jurisdiction of the last-named city. Pliny alone (ii. 3. s. 4) places the O-senses in Vescitania, a district mentioned nowhere else. It was a Roman colony, and had a mint. We learn from Plutarch (Sent. c. 14) that it was a large town, and the place where Sertorius died. It is probably the town called Hisca on (Hiscane) by Strabo, in an apparently corrupt passage (iii. p. 161; r. Ubert, vol. ii. p. 151). It seems to have possessed silver mines (Liv. xxiv. 10, 46, xi. 43), unless the "argentum Oscaense" here mentioned merely refers to the minted silver of the town. Flores, however (Med. ii. 520), has pointed out the impossibility of one place supplying such vast quantities of minted silver as we find recorded in ancient writers under the terms "argentum Oscaense," "signatum Oscaense;" and is of opinion that Oscaense in these phrases means Spanish, by a corruption from the national name, Oscana. (C. Cas. B. C. i. 60; Vell. Pat. ii. 30) It is the modern Huesca in Aragon. (Flores, Med. ii. p. 513; Sestini, p. 176; Mironet, l. p. 46, Suppl. i. p. 92; Murray's Handbook of Spain, p. 448.)

2. A town of the Tartetani in Hispania Baetia, which some have identified with Horsecar, but which Ubert (vol. ii. pt. 1. p. 370) thinks must be sought to the W. of that place. (Ptol. ii. 4. § 12; Plin. ii. 1. s. 3.) The pretended coins of this town are not genuine. (Flores, Med. L. c.; Sestini, p. 78; Mironet, i. p. 43, Suppl. i. p. 40; Sestini, p. 78; Ubert, L. c.) [T. II. D.]

Osc'ELA. [Leponti]  
OSCI or OPICI (in Greek always Οσκίαι; the original form of the name was Oscutes, which was still used by Eunnius, ap. Fust. a. v. p. 198), a nation of Central Italy, who at a very early period of the time have been spread over a considerable part of the peninsula. So far as we can ascertain they were the original occupants, at the earliest time of which we have anything like a definite account, of the central part of Italy, from Campania and the borders of Latium to the Adriatic; while on the S. they joined the Oscanrians, whom there is good reason to regard as a Pelasgic tribe. Throughout this extent they were subsequently conquered and reduced to subjection by tribes called Sabines or Sabellians, who issued from the lofty mountain tracts of the Apennines N. of the territory then occupied by the Oscans. The relation between the Sabellians and the Oscans is very obscure; but it is probable that the former were comparatively few in number, and adopted the language of the conquered people, as we know that the language both of the Campanians and Umbrians in later times was Oscan. (Liv. ii. 20.) Whether it remained unmixted, or had been modified in any degree by the language of the Sabellians, which was probably a cognate dialect, we have no means of determining, as all our existing monuments of the language are of a date long subsequent to the Sabellian conquest.

The ethiological affinities of the Oscans, and their relations to the Sabellian and other races of Central Italy, have been already considered under the article ITALIA; it only remains to add a few words concerning what is known of the Oscan language.

Niebuhr has justly remarked that "the Oscan language is by no means an inexplicable mystery, like the Etruscan. Had a single book in it been preserved, we should be perfectly able to decipher it out of itself." (Nieb. vol. i. p. 68.) Even with the limited means actually at our command we are able in great part to translate the extant inscriptions in this language, few and mostly brief as they are; and though the meaning of many words remains uncertain or unknown, we are able to arrive at distinct conclusions concerning the general character and affinities of the language. The Oscan was closely connected with the Latin; not merely as the Latin was with the Greek and other branches of the great Indo-European family, as offshoots from the same original stock, but as cognate and nearly allied dialects. This affinity may be traced throughout the grammatical forms and inflections of the language not less than in the vocabulary of single words. The Latin was, however, in all probability a composite language, derived from a combination of this Oscan element with one more closely akin to the Greek, or of Pelasgic origin (Latium, p. 137); while the Oscan doubtless represents the language of Central Italy in its more unmixed form. In many cases the older and ruder specimens of the Latin retain Oscan forms, which were laid aside in the more refined stages of the language; such is the termination of the oblique in d, which is found in the Duilian and other old Latin inscriptions, and appears to have been universal in Oscan.

The few notices of Oscan words which have been preserved to us by Latin writers, as Varro, Festus, &c., are of comparatively little importance. Our chief knowledge of the language is derived from extant inscriptions; of which the three most important are: 1. the Tabula Bantina, a bronze tablet found in the
neighbourhood of Bantia, on the borders of Apulia and Lucania, and which refers to the municipal affairs of that town; 2. the Cippus Abellianus, so called from its having been found at Abolla in Campania, and containing a treaty or agreement between the two neighbouring cities of Nola and Abella; and 3. a bronze tablet recently discovered in the neighbourhood of Agnone in northern Samnium, containing a dedication of various sacred offerings. It is remarkable that these three monuments have been found in nearly the most distant quarters of the Roman territory. By the assistance of the numerous minor inscriptions, we may fix pretty clearly the limits within which the language was spoken. They include, besides Campania and Samnium Proper, the land of the Hirpini and Frentani, and the northern part of Apulia. No inscriptions in Osca have been found in Lucania (except immediately on its borders) or Bruttium, though it is probable that in both of these countries the Sabellian conquerors introduced the Osca language, or one closely connected with it; and we are distinctly told by Festus that the Bruttians spoke Greek and Osca. (Fest. p. 55, M.) We learn also with certainty that not only the vernacular, but even the official, use of the Osca language continued in Central Italy long after the Roman conquest. Indeed few, if any, of the extant inscriptions date from an earlier period. The comic poet Titinius alludes to it as a dialect still in common use in his time, about B. C. 170. (Fest. s. v. Osca, p. 189.) The coins struck by the Samnites and their allies during the Social War (n. c. 90—88) have Osca inscriptions; but it is probable that, after the close of that contest and the general admission of the Italians to the Roman franchise, Latin became universal as the official language of Italy. Osca, however, must have continued to be spoken, not only in the more secluded mountain districts, but even in the towns, in Campania at least, until a much later period; as we find at Pompeii inscriptions rudely scratched or painted on the walls, which from their hasty execution and temporary character cannot be supposed to have existed long before the destruction of the city in A. D. 79. (Concerning the remains of the Osca language see the vol. of Unter-Italischen Dialekte, 4to, Leipzig, 1850; Kienze, Philologische Abhandlungen, 8vo, Berlin, 1839; and Donaldson, Varvranumis, pp. 104—138.)

We have no evidence of the Oscans having any literature, properly so called; but it was certainly from them that the Romans derived the dramatic entertainments called Attelane, a kind of rude farces, probably bearing considerable resemblance to the performances of Pulcinella, still so popular at Naples and in its neighbourhood. When these were transplanted to Rome they were naturally rendered into Latin; but though Strabo is probably mistaken in speaking of the Fabulae Attelaneae of his day as still performed at Rome in Osca, it is very natural to suppose that they were still so exhibited in Campania as long as the Osca language continued in common use in that country. (Strab. v. p. 233; concerning the Fabulae Attelaneae see Mommsen, L. c. p. 118; Bernhardy, Römische Literatur, p. 378, &c.; Munk, de Fabulae Attelaneis, Lips. 1840.)

OSCINEUM, a name which appears in the Jerusalem Itin. on the road from Vasatia (Bazas) to Elusa (Eumae). [Cossoio; Elucleates.] The order of names is Vasatiae, Tres Arborae, Oscineum, Sátium or Sotium, and Elusa. Oscineum is marked at the distance viii. from the two places between which it lies. D'Anville finds on this road a place named Esquies, which in name and position agrees pretty well with the Oscineum of the Itin. [G. L.]

OSERIATES (Oseriatae), a tribe of Pannonia Superior, dwelling on the banks of the river Dravaus; but nothing is known about them but their name. (Proc. ii. 15, § 2; Plin. iii. 20.)

OSI, a German tribe mentioned only by Tacitus (Ger. 28, 43), as dwelling beyond the Quadi, in a woody and mountainous country. But their national customs, as well as their language, were those of the Pannonians. They were, moreover, tributary to the Quadi and Sarmatians. The exact districts they inhabited cannot be determined, nor do we know whether they had migrated into Germany from Pannonia, or whether they were an ancient remnant of Pannonians in those districts. [L. S.]

OSIANA, a town in the west of Cappadocia, between the river Halys and Lake Tatta, which the modern town from Ankyra to Caesarea (Ut. i. 4, 20.) It is said to have been founded by the Persians. Its site must probably be looked for in the district of Jurkup or Ergib. [L. S.]

OSISMI or OSISMMI (Oseinomii), a Celtic people who joined the Veneti in the war against Caesar, B. C. 56. (B. G. iii. 9.) There is nothing in Caesar which shows their position further than this, that they were in the peninsula of Bretagne. Ptolemy (ii. 8. § 5) makes them extend as far south as the Gobaenum headland, and he names Varganum as their chief town. (Gobaenum.) If we accept the authority of Mela, who says (iii. 6) that the island Scini (Scin) is opposite to the shore of the Osismii, this will help us to determine the southern limit of the Osismii, and will confirm the conjecture of Gobaenum being the headland called Razz Pointe, which is opposite to the small island Scin, or as it is improperly called Ile des Saints, or being somewhere near that headland. In another passage (iii. 2) Mela makes the great head of the west coast of Gallia commence where the limits of the Osismii end: "ab illis enim iterum ad septentriones from Ritterum respectu, pertinetque ad ultimae Galliacaen gentium Marcomaricae." Pliny (iv. 18) describes this great peninsula of Bretagne thus: "Gallia Lugdunensis contains a considerable peninsula, which runs out into the ocean with a circuit of 625 miles, beginning from the border of the Osismii, the neck being 125 miles in width; south of it are the Nannetes. It is plain then that Pliny placed the Osismii along the north coast of Bretagne, and there is Mela's authority for placing them on the west coast of the peninsula. The neck of the peninsula which Pliny describes, may be determined by a line drawn from the bay of St. Brieuc on the north to Lorient on the south, or rather to some bays east of it, or Morbihan. It seems a fair conclusion, that the Osismii occupied a large part of the peninsula of Bretagne; or as Strabo (iv. p. 195) says: "Next to the Veneti are the Osismii, whom Pytheas calls Timi, who dwell in a peninsula which runs out considerably into the ocean, but not so far as Pytheas says and those who believe him." He does not tell us how far Pytheas said that the peninsula ran out into the sea, but if we had Pytheas words, we might find that he knew something about it. The conclusion of D'Anville is justified by the ancient authorities. He says: "It seems that it has been agreed up to the present time to limit the territory

K K 2
of the Ossami to the northern coast of Ætus Bre-
\[\text{engae},\] though there are the strongest reasons for thinking that they occupied the extremity of the same continent in all its breadth and that the diocese of Quispam was a part of the territory as well as the diocese of Lúan. D'Anville observes that there is 
\[\text{no part of ancient Gaul the geography of which is more obscure.}\]

O'SMIDA (Oesiba, Scyl. p. 18), a district of Crete, which Mr. Pasley's map places at the sources of the Megalo-potamo. (Hick, Kreta, vol. i. p. 396.)

OSPHAGUS, a branch of the river Erigon, in Lyncestis, upon which the consul Sulpicius pitched his camp in the campaign of B.C. 200 (Liv. XXXII. 39); perhaps the same as the Scheminites, an affluent of the Erigon, which falls into it to the N. of Montain. [E. B. J.]

OSQUIDATES, one of the peoples of Aquitania mentioned by Pliny (iv. 19). He mentions Osquidates Montani and Osquidates Campestres, but he enumerates many names between the two, from which we may conclude that the Campestres did not border on the Montani, for if they had, it is probable that he would have enumerated the Campestres immediately after the Montani instead of placing between them the names of eleven peoples. Beside this, we must look for the Montani on the north side of the Pyrenees and in the valleys of the Pyrenees, and the Campestres in the low country of Aquitania. There are no means for determining the position of either the Montani or the Campestres, except from the resemblance between the ancient and the modern names in this part of Gallia, which resemblance is often very great. Thus D'Anville supposes that the Osquidates Montani may have occupied the valley of Ossan, which extends from the foot of the Pyrenees to Obezon, on a branch of the Adour. This is probable enough, but his attempt to find a position for the Campestres is unsuccessful. [G. L.]

OSRIOEFE, a small district in the NW. corner of Mesopotamia (taken in its most extended sense), which there is some reason for supposing would be more correctly written Osrhoene. It does not appear in any writer earlier than the times of the Antio-
\[\text{chines, and is not therefore mentioned by either Strabo or Ptolemy.} \]
prisco states that it derived its name from a certain Osroes, who ruled there in former times (P. R. i. 17); and Dion Cassius declares that the name of the man who be-
graced by the Roman army under Crassus was Albarus the Osrhoenian (sl. 19; see for the same name, lxviii. 18, and lxviii. 12.) Again, Herodion calls the people who dwelt in these parts Osropathyi (iii. 9, iv. 7, 3). Ammianus writes the name Osrhoene (xiv. 3, 8, xxiv. 1.). The name prevailed in the country as late as the seventh century. (Hieron. p. 713.) In the Notitia Imperat. Osrheus was placed under a "Fracta Provinciae," and appears to have been sometimes included in Mesopotamia, sometimes kept separate from it. (See Justinius, Not. cit., § 11; Joan. Malalas, xi. p. 274, ed. Boni; Noéis. de Ephes. ii. p. 110.) It is most likely that the correct form of the name is Osrhoene; and that this is connected with the Maxarooiia of Isidorus. (Sitham. Peth. 1. 1.) and see Dion, lxviii. 2., for the name of Manius, a chief of the Mesopotamian Ar-Mana, who carried himself up to the Tanis. Not impossible, the Osrhoës of Pliny may refer to the same district. (xi. 30, 119.) [Edessa.] [V.]

OSSA (*Ossia, Ptol. iii. 13. § 15*), a town of the

OSSA (Ossia) is a lofty mountain in Thessaly on the coast of Magnesia, separated from Olympus only by the narrow vale of Tempe. Hence it was sup-
\[\text{posed by the ancients that these mountains were once united, and had been separated by an earthquake.} \]
(Herod. vii. 129; Strab. ix. pp. 430, 442; Lucan, vi. 347; Claudian, Resp. Proserp. ii. 183.) Ossa is conical in form and has only one summit. Polybius mentions it as one of the highest moun-
tains in Greece (xxx. 10); but it is considerably lower than Olympus, and according to Ovid even lower than Pelion. (Ov. Fast. iii. 411.) According to Doric are, who speaks, however, only from conjecture, Ossa is about 5000 feet high. To the south of Ossa rises Mt. Pelion, and the last fall of the two mountains are united by a low ridge. (Herod. vii. 129.) Olympus, Osa, and Pelion differ greatly in character; and the conical peak, standing between the other two, is well contrasted with the broad majority of Olympus, and the ex-
tended outline of Pelion. The length of Ossa along the coast is said by Strabo to be 80 stadia (ix. p. 443). It is hardly necessary to allude to the passages in the ports, in which Ossa is mentioned, along with Olympus and Pelion, in the war of the giants and the gods. (Herm. Od. xi. 312; Virg. Georg. i. 292, &c.) The modern name of Ossa is Kissava. (Holland, Travels, &c. vol. ii. pp. 3, 95; Dodwell, Classical Tour, vol. ii. p. 106; Leake, Northern Greece, vol. i. p. 431, vol. iv. pp. 411, 513; Mémoires, Memoire sur le Pelion et l'Ossia, Paris, 1853.)

2. A mountain in Elis near Olympia. [Vol. i. p. 817.] (h.)

OSSADIAE (Oseradha), a people who dwelt in the Pausias along the banks of the Acesines (Ches-
\[\text{ub}i), and who surrendered themselves to Alexander the Great after the conquest of the Mali (Malia). (Arrian, vi. 15.)

OSSARENE, OSSRAINE (Oseraphy, Ptol. v. 13. § 9; Te-
\[\text{raghy, Interp.},\) a canton of Armenia situated on the banks of the river Cyrus. St. Martin (Hist. sur l'Arménie, vol. i. p. 81) is of opinion that it may be the same as the Go-garen of Strabo. [E. B. J.] (h.)

OSSET, also called Julia Constantia (Pline, iii. 3), a town of Bactria, on the right bank of the river Bactria, and opposite to Hispasia. It is probably the modern S. Juan de Asturica, near Castello de la Cuesta, where there are some Roman remains.
OSTIGERDA.

COIN OF OSSET.

OSTIGERDA or OSICERDA (Osticios, Ptol. ii. 6. § 68), a town of the Edetani in Hispania Tarra-CONensis. It was a municipium in the jurisdiction of Caesarugusta. (Plin. iii. 3. s. 4, who calls the inhabitants Osigerdeceus.) It had a mint. (Flor. Med. ii. p. 532, iii. p. 109; Monnet, i. p. 47, Suppl. i. p. 93; Sestini, i. p. 177.) Ukert (vol. ii. pt. 1. p. 417) identifies it with Ossera, near Serronea. [T. H. D.]

OSTIGI LA'CONICUM, a town on the borders of Hispania Baetica, at the place where the Baetic enters that country (Plin. iii. 3); now Marqunis, where there are Roman ruins and inscriptions. (Flo-Res, Exp. S. xii. 367, v. 24.) [T. H. D.]

OSO'NOBA (Ossonoësa, Ptol. ii. 5. § 3), a town of the Tardetani in Lusitania, between the rivers Tagus and Anas, on the road from Esnris to Elora and Pax Julia. (Itin. Ant. pp. 418. 426.) [LUSITANIA, p. 220, a.] It is the same town mentioned by Strabo in a corrupt passage (Gii. p. 149), by Melis (iii. 1. § 6) Pliny (iv. 21. s. 33), and others. Commonly identified with Esteo, lying a little N. of Faro, near the mouth of the Silves, where Roman ruins and inscriptions are still found. One of the latter has recept. osson. (Ukert, vol. ii. pt. 1. p. 387.) [T. H. D.]

OSTOEDES (OstOdienza), a small island in the Tyrrhenian sea, lying off the N. coast of Sicily, and W. of the Aeolian Islands. Dioscorus tells us that it derived its name (the Bone Island) from the circumstance of the Carthaginians having on one occasion got rid of a body of 6000 disaffected mercenaries by binding them on this island, which was barren and uninhabited, and leaving them there to perish. (Dial. v. 11.) He describes it as situated in the open sea, to the west of the Liparisan or Aeolian islands: a description which applies only to the island now called Ustica. The difficulty is, that both Pliny and Ptolemy distinguish Ustica (OStiaca) from Osteades, as if they were two separate islands (Plin. iii. 8. s. 14; Ptol. iii. 4. § 17). The former writer says, "a Solune 1xxiv. M. Osteades, contraque Paroquine Ustica." But as there is in fact but one island in the open sea W. of the Lipari Islands (all of which are clearly identified), it seems certain that this must have been the Osteades of the Greeks, which was afterwards known to the Romans as Ustica, and that the existence of the two names led the geographers to suppose they were two distinct islands. Mela does not mention Ustica, but notices Osteades, which he reckons one of the Aeolian group; and its name is found also (corruptly written Ostodis) in the Tabula, but in a manner that affords no real clue to its position. (Mel. ii. 7. § 18; Tab. Poet.)

Ustica is an island of volcanic origin, about 10 miles in circumference, and is situated about 40 miles N. of the Capo di Gallo near Palermo, and 60 miles W. of Alicudi, the westernmost of the Lipari Islands. It is at this day well inhabited, and existing remains show that it must have been so in the time of the Romans also. (Smyth's Sicily, p. 273.)

OSTIA (Ostia, Euth. Ostiensis: Ostia), a city of Latium, situated at the mouth of the Tiber, from which position it derived its name. It was on the left bank of the river, at a distance of 16 miles from Rome, by the road which derived from it the name of Via Ostiensis. (Itin. Ant. p. 301.) All ancient writers agree in representing it as founded by the Roman king Ancus Marcus; and it seems certain that it always retained the position of a colony of Rome, and was at no period independent. From its position, indeed, it naturally became the port of Rome, and was essential to that city, not only for the purpose of maintaining that naval supremacy which it had established before the close of the regal period, but for securing its supplies of corn and other imported produce which was carried up the Tiber. Ancus Marcus at the same time established salt-works on the site, for which a long time continued to supply both Rome itself and the neighbouring country in the interior with that necessary article. (Liv. i. 33; Dionys. iii. 44; Cic. de Rep. ii. 3, 18; Strab. v. p. 232; Flor. i. 4; Eutrop. i. 51; Fest. p. 197.) There can be no doubt that the importance of Ostia must have continued to increase with the growing prosperity and power of Rome; but it is remarkable that we meet with no mention of its name in history until the period of the Second Punic War. At that time it appears as a commercial and naval station of the utmost im-PORTANCE; and was not only the port to which the corn from Sicily and Sardinia was brought for the supply of Rome itself, as well as of the Roman legions in the field, but was the permanent station of a Roman fleet, for the protection both of the capital, and the neighbouring shores of Italy. (Liv. xxii. 11, 37, 57, xxiii. 38, xxv. 20, xxvii. 22.)

It was at this time still reckoned one of the "coloni marineus;" but on account of its peculiar im-portance in relation to Rome it enjoyed special privi-leges; so that in n. c. 267, when the other maritime colonies endeavoured to establish a claim to ex-emption from levies for military service, this was allowed only in the case of Ostia and Antium; the citizens of which were at the same time compelled to be constantly present as a garrison within their own walls. (Liv. xxvii. 38.) On a subsequent occasion (n. c. 191) they attempted to extend this ex-emption to the naval service also; but their claim was at once disallowed by the senate. (Itid. xxvi. 3.) Even after the complete establishment of the naval power of the Roman Republic, Ostia seems to have continued to be the usual station of a Roman fleet: and in n. c. 67 it was there that a squadron, which had been assembled for the repression of the Cilician pirates, was attacked by the pirates them-selves, and the ships either destroyed or taken. (Cicpro Leg. Manil. 12; Dion Cass. xxxvi. 5.)

Ostia itself also suffered severely during the civil wars of Sulla and Marius, having been taken by the latter in b. c. 87, and given up to plunder and devastation by his soldiers. (Appian, B. C. i. 67; Liv. Epit. lxxvi.; Oros. v. 19, Flor. iii. 21. § 12.)

But its position at the mouth of the Tiber, as the port of Rome, secured it from decay: and so im-
important was the trade of Ostia become, especially on account of the supplies of corn which it furnished to the capital, that it was made the place of residence of one of the four quæstors of Italy, and gave name to one of the “provinciarum quaestoriam” into which that country was divided. (Cic. pro Murœn. 8; pro Sest. 17; Suet. Claud. 24.) But the increasing commerce of Ostia rendered its natural disadvantages as a port the more sensible; and there can be little doubt that those disadvantages were themselves continually increasing. It had been originally founded, as we are expressly told, close to the mouth of the Tiber, from which it is now distant above three miles; and the process of alluvial deposit, which has wrought this change, has undoubtedly gone on throughout the intervening period. Hence Strabo describes in strong terms the disadvantages of Ostia in his day, and calls it “a city without a port, on account of the alluvial deposits continually brought down by the Tiber, which compelled the larger class of vessels to ride at anchor in the open roadstead at great risk, while their cargoes were unloaded into boats or barges, by which they were carried up the river to Rome. Other vessels were themselves towed up the Tiber, after they had been lightened by discharging a part of their cargoes.” (Strab. v. pp. 231, 232.) Dionysius gives a more favourable view, but which does not substantially differ from the preceding account. (Dionys. n. 44.) These evils had already attracted the attention of the dictator Caesar, and among the projects ascribed to him, was one for forming an artificial port or basin at Ostia (Plut. Caes. 58); but this was neglected by his successors, until the increasing difficulty of supplying Rome with corn compelled Claudius to undertake the work.

That emperor, instead of attempting to clean and restore the original port of Ostia at the mouth of the Tiber, determined on the construction of an entirely new basin, which was excavated in the seaside about two miles to the N. of Ostia, and which was made to communicate with the river by an artificial cut or canal. This port was protected and enlarged by two moleS projecting out into the sea, so as to enclose an extensive space, while in the interval between them a breakwater or artificial island was thrown up, crowned by a lighthouse. (Dom Cass. ii. 11; Suet. Claud. 20; Plin. ix. 6; xvi. 40. s. 76; Juv. xii. 75–81.) This great work was called the Portus Augusti, on which account its construction, or at least commencement, is by some writers referred to the emperor Augustus; but there is no authority for this; and Dom Caesius distinctly assigns the commencement as well as completion of it to Claudius. Nero, however, appears to have put the finishing hand to the work, and in consequence struck coins on which he claims it for his own. (Eckhel, vol. vi. p. 276.) After this it was considerably augmented by Trajan, who added an inner basin or dock, of a polygonal form, surrounded with quays and extensive ranges of buildings for magazines and storeshouses. This port was called by him Portus Traiani; and hence we afterwards meet in inscriptions with the “Portus Augusti et Traiani,” and sometimes “Portus uterque” in the same sense. (Juv. l. c., et Schol. ad loc.; Gruter Inscri. p. 308. 10, p. 440. 3.) At the same time he enlarged or repaired the artificial channel of communication with
OSTIA.

the Tiber, which now assumed the name of Fossa Traiana, and is undoubtedly the same which still exists under the name of Fiumicino, and forms the right arm of the Tiber, from which it separates about a mile and a half above the site of Ostia.

The new port thus constructed soon gave rise to the growth of a new town around it, which was generally known by the name of Portus Ostiensis, sometimes also Portus Urbis or Portus Romanæ, but more frequently, at least in later times, simply Portus. It seems to have been designed more particularly for the importation of corn for the supply of the capital, an object of which the importance became felt more and more, as the population of Rome continued to increase, while it became more absolutely dependent upon foreign produce. The adjoining district on the right bank of the Tiber was portioned out among a body of colonists before the time of Trajan (Lib. Colon. p. 222); and a new line of road was constructed along the right bank of the Tiber from Rome to the new port, which obtained the name of Via Portumensis. In the reign of Constantine the city of Portus was erected into an episcopal see (Ann. Mass. vi. 16; Tert. ad Graec. 235); and the same emperor surrounded it with strong walls and towers, which are still in considerable part extant. Meanwhile Ostia itself was far from sinking into decay.Repeated notices of it during the earlier periods of the Roman Empire show it to have been still a flourishing and populous city, and successive emperors concerned in improving it and adorning it with public buildings. It was particularly indebted to the care of Hadrian (Gruter, Inscr. p. 249. 7) and Septimius Severus, numerous inscriptions in honour of whom have been discovered among its ruins. (Nibby, Dinaurum, vol. ii. pp. 434, 468.) Aurelian, also, we are told, adorned it with a Forum, which bore his name, and which was decorated by his successor Tacitus with 100 columns of Numidian marble. (Vopisc. Aurel. 45; Tac. 16.) The existing remains confirm the inference which we should draw from these accounts, and show that Ostia must have continued to be a flourishing town till towards the close of the Roman Empire, and far superior in the number and splendour of its public buildings to the neighbouring town of Portus. But the security of the latter place, which was well fortified, while Ostia was wholly unprotected by walls (Procop. B. G. i. 26), must have contributed greatly to the advantage of Portus; and the artificial port seems to have obtained an increasing preference over the natural mouth of the Tiber. Rutillus says that in his time (about A.D. 414) the left arm, or main channel of the river, was so obstructed with sand as to be wholly desert (Rutin. i. 181); but this would appear to be an exaggerated statement, as Procopius more than a century later describes them as both navigable (I. c.). Ostia was, however, in his day already in a state of great decay, and the road which led from thence to Rome (the Via Ostiensis) was neglected and abandoned, while the Via Portumensis on the other side of the Tiber was still the scene of considerable traffic. The importance of Portus became more developed when Rome itself became exposed to the attacks of hostile barbarians. In A.D. 409 Ataric, king of the Goths, made himself master of the port, and with it of the stores of corn for the supply of the capital, which compelled the senate to capitulate on the terms that he chose to dictate (Zosim. vi. 8); and again during the wars of Belisarius and Vitiges (in 537) the Gothic king,

by making himself master of Portus, was able to reduce his adversary to severe distress (Procop. B. G. i. 26, &c.). The decline of Ostia continued throughout the earlier part of the middle ages: in 827 it is described as altogether in ruins, and the continued incursions of the Saracens throughout that century seem to have completed its desolation.

But meanwhile the artificial ports of Claudius and Trajan were beginning in their turn to suffer from the deposit of sand which is constantly going on along these shores; and no attempt being made in these ages of confusion and disorder to arrest the progress of the evil, they were both gradually filled up so as to be rendered altogether useless. In the 10th century, the port of Trajan was already reduced to a mere lake or pool, altogether cut off from the sea, and only communicating by a ditch with the Tiber. (Ughelli, Italia Sacra, vol. i. p. 134.) The consequence was that for a time the trade was again forced to have recourse to the left arm of the river; and the modern Ostia, where a castle or fort had been founded by Pope Gregory IV. a little above the ruins of the ancient city, became again for a period of some centuries the landing-place of travellers and the port of Rome. It was not till 1612 that Pope Paul V. once more caused the canal of Trajan to be restored and cleared out, and continued to the present line of sea-coast, where a small port called Fiumicino was constructed; and from this time the whole traffic carried on by the Tiber with Rome (which is however but incomparable) has been confined to this arm of the river. The main channel, on the other hand, having been completely neglected, has become so obstructed with sand near the mouth as to be wholly impracticable.

The modern village of Ostia is a very poor place, with the ruins of an old castle, but retains little more than 50 permanent inhabitants, who are principally employed in the neighbouring salt-works. Its climate in summer is extremely unhealthy. The ruins of the ancient city begin about half a mile below it, and extend along the left bank of the Tiber for a space of near a mile and a half in length, and a mile in breadth. Though extensive, they are for the most part in a very dilapidated and imperfect state, so as to have little or no interest as architectural monuments; but among them may be distinctly traced the remains of the town, the names of the public buildings that surrounded it; and near the Torre Bovaciana, close to the Tiber, are the ruins of buildings that appear to indicate this as the site of the actual port or emporium of Ostia in the imperial period. The great number and beauty of the statues and other works of art, which have been brought to light by the excavations carried on at successive periods on the site of Ostia, are calculated to give a high notion of the opulence and prosperity of the ancient city. The ruins of Portus, which are also very considerable, are of an entirely different character from those of Ostia. They are found on the right bank of the Tiber, about 2 miles from the present line of sea-coast at Fiumicino, and are still known as Porto; while the inner basin of Trajan, the hexagonal form of which may be distinctly traced, though it is in great part filled with sand, is still popularly known by the name of Il Tragano. The quays of solid masonry that surrounded it are still well preserved; while extensive, though shapeless, masses of ruins adjoining it appear to have been those of the magazines and storehouses attached to the port. The
remains of the port of Claudius are less distinct; the line of the mole which bounded it may, however, be traced, though they are altogether buried in sand; the storehouse of the author of Pliny is still visible in the 15th century, when the ruins were visited and described by Pope's Pope II., but has now entirely disappeared. A considerable part of the ancient walls with which the city was fortified by Constantine is still visible; they were strengthened with towers, and closely resemble in their style of construction the older portions of those of Rome.

Between the site of Ostia and that of Portus is the Fland, formed by the two branches of the Tiber, which is about 3 miles in length by 2 in breadth. It is commonly known as the Insula Seca, an appellation first given to it by Procopius, who describes it in detail (B. G. i. 26). The origin of the epitaph is unknown, but it appears to have been in Christian times recorded as consecrated, having been, according to Anastasius, bestowed by Constantine upon the church. It is described in exaggerated terms by a writer of the 5th century (Aethicus, Cosmogr. p. 716, ed. Graser) for its beauty and fertility, while he says it was termed "Libanus Abumae Veneris;" but in spring it is still covered with fine pastures abounding with beautiful flowers. The formation of this island obviously dates only from the construction of the right arm of the Tiber, now known as il Filamacino, which, as already shown, is probably wholly artificial. No writer before the time of the Roman Empire alludes to more than one mouth of the river.

The topography of Ostia and Portus, and the vicissitudes and changes which the two parts at the mouth of the Tiber have undergone, are fully discussed, and the existing ruins described in detail, by Nibby (Dintorni di Roma, vol. ii. p. 426—474. 602—660); as well as by Preller, in the Bericht der historischen Gesellschaft für die year 1849 (pp. 3—38). The preceding map is copied from one given by the latter writer. [E. H. B.]

OSTIAE, OSTIDAMNII, Stephanus (s. v. Οστιάως) has preserved a notice of a Gallic people whom he describes as "a nation on the western Ocean, whom Arteniobus names Cosini, and Pythors names Ostiaci." Strabo (p. 63) observes of Pythors that what he says of the Ostiaci and the parts beyond the Rhine as far as Scythia, is all false. Whether false or true, we learn from Strabo that Pythors speaks of the Ostiaci of Gallia; and we can safely infer that Pythors placed them on the west coast of Gallia opposite to Britain. A passage of Strabo has been cited under Osismi, in which it is stated of the Osmi that Pythors named them Tinuin. Ubert (Gallia r. 336) purports to change τινιν into τινινος in this passage of Strabo into ὀσιμίας. The proposal is reasonable. The text of Strabo is probably corrupt here. These Ostiaci of Pythors can be no other than the Osiomis.

Eratosthenes mentioned a people of Gallia named Osismiani on the west coast of Gallia. He also spoke (Strab. p. 64) of the promontory of the Osiomiani as called Calbium. It is clear that he is speaking of the peninsula of Bruttium. The Osmi, Ostimani, Osismi are evidently the same people. [E. L.]

OSTIPO, a free city of Hispania Baetica, in the jurisdiction of Astigi (Plin. iii. i. s. 3) and on the road from Hispalis to Corduba. (Itin. Ant. p. 411.) It has not been satisfactorily identified, but, according to Ubert (vol. ii. pt. i. p. 360), it must probably be sought in the neighbourhood of Elvira. [T. H. B.]

OSTRI, a town of Umbria, in the district once occupied by the Semones mentioned both by Pliny and Ptolemy (Plin. iii. 14. s. 19; Ptole. iii. i. § 51), but of very uncertain site. [UMBRIA.]

OSTRACINA (Ostropia), Ptol. iv. 5. § 12; Ptol. v. 12. s. 14; Ostrakina It. Anton. p. 159, was a military station in Lower Aegypt, east of the Delta proper, and situated on the road from Rhinocorus to Pelusium. From the route of Vespasian, on his return from Alexandria to Palestine in a. d. 69, as described by Josephus (B. Jud. iv. 11. § 5), Ostracina appears to have been one of his march from the temple of Jupiter Casius in the Arabian hills, and about the same distance from the lake Serbonis. It was destitute of wells, and supplied with water brought by a canal from the Delta. (Comp. Marian. Capella, c. 6. [W. B. D.])

OSTRACINA, a mountain on the road from Mantinea to Methydrum. [Mantinea, p. 262, b.]

OSTUIDZUS (also written Ostdizus and Ostdizius, Itin. Ant. pp. 137, 230, 322; and in Hilari. viii. p. 1546, Usadiuzm), a town in Thrace, on the road from Hadriannopolis to Constantinople. [T. H. B.]

OSTUR, a town of Spain, not mentioned in any ancient writer, but which appears upon coins. There is still a place called Ostur near Alcira in Valencia, which has some Roman ruins, and which abounds with scorns,—the figure of which also appears upon the coins. (Floeae, Med. ii. p. 553, iii. i. p. 113; Sestini, p. 179; Monnet, i. p. 47, Suppl. i. p. 93, ep. Ubert, vol. ii. pt. i. p. 416.) [T. H. B.]

OTADINI (Strabon, Ptol. iii. 3, § 10), a British tribe on the E. coast of Britannia Barbara, in the province of Valenica, lying S. of the Boletia estuary, or Firth of Forth, down to the river Tynne; and therefore inhabiting the counties of Haddington, Berwick, Roxburgh, and the greater part of Northumberland. Their chief cities were Curia and Bremesium. [T. H. B.]

OTENCE (Οτένας, Ptol. v. 13. § 9, where the reading Μοτήρ is incorrect), a canton of Armenia, separated from Atropatene by the river Araxes, (Plin. vi. 16) St. Martin (Mém. sur l'Arménie. vol. i. p. 86) identifies it with the province known to the native geographers by the name of Otot, or what is now called Kara bigh, to the X. of the Araxes. [E. B. J.]

OTTOSIA, a town of Cispadane Gaul, known only from the mention of the Otestin by Pliny (iii. 15. s. 20) among the municipal towns of the Eighth Region. But an inscription given by Clauerius makes mention of the "Respublica Osismarorum," and it is probable that Aetoria and Obrania, which are found in Phlegon among the towns of the same part of Italy, are only corruptions of the same name. (Plinque, Macrob. 1; Clauer. Ital. p. 282.) Its site is wholly uncertain. [E. L. B.]

OTYRYS (Οτύρης), a lofty chain of mountains, which shuts in the plain of Thessaly from the south. It branches off from Mount Tymphrestus, a summit near the pass of the river Arachus, and runs in a north-easterly direction, passing through the town of Spercheus. (Strab. ix. pp. 432, 433; comp. Herod. vii. 129; Plin. iv. 8. s. 15.) On its northern side, many offshoots extend into the plain, of Pharsalus. It is lofty and covered with wood, whence the poets give it the epithet of "nivalis".
OTIS.

(Virg. Aen. vii. 675) and "nemerosus" (Linn. vi. 337). It is now usually called Garš, from a large village of this name upon its sides; but its highest summit, which lies to the east of this village, is named Jerzoev, and is 5669 feet above the level of the sea. In this region, the plain of Bukhara, famed for its gigantic melons. Ptolemy (vi. 12. § 3), if a correction be made in his latitudes, which are uniformly put too far forward to the N., gives the OXIANA PALUS (Οξιανα λαύα) its true position between Zarazasp and the Oxian Tribester. And "the whole range is a limestone of various and highly-inclined strata occasionally mixed with iron ore, anhydrite and asbestos. (Leake, Northern Greece, vol. ii. p. 17, vol. iv. p. 330, seq. Journal of Geogr. Society, vol. vii. p. 92.)

OTIS, a town on the Euphrates below Babylon, just above the commencement of the Babylonian Marshes. (Plin. v. 26.)

OTTOROCOERAS (Οττοροκοέρας, Ptol. vi. 16. §§ 2, 3), the E. termination of the Eumoe Mones. This is an example of a Sanscrit word which has been preserved in Ptolemy's geography, as it is merely the Greek form of the Utarakura of the "Mahishhrata," or the highland of the happy Indian Hyperboreans, who lived there sheltered from the cold blasts, about whom, under the name of Attacorri, as Pliny (vi. 20) relates, a certain Anomoeus wrote a book. Ammianus (xxxi. 6. § 65), copying Ptolemy, has OTOPOKERA, and Orochos (i. 2) Otourogeras. The sacred race of men living in the desert of whom Ctesias (Ind. 8, ed. Beurh) speaks, belong to this imaginative geography, which saw in the snow-capped summits of the Himadra the chosen habitation of the gods and of the Blessed. According to Ptolemy (vi. 16. § 5, viii. 24. § 7) there was a people of the Otorocoraces, with a town of the same name, to the E. of the Casii Montes, or mountains of Kosekgors; as the city is one of Ptolemy's points of recorded astronomical observations, having almost 14 hrs. 45 min. in its longest day, and being 7 hrs. E. of Alexandria, there must have been some real locality bearing this name, which must be assigned to É. Thibet. (Lassen, Ind. Atl. vol. i. pp. 511, 847.) [E. B. J.]

OVI-LABA (Ωλέα on the river Traun), a town of Noricum, on the road from Laureacum to Augasta Vindelicum. (Itin. Ant. pp. 235, 258, 277; Tab. Peut., where it is called Ovāla.) It is said, according to an inscription, to have been a Roman colony under the name of Aurelia Antoninia. (Muehr, Noricens, i. pp. 217, 238, 266, &c., 285, &c.) [L.S.]

OXIALAE. [ECHINAEDES]

OXIA PALUS, a lake which was formed by two very large rivers, the Araxes (Jaxartes) and Dyamus (probably the Demus of Ptolemy, vi. 12. § 3), at the foot of the Sagdi Mones. (Amm. Marc. xxiii. 6. § 59.) This has been supposed to intimate, though very vaguely, the formation of the Sea of Aral; but there seems to be more reason for identifying it with the lake of Karkaol to the SSE. of Bukhara, formed by the Zur-tashan or "gold-scattering" river of Samarcand, called also the Kohik, or more correctly the river of the Koh-ak or "hilllock." This river is the Polytimetus, which, according to Aristobulus (prep. Strab. xi. p. 518), traversed Sigdiana, and was lost in the sands: while Q. Curtius (vii. 37) describes it as entering a canyon and continuing its course under ground, through which it rarely discharges itself into this lake, which the Usbek call Dungli, the Turkish word for "sea." The Greeks translated the indigenous name Sagdia—the valley of which is one of the four Paradises of the Persian poets—into that of Polytimetus, "the very precious," an epithet which it well deserves from the benefits it showers upon this region, the plain of Bukhara, famed for its gigantic melons. Ptolemy (vi. 12. § 3), if a correction be made in his latitudes, which are uniformly put too far forward to the N., gives the Oxiana Palus (Οξιανα λαυα) its true position between Zarassap and the Oxian Tribester. And "the whole range is a limestone of various and highly-inclined strata occasionally mixed with iron ore, anhydrite and asbestos. (Leake, Northern Greece, vol. ii. p. 17, vol. iv. p. 330, seq. Journal of Geogr. Society, vol. vii. p. 92.)

OTIS, a town on the Euphrates below Babylon, just above the commencement of the Babylonian Marshes. (Plin. v. 26.)
in a direction from SW. to NE., from the Aral to the "embranchment" of the Obi. The characteristic feature of this depression is an immense number of chains of small lakes, communicating with each other, arranged in a circular form, or like a necklace. These lakes are probably the traces of Strabo's channel. The first distinct statement of the Sea of Aral, described as a vast and broad lake, situated to the E. of the river Aral or Jalik, occurs in Menander of Constantinople, who called the "Protector," who lived in the time of the emperor Maurice. (Menand. Hist. Legit. Barbararum et Romanos, pp. 300, 301, 419, 635, 636, ed. Bonn, 1592.) But it is only with the series of Arab geographers, at the head of whom must be placed El-Istachry, that any positive information upon the topography of these regions commences. (Humboldt, Asie Centrale, vol. ii. pp. 121—364.)

OXII MONTES. (vata. όξια μπόν. Vulg. v. 12. §§ 1, 4), a chain of mountains between the rivers Oxus and Jaxartes, in a direction from SW. to NE., and which separates Scythia from Sogdia. They are identified with the metalliferous group of As- tirah and Aktogly ("Mount Blance") of Edrisi (ed. Jamberti, vol. ii. pp. 198—200). The Oxī Repes of Strabo (Σένων νησίων p. 517), which he also calls the hill-fort of Arinazes (Q. Curt. vii. 11), has been identified by Droysen, as quoted by Thirwall (Hist. of Greece, vol. vi. p. 300), with the pass of Kohjiga or Derbend, in the Kuro-tagh, between Koh and Hassar; but as it is called the rock of the Oxus, it must be looked for on that river, and is probably Khorjiga-Tipja on the Amud. (Wilson, Arzina, p. 167; Ritter, Erdkunde, vol. vii. p. 734; Humboldt, Asie Centrale, vol. ii. pp. 18—20.) [E. B. J.]

OXINES (οξίνες), a small river on the coast of Bithynia, according to Arrian (Peripl. p. 14) between Beroedia and Phyllium, and according to Marcus (p. 79) 90 stadia to the north-east of Cape Posidinum. (Comp. Anonymous. Peripl. p. 4, where, as in Arrian, its name is Oxinas.) It is probably the modern Tekzerik.

OξΙΝΙΓΙΣ. [Arrinix.]

OXITHRAEAE (οξιθραίαι, Appian, B. Iliad. c. 58). a town of the Lusitan, and according to Appian the largest they had; but it is not mentioned by any other author. [T. H. D.]

OXUS. (ουκύς), 2° 27' W. of Polb, x. 48; Strabo (p. 208, x. 18); Trogus, p. 507, 509, 510, 513, 514, 516—518; Ptol. vi. 9. §§ 1, 2, 10. §§ 1, 2, 11. §§ 1—4, 7, 12. §§ 1, 14. §§ 1, 2, 14. 18. § 1; Acacianum. ii. 10; Arrian, 1. Radd. ii. 28, 29, 30, iv. 15, vii. 10, 16; Plat. Alex. 57; Dianys. 747; Pomp. Mela, iii. 5. § 6; Plin. vi. 18.; Q. Curt. vii. 4, 5, 10; Anni. Marc. xxxiii. 6. § 52), a river of Central Asia, on the course of which there appears a considerable discrepancy between the statements of ancient and modern geographers. Besides confirming that the Oxus flowed through Hyrcania to the Caspian or Hyrcanian sea, Strabo (ix. p. 509) adds, upon the authority of Aristobulus, that it was one of the largest rivers of Asia, that it was navigable, and that by it valuable merchandise was conveyed to the Hyrcanian sea, and thence to Albania, and by the river Cyrus to the Euxine. Pliny (vi. 19) also quotes M. Varro, who says that it was ascertained at the time when Pompeius was carrying on hostilities in the East against Mithridates, that a journey of seven days from the frontier of India brought the traveller to the Ixios, which flowed into the Oxus; the voyage continued along that river into the Caspian, and across it to the Cyrus, from whence a land journey of no more than five days carried Indian merchandise to Phasis in Pontus. It would appear (Strab. l. c.) that Patroclus, the admiral of Seleucus and Antiochus, had navigated the Caspian, and that the results of his observations were in perfect accord with these statements. With such definite accounts mistakes is almost impossible; yet the country between the Caspian and the Oxus has been crossed in several directions, and not only has the Oxus been unseen, but its course has been ascertained to take a direction to the NW., instead of to the SW.; and it flows not into the Caspian, but the sea of Aral. Sir A. Burns (Travels in Bokhara, vol. ii. p. 188) doubts whether the Oxus could indeed have had any other than its present course, for physical obstacles oppose its entrance into the Caspian S. of the bay of Balkul, and N. of that point its natural receptacle is the Aral; and that this has been the case for nine centuries at least there is the evidence of Ibn Haukil (Istachry). (Oriental Geography, p. 239, ed. Ousey, London, 1800.) Singularly enough, Pompeius Mela (l. c.) designates the Caspian, or Bithynia, almost as it is known at present. "Jaxartes et Oxus per desertam Scythicam ex Sogdiarum regionum in Sytiicum summum exunt. ille suo fonte grandis, hic incusus aliorum grandior; et aliquidun ad occasum ab oriente curvis, juxta Daumas primum inflectitur: curaque ad Septentrianon converso inter Amaros et Pasieca- os apertis." The course of the Oxus or Jilghum, as it is termed in the Turkish and Persian works that treat upon its basin, or Amu Darya, as the natives on its banks call it, whether we consider the Balakchan branch or Kokteka to be its source, or that which rises in the Alpine lake of Sard-itak, on the snow-covered heights of the Tartaric Caucuses of Panirius a direction from SE. to NW. The volume of its waters takes the same course from 37° to 40° lat. with great regularity from Khomdooz to Chebria. About the parallel of 40° the Oxus turns from S.E. to N.W., and its waters, diminished by the numerous channels of irrigation which from the days of Herodotus (ii. 117) have been the only means of fertilising the barren plains of Khwarizm, reaches the Aral at 43° 40'. Momont (vol. iv. p. 452) and others have seen in the text of Pompeius Mela a convincing proof that in his time the Oxus flowed into the Caspian. But it can hardly be supposed that the commerce of India by the Caspian and the Oxus had ceased in the little interval of time which separates Mela from Strabo and M. Varro. Besides, the statement of the Roman geographer remains singularly isolated. Ptolemy (l. c.), less than a century after Mela, directs the Caspian again from E. to W. into the Caspian. The lower course of the river, far from following a direction from S. to N., is represented, in the ancient maps, which are traced after Ptolemy's positions, as flowing from ENE. to WSW. But a more convincing proof has been brought forward by M. Jamberti (Mem. sur l'Asie Centrale de 1'Oxus, Jour. Asiatique, Dec. 1833, p. 498), who opposes the authority of Hamdallah, a famous geographer of the 14th century, whom he calls the Persian Kra- toshenne, who asserted that while one branch of the Oxus had its debouch into the sea Khovaren (Aral), there was a branch which pursued a W. course to the Caspian. (Purchas, vol. iii. p. 236; Hakluyt, vol. i. p. 368.) It should be observed that Jenkin- son, who visited the Caspian in 1559, also says that
OXYBIUS

the Oxus formerly fell into the gulf of Balkan. He is the author of the story that the Turkomans, in the hope of preventing the diminution of its waters in the upper part of its course, dammed up the mouth of the river. Evidence still more positive of the deposit into the Caspian of a considerable river which is now dry, is afforded by observations on the sea-coast, particularly in the Bay of Balkan. The earliest of these is the survey of that bay by Captain Woodroffe, in 1743, by order of Nadir Shah, who lays down the embouchure of a river which he was told was the Oxus. (Hanway, True, vol. i. p. 130.) The accuracy of his survey has been confirmed by the more elaborate investigations of the Russian surveyors, the results of which are embodied in the Periplus of the Caspian compiled by Eichwald (Alte Geogr. d. Capp. Mecres, Berlin, 1838), and these leave no doubt that a river, which could have been no other than the Oxus, formerly entered the Caspian at the SE. of the Bay of Balkan by two branches; in one of these there are still pools of water; the other is dry. How far they may be traceable inland is yet to be ascertained; but enough has been determined to justify the belief of the ancient world, that the Oxus was a channel of communication between India and W. Asia. The ancients describe Alexander as approaching the river from Bactra, which was distant from it 400 stadia; their estimate is correct, and there are no tables about the breadth of the river. Arrian, who follows Aristobulus, says that it was 6 stadia. The very topography of the river's bank may almost be traced in Curtius; for there are low and peaked hillocks near that passage of the Oxus, while there are none below Kileji. He adds that the Oxus was a muddy river that bore much slime along with it; and Burges (vol. ii. p. 7) found that one-tortith of the stream is clay suspended in water. Polybius (l. c.) states that the impetuous course of the river and of its falls is untrune, as its channel is remarkably free from rocks, rapids, and whirlpools. He has a strange story about the manner in which the Aspasii enter Hyrcania, either under the vault formed by the fall of the waters (comp. Strab. p. 50), or over its submerged stream. It is still a popular belief that the waters of the Aror pass by a subterraneous channel to the Caspian. At Kara Goombuz, where the caravans halt, between the two seas, it is said by some that the water is heard rushing beneath. (Burges, vol. ii. p. 188.)

The conclusions to which Von Humboldt (Asie Centrale, vol. ii. pp. 162—197) arrived as to the physical causes which may have interrupted the connexion between the Caspian and the Oxus are given in the article JAXARTES. For all that concerns the modern geography of the basin of the Oxus the travels of our countrymen, to whom we owe most of our real knowledge of these countries, should be consulted—Elphinstone, Burges, Wood, and Lord. Professor Wilson (Ariana, pp. 142—145) has treated this long-versed question with great ability, and shown that there is every reason for believing the statements of the ancients that the Oxus was once the great highway of nations, and gave an easy access to the great Arno-Caspian mission.

OXYBIUS (Οξύβιος), a "part of the Ligyes," as Stephanus says (α. v.), on the authority of Quadratus. Strabo (p. 185) terminates his description of the coast of Gallia Narbonensis, in which he proceeds from west to east, by mentioning the harbour Oxybios, so called from the Oxybi Ligyes. The Oxysus were a Ligurian people on the south coast of Gallia Narbonensis; but it is not easy to fix their position precisely. They were west of the Var and not far from it, and they were near to or bordered on the Deciates. The Oxysus had a town Agrippa, but its position is unknown. A brief sketch of the history of this people is written under DECATES. Pliny (iii. c. 4) places the Oxysus east of the Argenteus river (Argentes) and west of the Deciates. The Oxysus, therefore, occupied the coast east from Frejus as far as the border of the Deciates, who had the remainder of the coast to the Var. Antipolis (Antibus) was in the country of the Deciates. [G. L.]

OXYDRACAE (Οξυδράκαι), a great nation of the Panjik, who, with the Malli, occupied the banks of the Hydroges and Acesines, and strenuously resisted the advance of Alexander through their country. It was a common belief of the ancients, that it was in a battle with these people that Ptolemy saved the life of Alexander, and hence obtained the name of Soter. (Steph. B.) Arrian, however, transfers the story to the siege of the Malli (Multa), where Alexander was in imminent danger of his life and was severely wounded (vi. 11). The name is written in different ways by different writers. Thus Strabo writes it Sydracae (vv. p. 701), in which Pliny concurs (xii. 6), who makes their country the limit of Alexander's advance eastward; in Dio they appear under the form of Syracae (xvii. 98); lastly, in Orosius as Subaurae (iii. 19). The name is clearly of Indian origin; hence it has been conjectured by Pott, that the titles commencing in this manner represent the Hellenized form of the Sanscrit Csatatro (king) corresponding with the Zend Cstathera. (Pott, Etym. Forsch. p. lxvii.)

OXYDRACAE (Οξυδράκαι), a tribe of ancient Sogdiana, appear to have occupied the district to the N. of the Oxus, between that river and the Jaxartes. (Ptol. vi. 12, § 77.) A river which flowed into the Ganges, according to Arrian, in the territory of the Puzalae. The same people are mentioned by Pliny (vi. 19) and Ptolemy (vii. 2, § 15) under the name of Pessaia; and may be identified with the Sanscrit Pulkala, and as dwelling near Canjaakanga, in the plain country between the Simaca and the Ganges. In the immediate neighbourhood is the river Irmauti, which has been doubtless Graecized into Oxumagis. The Sanscrit appellation means "abounding in sugar-cane," which applies perfectly to the land through which it flows. (Cf. Biran, Avian, ii. p. 36; Schwabeck, Fragm. Megasthenes, p. 28.)

OXYNEA (Οξύνεα), a town of Thessaly, situated on the Ion, a tributary of the Peneus, and perhaps the capital of the Talares, occupied probably the valley of Miritta. It is described by Strabo as distant 120 stadia from Azorus. (Strab. vii. p. 327; Leake, Northern Greece, vol iv. p. 279.)

OXYRYNCHUS (Οξυρυνχος), Strab. xvii. p. 812; Ptol. iv. 5, § 59; Steph. B. s. v.; Amm. Marc. xii. 16; Oxyrynchum, R. Anton. p. 157. ed. Parthey; Etd. Oxyrinxus. This city was the chief town of the Nomoi Oxyrynchites, in Lower Egypt. The appellation of the name and its capital was derived from a fish of the sturgeon species (Acipenser Sturio, Linnæus; Athen. vii. p. 312), which was an object of religious worship, and had a temple dedi-
cated to it. (Aelian, Hist. An. x. 46; Plut. Iot. et Osir. c. 7.) The town stood nearly opposite Cynopolis, between the western bank of the Nile and the Joseph-canal, lat. 28° 6' N. At the village of Beknesh, which stands on part of the site of Cynopolis, there are some remains — broken columns and cornices — of the ancient city (Jannard, Descript. de l'Egypte, vol. ii. ch. 16. p. 53; Champollion, l'Egypte, vol. i. p. 303, seq.); and a single Corinthian column (Déon, l'Egypte, pl. 51), without leaves or volutes, partly buried in the sand, indicates a structure of a later period, probably of the age of Diocletian. Oxynychus became the site of an episcopal see, and Apollonius dated from hence an epistle to the Council of Nicaea (Epiph. Hærers, lxiii.). Roman coins were minted at Oxynychus in the age of Hadrian and Antoninus Pius. (1.) Hadrian, with the reverse of Pallas, holding in her right hand a statuette of Victory, in her left a spear; or, (2.) Serapis holding a stag in his right hand. (3.) Antoninus, with a reverse, Pallas holding in her right hand an axa, in her left a statuette of Victory. (Eckhel, vol. iv. p. 112.)

[OZENE. (ΟΣΕ'ΝΕ)] (Eckhel, vol. iv. p. 112.)

OZENE (ΟΣΕ'ΝΕ, Ροολ. M. Eghy, c. 38, ed. Müller), the principal emporium of the interior of the district of W. India, anciently called Limyrica. There can be no doubt that it is the Sanscrit Uj-jaini, the present Ujain. This place is held by all Indian authors to be one of great antiquity, and a royal capital,—as Ptolemy calls it,—the palace of a king Tiastanes (vii. 1. § 63). We know for certain that it was the capital of Vikramaditya, who in n. 55 expelled the Sacae or Scythians from his country, and founded the well-known Indian aera, which has been called from this circumstance the Saca aera. (Lassen, de Peutop. p. 57; Böhlen, Alto Ind. p. 94; Ettler, v. p. 486.) The author of the Peripatus states that great variety of commerce was sent down from Ozen to Barycana (l.c.).

OZOGARDANA, a town in the middle of Mesopotamia, recorded by Ammianus, in his account of the advance of Julianus through that country (xxiv. c. 2). He states that the inhabitants preserve there a throne or seat of judgment which they say belonged to Tejian. The same story is told in almost the same words by Zosimus of a place he calls Zaragradin (ii. 15). The place cannot now with certainty be identified; but Mommsen thinks it this same as shortly afterwards bare the name of Pescaria, from Pescaria (v. 2. p. 241); and Beedler holds it to be the same as Is or Lannopolis (the present Hit).

V.

P.

[PHRYGIA.]

PACHIMACUNUS (Παχιμακούς, or Παχιμα-

κοῦς), Plut. iv. 5. § 50; Παχιμακοῦς, Heroedes, p. 724), the principal town of the Sebennytic nome in the Aegyptio Delta, lat. 31° 6' N. It stood on the eastern shore of the Lake Batus, and very near the modern village of Handahor. (Champollion, l'Egypte, vol. ii. p. 206.)

PACHYNIUS (Παχυίνιος, Cape Passaro), a celebrated promontory of Sicily, forming the extreme SE. point of the whole island, and one of the three promontories which were supposed to have given to it the name of Trinacria. (Ovid. Fast. iv. 479. Met. xii. 725; Dionys. Per. 467—472; Scal. p. 4. § 13; Pol. i. 42; Strab. vi. pp. 265, 272, &c.; Plin. iii. 8. s. 14; Pol. iii. 4. § 8; Mela, ii. 7. § 15.)

All the ancient geographers correctly describe it as extending out towards the S. and E. so as to be the point of Sicily that was the most nearly opposite to Crete and the Peloponnesus. It is at the same time the southernmost point of the whole island. The headland itself is not lofty, but formed by bold projecting rocks (projecta sara Pachyna, Virg. Aen. iii. 699), and immediately off it lies a small rocky island of considerable elevation, which appears to have been generally regarded as forming the actual promontory. The name is the expression of Nonnus, who speaks of "the island rock of the sea-girt Pachyna." (Dionys. xiii. 322.) Lycophron also has a similar phrase. (Alex. 1181.)

We learn from Cicero (Verr. v. 34) that there was a port in the immediate neighbourhood of the promontory to which he gives the name of Portus Pachyuni: it was here that the fleet of Verres was stationed under his officer Cleomenes, when the news that a squadron of pirates was in the neighbouring Port of Ulysses (Portus Odysseae) came to that command to take to flight with precipitation. The Port of Ulysses is otherwise unknown; but Ptolemy gives the name of Promontory of Ulysses (Ουλυσσία ἄκρα. Pet. iii. 4. § 7) to a point on the S. coast of the island, a little to the W. of Cape Pachyuns. It is therefore probable that the Portus Pachyuni was the one now called Portus di Polo, immediately adjoining the promontory, while the Portus Odysseae may be identified with the small bay or harbour of La Marca about 6 miles distant. There are, however, several rocky coves to which the name of ports may be applied, and the determination must therefore be in great measure conjectural. (Smyth's Sicily, pp. 151,185,186.) The convenience of this point at the extreme SE. point of the island caused it to be a frequent place of rendezvous and station for fleets approaching Sicily; and on one occasion, during the Second Punic War the Carthaginian commander Bomilcar appears to have taken up his post in the port to the W. of the promontory, while the Roman fleet lay immediately to the N. of it. (Liv. xxiv. 27, xxv. 27, xxxvi. 2.)

[Ε. Η. Β.]

PACTOLUS (Πακτόλος), a small river of Lydia, which flows down from Mount Tmolus in a northern direction, and, after passing on the west of Salus, empties itself into the sea. (Hered. v. 101; Xenoph. Cyrop. vi. 2. § 1. vii. 3. § 4, Agesila. i. 30; Strab. xii. pp. 554, 521, xiii. p. 625, &c; Pet. iii. 2. § 6; Plin. iii. 30.) In ancient times the Pactolus had carried in its bed, it is said, a great quantity of small particles of gold-dust, which were carefully collected, and were believed to have been the source of the immense wealth possessed by Croesus and his ancestors; but in Strabo's time gold-dust was no longer found in it. The gold of this river, which was hence called Chryssorhakos, is often spoken of by the poets. (Soph. Phil. 392; Dionys. Perieg. 831; Hom. Hymn. in Del. 249; Virg. Aen. x. 142; Herod. Epod. xx. 20; Ov. Met. xi. 85. &c.; Sene. Phocas. 643; Juven. xiv. 298; Silv. ii. 1. 158.) The little stream, which is only 10 feet in breadth and scarcely 1 foot deep, still carries along with it a quantity of a reddish mud, and is now called Sarobot. [L. S.]

PACTYE (Πακτή), Herod. vi. 36; Strab. viii. p. 331), a town of the Thracian Chersonese, on the coast of the Propontis, 36 stadia from Cardia, whither Alcibiades retired after the Athenians had for the second time deprived him of the command.
PACTYICE.

(Diod. xxii. 74; Nepos, Ale. 7; cf. Plin. iv. 18; Str. p. 28.) Perhaps St. George. [T. H. D.]

PACZYC (Haeredita), a district of North-Western India, which, there is every reason to suppose, must have been nearly the same as the modern Kashmir, but probably extended westward across the Indus. It is mentioned by Herodotus with that amount of uncertainty which attaches to almost all that he relates of the far East. Thus in the catalogue of the produce of the different satrapies of the Persian empire, Pactyce is reckoned after Bactria, and is connected with the Armenians, which gives it an extent too far to the W. (iii. 93). Again, in his account of the arms of Xerxes (Herodotus mentions the Pactyes in common with the Sagartii, and places them under the command of a Persian (vii. 67). And in the subsequent description of the former people, he states that their dress is the same as that of the Pactyes (vii. 85). Evidently, therefore, he here imagines the country and the people to have occupied a district to the N. and NE. of Persia. Again, Herodotus states (iii. 102) that the bravest of the Indian tribes are those who are in the immediate neighbourhood of the city of Caspatyres and Pactyce; and he connects the same two places together where he states (iv. c. 44) that the celebrated voyage of Scylax of Caryanda, which was promoted by Dareins, the son of Hystaspes, commenced from the same localities. Now we know that Hecataeus (ap. Steph. B. s. r.) placed Caspatyres in the country of the Gandarini (Fragm. p. 94, ed. Klau- sen: hence the strong inference that Pactyce was part of Gandarica, if not, as Larcher has supposed, actually the same. [V.]

PACYRIS. [Caldicca.]

PADAEI. [India, p. 50, b.]

PADARGUS (Παδάργος, Artian, Iadic. c. 29), a small stream of Persia, which appears to have flowed into the Persian Gulf near the present Absharik. It is not possible to identify this and some other names mentioned by Arrian from the Journals of Nearchus, owing to the physical changes which have taken place in the coast-line. [V.]

PADINUM, a town of Gallia Cispadana, known only from Pliny, who mentions the Padinates among the municipia of that region (Plin. iii. 15. s. 20). But he affords us no clue to its position. Cluver would identify it with Bondino, between Ferrara and Miranda, but this is a mere conjecture. [E. H. B.]

PADUS (Παῦς; Po), the principal river of Northern Italy, and much the largest river in Italy altogether. Hence Virgil calls it "fluviorum rex" (Georg. i. 481), and Strabo even erroneously terms it the greatest river in Europe after the Danube. (Strab. iv. p. 204.) It has its sources in the Monte Vico, or Mons Venalus, one of the highest summits of the Western Alps (Plin. iii. 16. s. 20; Mcl. ii. 4. § 4), and from thence to the Adriatic has a course of above 400 miles. Pliny estimates it at 300 Roman miles without including the windings, which add about 88 more. (Plin. iii. 16. s. 20.) Both statements are beneath the truth. According to modern authorities its course, including its windings, is calculated at 380 Italian or 475 Roman miles. (Rampoldi, Dis. Topogr. d'Italia, vol. iii. p. 284.) After a very short course through a mountain valley it descends into the plain a few miles from Saluzzo, and from thence flows without interruption through a plain or broad level valley all the way to the sea. Its course from Saluzzo, as far as Chi- nasso (through the district of the ancient Vagi- eni and Taurini), is nearly NE. But after bounding the hills of the Montferrat, it turns E., and pursues this course with but little variation the whole way to the Adriatic. The great plain or valley of the Po is in fact one of the most important physical features of Italy. Bounded on the N. by the Alps, and on the S. by the Apenines, both of which ranges have in this part of their course a gentle direction from W. to E., it forms a gigantic trough-like basin, which receives the whole of the waters that flow from the southern slopes of the Alps and the northern ones of the Apenines. As Pliny remarks, there is hardly any other river which, within the same space, receives so many and such important tributaries. Those from the north, on its left bank, are the most considerable, being fed by the perpetual snows of the Alps; and many of these form extensive lakes at the points where they first reach the plain; after quitting which they are deep and navigable rivers, though in some cases still very rapid. Pliny states that the Padus receives in all thirty tributary rivers, but it is difficult to know which he reckons as such; he himself enumerates only seventeen; but this number can be increased almost indefinitely, if we include smaller streams. The principal tributaries will be here enumerated in order, beginning from the source, and proceeding along the left bank. They are: 1. the Clusius (Chiusone), not noticed by Pliny, but the name of which is found in the Tabula; 2. the Deria, commonly called Duria Minor, or Dora Riparia; 3. the Stura (Stura); 4. the Orgus (Orco); 5. the Doria Major, or Bantia (Dora Baltea), one of the greatest of all the tributaries of the Padus; 6. the Sesinius (Sessia); 7. the Ticinus (Ticino), flowing from the Lucus Verbanus (Lago Maggiore); 8. the Lambro or Lambrus (Lambro), a much less considerable stream, and which does not rise in the high Alps; 9. the Addua (Adda), flowing from the Lucus Larious or Lago di Como; 10. the Ollens (Oglio), which flows from the Lucus Nebinos (Lago d'Isio), and brings with it the tributary waters of the Mela (Mella) and Clusius (Chiese); 11. the Mitchus (Mincio), flowing from the Lago di Garda, or Colon Banneux. Below this the Po cannot be said to receive any regular tributary; for though it communicates at more than one point with the Tarento and Adige (Adige) rivers, the channels of the latter are largely artificial, and the bulk of the waters of the Adige are carried out to the sea by their own separate channel. [Athen.] On the southern or right bank of the Padus its principal tributaries are: 1. the Tanarius (Tanaro), a large river, which has itself received the important tributary streams of the Stura and Bormida, so that it brings with it almost all the waters of the Maritime Alps and adjoining tract of the Ligurian Apenines; 2. the Secchia, a considerable stream, but the ancient name of which is unknown; 3. the Trebia (Trebith), flowing near Piaventa; 4. the Tarvis (Taro); 5. the Ticin (Teso); 6. the Gabellus of Pliny, called also Sesia (Secchia); 7. the Scultenna, now called the Tanaro; 8. the Rhenum (Reno), flowing near Bologna. To these may be added several smaller streams, viz.: the Iddro (Idice), Silarus (Sillac), Vaternus (Plin., now Santerno), and Sinuns (Sinuo), all of which discharge themselves into the southern arm of the Po, now called the Po di Primaro, and anciently known as the Spineticum Istium, below the point
where it separates from the main stream. Several smaller tributaries of the river in the highest part of its course are noticed in the Tabula or by the Geographer of Ravenna, which are not mentioned by any ancient author; but their names are for the most part corrupt and uncertain.

Though flowing for the most part through a great plain, the Padus thus derives the great mass of its waters directly from two great mountain ranges, and the consequent is that it is always a strong, rapid, and turbid stream, and has been in all ages subject to violent inundations. (Vitr. Geog. i. 48; i. L. C.) The whole soil of the lower valley of the Po is indeed a pure alluvial deposit, and may be considered, like the valley of the Mississippi or the Delta of the Nile, as formed by the gradual accumulation of mud, sand, and gravel, brought down by the river itself and its tributary streams. But this process was for the most part long anterior to the historical period; and there can be no doubt that this portion of Italy had already acquired very much its present characteristics of cultivation and industry in the time of the first Etruscan settlements. The valley of the Padus, as well as the river itself, are well described by Polybius (the earliest extant author in whom the Roman name of Padus is found), as well as at a later period by Strabo and Pliny. (Pol. ii. 16. Strab. iv. pp. 203, 204, c. p. 212; Plin. iii. 16. s. 20.) Considerable changes have, however, taken place in the lower part of its course, near the Adriatic sea. Here the river forms a kind of great delta, analogous in many respects to that of the Nile; and the phenomena is complicated, as in that case, by the existence of great lagunes bordering the coast of the Adriatic, which are bounded by narrow strips or bars of sand, separating them from the sea, though leaving open occasional channels of communication, so that the lagunes are always salt and affected by the tides, which are more sensible in this part of the Adriatic than in the Mediterranean. (Strab. v. p. 212.) These lagunes, which are well described by Strabo, extended in his time from Ravenna to Altimum, both of which cities stood in the lagunes or marshes, and were built on piles, in the same manner as the modern Venet. But the whole of these could not be fairly considered as belonging to the Delta of the Padus; the more northern being formed at the mouths of other rivers, the Athesia, Medmaecus, &c., which had no direct or natural communication with the great river. They all, however, communicated with the Padus, and with one another, by channels or canals more or less artificial; and as this was already the case in the time of Pliny, that author distinctly reckons the mouths of the Padus to extend from Ravenna to Altimum. (Plin. l. C.) From the earliest period that this tract was occupied by a settled people, the necessity must have been felt of embarking the various canals and channels of the river, for protection against inundation, as well as of constructing artificial cuts and channels, both for carrying off its superfluous waters and for purposes of communication. The earliest works of this kind are ascribed to the Etruscans (Plin. l. C.), and from that time to the present day, they have been carried on with occasional interruptions. But in addition to these artificial changes, the river has from time to time burst its banks and forced for itself new channels, or diverted the mass of its waters into these which were previously unimportant. The most remarkable of these changes which is recorded with certainty, took place in 1152, when the main stream of the Po, which then flowed S. of Ferrara, suddenly changed its course, and has ever since flowed about 3 miles N. of that city. Hence it is probable that all the principal modern mouths of the Po, from the Po di Goro to the Po di Levante, were in ancient times comparatively inaccessible.

Polybius (ii. 16) describes the Padus as having only two principal mouths, which separated at a place called Trigaboli (the site of which cannot be determined); the one of which is called by him Padus (Piësès), and the other, which was the principal channel, and the one commonly navigated, he calls Olua or Holana ("Olaha"). This last is in all probability the channel still called Po di Volano, which until the great inundation of 1152, above noticed, was still the principal mouth of the Po. The other is probably the southernmost branch of the river, which separates from the preceding at Ferrara, and is carried at the present day by a wholly artificial channel into the sea at Primaro, from whence it derives the name of Po di Primaro. Its present mouth is about 15 miles N. of Ravenna, but it seems that in the days of Pliny, and probably in those of Polybius also, it discharged itself into the lagunes which then surrounded Ravenna on all sides. Ptolemy terms it Padus, but gives it also the name of Fossa Augusta, from its course having been artificially regulated, and perhaps altered, by that emperor. (Plin. iii. 16. s. 20.) The same author gives us a detailed enumeration of the mouths of the Padus as they existed in his day, but from the causes of change already adverted to, it is very difficult, if not impossible, to identify them with certainty.

They were, according to him: 1. the Padus, or Fossa Augusta, in which (he adds) was previously called Messena; this has now wholly ceased to exist. 2. The Portes Vatremi, evidently deriving its name from being the mouth of the river Vatremi, which flowed from Forum Corneli, just as the Po di Primaro is at the present day called the mouth of the Reno. This was also known as the Spinieticum Ostium, from the once celebrated city of Spina, which was situated on its banks. [Spina]. It was probably the same with the modern Po di Primaro. 3. Ostium Caprasiae. 4. Sagis. 5. Volano, previously called Olana: this is evidently the Olana of Polybius, and the modern Po di Volano, which, however, the two preceding cannot be identified, but must have been openings communicating with the great lagunes of Comacchio. 6. The Carbarnia, perhaps the Po di Goro. 7. The Fossio Philistina, which seems to have been an artificial canal, conveying the waters of the Tartarus, still called Tortaro, to the sea. This cannot be identified, the changes of the mouths of the river in this part being too considerable. The whole of the present delta, formed by the actual mouths of the Po (from the Po di Goro to the Po di Levante), must have been formed since the great change of 1152; its progress for some centuries back can be accurately traced; and we know that it has advanced not less than 9 miles in little more than two centuries and a half, and at least 15 miles since the 12th century. Beyond this the delta belongs rather to the Adriatic, and more northern streams than to the Po; the next month being that of the main stream of the Adige itself, and just beyond it the Porto di Bronzolado (the Brundulhus Pertus of Pliny), which at the present day is the mouth of the Brenta.*

* Much curious information concerning the delta of
PADUS.

The changes which have taken place on this line of coast are due not only to the pushing forward of the coast-line at the actual mouths of the rivers, but to the filling up of the lagoons. These in ancient times extended beyond Ravenna on the S.; but that city is now surrounded on all sides by dry land, and the lagoons only begin to the N. of the Po di Priamo. Here the lagoons of Conacchio extend over a space of above 20 miles in length, as far as the mouth of the Po di Tolano; but from that point to the fort of Brossolo, where the Venetian lagoons begin, though the whole country is very low and marshy, it is no longer covered with water, as it obviously was at no distant period. It is now, therefore, impossible to determine what were the particular lagoons designated by Pliny as the Subterr Maria, and indeed the passage in which he alludes to them is not very clear; but as he calls them Attianorum Padudes, they would seem to have been in the neighbourhood of Adria, and may probably have been the extensive lagoons (now converted into marshes) S. of Ariano. At a later period the name seems to have been differently used. The Itineraries speak of the navigation "per Septem Maria [a Ravenna] Althinum usque," so that the name seems here to be applied to the whole extent of the lagoons; and it is employed in the same sense by Herodian (viii. 7); while the Tabula, on the contrary, gives the name to a particular point or station on the line of route from Ravenna to Atlinum. This line, which is given in much detail, must have been by water, though not so specified, as there never could have been a road along the line in question; but it is impossible to give with any certainty the stations or points named. (Itin. Ant. p. 126; Tab. Peut.)

[VENETIA.]

Polybios speaks of the Padus as navigable for a distance of 2000 stadia, or 250 Roman miles from the sea. (Pol. ii. 16.) Strabo notices it as navigable from Placentia downwards to Ravenna, without saving that it was not practicable higher up; and Pliny correctly describes it as beginning to be navigable from Augusta Taurinorum (Turin), more than 120 miles above Placentia. (Strab. v. p. 217; Plin. iii. 17. s. 21.) Ancient writers already remarked that the stream of the Padus was fatter and more abundant in summer than in winter or spring; owing to its being fed in great part by the melting of the snows in the high Alps. (Pol. ii. 16; Plin. iii. 16. s. 20.) It is not till after it has received the waters of the Dura Major or Dora Baltea, a stream at least as considerable as itself, that the Po becomes a really great river. Hence, it is about this point (as Pliny observes) that it first attains a considerable depth. But at the present day it is not practicable for vessels of any considerable burden above Casale, about 25 miles lower down.

The origin of the name of Padus is uncertain. According to Meterodorus of Scepsis (cited by Pliny, l. c.), it was a Celtic name, derived from the number of pine-trees which grew around its sources. The etymology seems very doubtful; but the fact that the name was of Celtic origin is rendered probable by the circumstance that, according both to Polybios and Pliny, the name given it by the Ligurians (the most ancient inhabitants of its banks) was Bodincus the Po, and the changes which this part of the coast has undergone will be found in a note appended to Cuvier's Discours sur les Révolutions de la Surface du Globe, p. 75, 4to, edit., Paris, 1823.

PAEONES.

or Bodeneus (Boδενευς, Pol. ii. 16; Plin. iii. 16. s. 20), a name said to be derived from its great depth. It is well known that it was early identified by the Greeks with the mythical Eridanus, and was commonly called by them, as well as by the Latin poets, by that name, even at a late period. The origin and history of this name have been already given in the article ERIDANUS. It may be added, that the poplar trees which figure in the fable of Phaethon (in its later form) evidently refer to the tall and graceful trees, still commonly known as Lombardy poplars, on which growing in abundance on the banks of the Po. [E. H. B.]

PADUSA. [PADUS.]

PADYANDUS (Παδυανδος), a town in Catania, or the southernmost part of Cappadocia, about 25 miles to the south-east of Faustinopolis, near the pass of Mount Taurus known by the name of the Cilician Gates. (Pol. v. 7, § 7.) The town, which was extended by the emperor Valens, is mentioned in the Itineraries, but its name assumes different forms; as, Padyandus (Tab. Peut.), Pudandus (It. Itiner. 145), Maris Oceani (It. Itiner. p. 578), and Phrygopudanus (Hieroc., p. 699). The place is described by Basilius (Epist. 7-4) as one of the most wretched holes on earth. It is said to have derived its name from a small stream in the neighbourhood. (Const. Porphyry. Vit. Basil. 36; comp. Cedren. p. 575; Jo. Scal. Hist. pp. 829, 844.) The place is still called Podende. [L. S.]

PAEANIA. [ATTICA, p. 332, b.]

PAEANION (Παεάνιον), a town in Aetolia, near the Achelous, a little S. of Ithoria, and N. of Oeniadae, which was on the other side of the river. It was only 7 stadia in circumference, and was destroyed by Marcus Aurelius in 199. (Pol. iv. 65.) Paeanion was perhaps rebuilt, and may be the same town as Phana (Φανα), which was taken by the Achaean, and which we learn from the narrative in Panassius was near the sea. (Paus. x. 18) Stephanoian mentions Phana as a town of Italy; but for Παεανια Ατραλας, we ought probably to read Παεανια Ατραλιας. (Steph. B. s. v. Φανα.)

PAEOLONTIUM (Παεόλοντιον, Pol. ii. 6 § 33), a town of the Langues in Asturia, variously identified with Aplauz, Pola de Lena, and Concejo de Plomosa. [T. H. D.]

PAEMANI, mentioned in Caesar's Commentaries (viii. 22) with the Conduris, Eburanes, and Caerees, and the four peoples are included in the name of Germani. D'Anville conjectures that they were near the Condri, who probably held the country which is now called Condras. [CONDRA.] The Paemani may have occupied the country called Pays de Fannemne, of which Durbury, Laroche on the Ourthe, and Rochefort on the Homme are the chief towns. [G. L.]

PAEON (Παιαν, Scyl. p. 28), a town of Thrace, mentioned only by Scylax. [T. H. D.]

PAEONES (Παιονες, Hom. Η. 843, xvi. 287, xvii. 348, xxi. 139; Hom. iv. 33, 49, v. 1. 13, 98, vii. 113, 185; Thuc. ii. 96; Strab. i. p. 62, viii. pp. 316, 318, 323, 329, 330, 331; Arrian, Anab. ii. 9, § 2, iii. 12, § 4; Plut. Alex. 39; Polyaenus. Strat. iv. 12, § 3; Eustath. ad Hom. Η. ii. 287; Liv. xii. 51), a people divided into several tribes, who, before the Argolic colonisation of Emathia, appear to have occupied the entire country afterwards called Macedonie, with the exception of that portion of it which was considered a part of Thrace. As the Macedonian kingdom increased, the district called PAEONIA
PAEONES.

(Paeonia, Thuc. ii. 99; Polyb. v. 97, xiv. 8; Strab. vii. pp. 313, 318, 329, 331; Pol. iii. 13, § 23; Liv. xxxii. 19, xxxviii. 17, xxxix. 54. xl. 3, xiv. 29; Plin. iv. 17, vi. 39) was curtailed of its dimensions, on every side, though the name still continued to be applied in a general sense to the great belt of interior country which covered Upper and Lower Macedonia to the N. and NE., and a portion of which was a monarchy nominally independent of Macedon, until fifty years after the death of Alexander the Great. The banks of the "wide-flowing Axios" seem to have been the centre of the Paeonian power from the time when Pyrrachines and Asteropaeus led the Paeonians to the assistance of Priam (Hom. II. cc.), down to the latest existence of the monarchy. They appear neither as Macedonians, Thracians, or Illyrians, but were descended from the Teucri of Troy. When Megabazus crossed the river Syraxon, he conquered the Paeonians, of whom two tribes, called the Simpeones and Paeoplae, were deported into Asia by express order of Darius, whose fancy their breach struck at Sardis by seeing a beautiful and shapely Paeonian woman carrying a vessel on her head, leading a horse to water, and spinning flax, all at the same time. (H.-rodl. v. 12—16.) These two tribes were the Paeonians of the lower districts, and their country was afterwards taken possession of by the Thracians. When the Temenidae had acquired Euthalia, Almopia, Crestonia, and Mygdonia, the kings of Paeonia still continued to rule over the country beyond the straits of the Axios, until Philip, son of Amyntas, twice reduced them to terms, when weakened by the recent death of their king Agis, and their city of Limenium was taken by Alexander (Diodor. xix. 2, 4, 92, xxvii. 8); after which they were probably submissive to the Macedonian sovereigns. An inscribed marble which has been discovered in the acropolis of Athens records an interchange of good offices between the Athenians and Audoleon, king of Paeonia, in the archonship of Dositius, B.c. 354, or a few years after the accession of Philip and Audoleon to their respective thrones. The coins of Audoleon, who reigned at that time, and adopted, after the death of Alexander, the common types of that prince and his successors,—the head of Alexander in the character of young Hercules, and on the obverse the figure of Zeus Aietophrorns,—prove the civilisation of Paeonia under its kings. Afterwards kings of Paeonia are not heard of, so that their importance must have been only transitory; but it is certain that during the troubled times of Macedonia, that is, in the reign of Cassander, the principality of the Paeonians existed, and afterwards disappeared. At the Roman conquest the Paeonians on the W. of the Axios were included in Macedonia Secunda. Paeonia extended to the Bidentiaeae and Maeci of Thrace, and to the Dorian, Paeontae, and Dascaretae of Illyria, comprehending the various tribes who occupied the upper valleys of the Erigon, Axios, Strymon and Alagonas as far S. as the fertile plain of Siris. Its principal tribes to the E. were the Oboumati, Aeostaei, and Agrinees, parts of whose country were known by the names of Parstronymia and Paeonia, the former containing probably the valleys of the Upper Strymon, and of its great tributary the river of Sternaeae, the latter the adjacent mountains. On the W. frontier of Paeonia its subdivisions bordering on the Penestae and Dassareetae, Despatas and Pelagonia, which with Lyncei comprehended the entire country watered by the Erigon and its branches. (Leake, Northern Greece, vol. iii. pp. 212, 306, 462, 470.) [E. B. F.]

PAEOPLAE. [PAEONES.]

PAESICI. [Asturies, p. 249.]

PAESTANUS SINUS. [PAESTUM.]

PAESTUM (Posestov, Pol.); Posidonia, Strab.: Eub. Nautarados, Paestanum, Ruins at Peistos, a city of Lucania, on the Tyrrhenian sea, about 5 miles S. of the mouth of the Skylus. It was originally a Greek colony, named Postoniana (Postoniasia; a city of the Euboeans, (Hom. Iliad. vi. 76, 99; and was founded by a colony from Sybaris, on the opposite coast of Lucania. (Strab. v. 231; Sevynn. Ch. 245; Scyl. p. 3. § 12.) The date of its foundation is uncertain, but it may probably be referred to the period of the chief prosperity of Sybaris, when that city ruled over the whole of Lucania, from one sea to the other, or from 650 to 510 B.C. [SYBARIS.] It may be observed, also, that Solinus calls Postoniana a Doric colony; and though his authority is worth little in itself, it is confirmed by the occurrence of Doric forms on coins of the city: hence it seems probable that the Doric settlers from Troezen, who formed part of the original colony of Sybaris, but were subsequently expelled by the Achaeans (Arist. Pol. v. 3), may have contributed to the establishment of the new colony. According to Strabo it was originally founded close to the sea, but was subsequently removed further inland (Strab. L. c.); the change, however, was not considerable, as the still existing ruins of the ancient city are little more than half a mile from the coast.

We know scarcely anything of the early history of Postoniana. It is incidentally mentioned by Herodotus (i. 167) in a manner that proves it to have been already in existence, and apparently as a considerable town, at the period of the foundation of the neighbouring Veia, about B.C. 540. But this is the only notice of Postoniana until after the fall of its parent city of Sybaris, B.C. 510. It has been supposed by some modern writers that it received a great accession to its population at that period; but Herodotus, who notices the Sybarites as settling on that occasion at Lais and Solin, does not allude to Postoniana. (Herod. vi. 24.) There are, indeed, few among the cities of Magna Grecia of which we hear less in history; and the only evidence of the flourishing condition and prosperity of Postoniana, is to be found in the numbers of its coins and in the splendid architectural remains, so well known as the temples of Paestum. From its northerly position, it must have been one of the first cities that suffered from the advancing power of the Lucanians, as it was certainly one of the first Greek colonies that fell into the hands of that people. (Strab. v. 231.) The date of this event is very uncertain; but it is probable that it must have taken place before B.C. 390, when the city of Lais was besieged by the Lucanians, and had apparently become the bulwark of Magna Graecia on that side. [MAGNA GRAECIA.] We learn from a curious passage of Aristoxenos (ap. Athen. xiv. 632) that the Greek inhabitants were not expelled, but compelled to submit to the authority of the Lucanians, and receive a barbarian colony within their walls. They still retained many of their customs, and for ages afterwards continued to assemble at a certain festival every year with the express purpose of bewailing their captivity, and reviving the traditions of their prosperity. It would appear
PAESTUM.

from Livy (viii. 17), though the passage is not quite distinct, that it was recovered by Alexander, king of Epirus, as late as B.C. 339; but if so, it certainly soon fell again into the hands of the barbarians.

Posidonia passed with the rest of Lucania into the hands of the Romans. We find no mention of it on this occasion; but in B.C. 273, immediately after the departure of Pyrrhus from Italy, the Romans established a colony there for the security of their newly acquired territory on this side. (Liv. Epit. xiv.; Vell. Pat. i. 14; Strab. v. p. 251.) It was probably at this period that the name was changed, or corrupted, into Paestum, though the change may have already taken place at the time when the city fell into the hands of the Lucanians. But, from the time that it became a Roman colony, the name of Paestum seems to have exclusively prevailed; and even its coins, which are inscribed with Greek characters, have the legend ΠΑΙΣ and ΠΑΙΣΤΑΝΟ. (Eckhel, vol. i. p. 158.) We hear but little of Paestum as a Roman colony: it was one of the Coloniae Latinae, and distinguished itself by its unshaken fidelity throughout the Second Punic War. Thus the Paestani were mentioned as sending golden paterae as a present to the Roman senate just before the battle of Cannae (Liv. xxii. 36).

Again in B.C. 210 they furnished ships to the squadron with which D. Quintius repaired to the siege of Tarentum; and the following year they were among the eighteen colonies which still preserved their readiness to furnish supplies and recruits to the Roman armies, notwithstanding the long-continued pressure of the war (Liv. xxvi. 39, xxvii. 10.) Paestum was therefore at this period still a flourishing and considerable town, and we hear little more of it during the Roman Republic. It is incidentally mentioned by Cicero in one of his letters (Ep. ad Att. xi. 17); and is noticed by all the geographers as a still subsisting municipal town. Strabo, however, observes that it was rendered unhealthy by the stagnation of a small river which flowed beneath its walls (v. p. 251); and it was probably, therefore, already a declining place. But it was still one of the eight Praetorian Colonies of Lucania at a comparatively later period; and inscriptions attest its continuous existence throughout the Roman Empire. (Strab. l. c.; Plin. iii. 5. s. 10; Ptol. iii. 1. § 8; Lib. Colon. p. 209; Orell. Inscr. 133, 2492, 3078; Bull. d. Inst. Arch. 1836, p. 52.) In some of these it bears the title of a Colonia; but it is uncertain at what period it attained that rank; it certainly cannot refer to the original Latin colony, as that must have become merged in the municipal condition by the effect of the Lex Julia. We learn from ecclesiastical authorities that it became a bishopric at least as early as the fifth century; and it is probable that its final decay and desolation was owing to the ravages of the Saracens in the tenth century. At that time the episcopal see was removed to the neighbouring town of Capoccio, in an elevated situation a few miles inland.

Paestum was chiefly celebrated in ancient times for its roses, which possessed the peculiarity of flowering twice a year, and were celebrated as surpassing all others in fragrance. (Virg. Georg. iv. 118; Ovid. Met. xv. 708; Propert. iv. 5. 59; Martial. iv. 41. 10, vi. 80, 6; Auson. Isyl. 14. 11.) The roses that still grow wild among the ruins are said to retain their ancient property, and flower regularly both in May and November.

Vol. II.

The site of Paestum appears to have continued wholly uninhabited from the time when the episcopal see was removed till within a very recent period. It was not till the middle of the last century that attention was drawn to the ruins, which are now so celebrated. They can hardly be said to have been then first discovered, as they must always have been a conspicuous object from the Bay of Salerno, and could not but have been known in their immediate neighbourhood, they were certainly unknown to the rest of Europe. Even the diligent Cluverius, writing in 1634, notices the fact that there were ruins which bore the name of Pesto, without any allusion to their character and importance. (Oliver. Ital. p. 1255.) They seem to have been first visited by a certain Count Gasola, in the service of Charles VII., King of Naples, before the middle of the last century, and were described by Antonini, in his work on the topography of Lucania (Naples, 1745), and noticed by Mazzocchi, who has inserted a dissertation on the history of Paestum in his work on the Herenean Tables (pp. 499—513) published in 1754. Before the end of the century they became the subject of the special works of Magnani and Paoli, and were visited by travellers from all parts of Europe. Among these, Swinburne in 1779, has left a very accurate description of the ruins; and their architectural details are given by Wilkins in his Magna Graecia (fol. Cambr. 1807).

The principal ruins consist of the walls, and three temples standing within the space enclosed by them. The whole circuit of the walls can be clearly made out, and they are in many places standing to a considerable height; several of the towers also remain at the angles, and vestiges of the ancient gates, which were four in number; one of these, on the E. side of the town, is nearly perfect, and surmounted by a regularly constructed arch. The whole circuit of the walls forms an irregular polygon, about 3 miles in circumference. The two principal temples stand not far from the southern gate of the city. The finest and most ancient of these is commonly known as the temple of Neptune; but there is no authority for the name, beyond the fact that Neptune, or Poseidon, was unquestionably the tutelary deity of the city which derived from him its ancient name of Posidonia. The temple was hypaethral, or had its cela open to the sky, and is 195 feet long by 79 wide; it is remarkably perfect; not a single column is wanting, and the entablature and pediments are almost entire. The style of architecture is Doric, but its proportions are heavier, and the style altogether more massive and solid than any other extant edifice of the kind. On this account some of the earlier antiquarians disputed the fact of its Greek origin, and ascribed it to the Phoenicians or Etruscans; but there is not a shadow of foundation for this; we have no trace of any settlement on the spot before the Greek colony; and the architecture is of pure Greek style, though probably one of the most ancient specimens of the Doric order now remaining. About 100 yards from the temple of Neptune, and nearer to the south gate, is the second edifice, which on account of some peculiarities in its plan has been called a Basilica, but is unquestionably also a temple. It is of the kind called pseudo-dipteral; but differs from every other ancient building known in having nine columns at each end, while the interior is divided into two parts by a single range of columns running along the centre of the building. It was probably a temple consecrated to two different divinities, or rather, in
fact, two temples united in one. It has 18 columns in each side, and is 180 feet long by 80 in width. The third temple, which is at some distance from the other two, nearer to the N. gate of the town, and is commonly known as the Temple of Ceres or Vesta (though there is no reason for other name), is much smaller than the other two, being only 108 feet in length by 48 in breadth: it presents no remarkable architectural peculiarities, but is, as well as the so-called Basilica, of much later date than the great temple. Mr. Wilkins, indeed, would assign them both to the Roman period; but it is difficult to reconcile this with the history of the city, which never appears to have been a place of much importance under the Roman rule. (Swinburne's Travels, vol. ii. pp. 131—138; Wilkins's Magna Graecia, pp. 55—67.)

The other remains are of little importance. The vestiges of an amphitheatre exist near the centre of the city; and not far from them are the fallen ruins of a fourth temple, of small size and clearly of Roman date. Excavations have also laid bare the foundations of many houses and other buildings, and the traces of a portico, which appear to indicate the site of the ancient forum. The remains of an aqueduct are also visible outside the walls; and numerous tombs (some of which are said to be of much interest) have been recently brought to light.

The small river which (as already noticed by Strabo), by stagnating under the walls of Paestum, rendered its situation so unhealthy, is now called the Salso: its ancient name is not mentioned. It forms extensive deposits of a calcareous stone, resembling the Roman travertin, which forms an excellent building material, with which both the walls and edifices of the city have been constructed. The materials, which caused the site to be wholly abandoned during the middle ages, has already sensibly diminished, since the resort of travellers has again attracted a small population to the spot, and given rise to some cultivation.

About five miles from Paestum, at the mouth of the Silarus or Sele, stood, in ancient times, a celebrated temple of Juno, which, according to the tradition adopted both by Strabo and Pliny, was founded by the Argonauts under Jason (Strab. vi. p. 252; Plin. iii. 5. s. 10). It is probable that the worship of the Argive Hera, or Juno, was brought hither by the Troezennian colonists of Poseidonia. Pliny places the temple on the N. bank of the Silarus; Strabo, probably more correctly, on the S.

The extensive gulf which extends from the promontory of Minerva (the Punta della Campanella) to the headland called Posidium (the Punta di Liocene), and is now known as the Gulf of Salerno, derived its ancient name from the city of Paestum, being called by the Romans Paestanus Sinus, and by the Greeks the gulf of Poseidonia (Ποσειδονι- τις κόλπος). (Strab. v. p. 251; Sinus Paestanum, Plut. iii. 5. s. 10; Mel. ii. 4. § 9; Cic. ad Att. xvi. 6.)

PAESULA (Παεσούλα), a town of the Turdetsan in Hispania Baetica. (Ptol. ii. 4. § 13.) It is identified by Uchert with Salteras, but its site is uncertain.

PAESUS (Παεσός), an ancient town on the coast of Troas, at the entrance of the Propontis, between Lampseac and Parium. (Hom. II. ii. 828; v. 612; Herod. v. 117.) At one period it received colonists from Miletus; but in Strabo's time (xii. p. 589) the town was destroyed, and its inhabitants had transferred themselves to Lampseac, which was likewise a Milesian colony. The town derived its name from the small river Paes, on which it was situated, and now bears the name Beiram-Dere. [L. S.]

PAGALI ([ΠΕΓΑΛΗ). PAGALI (Παγαλή, Arrian, Indc. c. 23) a place on the coast of Gedrosia, to which the fleet of Nearchus came after leaving the river Arabs. It seems probable that it is the same as a place called Segasia or Papia by Philostratus, and which was also in the country of the Oritae (Vit. Apoll. iii. 54). It cannot be identified with any existing spot.

PAGASAE (Παγασαί: also Pagasa, gen. -ας, Plin. iv. s. 15; Mel. ii. 3. § 6; Prop. i. 20. 17; Ekh. Pagasaos, Pagaeaus), a town of Magnesia in Thessaly, situated at the northern extremity of the bay named after it. (Παγασατηκτος κόλπος, Scalas, p. 24; Strab. iv. p. 438; Pagasiας, Dem. Phil. Epit. 159; Pagaseus Sinus, Mel. l. c.; Pagasius, Plin. l. c.) Pagasae is celebrated in mythology as the port where Jason built the ship Argo, and from which he sailed upon his adventurous voyage; hence some of the ancients derived its name from the construction of that vessel (from παγάσαω, but others from the numerous and abundant springs which were found at this spot. (Strab. iv. p. 436.) Pagasae was conquered by Philip after the defeat of Omono-urchus. (Dem. Ol. i. pp. 11, 13; Dio. xvi. 31, where for Παγαί we ought probably to read Παγασαί.)
PAGAESAUS SINUS. On the foundation of Demetrius in n c. 290, Pagassae was one of the towns, whose inhabitants were transferred to the new city; but after the Roman conquest Pagassae was restored, and again became an important place. In the time of Strabo it was the port of Pherae, which was the principal city in this part of Thessaly. Pagassae was 90 stadia from Pherae, and 20 from Jolcos. (Strab. l c.) The ruins of the ancient city are to be seen near Jolco, which has given the modern name to the locality occupied by the ruined remains of the southern heights above Cape Anaphisti, and at the foot of the rocks are many copious sources of water, of which Strabo speaks. But as these springs are rather saline to the taste, the city was provided in the Roman times with water from a distance by means of an aqueduct, the ruined piers of which are still a conspicuous object. (Leake, Northern Greece, vol. iv. p. 368, seq.)

PAGAESAUS SINUS. [PAGASAE.]

PAGRAE (Πάγραι), a town of Syria, placed by Ptolemy in the district of Pieria, near the Syrian gates (v. 15. § 12), but more particularly described by Strabo, as adjoining Gindarus, the acropolis of Cyrhysteis. Pagrae he places in the district of Antochis, and describes as a strong place near the ascent of the Amanus, on the Syrian side of the pass called AMANIDES TYPALAE [Vol. I. p. 113], the Syrian gates of Ptolemy (L. c.). The plain of Antochis, adds Strabo, lies under Pagrae, through which flows the Areus, the Orontes, and the Labata. In this plain is also the dyke of Seleus and the river Oenoceras. Above it is the ridge of Trapezae, so called from its resemblance to a table, on which Ventidius engaged Paramanteis, general of the Parthians. (xvl. p. 754.) The place is easily identified in medieval and modern geography by the aid of Abulfeda and Pococke. Bagros, writes the former, has a lofty citadel, with fountains, and valley, and gardens; it is said to be distant 12 miles from Antochi, and as many from Iskanderin. It is situated on a mountain overlooking the valley of Chareon, which Chareon is distant two stages to the east. Bagros is distant less than a stage from Darbasca, to the south. (Tabula Syriana, p. 120.) Pococke is still more particular in his description. He passed within sight of it between Antochi and Bulas. After passing Ceremost, he turned to the west beyond the hills. "We saw also, about 2 miles to the north, the strong castle of Pagrae on the hills; this was the ancient name of it in the Itinerary [Antonini], in which it is placed 16 miles from Alexandria and 25 from Antochi; which latter is a mistake, for the Jerusalem Journey [calling it Pangres] puts it more justly 16 miles from Antochi. As I have been informed, a river called Sosades rises in the mountains to the west, runs under this place, and falls into the lake of Antochi,"—also called from it Bahel-sodos, otherwise Bakr-apoule, "the White Lake," from the colour of its waters. This Sosades "seems to be the river Arceuthus mentioned by Strabo, immediately after Pagrae, as running through the plain of Antochi. (Observations on Syria, vol. ii. p. 173.) It is numbered 17 on the map of the gulf of Isus. [Vol. I. p. 114.] [G. W.]

PAGUS (Παγός) a hill of Tima, a little to the north of Syrnyn, with a chapel of Nemesis and a spring of excellent water. (Paus. v. 12. § 1.) Modern travellers describe the hill as between 500 and 600 feet high, and as presenting the form of a cone from which the point is cut off. (Hamilton, Researches, i. p. 53, fol.)

PAGYRTIAE (Παγυρτίαι, Ptol. iii. 5. § 22), a people of European Sarmatia, whose position cannot be made out. Schafarik (Slav. Ant. vol. i. p. 211) connects the termination of their name with the word "guna," which the Pois and other Russo-Slavonian stocks use for "gorn," "mountain." [E. B. J.]

PALAChOM (Παλαχόμ), a fortress in the Tanitio Cheronea, built by Selinus, king of the Tauro-Scythians, to resist the attacks of Mithridates and his generals. (Strab. viii. p. 312.) The name, which it seems to have taken from his son Palachus (Strab. pp. 306, 309), still survives in the modern Balakldane, which Dr. Clark (Travels, vol. ii. p. 219) inaccurately supposes to be derived from the Genoese "Bella Clava," "The Fair Harbour." Its harbour was the SYMOLON PORTUS (Συμόλωνος Πόρτος, Strab. vii. pp. 308, 309; Arrian, Persip. p. 20; Ptol. iii. 6. § 2; Plin. iv. 26), or the Cembalo or Cenbalo of the middle ages, the narrow entrance to which has been described by Strabo (L c.) with such fidelity to nature. According to him, the harbour, together with that of Cetars (Cebastopol), constituted by their approach an isthmus of 40 stadia; with this a wall fenced the Lesser Peninsula, having within it the city of Cheronesus The SINUS PORTUS OF Pompianus Bela (ii. 1. § 3), from the position he assigns to it between Cumetopen and the next point to the W., can only agree with Balakldane, which is truly "σαλινον Πόρτος et promontorii duoduo includitur." Dubois de Montperoux (l'usage contre le Caucase, vol. vi. pp. 115, 220), in accordance with his theory of transferring the wanderings of Odysseus to the waters of the Euxine, discovers in Balakldane the harbour of the girt Laestrygones (Odys. x. 80—99); and this opinion has been taken up by more than one writer. It is almost needless to say that the poet's graphic picture of details freshly drawn from the visible world, is as true of other land-locked basins, edged in by cliffs, as when applied to the greyish-blue, or light red Jura rocks, which hem in the entrance to the straits of Balakldane. [E. B. J.]

PALAEG, a town of Thrace, according to Lapie near Mousalitza. (Hist. Ant. p. 368.) [T. H. D.]

PALAEA 1. (Παλαία), a place in the Troad on the coast, 130 stadia from Aenea. (Strab. xiii. p. 614.)

2. (Παλαία κόμη), in Laconia. [Pleiæ.]

PALAEBYLOS (Παλαιβύλος, Strab. xv. p. 755; Παλαιβύλος, Ptol. v. 15. § 21), a town of Phoenicia, which Strabo places after the ClimaX or promontory called AEA-Watta-Salen, forming the N. extremity of the Bay of Keram. The site, which is unknown, was therefore probably between the ClimaX, in the steep cliffs of which it was necessary to cut steps, whence the name—Arceuthus, the river Lycus, among the hills which closely border the shore, and rise to the height of 1000 feet. Ptolemy (L c.) calls it a city of the interior, and the Pen-tinger Table places it 7 M. P. from Berytus, but does not give its distance from Byblos. (Kenrick, Phoenicia, p. 12, London, 1855.) [E. B. J.]

PALERMYNDUS. [Myndus.]

Palaebyleus. [Palaebyledus.]

Palaebitheus, or PALAEIPHARUSALUS, that is either old Phare or Pherae or old Pharsaulus, according to the difference of the readings in the text of Livy (xxxi. 13.).

Palaepolis. [Neapolis.]

I. L. 2
PALAEUS.  
Palaerus (Παλαιρός: Eth. Παλαιρώτιος), a town on the W. coast of Acanthia, on the Ionian sea, which is placed by Strabo between Leucus and Alyzia. Its exact site is unknown. Leake places it in the valley of Livadi. In the first year of the Peloponnesian War (ib. c. 431) Palaeus was in alliance with the Athenians; and when the latter people took the neighbouring town of Sullium, which was a Corinthian colony, they gave both it and its territory to the inhabitants of Palaeus. (Thuc. ii. 30; Strab. x. pp. 450, 459.)

PALAECIESIS. [Scoptsis.]  
Palaesimundum (Plin. vi. 22. s. 24), a great town in the ancient Taprobane (Ceylon), an account of which was given to the Romans by Annius Plancus, who spent six months there during the reign of the emperor Claudius. According to him, it was situated on a river of the same name, which, flowing from a great inland lake, entered the sea by three mouths. It is probable that it is represented by the present Trincomalee, in the neighbourhood of which are the remains of enormous ancient works for the regulation of the course of the river—now called the Mahawil-Ganga. (Brooke, Geogr. Journ. vol. iii. p. 223.) The name occurs under the form Phnres. (ib. cap. 1.)

PALAESTINA.  
from the very earliest period, and during the time of the Israelite kingdom (Exod. xiii. 17); although it would appear that this district was partially occupied by the cognate branches of the Canaanites. (Gen. x. 14, 19.) It afterwards came to be used of „the great sea” in general, and that are the sites of west of the Jordan, but also to the east, as far as the latter limits of the children of Israel; and in this wider acceptation it will be convenient here to adopt it; although it deserves to be noted that even so late as Josephus the name Palæstina was occasionally used in its more restricted and proper sense, viz. of that part of the coast inhabited of old by the Philistines. (See the passages referred to in Ieland, p. 41, who devotes the nine first chapters of his work to the names of Palestine, pp. 1—51.)

I. GENERAL BOUNDARIES, SOIL, CLIMATE.  
The general boundaries of Palestine, in this wider acceptation of the name, are clearly defined by the Mediterranean on the west, and the great desert, now called the Hauran, on the east. [HAURAN.] The country, however, on the east of Jordan was not originally designed to form part of the land of Israel; which was to have been bounded by the Jordan and its inland lakes. (Num. xxxiv. 6, 10—12; comp. xxxvi.) The northern and southern boundaries are not so clearly defined; but it is probable that a more careful investigation and a more accurate survey of the country than has hitherto been attempted might lead to the recovery of many of the sites mentioned in the sacred books, and of natural divisions which might help to the elucidation of the geography of Palestine. On the south, indeed, recent investigations have led to the discovery of a well-defined mountain barrier, forming a natural wall along the south of Palestine, from the southern bay of the Dead Sea to the Mediterranean, along the line of which, at intervals, may be found traces of the names mentioned in the borders in the books of Moses and Joshua, terminating on the west with the river of Egypt (Wady-el-Arish) at Rhinocera. (Num. xxxiv. 3—5; comp. Josh. xv. 1—4; Williams, Holy City, vol. i., appendix i., note 1, p. 463—468.) On the northern border the mention of Mount Her is perplexing; the point on the coast of Galilee, especially if Hamath or Zedad determined. (Num. xxxvi. 7, 8; comp. Ezek. xlvi. 15, 16.) But whatever account may be given of the name Her in the northern border of Palestine, the mention of Hermon as the northern extremity of the Israelites' conquests in Deuteronomy (iii. 9, v. 48) would point to that rather than to Lebanon, which Eland conjectures, as the mountain in question; while the fact that Sisera is assigned to the tribe of Asher (Judges i. 13, 18) would point to a boundary which could be fixed north of that border town of the Canaanites. (Gen. x. 19; Josh. xix. 28.) The present Hamah, near to Homs (Lonca), is much too far north to fall in with the boundary of Palestine, and it must be conceded that we have not at present sufficient data to enable us to determine its northern limits. (Eland, lib. i. cap. 23, pp. 113—123.) To this it must be added that the limits of Palestine varied at different periods of its history, and according to the views of different writers (ib. cap. 26, pp. 124—127), and that the common error of confounding the limits of the possessions of the Israelites with those assigned to their conquests has still further embarrassed the question. Assuming, however,
PALAESTINA.

Palaestina. 517

which, under the name of Roman Arabia, had Bozra for its capital. The inferior tracts are frequently coated with pebbles and black flints, having little, and sometimes no vegetation. Such are the greater portions of the tracts southwest of Gaza and Hebron, and that part of the palmashik which borders upon Arabia Deserta, where scarcity of water has produced a wilderness, which at best is only capable of nourishing a limited number of sheep, goats, and camels; its condition is the worst in summer, at which season little or no rain falls throughout the eastern parts of Syria.

Owing to the inequality of its surface, Palestine has a great variety of temperature and climate, which have been distributed as follows.—(1) The cold; (2) warm and humid; (3) warm and dry. The first belongs principally to the Lebanon range and to Mount Hermon, in the extreme north of the country, but is shared in some measure by the mountain districts of Nobis, Jerusalem, and Hebron, where the winters are often very severe, the springs mild, and a refreshing breeze tempers the summer heat. The second embraces the slopes adjoining the coast of the Mediterranean, together with the adjacent plains of Akka, Jaffa, and Gaza; also those in the interior, such as Esdraelon, the valley of the Jordan, and part of Perea. The third prevails in the south-eastern parts of Syria, the contiguity of which to the arid deserts of burning sand, exposes them to the furnace-blasts of the sirocco untempered by the humid winds which prevail to the west of the central highlands, while the depression of the southern part of the Jordan valley and the Dead Sea gives to the plains of Jericho and the districts in the vicinity of that sea an Egyptian climate. (Col. Chesney. Expedition to the Euphrates, &c., vol. i. pp. 533—557.)

II. GEOLOGY, NATURAL DIVISIONS, AND PRODUCTIONS.

The general geographical position of Palestine is well described in the following extract:—That great mountain chain known to the ancients under the various names of Idaus, Caucasus, and Taurus, which extends due east and west from China to Asia Minor; this chain, at the point where it enters Asia Minor, throws off to the southward a subordinate ridge of hills, which forms the barrier between the Western Sea and the plains of Syria and Assyria. After pursuing a tortuous course for some time, and breaking into the parallel ridges of Libanus and Anti-libanus, it runs with many breaks and diversifications through Palestine and the Arabian peninsula to the Indian Ocean. One of the most remarkable of these breaks is the great plain of Esdraelon, the battle-field of the East. From this point ... the ridge or mountainous tract extends, without interruption, to the south end of the Dead Sea, or further. This whole tract rises gradually towards the south, forming the hill country of Ephraim and Judah, until, in the vicinity of Hebron, it attains an altitude of 3250 feet above the level of the Mediterranean. At a point exactly opposite to the extreme north of the Dead Sea, i.e. due west from it, where the entire ridge has an elevation of about 2710 feet, and close to the sable of the ridge, a very remarkable feature of this rocky process, so to call it, occurs. The appearance is as if a single, but vast wave of this sea of rock, rising and swelling gradually from north to south, had been suddenly checked in its advance, and, after a
considerable subsidence below the general level, left standing perfectly isolated from the surrounding mass, both as to its front and sides. Add, that about the middle of this wave there is a slight depression, channelling it from north-west to south-east, and you have before you the natural limestone rock which forms the site of Jerusalem." (Christian Remembrancer, No. lvii. N.S., vol. xviii. pp. 425, 426.) A few additions to this graphic sketch of the geography of Palestine will suffice to complete the description of its main features, and to furnish a nomenclature for the more detailed notices which must follow. This addition will be best supplied by the naturalist Russegger, whose travels have furnished a desideratum in the geography of Palestine. It will, however, be more convenient to consider below his third division of the country, comprehending the river Jordan and the Dead Sea, with its volcanic phenomena, as those articles have been reserved for this place, and the historical importance of them demands a fuller account than is given in his necessarily brief summary. He divides the country as follows:—

1. The fruitful plain extending along the coast from Gaza to Joppa, north-east of Beiruat.

2. The mountain range separating this plain from the valley of the Jordan, which, commencing with Jebel Khalil, forms the rocky land of Judaea, Samaria, and Galilee, and ends with the knot of mountains from which Libanus and Antillibanius extend towards the north.

3. The valley of the Jordan, with the basins of the lake of Tiberias and the Dead Sea, as far as Wady-el-Ghor, the northern end of Wady-el-Arada.

4. The country on the east of the Jordan, as far as the parallel of Damascus.

(1.) The part of the coast plain extending from the isthmus of Suez between the sea and the mountains of Judaea and Samaria, and bounded by the ridge of Carmel, belongs, in regard to its fertility, to the most beautiful regions of Syria. The vegetation in all its forms is that of the warmer parts of the shores of the Mediterranean; in the southern districts the palm flourishes.

The mountains of Judaea and Samaria, which rise to the height of 2000 feet above the sea, follow the line of the plain until they meet the ridge of Carmel. The coast district belongs partly to the older nappes of the marine deposits, and partly to the chalk and Jura formations of the neighbouring mountainous country.

To the north of Carmel the hilly arable land occurs again.

Still further north, with the exception of a few strips of land about Acre, Sur, Scida, Beiruat, &c., the coast plain becomes more and more narrowed by the mountains, which extend towards the sea, until there only remains here and there a very small strip of coast.

Several mountain streams, swollen in the rainy season to torrents, flow through deep narrow valleys into the plain, in part fertilising it; in part, where there are no barriers to oppose their force, spreading devastation far and wide. Of these the principal are Nahal-el-Kelb, Nahal-el-Damur, the Auifi, the Saharanah, Nahal-el-Kistinieh, Nahal-Mukutta, &c.

The mountain sides of Lebanon, from Scida to Beiruat, are cultivated in terraces; the principal products of this kind of cultivation is the vine and mulberry; the secondary, figs, oranges, pomegranates, and, in general, the so-called tropical fruits.
The great Hermon (Jebel-es-Sheikh) rises high above the other mountains. The valleys are no longer inhospitable ravines; they become long and broad, and partly form plains of large extent, as Esdraelon. A beautiful pastoral land extends to the heights of the mountains. Considerable mountain streams water the valleys.

(3.) To the east of this mountain chain lies the valley of the Jordan, the most remarkable of all known depressions of the earth, as well on account of its great length as of its almost incredible depth. [See below, III. and IV.]

(4.) On the east of the Dead Sea and the Jordan valley, with the sea of Tiberias, rises like a wall a steep mountain range of Jura limestone. On the top of this lies a broad plateau inhabited by nomadic Arabs and stationary tribes. The southern part of these highlands is known by the name of Jebel Belka; further north, beyond the Zerko, in the neighbourhood of the lofty Ajlôn, it meets the highlands of E'Z-Zowit; and still further north begins the well-known plateau El-Heerus, which, inhabited chiefly by Arabs and Druses, is bounded by Antilibanos and the Syrian desert, joins the plateau of Damascus, and there reaches a height of 2304 Paris feet above the sea.

III. THE JORDAN.

The most celebrated river of Judaea, and the only stream of any considerable size in the country. Its etymology has not been successfully investigated by the ancients, who propose a compound of lor and Dan, and imagine two fountains bearing these names, from which the river derived its origin and appellation. S. Jerome (Onomast. s. v. Dan) derives it from Jor, which he says is equivalent to ḫelī, fluvius, and Dan the city, where one of its principal fountains was situated. But there are serious objections to both parts of this derivation. For in the first place ḫelī is the Hebrew form of the equivalent for fluvius, while the proper name is always ḫelī, and never ḫelīn, as the proposed etymology would require; while the name Dan, as applied to the city Laish, is five centuries later than the first mention of the river in the book of Genesis; and the theory of anticipation in the numerous passages of the Pentateuch in which it occurs is scarcely admissible (See Judges, xviii.; Gen. xiii. 10, xxxii. 10; Josh. xi. 23), although Dan is certainly so used in at least one passage (Gen. xiv. 14). Besides which, Reland has remarked that the vowel always written with the second syllable of the river is different from that of the monosyllabic city, ḫelī, and not ḫelīn. He suggests another derivation from the root ḫel, descendit, inhabit, so denoting a river, as this, in common with other rivers which he instances, might be called=n ḫelī (Robinson, Palæstina, p. 263), and as Josephus does call it νόταρα, without any distinctive name (Ant. v. 1. § 22), in describing the borders of Issachar. This is also adopted by Gesenius, Lee, and other moderns. (Lee, Lexicon, s. v.)

The source of this river is a question involved in much obscurity in the ancient records; and there is a perplexing notice of Josephus, which has added considerably to the difficulty. The subject was fully investigated by the writer in 1842, and the results are stated below.

The Jordan has three principal sources: (1) at Banias, the ancient Caesarea Philippi; (2) at Tell-el-Kadi, the site of the ancient Dan, about two miles to the west of Banias; (3) at Hashe, some distance to the north of Tell-el-Kadi. These several sources require distinct notice.

1. The fountain at Banias is regarded by Josephus and others as the proper source of the Jordan, but not with sufficient reason. It is indeed a copious fountain, springing out from the earth in a wide and rapid but shallow stream, in front of a cave formerly dedicated to Pan, but not at all in the manner described by Josephus, who speaks of a yawning cleft in the cave itself, and an unfathomable depth of still water, of which there is neither appearance nor tradition at present, the cave itself being perfectly dry. (Bell. Jud. i. 21. § 3.) He states, however, that it is a popular error to consider this as the source of the Jordan. Its true source, he subsequently says (iii. 9. § 7), was ascertained to be at Phihla, which he describes as a circular pool, 120 stadia distant from Caesarea, not far from the road that led to Trachonitis, i.e. to the east. This pool, he says (named from its form), was always full to the brim, but never overflowed, and its connection with the fountain at Paneas was discovered by Herod Philip the tetrarch in the following manner:—He threw chaff into the lake Phihla, which made its appearance again at the fountain of Paneas. This circular, goblet-shaped pool, about a mile in diameter, is now called Birket-er-Ram. It is situated high in a bare mountain region, and strongly resembles the crater of an extinct volcano. It is a curious error of libly and Maugles to represent the surrounding hills as "richly wooded" (Travels, p. 287). The water is stagnant, nor is there any appearance or report among the natives of any stream issuing from the lake, or of any subterranean communication with the fountain of Paneas. The above-named travelers correctly represent it as having no apparent supply or discharge. The experiment of Philip is therefore utterly unintelligible, as there is no stream to carry off the chaff. (For a view of Phihla, see Trall's Josephus, vol. ii. p. 46, and lxxx. &c.)

2. The second fountain of the Jordan is at Tell-el-Kadi. [DAN.] This is almost equally copious with the first-named; and issues from the earth in a rapid stream on the western side of the woody hill, on which traces of the city may still be discovered. The stream bears the ancient name of the town, and is called Naher Iodlan, "the river Jordan," sometimes misunderstood by travellers as the ancient name of the river, which certainly no longer exists among the natives. This is plainly the Daphne of Josephus, "having fountains, which, feeding what is called the little Jordan, under the temple of the golden calf, discharge it into the great Jordan." (Bell. Jud. iv. 1. § 1, conf. Ant. viii. 8. § 4; and see Reland, Palæstina, p. 263.)

3. A mile to the west of Tell-el-Kadi, runs the Naher Hashe, the Hasheva river, little inferior to either of the former. It rises 6 or 8 miles to the north, near the large village of Hasheva, and being joined in its course by a stream from Mount Hermon, contributes considerably to the bulk of the Jordan. It is therefore somewhat remarkable that this tributary has been unnoticed until comparatively modern times. (Robinson, Bib. Res. vol. iii. p. 354, note 2.)

These three principal sources of the Jordan, as the natives affirm, do not intermingle their waters until they meet in the small lake now called Bahr-
Palaestina.

el-Huleh, "the waters of Merom" of Scripture (Josh xi. 5, 7), the Semachonitis Pales of Josephus (Ant. v. 5 § 1, Bell. Jud. iii. 12 § 7, iv. 1 § 1); but the plain between this lake and Panecas is hard to be explored, in consequence of numerous fountains and the rivulets into which the main streams are here divided. (Robinson, l. c. pp. 353, 354; Bibliotheca Sacra, 1843, pp. 12, 13.)

This point was investigated by Dr. Robinson in 1832, and he found that both the Ledas and the Huleh receive their waters from the Jordan, some distance above the lake, to which they run in one stream. (Journal R. Geog. Soc. vol. xxiv. p. 25, 1855.)

This region, now called Merj-el-Huleh, might well be designated Elas or Ἐλας τοῦ Ὠρώπου, "the marshes of Jordan," by which name, however, the author of the first book of Maccabees (1 Macc. ix. 42) and Josephus (Ant. xiii. 1 § 3) would seem to signify the marshy plain to the south of the Dead Sea. The dead reaches of the Bahr and Aríd-el-Huleh, run off towards the south in one current towards the sea of Tiberias [Tiberias Mare], a distance, according to Josephus, of 120 stadia. They flow off at the south-western extremity of this lake, and passing through a district well described by Josephus as a great desert (πολύνη ρηματα, B. J. iii. 9. § 7), now called by the natives El-Ghor, lose themselves in the Dead Sea.

Attention has been lately called to a peculiar phenomenon exhibited by this river, the problems relating to which have been solved twice within the last few years by the enterprise of English and American sailors. In the spring of the year 1838 a series of barometrical observations by M. Bertou gave to the Dead Sea a depression of 1374 feet below the level of the Mediterranean, and to the sea of Tiberias a depression of 755 feet, thus establishing a fall of 619 feet from the three two lakes. At the close of the same year the observations were repeated by Rassegger, with somewhat different results; the depression of the Dead Sea being given as 1429 feet, the sea of Tiberias 666 feet, and the consequent fall of the Jordan between the two, 763 feet. Heri von Wildenbruch repeated the observations by barometer in 1845, with the following results:—Depression of the Dead Sea 1446 feet, of the sea of Tiberias 845 feet, difference 600 feet. He carried his observations further north, even to the source at Tell-el-Kadi, with the following results:—At Jacob's bridge, about 2/3 miles from the southern extremity of Bahr Huleh, he found the Jordan 89.9 feet above the Mediterranean; at the Bahr Huleh 100 feet; and at the source at Tell-el-Kadi 537 feet; thus giving a fall of 1983 feet in a direct course of 117 miles;—the most rapid fall being between the bridge of Jacob and the sea of Tiberias, a distance of only 8 miles, in which the river falls 845 feet, or 116 feet per mile. Results so remarkable did not find easy credence, although they were further tested by a trigonometrical survey, conducted by Lient. Symonds of the Royal Engineers, in 1841, which confirmed the barometrical observations for the Dead Sea, but were remarkably at variance with the statement for the sea of Tiberias, giving to the former a depression of 1312 feet, and to the latter of 328 feet, and a difference of level between the two of 984 feet. The whole subject is ably treated by Mr. Petermann, in a paper read before the Geographical Society, chiefly in answer to the strictures of Dr. Robinson, in a communication made to the same society,—both of which papers were subsequently published in the journal of the society (vol. xviii. part 2, 1848). In consequence of the observations of Dr. Robinson (Bib. Rev. vol. ii. p. 595. n. 4, and vol. iii. p. 311, n. 3), the writer in 1842 followed the course of the Jordan from the sea of Tiberias to the sea of Huleh, and found it to be a continuous torrent, rushing down in a narrow rocky channel between almost precipitous mountains. It is well described by Herr von Wildenbruch, who explored it in 1845, as a "continuous waterfall" (cited by Petermann, l. c. p. 103).

The lower Jordan, between the sea of Tiberias and the Dead Sea, was subsequently explored by Lient. Molyneux in 1847, and by an American expedition under Lient. Lynch in the following year. The following valley of the Jordan is a grottic ascent of Lient. Molyneux, also contained in the number of the Royal Geographical Society's Journal (pp. 104—123) already referred to, will give the best idea of the character of this interesting river, hitherto so little known. Immediately on leaving the sea of Tiberias they found the river upwards of 100 feet broad and 4 or 5 deep; but on reaching the ruins of a bridge, about 2 miles down the stream, they found the passage obstructed by the ruins, and their difficulties increased; for seven hours they scarcely ever had sufficient water to swim the boat for 100 yards together. In many places the river is split into a number of small streams, and consequently without much water in any of them. Occasionally the boat had to be carried upwards of 100 yards over rocks and through thorny bushes; and in some places they had high, steep, sandy cliffs all along the banks of the river. In other places the boat had to be carried on the backs of the camels, the stream being quite impracticable. The Ghor, or greater valley of the Jordan, is a grottic ascent of Lient. Molyneux, 8 or 9 miles broad at its upper end; and this space is anything but flat—nothing but a continuation of bare hills, with yellow dried-up weeds, which look when distant like corn stubbles. These hills, however, sink into insignificance when compared to the ranges of the mountains which enclose the Ghor; and it is therefore only by comparison that this part of the Ghor is entitled to be called a valley. Within this broader valley is a smaller one on a lower level, through which the river runs; and its winding course, which is marked by luxurious vegetation, resembles a gigantic serpent twisting down the valley. So tortuous is its course, that it would be quite impossible to give any account of its various turnings in its way from the lake of Tiberias to the Dead Sea. A little above Beisan the stream is spanned by an old curiously formed bridge of three arches, still in use, and here the Ghor begins to wear a much better and more fertile aspect. It appears to be composed of two different platforms: the upper one on either side projects from the foot of the hills, which form the great valley, and is tolerably level, but barren and uncultivated. It then falls away in the form of rounded sand-hills, or whitish perpendicular cliffs, varying from 150 to 200 feet in height, to the lower plain, which should more properly be called the valley of the Jordan. The river here and there washes the foot of the cliffs which enclose this smaller valley, but generally it winds in the most
tormentuous manner between them. In many places these cliffs are like walls. About this part of the Jordan the lower plain might be perhaps 15 or 2 miles broad, and so full of the most rank and luxuriant vegetation, like a jungle, that in a few spots only can anything approach its banks. Below Belzen the higher terraces on either side begin to close in, and to narrow the fertile space below; the hills become irregular and only partly cultivated; and by degrees the whole Ghor resumes its original form. The zigzag course of the river is still pretty marked by lenses of green foliage, and it veers from the cliffs on one side to those on the other. This general character of the river and of the Ghor is continued to the Dead Sea, the mountains on either side of the upper valley approaching or receding, and the river winding in the lower valley between bare cliffs of soft limestone, in some places not less than 300 or 400 feet high, having many shallows and some large falls. The American expedition added little to the information contained in the paper of our enterprising countryman, who only survived his exploit one month. Lieut. Lynch's report, however, fully confirms all Lieut. Molyneux's observations; and he sums up the results of the survey in the following sentence:—"The great secret of the depression between lake Tiberias and the Dead Sea is solved by the tormentous course of the Jordan. In a space of 60 miles of latitude and 4 or 5 miles of longitude, the Jordan traverses at least 200 miles. . . . We have plumbed down twenty-seven threatening rapids, besides a great many of lesser magnitude." (Lynch, Narrative of the United States' Expedition to the Jordan, &c., p. 265.) It is satisfactory also to find that the trigonometrical survey of the officers attached to the American expedition confirms the results arrived at by Lieut. Symonds. (Dr. Robinson, Theological Review for 1848, pp. 764-768.)

It is obvious that these phenomena have an important bearing on the historical notices of the river; and it is curious to observe (as Mr. Petermann has remarked), in examining the results of De Berton, Russeger, and Von Wahlenbruch, that the depression both of the Dead Sea and of the lake of Tiberias increases in a chronological order (with only one exception); which may perhaps indicate that a continual change is going on in the level of the entire Ghor, especially as it is well proved that the whole Jordan valley, with its lakes, not only has been but still is subject to volcanic action; as Russeger has remarked that the mountains between Jerusalem and the Jordan, in the valley of the Jordan itself, and those around the Dead Sea, bear unequivocal evidence of volcanic agency, such as dissections, upheaving, faults, &c., proofs of which agency are still notorious in continual earthquakes, hot springs, and formations of asphalt.

One of the earliest historical facts connected with this river is its periodical overflow during the season of barley harvest (Josh. iii. 15; 1 Chron. xii. 15; Jeremiah, xii. 5; see Blunt's Undesignated Coincidences, pp. 113, 114); and allusion is made to this fact after the captivity. (Ecclesi. xxiv. 26; Aristeus, Epist. ad Philocratem.) The river in the vicinity of Jericho was visited by the writer at all seasons of the year, but he never witnessed an overflow, nor were the Bedouins who inhabit its banks acquainted with the phenomenon. The American expedition went down the river in the month of April, and were off Jericho at Easter, yet they wit-
IV. THE DEAD SEA.

Of all the natural phenomena of Palestine, the Dead Sea is that which has most attracted the notice of geographers and naturalists both in ancient and modern times, as exhibiting peculiarities and suggesting questions of great interest in a geological point of view.

Names.—The earliest allusion to this sea, which, according to the prevailing theory, refers to its original formation, is found in the book of Genesis (xiv. 3), in which it is identified with the vale of Sodom, and denominated “the Salt Sea” (גֶּדֶּשׁ אֶרֶץ תַּוְּדָם, LXX.); comp. Numb. xxxiv. 3, 12); which Salt Sea is elsewhere identified with “the sea of the plain” (Deut. iii. 17, iv. 49; Josh. iii. 16). It is believed that the prophetic allusion (chap. xiv. 7, 8), and Ezekiel (xlii. 18), the “former,” or “eastern sea.” Its common name among the classical authors, first found in Diodorus Siculus (inf. cit.), and adopted by Josephus, is “Asphaltitis Lacus” (Ἀσφαλτιτις λίμνη), or simply Ἡ Ἀσφαλτις. The name by which it is best known among moderns is the authority of Justin (xxxvi. 3 § 6) and Pausanias (v. 7 § 45), who call it ὁ Σαλάσσα ἡ κόρα, “Mortum Mare.” Its modern native name is Bohr Lüt, “the Sea of Salt,”—therein perpetuating the memorial of the catastrophe to which it owes its formation, or by which it is certain that its features were considerably altered and modified. The name assigned it by Strabo must be referred to a slip of the author; for it is too much assumed with Falconer that the geographer had written Σαλάσσης λίμνη, when all the copies read Σαλάσσης λίμνη.

So copious are the modern notices of this remarkable inland sea, that it would be vain to attempt even an abridgment of them; and the necessity for doing so is greatly lessened by the late successful surveying expedition, conducted by Lieut. Lynch of the American navy, whose published narrative has set at rest many questions connected with its physical formation. The principal ancient writers will be quoted in detail and in chronological order, that it may appear how far they have borrowed one from another, or may be regarded as independent witnesses. Their notices will then be substantiated or controverted by modern writers. The questions centre in the formation of the sea, its volcanic origin, and the other igneous phenomena in the country, will be reserved for another chapter.

The earliest extant writer who has noticed at any length the marvels of the Dead Sea, is Diodorus Siculus (ii. c. 43), who has twice described it; first in his geographical survey of the country (ii. 45), and subsequently in his account of the expedition of Demetrius against the Nabataeans (xx. 98), to which last account a few particulars are added, which were omitted in the earlier book.

"We ought not to pass over the character of this lake (Asphaltites) unmentioned. It is situated in the midst of the saltary of Iidmaea, in length extending about 500 stadia, and in breadth about 60. Its water is very salt, and of an extremely noxious smell, so that neither fish nor any of the other ordinary marine animals can live in it: and although great rivers remarkable for their sweetness flow into it, yet by its smell it counteracts their effect. From the centre of it there rises yearly a large mass of solid bitumen, sometimes more than 3 plethra in size, sometimes a little less than one plethron.* For this reason the neighbouring barbarians usually call the greater, bull, and the lesser, calf. The bitumen floating on the surface of the water appears at a distance like an island. The time of the rising of the bitumen is known about twenty days before it takes place; for around the lake to the distance of several stadia the smell of the bitumen spreads with a noxious air, and all the silver, gold, and brass in the neighbourhood loses its proper colour; which, however, returns again as soon as all the bitumen is ejected. The fire which burns beneath the ground and the stench render the inhabitants of the neighbouring country sickly and very short-lived. It is nevertheless well fitted for the cultivation of palms, wherever it is traversed by serviceable rivers or fountains available for the purposes of irrigation. In a neighbouring valley grows the plant called bahrum, which yields an abundant income, as the plant grows in no other part of the world, and it is much used by physicians as a medicine.

"The bitumen which rises to the surface is carried off by the inhabitants of both sides of the lake, who are hostile inclined towards each other. They carry away the bitumen in a singular manner without boats: they construct large rafts of reeds, which they launch into the lake. Upon each of these not more than three can sit, two of whom row with ears attached to the raft, and the third, armed with a bow, drives off those who are sailing up from the opposite side, or who venture to use violence; but when they come near to the bitumen they keep on it with axes in their hands, and, cutting it like soft stone, they load their raft, and then return. If the raft break and any one fall off, even though he may be unable to swim, he does not sink as in other water, but floats as well as one who could swim; for this water naturally assimilates any weight capable of expansion, or which contains air, but not solid substances, which have a density like that of gold, silver, and lead, and like: but even these sink much more slowly in this water than they would if they were thrown into any other lake. This source of wealth the barbarians possess, and they transport it into Egypt and there sell it for the purposes of embalming the dead; for unless this bitumen is mixed with the other spices, the bodies will not long remain undecayed."
Egypt (i. 30). The mistake is the more unaccountable, as he not only describes the Dead Sea in a manner which shows that he was thoroughly acquainted with its peculiarities, but also cites the opinions of more ancient authors, who had described and attempted to explain its phenomena. His notice is peculiarly interesting from the accounts which he gives of the formation of the bitumen, and the other indications which he mentions in the vicinity of the operation of volcanic agency, of which more will be said in the following chapter. The native traditions of the inhabitants of the cities of the plain, and the still existing monuments of their overthrow, are facts not mentioned by the earlier historian.

"The lake Sirbonis is of great extent; some have stated its circumference at 1000 stadia; it stretches along near the sea-coast, in length a little more than 200 stadia, deep, and with exceedingly heavy water, so that it is not necessary to swim, but one who advances into it up to his waist is immediately borne up. It is full of asphalt, which it vomits up at uncertain seasons from the midst of the water, as the gatherer with bubbles like those of boiling water, and the surface, curving itself, assumes the appearance of a crust. Together with the asphalt there rises much soot, smoky, and invisible to the sight, by which brass, silver, and everything shining, even gold, is tarnished; and by the tarnishing of their vessels the inhabitants of the neighbourhood know the time when the asphalt begins to rise, and make preparations for collecting it by constructing rafts of reeds. Now the asphalt is the soil of the earth melted by heat, and bubbling up, and again changed into a solid mass by cold water, such as that of the lake, so that it requires to be cut; it then floats on the surface by reason of the nature of the water, which, as I have said, is such that a person who goes into it need not swim, and indeed cannot sink, but is supported by the water. The people then sail up on the rafts, and cut and carry off as much as they can of the asphalt: this is what takes place. But Posidonius states that they being sorcerers use certain incantations, and contrive the asphalt by pouring over it urine and other foul liquids, and then pressing them out. After this they cut it; unless perhaps urine has the same properties as in the bladder of those who suffer from stone. For gold-solder (χρυσοκολλα, borax) is made with the urine of boys. In the midst of the lake the phaenomenon may reasonably take place, because the source of the fire, and that of the asphalt, as well as the principal quantities of it, are in the middle; and the eruption is uncertain, because the movements of fire have no order known to us, as is that of many other gases (πνεύματα). This also takes place in Apollonia of Epeirus. There are many other evidences also of the existence of fire beneath the ground; for several rough burnt rocks are shown near Massa [Masada], and caves in several places, and earth formed of ashes, and drops of pitch distilling from the rocks, and boiling streams, with an unpleasant odour perceptible from a distance, and houses overthrown in every direction, so as to give probability to the legends of the natives, that formerly thirteen cities stood on this spot, of the principal of which, namely, Sodoma, ruins still remain about 60 stadia in circumference; that the lake was formed by earthquakes and the ebulition of fire, and hot water impregnated with bitumen and sulphur; that the rocks took fire; and that some of the cities were swallowed up, and others were desert by those of their inhabitants who could escape. Pharaoh gives a different account, namely, that the country being marshy, the greater part of it was covered like the sea by the burstest of the waters. Moreover, in the territory of Gadara, there is some pernicious lake-water, which when the cattle drink, they lose their hair, hoofs, and horns. At the place named Tarichiae the lake affords excellent salt fish; it also produces fruit-trees, resembling apple-trees. The Egyptians use the asphalt for embalming the dead." (Lib. xvi. pp. 763, 764.)

Another confusion must be remarked at the close of this passage, where Strabo evidently places Tarichiae on the Dead Sea, whereas it is situated on the shores of the sea of Tiberias.

The next writer is the Jewish historian, who adds indeed little to the accurate information conveyed by his predecessors; but his account is evidently independent of the former, and states a few facts which will be of service in the sequel. Josephus wrote about A. D. 71.

"It is worth while to describe the character of the lake Asphaltites, which is salt and unproductive, as I mentioned, and of such buoyancy that it sustains even the heaviest substances thrown into it, and that even one who endeavours to sink in it cannot easily do so. For Vespasian, having come to examine it, ordered some persons who could not swim to be bound with their hands behind their backs, and to be cast into the deep; and it happened that all of them floated on the surface as if they were borne up by the force of a blast. The changes of its colour also are remarkable; for thrice every day it changes its appearance, and reflects different colours from the rays of the sun. It also emits in many places black masses of bitumen, which float on the surface, somewhat resembling headless bulls in appearance and size. The workmen who live by the lake row out, and, laying hold of the solid masses, drag them into their boats; but when they have filled them they do not find it easy to cut the bitumen, for, by reason of its tenacity, it heat adheres to the mass until it is detached by means of the menstrual blood of women or urine, to which alone it yields. It is used not only for shipbuilding but also for medicinal purposes: it is mixed with several drugs. The length of this lake is 580 stadia, as it extends as far as Zeara of Arabia; its breadth is 150 stadia. On the borders of the lake lies the territory of Sodom, formerly a flourishing country, both on account of the abundance of its produce and the number of its cities; now it is all an arid waste. It is said that it was destroyed by lighting, on account of the wickedness of its inhabitants. The traces of the heavenly fire and the ruins of five cities may still be seen; and ashes are found even in the fruits, which are of an appearance resembling the edible kinds, but which, when plucked, turn into smoke and ashes. Such confirmation do the legends concerning the land of Sodom receive from actual observation." (Josephus, B. J. iv. 8, § 4.)

The Dead Sea and its marvels was a subject suited to the inquiring spirit of the naturalist; and Pliny's account, though brief, is remarkably clear and accurate, except that, in common with all writers, he greatly overstates its size. He wrote probably too soon (A.D. 74) after Josephus to avail himself of his account, and may, therefore, be regarded as an independent authority.

"This lake produces nothing but bitumen, from
which circumstance its name is derived. It receives no animal body; bulls and camels float in it; and this is the origin of the report that nothing sinks in it. In length it exceeds 100 miles; its greatest breadth is 25 miles, its least 6. On the east of it lies Arabia Nomadum, on the south Machmous, formerly the second fortress of Judæa after Jerusalem. On the same side there is situated a hot-spring, possessing medicinal properties, named Callirrhöe, indicating by its name the virtues of its waters." (Hist Nat. lib. v. 16.)

The last author who will here be cited is Tacitus, whose account may be given in the original. He appears in this, as in other passages, to have drawn largely on Josephus, but had certainly consulted other writers. He wrote A.D. 97.

This sea is subsequently noticed by Gaius (A. D. 164) and Pausanias (cir. A. D. 174), but their accounts are evidently borrowed from some of these above cited from Greek, Jewish, and Latin writers; in illustration of whose statements reference will now be made to modern travellers, who have had better opportunities of testing the truth than were presented to them; and it will appear that those statements, even in their most marvellous particulars, are wonderfully trustworthy; and that the hypotheses by which they endeavoured to account for the phenomena of this extraordinary lake are confirmed by the investigations of modern science.

1. General Remarks.—It is deeply to be regretted that the results arrived at by the American exploring expedition, under Lieut. Lynch, have been given to the world only in the loose, unstatic and thoroughly unsatisfactory notes scattered through the personal narrative published by that officer; and that his official report to his government has not been made available for scientific purposes. The few meagre facts worth chronicling have been extracted in a number of the Bibliotheca Sacra, from which they are here copied. (Vol. v. p. 767, and vol. vi. p. 396.) The distance in a straight line from the fountain "Ain-el-Feshkahh," on the west, directly across to the eastern shore, was nearly 8 statute miles. The soundings gave 69 feet as the greatest depth. Another line was run diagonally from the same point to the south-east, to a chasm forming the outlet of the hot-springs of Callirrhöe. The bottom of the northern half of the sea is almost an entire plain. Its meridional lines at a short distance from the shore scarcely vary in depth. The deepest soundings thus far are 188 fathoms, or 1128 feet. Near the shore the bottom is generally an incrustation of salt; but the intermediate one is soft, with many rectangular crystals, mostly cubes, of pure salt. The southern half of the sea is as shallow as the northern one is deep, and for about one-fourth of its entire length the depth does not exceed 3 fathoms or 18 feet. Its southern bed presented no crystals, but the shores are lined with incrustations of salt. Thus, then, the bottom of the Dead Sea forms two submerged plains, an elevated and a depressed one. The first, its southern part, of sliny mud covered by a shallow bay: the last, its northern and largest portion, of mud with incrustations and recta, does crystals of salt, at a great depth, with a narrow ravine running through it, corresponding with the bed of the river Jordan at one extremity and the Wady-el-Jibb at the other. The opposite shores of the peninsula and the west coast present evident marks of disruption.

2. Dimensions.—It will have been seen that the ancient authorities differ widely as to the size of the sea: Diodorus states it at 500 stadia by 60; Pliny at 100 miles in length, by 25 miles in its widest, and 6 miles in its narrowest part; Josephus at 250 stadia by 150. Strabo's measure evidently belongs to the Sirbonicus Lacus, with which he considered the Dead Sea, and is copied from Diodorus's description of that lake. Of these measures the earliest, viz. that of Diodorus, comes nearest to modern measurement. We have seen that a straight line from "Ain-el-Feshkahh" to the east shore measured nearly 8 statute miles; from "Ain Jidy" directly across to the mouth of the Arnon the distance was about 9 statute miles. The length of the sea does not seem to have been measured by the Americans, but the near agreement of their actual measurement of the width with the computation of Dr. Robinson may give credit to his estimate of the length also. His observations resulted in fixing the breadth of the sea at "Ain Jidy" at about 9 geographical miles, and the length about 39.—"Ain Jidy" being situated nearly at the middle point of the western coast. (Bib. Rev. vol. vii. p. 217.)

3. Saltness and Specific Gravity.—Its excessive saltiness, noticed by Josephus, is attested by all travellers; and is indicated by the presence of crystals of salt in profusion over the bed of the sea,—"at one time Stellwagen's lead brought up nothing but crystals,"—as well as by the district of rock-salt at the south-west quarter of the sea, where the American officers discovered "a lofty, round pilar, standing detached from the general mass, composed of solid salt, capped with carbonate of lime, cylindrical in front and pyramidal behind, about 40 feet high, resting on a kind of oval pedestal from 40 to 60 feet above the level of the sea." (Lynch, Expedition, p. 307.) In the southern bay of the sea, where the water encroaches more or less according to the season, it dries off into shallows and small pools, which in the end deposit a salt as fine and as well bleached, in some instances, as that in regular salt-pans. In this part, where the salt water stagnates and evaporates, lily and Magnes "found several persons engaged in
peeling off a solid surface of salt, several inches in thickness; they were collecting it and loading it on asses." (Travers, p. 139.) It has been sometimes asserted that the water is so saturated with salt that salt cannot be dissolved in it. The experiment was tried by Lieut. Lynch with the following result: "Tried the relative density of the water of this sea, and of the Atlantic—distilled water being as 1. The water of the Atlantic was 1.02, that of this sea 1.13; the last dissolved in the water of the Atlantic 1, and distilled water 0.71, of its weight of salt. The boats were found to draw 1 inch less water when afloat upon this sea than in the river." (Lynch, p. 377.) The experiment tried by Vespasian has been repeated by nearly all travellers, of course with the same result. The density and buoyancy of the waters is such that it is impossible to sink in it. "A muscular man floated nearly breast high, without the least exertion." Several analyses of the waters have been made with various results, to be accounted for, as Dr. Robinson supposes, by the various states of the sea at different seasons; for its body of water is increased to the height of 7 feet or more in the rainy season (Lynch, p. 289), or, according to Dr. Robinson, 10 or 15 feet; for he found traces of its high-water mark, at the south end, in the month of May, more than an hour south of its limit at that time. The following are the results of the analyses, the standard of comparison for the specific gravity being distilled water at 1000:—

| Specific Gravity | 1.211 | 1.258 | 1.278 | 1.318 |
| Chloride of Sodium | 3.890 | 3.978 | 3.9114 | 2.236 |
| Chloride of Magnesium | 10.236 | 11.161 | 11.11 | 7.09 |
| Chloride of Magnesmum | — | — | — | 5.493 |
| Sodium | 9.820 | 9.65 | 7.877 | 7.832 |
| Manganes | — | — | — | 5.900 |
| Aluminum | — | — | — | 0.680 |
| Aluminum | — | — | — | 0.602 |
| Salpate of Lime | 0.794 | — | 0.3097 | 0.675 |
| Water | — | 1.204 | 1.247 | 1.256 |

(Robinson, Bib. Res. ii. pp. 224, 225.)

Russegger says:—"The excessive saltiness of the Dead Sea is easily accounted for by the washing down of the numerous and extensive salt-beds, which are peculiar to the formation of the basin, in which also are found bituminous rocks in sufficient quantity to enable us, without doing violence to science, to explain many of the chemical and physical peculiarities of this lake-water by the continual contact of these rocks with water strongly impregnated with salt." (Reisen, p. 207.)

4. Evaporation.—The enormous quantity of water brought down by the Jordan, particularly in the rainy season, and by the other streams around the Dead Sea, some of which are very considerable, as e.g., the Arnon was found to be 82 feet wide and 4 feet deep at its mouth, is all carried off by evaporation; and, when the small extent of the sea is considered, it is clear that the decomposition of its waters must be very rapid. The ancient writers speak of a noxious smell, of bubbles like those of boiling water, of much soot, and an invisible vapour, tarishing all metals, and deleterious to the inhabitants; and its change of aspect thence a day may also be ascribed to the same cause. Now it is remarkable that nearly all these phenomena have been noticed recently, and the single fact, which is not confirmed is accounted for in a manner which must exempt the ancient geographers from the charge of misrepresentation or exaggeration; and it may well be believed that the enormous chemical processes, perpetually going forward in the depths of the sea, may occasionally produce effects upon the surface which have not been chronicled by any modern traveller. Lieut. Lynch, while encamped near Engedi, remarked, "a strong smell of sulphuriferous hydrogen," though there are no thermal springs in this vicinity; and again, "a foetid sulphuriferous odour in the night;"—"the north wind, quite fresh, and blowing with a smell of sulphur." Lieut. Molyneux detected the same disagreeable smell the night he spent upon the sea, which he ascribed to the water (Journal of the R. Geog. Soc. vol. xviii. p. 127, 1848.) But Lieut. Lynch states that, "although the water was greasy, acid, and disagreeable, it was perfectly inodorous." He is therefore inclined to attribute the noxious smell to the foetid springs and marshes along the shores of the sea, increased, perhaps, by exhalations from stagnant pools in the flat plain which bounds it to the north. (Expedition, pp. 292, 294, 296, 300.) The "pale-bine misty appearance over the sea," "the air over the sea, very misty," and "the two extremities of the sea misty, with constant evaporation" (p. 294), are other notes indicating the unnatural state of the atmosphere surcharged with the gases disengaged by the process. On a stormy night "the surface of the sea was one wide sheet of phosphorescent foam, so that a dark object could have been discerned at a great distance" (p. 281) comp. Molyneux, l. c. p. 129). A kind of mirage, noticed by many travellers, may be attributed to the same cause. "A thin haze-like vapour over the southern sea:—appearance of an island between the two shores" (p. 288). This phenomenon is more fully noticed by Irby and Mangles:—"This evening, at sunset, we were deceived by a dark shade on the sea, which assumed so exactly the appearance of an island that we entertained no doubt regarding it, even after looking through a telescope. It is not the only time that such a phenomenon has presented itself to us; in two instances, looking up the sea from its southern extremity, we saw it apparently closed by a low, dark line, like a bar of sand to the northward; and, on a third occasion, two small islands seemed to present themselves between a long sharp promontory and the western shore. We were unable to account for these appearances, but felt little doubt that they are the results of a discovery Mr. Seetzen into the supposition that he had discovered an island of some extent, which we have had opportunity of ascertaining, beyond all doubt, does not exist. It is not absolutely impossible, however, that he may have seen one of those temporary islands of bitumen, which Pliny describes as being several acres in extent." (Travers, p. 141.) Two effects of the heavy atmosphere of the sea remain to be noticed: one, the irresistible feeling of drowsiness which it induced in all who navigated it; the other, confirming, in a remarkable manner, the ancient testimonies, above cited, that the water appeared to be destructive to everything it touched, particularly metals; viz. that "everything in the boat was covered with a nasty sliny substance, iron dreadfully corroded, and looked as if covered with coal-tar." (Molyneux, l. c. p. 128.) The "bubbles like those of boiling water," mentioned by Strabo, may be identified with the curious broad strip of foam, lying in a straight line nearly parallel and throughout the whole length of the sea, which
seemed to be constantly bubbling and in motion. (Molyneux, p. 129; Lynch, pp. 288, 289.) And even the marvellous fact mentioned by Josephus, of the sea changing its colour three times a day, may derive some countenance from testimonies already cited, but more especially from the following notice of Lient. Lynch: — "At one time, to-day, the sea assumed an apect peculiarly sombre. . . . The great evaporation enveloped it in a thin, transparent vapour, its purple tinge contrasting strangely with the extraordinary colour of the sea beneath, and, while they blended in the distance, giving it the appearance of smoke from burning sulphur. It seemed a vast caldron of metal, fused but motionless" (p. 324): "in the forenoon it had looked like a sheet of foam." In the afternoon, of the same day, it "verified the resemblance which it has been said to bear to a plumed head;" "at night it had the exact hue of absinthe" (p. 276). The earlier testimony of Prince Radziwill may also be added, who, after citing Josephus, adds, that he had had ocular proof of the fact: "Nam mane habebat aquam nigricentam; meridie, solius tenuis lacte maximi" instar panis ft ceraeae: ante oceanum, ubi vis coloris remittit, taqauan himo permixta, modice rabet, vel potius flavescit." (Jeronimosiana Peregrinatio, p. 96.) A familiarity acquired by three weeks' diligent examination did not remove the spell of awe inspired by its marvels: "So sudden are the changes of the weather, and so different the aspects it presents, as at times to seem as if we were in a world of enchantments. We are alternately beside and upon the brink and the surface of a huge and sometimes seething caldron." (Lient. Lynch, Bib. Sear, vol. v. p. 765.)

5. Bitumen. — It is to be regretted that the American expedition has thrown no new light on the production of the asphalt for which this sea is once so famous. Among almost the whole of the west coast numerous fragments of this substance are found among the pebbles, but there is no record of any considerable masses or fields of it being seen by any European travellers in modern times; unless, as is suggested by Irby and Mangles, the imaginary islands may be so regarded. But it is curious that the traditions of the natives still confirm the notice of Strabo that drops of pitch are distilled from rocks on the western shore—a story corroborated by various Arab shrifts to Sodden, Burkhard, and Robinson, the last of whom also mentions the fact of their belief that the large masses of bitumen appear only after earthquakes. Thus, after the earthquake of 1834, a large quantity was thrown upon the shore near the south-western part of the sea, of which one tribe brought about 60 kantars into market (each kantfar = 98 lbs.); and that after the earthquake of Jan. 1st, 1837, a large mass of bitumen (one said like an island, another like a house) was discovered floating on the sea, and was driven aground on the west side, not far to the north of Usdorn. The Arabs swam off to it, and cut it up with axes so as to bring it ashore; as Tacitus tells us was done in his times, though he mentions what he considered the less probable account of its flowing as a black liquid into the ships in a perennial stream. (Robinson, Bib. Res. vol. ii. pp. 225—231.) That the water of this sea is destructive of all animal life, as all the ancients held, seems sufficiently proved; for although shells have been found on the shore, they have been evidently washed down by the Jordan or other fresh water streams, and their inmates destroyed by the sea water; while the birds that have been occasionally seen on its surface may be regarded as denizens of those same streams; and no animal life has been discovered in its waters.

V. VOLCANIC PHENOMENA.

Something must now be said of the various theories by which it has been attempted to account for the wonderful phenomena above recorded of the depression of the Ghur, or Valley of the Jordan: and of the formation and physical constitution of the Dead Sea. All theories suppose volcanic agency; and it is worthy of observation that, while the earliest historical and poetical records of the country bear witness to a familiarity with such phenomena, the existing geological monuments confirm the testimony. Independently of the igneous agency by which the cities of the plain were destroyed, much of the descriptive imagery of the psalmists and prophets is borrowed from volcanos and earthquakes: while there are evidences of an earthquake of very great and probably destructive violence during the reign of Uzziah, king of Judah, which formed a kind of era in the history of the country, being alluded to after an interval of 300 years. (Amos, i. 1; Zechab. xiv. 5.) The existing phenomena may be briefly mentioned, beginning with one recently discovered by the explorers, of whom Mr. Auluck reports a volcanic formation on the east shore, and brought specimens of lava" (p. 280).

The mountain known as Jebel Mina, at the northeast of the Dead Sea, composed entirely of black bituminous limestone, which burns like coal, has not been investigated so fully as it deserves: but the basaltic columns in the vicinity of the sea of Tiberias have been frequently noticed by travellers. The thermal fountains of Callirrhoe, Gadara, and Tiberias complete the chain of evidence, and render it highly probable that the extinct volcano noticed by Dr. Robinson at a short distance north-west of Safed, the Frank Mountain, and others, may have been active during the historical period, and furnished the poets and prophets with the sublime imagery of the Bible. Having then discovered the agent of the geological changes that the country has passed through, it may be interesting to hear the opinion of two eminent and scientific writers on the great problem under consideration.

Bosseweger, who has himself carefully examined the phenomena of the country and tested the observations of preceding travellers, thus sums up the results (Reisen, p. 205):—

"From its exit from the lake of Tiberias to its entrance into the Dead Sea the Jordan has a fall of 716 Paris feet and thus lies at the latter place 1341 Paris feet below the level of the Mediterranean sea. At the southern extremity of the Dead Sea lie the marshy lowlands of Wady-el-Ghur, the commencement of Wady-el-Arabah, and apparently very little higher than the Dead Sea itself. These lowlands join Wady-el-Arabah, the bed of which rises gently to the watershed which separates the water system of the Dead Sea from that of the Red Sea. As the watershed of Wady-el-Arabah is apparently of no considerable height above the level of the sea, the length of this remarkable depression may be reckoned from the northern extremity of the chain El-Battack (to the north of the sea of Tiberias) to this watershed, a distance of full three degrees. All the rock of this region consists of normal formations, amongst which those of the Jurra and
chank period prevail. It is in the northern part of this country alone that volcanic formations are found in considerable quantities. Nevertheless the bed of the land in which volcanic rocks are not found bears evident marks of frequent volcanic action, such as hot-springs; the crater-like depressions, such as the basin of Tiberias, and that of the Dead Sea, with its basaltic rocks; the frequent and visible disturbances of the strata of the normal rocks, the numerous crevices, and especially the frequent and violent earthquakes. The line of earthquakes in Syria includes Heliopolis, Jerusalem, Nazareth, Tiberias, Safed, Bodbeck, Aleppo, and they cross in a direction from south-west to north-east, follows the direction of the central chain of Syria, runs parallel to that of the valley of the Jordan, and has its termination northwards, in the volcanic country on the slope of Taurus (Gianur Dagh), and southwards in the mountain land of Arabia Petraea. At several places branches of this great volcanic crevice appear to stretch as far as the sea, and to touch Jaffa, Acre, Beirut, Antioch, — unless, indeed, there be a second crevice, parallel to the first, running along the coast, and connecting the above places. I am of opinion that such is the case, and that there exists also a third crevice, coinciding with the direction of the valley of the Jordan, and united to the principal crevice above mentioned at its northern extremity. This supposition will account for the depression of the valley of the Jordan. At the time of the destruction of Solomon and Solomon the surface of the crevice opened, and the great depression of the ground from Jebel-es-Sheich to the watershed in Wady-el-Arabah followed. The difference of the resistance arising from local circumstances, the volcanic eruptions connected with this phenomenon, the local form of the land, and the different depths of the chasm then formed, caused a more or less extensive depression, and created along the chasm crater-like hollows, some of extraordinary depth, as the basin of Tiberias and that of the Dead Sea. These hollows, as is usual in such cases, became filled with water, and formed a system of lakes. Next the waters from the sides of Jebel-es-Sheich formed the principal stream of Jordan connecting these lakes, having overflowed them successively. This however was not the case with the Dead Sea. The watershed of Wady-el-Arabah is probably much more ancient than the depression; and as the Red Sea, judging by the geognostic nature of Wady-el-Arabah, formerly seems to have extended so far inland, this barrier must have existed at the time of the depression, since otherwise the Red Sea would have burst into the hollow formed by the sinking of the land. If, however, there existed before the time of the depression a regular fall throughout the whole valley to the Red Sea, it is natural to suppose that at that time the Jordan flowed into the Red Sea, and that when the depression took place its course was interrupted. However this may have been, after the depression the filling of the basin of the Dead Sea continued until it became of such super-

face, that the evaporation of the water was equal to the influx. The appearance of its shores proves that, owing either to a greater influx of water during rainy seasons, or to a less copious evaporation caused by circumstances of temperature, the sea at one time was considerably higher than at present."

Professor Daubeney introduces his theory with other notices of volcanic agency collected from modern books of travel. (Dr. Daubeney, A Description of notice and extinct Volcanoes, 2d ed. pp. 350—358.)
which, with its deep fissures, the earthquakes to which it is subject, and the saline sulphureous springs, which have a temperature of 46° cent., attest the volcanic origin of this depression.

"The other substances met with in the neighbourhood are no less corroborative of the cause assigned. On the shore of the lake Mr. Mannelli found a kind of bituminous stone, which I infer from his description to be analogous to that of Badesa in Sicily.

"It would appear that, even antecedently to the eruption mentioned in Scripture, bitumen-pits abounded in the plain of Siddim. Thus, in the account of the battle between the kings of Sodom and Gomorrah and some of the neighbouring princes (Gen. xiv.), it is said, 'And the vale of Siddim was full of slime-pits,' which a learned friend assures me ought to be translated fountains of bitumen.

"But besides this volcanic eruption, which brought about the destruction of the cities, it would appear that the very plain itself in which they stood was obliterated, and that a lake was formed in its stead. This is collected not only from the apparent non-existence of the valley in which these cities were placed, but likewise from the express words of Scripture, where, in speaking of the wars which took place between the kings of Sodom and Gomorrah and certain adjoining tribes, it is added that the latter assembled in the vale of Siddim, which is the Salt (i.e. the Dead) Sea.

"It is therefore supposed that the lake itself occupied the site of this once fertile valley, and that it was produced by the waters of the Jordan, which, being without an outlet, would fill the hollow until the surface over which they spread themselves proved sufficiently large to cause the loss arising from evaporation to be equivalent to the accession it received from the rains and snows of the mountains in which it took its rise.

"This hypothesis assumes that previously to the existence of the Dead Sea the Jordan must have had an outlet, either into the Mediterranean or into the Red Sea; and accordingly when it was discovered by Burckhardt, that there actually existed a longitudinal valley, parallel to the course which the Jordan took before it reached the Dead Sea, as well as to the larger axis of that expanse of water, running from north to south, and extending from the southern termination of the Dead Sea to the extremity of the Lake of Tiberias, it was immediately concluded that this valley was in fact the former bed of the Jordan, which river, consequently, prior to the catastrophe by which the Dead Sea was produced, had flowed into this arm of the Red Sea.

"Briefly, then, to recapitulate the train of phenomena by which the destruction of the cities might have been brought about, I would suppose that the river Jordan, prior to that event, continued its course tranquilly through the great longitudinal valley called El-Arabah, into the gulf of Akaba; that a shower of stones and sand from some neighbouring volcano first overwhelmed these places; and that its eruption was followed by a depression of the whole of the region, from some point apparently intermediate between the lake of Tiberias and the mountains of Lebanon, to the watershed in the parallel of 36°, which occurs in the valley of El-Arabah above mentioned. I would thence infer that the waters of the Jordan, pent up within the valley by a range of mountains to the east and west, and a barrier of elevated table-land to the south, could find no outlet, and consequently by degrees formed a lake in its most depressed portion; which, however, did not occur at once, and therefore is not recorded by Scripture as a part of the catastrophe (see the passage in Ezekiel, xlvii, 8, indicating, if it be interpreted literally, the gradual manner in which the Dead Sea was formed, and likewise perhaps the existence of a tradition that its waters once had their exit in the Red Sea), though reference is made in another passage to its existence in what was before the valley of Siddim.

"If, as Robinson states, extensive beds of salt occurred immediately round its margin, the solution of the contents of these by the waters of the lake would account for their present composition, its saltiness increasing gradually to the point of saturation, owing to the gradual accession of waters from above, which, on evaporating, would leave their salt behind; whilst the bitumen might either have existed there previously as a consequence of antecedent volcanic eruptions, or have been produced by the very one to which reference is here made.

"I do not, however, see what is gained by attributing the destruction of these cities, as some have preferred to do, to the combination of these beds of bitumen, as the latter could have been inflamed by no natural agent with which we are acquainted except the volcano itself, which therefore must in any case be supposed instrumental, and, being invoked will alone enable us to explain all the facts recorded.

"It must at the same time be confessed that much remains to be done before this or any other explanation can be received as established; and I am disappointed to find that amongst the crowds of travellers who have resorted to the Holy Land within the last twenty years, so few have paid that attention to the physical structure of the country which alone could place the subject beyond the limits of doubt and controversy.

"The geologist, for instance, would still find it worth his while to search the rocks which bound the Dead Sea, in order to discover if possible whether there be any crater which might have been in a state of eruption at the period alluded to; he should ascertain whether there are any proofs of a sinking of the ground, from the existence of rapids anywhere along the course of the river, and whether south of the lake can be discovered traces of the ancient bed of the Jordan, as well as of a barrier of lava stretching across it, which latter hypothesis Dr. Von Buch, I perceive, is still inclined to support; nor should he omit to examine whether vestiges of these devoted cities can be found, as some have stated, submerged beneath the waters, and buried, like Pompeii, under heaps of the ejected materials."

VI. HISTORICAL GEOGRAPHY.

1. Earliest period.—The first notice we have of the inhabitants of Palestine is in the days of Abraham's immigration, when the Canaanites was in the land, from whom it received its earliest appellation, "the land of Canaan." (Gen. xii, 5, 6, xiii. 7, 12, &c.) The limits of their country are plainly defined in the genealogy of Canaan; but its distribution among the various families of that patriarch is nowhere clearly stated. "Canaan begot Sidon his first-born, and Heth, and the Jebusite, and the Amorite, and the Girgasite, and the Hivite, and the Arkite, and the Sinite, and the Arvadite, and the Zemarite, and the Hamathite: and afterwards were the families of the Canaanites spread abroad. And
the border of the Canaanites was from Sidon, as thou comest to Gerar, unto Gaza; as thou goest unto Sodom, and Gomorrath, and Admah, and Ze-baim, even unto Lasha" (x. 15—19). As several of these names occur no more in the history of Palestine, we must suppose either that the places reappear under other names, or that these tribes, having originally settled within the limits of the Dead Sea, afterwards migrated to the north, where we certainly find the Arvadites and Hamathites in later times. Of the eleven families above named, the first six are found in the subsequent history of the country: the descendants of Sidon on the coast to the north; the children of Heth in Hebron, on the south; the Jebusites to the north of these, in the highlands about Jerusalem; the Amorites to the east of the Hittites, on the west of the Dead Sea; the Girgashites, supposed to be a branch of the Hivites next named, who were situated north of the Jebusites in Shechem and its vicinity. (Gen. xxxiv. 2.) The coast to the south was wrested from the Canaanites in very early times, if they ever possessed it; for throughout the records of history the Philistines, descendants of Mizraim, not of Canaan, were masters of the great western plain (x. 14). The distribution of the country among these tribes is involved in frequent changes by the introduction of the Perizzites with the Canaanites as joint occupiers of the country (xiii. 7), and by the fact of the Canaanites appearing as a distinct tribe, where the Hittites, the Amorites, the Girgashites, and the Jebusites, who were all alike Canaanites, are severally enumerated (xv. 19—21). It would appear also that the names Canaanites was used in a more restricted sense in the last cited passage, the names of the particular families were sometimes used in a wider acceptation; which may account for the Hittites, whose seats we have already fixed to the south of Jerusalem, being found to the north of that city, in the neighbourhood of Bethel. (Judges, i. 26.) It may be, however, that the seats of the several tribes in those early times were not fixed, but fluctuated with the tide of conquest or with the necessities of a pastoral people: an example of the former may be found in the victories of Candesarmer (Gen. xiv.), and of the latter in the many migrations of Abraham with his numerous dependents, and of his descendants, which finally transferred the whole of his posterity into Egypt for a period of four centuries (xiii. 6—10, xiii. 1—4, 18, xx. 1, xxxi. 1, &c.). To attempt to trace these various migrations were a fruitless task with the very scanty notices which we possess; but the number and general disposition of the Canaanitish tribes at the period of the Exodists of the Israelites under Joshua may be approximately ascertained, and all in the description of the distribution of the land among the latter. The tribes then in occupation of the land are said to be seven (Deut. vii. 1), and are thus enumerated:—"Canaanites, Hittites, Amorites, Perizzites, Hivites, Jebusites," only six (Exod. iii. 8, 17, xxiii. 2); but in Deteronomy (L. c.) and Joshua (iii. 10) the Girgashites are added, which completes the number. Of these the Amorites occupied the southern border, or probably shared it with the Amalekites, as it was with the latter that the Israelites were first brought into collision. (Exod. xviii. 8, 9; Josh. xiv. 25, 43—45.) This was therefore called "the Mount of the Amorites" (Deut. i. 19, 20); and their relative position with regard to the other tribes is thus clearly stated:—

"The Amalekites dwell in the land of the south, and the Hittites, and the Jebusites, and the Amorites (Joshua, xi. 3, adds the Perizzites). dwell in the mountains: and the Canaanites dwell by the sea, and by the coast of Jordan." (Numb. xiii. 28, 29.)

The limits of the Amorite territory are further defined by the confederacy of the five cities of Jerusalem, Hebron, Jarmuth, Lachish, and Eglon, which were Amorites (Josh. x. 5); while the hill-country immediately to the north and west of Jerusalem, comprising Gibeon, Chephirah, Beeroth, and Kirjath-jeearim was held by the Hivites (ix. 3, 7, 17, xi. 19), who are also found, at the same period, far to the north, "under Hermon in the land of Mizpeh" (xi. 3; Judges, iii. 3), as two large and powerful kingdoms of the Amorites coexisted on the east of the Jordan [Amorræos], the older inhabitants having been driven out. It is worthy of remark that during the occupation of Palestine by these Canaanites it is already called "the land of the Hebrews" or Heberites, which can only be accounted for by an actual residence in it of Heber himself and his race, which goes far to prove that the Canaanitish tribes were only intruders in the Land of Promise. (Gen. xi. 15; see Christian Remembrancer, vol. xviii. p. 451.) For fuller details reference may be made to Belzoni (Palestina, cap. xxvii. pp. 135—141) and Bochart (Phaen. lib. iv. cap. 34—37).

2. Second period. — We have now to consider the division of Palestine among the twelve tribes of Israel, on the settlement of the land by Josua, the son of Nun; and the Scripture statement compared with Josephus will furnish numerous landmarks, which a more careful survey of the country than has yet been made would probably bring to light at the present day. To begin with the cis-Jordanic tribes:—

Judah, Simeon, Dan. — The south border of Judah was bounded by the country of Edom and the wilderness of Zin; the frontier being plainly defined by a chain of hills, of considerable elevation, forming a natural barrier from the southern bay of the Dead Sea on the east to the Mediterranean on the west, in which line the following points are named, viz., the ascent or pass of Acrabbin, Zin, Kadeh-Barnes, Hezron, Adar, Karkaa, Aznon, the river of Egypt. The east border extended along the whole length of the Dead Sea to the mouth of the Jordan, from which the north border was drawn to the Mediterranean along an irregular line, in which Jerusalem would be nearly the middle point. The road from Jerusalem to Jericho passes immediately within the line, and 'Am-'er-Rassil, Wady Kilt, Kulaat-ed-Durmin, and 'Ain or Kuor Hightah, are easily identified with Enshemesh, the river, Ashumim, and Beth-lugla. It passed south of Jerusalem, from Enroel up the valley of Hinnom, by Nephoth, Mount Ephron, Kirjath-jeearim, Bethshemesh, Timnah, Ekron, Shichron, and Jabneel. Their cities were, as stated in the summary, 29 in number, in the south division of the tribe, on the borders of Edom; but the names, as recombined in the English version, are 39. The discrepancy is to be accounted for, as Belzoni remarks, by several of the words, regarded as proper, or separate names, being capable of translation as apppellatives or as adjuncts to other names. In the valley, including under that name the declivity of the western plain and the plain itself, there were 14 + 16 + 9 = 39 towns, with their villages, besides the cities of the Philistines.
between Ekron and Gaza, which the Israelites did not occupy; in the mountains 11 + 9 + 10 + 6 + 2 = 33 cities, with their villages; and in the wilderness, i.e. the western side of the Dead Sea, 6 towns and their villages; in all, according to the Hebrew version, no less than 112 towns, exclusive of their future capital, of which the Jebusite still held possession. But the Septuagint version inserts the names of 11 other cities in the mountain district, among which are the important towns Bethlehem and Tekoa, which would make the total 123 in the tribe of Judah alone, implying an enormous population, even if we admit that these towns were only large villages with scattered hamlets. It must be remarked, however, that the tribe of Simeon was comprehended within the limits above assigned to the tribe of Judah; and that 17 cities in the south of Judah are referred to Simeon, as is expressly stated: "Out of the portion of the children of Judah was the inheritance of the children of Simeon; for the part of the children of Judah was too much for them; therefore the children of Simeon had their inheritance within the inheritance of them." (Josh. xix. 9, 10). As Simeon possessed the southern part of the territory assigned to Judah, so did the tribe of Dan impinge upon its north-west border; and in the list of its seventeen cities are some before assigned to Judah (Josh. xix. 41—46); a limited extent of territory on the confines of the plain of the Philistines, from which they early sent out a colony to the extreme north of the Holy Land, where their city, synonymous with their tribe, situated at the southern base of Mount Horon, became proverbial in Israel for the worship of the golden calf. (Judges, xviii.)

Benjamin.—The tribe of Benjamin was bounded by Judah on the south, by the Jordan on the east. The northern line was drawn from Jericho westward through the mountains, by Bethel and Ataroth-adar, to a hill that lay to the south of the lower Beth-horon, from which point the boundary was drawn to Kirjath-jearim of the tribe of Judah. They possessed twenty-six cities, including Jerusalen. (Josh. xviii. 11—28.) It is evident that Josephus is mistaken in stating that they extended in length from Jordan to the sea; for it is clear that the tribe of Dan and the plain of Philistia lay between them and the Mediterranean. His remark that the width of their territory was least of all, is more accurate, though his explanation of the fact may be doubted, when he ascribes it to the truthfulness of the land, which, he adds, comprehended Jericho and Jerusalem.

Ephraim.—The tribe of Ephraim was encompassed on the south with the tribe of Benjamin, as far as the extreme of the latter; from whence it passed by Tappnah and the river Kanah to the sea. On the east side are named Ataroth-adar and Beth-horon the upper, and on the north, beginning at the sea and going east, Michmethah, Taanath-shiloh, Japhia, Ataroth, Naarath, Jericho, and the Jordan. The cities of Ephraim are not catalogued; but it is remarked that "the separate cities for the children of Ephraim were among the inheritance of the children of Manasseh, all the cities with their villages." (Ex. 5—9). According to Josephus it extended in width from Bethel even to the great plain of Esdraelon.

Manasseh.—The portion of Manasseh on the west of Jordan was contiguous to that of Ephraim, and appears to have been allotted to the two tribes jointly, as the same boundaries are assigned to both (xvi. 1—4, comp. 5—8 with xvii. 7—10), but in general the southern part was Ephraim, and the north Manasseh, which latter also possessed towns in the borders of Asher and Issachar, as Bethel and Endor, on the east, in Issachar, and Taanach, Megiddo, and Dor, on the west, in Asher (ver. 11). It will have been seen that these twin tribes did not extend as far as the Jordan eastward, but that their eastern boundary excluded the valley of the Jordan, and formed, with their northern boundary, a curved line from Jericho to the sea, south of Mount Carmel.

Issachar.—This tribe covered the whole of the north-east frontier of Manasseh and Ephraim, and so comprehended the valley of the Jordan northward from Jericho to Mount Tabor, and the eastern part of the plain of Esdraelon, in which Tabor is situated, containing sixteen cities, among which were Shunem and Jezer of Scripture note, the latter for many years the capital of the kingdom of Israel.

Asher.—To the west of Issachar was Asher, occupying the remainder of the valley of Esdraelon, now the Plain of Jezreel, and extending along the coast of the Mediterranean, from Mont Carmel to Sidon. Our ignorance of the modern geography of Upper Galilee does not allow us to assign its limits to the east; but there is little doubt that careful inquiry would still recover the sites at least of some of their twenty-two cities, and so restore the eastern boundary of their territory, which extended along the western borders of Zebulun and Naphtali, which two tribes occupied the highlands of Galilee to the extremity of the Land of Promise.

Zebulun.—Of these two, Zebulun was to the south, contiguous to Issachar, having the sea of Tiberias for its eastern boundary, as far perhaps as the mouth of the northern Jordan. None of its twelve cities can now be identified with certainty; but Japhia is probably represented by the modern village of Tapha, in the plain, not far to the south of Nazareth, which was certainly situated within the borders of this tribe; and Bethleham may, with great probability, be identified with the modern village of Bethlehem, not far from the ruins of Seppolionari to the north-west. [CAESAREA-DIO.]

Naphtali.—The northeastermost of the tribes was Naphtali, bounded by the Upper Jordan on the east, from its source to its mouth, near which was situated the city of Capernaum, expressly declared by St. Matthew to have been in the borders of Zebulun and Naphtali (iv. 13). On the south was Zebulun, on the west Asher, and on the north the roots of Libanus and the valley of Caleveria, now called the Belka. Of their nineteen cities Rekesh is the most noted in Scripture history; and its ruins, existing under the same name at this day, attest its ancient importance. Josephus absurdly extends their territory to Damascus, if the reading be not corrupt, as Ireland suspects.

Having completed this survey of the tribes, it may be remarked in anticipation of the following section, that the subsequent divisions of the country follow closely the limits of the tribes; thus the district of Judaea was formed by grouping together the tribes of Judah, Simeon, Dan, and Benjamin; Samaria was coextensive with Ephraim and the half of Manasseh; Issachar and Asher occupied Lower Galilee; Zebulun and Naphtali Upper Galilee.

Trans-Jordanian tribes.—A few words must be
Palaestina. Added concerning the two tribes and a half beyond Jordan, although their general disposition has been anticipated in the account of the nations whom they dispossessed. [Amorites.]

Reuben, Gad, and half Manasseh. — The southern part of the old Amorite conquests on the east of Jordan was assigned by Moses to the Reubenites, whose possessions seem to have been coextensive with the kingdom of Sihon, king of the Amorites, whose capital was at Heshbon. [Hessan.] There is, however, some apparent confusion in the accounts; as while Reuben is said for his possession "from Aror by the river Arnon, ... Heshbon, ... and all the kingdom of Sihon king of the Amorites," Gad is also said to have had "the rest of the kingdom of Sihon;" and while Gad is said to have held "all the cities of Gilad," Manasseh is said to have had "half Gilad." [Josh. xiii. comp. ver. 21 with 27, and 25 with 31]; while from Numbers (xxiii. 39—42) it would appear that Manasseh possessed the whole of Gilad. As the Israelites were not permitted to occupy the country which they found still in possession of the Ammonites, but only so much of it as had been taken from them by Sihon king of the Amorites, the limits of the Israelite possessions towards the Ammonites are not clearly defined [Ammonitae; Baman]; and it may be doubted whether the distribution of the country among the two tribes and a half was not regulated rather by convenience or the accident of conquest than by any distinct territorial limits; certain it is that it would be extremely difficult to draw a line which should include all the cities belonging to any one tribe, and whose sites are fixed with any degree of certainty, and yet exclude all other cities mentioned as belonging to one of the other tribes. Generally it may be said that the possessions of Gad and Reuben lay to the south and west of the trans-Jordanic provinces; while those of Manasseh lay in the mountains to the east of the Jordan valley and the lake of Gennesaret. It is plain only that the Jordan was the border of the two former, and that of the tribe of Gad held the northern part of the valley, to "the sea of Chinnereth." [Josh. xiii. 23, 27.] When the Galileans are said to have built nine cities, the Reubenites six, it can only be understood to mean that they restored them after they had been dismantled by their old inhabitants, as in the case of Machir the son of Manasseh; it is expressly said that he occupied the cities of the dispossessed Amorites. [Num. xxxvii. 34—42.] It may, perhaps, be concluded from Deut. iii. 1—17 that, while the kingdom of Sihon was divided between the tribes of Gad and Reuben, the whole kingdom of Og was allotted to the half-tribe of Manasseh; as, indeed, it is highly probable that the division of the land on the west of Jordan also followed its ancient distribution among its former inhabitants. It is remarked by Reckah, that the division of the land by Sennacherib has been too commonly overlooked, for, although it had regard only to the provision of the king's table, it is calculated to throw considerable light on sacred geography. The country was divided into twelve districts, under superior officers, several of whom were allied to the king by marriage, each of which districts was made chargeable with victualling the palace during one month in the year. Whether these divisions had any further political signification does not appear, but it is difficult to imagine that any merely sumptuary exigencies would have suggested such an elaborate arrange-

ment. The divisions agree for the most part with those of the tribes. (1 Kings, iv. 7—19.)

3. Third Period. — We have no distinct account of the civil division of the country on the return of the Jews from the captivity, and during its subsequent history, until it was reduced to a Roman province.

Under the Persians, the title of "governor on this side the river," so frequent in the books of Nehemiah and Ezra, and the description of the strangers, colonists of Samaria, as "men on this side the river" (Euphrates), probably indicates the only designation by which Palestine was known, as a comparatively small and insignificant part of one of the satrapies of that enormous kingdom. (Ezra, iv. 10, 17, v. 20, vi. 6, &c.; Neh. ii. 7, iii. 8, &c.) Among the Jews, the ancient divisions were still recognised, but gradually the larger territorial divisions superseded the tribunal, and the political geography assumed the more convenient form which we find in the New Testament and in the writings of Josephus, illustrated as they are by the classical geographers Pliny and Ptolemy.

The divisions most familiar to the readers of the New Testament are, Judea, Galilee, Samaria, Decapolis, and Perea, in which is comprehended the whole of Palestine, with the exception of the seaborne, the northern part of which is called "the coasts of Tyre and Sidon" by the evangelists, and comprehended under the name of Phoenicia by Josephus and the classical geographers. The three first-named districts are very clearly described by Josephus; and his account is the more valuable as confirming the descriptions contained in the Bible of its extreme fertility and populousness, which will, however, present no difficulty to the traveller who has had the opportunity of observing the natural fertility of the soil in the parts still rudely cultivated, and the numerous traces of the agricultural industry of ancient times.

Galilee, Upper and Lower. — "There are two Galilees, one called Lower, the other Upper, which are surrounded by Phoenicia and Syria. On the side of the setting sun they are bounded by the frontiers of the territory of Ptolemais, and Carmel, a mountain formerly belonging to the Galileans, but at present to the Tyrians; which is joined by Gaba, called the 'city of knights,' because the knights disband by Herod dwell there; and on the south by Samaria and Sicythopolis, as far as the river Jordan. On the east it is bounded by Hippene and Gaularis, and Gaulanitis and the frontiers of Agrippa's kingdom. The northern limit is Tyre and the Tyrian territory. That which is called Lower Galilee extends in length from Tiberias to Chabulan, near which on the sea-coast is situated Ptolemais. Its greatest breadth is from a village called Xaloth, situated in the great plain, to Berbase: from which place also the breadth of Upper Galilee commences, extending to a village named Baca, which separates the Tyrian territory from Galilee. In length, Upper Galilee reaches to Meroth from Thella, a village near the Jordan. "Now the two Galilees, being of such extent, and surrounded by foreign nations, have always resisted every hostile invasion; for its inhabitants are trained to arms from their infancy, and are exceedingly numerous; and neither have the men ever been wanting in courage, nor the country suffered from paucity of inhabitants, since it is rich, and favourable for pasture, and planted with every variety of tree; so that by its fertility it invites even those
who are least given to the pursuit of agriculture. Every part of it, therefore, has been put under cultivation by the inhabitants, and none of it lies idle; but it possesses numerous cities and multitudes of villages, all densely populated on account of its fertility, so that the smallest of them has more than 15,000 inhabitants.

Perea. — "On the whole, then, although Galilee is inferior to Perea in extent, yet it is superior to it in strength. For the former is all under cultivation, and productive in every part; but Perea, although much more extensive, is for the most part rugged and barren, and too wild for the culture of tender produce. Nevertheless, wherever the soil is soft it is very productive; and the plains are covered with various trees (the greater part is planted with olives, vines, and palms), and watered by mountain torrents, and perennial wells sufficient to supply water wherever the mountain streams are dried up by the heat. Its greatest length is from Machaerus to Pella, and its breadth from Philadelphia to the Jordan. It is bounded on the north by Pella, which we have mentioned; on the west by the Jordan. Its southern boundary is Meabitis, and its eastern is Arabia and Silbonitis, and also Philadelphia and Gerasa.

Samaria. — "The country of Samaria lies between Judaea and Galilee; for beginning at the village called Ginea, situated in the great plain, it ends at the toparchy of Acrabatta; its character is in no respect different from that of Judaea, for both abound in mountains and plains, and are suited for agriculture, and productive, wooded, and full of fruits both wild and cultivated. They are not abundantly watered; but much rain falls there. The springs are of an exceedingly sweet taste; and, on account of the quantity of good grass, the cattle there produce more milk than elsewhere. But the best proof of their richness and fertility is that both are thickly populated.

Judaea. — "On the confines of the two countries stands the village Amath, otherwise called Boreces, the boundary of Judaea on the north. The south of it, when measured by length, is bounded by a village, which stands on the confines of Arabia, called by the neighbouring Jews Jordan. In breadth it extends from the Jordan to Joppa, and in the centre of it lies the city Jerusalem; for which cause the city is called by some, not without reason, the navel of the earth. Judaea is not deprived of the advantages of the sea, as it extends along the sea-coast to Ptolemais. It is divided into eleven districts, of which Jerusalem, as the seat of government, rules, taking precedence over the surrounding country as the head over the body. The other districts, after it, are distributed by toparchies. Gophna is second; after that, Acrabatta, then Thamna, Lydda, Amman, Pella, Iдумea, Engaddha, Herodenum, Jericho; then Lamia and Joppa, which take precedence of the neighbouring country.

Besides these districts, there are Gualatlicata and Ganaititis, Batanaea, and Trachonitis, parts of the kingdom of Acrigga. Beginning from Mount Libanus and the source of the Jordan, this country reaches in breadth to the lake of Tiberias: its length is, from a village called Arpha to Julias. It is inhabited by Jews and Syrians mixed.

"Thus we have given an account, as short as was possible, of Judaea and the neighbouring regions."

Besides this general description of the country according to its divisions in the first century of the Christian era, Josephus has inserted in his history special descriptions of several towns and districts, with details of great geographical interest and importance. These, however, will be found, for the most part, under their several names, in these volumes. [Aulon; Bassan; Esdraelon; Vallis; Belus; Jericho; Jerusalem; Tiberias Mare, &c.]

As the division of Galatia does not appear to have had a permanent influence, it may be sufficient to notice it, before dismissing Josephus, who is our sole authority for it. He informs us that the Roman general having defeated Alexander the son of Aristobulus, and pacified the country, constituted five councils (zveiu&pa) in various parts of the country, which he distributed into so many equal divisions (vouu&pa). These seats of judicature were Jerusalem, Gadara, Amathus, Jericho, and Sepphoris in Galilee. (Ant. xiv. 5. § 4.) In the division of the country among the sons of Herod the Great, Judaea, Idumaea (i.e., in the language of Josephus, the southern part of Idumaea), with Samaria were assigned to Archelaus, with the title of ethnarch. Antipas had Galilee and Perea, with the title of tetrarch, and Philip, with the same title, Trachonitis, Auranitis, Batanaea, and Panes, mostly without the limits of Palestine [vid. s. v.]. (Ant. xvii. 13. § 4.) On the disgrace and banishment of Archelaus, in the tenth year of his reign, his government was added to the province of Syria, and administered by a procurator subordinate to the prefect of Syria; the same fate attended the tetrarchy of Philip on his death in the twentieth year of Tiberius, until it was committed to Herod Agrippa by Caius Caligula, with the title of king, to which was added the tetrarchy of Lysanias, and subsequently, on the banishment of Antipas, his tetrarchy also; to which Claudius added besides Judaea and Samaria, so that his kingdom equaled in extent that of his grandfather Herod the Great. On his death, his son, who was but seventeen years old, was thought too young to succeed him, and his dominions reverted to the province of Syria. But on the death of Herod king of Chalcis, that country was committed to the younger Agrippa, which was afterwards exchanged for the tetrarchies of Philip and Lysanias, to which Nero added the part of Galilee about the sea of Tiberias, and Julias in the Decapolis. After his death, in the third year of Trajan, there is no further mention of the tetrarchies (Reland, Palaestina, lib. i. cap. 30, pp. 174, 175.)

The division into toparchies, mentioned by Josephus, is recognized also by Pliny, though their lists do not exactly coincide. Pliny reckons them as follows: —

1. Jericho.
2. Emmaus.
3. Lydda.
4. Joppa.
5. Acrabata.
7. Thamna.
8. Bethlephaine.
9. Orine (in which was Jerusalem.)

Of these, Nos. 8 and 9 are not reckoned by Josephus: but Reland is probably correct in his conjecture that 8 is identical with his Pella, and 9 with his Idumaea, as this district may well be described as &pi;epi, mountainous. (Plin. Hist. Nat. v. 14.)

The other notices of Pliny are few and fragmentary, but agree in all essential particulars with the syn
dependent account of Josephus above cited.

Its geography had undergone little variation when Ptolemy wrote in the following century, and the brief notices of that geographer are as accurate as
PALAETYRUS. usual. He calls it Palestina of Syria, otherwise called Judaea, and describes it as bounded by Syria on the north, by Arabia Petrea on the east and south, independently of the coast of the Mediterranean, he reckons the districts of Galilee, Samaria, Judaea, and Idumea, but describes the Perea, by a periphery, as the eastern side of Jordan, which may imply that the name was no longer in vogue. He names also the principal cities of these several divisions (v. 16).

The most valuable contributions to the ancient geography of Palestine are those of Eusebius and his commentator S. Jerome, in the Onomasticon, composed by the former, and translated, with important additions and corrections, by the latter, who has also interspersed in his commentaries and letters numerous geographical notices of extreme value. They are not, however, of such a character as to be available under this general article, but are fully cited under the names of the towns, &c. (See Behand. Palast. lib. ii. cap. 12, pp. 477, &c.)

It remains only to add a few words concerning the partition of Palestine into First, Second, and Third, which is first found at the commencement of the fifth century of the Christian era, in the Code of Theodosius (A. D. 409); and this division is observed to this day in the ecclesiastical documents of the Eastern Church, by which it was adopted from the first; as it is recognized in the Notitiae, political and ecclesiastical, of the fifth and following centuries. (Quoted fully by Behand, l. c. capp. 14, 23, pp. 204—234.) In this division Palaisa Prima comprehended the old divisions of Judaea and Samaria; Palaisa Secunda, the two Galilees and the western part of Perea; Palaisa Tertia, otherwise called Salutaria, Idumaea and Arabia Petrea; while the greater part of the ancient Perea was comprehended under the name of Arabia.

As the sources of geographical information for Palestine are far too numerous for citation, it may suffice to refer to the copious lists of authors appended to Dr. Robinson’s invaluable work (Bibl. Res. vol. iii. first appendix A, pp. 1—28), and to the still more copious catalogue of Carl Bitter (Erdkunde, Palast. 2tr B. 1te Abt. 1850, pp. 23—91), who in his four large volumes on the peninsula of Mount Sinai, Palestine, and Syria, has with his usual ability systematized and digested the voluminous records of centuries, and completely exhausted a subject which could scarcely be touched within the limits assigned to a general article in such a work as the present.

PALAETYRUS. [Tyros.]

PALAMNUS (Παλαμνός, Scyl. p. 10), a river of Illyricum, which flowed into the sea near Epidamnus. This river has been identified with the PNAVIS (Πανάβις, Πανόβις), T. i. 13, § 3; but this latter corresponds better with the GENUS (Γενός) than SLAVONIA, the Palamus is probably the same as the Daracka or Spinastra, to the S. of Iruna.

PALANDAS (Σαλανδας), a small stream mentioned by Ptolemy in the Chersonese Aecus (vii. 2, § 5). It is supposed by Forbiger that it is the same as that which flows into the Gulf of Marmara near Tarsos. Ptolemy notices also a town in the same neighbourhood which he calls Palanda (vii. 2, § 25).

PALAS, a district in the south of Germany, on the borders between the Alamanni and Burgundii; it was also called Capellatium; but as it is mentioned only by Ammianus Marcellinus (xviii. 2), it is impossible with any degree of certainty to identify it.

PALATIUM, a place in the Rhodian Alps, on the road from Tridenfium to Verona, still bears its ancient name in the form of Palazzu. (It. Ant. p. 275.)

PALE (Πάλαι): Ebb. Palaeis, Palatis, Thuc.; Palænes; the city itself is usually called Palæis; also ΠΑΛΑΙΟΣ ΠΑΛΕΣ, Polyb. v. 33, a town in Cephalonia on the eastern side of a bay in the north-western part of the island. It is first mentioned in the Persian wars, when two hundred of its citizens fought at the battle of Plataea, alongside of the Lacedaemones and Anacortans. (Herod. i. 28.) It also sent four ships to the assistance of the Corinthians against the Conyraeans just before the commencement of the Peloponnesian War (Thuc. i. 27); from which circumstance, together with its fighting along with the Corinthians, the Lacedaemones and Anacortans at the battle of Plataea, it has been conjectured that Pale was a Corinthian colony. But whether this was the case or not, it joined the Athenian alliance, together with the other towns of the island, in B. C. 431. (Thuc. ii. 30.) At a later period Pale espoused the side of the Aetolians against the Achaean, and was accordingly besieged by Philip, who would have taken the city but for the treachery of one of his own officers. (Pol. v. 3, 4.) Polybius describes Pale as surrounded by the sea, and by precipitous heights on every side, except the one looking towards Zacynthus. He further states that it possessed a fertile territory, in which a considerable quantity of corn was grown. Pale surrendered to the Romans without resistance in B. C. 189 (Liv. xxxviii. 28); and after the capture of Same by the Romans in that year, it became the chief town in the island. It was in existence in the time of Hadrian, in whose reign it is called in an inscription ΠΑΛΑΙΟΣ ΠΑΛΑΙΟΣ. (Böckh, Inschr. No. 540.) According to Theodorus of Cyzicus, Pale was the Homeric Dulichium; this opinion was rejected by Strabo (x. p. 456), but accepted by Pausanias (vi. 15. § 7).

The remains of Pale are seen on a small height, about a mile and a half to the north of the modern Livori. Scarcely anything is left of the ancient city; but the name is still retained in that of Palio and of Pali, the former being the name of the plain around the ruins of the city, and the latter that of the whole peninsula. (Iv. 4, 1. 13, § 3.)

PALICORUM LACUS. [τὸ ρεῖσκον Λιπθήναν.]

PAULFURIA’NA, a town of Hispania Tarraco- nensis, by Ukert (vol. ii. pt. i. p. 420) and others placed in the territory of the Hencames; by Forbiger (vol. iii. p. 73) in that of the Caetani. It was on the road from Barcino to Tarraco, and is usually identified with Vendrell. (It. Marc. Hisp. ii. c. 11. p. 141; Floras, Exp. & xxiv. 43. T.H.D.)

PAULICORUM LACUS (τὸ ποταμονὶ Παλίκος Ἀλυσιόνιον; Lago di Nafst), a small volcanic lake in the interior of Sicily, near Palagonia, about 15 miles W. and S.
PALINUS.

of Leontini. It is a mere pool, being not more than 480 feet in circumference, but early attracted attention from the remarkable phenomena caused by two jets of volcanic gas, which rise under the water, causing a violent ebullition, and sometimes throwing up the water to a considerable height. On this account the spot was, from an early period, considered sacred, and consecrated to the indigenous deities called the Palici, who had a temple on the spot. This enjoyed the privileges of an asylum for fugitive slaves, and was much resorted to also for determining controversies by oaths; an oath taken by the holy springs, or craters as they are called, became sacred, and the wrongs done by persons derived from it by the death of the offender. The remarkable phenomena of the locality are described in detail by Diodorus, as well as by several other writers, and notwithstanding some slight discrepancies, leave no doubt that the spot was the same now called the Lago di Nafsia, from the naplitha with which, as well as sulphur, the sources are strongly impregnated. It would, however, seem that in ancient times there were two separate pools or craters, sometimes termed fountains (σπηρια), and that they did not, as at the present day, form one more considerable pool or lake. Hence they are alluded to by Ovid as "Sagra Palicornis;" while Virgil notices only the sanctuary or altar, "pinguis et placablis ara Palici." (Dio. xi. 89; Steph. Byz. s. v. Παλικαί; Pseud.-Arist. Mirab. 58; Macrobr. Stad. v. 19; Strab. vi. p. 275; Ovid, Met. v. 406; Virg. Aen. ix. 583; Syl. Ital. xiv. 219; Num. Dionys. xii. 311.) The sacred character of the spot as an asylum for fugitive slaves caused it to be selected for the place where the great servile insurrection of Sicily in B. C. 102 was first discussed and arranged; and for the same reason Salvius, the leader of the insurgents, made splendid offerings at the shrine of the Palici. (Dio. xxxvi. 3. 7.) There was not in early times any other settlement besides the sanctuary and its appurtenances, adjoining the lake of the Palici; but in a. c. 453, Duce- tius, the chief priest of this city, founded a city close to the lake, to which he gave the name of Palica (Παλικαί), and to which he transferred the inhabitants of Memenium and other neighbouring towns. This city rose for a short time to considerable prosperity; but was destroyed again shortly after the death of Duceutis, and never afterwards restored. (Dio. xi. 88, 90.) Hence the notices of it in Stephanus of Byzantium and other writers can only refer to this brief period of its existence. (Steph. B. L. c.; Paludan, op. cit. Macrobr. l. c.) The modern town of Palagonia is thought to retain the traces of the name of Palica, but certainly does not occupy the site of the city of Duceutis, being situated on a lofty hill, at some distance from the Lago di Nafsia. Some remains of the temple and other buildings were still visible in the days of Facello in the neighbourhood of the lake. The locality is fully described by him, and more recently by the Abate Ferrara. (Facello. del Re. Soc. iii. 2; Ferrara. Com. Elezio della Sicilia. pp. 48, 108.) [E. H. E.]

PALIMBOTHRA. (Παλιμβοθρα). Ptol. vii. 1. 8; 73; Steph. B. s. v.), a celebrated city of ancient India, situated at the junction of the Ganges and Umayabonas (Hirindevina), at present known by the name of Patna. Strabo, who states (iv. p. 70) that Megasthenes was sent to Palimbothra as an ambassador to the king Sandroctus (Chandra-yugap), describes it as a vast town, in the form of a parallelogram 80 stadia in length and 15 in breadth, surrounded by a stockade, in which open spaces were cut to shoot through, and by a ditch. He adds that it was in this country the Priests (iv. p. 792). In another passage he places it, on the authority of Megasthenes, at 6000 stadia from the mouths of the Ganges; or on that of Patrocles, who was sent as an ambassador to Allirochades, the son of Sandroctus (ii. p. 70), at 5000 stadia (iv. p. 689). Pliny approaches most nearly to the computation of the latter traveller, as he makes the distance from Palimbothra to the sea to be 638 M. P., about 5100 stadia to study (vi. 17. § 22). Arrian calls it the greatest of the cities of India, and apparently quotes the same description from Megasthenes which Strabo must have had before him. (Indic. c. 10.) Diodorus attributes to Hercules the building of its walls (ii. 39). Where Pliny says "Amnis Jumanaes in Ganges per Palimbothras decidunt," he is evidently speaking of the people, and not, as some have supposed, of the town (vi. 19). There seems no reason to doubt that the ancient Sanscrit name of this town was Pali-nirus (Pal-iniru, Palinirus, Palinir, Palinor) (Lassen, Indic. Altert. ii. p. 137; Franklin, Inquiry into the ancient Palinothera, Lond. 1815, who, however, places it wrongly at Bhagapipir.)

PALINDROMUS PROMONTORIUM (Παλινδρομός ἄκρα), a promontory of the extreme SW. of the Arabian peninsula, at the Straits of Bab-el-Mandeb, placed by Ptolemy between Oecis Emporio and Posidum Promontorium, in long. 74° 30', lat. 11° 46' (vi. 7, § 7). It now bears the same name as the strait. (Morsay, Sailing Directions for the Red Sea, 2.)

PALINUS or PALINURI PROMONTORIUM (Παλινιούρι ἄκρατορος, Strab.: Capo Pali- nuro), a promontory on the coast of Lucania, on the Tyrrhenian sea, between Velia and Buxentum. It had a port of the same name immediately adjoining it, which still bears the name of the Porto di Palinuro. Both headland and port received their name from the well-known tradition, recorded by Virgil, and alluded to by many other Latin writers, that it was here that Palinius, the pilot of Argo, cast on shore and buried. (Virg. Aen. vi. 833—871, vi. 337—381; Dionys. l. 53; Lucan, ix. 42; Mel. ii. 4, § 9; Solin. 2. § 13.) We learn from Servius that heroic honours were paid him by the citizens of Velia, and that he had a cenotaph and sacred grove not far from that city. (Serv. ad Aen. vi. 278.) It does not appear that there was ever a town adjoining the headland; and the port, which is small, though secure and well sheltered, is mentioned only by Dionysius; but the promontory is noticed by all the geographers except Ptolemy, and is described by Pliny as forming the northern boundary of a great bay which might be considered as extending to the Columna Rhegina, or the headland on the Sicilian straits. It is in fact the most salient point of the projecting mass of mountains which separate the gulf of Poseidonia from that of Laüs or Pelasgostro, and form the chief natural feature of the coast of Lucania. (Plin. iii. 5. 10; M.A. vi. § 9; Strab. vii. p. 103; Oros. viii. 9.) Some ruins of ancient buildings are still visible on the summit of the headland, which are popularly known as the tomb of Palinus. The promontory still retains its ancient name, though vulgarly corrupted into that of Palonudo.

Like most mountain promontories, that of Pali-
PALIO.

nuns was subject to sudden and violent storms, and became, in consequence, on two occasions the scene of great disasters to the Roman fleets. The first was in B.C. 253, when a fleet under the consul Servilius Caepio and Sempronius Banesus, on its return from Africa, was shipwrecked on the coast about Cape Palinurus, and 150 vessels lost with all the booty on board. (Oros. iv. 9.) The second was in B.C. 96, when a considerable part of the fleet of Augustus, on its way to Sicily, having been compelled by a tempest to seek refuge in the bay or roadstead of Vela, was lost on the rocky coast between that city and the adjoining headland of Palinurus. (Dion Cass. xlix. 1; Appian, B. C. v. 98; Vell. Pat. ii. 79.)

PALIO (Palo), a town of Apulia, mentioned only by Pliny, who enumerates the Palatineae among the "populi" of the interior of that region. (Plin. iii. 13. a. 16.) Its site is probably indicated by the modern village of Palo, about 5 miles south of Bitonto (Butuntum).

PALISCIUS. [Megalopolis, p. 310. a.]

PALIURUS (Παλιουρος, Strab. xvii. p. 388; Stadtm. § 42; Polt. iv. 5. § 2; Paliuris, Penta. Tab.; Geog. Rav. iii. 3; Panuris, Stat. Ant.). a village of the Marmaiand, near which was a temple to Hercules (Strab. l.c.), a deity much worshipped in Cyrenaica. (comp. Thrill, Res Cyren. p. 291.)

POTOLEY (IV. 4. § 353) tells that there was a marsh here with shell valves (τις ἡ κοχυλίας). It is identified with the Wady Timna'cid (Facho, Voyage p. 52; Barth, Wanderungen, pp. 506, 548), where there is a brackish marsh, corresponding to that of Potoley (l.c.), and remains of ancient wells and buildings at Meredet (Sidi Hadjar-el-Djemini). It was off this coast that Cato (Lucan, ix. 42, where the reading is Palinurus, with an allusion to the tale of Aeneas) met the flying vessels which bore Cornelia, together with Sextus, from the scene of her husband, Pompeian's, murder. [E. B. J.]

PALLACO'S. [Bamyllona, p. 362 b.]

PALLAE. [Corsiaca, p. 691, b.]

PALLANTIA (Παλαιατία, Strab. iii. p. 162; Polt. i. 6. § 50), the most important town of the Vaceii, in the X. of Hispania Tarraconensis, and in the jurisdiction of Chinnia. (Plin. iii. 3. s. d.)

SABRO (L.c.) wrongly assigns it to the Areacii. Now Pallantia on the Carrion. (See D'Anville, Geog. Anc. i. p. 23; Florio, Esp. S. viii. p. 58, B. l.c. § 53; Sella, i. 6.) For its coins, see Munoz (l. c. p. 48). [T. H. D.]

PALLANTIIAS (Παλαιατίας, Polt. i. 6. § 15), a small river of Hispania Tarraconensis, between the Iberus and Fretum Herculeum, and near Saguntum; now the Pallantia near Murcieina. [T. H. D.]

PALLANTIIUM (Παλαιατίου, more rarely Παλαντίου; Eth. Παλαντίτες), one of the most ancient towns of Arcadia, in the district Maenalia, said to have been founded by Pallass, a son of Lycaon, was situated W. of Tegea, in a small plain called the Palantine plain (Παλαντικοῦ πεδίου, Paus. viii. 44. § 5), which was separated from the territory of Tegea by a choma (χώμα) or dyke (Τεγέα). It was from this town that Evander was said to have led colonists to the banks of the Tiber, and from it the Palatium or Palatine Mount at Rome was reputed to have derived its name. (Hes. Op. Steph. B. s. e.; Paus. viii. 43. § 2; Liv. i. 5; Plut. iv. 2; Justin, xxxii. 1.) Palantium took part in the foundation of Magnesia, B.C. 371 (Paus. viii. 27. § 8); but it continued to exist as an inde-
PALENE.

... an abundance of grain of superior quality, as well as wool, honey, and wax, besides raising silk-worms. (Lach. *Northern Greece*, vol. iii. p. 165.)

A list of the towns in Palene is given under CHALCID:

[E. B. J.]

PALENE. [Attica, p. 327, a.]

PALMA. [Balbaris.]

PALMAM, AD, a station on the coast-road of Strymon, 12 M. P. from Lepcis Magna, and 15 M. P. from Quinhtifana. (Pent. Tub.) This position agrees with that of the ruins found at Schol Bariy, (Barth, W. R. ii. p. 244.) [E. B. J.]

PALMYRIA (Palmarus), a small island in the Tyrrhenian sea, the most westerly of the group now known as the Ponta Island, or Isle of Ponza. It is between 3 and 4 miles long, and not more than a quarter of a mile broad; and was doubtless in ancient, as well as modern times, a dependency of the neighbouring and more considerable island of Ponta (Ponza), from which it is now only 3 miles distant. (Plin. iii. 6. 12; Mel. ii. 7, § 18; Varr. R. R. 1. 5. § 7.) [E. B. B.]

PALMIATIS (Παλμιατης, Poesop, ed. Arz. iv. 7. p. 293), a town of Moesia Inferior, between Dorostorum and Marcianopolis (Tab. Peut.), perhaps Kutuskuk-Kainavdiek. [T. H. D.]

PALMYRA (Παλμυρα, Plut. v. 15, §§ 19, 24, viii. 20. § 10; Appian, B. C. v. 9: Παλμυρα, Joseph. Ant. viii. 2; and Palma, Pinn. v. 23. s. 21: Eth. Palmyrenus, or Palmirensis, Id. l. c.), a city of Syria, situated in 34° 24' N. lat., and 34° 20' E. long. Its Hebrew name, Tadmor, or Thad- mor, denotes, like its Greek one, a city of palms; and this appellation is preserved by the Arabs, who still call it Taimor. Tadmor was built, or more probably enlarged, by Solomon in the tenth century B.C. (1 Kings, ix. 18: 2 Chron. viii. 4), and its identity with Palmyra is shown in the passage of Josephus before cited. It is seated in a pleasant and fruitful oasis of the great Syrian desert, and is well watered by several small streams; but the river mentioned by Pliny is nowhere to be found. Its situation is fine, for on a high edge of hills towards the W., and a little above the level of an extensive plain, which it commands on the E. (Wood, *Ruins of Palmyra*, p. 5), at a distance of about 140 miles N.E. of Damascus. It is not mentioned by Xenophon, who must have passed near it, nor in the accounts of the conquests of Alexander the Great. The first historical notice that we find of it is in Appian, who tells us that M. Antony, under pretence of punishing its equirval conduct, but in reality to enrich his troops with the plunder of a thriving commercial city, directed his march towards it, but was frustrated of his object by the inhabitants removing their goods to the other side of the Euphrates. (B. C. v. c. 9.) This account shows that it must have been a town of considerable wealth; and indeed its advantageous situation must have long rendered it an entrepôt for the traffic between the east and Damascus and the Phœnician cities on the Mediterranean. Yet its name is not mentioned either by Strabo or Mela. Under the first Roman emperors it was an independent city; and its situation on the borders of the Roman and Parthian empires gave it a political importance, which it seems to have preserved by a well-judged course of policy, though naturally exposed to much danger in the quarrels of two such formidable neighbours. ("Inter duo imperia summa, et prima in discordia semper utrinque curta," Plin. l. c.) It is called a colonia on the coins of Caracalla, and Ulpian mentioned it in his first book de Consiliis as having the Jews in Palmyra. It appears, from an inscription, to have assisted the emperor Alexander Severus in his wars against the Persians. (Wood, *Inscr. xix.*) It is not, however, till the reign of Gallienus that we find Palmyra playing any important part in history; and at this period we have notices of it in the works of Zosimus, Vopiscus, and Trebellius Pollio. Odenathus, a noble of Palmyra, and according to Procopius (B. Pers. ii. c. 5) prince of the Saracens who inhabited the banks of the Euphrates, for his great and extensive services, was created, apparently, from Galienus the title of Augustus, and was acknowledged by him as his colleague in the empire. After the assassination of Odenathus by his nephew Macenius, the celebrated Zenobia, the wife of the former, whose prudence and courage had been of great assistance to Odenathus in his former successes, ascended the vacant throne, and, assuming the magnificent title of Queen of the East, ruled with a manly vigour during a period of five years. Under this extraordinary monarch, whose talents and accomplishments were equalled by her beauty, and whose love of literature is shown by her patronage of Longinus, Palmyra attained the highest pitch of its prosperity. She claimed to be descended from the Macedonian kings of Egypt, and her achievements would not have disgraced her ancestry; though, according to other accounts, she was a Jewess. (Miniam, *Hist. of the Jews*, iii. p. 175.) Besides the sovereignty of Syria and Mesopotamia, she is said to have extended her sway over Egypt (Zosim. i. c. 44); but by some critics this fact has been questioned. Claudius, the successor of Gallienus, being engaged in the Gothic War, tacitly acknowledged her authority. But after the termination of the short reign of that emperor, the progress of Zenobia in Asia Minor was regarded by Aurelian with jealousy and alarm. Her arms and intrigues already menaced the security of Bithynia (Ib. c. 50), when Aurelian marched against her, and defeated her in two battles at Antioch and Emesa, at both of which she commanded in person. Zenobia now retreated to Palmyra, and prepared to defend her capital with vigour. The difficulties of the siege are described by Aurelian himself in an original letter preserved by Vopiscus. (Aurel. c. 26.) After defying for a long time the arms of the Roman emperor, Zenobia, being disappointed of the succour which she expected to receive from the Persians, was ultimately compelled to fly, but was overthrown on the banks of the Euphrates by the light horse of Aurelian, and brought back a prisoner. Shortly after this event her capital surrendered, and was treated with clemency by the conqueror, who, however, sullied his fame by the cruel execution of Longinus and some of the principal citizens, whom Zenobia had denounced to him. The personal adventures of Zenobia we need not pursue, as they will be found related in the *Dictionary of Biography and Mythology*. No sooner had Aurelian crossed the Hellespont than he was recalled by the intelligence that the Palmyrenians had risen against and massacred the small garrison which he had left in their city. The emperor immediately marched again to Palmyra, which now paid the full penalty of its rebellion. In an original letter Aurelian has himself recorded the unsparing execution, which extended even to old men, women, and children. (Vopisc. *Aur. c. 31.*) To the remnant of the Palmyrenians,
PALMYRA.

Indeed, he granted a pardon, with permission to repair and inhabit their ruined city, and especially discovered much solicitude for the restoration of the Temple of the Sun. But the effects of the blow were too great to repair. The town (A.D. 273) Palmyra gradually dwindled into an insignificant town, and at length became only a place of refuge for a few families of wandering Arabs. It served indeed for some years as a Roman military station; and Diocletian partially restored some of its buildings, as appears from an inscription preserved by Wood. About the year 400 the first Byzantine legion was quartered there (Vot. Imp.); and Palmyra continued to exist, for it was fortified by Justinian (de Aed. ii. 12). But this is the least that we hear of Palmyra under the Romans; and the sickening fortunes of their empire probably soon led them to abandon it.

The remains of the buildings of Palmyra are chiefly of the Corinthian order, which was the favourite style of architecture during the two or three centuries which preceded Diocletian: whence we may infer that the splendour which it once exhibited was chiefly owing to Odenathus and Zenobia. For many centuries even, the site of Palmyra remained totally unknown except to the roving Arabs of the desert, whose magnificent accounts of its ruins at length excited the curiosity of the English merchants settled at Aleppo. Under the auspices of the Levant Company, an expedition started in 1678 for the purpose of exploring them; but the persons who composed it were robbed and ill-treated by the Arabs, and compelled to return without having accomplished their object. In 1691 the expedition was renewed with better success, and an account of the discoveries then made was published in the transactions of the Royal Society. (Sellers, Antiquities of Palmyra, Pref.) Subsequently Palmyra was visited in 1751 by Wood and Dawkins, who published the results of their journey in a large folio volume with magnificent engravings. The account in Volney (vol. ii.) is chiefly taken from this work. Among the more recent descriptions may be mentioned that of Iry and Mangles (Travels, ch. v.), who visited Palmyra in 1816. According to these travellers the plates of Wood and Dawkins have done more justice to the subject; and although the view of the ruins from a distance, with their line of dazzling white columns extending between one and two miles, and relieved by the contrast of the yellow sand of the desert, is very striking, yet, when examined in detail, they excite but little interest. Taken separately, not a single column or architectural member is worthy of admiration. None of the former exceed 40 feet in height and 4 feet in diameter, and in the boasted avenue they are little more than 30 feet high. The remains of the Temple of the Sun form the most magnificent object, and being of the Ionic order, relieve the monotony of the prevailing Corinthian style. These columns, which are 40 feet high and 4 feet in diameter, are fluted, and formed of only three or four pieces of stone; and in former times were surmounted by brazen Ionic capitals. The facade of the portico consists of 12 columns, like that of the temple of Baalbec, besides which there are other points of resemblance. On the whole, however, the ruins are far inferior to those at Baalbec. At the time of Messrs. Iry and Mangles' visit the peristyle court of the Temple of the Sun was occupied by the Arabian village of Tadmor; but with this exception, and the Turkish burial ground, the space was unnumbered, and there was nothing to obstruct the researches of the antiquary. In some places the lines of the streets and the foundations of the houses were distinctly visible. The stones of the temple were chiefly bad; the stone is of a perishable description, and scarcely deserves the name of marble. The sepulchres outside the walls formed perhaps the most interesting part of the remains. These consist of square towers, from three to five stories high, forming sepulchral chambers, with recesses for the reception of the bodies. In these tombs mummies and mummy cloths are found, prepared very much after the Egyptian manner; but there are no paintings, and on the whole they are far from being so interesting as the Egyptian sepulchres.

There was a sculptured tablet in bas-relief, with seven or eight figures standing and clothed in long robes, supposed to represent priests. Several Greek and Palmyrene inscriptions, and two or three in Latin and Hebrew, have been discovered at Palmyra. They will be found in Wood's Ruins of Palmyra, and the following works may also be consulted: Bernard, Antiquities of Palmyra, London, 1696; Huntington in the Philosophical Transactions, vol. xix. Nos. 217, 218; a Dissertation by Dr. Halley in the same work; Gibbon's Decline and Fall, ch. xi.; Smith, Hist. de Palmyre, Paris, 1823; Addison's Damascus and Palmyra; Richter, Wulfahrt; Cassà, Voyage Pittoresque de la Syrie; Labarde, Voyage en Orient; &c.

PALMYRENE (Παλμυρηνή, Ptol. v. 15. § 24), a district of Syria, so named after the city of Palmyra, and which extended S. from Chalbybath to the desert. (Cf. Ptol. v. 24. s. 21.)

[PALORUM PORTUS. (MALLUS AND MAGRAEA.)

PALUTS (Παλώτας; Eth. Παλώτρος), a town of Syria upon the coast, subject to the island of Aratus, which was at no great distance from it. According to some accounts Menam was buried in the neighbourhood of Palus. Pococke places it at Heketo; Shaw at the ruins at the mouth of the Melbeck, 6 miles from Jebilee, the ancient Gabala. (Strab. xvi. pp. 728, 735; Ptol. v. 15. § 3; Cic. ad Fam. x. 13; Plin. v. 20. s. 18; Mela, i. 12; Steph. B. s. v.; Pococke, vol. i. p. 199; Shaw, p. 324, Oxf. 1738.)

PAMBOTTUS LACUS. (DODONA, p. 784.)

PAMISUS (Παμίσος). 1. The chief river of Mesopotamia. [See Vol. II. pp. 341, 342.]

2. A river in Lycia, forming the ancient boundary between Messenia and Lycia. (Strab. viii. p. 361.) Strabo speaks of this river as near Leuctrum, but it flows into the sea at Paphus, about 3 miles S. of Leuctrum. [PEPHUS.]

3. A tributary of the Peneus in Thessaly, probably the modern Biléri or Pilléri. (Herod. vii. 129; Plin. iv. 8. s. 15; Leake, Northern Greece, vol. iv. pp. 312, 514.)

PAMPHILIA (Παμφίλια), a village of Actolus, on the road from Metap to Thermm, and distant 30
PAMPHYLIA.

A country on the south coast of Asia Minor, bordering on the west on Lycia, in the north on Pisidia, and in the east on Cilicia. The country, consisting of only a narrow strip of coast, forms an arch round the bay, which is called after it the Pamphylus Sinus or the Pamphylium Mare. According to Pliny (v. 26) the country was originally called Mopsopia, from Mopsus, a leader of one of those bands of Greeks who after the Trojan War are said to have settled in Pamphylia, Cilicia, and Syria. (Strab. xiv. p. 668; comp. Appian, B.C., iii. p. 590, &c.; Dion. Hal. i. 14; Stadium. Mar. Mag. § 194, &c.; Hier. p. 679, &c.) Pamphylia, according to Strabo, extended from Olbia to Ptolemais, a line measuring 640 stadia, or about 18 geographical miles; the breadth of the country, from the coast towards the interior, was nowhere above a few miles. In later times, however, the Romans applied the name Pamphylia in such a manner as to embrace Pisidia on both sides of Mount Taurus, which does not appear as a distinct province, nor was it to the north of Constantine was made. This accounts for the fact of Polybius (xxii. 27) doubting whether Pamphylia (in the Roman sense) was one of the countries beyond or this side of Mount Taurus; for Pisidia, in its narrower sense, is unquestionably a country beyond Mount Taurus. (Comp. Strab. xii. p. 570, xiv. p. 632, xv. p. 683.) In this latter sense Pamphylia was separated from Lycia by Mount Cilician, and from Cilicia by the river Melas, and accordingly embraced the districts called in modern times Tekke and the coast district of Itabul. But these limits were not always strictly observed; for Olbia and Perge are described by some writers as belonging to Lycia (Seylax, p. 39); while Ptolemais, beyond the Melas, which is generally regarded as belonging to Pamphylia, is assigned by some to Cilicia. The country of Pamphylia is, on the whole, very mountainous; for the ramifications of Mount Taurus rise in some parts on the coast itself, and in others, a distance of only a few miles from it. There is only one great promontory on the coast, viz. Leucotheum, or Leucolla. The principal rivers, all of which discharge their waters into the Pamphylian bay, are the Acathécetes, Cestrus, Euymiédon, and Melas, all of which are navigable. The coast district between the Cestrus and Euymiédon contains the lake Capria, which is of considerable extent.

The inhabitants of Pamphylia, Pamphyli, that is, a mixture of various races, consisted of aborigines mixed with Cilicians who had immigrated: to these were added bands of Greeks after the Trojan War, and later Greek colonies. (Strab. l. c.; Eustath. ad Dion. Per. 854; Herod. vii. 91, viii. 81; Paus. vii. 3, § 3; Appian, B. C. ii. 71, iv. 60; Liv. xiv. 14.) The Pamphylians (Pamphyli, Pamphylia, Pamphōla, Παμφύλιοι), accordingly, were in those parts what the Alemani were in Germany, though the current relations between them was that they were all descended from Pamphylia, a daughter of Rhages and Manto (Steph. B. s. v. Παμφύλια), or from one Pamphylius (Eustath. ad Dion. Per. l. c.). Others again, though without good reason, derive the name from παμ and φύλο, because the country was rich in wood. The Pamphylians never acquired any great power or political importance; they shared the fate of all the nations of Asia Minor, and in the war of Xerxes against the Greeks their naval contingent consisted of only 30 ships, while the Lyceans furnished 50, and the Cilicians 100. (Herod. vii. 92.) After the Persian empire was broken to pieces by Alexander, the Pamphylians first became subject to Macedonia, and then to Syria. After the defeat of Antiochus the Great, they were annexed by the Romans to the kingdom of Pergamum (Polyb. xxi. 27), and remained connected with it, until it was made over to the Romans. The Greek colonies, however, such as Aspendus and Side, remained independent republics even under the Persian dominion (Arrian, Anab. i. 25, foll.), but we have no information at all as to their political constitutions. In their manners and social habits, the Pamphylians strongly resembled the Cilicians (Strab. xii. p. 570, xiv. p. 670), and took part with them in their piratical proceedings; their maritime towns were in fact the great marts where the spoils of the Cilician pirates were disposed of. (Strab. xiv. p. 664.) Navigation seems to have been their principal occupation, as is evident from the coins of several of their towns. Their language was probably a mixture of Greek and some barbarous dialect, which was broken nearly by Alexanders' conquests, and afterwards became a dialect of the Greek. (Arrian, Anab. i. 26.) But their coins bear evidence of an intimate acquaintance with the gymnastic and agonistic arts, and with the gods of the Hellenes, among whom Zeus, Artemis, and Dionysus are often represented.

The more important towns of Pamphylia were Lyra- sys or Lycus, Nysus, Tenedus, Olbia, Corcyra, Aspendus, Perge, Syllium, Side, Cibyra, Ptolemais, &c. (Comp. Sestini, Descript. Num. p. 388, 571.) After the Persians had been expelled by Alexander, the coast is now called the bay of Adalia. [L. S.]

PANACHAICUS MONS. [Achaila, p. 13, a.]

PANACTUM. [Attica, p. 329, a.]

PANALEI (Panalei), a people of Thrace, whom Thucydides describes as dwelling by the Strymon towards the north (ii. 101). According to Stephannus B. (iv. 7) they were a tribe of the Edones near Amphiapolis.

PANATHEON. [Aetolia, p. 63, b.]

PANATA (Panata), a town in the interior of Libya on the lake Libya, and near the Niger. (Iot. iv. 6, § 27.)

PANDAE (Pandae), a tribe of Indians mentioned by Pliny, who, according to him, were alone in the habit of having female sovereigns, owing to a tradition prevailing among them that they were descended from a daughter of Hercules. They would seem from his account to have been a race of great power and wide dominion, and to have occupied some part at least of the Pamphylia. Arrian (Italic. 8) tells nearly the same story of a daughter of the Indian Hercules, whom he calls Pandaea. There can be no doubt that both are to be referred to the Indian dynasty of the Pandava, traces of whose names are met in several ancient authors. [PANDIOS REGIO.]

PANDATARIA (Πανδαταρία: Πανδαταρία), a
small island in the Tryanbian sea, lying off the Gulf of Gaeta, nearly opposite to the mouth of the Volturmas. (Plin. iii. 6. s. 12; Strab. ii. p. 123; Meli, ii. 7. § 18; Polt. iii. i. § 79.) Strabo says it was 250 stadia from the mainland, which is just about the truth (v. p. 230). He calls it a small island, but well peopled. It was not uniformly made use of, as well as the neighbouring Pontia, as a place of confinement for state prisoners or political exiles. Among these be mentioned Julia, the daughter of Augustus, Agrippina, the widow of Germanicus, and Octavia, the first wife of Nero, of whom the two last were put to death in the island. (Tac. Anm. i. 55, xiv. 63; Suet. Tib. 53.) Pandataria is about midway between Pontia (Ponius) and Acarnia (Lecce); for it is of volcanic origin, like the group of the Fossa Islands, to which it is sometimes considered as belonging; and does not exceed 3 miles in length. Valer notices it as frequented, like the neighboring islands of Pontia and Palmaria, by flocks of quails and turtle-doves in their annual migrations. (Varr. R. R. iii. 5. § 7.)

PANDION, a headland in the south-west of Caria, opposite the island of Syrne. (Pom. Mel. i. 16.) Pliny (v. 29) mentions on the same spot a small town called Parion, or according to another reading Parydon. [L. B.]

PANDOSIA (Πανδοσία: Eho. Πανδοσίων). 1. A city of Bruttia, situated near the frontiers of Lucania. Strabo describes it as a little above Consentia, the precise sense of which expression is far from clear (Strab. vi. p. 256); but Livy calls it "immemor Lamucianae ac Bruttiae finibus." (Livy viii. 24.) According to Strabo it was originally an Oenotrian town, and was even, at one time, the capital of the Oenotrian kings (Strab. v. 29). Such a name seems to have certainly survived in the Greek colony, as Sycla expressly enumerates it among the Greek cities of this part of Italy, and Scymnus Chis, though perhaps less distinctly, asserts the same thing. (Scul. p. 4. § 12; Scymn. Ch. 326.) It was probably a colony of Crotone; though the statement of Eusebius, which represents it as founded in the same year with Metapontum, would lead us to regard it as an independent and separate colony. (Euseb. Chron. p. 99.) But the date assigned by him of b.c. 774 seems certainly impossibly. (Metapontum.) But whether originally an independent settlement or not, it must have been a dependency of Crotone during the period of greatness of that city, and hence we never find its name mentioned among the cities of Magna Graecia. Its only historical celebrity arises from its being the place near which Alexander, king of Epirus, was slain in battle with the Bruttians, b.c. 326. That monarch had been warned by an oracle to avoid Pandosia, but he understood this as referring to the town of that name in Thespia, on the banks of the Achera, and was ignorant of the existence of both a town and river of the same names in Italy. (Strab. vi. p. 256; Liv. viii. 24; Justin, xii. 2; Plin. iii. 11, s. 13.) The name of Pandosia is again mentioned by Livy (xxix. 38) in the Second Punic War, among the Bruttian towns retaken by the consul P. Sempronius, in b.c. 204; and it is there noticed, together with Consentia, as opposed to the "ignobles aliae civitates." It was therefore at this time still a place of some consequence; and Strabo seems to imply that it still existed in his time (Strab. l. c.), but we find no subsequent trace of it. There is great difficulty in determining its position. It is described as a strong fortress, situated on a hill, which had three peaks, whence it was called in the oracle Πανδοσία τριφωκαίος (Strab., l. c.) In addition to the vague statements of Strabo and Livy above cited, it is enumerated by Scymnus Chis between Crotone and Thurii. But it was clearly an inland town, and must probably have stood in the mountains between Consentia and Thurii, though its exact site cannot be determined, and those assigned by local topographers are purely conjectural. The proximity of the river Acheron affords us no assistance, as this was evidently an inaccessible stream, the name of which is not mentioned on any other occasion, and which, therefore, cannot be identified.

Much confusion has arisen between the Bruttian Pandosia and a town of the same name in Lucania (No. 2); and some writers have even considered this last as the place where Alexander perished. (Romanelli, vol. i. pp. 261—263.) It is true that Theopompus (ap. Plin. iii. 11. s. 15), in speaking of that event, described Pandosia as a city of the Lucaniuns, but this is a very natural error, as it was, in fact, near the boundaries of the two nations (Liv. viii. 24), and the passages of Livy (xxix. 38) and Strabo can leave no doubt that it was really situated in the land of the Bruttians.

2. A town of Lucania, situated near Heraclea. It has often been confounded with the preceding; but the distinct existence of a Lucanian town of the name is clearly established by two authorities. Plinarch describes Pyrrhus as encamping in the plain between Pandosia and Heraclea, with the river Siris in front of him (Plut. Pyrrh. 16); and the celebrated Tabulae Heracleenses repeatedly refer to the existence of a town of the name in the immediate neighbourhood of Heraclea. (Mazzocchi, Toh. Herac. p. 104.) From these notices we may infer that it was situated at a very short distance from Heraclea, but apparently further inland; and its site has been fixed with some probability at a spot called Sta Maria d' Anglona, about 7 miles from the sea, and 4 from Heraclea. Anglona was an episcopal seat down to a late period of the middle ages, but is now wholly deserted. (Mazzocchi, l. c. pp. 104, 103; Romanelli, vol. i. p. 265.)

PANDOSIA (Πανδοσία: Eho. Πανδοσίων), an ancient colony of Elis (Dem. Halounes. p. 84, Reikke), and a town of the Cossopedi in the district of Thesprotia in Epirus, situated upon the river Acheron. It is probably represented by the rocky height of Kastri, on the summit of which are the walls of an acropolis, while those of the city descend the slopes on either side. (Strab. vi. p. 324; Liv. viii. 24; Justin, xii. 2; Plin. iv. 1; Steph. B. s. s.; Leake, Northern Greece, vol. iv. p. 56.)

COIN OF PANDOSIA.

PANDOVI REGIO (Πανδοβιός ξηρά, Pol. viii. 1. § 11), a district at the southern extremity of the Peninsula of Achaia. The name is in some editions Πανδοβιος, but there is every probability that the above (which was suggested by Era-nuns) is the true reading. There is another district of the same name which is placed by Tolomey in the Pan-
PANEAS, PANIAS, or PANIEIAS (Pâneás, Pânavos, Hierod. p. 716), more usually called either CAESAREA PANEAS (Kaiseara Pâneias) or PANEAS (Pâneia) or PÂNEAS (Pâneis), according to the spelling of the manuscripts of Ptolemy, who were known by the name of the Pausanias, and who appear to have been extended very widely over India. At the time of the invasion of Alexander, the district in the Panjib belonged to king Poras. (Strab. xv. p. 686; Lassen, Ind. Alterth. Geschichte der Pana- dea, p. 652.)

[VAR.]

PANEAS, PANIAS, or PANIEIAS (Pâneás, Pânavos, Hierod. p. 716), more usually called either CAESAREA PANEAS (Kaiseara Pâneias) or PANEAS (Pâneia) or PÂNEAS (Pâneis), according to the spelling of the manuscripts of Ptolemy, who were known by the name of the Pausanias, and who appear to have been extended very widely over India. At the time of the invasion of Alexander, the district in the Panjib belonged to king Poras. (Strab. xv. p. 686; Lassen, Ind. Alterth. Geschichte der Pana- dea, p. 652.)

PANGAEAUM, PANGAEUS (παγαίεος), who was a friend of Posidonius (Plin. H. N. iii. 20). PANGAEUS (παγαίεος), as Agrippa to Jerome was Laish, or known to Sozom. [T. H. D. 13. Mark. viii. 27; Joseph. Ant. xx. 8. § 4. B. J. iii. 8. § 7. 2. § 1; Euseb. H. E. vii. 17), a city in the north of Palestine, called by Ptolemy and Hierocles (€λευθερια) a city of Phocis, situated upon one of the sources of the Jordan, at the foot of Mt. Panias. Piae (bases) of the branches of Lebanon. Mt. Panias contained a cave sacred to Zeus, when it derived its name. (Philostorg. vii. 7.) At this spot Herod erected a temple in honour of Augustus. (Joseph. Ant. xv. 10. § 3, B. J. i. 21. § 3.) Panias was supposed by many to have been the town of Laish, afterwards called Dan; but Eusebius and Jerome state that they were separate cities, distant 4 miles from each other (Ireland, Palaestina, p. 918, seq.) Panias was rebuilt by Philip the Tetrarch, who called it Caesarea in honour of the Roman emperors, and gave it the surname of Philippa to distinguish it from the other Caesarea in Palestine. (Joseph. Ant. xviii. 2. § 3, B. J. ii. 9. § 1.) It was subsequently called Neronias by Herod Agrippa in honour of the emperor Nero. (Joseph. Ant. xx. 8. § 4; Coins.) According to ecclesiastical tradition it was the residence of the women diseased with an issue of blood. (Matth. ix. 20; Euseb. H. E. vii. 18; Sozom. v. 21; Theoph. Chronogr. 41; Pleron. cod. 271.) Under the Caesarea Panias became a bishopric. It is still called Bénissa, and contains now only 150 houses. On the NE. side of the village the river, supposed to be the principal source of the Jordan, issues from a spacious cavern under a wall of rock. Around this source are many hewn stones. In the face of the perpendicular rock, directly over the cavern and in other parts, several niches have been cut, apparently to receive statues. Each of these niches had once an inscription, and one of them, copied by Burke- hart, appears to have been a dedication by a priest of Pan. There can be no doubt that this cavern is the cave of Pan mentioned above; and the hewn stones around the spring may have belonged perhaps to the temple of Augustus. This spring was considered by Josephus to be the outlet of a small lake called Phihia, situated 120 stadia from Panias towards Trachonitis or the NE. Respecting this lake see Vol. ii. p. 519, b.

PANEPISTHE, ISO (Pâneψεως, Plut. iv. 5. § 52), a town of Egypt, mentioned by recent writers only, with the single exception of Ptolemy (Pâneψεως, Cane. Ephes. p. 478; Pâneψεως, Cassian. Collat. xi. 31. It probably therefore bore another appellation in more ancient times. Mamert (vol. x. pt. 2. p. 580) believes it to have been the city of Diospolis in the Delta; and he agrees with Champollion ("Egypte," vol. ii. p. 110) in identifying it with the modern Menzeh. It stood between the Tauric and Mendesian arms of the Nile, a little SE. of the Ostium Mendesium. Ptolemy (l. c.) says that it was the capital of a nome, which he alone mentions and denominates Νέωρ. Panephexis or Panephys or Panaphys is said to be the surviving suburb of a decayed Deltaic town, or one of the hamlets which sprang up among the ruins of a more ancient city. [W. B. D.]

PANGAEUM, PANGAEUS (παγαίεος), who was a friend of Posidonius (Plin. H. N. iii. 52; Pliny, p. 312; Eupir. Rhes. 922, 927; Dion Cass. xiv. 35; Appian, B. C. iv. 87, 106; Plin. iv. 18; Virg. Georg. iv. 462; Lucian, i. 679), the great mountain of Macedonia, which, under the modern name of Pirnér, stretching to the E. from the left bank of the Strymon at the pass of Amphipolis, bounds all the eastern portion of the great Strymonic basin on the S., and near Priësitsa meets the ridges which enclose the eastern basin of that river, and produced gold as well as silver (Herod. vii. 112; Appian, B. C. iv. 106); and its slopes were covered in summer with the Rosa centifolia. (Plin. xxi. 10; Theoph. H. P. vi. 6; Athen. xv. p. 682.) The mines were chiefly in the hands of the Thasians; the other peoples who, according to Herodotus (l. c.), worked Pangaeum, were the Pieres and Odonians, but particularly the Satrae, who bordered on the mountain. None of their money has reached us; but to the Pangaeum silver mines may be traced a large coin of Geta, king of the Edonis. (Edones.) (Leake, Northern Greece, vol. iii. pp. 176, 190, 212.) [E. B. J.]

PANHELLENES. [Graeca, Vol. i. p. 1010.]

PANIONIUM (πανιωνιον), a place on the western slope of Mount Mycale, in the territory of Priene, containing the common national sanctuary of Poseidon, at which the Ionians held their regular meetings, from which circumstance the place derived its name. It was situated about 23 stadia from the sea-coast. (Strab. xiv. p. 639; Herod. i. 141, fol.; Mela, i. 17; Plin. v. 31; Paus. vii. 5. § 1.) The Panionium was properly speaking only a grove, with such buildings as were necessary to accommodate strangers. Stephanus B. is the only writer who calls it a town, and even mentions the Ethnic designation of its citizens. The preparations for the meeting and the management of the games devolved upon the inhabitants of Priene. The earlier travellers and geographers looked for the site of the Panionium in some place near the modern village of Tachangli; but Col. Leake (Asia Minor, p. 260) observes: "The inhabitable aspect of the rocks and forests of Nyciae, from Cape Tregion to the modern Tachangli, is such as to make it impossible to fix upon any spot, either on the face or at the foot of that mountain, at which Panionium could be supposed to have stood. Tachangli, on the other hand, situated in a delightful and well watered valley, was admirably suited to the Panonian festival; and here Sir William Gell found, in a church on the sea-shore, an inscription in which he distinguished the name of Panionium twice, I conceive, therefore, that there can be little doubt of Tachangli being on the site of Panionium." [L. S.] PANIXSA, a river on the E. coast of Thrace. (Plin. iv. 11. s. 18.) [T. H. D.]
PANONIA.

PANONIA (Πανώνια, Herod. p. 622; Const. Porph. de Them. ii. 1. p. 47; Suidas, s. v.), a town on the coast of Thrace, near Heraclea; perhaps the modern Bonnau. [T. H. D.]

PANONNA (Πανονία), a town in the interior of Crete, S. of Cnossus, retaining the name of Panon. (Ptol. iii. 12. § 10.)

PANON'IA (Πανωνία, Ptol. ii. 1. § 12; or Πανωνία, Zosim. ii. 43), one of the most important provinces of the Roman empire, on the south and west of the Danube, which forms its boundary in the north and east. It was bounded on the north by Illyricum and Moesia, while in the west it was separated from Noricum by Mount Cetus, and from Italy by the Julian Alps. The country extended along the Danube from Vindobona (Vienna) to Singidunum, and accordingly comprised the eastern portions of Austria, Carnuntum, Carniolia, the part of Hungary between the Danube and Sava, Slavonia, and portions of Croatia and Bosnia. After its subjugation by the Romans, it was divided into Pannonia Superior (ἡ ἐπούσα Πανωνία) and Pannonia Inferior (ἡ κάτω Πανωνία), by a straight line running from Aragona in the north to Servitium in the south, so that the part west of this line constituted Upper Pannonia, and that on the east Lower Pannonia. (Ptol. ii. 15. § 16.) In consequence of this division the whole country is sometimes called by the plural name Pannoniae (Πανωνίαι, Ptol. ii. 16. § 1; Zosim. ii. 43; Plin. xxvii. 11. s. 2). In the fourth century, the emperor Galerius separated the district of Lower Pannonia between the Bech, Danube, and Drau, and constituted it as a separate province under the name of Valeria, in honour of his wife who bore the same name. (Aur. Vict. de Caesa. 40; Amm. Marc. xvi. 10, xviii. 3.) But as Lower Pannonia seemed by this measure to be too much reduced, Constantine the Great added to it a part of Upper Pannonia, viz., the districts about the Upper Drava and Sava; and Upper Pannonia was henceforth called Pannonia Prima, and Lower Pannonia, Pannonia Secunda. (Amm. Marc. xv. 3, xvi. 12.) All these three provinces belonged to the diocese of Illyricum. It should be observed, however, that Pannonia Secunda is sometimes also called Interamnia, Savia, or Epiensia. (Sext. Rer. Etr. 11; Notit. Imp.)

The three provinces into which Pannonia was thus divided were governed by three different officers, a praeses residing at Sabaria, a consular residing at Sirmium, and a praetext who had his seat at Siscia. The part bordering upon Germany, which stood most in need of protection, had always the strongest garrisons, though all Pannonia in general was protected by numerous armies, which were gradually increased to seven legions. Besides these troops the fleet stationed at Vindobona was the strongest of the three fleets maintained on the Danube.

Dion Cassius (xliv. 36) mentions an unfortunate etymology of the name of Pannonia from "pannon," "a rag or piece of cloth," referring to a peculiar article of dress of the inhabitants, though he also states at the same time that the natives called themselves Pannonians, whence it follows that the name can have nothing to do with the Latin pannus. As to the identity of the name with that of the Panonians we shall have occasion to speak presently.

In its physical configuration, Pannonia forms a vast plain enclosed only in the west and south by mountains of any considerable height, and traversed only by hills of a moderate size, which form the terminating of the Alpine chains in the west and south, and are for this reason called by Tacitus (Hist. ii. 28) and Tibbonus (iv. 1. 109) the Pannonian Alps. The separate parts of these ramifications of the Alps are mentioned under the names of Mount Carvancas, Cetus, Albi Montes, Claudia, and Almi or Almus. The mountains on the western and southern frontiers contain the sources of some important rivers, such as the Drava and Savus, which flow almost parallel and empty themselves into the Danube. Only one north-east tributary of the Drava is mentioned, viz., the Murus; while the Savus receives from the south the Naupartus, Carcorus, Colapius, Osnes, Eupanus, Valdasus, and Drinus. The only other important river in the north-west is the Arlado. The northern part of Pannonia contained a great lake called the Pelso or Peiro (the Plattensee), besides which we may notice some smaller lakes, the Uclea Laces, between the Sore and the Drau, near their mouth. The climate and fertility of Pannonia are described by the ancients in a manner which little corresponds with what is now known of those countries. It is said to have been a rough, cold, rugged, and not very productive country (Solin. vii. p. 317; Dion Cass. xlix. 37; Herodian, i. 6), though later writers acknowledge the fertility of the plains. (Solin. 21; comp. with Vell. Pat. ii. 110.) Both statements, however, may be reconciled, if we recollect how much the emperors Probus and Galerius did to promote the productivity of the country by routing out the large forests and reclaiming the districts occupied by them for agriculture. (Plin. iii. 28; Appian, Hiar. 22; Hygin. de Limit. Cons. p. 206; Aurel. de Cosa. 40.) As the forests in these times were probably much more extensive than at present, timber was one of the principal articles of export from Pannonia, and great quantities of it were imported into Italy. (Solin. 22.) Agriculture was not carried on to any great extent, and was for the most part confined to the rearing of barley and oats, from which the Pannonians brewed a kind of beer, called Sabain (Dion Cass. xlix. 36; Amm. Marc. xxvi. 8), and which formed the chief articles of food for the natives. Olives and vines do not appear, at least in early times, to have grown at all in Pannonia, until the emperor Probus introduced the cultivation of the vine in the neighbourhood of Sirmium. (Vopisc. Prob. 1. 18; Eutrop. ix. 17; Aurel. Vict. de Cosa. 37.) Among the valuable productions of the vegetable kingdom, the fragrant salvia is mentioned (Plin. xxi. 20), and among the animals dogs excellent; for the game are spoken of by Nemesianus (Synec. 126), the catane by Martial (xiii. 69), and the charax or black-cock by Athenaeus (ix. p. 398). The rivers must have provided the inhabitants with abundance of fish. The ancients do not speak of any metals found in Pannonia, either because the mines were not worked, or because the metals imported from Pannonia were vaguely said to come from Noricum, where mining was carried on to a great extent.

The inhabitants of Pannonia (Pannonii, Pannonienses, Pannonenses, or Pannonii) were a very numerous race, which, in the war against the Romans, could send 100,000 armed men into the field. (Appian, Hiar. 22.) Appian (i. c. 14) states that the Romans regarded them as belonging to Illyricum. Some have inferred from this that the great body of the people were Illyrians; and some tribes, such as the Tyrnustae, Mazani, and Doestiatae, are actually described by some as Illyrian and by others as Pannonian.
nonian tribes. The fact that most Greek writers called them Paeonians, and that Tacitus ( Germ. 43) speaks of the Pannonian language as different from that of the German tribes, seems to favour the supposition that they were a branch of the Thraco Paeonians, who had gradually spread to the banks of the Danube and the confines of Italy. It must however be observed that Dion Cassius (xxix. 36), who knew the people well, does not so consider them. There can, however, be no doubt that Celtic tribes also existed in the country, and in the early part of the Roman empire Roman civilisation and the Latin language had made considerable progress. They are described as a brave and warlike people, which, at the time when the Romans became acquainted with them, lived in a very low state of civilisation, and were notorious for cruelty and love of bloodshed (Dion Cass. L. c.; Appian, Illyri. 14; Strab. vii. p. 318; Stat. Sil. iii. 13), as well as for faithlessness and cunning (Hillul. iv. 1, 8). But since their subjugation by the Romans, the civilisation of the conquerors produced considerable changes (Vell. Pat. ii. 110); and even the religion of the Pannonians (some of their gods, such as Latobins, Laburus, Chartiis, are mentioned in inscriptions) gave way to that of the Romans, and Pannonian divinities were identified with Roman ones (Spart. Sever. 15; Lamprid. Alex. 7). The Romanisation of the country was promoted and completed by the establishment of colonies and garrisons, so that at the time of the migration of nations, the country was completely Romanised.

The following are the principal tribes noticed by the ancients in Pannonia: some of them, it must be observed, are decidedly Celtic. In Upper Pannonia we meet with the Azali, Cynzi, Bolii, Cole- tians, Osebiates, Serreteis, Sarrapelli, San diezzes, Latobici, and Votortians, and perhaps also the Lapodes or Iapodes, the Colotianis and Scorobiclans, though some of these latter may have extended into Illyricum. In Lower Pannonia, we have the Arabisci, Hercuniciaetus, Andiates, Iasi, Breeuci, Amantini (Amantes), and Corecutae. Besides these, Pliny (iii. 26) mentions the Ariavates, Belgates, and Catari, of whom it is not known what districts they inhabited. Towns and villages existed in the country in great numbers even before its conquest by the Romans (Dion Cass. iv. 29; Jornand. Get. 50); and Appian's statement (Illyri. 22), that the Pannonians were waging war in various places and isolated farms, probably applies only to some remote and more rugged part of the country. The most important towns were Vindobona, Car untum, Scambanta, Sabaria, Abrado, Pat tovis, Sicista, Aemona, Naupactus; and in Lower Pannonia, Bregetto, Aquincum, Mursia, Ciralai, Acinicum, Taracum, and Stumiun. The history of Pannonia previous to its conquest by the Romans, is little known. We learn from Justin (xxiv. 4, xxvii. 3, 12) that some Celtic tribes were probably the hosts of the Celts, settled in the country. Most of the tribes seem to have been governed by their own chiefs or kings. (Vell. Pat. ii. 114; Sext. Ruf. Rev. 7; Jornand. de Reg. Suec. 50.) The obscurity which hangs over its history begins to be somewhat removed in the time of the triumvirates at Rome, B.C. 33, when Octavianus, for no other purpose but that of giving his troops occupation and maintaining them at the expense of others, attacked the Pannonians, and by conquering the town of Sicista broke the strength of the nation. (Dion Cass. xlix. 36; Appian, Illyri. 13, 32, foll.) His general Vibius afterwards completed the conquest of the country. But not many years after this, when a war between Marobodus, king of the Marcomanni, and the Romans was on the point of breaking out, the Pannonians, together with the Dalmatians and other Illyrian tribes, rose in a great insurrection against their oppressors, and it was not till after a bloody war of several years' duration that Tiberius succeeded in reducing them, and changing the country into a Roman province, A. D. 8. (Dion Cass. iv. 24, 28, 29; Suet. Tib. 15, 29; Vell. Pat. ii. 110, foll.) Henceforth a considerable army was kept in Pannonia to secure the submission of the people. When the soldiers received the news of the death of Augustus, they broke out in open rebellion, but were reduced by Drusus. (Tac. Ann. i. 15, foll. 30; Dion Cass. iii. 4.) During the first century Pannonia formed only one province, under the administration of a lieutenant of the emperor. Respecting its division in the second century, we have already spoken. Until the time of the migration of nations, Pannonia remained a part of the Roman empire; many colonies and municipia were established in the country, and fortresses were built for its protection; military roads also were constructed, especially one along the Danube, and a second through the central part of the country from Vindobona to Carnuntum. The Romans did indeed much to civilise the Pannonians, but they at the same time derived great benefits from them; the military valor of the natives was of great service to them, and formed always a considerable portion of the Roman legions. About the middle of the fifth century Pannonia was lost to the Romans in consequence of the conquests made by the Huns, to whom the emperor Theodosius II. was obliged formally to cede Pannonia. (Pline. Exc. de Leg. vii. 37, ed. Paris.) On the dissolution of the empire of the Huns by the death of Attila, the country fell into the hands of the Ostrogoths (Jornand. Get. 50), from whom it passed, about A.D. 560, into those of the Longobards, who in their turn had to give it up to the Avari in a.D. 568.

The ancient authorities for the geography of Pannonia are Proculius (ii. 15 and 16), Pliny (ii. 28), Strabo (iv. 206, foll., v. 213, foll., vii. p. 313, foll.), Dion Cassius (xxiv. 34—35, iv. 23, 24), Vetulius Paterculus (ii. 110, foll.), Tacitus (Ann. i. 16, 21, 28—29), and Cassius (some of his works) (Liv. xlix. 9). Among modern writers the following deserve to be consulted: Schübelin, Carniola antiqua et nova, and Annales Cornubiensis antiquae et recentiores, Lubacius, 1681, fol. Kataniesiin, Comment. in C. Plinii Secundi Pannoniam, Buda, 1829; Nöthbr, Lect. on Ancient Hist. vol. i. p. 164, foll. [I. 8.]

Panoiue is the Phanoteus (Phanoteus) of Strab. Paus.; Phanoteus, Hes. ap. Strab. i. p. 424; Steph. B. s. r.; Or. Met. iii. 19; Stat. Thib. iv. 344; Herod. ii. 42, 43; Hesych. says that he was first discovered by Strab. in p. 423, to be his name in his time, but the form also occurs in Thuc. iv. 89; Forbórius, Steph. B. s. r.; Phanotea, Liv. xxxii. 18; Eth. Phanoteus (Phanoteus), an ancient town of Phocias, near the frontier of Boeotia, and on the road from Dalus to Chaeronea. Pansanius says that Pano eus was 20 stadia from Chaeronea, and 7 from Daulus (iv. 4. §§ 1, 7); but the latter number is obviously a mistake. The ruins at the village of Aio Visti (Syrr. Ministras), which are clearly those of Panopeus, are distant about 20 stadia from Ka-
PANOPOLIS.

Panopolis (Pavvovav, Diodor. i. 18; Ptol. iv. 5. § 72; Paieaav avav, Strab. xvi. p. 818; Paivs pavv, Steph. B. s. n.; sometimes simply Paivs, Hieroc. p. 731; It. Anton. p. 166: Euth. Panouoaiyv), the Greek equivalent of the Aegyptian appellative Chemmis or Chemho (Herod. ii. 91, 145, seq.; Diodor. l. c.), was a very ancient city of the Thebaid, lat. 26° 40' N. [CHEMMIS.] Panopolis was dedicated to Chem or Pan, one of the first Octad of the Aegyptian deities, or, according to a later theory, to the Pan of the nomos. Originally an Upper Aegyptian city (Plut. Is. et Olymp. c. 14). Stephanus of Byzantium describes the Chem or Pan of this city as an Ithyphallic god, the same whose representation occurs so frequently among the sculptures of Thebes. His face was human, like that of Ammon; his head-dress, like that of Ammon, consisted of long straight feathers, and over the fingers of his right hand, which is lifted up, is suspended a storge; the body, like that of Ammon also, inclining the left arm, is swathed in bandages. An inscription on the Koseir road is the ground for supposing that Chem and Pan were the same deity; and that Chemmis and Panopolis were respectively the Aegyptian and Greek names for the same city is inferred from Diodorus (l. c.). Panopolis stood on the right bank of the Nile, and was the capital of the Nomos Panopolites. According to Strabo (l. c.) it was inhabited principally by stonemasons and linen-weavers; and Agathias (iv. p. 105) says that it was the birthplace of the poet Nonnus A. p. 410. Although a principal seat of Panie worship, Panopolis was celebrated for its temple of Perseus. From Herodotus (vi. 53) we know that the Dorian chieftains deduced their origin from Persians through Aegypt. It is difficult to say which of the native Aegyptian gods was represented by Perseus. From the root of the word—περσα, to burn—it is probable, however, that he is the same with the fire-god Hephaestus or Pithah. The Panopolis temple of Perseus was rectangular, and surrounded by a wall around which was a plantation of palm-trees. At the entrance of the enclosure were the ginnasiums of stone, and upon these were placed colossal statues in human form. Within the adytum was a statue of Persians, and there also was laid up his sandal, two cubits long. The priests of Panopolis asserted that Persians occasionally visited their temple, and that his epiphanies were always the omens of an abundant harvest to Aegypt. The sandals of Persians are described by Hesiod (Scut. Herc. 220), and their deposition in the shrine implied that, having left his abode for a season, he was traversing the land to bless it with especial fertility. The modern name of Panopolis is Akhmin, an evident corruption of Chemmis. The ruins, in respect of its ancient splendour, are inconceivable. It is probable, indeed, that Panopolis, like Abydos and other of the older cities of Upper Aegypt, declined in prosperity as Thebes rose to metropolitan importance. (Champollion, Egypte, vol. i. p. 267; Pococke, Travels, p. 115; Minutoli, p. 245.)

PANORMUS (Pdvvoqov : Euth. Panourque, Panormitans: Palermo), one of the most important cities of Sicily, situated on the N. coast of the island, about 50 miles from its NW. extremity, on an extensive bay, which is now known as the Gulf of Palermo. The name is evidently Greek, and derived from the excellence of its port, or, more strictly speaking, of the anchorage in its spacious bay. (Diod. xiii. 10.) But Panormus was not a Greek colony; it was undoubtedly of Phoenician origin, and appears to have been one of the earliest settlements of that people in Sicily. Hence, when the increasing power of the Greek colonies in the island compelled the Phoenicians to concentrate themselves in its more westerly portion, Panormus, together with Motya and Soli, became one of the chief seats of their power. (Thuc. vi. 2.) We find no mention of the Phoenician name of Panormus, though it may fairly be presumed that this Greek appellation was not that used by the colonists themselves. It would be natural enough to suppose that the Greek name was only a translation of the Phoenician one; but the Punic form of the name, which is found on coins, is read “Machanath,” which signifies “a camp,” like the Roman Castra, and has no reference to the port. (Geuenius, Monum. Phoen. p. 288; Mover's Phoenicier, vol. iii. p. 335.)

We have no account of the early history of any of these Phoenician colonies in Sicily, or of the process by which they were detached from the dependence of the mother country and became dependencies of Carthage; though it is probable that the change took place when Phoenicia itself became subject to the Persian monarchy. But it is certain that Carthage already held this kind of supremacy over the Sicilian colonies when we first meet with the name of Panormus in history. This is not till m. c. 480, when the great Carthaginian armament under Hamilcar landed there and made it their head-quarters before advancing against Messana. (Diod. 20.) From this time it bore an important part in the wars of the Carthaginians in Sicily, and seems to have gradually become the acknowledged capital of their

But

in

countries of Asia Minor,

the boundaries are somewhat fluctuating.

Slrubn,

when saying that Paphhigonia

also

bordered on Phrygia in the south, was most probably
thinking of tliose earlier times when the Oalatiuns
had not yet estabUshed themselves in Phrygia.
Pliny (vi. 2) again includes Amisus beyond the
Halys in Paphlagonia, while Mela (i, 19) regards
Sinope, on the west of the Halys, as a city of PonIt is probable, however, that in early times llis
Paphlagonians occupied, besides Paphlagonia proper,
tract of country on the east of ibe
Htdys, perhap.s as far as Themiscyra or even Cape
lasonium (Xenopli. .Iim6. v. 6. § 1; Strab. xii.
tus.

a considerable


The Paphlagonians are described by the ancients as a superstitious, silly, and coarse people, though this seems to apply to the inhabitants of the interior more than to those of the coast. (Xenoph. Anab. v. 9, § 6; Aristoph. Eq. 2, 65, 102, 110; Lucian, Alex. 9, folt.) Besides the Paphlagonians proper and the Greek colonists on the coast, we hear of the Heneti and Macrones, concerning whose nationality nothing is known; they may accordingly have been subdivisions of the Paphlagonians themselves, or they may have been foreign immigrants.

Until the time of Cressus, the country was governed by native independent princes, but that king made Paphlagonia a part of his empire. (Herod. i. 28.) On the conquest of Lydia by Cyrus, the Paphlagonians were incorporated with the Persian empire, in which they formed a part of the third satrapy. (Herod. iii. 90.) But at that great distance from the seat of the government, the satraps found it easy to assert their independence; and independent Paphlagonian kings are accordingly mentioned as early as the time of Xenophon (Anab. v. 6, § 3, 9, § 2). In the time of Alexander the Great, whose expedition did not touch those northern parts, kings of Cappadocia and Paphlagonia are still mentioned. (Arrian, Anab. ii. 4, § 1; iii. 8. § 5; Diod. Sic. xviii. 16.) But this independence, though it may have been merely nominal, ceased soon after, and Paphlagonia and Cappadocia fell to the share of Eumenes. (Diod. Sic. xviii. 3; Justin, xiii. 4, 16.) After Eumenes' death, it was again governed by native princes, until in the end it was incorporated with the kingdom of Pontus by Mithridates. (Arrian, ap. Phot. p. 72, ed. Bekker; Diod. Ecdog. xxxi. 3; Justin, xxxviii. 1; Strab. xii. p. 540; Appian, Mithrid. 11, 12.) Mithridates, however, soon afterwards divided Paphlagonia with his neighbour Nicias, who made his son, under the name of Palaemenes, king of Paphlagonia. (Justin, xxxviii. 3, 4.) After the conquest of Mithridates, the Romans united the coast districts of Paphlagonia with Bithynia, but the interior was again governed by native princes (Strab. l. c.; Appian, B. C. ii. 71; Plut. Pomp. 73); and when their race became extinct, the Romans incorporated the whole with their empire, and thenceforth Paphlagonia formed a part of the province of Galatia. (Strab. vi. p. 288, xii. pp. 541, 562.) In the new division of the empire in the fourth century, Paphlagonia became a separate province, only the easternmost part being cut off and added to Pontus. (Herod. i. pp. 695, 701.) The principal coast towns were Amasia, Elythinyi, Cromina, Cytorus, Aegialus, Abontichios, Cimolis, Stephane, Potami, Armea, Sinope, and Carusa. The whole of the interior of the country was divided, according to Strabo, into nine districts, viz. Blacon, Donanetic, Pinolinesis, Climatene, Timontis, Gizzaorius, Marmoolitis, Sinseine, and Potami. The interior contained only few towns, such as Pompeopogia, Gangra, and some mountain fortresses.

[6.8]

PAPHUS (Ptol. viii. 20. § 3, &c.: Eth. and Adj. Πάφος, Paphus, and Paphiaken), the name of two towns seated on the SW. extremity of the coast of Cyprus, viz., Old Paphos (Πάφος ταλαιπ, Ptol. v. 14. § 1; or, in one word, Παλαιαργός, Strab. xiv. p. 683; Paphaeophus, Plin. v. 31. s. 35) and New Paphos (Παφος νεας, Plin. l. c.; Nca Paphus, Plin. l. c.). The name of Paphus, which is said to mean exultation or joy, is used by poets and by writers of prose to indicate the enjoyment of happiness, glory, elevation, and excellence.

Ares, and who may, accordingly, have been the object of Pappamite worship. In the Pappamite nome a battle was fought between the Persians and Aegyptians, in which the stratup Achamasnes was defeated by Inarus, king of Lower Aegypt. n. c. 460. (Char. vii. 13.) My I'll

PARACANDA. [Maracanda.]

PARACHELO'OITIS. [Aetolia, p. 63, a.]

PARACOATHRAS (& Παραχόαθαρας, Ptol. vi. 2. § 3, 4, § 1), the great south-eastern chain of the Taurus, which under various names extended from

PARAGON. [Pakachlou.] Aegyptians, Delta speculate Persic, the § cannot 460.

ParacóctoNII (Παρακοχτονις, Sct. p. 44; Strab. xvii. p. 799; Pomp. Mela, i. § 2; Plin. v. 5; Ptol. iv. 5. § 4; Steph. B. Α. in. Anton. Hiero-

ciles), a town of Marmarica, which was also called

ParacóctoNI, which its celebrity was owing to its spacious harbour, extending to 40 stadia (Strab. l. c.; comp. Diod. i. 31), but which appears to have been difficult to make. (Lucian, Quomodo historia sit conscribenda, 62.) Paracóni-

tum was 1300 stadia (Strab. l. c.; 1550 stadia, Studioius, § 19) from Alexandria. From this point Alexander, n. c. 392, set out to visit the oracle of Ammon. (Arrian, Anabiv iv. 117.) When the "world's debate" was decided at Actium, Antonius stopped at Paraconium, where some Roman troops were stationed under Pinarius r for the defence of Aegypt. (Plut. Anton. 70; Flor. iv. 11.) The name occurs in Latin poetry. (Ovid, Met. ix. 772, Amores, ii. 13. 7; Lucan. iii. 295.) Justinius for-
tified it as a frontier fortress to protect Aegypt from attacks on the W. (Procop. de Aed. vi. 2.) An imperial coin of the elder Faustina has been assigned to this place, but on insufficient grounds. (Eckhel, vol. iv. p. 116.) When the Aoulad Abi were sovereigns over this district, the site, where there were ancient remains, retained the name of Baretony; but after their expulsion by the pasha of Aegypt, it was called Berek Marrab. (Pacho, Voyage dans la Marmarique, p. 28.)

PARAGON SINUS (Παραγόνος κόλπος, Ptol. vi. 8. § 7; Marcius, c. 29. ed. Miller), a gulf on the shore of Gedrosia, a little way beyond the Prom. Carpella (now Cape Bombareeh'), according to Po-

tenyn. Marcius states that it was of considerable size, and extended as far as the promontory called Alamhator (now Rûs Guadel) and the island of Lība or Ziba. It appears to have been in that part of Gedrosia which was inhabited by the Ichthyophagi; it is not, however, noticed in Xeruchs's voyage. [V.]

PARALAI (Παραλάι), a town of Lycaonia, and, as its name seems to indicate, situated near a lake. (Ptol. v. 6. § 7.) There are coins bearing the in-

scription "Iah. Aug. Col. Palaia" (Eckhel, vol. vii. p. 33, foll.), from which it appears that the place was made a Roman colony. But as the town and its elevation to the rank of a colony is not mentioned elsewhre, it has been supposed that the coins are either forged or have been incorrectly read [L.S.]

PARATIA, or PARALUS. [Attica, p. 322.]

PARALIA, PARAXIA [Chalcidice, Vol. i. p. 598, a.]

PARAMBOLE (Paramboile, Itin. Hieros. p. 568; Parmobole, Acta S. Alex. Wezel, p. 568), a town of Thrace, on the river Hebros, still called Parem-
bolus, according to Pala. [T. H. D.]

PARAPIOTAE (Παραπιοταί), an Indian tribe mentioned by Ptolemy (vii. 1. § 635), and placed by him on the slopes of the Vindius M. (Vindhyā M.), along the banks of the Kandous (Nosbedia), Lassen, in his Map of Ancient India, places them along the upper sources of the same river. [V.]

PARAPOTHAMI (Παραποθαμί, Ptol. Strab. Paeo; Παραποθαμί, Steph. B. x. p. Eth. Hebræorum, i. 12), a town of Phocis on the left bank of the Cephissus (whence its name), and near the frontier of Bœotia. Its position is described in a passage of Theopompos, preserved by Strabo, who says that it stood at a distance of 40 stadia from Chaeroneia, in the entrance from Bœotia into Phocis, on a height of

PARAPOTAMI. 549

PARAPOTAMI. 549

PARAPOTAMI.
PARASOPIAS.

moderate elevation, situated between Parassus and Mount Hedyllium; he adds that these two mountains were separated from each other by an interval of 5 stadia, through which the Cephissus flowed. (Strab. i.x. p. 424.) Parapotamum was destroyed by Xerxes (Herod. viii. 33), and again a second time by Philip at the conclusion of the Sacred War. (Paus. x. 3. § 1.) It was never rebuilt. Plutarch in his life of Sulla (c. 16) speaks of the acropolis of the deserted city, which he describes as a story height surrounded with a precipice and separated from Mr. Healey's town only by the river Asius, (Leake, "Northern Greece," vol. ii. pp. 97, 193.)

PARASOPIAS (Παρασοπιας), a town of Thessaly in the district Oetaea. (Strab. i.x. p. 434.)

PARAVAEI (Παραβαίοι, Thuc. ii. 80; Ilidius, ap. Steph. B. s. n.), an Epirot tribe, whose territories, contumins with those of the Orestae, were situated on the banks of the Asua (Viesa), from which they took their name. In the third year of the Peloponnesian War, a part of the Thessalians and the Epirot Odorcas, joined (Paus. iii. 19. § 1.), the Lacedaemonian commander. Arrian (Anab. i. 7), describing the route of Alexander from Eliminius (Greveni and Tjezembia) to Pellaenaum in Thessaly, which stood a little to the E. of Trikkola, remarks that Alexander passed by the highlands of Paravae, —Λοσαρικανινβοκα, with the adjacent mountains.

The seat of this tribe must be confined to the valleys of the main or E. branch of the Asua, and the mountains in which that river originates, extending from the Aci Stena or Klisiria, as far S. as the borders of Thymphaea and the Molossi, and including the central and fertile district of Kônitsa, with the N. part of Zagori. (Leake, "Northern Greece," vol. iv. pp. 115—120, 195.) [E. B. J.]

PAREMBOLE (Παραμέλος, Mol. Brev. p. 188; Parmobole, It. Ant. p. 161; H. Hieros, p. 568) was a part or castle (Castra, Plin. v. 9. s. 10) on the borders of Aegypt and Aetoliaria, and alternately attached to either kingdom. Parembole was situated between Syene and Lambis, on the left bank of the Nile, lat. 23° 40' N. In Roman times it was one of the principal fortresses of the southern extremity of the empire, and was usually occupied by a legion. On the recession of the Roman boundary in Decedian's reign, Parembole was handed over to the Nubae, and was frequently assailed by the Blemyes from the opposite bank of the river. (Pliny, B. N. i. 19.) The ruins of its temples were still seen at the village of Debod or Debou. From the square enclosure of brick found there it well seems to have been a penal settlement for virgins as well as a regular station for soldiers. (Rosell. "Mon. del Culto," p. 189.) [W. B. D.]

PARENTIUM (Παρερτίον: Parenta), a city of stria, on the W. coast of the peninsula, about 30 miles N. of Pola. (Plin. iii. 19. s. 23; Ptol. iii. 1. § 37; Itin. Ant. p. 271; Tab. Ptol.; Anon. Rav. iv. 41.) From the mention of the name by Stephanus of Byzantium (s. c.) it is probable that it existed as an Etruscan town previous to the Roman settlement there. Pliny calls it an "oppidum civium Romanorum," and it would seem that it was already one of the most considerable towns in the province, though it did not then enjoy the rank of a colony.

But we learn from inscriptions that it subsequently attained this rank under Trajan, and bore the titles of Colonia Ulpia Parmentium (Orell. Inscr. 72, 3729; Ezumpt, de Colon. p. 402.) In common with the other cities of Istria, its most flourishing period belongs to the close of the Western Empire. The modern city of Porecz is a small place, but retains its episcopal see, which dates from a very early period. [E. H. B.]

PARGYETA (Παργύεται), a tribe who, according to Ptolemy (vi. 18. § 3), occupied part of the chain of the Paropamisus (Hindu Koh). There can be little doubt that they lived along what are now called the Solimen Koh, a great chain of mountains which extends nearly SW. from Cabul parallel with the Panjib. There is some doubt as to the correct orthography of their name; and it seems most probable that the real form is Paryetec or Paryetae, which is also given by Ptolemy as the name of another portion of the chain of the Paropamisus. Both probably derive their name from the Sanscrit Parvata, which means mountains. [V.]

PARTITION. [PANIXION.]

PARIENA (Παριέννα), a town of Germany, in the country of the Quadii, was probably situated on the river Waga, on the site of the modern Paris or Veren. (Ptol. ii. 11. § 29.)

PARETINUM, a town of the Celtiberians in Hispania Tarraconensis, identified by some with S. Clemente. (Itin. Ant. p. 447.) [T. H. D.]

PARIIN (Παρίν, Isidor. Meth. Parth. c. 17, ed. Müller), a town mentioned by Isidorus of Charax in Drangiana, or, as he calls it, Zraungana. It has been conjectured by Forbiger that it is represented by the Modern Paruy; Müller, however, thinks it is the same as Bobonara.

PARIUS (Παρίου, Ptol. ii. 3. § 17), a British tribe dwelling on the NE. coast of Britannia Romana, and on the left bank of the Abus (Humber), consequently in the "East Riding of Yorkshire." Their chief town was Petarina (Poropina, Ptol. l. c.), which is thought to be the same with the Praetorium of the Itinerary (pp. 464, 466), and whence there was a road through Eboracum (York) to the Roman Wall. Re-pecting the site of Petaria there have been many conjectures, and it has been variously identified with Beverley, Burgh, Appleby, &c. [T. H. D.]

PARI'SIL. [LUTETIA.]

PARUM (Παρόμ: Eth. Παραμός), a coast-town of Mycia, on the Hellespont, on the west of Priapus, in the district called Adrastea, from an ancient town which once existed in it (Strab. xiii. p. 588). Pliny, (v. 40) is mistaken in stating that Homer applied the name of Adrastea to Parium, and the only truth that seems to lie at the bottom of his assertion is that a town Adrastea did at one time exist between Priapus and Parium, and that on the destruction of Adrastea all the building materials were transferred to Parium. According to Strabo, Parium was a colony of Milesians, Erythraeans, and Parians; while Pausanias (ix. 27. § 1) calls it simply a colony of Erythrae. According to the common traditions, it had received its name from Parus, a son of Jason. (Eustath. ad Hes. Od. v. 125, ad Dion. Per. 517; Steph. B. s. c.)

The harbour of Parium was larger and better than that of the neighbouring Priapus; whence the latter place decayed, while the prosperity of the former increased. In the time of Augustus, Parium became a Roman colony, as is attested by coins and inscriptions. It contained an altar constructed of the stones of an oriental temple at Athisa which had been removed to Parium; and this altar, the work of Hermogenes, is described as very remarkable on account of its size and beauty. Strabo and Pliny (vii.
that it continued under the Roman Empire to be, as it was in the time of Strabo, one of the principal towns of this populous and flourishing part of Italy. (Ptol. iii. 15. s. 20; Strab. v. p. 216; Ptol. iii. 1. § 46; Pliny, Macrob. 1.) But its name is scarcely mentioned in history: a proof perhaps of the tranquillity that it enjoyed. Its territory was celebrated for the excellence of its wool, which according to Martial was inferior only to that of Apulia. (Mart. xiv. 153; Colum. vii. 2. § 3.) In A. D. 577, a colony of Goths was settled by order of Gratian in the territory of Parma, as well as the adjoining parts of Apulia. (Appian, mm. § 4.) — a proof that they were already suffering from a decay of the population; and it is probable that it did not escape the general devastation of the province of Aemilia by Attila. But it survived these calamities: it still bears a part as an important town during the wars of Narses with the Goths and their allies, and is noticed by P. Diacconus, as one of the wealthy cities of Aemilia after the Lombard conquest. (Agath. B. G. i. 14 — 17; P. Dic. Hist. Lang. i. 18.) It is retained by the Saracens throughout the middle ages, and is still a populous and flourishing place with above 30,000 inhabitants, but has no remains of antiquity, except a few inscriptions.

The Roman poet Cassius Parinensis would appear from his name to have been a native of Parma, but there is no distinct testimony to this effect.

The itinerary (p. 284) mentions a line of cross-road which proceeded from Parma across the Apennines to Luca: this must have ascended the valley of the Parmenian, or the adjoining one of the Tarsii, as far as the main ridge, and then descended the valley of the Macra to Luna. This passage, though little frequented in modern times, is one of the main lines of natural communication across this part of the Apennines, and is in all probability that followed by Hannibal on his advance into Etruria.

[E. H. B.]

PAMMAECAMPI (Παμμαέκαμπ), a tribe of Southern Germany, on the east of Mount Abnaha and the Danube; they probably occupied the district about the town of Chem in Bavaria. (Cass. Hist. Rom. ii. 11. § 24.)

PARNASSUS Mons. [DErELPH.]

PARNES, or Parthaca, p. 321, seq.]

PARKON. [Lacoxia, p. 109.]

PARECO/ POLIS (Παρεκομπόλις, Ptol. iii. 13. § 30), a town of Sintice, in Macedonia, on the right of the river Strymon. Nigrita, on the road from Saloniki to Seres, was either Tystolos (Πιστόλος, Ptol. l. c.) or Parecopolis, for these are the only two towns besides Heracleia which Tolyeney assigns to Sintice. If Nigrita be assigned to Tystolos, Parecopolis will be represented by Scaphèi, which lies to the N. of the former town. (Thrace, Northern Greece, vol. iii. p. 229.) [E. B. J.]

PAREOLISUM. (Παρεολίσσων, or Παρελίσσων, Ptol. iii. 8. § 6; Parolson, Tab. Pent.; cf. Oreili, Inscr. No. 3433), a municipal town of Dacia, seated at the termination of the Roman road towards the N. According to Martii (ii. p. 85), Miannia; according to Mammert (iv. p. 216), on the Marosch, N X N
above "Weissenburg" according to Reehard, "Naut-Banja."

PAROPAMISADA." (Παροπαμίσαδα or Παρο-
παμίσαδα, Strab. xvi. p. 691, &c.; Dioi. xvi. 82.;
Arrian, Anab. v. 3.; Plut. vi. 15.; Paropamis.
Mela, i. 2. § 5), the collective name of a number of
small tribes who lived along the spurs of the great
chain of the Paropamisus ("Hindu Kush"), and chiefly
along its southern and eastern sides. The distri-
ct they inhabited, which was called generally
"Παροπαμίσαδα χώρα" (Arrian, Anab. v. 3), was
bounded on the W. by Ariana, on the N. by Bac-
tria, on the E. by the Indus and Panjeh, and
on the S. by Arachosia. It comprehended therefore
the whole of Cabulistan, and a considerable portion
of Afghanistan. The two principal rivers of this
district were the Dargamenes (now Gors) and Co-
phen (Cdubal river). The population appears to
have been a free independent mountain race, who
never till the time of Alexander had been compelled
to submit to a foreign ruler. During the Persian
domination of Asia, as the Paropamisadae are not
mentioned, it may be presumed that they remained
unsubdued. Their chief tribes were the Bolitae
(perhaps Carlodita, the inhabitants of Cdubal), the
Ambantae, Parsii, and Paryetae or Parygetae
(Plut. vi. 18. § 3). Their chief towns were Orto-
spamum (Paropamisus, "Hindu Kush"), and chief
districts, Emodus, and Capisa or Capisa. The valleys
between the mountains, though exposed to great
cold during the winter, were very fertile. (Strab.
xvi. p. 765; Curt. vii. 3. § 15.)

PAROPAMISUS (Παροπαμίσαδα, Strab. xvi.
p. 699; Παροπαμίσαδα, Plut. vi. 11. § 17; Παρο-
παμίσαδας, Arrian, Anab. v. 4. § 5; Παρο-
pαμίσαδος, Steph. B. s. v.; Paropamisus, Mela, i. 15. § 2; Plin.
vi. 17. s. 20), a great chain of mountains extending
from about 67° E. long. to 73° E. long., and along
53° N. lat. and forming the connecting link between
the Western Caucasus and the still more eastern
Paropamisus and Hindu Kush. Their general modern
name is Hindu Kush, but several of the most remarkable
groups have their own titles: thus the great moun-
tains W. of Cdubal are now called Koll-i-Baba, and
those again N. of the Cdubal river in the direction
of Jellahdudh bear the title of Nishabth.

The altitude of these mountains, though not so
great as that of the Hindu Kush, varies from 15,000
to 20,000 ft. It is difficult to determine whether the
Greeks obtained the name whereby they have re-
corded these mountains, or which is the best
orthography to adopt. Yet it seems not unlikely that
Ptolemy is the most correct, and that in the
Greek Paropamisus we have some traces of the Sun-
cent Nishabth.

The ancient writers are by no means clear in
their accounts of these mountains, and there is a
perpetual confusion between the Taurus and the
Paropamisus. The reason of this no doubt is, that,
till the time of Alexander's invasion they were
altogether unknown to the Greeks, and that then
the officers who described different portions of
this celebrated expedition sometimes considered the
Indian chain as a continuation of the Taurus, and
sometimes of the Caucasus. Thus Strabo, in one
place, states that the Macedonians called all the
mountains beyond Ariana eastward, Caucasus, but
that among the barbarous people they bore severally
the names of Paropamisus, Eumolus, and Iambi
(str. p. 511); in another, he appears to consider the
range which bounded India on the north to be the
extreme end of Taurus, which extended to the
Eastern Sea (xv. p. 689). Arrian appears to have
thought that Taurus ought to have been the true
name of these, as he considers this great chain to
extend across the whole of Asia from M. Mycale,
which is opposite to Samos. (Anab. v. 5.) But he
adds, that it was named Caucasus by the Macro-
donian soldiers to gratify Alexander, as though,
in passing into Sogdiana through Bactria, he had
crossed the Caucasus. Under the double name of
Taurus and Caucasus, he states his belief that this
chain is the watershed of all the great rivers of
Asia. (L.c.) Again, in another place, he coincides
with the description in Strabo, and asserts that
the Indian names of Paropamisus, Eumolus, &c., are
local titles of the extended chain of the Taurus.

(Ind. 2.) Other ancient authors agree more or
less with these determinations: thus Mela gives
the whole central chain from E. to W. the name of
Taurus (i. 15, iii. 7); Curtius calls it Caucasus
(vii. 3. § 19, viii. 9. § 3); Pliny, enumerating
the several groups from E. to W., gives the name
of Caucasus to that portion W. of the Hindu Kush
which connects the chain with the Caucasus and
Taurus of Western Asia (vi. 17. s. 21); Ptolemy
appears to have considered the Paropamisian part
of the Caucasus (vi. 18. § 1); lastly, Polybius,
speaking of the principal rivers and waters from the
Caucasus (x. 46, xi. 52). It has been suggested
that the present name of Hindu Kush is derived from
Indicus Caucasus. [V.]

PAROPUS (Παρόπος; Eth. Paropinos), a town
of Sicily mentioned by Polybius (i. 24) during
the First Punic War, in a manner that seems to in-
dicate its site between Panormus and Taurmne (Ter-
mitus). It is not noticed by any of the geographers
except Pliny, who mentions it in his list of the
stipendiary towns of Sicily (Plin. iii. 8. s. 14); and
in another passage (ib. § 92) speaks of the
island of Ustica as lying "contra Paropinos." This
is all the clue we have to its position, and its exac
site cannot therefore be determined. [E. H. B.]

PAROREATAE. [Ellis, p. 818, a.]

PAROKELIA. [Megalopolis, p. 309, b.]

PAROEIA (Παροεία), a city of Thrace on the
borders of Macedonia (Liv. xxxiii. 27, xili. 51).
is called by Stephenus B. (s. v.), a city of Macedonia.
Its inhabitants are mentioned by Pliny (iv. 10. s.
7) under the name of Paroi, and are supposed to
have been the Paroii of Homer.

PAREIOI. [Phrygia.]

PAREOS or PAROS (Πάρος; Eth. Πάροι;
Paro), an island in the Aegean sea, and one of the
largest of the Cyclades, lies west of Naxos, from
which it is separated by a channel about 6 miles
wide. It was said to have been originally inhabited
by Cretans and Arcadians, and to have received its
ame from Parus, a son of the Arcadian Parrhasius.
(Callimach. ap. Steph. B. s. v.) It was also re-
ported to have borne the name of Pactia, Deme-
trian, Zeycuthus, Hyleisa, Mynea, and Cabarnis.
(Nic. ap. Steph. B. s. v.) It was colonised by
the Ionians, and became at an early period so pros-
erous as to send colonies to Thasus (Thuc. iv.
104: Strab. x. p. 457), to Parium on the Propontis
(Strab. L. c.), and to Pharsus on the Illyrian coast.
(Thuc. viii. p. 315.) After the battle of Marathon,
Miltiades in vain endeavoured to subjugate the
island. (Herod. vii. 193, seq.; Ephorus, ap. Steph.
B. s. v.) The Paroii did not take part in the
battle of Salamis, but kept aloof at Cythnna, watching
the course of events. (Herod. viii. 67.) They es-
PARRHASIA.

PARRHASIA, PARRHASII. [Arcadia, p. 192. 2.]

PARISSI MONTES, a small chain of mountains in the western part of Gedrosia, beyond the river Arabes. Forbiger has conjectured that they are the same as the present Baskurd Mts. Connected doubtless with these mountains, and in the same district was the Paris of Potoncy (vi. 21. § 5), which he calls a metropolis, an opinion in which Marcian assents (c. 24, ed. Müller), and another tribe whom Potoncy calls the Parissae or Parissae (vi. 21. § 4). It seems not unlikely that these are the same people whom Arrian calls Parissae (Ind. c. 26) and Pliny Passivs (vi. 23. s. 26). [V.]

PARTHANUM, a town in Rhetaia, on the road from Lauracum to Veldiana, where, according to the Notitia Imperii (in which it is called Paro-

dumm), the first Rhetaian cohort was stationed. [Plin. Ant. pp. 257, 275.]

Its site is generally identified with the modern Partenkirchen. [L.S.]

PARTHINI PARTHINI (Parthyn, Parthun, Parhon, Strab. viii. p. 326; Appian, Illyr. 1; Dion Cass. xii. 49; Cie. in Pict. 40; Pomp. M-la, ii. 3. § 11; Plin. iii. 26), a people of Grecian Illyricum, who may be placed to the N. in the neighbourhood of Epidamnus, and consequently, next to the Taulanti. They are often mentioned in the course of the war with Illyricum, b.c. 229, but as friends rather than foes of the Romans, having submitted at an early period to their arms. (Polyb. ii. 11; Liv. xiv. 12.) After the death of king of Macedon, they appear to have been added to the dominions of Ptolema, an Illyrian prince allied to the Romans. (Polyb. xivii. 30; Liv. xxx. 34, xlv. 30.) Their principal town was PARTHIS (Páthos, Steph. B. s. v.), which was taken by Caesar in the course of his campaign with Pompeius. (Caes. B. C. iii. 41.) In Leake's map the site is marked at Arcadentia (7).

The double-hilled Dinallum, the strongest among the Illyrian places, was on the sea, and about 5000 inhabitants. (Thiersch, Über Paros und Parische Inschriften, in the Abhandl. der Byzantischen Akad. of 1834, p. 583, &c.; Ross, Reisen auf den griech. Inseln, vol. i. p. 44; Leake, Northern Greece, vol. iii. p. 85, &c.)

COIN OF PAROS.

PARNESIUM, PARNESUS. [Arcadia, p. 192. 2.]

PARSII, or the name of the country, is employed by Strabo, who calls it "Parnesia." [V.]

PARTHE'NIA. [Parina.]

PARTHE'NIUM (παρθηνείον ὄρος), a mountain on the frontiers of Arcadia and Argolis, across which there was an important pass leading from Argos to Tegae. [See Vol. i. pp. 201, 402.]

(Paus. vii. 6. § 4; Strab. viii. pp. 376, 389; Polyb. iv. 23; Liv. xxxiv. 26; Plin. iv. 6. s. 16.) It was sacred to Pan; and it was upon this mountain that the courier Pheidippides said that he had had an interview with Pan on returning from Sparta, whither he had gone to ask assistance for the Athenians shortly before the battle of Marathon. (Herod. vi. 103; Paus. i. 28. § 4, vii. 54. § 6.) The pass is still called Partheni, but the whole mountain bears the name of Parnos. It is 3993 feet in height. (Leake, Morea, vol. ii. p. 329, seq.; Peloponnesiac. p. 203.)

PARTHE'NIUM (παρθηνείον), a town in Myisia, in the south of Pergamum. (Xen. Alex. vii. §§ 15, 21; Plin. v. 33.) Its exact site has not been ascertained. [L.S.]

PARTHE'NIUM MARE (παρθηνείον πέλαγος, Greg. Naz. Or. xi.), the eastern part of the mare Internum, between Egypt and Cyprus. (Athan. Mare. xiv. 8. § 10: from which it appears that it was sometimes called the Issiac Sea—"a vespera (Aegyptus) Issiaco disjungitur maris, quod quidam nominavere Parthenum," xxii. 15. § 2.) [T.H.D.]

PARTHE'NIUM (παρθηνείον), the most important river in the west of Paphlagonia. It owes its Greek name probably to a similarity in the sound of its native appellation, which is still Burtan-Sa or Burtine; though Greek authors believed that it derived its name from the fact that Artemis loved to bathe in its waters (Seym. 226, foll.) or to hunt on its banks, or from the purity of its waters. The river has its sources on mount Olgassas, and in its north-western course formed the boundary between Paphlagonia and Bithynia. It empties itself into the Euxine about 90 stada west of Anamatis. (Hom.
PARTHENOE.

II. 854; Hes. Theog. 344; Herod. ii. 104; Xenoph. Anab. v. 6, iii, 22; ii. 21; Strab. xii. p. 543; Ptol. v. 1. § 7; Arrian, Perip. p. 203, Steph. B. s. c. who erroneously states that the river flowed through the middle of the town of Asiaea; Op. Ex Post. iv. 10. 49; Amm. Marc. xxiii. 9.)

PARTHENOE. [NEAPOLIS.]

PARTHIA (§ Parthiara, Strab. xi. pp 514, 515, etc.; § Parthiara, Polyb. x. 28; Steph. B. s. c.; Curt. vi. 12: Parthia, Polyb. vi. 5. § 1: Parthia, Plin. vi. 15. s. 16), originally a small district of Western Asia, shut in on all sides by other mountains or deserts. It was bounded on the West by Media, on the South by Hyrcania, on the E. by Ariana and M. Media, and on the S. by Carmania, Deserta, and Persia. It comprehended, therefore, the southern part of Khwosen, almost all Kohistan, and some portion of the great Salt Desert. It was for the most part a mountainous and rugged district. The principal mountains were the Labus or Labantras (probably part of the great range now known by the name of the Elburz Mts.), the Parachaouras (or Elbantras), which possessed little or no mountain streams, liable to violent and sudden floods on the melting of the snow, but nearly dry during the summer: the only names which have been recorded of these streams are, the Zibehris or Stibocotes, the Hindagus, and the Chaotrites. The principal divisions of the land were into Camise, on the north; Parthiane, to the S.W. of Camisee, extending along the edge of the Caspian Sea, as far as the Caspian Gates, a district which some have supposed to have been the original seat of the population, and that from which the whole country derived its name; Cheersen, the western portion of the land, and for the most part a fruitful valley along the frontiers of Media; Apavaretene, to the S.; and Tahlione, along the borders of Carmania Deserta. There were no great towns in Parthia, properly so called, but history has preserved the names of a few which played an important part at different periods: of these, the best known were Hecatomapolis, the chief town of the Parthians, and the royal residence of the dynasty of the Aracaeides, and Apameia Bichagiana.

Little is known of Parthian history at an early period; and it is probable that it was subject to the great empire of Persia, and subsequently to the first successors of Alexander, till the first Araxes threw off the Syro-Macedonian rule, and established a native dynasty on the throne of Parthia in B.C. 256. From this period it grew rapidly more powerful, till, on the final decay of the house of the Seleucidae, the Aracaeidian dynasty possessed the rule of the greater part of Western Asia. Their long wars with the Romans are well known: no Eastern race was able to make so effectual a resistance to the advance of the Roman arms, or vindicated with more consistency and determination their natural freedom. The overthrow of Crassus, B.C. 53, showed what even the undisciplined Parthian troops could do when fighting for freedom. (Dom Cass. x 21.) Subsequent to this, the Romans were occasionally victorious, B.C. 51, 95, 48, 44, 33; Vercingetorix was sent as a hostage to Rome (Tacit. Ann. vi. 1), and finally the greater part of the country was subdued, successively, by the arms of Trajan, by Antoninus, and Caracalla, till, at length, the rise of the new Sassanian, or native dynasty of Persia, under the name of Ataxares I, put an end to the history of Araxes (A.D. 226). Subsequent to this period there is a constant confusion in ancient authors between Persians and Parthians. The history of the Parthian kings is given at length in the Dict. of Asia. vol. i. p. 355 seq.

The inhabitants of Parthia were called Parthiasei (Partheana, Polyb. x. 31; Strab. xi. p. 509; Arrian, Anab. ii. 21; Ptol. iii. 13, § 41) or Parthi (Parthis, Herod. iii. 93; Strab. xi. p. 524; Plin. vi. 25. s. 28; Amm. Marc. xxiii. 6), and were, in all probability, one of the many branches of the great Indo-Germanic family of nations. Their own tradition (if, indeed, faithfully reported) was that they came out of Systhen to the desert, and then migrated westward, and finally settled in the Syrian tongue. (Justin, xii. 1.)

Herodotus, too, classes them with the people of Chosrasnia and Sogdiana (iii. 39, vii. 66); and Strabo admits that their manners resembled those of the Sythians (xi. p. 515). On the other hand, modern research has demonstrated their direct connection with the Iranian tribes; their name is found in the Zend to be Pardis, in the Sasanian Parada. (Beney, Revue des Equites, iii. 72, 73.) There is no doubt that, from their independence, the Parthians were governed by a double council, composed of the nobles or relatives of the king (according as the reading veyovw aor ayrvoovn is adopted), and of the Magians (xi. p. 515). As a nation, they were famous for their skill in the management of the horse and for their use of the bow (Dom Cass. xi. 15, 22; Dionys. 1045; Plut. Cress. c. 24), and for the peculiar art which they practised in shooting with the bow from horseback while retreating. This peculiarity is repeatedly noticed by the Roman poets. (Vrg. Geor. iii. 31; Herat. Carm. i. 19. 11, ii. 13, 17; Ovid, Art. Am. ii. 209.) In their treatment of their kings and nobles they were supposed to carry their adulation even beyond the usual Oriental excess. (Vrg. Geor. iv. 211; Martial, Epigr. x. 72, 1—5.)

PARTHIANI. [PARTHIANI.]

PARTHUS (Παρθός or Πάρθος, Appian, Pan. vii. 39), a town in the jurisdiction of Carthage, in the neighbourhood of Zara. [T. H. D.]

PARTHIUS, in Hyg. (PARNESI.)

PARUS. [PAROS.]

PARUTAE (Παρουται, Strab. vi. 17. § 3), a tribe placed by Polydor on the outskirts of the Paropamisus in Ariana. It is probable that these people derived their name from the Sanscrit Parvata, meaning mountain tribes. [V.]

PARYADES (Παραύδης, Παράνδης, or Παράδην), a range of lofty and rugged mountains in the north of Pontus, which is connected with Mount Taurus and Mount Cappadocia (Strab. xi. p. 497, xii. p. 548; Plin. vi. 27, vi. 9, 11). It communicates at the western extremity of the Montes Moschici, precedes in a south-western direction round Pontus, and there forms the frontier between Armenia and Cappadocia. A more southern branch of the same mountain is the Seodeises. Polydor (v. 13, §§ 5, 9) describes this mountain as containing the sources of the Euphrates and Araxes, and accordingly includes within its range Mount Abas, from which others make these rivers flow. The Paryades contains the sources of only small rivers, of which the largest is the Abarus. The mountain was in ancient times thickly covered with wood, and the population upon and about it consisted of robbers (Strab. xii. p. 548). Many parts of the mountain are extremely rugged, and almost inaccessible, whence Mihridates of Pontus built many of his treasure-houses there, and
when pursued by Pompey, concealed himself in its fastnesses. In a climatic point of view the mountain divides Pontus into two distinct regions; for while the north side is stern and cold, its south side is delightful. No wonder the ancients called the point of transition in a pass between Trapezus and Satara, the Frigidarium. The modern name of the mountain is generally Kuttay, but it is also called Kara Bel. (Tournefort, Voyage i. lettre 18. p. 107.)

PARYETAE. (Parargadæa.) According to Herodotus, one of the three chief tribes of the ancient Persians (i. 125); according to Strabo, a people of the adjoining province of Carmania (Str. vi. 8. § 12; Dionys. v. 1069). The probability is, that they were the inhabitants of Parargadae in Persia.

PASSAREDAE (Parargadæa, Strab. xiv. 730). A great city of the early Persians, situated, according to the best authorities, on the small river Cyrus (now Ker), in a plain on all sides surrounded by mountains. It contained, according to Strabo, a palace, the treasures, and other memorials of the Persian people, and though not so magnificent as Persopolis, was highly esteemed by that people for its antiquity (xiv. 728). In another place the same geographer states that the most ancient palace was at Parargadae; and in its immediate neighbourhood the tomb of Cyrus, who had a regard for the spot, as that on which he finally overthrew Astyages the Mede (xiv. 730). It is by the notice of the tomb of Cyrus in Strabo (L. c.), and more fully in Arrian (vi. 29), that we are now enabled to identify the site of the ancient Parargadae with the modern Murghab. At Murghab a building has been noticed by many modern travellers, and especially by Merier and Ker Porter, which corresponds so well with the description in ancient authors that they have not hesitated to pronounce it the tomb of Cyrus; and the whole adjoining plain is strewn with relics of the once great capital. Among other monuments still remaining is a great monolith, on which is a bas-relief, and above the relief, in cuneiform characters, the words "I am Cyrus, the king, the Achaemenian." The same inscription is found repeated on other stones. (Merier, Travels, i. p. 30, pl. 29; Ker Porter, i. p. 500; Lassen, Zeitschrift, vi. p. 152; Burneuf, Mémoire, p. 169; Ouseley, Travels, ii. pl. 49.) The name of the place is found in different authors differently written. Thus Pliny writes "Pasargadæa" (vi. 26. s. 29), Ptolemy "Parargada" (vi. 4. § 7), Sir W. Ouseley (L. c.) thinks that the original name was Parargadæa, the habitation of the Persians, on the analogy Dabok-gerd, Firïc-gerd, etc.

PASAMA (Pâsâma). A small port on the coast of Caramania, mentioned by Marcian (Peripil. § 28). Foriger thinks that it is the same as that called in some editions of Ptolemy Megida, in others, Massin (vi. 5. § 7).

PASIN, PASINUS. [Ligurci.] PASIRA (Pâsirâ). Near Arrdan, iii. 6 (25), a place mentioned by Arrian in Georgia, as touched at by Nearchus in his voyage. It is doubtful whether it is to be considered as distinct from another place he has mentioned just before, Bagiares. Kem- thorne has identified the nearer with a locality now known by the name of Arrabok or Hormanah bay, and thinks that a large fishing village in the immediate neighbourhood may be that called by Nearchus.

Patara. The inhabitants were called Pasiæae or Pa-sirees. Pliny places the Pasiæae along the river Tonderon or Tonderus (vi. 25. s. 27). Nearchus, however, makes the Tonderus flow at a distance in 900 stadia from Pataria. It is probable that the Rhacians of Ptolomy refers to Bagisaura or Pasiæa (vi. 21. § 2).

PASITHEIANS. [Tigris.] PASSALÆAE (Pâsêlæa, Ptol. vii. 2. § 15), a tribe in India east Ganges, placed by Ptolemy between the Imaus and the M. Beypurians. They must therefore have occupied some of the mountain-valleys on the eastern side of Tibet. Ptolemy mentions them also (vii. 1. § 32). PASSARION (Paśarōn), the ancient capital of the Molossæ in Epirus, where the kings and assembled people were accustomed to take mutual oaths, the one to govern according to the laws, the other to defend the kingdom. (Plut. Pyrrh. 5.) The town was taken by the Roman proctor L. Anicius Gallus in n. c. 167. (Liv. xiv. 26. 33, 34.) Its site is uncertain: but it was apparently on the sea-coast, as Anna Comnena mentions (vi. p. 284, ed. Bury, 1893). Patara was called Passara on the coast of Epirus. If this place is the same as the older Passarion, the ruins at Dravantiai, which lie inland in a SSW. direction from Iona- nina, cannot be those of the ancient capital of the Molossæ. Those ruins are very considerable, and contain among other things a theatre in a very fine state of preservation. (Leake, Northern Greece, vol. iv. p. 81.)

PATAIRA (Pâtâra : Eth. Pâtâpeôs, Patarensis or Pataramus). A small town in Caýadera or Armenia Minor. (Tab. Peut.)

2. A flourishing maritime and commercial city on the south-west coast of Lycia. The place was large, possessed a good harbour, and was said to have been founded by Pataurus, a son of Apollo. (Strab. xiv. p. 666; Steph. B. s. v.) It was situated at a distance of 60 stadia to the south-east of the mouth of the river Xanthus. (Stadium, Mar. Mag. § 219.) Pataira was most celebrated in antiquity for its temple and oracle of Apollo, which was accessible only to that of Delphi; and the god is often mentioned with the surname Patarus (Patapeôs, Strab. L. c.; Lyoph. 920; Horat. Carm. iii. 4. 64; Stat. Theb. i. 696; Or. Met. i. 513; Virg. Aen. iv. 143; Pomp. Mela, i. 14.) Herodotus (i. 182) says that the oracle of Apollo was delivered by a priestess only during a certain period of the year; and from Servius (ad Aen. L. c.) we learn that this period was the six winter months. It has been supposed that the town was of Phoenician or Scythian origin; but whatever may be thought on this point, it seems certain that at a later period it received Dorian settlers from Crete; and the worship of Apollo was certainly Dorian. Strabo informs us that Ptelemé Philadelphus of Egypt, who enlarged the city, gave it the name of Arsinoe, but that it nevertheless continued to be called by its ancient name, Pataira. The place is often noticed by ancient writers as one of the principal cities of Lycia, as by Livy, xiii. 41, xxvii. 15—17, xcvii. 79; Plut. Aris. 52; Appian, B. C. iv. 52, 81, Mithr. 27; Plin. ii. 112, v. 28; Ptol. v. 3. § 3, viii. 17. § 22; Dionys. Per. 129, 507. Pataira is mentioned among the Lycian bishoprics in the Acts of Councils (Hieroc. p. 684), and the name Patera is still attached to its numerous ruins. These, according to the survey of Capt. Beaufort, are situated on the sea-shore, a little to
the eastward of the river Xanthus, and consist of a theatre excavated in the northern side of a small hill, a ruined temple on the side of the same hill, and a deep circular pit, of singular appearance, which may have been the seat of the oracle. The town walls surrounded an area of considerable extent; they may easily be traced, as well as the situation of a castle which commanded the harbour, and of several towers which flanked the walls. On the outside of the walls there is a multitude of stone sarcophagi, most of them bearing inscriptions, but all open and empty; and within the walls, temples, altars, pedestals, and fragments of sculpture appear in profusion, but ruined and mutilated. The situation of the harbour is still apparent, but at present it is a swamp, choked up with sand and bushes.” (Beaufort, Karmania, pp. 2, 6.) The theatre, of which a plan is given in Leake’s Asia Minor (p. 320), was built in the reign of Antoninus Pius; its diameter is 256 feet, and has about 30 rows of seats. The three chief of these are the minor, which, according to an inscription upon them, were built by Vespasian. (Comp. Sir C. Fellows, Tour in Asia Min. p. 222, foll.; Dic. de l’Empire, p. 179, foll.; Texier, Descript. de l’Asie Min., which contains numerous representations of the ancient remains of Patara; Spratt and Forbes, Travels in Asia, i. p. 31, foll.)

PATAVISSA (Παταβισσα, Ptol. iii. 8. § 7, wrongly), a small town of Paece, endowed by the emperor Severus with the jus colonia (Ulpian, Dig. i. 8. 9, where it is called Patavicium vixus.) Variously identified with Mar-Ujjar, or with Pontus or Toris, on the Marsich; also with Bogata and St. Kirya, on a tributary of the same river. (T.H.D.)

PATAVIUM (Παταβιον: Eth. Patavimis: Pudore), one of the most ancient and important cities of Venetia, situated on the river Medoacus (Brionta), about 30 miles from its mouth. According to a tradition recorded by Virgil, and universally received in antiquity, it was founded by Antenor, who escaped from Troy and by himself, a native of the city, confirms this tradition, though he does not mention the name of Patavium, but describes the whole nation of the Veneti as having migrated to this part of Italy under the guidance of Antenor. He identifies them with the Veneti, who were mentioned by Homer as a Thaphyganian tribe. (Liv. i. 1; Virg. Aen. i. 247; Strab. v. p. 212; Mel. ii. 4. § 2; Suid. 2. § 10.) The national antiques of the Veneti are considered elsewhere (Veneti). The story of Antenor may safely be rejected as mythical; but we may infer from the general accordance of ancient writers that Patavium itself was a Venetian city, and apparently from an early period the capital or chief place of the nation. We have very little information as to its history, before it became subject to Rome, and we know only the general fact that it was at an early period an opulent and flourishing city; Strabo even tells us that it could send into the field an army of 12,000 men, but this is evidently an exaggeration, and probably refers to the whole nation of the Veneti, of which it was the capital. (Strab. v. p. 213.) Whatever was the origin of the Veneti, there seems no doubt they were a people far more advanced in civilisation than the neighbouring Gauls, with whom they were on terms of almost continual hostility. The vigilance rendered necessary by the incursions of the Gauls stood them in stead on occasion of the unexpected attack of Cleonymus the Lacedaemonian, who in n. c. 301 landed at the mouth of the Medoacus, but was attacked by the Patavians, and the greater part of his forces cut off. (Liv. x. 2.)

It was doubtless their continual hostility with the Gauls that led the Venetians to become the allies of Rome, as soon as that power began to extend its arms into Cisalpine Gaul. (Pol. ii. 23.) No special mention of Patavium occurs during the wars that followed; and we are left to infer from analogy the steps by which this independent city passed gradually under the dependence and protection of Rome, till it ultimately became an ordinary municipal town. In n. c. 174 it is clear that it still retained at least a semblance of independence, as we hear that it was distracted with domestic dissensions, which the citizens appealed to Rome to pacify, and the consul M. Aurelius was selected as deputy for the purpose. (Liv. xii. 27.) But the prosperity of Patavium continued unbroken; for this it was indebted as much to the manufacturing industry of its inhabitants as to the natural fertility of its territory. The neighbouring hills furnished abundance of wool of excellent quality; and this supplied the material for extensive woollen manufactures, which seem to have been the staple article of the trade of Patavium, that city supplying Rome in the time of Augustus with all the finer and more costly kinds of carpets, hangings, &c. Besides these, however, it carried on many other branches of manufactures also; and so great was the wealth arising from these sources that, according to Strabo, Patavium was the only city of Italy, except Rome, that could return to the census not less than 500 persons of fortunes entitling them to equestrian rank. (Strab. iii. p. 169, v. pp. 213, 218.) We cannot wonder, therefore, that both he and Mela speak of it as unquestionably the first city in this part of Italy. (Id. v. p. 213; Mela. ii. 4. § 2.)

The Patavians had been fortunate in escaping the ravages of war. During the Civil Wars their name is scarcely mentioned; but we learn from Cicero that in n. c. 43 they took part with the senate against M. Antonius, and refused to receive his emissaries. (Cic. Phil. xii. 4.) It was probably in consequence of this, that at a later period they were severely oppressed by the exactions of Annius Pollio. (Maccrob. Sot. i. 11. § 22.) In a. d. 69 Patavium was occupied without opposition by the generals of Vespasian, Primaus, and Varus, during their advances into Italy. (Tac. Hist. iii. 6.) From its good fortune in this respect there can be no doubt that Patavium continued down to a late period of the Empire to be a flourishing and wealthy city, though it seems to have been gradually eclipsed by the increasing prosperity of Aquileia and Mediolanum. Hence Annius, writing in the fourth century, does not even assign it a place in his Ordo Nobilium Urbium. But its long period of prosperity was abruptly brought to a close. In a. d. 452 it felt the full fury of Attila, who, after the capture of Aquileia, ravaged the rest of Venetia, and laid waste almost without opposition the remaining cities of Venetia. He is said to have utterly destroyed and razed to the ground Patavium, as well as Concordia and Altinum (P. Dac. Hist. Miscell. xv. p. 549); and, according to a tradition, which, though not supported by contemporary evidence, is probably well founded, it was on this occasion that a large number of fugitives from the former city took refuge in the islands of the lagunes, and there founded the
celebrated city of Venice. (Gibbon, ch. 35, note 55.) But Patavium did not cease to exist, and must have partially at least recovered from this calamity, as it is mentioned as one of the chief towns of Venetia when that province was overrun by the Lombards under Alboin, in A.D. 568. (P. Dic. Hist. Lang. ii. 14.) It did not fall into the hands of those people till near 40 years afterwards, when it was taken by Agilulf, king of the Lombards, and burnt to the ground. (Ibid. iv. 24.) But it once more received the name of Ponte, and in the middle ages again became, as it has continned ever since, one of the most considerable cities in this part of Italy, though no longer enjoying its ancient pre-eminence.

It is probably owing to the calamities thus suffered by Patavium, as well as to the earthquakes by which it has been repeatedly visited, that it has now scarcely any relics of its ancient splendour, except a few inscriptions; and even these are much less numerous than might have been expected. One of them is preserved with great care in the town-hall as containing the name of T. Livius, which has been supposed to refer to the great historian of the name, who, as is well known, was a native of Patavium. But this is clearly a mistake; the inscription in question refers only to an obscure freedman; nor is there the slightest foundation for regarding the sarcophagus preserved with it as the tomb of the celebrated historian. (Böhl, Diet. Vol. ii. p. 790.) But at least the supposition was more plausible than that which assigns another ancient sarcophagus (discovered in 1274, and still preserved in the church of S. Lorenzo) as the sepulchre of Antenor! Besides these sarcophagi and inscriptions, the foundations of ancient buildings have been discovered in various parts of the modern city, but nothing now remains above ground.

Patavium was the birthplace also of Thrasea Paetus, who was put to death by Nero in A.D. 66. One of the causes of offence which he had given was by assisting to be made in certain games, which were celebrated at Patavium every 30 years in honour of Antenor, a custom said to be derived from the Trojan founders of the city. (Tac. Ann. xvi. 21; Dion Cass. lxxii. 26.) We learn also from Livy that in his time the memory of the defeat of the Spartan Cleonymus was preserved by an annual mock fight on the river which flowed through the midst of the town. (Liv. x. 2.)

PATAVIUM (Harauaioi), a town of Bithynia on the south of Lake Aseaia, between the Siros Aeaeanus and the Sinus Cianus. (Pol. v. 1. § 13.) [L. S.]

PATERUM, a town on the E. coast of the Bruttian peninsula, mentioned only in the Itinerary of Antoninus (p. 114); from which we learn that it was situated 27 miles from Rescianum (Rossano), probably in the neighbourhood of the Capo dell' Alze, the ancient Cape Crimissa; but the supposition that it was the same place with the more ancient city of Crimissa is a mere conjecture; as is also its identification with the modern town of Orvieto.

The name of Paterum again occurs in early ecclesiastical records as the see of a bishop, but afterwards wholly disappears. (Holsten. Not. ad Claud. p. 207; Romanelli, vol. i. p. 213.) [E. H. B.]

PATRISCUS. [Tchiniscus.]

PATIGRAN (Amnissium, xiii. 6), one of the three principal towns mentioned by Ammianus Marcellinus in Media. This place is nowhere else noticed; but it is not impossible that the name is a barbarous corruption of the Tigrama of Ptolemy (vi. 2. § 9). [V.]

PATMOS (Patmos; Patmou), one of the Sporades Insulae, in the south-east of the Aegean, to the west of Lepisia and south of Samos, is said to have been 30 Roman miles in circumference. (Pliny, iv. 23; Strab. x. p. 488; Thucyd. iii. 23; Eustath. ad Dion. Per. 530.) On the north-eastern side of the island there was a town with a harbour of the same name. But the middle ages, and the southern wind, have carried the promontory Amazonium (Studiosum, Mor. Mer. p. 488, ed. Hoffmann). This little island is celebrated as the place to which St. John was banished towards the close of the reign of Domitian, and where he is said to have composed the Apocalypse (Rev. i. 9). A cave is still shown in Patmos where the apostle is believed to have received his revelations. (Comp. Iran. ii. 22; Euseb. Hist. Eccl. ix. 18; Dion Cass. xvi. 1.) The island contains several churches and convents, and few remains of the ancient town and its castle. (Walpole, Turkey, vol. ii. p. 43; Ross, Reisen auf den Griech. Inseln, vol. ii. p. 123, foll.)

PATRAE (Patraí; in Herod. i. 145, Patreei, properly the name of the inhabitants: Eth. Patreis, Thuc.; Patraoi, Pol. iv. 6; Patrensis: Patrasso, Patras, Patrai), a town of Achaia, and one of the twelve Achaean cities, was situated on the coast, W. of the promontory Rhium, near the opening of the Corinthian gulf. (Herod. i. 145; Pol. ii. 41; Strab. viii. p. 866.) It stood on one of the outlying spurs of Mount Panachaicus (Voldhid), which rises immediately behind it to the height of 6322 feet. It is said to have been formed by an union of three small places, named Aroë (Aroΐ), Antileia (Arvane), and Mesatis (Mesarís), which had been founded by the Ionians, when they were in the occupation of the country. After the expulsion of the Ionians, the Achaean hero Patras withdrew the inhabitants from Antileia and Mesatis to Aroë, which he enlarged and called Patrae after himself. The acropolis of the city probably continued to bear the name of Aroë, which was often used as synonymous with Patrae. Strabo says that Patrae was formed by a coalescence of seven demes; but this statement perhaps refers to the restoration of the town mentioned below. (Paus. vii. 18. § 2, seq.; Strab. viii. p. 337.) In the Peloponnesian War Patrae was the only one of the Achaean cities which espoused the Athenian cause; and in B.C. 419, the inhabitants were persuaded by Alexiades to connect their city by means of long walls with its port. (Thuc. v. 52; Plut. Alex. 15.) After the death of Alexander the city fell into the hands of Cassander, but his troops were driven out of it by Aristodemus, the general of Antigonus, B.C. 314. (Diod. xiii. 66.) In B.C. 280 Patrae and Dyrrhym were the first two Achaean cities which expelled the Macedonians, and their example being shortly afterwards followed by Tribuca and Phærae, the Achaean League was renewed by these four towns. [See Vol. i. p. 15.] In the following year (B.C. 279) Patrae was the only one of the Achaean cities which sent assistance to the Aetolians, when their country was invaded by the Gauls. In the Social War Patrae is frequently mentioned as the port at which Philip landed in his expedition into Peloponnesus. In the war between the Achaean and the Romans Patrae suffered so severely, that the greater part of the inhabitants abandoned the city and took up their abodes in the surrounding villages of Mesatis, An-
THE JOURNAL OF THE IRISH ARCHAEOLOGICAL SOCIETY.

PATRAE.

The country around Patras is a fine and fertile plain, and produces at present a large quantity of currants, which form an article of export. The modern town occupies the same site as the ancient city. It stands upon a ridge about a mile long, the summit of which formed the acropolis, and is now occupied by the ruins of the Turkish citadel. From the town there is a beautiful sea-view. "There was a line of the land on the opposite side of the gulf, extended from the snowy tops of Parnassus in the east, to the more distant mountains of Acastania in the same direction, while full in front, in the centre of the prospect, are the colossal pyramids of Kaksilaca (the ancient Taphiususus) and Varvaten (the ancient Chakes), rising in huge perpendicular masses from the brink of the water." (Mur, Tour in Greece, vol. ii. p. 300.) There are very few remains of antiquity at Patras. The modern citadel contains some pieces of the walls of the ancient acropolis, and there are ruins of the Roman aqueduct of brick. The well mentioned by Pausanias is still to be seen about three quarters of a mile from the town under a vault belonging to the remains of a church of St. Andrew, the patron saint of Patras. Before the Greek revolution, in which Patras suffered greatly, its population was about 10,000; but its present population is probably somewhat less. (Leake, Morus, vol. ii. p. 123, seq.)

COIN OF PATRAE.

PATTALA.

PATTILA INSULA (Πατταλινή νησίωτα) (Pattalona νῆσις), Paus. i. i. § 1, i. 55, § 1; Nephi. B. s. v.; Πατταλονὲς χρόας, Strab., i. 598), a small island off the southern coast of Attica, west of the promontory Sunium, so called from Patrucas, one of the generals of Ptolemy Philadelphus, who was sent by this king to assist the Athenians against the Macedonians, and who built a fortress in the island. It is now called Gaitharionisia. (Leake, Deni. of A. c. p. 62, 2nd ed.)

PATTALA (παττάλα), Arrian, v. 4. vi. 17; Πάτταλα, Paus. vii. i. § 59), a town in Western India, situated at the point of land where the western stream of the Indus is divided off into two chief branches, which, flowing to the sea, enclose what has been popularly called the delta of that river. There can be no doubt that this place is represented by the present Tatta. Arrian states that it derives its name from an Indian word, which signifies delta (v. 4; Ind. c. 2.) Alexander the Great appears to have spent some time there, and to have built a castle and docks; and it was from this place that he made his first unfortunate but ultimately successful expedition in ships to the mouth of the Indus (Arrian, vi. 18). The real Median meaning of Pattala appears to be the West, in opposition to
PATALENE.

the East, or land of the Ganges; or, mythologically, the Lower Regions (Ritter, v. p. 476).

PATALENE: (Παταλενή, Strab. xvi. p. 691, 701; Patalene, Patat'ēnē, Ptol. vii. i. § 55; Pala'te, Plin. vi. 20, 21, 23), the delta-shaped district comprised between the arms of the Indus, and extending from its capital Pattala (now Tutta) to the Indian Ocean. It was a very fertile, flat, marshy country, liable to be constantly overflowed by the water of the Nile. The ancient name, on the whole, a tolerably accurate estimate of the size of this delta, Aristobulus stating that it was 1000 stadia from one arm of the river to another, and Nearchus considering the distance to be 800 stadia; they, however, greatly exaggerated the width of the river, at its point of separation, Onesicritus deeming this to have been as much as 200 stadia (Strab. xv. p. 701). We may presume this measure to have been made during a time of flood. By Marcellus, Pattala is comprehended in Gedrosia; but there seems reason to suspect that the present text of Marcellus has been tampered with (c. 34, ed. Müller, 1855). Arrian does not distinguish between the town and the district of which it was the capital, but calls them both indiscriminately Patala (Arab. v. 3). The district probably extended along the coast from the present Kurichch on the W. to Cutch on the E.

PATO'MUS (Πατομός, Herod. ii. 159), a town of Arcadia, on the borders of Egypt, near which Necho constructed a canal from the Nile to the Arabian Gulf. It is probably the Pithon of Scripture (Exod. i. 11), not far from Babastis, and near the site of the present Belbej. [T. H. D.]

PAULO (Pagiōn), a river of Liguria, rising in the Maritime Alps, and flowing into the sea under the walls of Nicea (Nice). (Plin. iii. 3. s. 7; Mel. ii. 4. § 9.) It is now called the Pigiōn, and is a considerable mountain torrent in winter and spring.

[ E. H. B.]

PAUS. [CLEITON]

PAUSILYPUS MONS. [NEAPOLIS, p. 410.]

PAUSALAE. (Pith. Pausalaias, a town of Pëceum, mentioned only by Pliny (iii. 13. s. 18). It is placed by Holstenius at Monte dell'Olsino, about 5 miles S. of Messara, on the right bank of the river Chantiar, the ancient Fisuron. (Holsten. Not. ad Victor. p. 137.)

PAXI (Παξί), the name of two small islands, now called Peza and Antipaxi, situated between Coreya and Lecusos. (Polyb. ii. 10; Plin. iv. 12. s. 19; Dion Cass. i. 12.)

PEDAEUM or PEDAEUS (Πεδαίος), a place mentioned by Homer (II. xiii. 172), which is said by Eustathius to have been a town in Tröas; but it is otherwise entirely unknown.

PEDALIE, a place on the coast of Cilicia, between Fimara and Ale, is mentioned only by Pliny (v. 22), and its exact site is unknown. [L. S.]

PEDALIUM (Πεδαλίου), a promontory in the south-east of Caria, forming the southernmost point of the western coast of the Ínns Glanucus. (Pomp. Mela. i. 16; Plin. v. 29; Stadiasmus Mar. Magn. §§ 228, 233, 234.) Strabo (xiv. p. 651) gives to the same promontory the name of Artémia, from a temple of Artemis, which stood upon it; its modern name is Bokomandil. (Leake, Asia Minor, p. 223, foll.)

PEDASIA (Πεδασία; Eth. Pedaśieos), also called PEDASUM (Plin. v. 29), an ancient city of Caria, in which the Persians suffered a defeat during the revolt of the Ionians. (Herod. v. 121, vi. 20.) It was once the chief seat of the Leleges. Alexander the Great deprived the place of its independence by giving it over to the Halicarnassians, together with five other neighbouring towns. (Plin. iv. 23.) In the time of Strabo (xiii. p. 611) the town had ceased to exist, and the name of the district, Pedasia (Πεδαςία), was the only remaining memorial of the place. (Comp. Polyb. viii. 27; Steph. B. s. e.) As Herodotus assigns to Pedas a portion of the territory of Miletus, it is clear that the town must have been situated between Miletos, Halicarnassus, and Stratozicelia; but its exact site is only matter of conjecture, some placing it at the modern Melasos, and others at Areth Utsar, neither of which suggestions is free from inconsistencies.

[ L. S.]

PEDASUS (Πεδάσος), a small town of Mysia, on the river Satnicoces, which is mentioned by Homer (II. vi. 33, xx. 92, xxi. 87), but was deserted in the time of Strabo (xiii. p. 605), who (p. 584) mentions it among the towns of the Leleges, which were destroyed by Achilles. (Comp. Steph. B. s. e. Πεδασία.) Pliny (v. 23) imagines that Pedasus was the same place as that which subsequently bore the name of Adriamantus; but as Homer distinctly places it on
the river Satratis, the supposition is impossible.

PEDASUS. [Metihone.]

PEDAEUS (Πεδαίος), the largest river of Cyprus, rising from the eastern side of Olympus, and flowing near Salamis into the sea. (Ptol. v. 14. § 3; Engel, Kypros, vol. i. p. 37.)

PEDAEI (Πεδαί), the inhabitants of one of the Phoenician towns destroyed by Xerxes. (Herod. viii. 33.) From the order in which it stands in the enumeration of Herodotus, it appears to have stood near the Cephalisus, in some part of the plain between Thirtora and Eateia, and is perhaps represented by the ruins at Palea Feca. (Lacea, Northern Greece, vol. ii. p. 89.)

PEDNELISSUS (Πενελλίς), a town in the interior of Pisidia, near the Eurymened, above Aspendus (Strab. xi. p. 570; i. p. 667; Paus. B. a. e.; Ptol. v. 5. § 8; Hierocles (p. 616), giving a greater extension to Pamphylia, assigns the town to this province. The town formed a small state by itself, but was always involved in war with the neighbouring Selge. (Polyb. v. 72, &c.) It is also mentioned in the ecclesiastical annals and on coins. (Sestini, p. 96.) Fellows (Asia Minor, p. 196, &c.) is inclined to identify the extensive ruins near the village of Bodosooe with the ancient Pednelissus; these ruins, however, according to his theory, lie scarcely any trace of Greek origin, but belong to the Roman period. [L. S.]

PEDONIA (Πεδωνία), a town on the coast of Marmaria, before which lay an island of the same name. (Ptol. iv. 5. §§ 32, 75.) This island is also mentioned by Strabo, but in some editions under the name of Sidonia (xvii. p. 799). We may, however, conclude from Polyenn that Pedonia is the correct reading. (See Groskurd's Strabo, vol iii. p. 557.)

PEDUM (Πέδουμ, Steph. B.; Ech. Πεδούμ, Pedanuus; Galliacho), an ancient city of Latium, which appears to have been at one period of considerable importance. It is mentioned by Dionysius as one of the cities which composed the league against Rome in B.C. 493; and there is no doubt that it was, in fact, one of the thirty cities of the Latin League. (Dionys. v. 61; Niebuhr, vol. ii. p. 17.) It is next mentioned among the cities which are said to have been taken by Coriolanus in the campaign of B.C. 498, where its name is associated with those of Lavinium, Pometia, and Corioli. (Liv. i. 59; Dionys. viii. 10; Plut. Coriol. 28.) Dionysius terms it at this time a small city (Ib. 26); and it is remarkable that its name does not again occur during the wars of the Romans with the Aequians, notwithstanding its proximity to the frontier of the two nations. It is next mentioned in B.C. 338, when the Gauls, who had invaded Latium, encamped in its neighbourhood, where they sustained a severe defeat from the dictator C. Sulpius. (Liv. vii. 12.) During the last great struggle of the Latins with Rome, the Pedum bear a considerable part. Their name, indeed, is not mentioned at the first outbreak of the war, though there can be no doubt of their having taken part in it; but, in B.C. 339, Pedum became for a time the centre of hostilities, being besieged by the Roman general Aemilius, and defended by the allied forces assembled from Tibur, Praeneste, Velitrae, Lanuvium, and Antium. Aemilius on this occasion abandoned the enterprise; but the next year Camillus again advanced to Pedum, and, the forces of the Latins having now divided, the Tiburtines and Praenestines alone arrived for its protection. They were defeated in a great battle by Camillus, and the city of Pedum taken by assault immediately afterwards. (Liv. viii. 12, 13; Fast. Capit.) In the general pacification which followed the Pedani obtained the Roman franchise, but on the same terms as the Lanuvians, that is to say, without the right of the suffrage. (16. 14.) From this time not only does the name of the people disappear from history, but we find no subsequent mention of the town of Pedum, which appears to have rapidly fallen into decay. The "Pedanus aeger," or "regio Pedana," is alluded to both by Cicero and Horace; but in Pliny's time even the "populus" had become utterly extinct, and we find no subsequent trace of the name. (Cic. ad Att. ix. 15; Hor. Ep. i. 4. 2; Plin. iii. 5. s. 9.) Hence the only clue to its position is derived from the passages already cited, and from the statement of the old scholiast on Horace (Schol. Cris. ad L. C.) that it was situated between Tibur and Praeneste. Its proximity to those cities is distinctly attested by Livy (viii. 13), and there seems no reason to reject the opinion first advanced by Cluverius, and adopted by Gell, Nibby, and Abeken, which would place Pedum on the site of Gallicano, though we have certainly no conclusive evidence in its favour. The modern village of Gallicano, the name of which first occurs in the tenth century, in all probability occupies an ancient site; it stands on a narrow tongue of land between the two rivers, opposite the site of the town, with lofty and precipitous banks; but, from the peculiar nature of the country, this position almost exactly resembles that of Zagarelo and other neighbouring places. No ruins exist at Gallicano; and from the early decay of Pedum we can hardly expect to meet with inscriptions, only the evidence that can really set the question at rest. Gallicano is 4½ miles from Praenestina (Praeneste), and about the same distance from La Colonna (Labicum); it is about a mile on the left of the Via Praenestina, and 19 miles from Rome. (Cluver, Ital. p. 966; Gell, Top. of Rome, p. 340; Nibby, Dintorni, vol. ii. p. 532; Abeken, Mittel Italiens, p. 77.) [E. B. E.]

PEGAE or PAGAE (Παγαή, Dor. Παγαί: Ech. Παγαίων), a town of Megaris, on the Akyonian or Corinthian gulf. It was the harbour of Megaris on the east coast, and was the most important place in the country next to the capital. According to Strabo (viii. p. 334) it was situated on the narrow strip of land between the two rivers, and the distance from Pagae to Nissa being 120 stadia. When the Megarians joined Athens in B.C. 455, the Athenians garrisoned Pegae, and its harbour was of service to them in sending out an expedition against the northern coast of Peloponnesus. (Thuc. i. 103, 111.) The Athenians retained possession of Pegae a short time after Megara revolted from them in B.C. 434; but, by the thirty years' truce made in the same year, they surrendered the place to the Megarians. (Thuc. i. 114. 11.) At one period of the Peloponnesian War (B.C. 424) when Pegae fell by the aristocratical exiles from Megara. (Thuc. iv. 66.) Pegae continued to exist till a late period, and under the Roman empire was a place of sufficient importance to coin its own money. Strabo (viii. p. 380) calls it τὸ τῶν Μεγαρίων φρούριον. Pausanias saw there a chapel of the hero Aegaleus, who fell at Glisus in the second expedition of the Argives against Thebes, but who was buried at this place. He also saw near the road to Pegae, a rock covered with marks of arrows, which were supposed to have been made by a body of the Persian cavalry.
of Mardonius, who in the night had discharged their arrows at the rock under the impulse of Artemis, mistaking it for the enemy. In commemoration of this event, there was a brazen statue of Artemis Soteira at Paeae. (Paus. i. 44. § 4.) Paeae is also mentioned in the following passages:—Strab. ix. pp. 400, 409; Paus. i. 41. § 8; Polyb. iii. 13. § 84. Steph. B. s. v.; Mela, ii. iii. § 10; Plin. iv. 7. s. 11. Hieroc. p. 645; Tab. Peut. where it is called Pache. Its site is now occupied by the port of Pontho, not far from the shore of which are found the remains of an ancient fortress. (Lenko, Northern Greece, vol. ii. p. 407.)

PEGASUS STAGNUM. A small lake in the Castrian plain near Ephesius, from which issues the little river Phyrites, a tributary of the Caystrus. (Plin. v. 31.) The district surrounding the lake present an extensive morsis. (Comp. Arandoll, Sera Churches, p. 23, &c.)

PEIRAECUS. [Attiena, p. 306.]

PEIRAEOUS and PEIRAECUM, in Corinthia. [p. 685.]

PEIRAEOUS. [Amisus.]

PEIRENE FONS. [Corinthis, p. 680, b.]

PEIREISAE. [Asterium.]

PEIRUS. [Achila, p. 13, b.]

PEISO. [Pelso.]

PELLUS (Πίππος), a fortress of the Tolistobii, in Galatia, where Deiotaros kept his treasures. (Strab. xii. p. 567.)

PELAGONIA (Πελαγονία, Strab. vii. pp. 326, 327; Παλαιόνια, Steph. B.), a district of Macedonia, bordering on Illyricum, occupied by the PELAGONIANS (Πελαγόνες, Strab. vii. pp. 327, 331, Fr. 38—40, 434; Polyb. iii. 13, § 34; Plin. iv. 17.) Although Livy employs the name of Pelagonia, corresponding with the fertile plains of Bitolus, in his narrative of the campaigns of Sulpicius, as that of a large district containing Strymon, it is evident, from his account of the division of Macedonia after the Roman conquest, that Pelagonia became the appellation of the chief town of the Pelagonians, and the capital of the Fourth Macedon, which included all the primitive or Upper Macedonia E. of the range of Pindus and Scardus. (Liv. xiv 29.) It was perhaps not specifically employed as the name of a town until the other two cities of Pelagonia were ruined; for that Pelagonia, or a portion of it, once contained traces of a tripartite military wall, and was situated near the river Tripolitsa, given to it by Strabo (vii. p. 327). The town, which, from its circumstance of being the historic capital of the Fourth Macedon, must have been of some importance, existed till a late period, as it is noticed in the Synecocemus of Hierocles, and by the Byzantine historian, Malachus of Philadelphia, who speaks of the strength of its citadel (ap. Const. Porphy. Excerpt. de Legat. p. 51). From its advantages it was occupied by Manuel Comnenus (Nicetas, p. 67; Le Bouc, Bas Empire, vol. xvi. p. 141.) The name of Pelagonia still exists as the designation of the Greek metropolitan bishopric of Bitolus or Monastiri, now the chief place of the surrounding country, and the ordinary residence of the governor of Rhami. At or near the town are many vestiges of ancient buildings of Roman times. The district was exposed to invasions from the Dardani, who bordered on the N., for which reasons the communication "Etucus Pelagonem" Liv. xxi. 34. were carefully guarded by the kings of Macedonia, being of great importance, as one of the direct en-

Trances from Illyricum into Macedonia by the course of the river Drilon. Between the NE. extremity, Mt. Izbaitria, and the Kisauros of Decol, there are in the mighty and continuous chain of Scardus (above 7000 feet high) only two passes fit for an army to cross, one near the N. extremity of the chain from Kisauros, he found traces of the Pelagonia, a very high "col," not less than 5000 feet above the sea-level; the other considerably to the S., and lower as well as easier, nearly in the latitude of Akbe:li. Lenko (Northern Greece, vol. iii. pp. 318—322) is of opinion that the passes of Pelagonia, in which Perseus was stationed by his father Philip, were this latter depression in the chain over which the modern road from Scodra or Sentari runs, and the Via Aenatica travelled formerly. The Illyrian Antartiae and Dardani, to the N. of the chain, could threaten Macedonia from the former pass, to the NE. of the mountain-chain of Scardus. (Comp. Grote, Greece, c. xxxv. and the references there to Pouqueville, Boné, Grisebach, and Müller) Stymbara or Stubara, was situated apparently on the Erigon, as also were most of the Pelagonian towns. Polybius (v. 108) speaks of a Pelagonian town named Pissaeum (Πισσαίασις). Pselomy (l.c.) assigns to the Pelagonian the two towns of Andratrius or Eunthos (Πεστ. Τοβ., the orthography is not quite certain), and Strabo: [E. B. F.]

PELASGI (Πελασγοί), an ancient race, widely spread over Greece and the coasts and islands of the Aegean sea in prehistoric times. We also find traces of them in Asia Minor and Italy.

I. The Pelasgi in Greece. The earliest mention of the Pelasgi is in Homer (II. ii. 681), who enumerates several Thessalian tribes as furnishing a contingent under the command of Achilles, and among them " those who dwelt in Pelasgian Argos." Homer also speaks of Erebus as a chief abode of the Pelasgi; for Achilles addresses Zeus as Δῶρος, Πελασγώτης. (Il. xvi. 233.) And this agrees with Hesiod's description of Dodona as the "seat of the Pelasgi." (Frang. xvi.iii.) So in the Supplices of Aeschylus, the king declares himself to be ruler of the country through which the Alges and the Strymon flow, and also of the whole of the land of the Perrhaebi, near the Paeonians, and the Dodoncean mountains, as far as the sea. (Suppl. 250, seq.) Herodotus tells how he found traces of Erebus at Dodona, where he says they worshipped all the gods, without giving a name to any (i. 52). Compare his mythical account of the two priestesses at Dodona (ii. 56) with Homer's description of the Seli. (Il. xvi. 234, seq.)

Strabo (v. p. 221, C.) says: "Nearly all are agreed about the Pelasgi, that they were an ancient tribe (φολο) spread over the whole of Hellen, and especially by the side of the Aeolians in Thessaly. . . . And that part of Thessaly is called Pelasgian Argos which extends from the coast between the outlet of the Peneus and Thermopylae as far as the mountain range of Pindus, because the Pelasgians were masters of that region."* We also hear of the Pelasgi in Boeotia, where they dwelt for a time, after having, in conjunction with the Thracians, driven out the Aeones, Tenmires, Leleges and Hyantes. Afterwards they were, in their turn, driven out by the former inhabitants, and took refuge at Athens under M. Hynemutas, part of

* Argos probably means a plain, see Kruce's Hellen (vol. i. p. 404).
the city being called after their name. (Strab. i. 6. p. 401.) And Attic historians speak of their residence there, and say that an account of their migratory disposition they were called ΠΕΛΑΣΓΟι (storks) by the Attic people. (Strab. v. p. 221.) This is the character generally given to the Pelasgi, and it is curious to find Herodotus (i. 56) contrasting the stationary habits of the Pelasgians, with the love of wandering exhibited by the Hellenic Dorians. For even his own account of the Pelasgi disproves his general statement; since they could not have existed in so many different quarters as he assigns to them without several migrations, or assertions of an universal extension over Greece, and its dependencies. It is true that he says (ii. 56) that Hellas was formerly called Pelasgia, and Thucydides speaks (i. 3) of the name Hellas being of comparatively recent date, and of the Pelasgie name being the most prevalent among the tribes of Greece; but this does not account for the Pelasgi being found in Asia (Hieron. ii. x. 429), and for their having introduced Egyptian rites into Greece. (Herod. ii. 51.)

Their sojourn in Attica is related by Herodotus, wherein (v. 137) that they had possession of Athens, under Mt Hymettus assigned them as a reward for their services in building the wall of the Acropolis at Athens. From this Heracaneus said they were driven out by the Athenians from envy, because their land was the best cultivated. The Athenians, however, says Herodotus, ascribe their expulsion to their licentious conduct. Thucydides also (ii. 17) mentions the Pelasgic settlement beneath the Acropolis, and the oracle relating to it. In the passages above quoted Herodotus speaks of the Pelasgi as of foreign extraction. In another passage (viii. 44) he tells us that the Athenians were formerly Pelasgians, and were so called, with the surname of Cracai. They were called successively Cerecophai, Erechtheiadae and Iones.

Strabo (xiii. p. 621) mentions a legend that the inhabitants of Mt Phriecon near Themiselyca made a descent upon the place where Cyne afterwards stood, and found it in the possession of Pelasgi, who had suffered from the Trojan War, but were nevertheless in possession of Larissa, which was about 70 stades from Cyne.

We find traces of the Pelasgi in several parts of the Peloponnesus. Herodotus (i. 146) speaks of Arcadian Pelasgians, and (vii. 94) tells us that the Ionians in Achaia were formerly called Pelasgic Arcadians (or Pelasgians of the coast). After Danaus and Xuthus came to Peloponnesus, they were called Ionians, from Ion, son of Xuthus.

In the passage above referred to (Simp. 236) Argos is called Pelasgian; the king of Argos is also called Κρατος Πελασγων (v. 327), and throughout the play the words Argive and Pelasgian are used indiscriminately. So, too, in the Prometheus Vinctus (v. 860), Argolis is called "the Pelasgian land." In a fragment of Sophocles (Iphiclus) the king is addressed as lord of Argos and of the Tyrrheni Pelasgi.

Strabo (vii. p. 321) speaks of Pelasgians taking possession of part of the Peloponnesus; along with other barbarians, he says (v. p. 221) that Ephorus, on Herodotus's authority, traces the origin of the Pelasgi to Lycaon, son of Pelasgus, and that he declare his own opinion to be that they were originally Arcadians, who chose a military life, and, by inducing many others to join them, spread the name far and wide, both among the Greeks and wherever they happened to come. "The Arcadian divine or heroic pedigree," says Mr. Grote (Hist. Greece, vol. i. 1. ed. ix.), "begins with Pelasgus, whom both Hesiod and Asius considered as an indigenous man, though Aesilians the Argelian represented him as brother of Arges and son of Zeus by Niobe, daughter of Phoroneus; this logo grapber wished to establish a community of origin between the Arcadians and the" Pelasgi. For the legend concerning Lycaon, son of Pelasgus, and his fifty sons, see Grote's Greece, vol. i. p. 239, note.

According to Dionysius, Lycaon, son of Pelasgus, lived and gave names before the Trojan War (vi. i. p. 30, ed. Reiske), and the migration of the Oecumens under Oeneus, son of Lycaon, in the next generation, is, in the words of Pausanias (viii. 3, quoted by Niebuhr), "the earliest colony, whether of Greeks or barbarians, whereof a recollection has been preserved."

Pausanias (viii. 2) gives the popular legend current among the Arcadians, that Pelasgus was the first man born there; on which he observes mildly: "But it is likely that other men were also born with Pelasgus, for how could he have reigned without subjects?" According to this legend Pelasgus is a regular mythic hero, surpassing all his contemporaries in stature and wisdom, and teaching them what to choose for food and what to abstain from. The use of beechn-asters, which the Pythian oracle (Herod. i. 66) ascribed to the Arcadians, was taught them by Pelasgus. His descendants became numerous after three generations, and gave their names to various districts and many towns in Greece. Pausanias also speaks of Pelasgians coming from Lesbian to Pylos, and driving out the eponymic founder (v. 36. § 1).

Dionysius adopts the Achaean legend, viz. that the first abode of the Pelasgi was Achaia Argos. There they were autochthonous, and took their name from Pelasgus. Six generations afterwards they left Peloponnesus, and migrated to Macedon, the country being Achaean, and Pheidian, and Pelasgus, sons of Larissa and Poseidon. These three gave names to various districts, Achaean, Pheidian, and Pelasgian. Here they abode for five generations, and in the sixth they were driven out of Thessaly by the Curetes and Leleges, who are now called Locrians and Aetolians, with whom were joined many others of the inhabitants of the district of Mt. Parasnaus, led by Deucalion (i. 17. p. 46). They dispersed in different directions; some settled in Illyria, between Olympus and Osse; others in Boeotia, Phocis, and Euboea; the main body, however, took refuge with their kinmen in Epirus, in the neighborhood of Dodona (i. 18).

We now come to II. The Pelasgians in the Islands of the Aegean. Homer (Od. xix. 175—177) mentions the Pelasgi (called δαοι), as one of the five tribes in Creece, the remaining four being the Aeacians, Eteoretes, Cyclones, and Dorians (called τραύανοι). See Strabo's comment on this passage (v. p. 221), and x. pp. 473, 476, where two different explanations of the epithet τραύανοι are given. Herodotus (i. 81) speaks of Pelasgi living in Samothrace, where they performed the mysteries called Samothracian orgies.

Lennoals and Imbros were also inhabited by them (v. 26). So also Strabo (v. p. 221), quoting Autolices. Theophrastus (i. 109) speaks of the Tyrreni Pelasgi, who occupied Lennois; and Pausanias...
(vii. 2. § 2) says the Pelasgians drove out the Mi-
nyans and Lacedaemonians from Lemnos. The per-
petrators of the Lemnian massacre were Pelasgians.
(Hevel. vi. 138—140 ; compare Fnd. Pyth. Od. iv. 448 [232. Bk.). Orph. Arg. v. 470; Stanley, 
Comm. in Aeschy. Chor. Ph. 631.)

Heredotus also reckons the inhabitants of seven-
teen islands on the coast of Asia as belonging to the
Pelasgian race (vii. 95). According to Strabo (xiii. 
p. 621) Meneaetes declared the whole coast of
Lonia, beginning at Mycale, to be peopled by Pelasgi,
and the neighbouring islands likewise: "and the
Lesbians say they were under the command of
Pylaus, who was called by the poet the leader of
the Pelasgi, and from whom their mountain was
called Pylaum. And the Chians say their founders
were Pelasgi from Thessaly.

Dionysius (i. 19) says that the first Pelasgian
 colony was led by Mycar to Lesbos, after the Pelasgi
had been driven out of Thessaly.

Diodorus Siculus (v. 51) gives a different account
of this colony. He says that Xanthus, the son of
Triopius, chief of the Pelasgi from Argos, settled
first in Lycia, and afterwards crossed over with his
followers into Lesbos, which he found unoccupied,
and divided among them. This was seven genera-
tions before the flood of Denedaun. When this oc-
curred Lesbos was desolated, and Magnesia, guardian
of Zeus (according to Herodotus) occupied it a second
time, and the island received its name from his son-
in-law, Semoins of Chios (quoted by Kruse, Hellen).

speaks of Pelasgians being in Scithos and Scyros.

We next come to

III. The Pelasgians in Asia.—On this point we
have Homer's authority that there were Pelasgians
among the Trojan allies, ranked with Lelges, Can-
cores, and Lycians, and called Eunai (II. x. 429.)
One of these was killed by Ajax, in the battle over
the body of Patroclus,—Hippothous, son of Lethas.
(II. xvii. 288.)

Heredotus speaks (vii. 42) of Antaodros as a
Pelasgian city, and afterwards (vii. 95) says that
the Aeolians were formerly called Pelasgians by the
Hellenes, and that when they fought against the
Greeks they wore Hellenic armour.

Strabo (v. 221) quotes Homer's statement that
the neighbours of the Cilicians in the Troad were
Pelasgians, and that they dwelt about Larissa. (II.
ii. 429.) This name probably signifies a fortress
built on a precipice or overhanging rock, and is an
indication, wherever it occurs, of the presence of
Pelasgi. There were several places of the same
name in Greece and two or three in Asia Minor,
which are enumerated by Strabo (ix. p. 440, xiii.
p. 620). According to this geographer most of the
Carians were Lelges and Pelasgi. They first occu-
pied the islands, then the sea-coast. He argues,
from Homer's expression "the tribes of Pelasgians" 
(II. ii. 840), that their number was considerable.

Dionysius (i. 18) says that the Pelasgi, on being
driven out of Thessaly, crossed over into Asia and
acquired many cities on the sea-coast.

Two cities were in existence in the time of Her-
rodotus, namely, Scylace and Placie, on the Pro-
pentis, which he believed to be Pelasgian cities, and
which, he says (i. 57), spoke similar dialects, but
unlike their neighbours. That dialect was, on
Herodotus's testimony, not Greek, but resembling
the dialect of the Cretorians, or rather Cretanians,
the tribe among the Edones in Thrace.

Bishop Thirlway, comparing this passage with
another, in which Herodotus is enumerating the
dialects that prevailed among the Ionian Greeks,
and using the same terms, infers from the comparison
that "the Pelasgian language which Herodotus
heard on the Hellespont and elsewhere sounded to
him a strange jargon; as did the dialect of Ephesus
to a Milesian, and that of the Bolognese does to a
Bolognese" (vol. i. p. 55). Mr. Grote differs from
Bishop Thirlway in his estimate of these expressions
of Herodotus, who, he thinks, must have known
better than one whether a language which he
heard was Greek or not, and concludes that "Her-
rodotus pronounces the Pelasgians of his day to
speak a substantive language differing from Greek;
but whether differing from it in a greater or less
degree (e.g. in the degree of Latin or of the Hellenic),
we have no means of deciding" (vol. i. pp. 351 —
353).

Hereon (Ancient Greece, p. 38, note) has some
remarks on Herodotus's opinion respecting the lan-
guage spoken by the Pelasgians in his day, in which
he seems to raise an imaginary difficulty that he
may have the pleasure of overthrowing it.

Before quitting the coasts of the Aegean, it is
necessary to quote Thucydides's observation (iv. 
109), that "the Pelasgian race is said to be the
most widely prevalent in the Chalcidic peninsulas
and in the islands of the Chalcidic sea," and the legend
preserved by Athenaeus (xiv. p. 639), that "Thessaly
was, in the time of Pelasgus, suddenly converted by
an earthquake from a vast lake into a fertile plain,
irrigated by the Peneus, the waters of which before
had been shut in by mountains.

The latter is a poetical version of a geological
truth, which, though not falling within the province
of history, recommends itself at once to the notice of
the geographer.

We now come to

IV. The Pelasgians in Italy.—Legendary history
has connected the Pelasgic race with more than one
portion of the Italian peninsula. The name Oenotria,
by which the southern part of Italy was formerly
known (see Aristotle, Pol. vii. 19) suggests an affin-
ity between the early inhabitants of that country
and the Arcadian Pelasgians. The name Tyrrheni
or Tyrrhen, which we have seen is used identically
with that of Pelasgi, suggests another link in the
numerous legends which furnished logographers
with the subject-matter of their discourse. connected
the Umbrics, the Pcenetians, and other tribes in the
north of Italy and on the coast of the Adriatic
with the Pelasgians from Epirus and Thessaly. Some
of these are given by Strabo. He quotes Anticlaudes
to the effect that some of the Lemnian
Pelasgians crossed over into Italy with Tyrrhenians,
son of Atys (v. p. 221). Again, he quotes Hier-
onymus's assertion, that the Thessalian Pelasgians
were driven out of the neighbourhood of Larissa
by the Lapiths, and took refuge in Italy (iv. p. 
443).

Panasius's account of the Pelasgian colony led
by Oenotrus has already been given. Dionysius
(i. 11. p. 30) confirms it, saying "Oenotrus son
of Lycaon led a colony into Italy seventeen gen-
erations before the Trojan War." According to
Dionysius, a colony of Pelasgians came over from
Thessaly and settled among the Aborigines, with
whom they waged war against the Sicels (i. 17. p.
45).

Another body came from the neighbourhood
of Dolona, whence, finding the territory unable to sup-

Pelasgi. 563
Dionysius thinks all are mistaken who hold the Tyrrenhi and the Pelasgi to be the same race. He thinks no argument can be drawn from the feet of their names being used indiscriminately, as that was very common, e.g., in the case of the Trojan and Pelasgian. Moreover, the Greeks called all Italians—Lattins, Umbrians, Ausones, &c.—Tyrrenhians. Even Rome was believed by many to be a Tyrrenhian city. Dionysius quotes Herodotus (i. 57) in support of his opinion that the Pelasgi and Tyrrenhians are not of the same origin. It would be a wonderful thing, he says, if the Coroticani spoke the same dialect as the Placeni on the Hellespont, both being Pelasgi, but should not speak the same dialect as the Tyrrenhians, if they were also Pelasgi. For the contrary of the proposition—if δυογλασίως, then δυοθείως—holds good: i.e., if ἀλλογλασίους, then ἀλλοθείους. If the case were reversed, there might be a show of reason for believing them of the same origin; for it might be said that distance and the interlarded early traces of resemblance: but when they are so near each other as the Coroticani and Tyrrenhi this supposition is untenable (i. 29).

Hence Dionysius believes the Pelasgi and Tyrrenhians to be distinct. He sums up all by saying that those Pelasgi who survived the final dispersion and ruin of the race existed among the Aborigines, and their descendants helped them and other tribes to build Rome (i. 30).

It is unnecessary to remark the difference between Corotia in Umbria and Creton in Thrace, which Dionysius unsuspiciously passes over. The above somewhat lengthy extracts have been made from his Roman Antiquities, because they give us a very fair specimen of the way in which scattered traditions were dressed up in a quasi-historical garb, and decked out with any stray evidence which local names or language might supply.

The common native tradition of the Latins only testifies to an immigration of so called Aborigines, not to the existence of the Pelasgi within Italy, or the Pelasgi with the Aborigines. Certain Roman historians have combined these two traditions in a different way to that of Dionysius, making the Aborigines, namely, declare themselves to be one and the same people with the Pelasgi. This, for instance, is without any doubt, the meaning of Cicero's assertion that Aborigines came over into Italy many generations before the Trojan War, out of Achaea: for so he named the old Pelasgic Greece by the common appellation of his time. (Schwegler, Romische Gesch. iii. 2) We find the same tradition of a Pelasgic immigration into Latium confirmed by many other testimonies. Pline declares that writing was brought into Latium by the Pelasgi. It is a question, however, whether by these Pelasgi he means those who came out of Thessaly and Dodona, or the Aborigines of Thessaly, who conquered the Pelasgi and united them with the Latins.

Other traditions assert the name of Rome to be Pelasgic, and derive the Saturnia from a feast originally instituted by the Pelasgians who settled on the Saturnian hill.

"In other parts of Italy we stumble repeatedly," says Schwegler, "on the same wide-extended name. Thus, it is said that the Hernici were descended from the Pelasgi. Pireniun also is said to have been occupied by the Pelasgi. Report also says that the towns of Aenaria, Herculanum, and Pompeii were founded by them, or that they dwelt there for a certain time. Other instances have been already given of towns and districts with which legendary history has associated the name of the Pelasgi."
In short, the whole of Italy was, if we are to believe the authorities addicted, inhabited in ancient times by the Pelasgians. In later times they appear as vassals of the Italoids; the common fate of original races that have been subjugated.

Upon these and similar traditions Niebuhr has grounded a hypothesis, which at present is generally received, and against which conclusive objections can only be raised from the side of comparative philology. According to Niebuhr, the Pelasgians were the original population, not only of Greece, but also of Italy. There was a time, he said, when the Pelasgians, formerly perhaps the most widely-spread people in Europe, inhabited all the countries from the Arno and Padus to the Bosporus; not as wandering tribes, as the writers of history represent it, but as firmly-rooted, powerful, honourable people. This time lies, for the most part, before the beginning of our Greek history. However, at the time that the genealogists and Hellenarics wrote, there were only insularised, dispersed, and scattered fragments of this immense nation,—as of the Celtic race in Spain,—like mountain summits, which stand out like islands when the lowlands have been changed by floods into a lake. These sporadic Pelasgic tribes did not seem to these logographers to be fragments and relics, but colonies that had been sent out and had migrated, like the equally scattered colonies of the Hellenes. Hence the numerous traditions about the expeditions and wanderings of the Pelasgi. All these traditions are without the slightest historical value. They are nothing but a hypothesis of the logographers, framed out of the supposition that those scattered colonies of the Pelasgi had arisen and were produced by a series of migrations. There is nothing historical about them, except, indeed, the fact which lies at the bottom of the hypothesis, namely, the existence in later times of scattered Pelasgic tribes,—a fact which, however, implies much more the original greatness and extension of the Pelasgian nation. If the Pelasgians vanished gradually as historical times begin, the cause of this is, that they were transformed into other nations. Thus, in Greece they became gradually Hellenised, as a nation which, in spite of all distinctions, was actually related to the Hellenes, just as even in Italy they form a considerable portion of the later tribes of the peninsula which owed their origin in the main to the mixture of races.

The half-Greek element which the Latin language contains, is, according to this view of Niebuhr's, Pelasgic, and owes its origin to the Pelasgian portion of the Latin nation, which Niebuhr and K. O. Müller (Estrucker) agree in finding in the Sicilians.

This hypothesis of Niebuhr's, generally received as it is, wants, nevertheless, a sound historical foundation. It has received at the hands of Schweger (Röm. Geach.) a careful examination, and is condemned on the following grounds:

1. The absence of any indigenous name for the Pelasgians in Italy.
2. The evident traces of Roman writers on the subject having obtained their information from the Greek logographers.
3. The contradictory accounts given by different writers of the migrations of the Pelasgi, according as they follow Hellenic and Pherecydes or Myrsilus.
4. The absence of any historical monument of the Pelasgi in Italy, whether literary or of another kind.

It only remains to make a few general observations on the evidence for the existence of the Pelasgi, and on the views taken by modern writers on the subject.

1. The modern authorities on the Pelasgi in Greece are: Larcher, Chronologie d'Hérodote, ch. viii. pp. 215—217; K. O. Müller Estrucker, vol. i. Einleitung, ch. ii. pp. 75—100; Kruse, Hellen, vol. i. p. 398—425; Mannert, Geographie, part viii. introduction, p. 4; Thirlwall, History of Greece, ch. ii.; Grote, vol. i. ch. ix., vol. ii. ch. ii. sub finem. The latter historian treats of the Pelasgi as belonging not to historical, but legendary Greece. He says, "What has been supposed to be the Pelasgian systems respecting the Pelasgi,—from the literal belief of Cluvier, Larcher, and Ducis-Rochette, to the interpretative and half-incredulous processes applied by able men, such as Niebuhr, or O. Müller, or Dr. Thirlwall,—will not be displeased with my resolution to declare so insoluble a problem. No attested facts are now present to us,—none were present to Herodotus or Thucydides even in their age,—on which to build trustworthy affirmations respecting the ante-Hellenic Pelasgia; and when such is the case, we may without impropriety apply the remark of Herodotus respecting one of the theories which he had heard for explaining the inundation of the Nile by a supposed connection with the ocean—that the man who carries up his story into the invisible world, passes out of the range of criticism." (Vol. ii. p. 345.) Those who think Mr. Grote's way of disposing of the question too summary, will find it treated with great patience and a fair spirit of criticism by Bishop Thirlwall. The point on which he and Mr. Grote differ,—namely, the question whether the language of the Pelasgi was a rough dialect of the Hellenic, or non-Hellenic,—has been already referred to. As we possess no positive data for determining it, it is needless to do more than refer the reader to the passages quoted. Respecting the architectural remains of the Pelasgi in Greece, a very few words will suffice. The Gate of the Lions at Mycenae, mentioned by Pausanias (ii. 15—16), is the only monument of the plastic art of Greece in prehistoric times. The walls of Tiryns, of polygonal masonry, appear to be of equal antiquity, and are ascribed to the Cyclopes. (Mycenae.) These bear a strong resemblance to the Tyrrenno-Pelasgic remains in Italy, specimens of which are given in Dampier's Etruria Regalia, v. g. the walls of Casa, Segnì (Segni) and Faesule (Fiesole). And a small amount of evidence is thereby afforded in favour of Niebuhr's theory of an original Pelasgic population existing in the peninsula of Greece and Italy. But this is much diminished by the fact, that similar remains are found in parts of Asia Minor where no traces exist of any Pelasgic traditions. And we are obliged therefore to fall back upon the view first adopted by A. W. Schlegel, that the peninsula of Greece and Italy were successively peopled by branches of one original nation, dwelling once upon a time in the central part of Western Asia, and speaking one language, out of which, by successive modifications, sprang the different Greek and Italian dialects.

2. The authorities on the Pelasgi in Italy are Niebuhr (H. R. vol. i. p. 23, Tr.); Müller, Estrucker (quoted above); Lanz, Saggio di Lingua Etrusca, &c., Flor. 1824; Lessius, über die Tyrrhen. Pelagier in Etruria, Leipzig, 1842; Steub, über die
PELIGNI.

Urhebertheorien, s.v., 1843; Mommsen, Un-...the Heer in 1850; Prichard, Natural History of Man, vol. iv. 4; Heßler, Geschichte der Latein Sprache, p. 11; G. C. Lewis, Credibility of early Roman History, vol. i. p. 282; and Schwe-...52, a.)

PELECAS (Πελεκάς), a mountain in Misia, which lay between the Apian plain and the river Megistus. (Polyb. v. 77.) It is probably the con...from that of the Megistus. It has been...ber of which is everywhere and nowhere, always reappearing, and vanishing again without leaving any trace,—the image of this nameless nation to me so strange, that we must entertain doubts as to its historic existence."

After they became a powerful nation in Italy, the tradition, which Ioniysius follows, tells us that they suddenly dispersed. This is in itself strange; but, were any other conclusion of the Pelasgian migration not inadmissible, it would be difficult to separate Pelasgians in Italy, which is impossible. Nothing re...names of places, which are manifestly Greek. Leipsius thought an inscription found at Agyia was Pelasgic, but Mommsen (Unt. rhet. Dist. p. 17) says it is nothing but old Etruscan.

It is not difficult to account for the prevalence of traditions relating to Pelasgi in Italy. Schweiger has ably analysed the causes of this, and disproved on historical and linguistic grounds the views of Niebuhr and O. Müller, which they set up in opposition to the Roman grammarians.

There is considerable doubt, as he remarks, in what light we are to regard the name Pelasgi,—whether in that of an ethnographic distinction, or in that of an epithet = autochthones or aborigines. We have both in Greek and Latin words resembling it sufficiently in form to warrant this supposition,—v. g. Παλαιος, Παλαιόθρως, and Priscus. The change from Α to ι is so common as to need no illustration, and the termination -ω is nearly the same as -ovia.

These remarks, though they apply with considerable force to the indiscriminate use of the word Pelasgian as applied to Italian races, need not affect the statement of Herodotus concerning the townships of Sylyrse, Placie, and Creston, which were accounted in his time Pelasgic, and spoke a different language from their neighbours.

That the name Pelasgi once indicated an existing race we may fairly allow; but we cannot form any historical conception of a people whom Herodotus calls stationary and others migratory, and whose ear...st area was between the mountains of Ossa and Olympus, and also in Arcadia and Argolis. On the whole we can partly appreciate Niebuhr's feelings when he wrote of the Pelasgi,—"The name of this people is trite to the historian, hating as he does that spurious philology which raises pretensions to knowledge concerning races so completely buried in silence." (Rom. Hist. i. p. 26, Trans.)

If the Pelasgi have any claims on our attention above other extinct races it is not because they have left more trustworthy memoirs of their existence, but because they occupy a considerable space in the mythical records of Greece and Italy. (G. B.)

PELAGIO'ITIS. [Thessalia.]

PELE (Πηλή; Πηλιάων), a small island, forming one of a cluster, off the coast of Ionia, oppo...site to Clazomenae. (Thuc. vii. 31; Plin. v. 31 s. 38, xxxii. 2. s. 9; Steph. B. s. v.; see Vol. i. p. 632, a.)

PELE'NES (Παλε'νος, Ptol. ii. 6. § 54), a Celtiberian people in Hispania Tarraconensis, on...sources of the Durus and Iberus, and situated to the E. of the Arcavi. Under the Romans they were in the jurisdiction of Cilicia. They consisted of four tribes, and one of their towns was Numantia. We find also among their cities, Visiamum, Olitica, Varrac, N. (Ptol. iii. 17. vii. p. 423, s. 34.)

PELE'THRO'NIUM (Πελεθρόνιον), a part of Mt. Pelium, whence Virgil gives the Lepithae the epithet of Pelethronii. (Strab. vii. p. 299; Steph. B. s. v.; Virg. Georg. iii. 115.)

PELE'NI (Πελε'νος) a people of Central Italy, occupying an inland district in the heart of the Apennines. They bordered on the Marsi towards the W., on the Samnites to the S., the Frontanti on the E., and the Vestini to the N. Their territory was of very small extent, being confined to the valley of the Gizio, a tributary of the Aternum, of which the ancient name is nowhere recorded, and a small part of the valley of the Aternum itself along its right bank. The valley of the Gizio is one of three upland valleys at a considerable elevation above the sea, running parallel with the course of the Apen...ines, which form so remarkable a feature in the configuration of the central chain of those mountains [APENNINUS]. It is separated from the Marsi and the basin of the lake Fucinus on the W. by a car-...row and strongly marked mountain ridge of no great elevation; while towards the S. it terminates in the lofty mountain group which connects the central ranges of the Apennines with the great mass of the Majella. This last group, one of the most elevated in the whole of the Apennines, attaining a height of 9100 feet above the sea, rises on the SE. frontier of the Peligni; while the Monte Morrone, a long ridge of scarcely inferior height, runs out from the point of its junction with the Majella in a NW. direction, forming a gigantic barrier, which completely shuts in the Peligni on the NE., separating them from the Frontanti and Marrucini. This mountain ridge is almost continuous with that which descends from the Gran Sasso towards the SE. through the country of the Vestini, but the great mountain barrier thus formed is interrupted by a deep gorge, through which the Aternum forces its way to the sea, having turned abruptly to the NE. immediately after reaching the tree line (Aternas). The most elevated district of the Peligni was thus shut in on all sides by natural barriers, except towards the N., where they met the Vestini in the valley of the Aternum.

A tradition recorded by Festus (s. v. Peligni, p. 222), but on what authority we know not, represented the Peligni as of Ilyrian origin; but this statement is far outweighed by the express testimony
of Ovid, that they were of Sabine descent. (Ovid, Fast. iii. 95.) The authority of the poet, himself a native of the district, is strongly confirmed by the internal probabilities of the case, there being little doubt that all these upland valleys of the Central Apennines were peopled by the Sabines, who, radiating from Amaterrum as a centre, spread themselves towards the S. and E. in the same manner as they descended towards the valley of the Tiber on the W. and SW. Hence the Peligni were of kindred race with their neighbours, the Vestini, Marsi, and Marrucini, and circumstances, coupled with their geographical proximity, sufficiently explains the close union which we find subsisting in historical times between the four nations. It is probable, indeed, that these four tribes formed a kind of league or confederacy among themselves (Liv. viii. 29), though its bonds must have been somewhat lax, as we find them occasionally engaging in war or concluding peace singly, though more frequently all four would adopt the same policy.

The mention of the Peligni in Roman history occurs in b. c. 343, when we are told that the Latins, who had been threatening war with Rome, turned their arms against the Peligni (Liv. vii. 38); but we have no account of the causes or result of the war. Soon after we find the Peligni, as well as their neighbours, the Marsi, on friendly terms with the Romans, so that they afforded a free passage to the Roman army which was proceeding through Samnium into Campania (Liv. viii. 6); and even when their neighbours the Vestini declared themselves in favour of the Samnitians, they seem to have refused to follow the example. (Id. viii. 29.) In b. c. 308, however, they joined the Marsi in their defection from Rome, and shared in their defeat by Fabius (Id. ix. 41); but a few years afterwards (b. c. 304) they were induced to sue for peace, and obtained a treaty, apparently on favourable terms. (I. b. 45; Diod. xx. 101.) From this period they became the faithful and steadfast allies of Rome, and gave a striking proof of their zeal in b. c. 295, by attacking the enemy army on its retreat from the great battle of Sentinum, and cutting to pieces 1000 of the fugitives. (Id. x. 30.) After the subjection of Italy by the Romans, the Peligni are seldom mentioned in history; but it is certain that they continued to furnish regularly their contingents to the Roman armies, and, notwithstanding their small numbers, occupied a distinguished position among the auxiliary troops, the Pelignian cohorts being on several occasions mentioned with distinction. (Dionys. xxx. Fr. Didot; Ennius, Ann. viii. Fr. 6; Liv. xxv. 14. xiv. 49.) Their name is omitted by Polybius in his catalogue of the forces of the Italian allies in b. c. 225 (Pol. ii. 24), but this is probably by mere accident. During the Second Punic War they maintained unshaken their fidelity to Rome, though their territory was repeatedly ravaged by Hannibal; and besides furnishing their usual quota to the Roman armies, they were still able in b. c. 205 to raise volunteers for the armament of Scipio. (Liv. xxvii. 9. xxvi. 11, xxviii. 45.) At the outbreak of the Social War, the Peligni, in conjunction with their neighbours and confederates the Marsi, were among the first to declare themselves against Rome; and the choice of their chief city, Corfinium, to be the capital of the confederates, and therefore the destined capital of Italy, had their plans proved successful, at once assigned them a prominent place among the nations arrayed against Rome. (Appian, B. C. i. 39; Liv. Epit. lxxiii.; Oros. v. 18; Vell. Pat. ii. 16; Diod. xxxvii. 2.) The choice of Corfinium was probably determined by its strength as a fortress, as well as by its central position in regard to the northern confederates; at a later period of the war it was abandoned by the allies, who transferred their senate and capital to Aesernia. (Diod. l. c.) The name of the Peligni is not often mentioned during the war, though it is certain that they continued to take an active part in it throughout, and it is probable that they were almost unceasingly associated with the Marsi. But in b. c. 90 we are told that they sustained a severe defeat by Sertilus Galba (Liv. Epit. lxxiii.); and before the close of the following year they were received to submission, together with the Marrucini and Vestini, by Ca. Pompeius Strabo, u. c. 88. (Liv. Epit. lxxvi.) It is certain that the Peligni, as well as their neighbours, were at this time, or very soon after, admitted to the Roman franchise, for the sake of which they had originally engaged in the war: they were enrolled in the Samnite tribes, together with the Marsi and Adjutus. (Cic. in Vatia. 15; Schol. Bob. ad loc.) The Peligni again figure in the history of the Civil War between Caesar and Pompey, b. c. 49, when their chief town, Corfinium, was occupied by Domitius Abemobarbus with twenty cohorts, which he had raised for the most part among the Marsi and Peligni, and with which he at first checked the advance of Caesar; but the rapid spread of dissatisfaction among his own troops quickly compelled him to surrender. (Caes. B. C. i. 15—23;) Sulmo, which had been also garrisoned by Domitius, yielded without resistance to Caesar. (Ib. 17.) The Peligni, in common with the other mountain tribes, seem to have retained to a considerable extent their national character and feeling, long after they had become merged in the condition of Roman citizens, and as late as the civil war between Vespasian and Vitellius (A. D. 69) they are mentioned as declaring themselves, as a people, in favour of the former. (Tac. Hist. iii. 59.) This is the last notice of them which occurs within the limits of this work, as already noted, there are no allusions by all the geographers as a distinct people, retaining their separate nationality, (Strab. v. p. 241; Plin. iii. 12. s. 17; Ptol. iii. 1. § 64.) For administrative purposes they were included in the Fourth Region of Augustus (Plin. l. c.); and in the later division of this part of Italy, their territory was comprised, together with that of the Marsi, in the province called Valeria. (Lib. Cohon. p. 228.) It now forms a part of the province of Abruzzo Ulteriore.

The position of the Peligni, surrounded on all sides by the loftiest ranges of the Apennines, while the valley of the Gizio itself is at a considerable elevation above the sea, naturally rendered the climate one of the coldest in Italy. Horace uses the expression "Peligus frigoris," as one almost proverbial for extreme cold; and Ovid, who was a native of Sulmo, repeatedly alludes to the cold and wintry climate of his native district. (Hor. Carm. iii. 19. 8; Ovid, Fast. iv. 81, 683, Trist. iv. 9.) On the other hand, it derived from the same cause the advantage of being watered by numerous and perennial streams, fed by the snows of the neighbouring mountains, where they are said to linger throughout the summer. (Ovid, Amor. ii. 16, Fast. iv. 685.) The broad valley of the Gizio was, however, sufficiently fertile; it produced considerable quantities of corn, and wine in abundance, though not of superior quality, and a few sheltered spots would even admit...
of the growth of olives. (Ovid, Amor. b. 16. 6, 7; Martian. i. 27. 5, xiii. 121.) Of the character of the Peligni, we know only that they were esteemed as rivalling in bravery their neighbours the Marsi (Plin. iii. 12. s. 17; Cic. in Patiis. 1. 5; Sili. Itali. v. 5.), and that from their seceded position they always retained the primitive simplicity of their habits. From an expression of Horace it would appear also that they shared with the Marsi the reputation of skill in magical incantations. (Hor. Epod. 17. 60.)

The Peligni had only three principal towns, Corfinium, Sulmo, and Sipeteraevum, of which the two first only are known historically, and were doubtless much the most important places. In the list of the Italian cities, Cursus, called all three in his list of towns; and the same names are found also in the Liber Colonaris. (Plin. l. c.; Lib. Colon. pp. 228, 229.) Hence these are obviously the three alluded to by Ovid, when he calls his native town of Sulmo "Peligni pars tertia rura" (Amor. ii. 16); and it thus appears there were no other places in the district which enjoyed municipal rank and had a territory of their own. Cecelium, mentioned only by Strabo (v. p. 241) as situated to the right of the Via Valeria, is evidently the modern Ceculla, and must have been in the territory of the Peligni, but was probably an insignificant place. Statulac, known only from the Tabula as a station on the Via Valeria, 7 miles from Corfinium, on the E. of the Mons Ineae, must have been situated at or near the village of Goriano. The territory of the Peligni must always have been an important point in regard to the communications of the different nations of Central Italy. On the one side a natural pass, the Forawna, between the Tabula the Mons Ineae, connected the basin of the Gizio and lower valley of the Aeternus with the land of the Marsi and basin of the lake Fuscinus; on the other the remarkable pass or gorge through which the Aeternus forces its way just below Popoli, afforded a natural outlet, through which these upland valleys had a direct communication with the sea. These two passes, in conjunction with that which led from the basin of the Fuscinus to Carsoli, formed a natural line of way from the Tyrrhenian and the Adriatic, which was undoubtedly frequented long before the Romans subdued the several nations through which it passed, and ages before the Via Valeria was laid down as an artificial road. That highway, indeed, was not continued through the land of the Peligni, and thence to the sea, until the reign of the emperor Claudius (Cerenzia). In the other direction also the valley of the Gizio, opening into that of the Aeternus, afforded direct means of communication with Rome, Tascianum, and the valley of the Tiber, while at its southern extremity a practicable pass led through the heart of the Apennines into the valley of the Sagrus, and thus opened a direct line of communication with the interior of Samnium. The importance of this line of route, as well as the early period at which it was frequented, is shown by the circumstance that it was followed by the Roman armies in b. c. 340, when the Samnite, as well as the Marsi and Peligni, were friendly, and the revolt of the Latins cut off their natural line of march into Campania. (Liv. viii. 6.)

This line of road, as given in the Tabula, led from Corfinium by Sulmo to Aulidea, and thence to Asculum and Venafro. At the distance of 7 miles from Sulmo that itinary places a station called "Jovis Larenos," evidently the site of a temple, on the highest part of the pass. The spot is still called Cursus, and it is probable that the true reading is "Jovis Paleni," the adjoining mountain being still called Monte di Palena, and a village or small town at the foot of it bearing the same name. (Cluver, Ital. p. 759; Holsten. Not. ad Cluvr. p. 145; Romanelli, vol. iii. p. 165.) It thus appears that the ancient road followed a more circuitous but easier line than the modern highway, and thus avoided the passage of the Forno di Cinque Miglia, an upland valley at the highest part of the pass, much deduced in winter and spring on account of the terrific storms of wind and snow to which it is subject. (Craven's Abruzzi, vol. ii. pp. 45—50.)

PELINAEUS. [Chios.]

PELINNA, more commonly PELINNAEUM (Thaures, Steph. B. s. r. ; Plin. iv. 8. s. 15; Pelexoraw, Scl. l. p. 25; Pind. Pyth. s. 4; Strab. ix. p. 457; Arrian, Arab. l. 7; Liv. xxxvi. 10; Pelinnaeum, on coins, Eckhel, vol. ii. p. 146: Eth. Peleonoaum), a town of Thessaly, in the district of Hisaestia, a little to the left bank of the Peneus. (Strab. l. c.) It seems to have been a place of some importance even in the time of Pindar (l. c.). Alexander the Great passed through the town in his rapid march from Illyria to Boeotia. (Arrian, l. c.) It did not revolt from the Macedonians together with the other Thessalians after the death of Alexander the Great. (Diod. xviii. 11.) In the war between Antiochus and the Romans, b. c. 191, Pelinnaeum was occupied by the Atticians, and in 160 by the Romans. (Liv. xxxvi. 10. 14.) There are considerable remains of Pelinnaeum at Old Kordhiiki or Gardhiki. "The city occupied the face of a rocky height, together with a large quadrangular space at the foot of it on the south. The southern wall is more than half a mile in length, and the whole circumference near three miles." (Leake, Northern Greece, vol. iv. p. 288.)

PELIMUM (Pelasg. Arrian, Aulde l. 5; Pelasg. Quadrium, Plin. H. n. 1. a. c. 15; Plut. Pyth. 4. b. c.; Liv. xxxi. 40), a town of the Dassareti, on the Macedonian frontier, and commanding the pass which led into that country. From its situation it was a place of considerable importance, and was attacked by Alexander on his return from the expedition against the Getae, in the war against the two Illyrian kings Cleitus and Gnaeus. On the defeat of the Illyrians Cleitus set the town on fire. According to Arrian (l. c.), Pelium was situated at the foot of a woody mountain, and close to a narrow defile through which the Eordiacean flowed, leaving in one part space only for four shields abreast, a description which corresponds so exactly with the pass of Tana- gan, or Klisura of Decol, both as to the river, and breadth of one part of the pass, that the identity can hardly be questioned. Pelium will then be either Plissae or Porjani, but the former has the preference by its name, which seems to be a vulgar sounding of Plisse. (Leake, Northern Greece, vol. iii. p. 929.) The consul Silpichus, in his first campaign against Philip (Liv. ix. b. c. 15), crossed from Eordena, or Sarigiboli, which he had ravaged over part of the plain of Grevena, and through Anasaletia to Kastoria, whence he diverged to Pelium, which he occupied, leaving a strong garrison in it, as it
was an advantageous post for making excursions into the enemy's territory. [E. B. J.]

PELLUM (Πελώμα), a lofty mountain in Thessaly, extending along the coast of Magnesia. It rises to the southward of Ossa, and the last falls of the two mountains are connected by a low ridge. (Herod. vii. 129.) It forms a chain of some extent, stretching from Mt. Ossa to the extremity of Magnesia, where it terminates in the promontories of Sepias and Aeantum. It attains its greatest height above Iolcos. According to Ovid it is lower than Ossa (Fast. iii. 441), which Dodwell describes as about 5000 feet high. In form it has a broad and extended outline, and is well contrasted with the steeply conical shape of Ossa. On its eastern side Mt. Pelium rises almost precipitously from the sea; and its rocky and ininhabitable shore (ἀκτὰ Ἀλκιμίων) was, from Cheiron, that which since wiser residence has been covered with venerable forests, to which frequent allusion is made in the ancient poets. Homer constantly gives it the epithet of ἐφιστήκτουν (II. ii. 744, A.). Its northern summit is clothed with oaks, and its eastern side abound with pines. Particularly famous are those forests of beeches, elms, and pines. (Dicaearch. Descr. Mont. Pel. in Geogr. Graec. 359.)

Mt. Pelium is still covered with venerable forests, to which frequent allusion is made in the ancient poets. Homer constantly gives it the epithet of ἐφιστήκτουν (II. ii. 744, A.). Its northern summit is clothed with oaks, and its eastern side abound with pines. Particularly famous are those forests of beeches, elms, and pines. (Dicaearch. Descr. Mont. Pel. in Geogr. Graec. 359.)

Pelium is viewed from the south, two summits are seen at a considerable distance from each other,—a concavity between them, but so slight as almost to give the effect of a table-mountain, upon which fiction might readily suppose that another hill of the conical form of Ossa should recline. (Holland, Travels, vol. ii. p. 96.) Mt. Pelium was said to be the residence of the Centaurs, and more especially of Cheiron, the instructor of Achilles. A legend to which the number of mediaeval plays founded there are forests of beeches, elms, and pines. (Dicaearchus. I. c.)

According to Dicaearchus (I. c.), the cave of Cheiron and a temple of Zeus Actaeus occupied the summit of the mountain. The same writer relates that it was the custom of the sons of the principal citizens of Demetrias, selected by the priest, to ascend every year to this temple, clothed with thick skins, on account of the cold. Between the two summits of Mt. Pelium there is a fine cavern, now commonly known by the name of the cave of Achilles, and which accorda with the position of the cave of Cheiron, mentioned by Dicaearchus. The same writer likewise speaks of two rivers of Mt. Pelium, called Crusinon and Brycon. One of them is now named Zerovikia, and falls into the Gulf between Nizhori and St. George. (Leake, Northern Greece, vol. iv. p. 384, seq.) Lastly, Pelium was connected with the tale of the Argonauts, since the timber of which their ships were built there was cut down in the forests of this mountain. The north-western summit of Mt. Pelium is now named Pleisothi; but the mountain is frequently called Zagorá, from the town of this name immediately below the summit on the eastern side. (Leake, L. c.)

Mézières, Mémoire sur le Pélion et l'Ossa, Paris, 1853.)

PELLA (Πελλά), Herod. vii. 123; Thuc. ii. 99, 100; Strab. viii. ap. 325, 393, 330, Fr. 22, 23; Polib. iii. 13, § 30, viii. 12. It lies like an island from Antan.; Itin. Hierosol.; Pera. Tab.; Πελλά, Hierocles), the capital of Macedonia. At the time when Xerxes passed through Macedon, Pella, which Herodotus (L. c.) calls a πολιορκία, was in the hands of the Bottiaeans. Philip was the first to make Pella, which Amyntas had been obliged to evacuate (Xen. Hellen. v. 2, § 13; comp. Diodor. xiv. 92, xv. 19), a place of importance (Dem. de Cor. p. 247), and fixed the royal residence there: there was a navigation from the sea by the Lydias, though the marshes, which was 120 stadia in length, exclusive of the Lydias. (Scl. p. 26.) These marshes were called B Ornës (Βορμνήδαι), as appears from an epigram (Theocrit. Chi. ap. Plut. de Exil. vol. vii. p. 380, ed. Reiske), in which Aristophanes is reproached for preferring a residence near them to that of the Academy. Archestratus (ap. Athen. vii. p. 328, a.) related that the lake produced a fish called "chronis," of great size, and some other, particularly famous, which was called a "fish" of a hill surrounded by waters, the metropolis of Philip, and the birthplace of Alexander (Juv. v. 168; Lucan, x. 20), soon grew into a considerable city. Had Alexander not been estranged from Macedonia, it would probably have attained greater importance. Antipater lived there as regent of Macedonia, but Cassander spent less of his time at Pella, than at Thessalonica and Cassandra; from the time of Antigonus Gonatas till that of Perseus, a period of nearly a century, Pella remained the capital, and was a splendid town. (Liv. xxxvi. 25; xvii. 7, 415, 41, 51, 67, xili. 43, xiv. 10.) Livy (xlv. 46) has left the following description, derived undoubtedly from Polybius, of the construction of the city towards the lake. "Pella stands upon a height sloping to the SW., and is bounded by marshes which are impassable both in winter and summer, and are caused by the overflowing of a lake. The cited are " (the word "ax" is wanting in our copies of Livy, but seems absolutely necessary both to the sense and the grammar), "it rises on the part of the marsh nearest to the city, being built upon an immense embankment, which defies all injury from the waters; though appearing at a distance to be united to the wall of the city, it is in reality separated from it by a wet ditch, over which there is a bridge, so that no access whatever is afforded to an enemy, nor can any prisoner whom the king may confine in the castle escape, but by the easily guarded bridge. In the fortress was the royal treasure." It was surrendered to Aeginaeus Paulus (Livy, xlv. 45), and became, according to Strabo (p. 323) and the Itineraries, a station on the Egnaian Way, and a colony. (Phin. I. c.) Don Chrystostomos (Orat. Tars. Prior. vol. ii. p. 12, ed. Reiske) says that Pella was a heap of ruins; but from the fact that there are coins of the colony of Pella, ranging from Hadiarion to Philip, this must be an exaggeration. The name of the city is found as late as the sixth century of our era, as it occurs in Hierocles. It would seem in another case if he had survived the ruins of the city, and had reverted to the fountain, to which it was originally attached; as at a small distance from the village named Neokhôri or Yeniky, which has been identified with a portion of the ancient Pella, there is a spring
called by the Bulgarians Pel, and by the Greeks Πελλα. Below the fountain, are some remains of buildings, said to have been baths, and still called τά Αυτης. These baths are alluded to by the comic poet Mochon (ap. Athen. viii. p. 348, c.) as producing bilious complaints. Although little remains of Pella, a clear idea may be formed of its extent and general plan by means of the description in Livy, compared with the existing traces, consisting mainly of "tumuli." The circumference of the ancient city has been estimated at about 3 miles. The sources of the fountains, of which there are two, were probably about the centre of the site; and the modern road may possibly be in the exact line of a main street which traverses it from E. to W. The temple of Minerva Alethene is the only public building mentioned in history (Livy xiii. 51), but of its situation nothing at present is known. Felix Beaumour, who was consul-general at Salonika (Tableau du Commerce de la Gréce, vol. i. p. 87), asserted that he saw the remains of a port, and of a canal communicating with the sea. Leake (Northern Greece, vol. iii. pp. 261—266), who carefully went over the ground, could find no traces of a port, of which indeed there is no mention in ancient history: remains of a canal could be seen, as he was told, in summer.

An autonomous coin of Pella has the type of an olive-branch, which explains what Steph. B. (s. r.; comp. Uplian., ad. Deo. de Fals. Leg.) reports, that it was formerly called Bougâsos. (Eckhel, vol. ii. p. 73; Sestini, Mon. Pel. p. 37.)

**COIN OF PELLA IN MACEDONIA**

PELLA (Πέλλα; Eth. Πελλαίως). 1. A city of Palestine, and one of the towns of Decapolis in the Peræa, being the most northerly place in the latter district. (Ilim. v. 19, s. 16; Joseph. B. J. iii. 3. 5.) Stephanus B. (s. n.) calls it a city of Coel-Syria and Pobryon (v. 15; § 23) also describes it as a city of Decapolis in Coel-Syria. Stephanus adds that it was also called Butis (§ Βούτης), which appellation seems to be preserved in its modern name El-Boutteh. Its name Pella shows that it was either built or colonised by the Macedonians. Pliny describes it as abounding in springs ("aquis divitis," Plin. l. c.). It was taken by Antiochus the Great (Polyb. v. 70), and was afterwards destroyed by Alexander Lamianus, because its inhabitants would not accept the Jewish religion (Joseph. Ant. xiii. 15 (23). § 3, B. J. i. 4, § 8); but it was afterwards restored by Pompey. (Joseph., Jos. ait. 4. § 7.) Pella was the place to which the Christians of Jerusalem fled before the destruction of the latter city, (Euseb. H. E. iii. 5; Epiph. de Macc. et Ponder. p. 171; Reland, Palæstina, p. 924.)

2. A town of Syria, on the Orontes, better known under the name of Apaneis. (Argamm. No. 1.)

PELLA / N / PELLENE (ΣΠΕΛΛΑ y. PELLENE, Παλιγχ) 20. § 2; ΠΕΛΛΑ, Strab. viii. p. 386; ΠΕΛΛΑ, Xen. Hell. vii. 5. § 9; Polyb. iv. 81, xvi. 37; Plut. Aeg. 8), a town of Laconia, on the Eurotas, and on the road from Sparta to Arcadia. It was said to have been the residence of Tyndareus, when he was expelled from Sparta, and was subsequently the frontier-fortress of Sparta on the city walls as in the Oenas. Polybius describes it (iv. 81) as one of the cities of the Laconian Tribûls, the other two being probably Carystus and Belemita. It had ceased to be a town in the time of Pansanius, but he noticed there a temple of Asclepius, and two fountains, named Pellanes and Lances. Below Pellana, was the Characoma (Χαρακομά), a fortification or wall in the narrow part of the valley; and near the town was the ditch, which according to the law of Agis, was to separate the limits of the Spartans from those of the Perioeci. (Plut. l. c.) Pansanius says that Pellana was 100 stadia from Belemita; but he does not specify its distance from Sparta, nor on which bank of the river it stood. It was probably on the left bank of the river at Mt. Buria, which is distant 55 stadia from Sparta, and 100 from Mt. Khelmos, the site of Belemita. Mt. Buria has two peaked summits, on each of which stands a chapel: and the bank of the river, which is only separated from the mountain by a narrow meadow, is supported for the length of 200 yards by an Embasure. Some copious sources issue from the foot of the rocks, and from a stream which joins the river at the southern end of the meadow, where the wall ends. There are still traces of an aqueduct, which appears to have carried the waters of these fountains to Sparta. The acropolis of Pellana may have occupied one of the summits of the mountain, but there are no traces of antiquity in either of the chapels. (Leake, Morea, vol. iii. p. 13, seq.; Boblaye, Ackerschere, v. 76; Ross, Reisen im Peloponnes, p. 191; Curtius, Peloponesus, vii. p. 11.)

PELLANA. 1. (Πελαινός, Dor. Πελλαίνα, Πελλανά, Steph. B. s. v.; Eth. Πελλαίνει, Pellenesius, Liv. xxxiv. 29; Pellenaeus, Plin. iv. 6: Τεχερος, m. Ζυγό), a town of Achaia, and the most easterly of the twelve Achaean cities, whose territory bordered upon that of Sicyon on the E. and upon that of Aegae on the W. Pellenes was situated 60 stadia from the sea, upon a strongly fortified hill, the summit of which rose into an inaccessible peak, dividing the two districts. It was almost wholly occupied by the inhabitants themselves from the giant Pallas, and by the Argives from the Argive Pellenes, a son of Phorbas. (Herod. i. 145: Pol. ii. 41: Strab. viii. p. 386; Pans. vii. 26. §§ 12—14; Apoll. Rhod. i. 176.) Pellenes was a city of great antiquity. It is mentioned in the Hомерic catalogue; and according to a tradition, preserved by Thucydides, the inhabitants of Sicyon in the peninsula of Pellene in Macedonia professed to be descended from the Achaean Pellenesians, who were driven on the Macedonian coast, on their return from Troy. (Hom. II. ii. 574; Thuc. iv. 120.) At the commencement of the Peloponnesian War, Pellenes was the only one of the Achaean towns which espoused the Spartan cause, though the other states afterwards followed their example. (Thuc. ii. 9.) In the time of Alexander the Great, Pellenes fell under the dominion of one of its citizens, the name of Chaerón, a distinguished athlete, who raised himself to the tyranny by Alexander's assistance. (Pans. vii. 27. 7.) In the wars which followed the re-establishment of the Achaean League, Pellenes was several times taken and re-taken by the contending parties. (Pol. i. 52, iv. 8, 13; Plut. Cleom 17, Arat. 31, 32.) The buildings of Pellenes are de-
scribed by Pausanias (vii. 27). Of these, the most important were a temple of Athena, with a statue of the goddess, said to have been one of the earlier works of Pheidias; a temple of Dionysus Lampræ, in whose honour a festival, Lampetria, was celebra
ted: a temple of Apollo Theoxenos, to whom a festival, Theoxenia, was celebrated; a gymnasion, &c. Sixty stadia from the city was the Myseaum (Μυσαία), a temple of the Mysian Demeter; and near it a temple of Asclepius, called Cyrus (Κύρος): at both of these places there were copious springs. The ruins of Pellene are situated at Ζεγρά, and are now called Ζεγρέι. The two temples of Myseaum and Cyrus are placed by Leake at Τρικκάλια, SE. of the ancient city. (Leake, Morea, vol. iii. p. 215. Peloiponnesiacs, p. 391.)

Between Aegium and Pellene, there was a village also called Pellene, celebrated for the manufacture of a particular kind of cloaks, which were given as prizes in the agonistic contests in the city. (Strab. vii. p. 386; Pind. Ol. ix. 146, with Schol. Aristoph. Anc. 1421, with Schol.; Hesych. and Phot. s. v. Πελλήνης ζ. λα.δικαί.) K. O. Müller (Dor, vol. ii. p. 430), however, questions this second Pellene: he supposes that Strabo is describing Pellene as both citadel and village, and he corrects the text, καθισκόν διὰ μεταξῶν Ἀγίων καὶ Κωκλῆνης, instead of Πέλληνης; but the context renders this conjecture improbable.

The harbour of Pellene was called ARISTONAUTAE (Ἀριστονούται), and was distant 60 stadia from Pellene, and 120 from Aegium. It is said to have been so called from the Argonauts having landed there in the course of their voyage. (Paus. vii. § 14, ii. 12, § 2.) It was probably on the site of the modern Κωκόβρει. (Leake, Morea, vol. iii. p. 384.) A little to the E., near the coast, was the fortress OLEUS (Ολευς), dependent upon Pellene; Leake places it at Χυλοκαστρό. It would thus have stood at the entrance of the gulf leading from the maritime plain into the territory of Pellene, and would have been of great importance to the safety of that district. (Xen. Hell. vii. 14. §§ 17, 18; Pind. iv. 6; Mel. iii. 3; Steph. B. s. v.; Leake, vol. iii. p. 224.) Near Aristonautae was GONUSA or GONOSSEA (Γονοσεσσα), to which Homer gives the epithet of lofty (αἰσχωρή). According to Pausanias its proper name was DONUSSA (Δονούσσα), which was changed by Pausistratus into Goinossëa, when he collected the poems of Homer. Pausanias says that it was a fortress belonging to the Sicyonians, and lay between Aegium and Pellene; but from its position we may infer that it was at one time dependent upon Pellene. Leake places it at Κορίνθι, the lofty mountain, at the foot of which is Κωκόβρει, the ancient Aristonautae. (Hom. II. ii. 573; Paus. vii. 26. § 13; Leake, vol. iii. p. 385.)

2. A town in Laconia. (PELLANA.)

COIN OF PELLENE.

PELODES PONTUS. (Buthrotum.)

PELOPSIS I'X'NLAE, nine small islands lying off Methana, on the Argolic coast. (Paus. ii. 34. § 3.) They must be the islands lying between Epidaurus and Aegina, of which Pityonneus (Αν-
stationed, with the view both of threatening the city and preventing the Romans from crossing the straits. (Pol. i. 11.) At a later period, during the contest between Octavian and Sextus Pompey in the neighbourhood of Messana, the headland of Pelorus once more became an important post, being one of the points sedulously guarded by Pompey in order to prevent his overthrow from the effects of a landing. (Appian, B. C. p. 105, 116.)

The actual promontory of Pelorus, as already mentioned, is a low spit or point of sand, about 2 miles in length, which has evidently been thrown up by the currents, which flow with great rapidity through the straits. (Smyth's Sicily, p. 109.) A tradition, reported by Diodorus, but as ancient as the time of Hesiod, represented it as an artificial work constructed by the giant Orion. (Diod. iv. 83.) Within this sandy point, between the beach and the hills, are enclosed two small lakes or pools which are famous for producing the best oysters in Sicily (Smyth, l. c. p. 106).—a reputation they already enjoyed in ancient times, as the "oysters of Pelorus" are repeatedly noticed by Athenaeus; and Sollinus, who mentions the lakes in question, speaks of them as abounding in fish. There appear to have been three of them in his day, but the marbles which are relics of one of them are purely fabulous. ( Athen. i. p. 4, c. iii. p. 92; Sollin. 5. §§ 2–4.) A temple of Neptune stood in ancient times upon the promontory, as well as a lighthouse and Pharos, the memory of which is retained in the modern name of Punta del Faro, by which the cape is still known. This appellation seems to have indeed come into use before the close of the Roman Empire, as Servius, in describing the width of the Sicilian strait, measures it "a Columna usque ad Pharon." (Serv. ad Aen. ill. 411.) But no remains of either building are now visible.

[ E. H. B. ]

PELORUS (Πελόρος), a small river of Boeotia, in Asia, probably a tributary of the Cypris. (Dion. Cass. xxxvii. 2; comp. Groskord's Strab. vol. ii. p. 375.)

PELSO (Anc. Vict. de Caes. 40) or PEISO (Strab.iii. 27), a considerable lake in the north of Pannonia. A large portion of it was drained by the emperor Galerius, who conducted its waters into the Danube, and thus reclaimed large tracts of land, which formed an important addition to the province. (Anc. Vict. l. c.) The modern name of this lake is Plattensee; during rainy seasons it still overflows its banks far and wide, and forms extensive marshes, which are probably the very districts that were drained by Galerius. Lake Pelso is mentioned under different modifications of this name, such as Lacus Pelosid (Jornand. Gct. 52, 53) and Pelsois (Geogr. Rav. iv. 19), while in the middle ages it was called Pelissa. Muchar (Noric. i. p. 3, &c.) regards Pelso and Pelso as two lakes, placing the former, with Pliny, near the Deserta Balonum, and identifying it with the Nosia-dere, while he admits the Pelso to be the Plattensee. This hypothesis, however, can hardly be sustained, as it is pretty certain that the Nosia-dere did not exist in the times of the Romans, but was formed at a later period. (Comp. Schonwiesner, Antiquitates et Historia Subvariae, p 17, &c.; Liechtenberg, Geogr. des Öster. Kaiserstaates, vol. iii. p. 1245, &c.)

[ L. S. ]

PELTAE (Πέλται; Eth. Πέλταιον, Pelteni), a considerable town of Phrygia, was situated, according to Xenophon (Anab. i. 2. § 10) at a distance of 10 parasangs from Celaenae, at the head of the river Macedon. Xenophon describes it as a populous city, and states that the army of Cyrus remained there three days, during which games and sacrifices were performed. The Peuting, Table, where the name is erroneously written Pella, places it, quite in accordance with Xenophon, 26 miles from Apanoae Cibotum, to the convenience of which Peltae was formed. (Pimp. v. 29; comp. Ptol. v. 2. § 25; Steph. B. s. v.) Strabo (xii. p. 576) mentions Peltae among the smaller towns of Phrygia, and the Notitiae name it among the episcopal cities of Phrygia Paeophia. The district in which the town was situated derived from it the name of the Peltean plain (Πελτηνόν or Πελταϊνον πεδίον, Strab. xiii. p. 629). Kiepert (ap. Franz, Forsch. Inschriften, p. 36) fixes the site of Peltae at the place where Mr. Hamilton found ruins of an ancient city, about 8 miles south of Semitelli (Journal of the Roy. Geogr. Society, viii. p. 144): while Hamilton himself (Researches, ii. p. 203) thinks that it must have been situated more to the south-west, near the modern Iskebli. But this latter hypothesis seems to place it too far west.

[ L. S. ]

PELTUINUM (Eth. Peltauinas, -atis: Ansedonia) a considerable town of the Vestini, and one of the four ascribed to that people by Pliney (iii. 12. s. 17). Its name is not found in Polybius or the Itineraries, but its municiplal importance is attested. One of these confirms the fact mentioned by Pliney, that the Ausonians were closely connected with, or dependent on, Peltuimum, apparently the more important place of the two. We learn from the Liber Coloniarum (p. 229) that it attained the rank of a colony, probably under Augustus: but at a later period, as we learn from an inscription of the date of A. D. 242, it was reduced to the condition of a Frankieum, though it seems to have been still a flourishing town. (Orell. Inschr. no. 4056; Zumtob, de Coloniae (Colonialia). p. 359, &c.) Its site was unknown to Clavuerus, but can be fixed with certainty at a spot called Ansedonia, between the villages of Castel Nuovo and Prata, about 14 miles SE. of Aquila, on the road from thence to Popoli. The ancient name is retained by a neighbouring church, called in ecclesiastical documents S. Paolo a Pelutino. A considerable part of the circuit of the ancient walls is still visible, with remains of various public buildings, and the ruins of an ancient basilica (Ibn-inazri, Arcic, p. 119; Romanieli, vol. iii. pp. 264–268; Orelli, Inschr. 106, 3961, 3981).

[ E. H. B. ]

PELVA, a town of Dalmatia, which the Antonine Itinerary places on the road from Sirmium to Salona. Schafarik (Schr. Alt. vol. i. pp. 60, 247) identifies it with Pleva, a place in Bosnia, with a river of the same name, of which Pelva is the Latinised form.

[ E. B. J. ]

PELUSHUM (Πελοσύμων, Plin. iv. 5. § 11, viii. 15. § 11; Steph. B. s. r., Strab. xviii. p. 802, seq.; Apian. Πελοσύμων, Πελοσύμων) was a city of Lower Egypt, situated upon the easternmost bank of the Nile, the Ostium Pelusiacum, to which it gave its name. It was the Sin of the Hebrew Scriptures (Ezek. xxx. 15); and this word, as well as its Egyptian appellation, Peremorn or Peromri, and its Greek (Πελοσύμων) import the city of the oze or mud (Ομη, Copte, μυθ), Pelusium lying between the sea-board and the Deltaic marshes, about two and a half miles from the sea. The Ostium Pelusiacum was chosined by sand as early as the first century B.C.,
and the coast-line has now advanced far beyond its ancient limits, so that the city, even in the third century B.C., was at least four miles from the Mediterranean. The principal produce of the neighbouring lands was flax, and the linen Pelusiacum (Plin. xii. 1 s. 3) was both abundant and of a very fine quality. It was, however, as a border-fortress on the frontier, as the key of Egypt as regarded Syria and the sea, and as a place of great strength, that Pelusium was most remarkable. From its position it was directly exposed to attack by the invaders of Egypt; several important battles were fought under its walls, and it was often besieged and taken. The following are the most memorable events in the history of Pelusium:

1. Sennacherib, king of Assyria, n. c. 720—715, in the reign of Sethos the Aethiopian (25th dynasty) advanced from Palestine by the way of Libna and Lachish upon Pelusium, but retired without fighting from before its walls (Istahul, xxxv. 8; Herod. i. 141; Strab. xiii. p. 604). His retreat was ascribed to the favour of Hephaestos towards Sethos, his protector. In the night, while the Assyrians slept, a host of field-mice gnawed the bow-strings and shield-strap's of the Assyrians, who fled, and many of them were slain in their flight by the Aegyptians. Herodotus saw in the temple of Hephaestos at Memphis, a record of this victory of the Aegyptians, viz. a statue of Sethos holding a mouse in his hand. The story probably rests on the fact that in the symbolism of Egypt the mouse implied destruction. (Camp. Horapoll. Hieegypt. i. 50; Adelian. H. An. i. 41.)

The decisive battle which transferred the throne of the Pharaohs to Cambyses, king of the Med-Persians, was fought near Pelusium in n. c. 525. The fields around were strewed with the bones of the combatants when Herodotus visited Lower Egypt; and the skulls of the Aegyptians were distinguishable from those of the Persians by their superior hardness, a fact confirmed by the mummmies, and which the historian ascribes to the Aegyptians shaving their heads from infancy, and to the Persians covering them up with folds of cloth or linen. (Herod. ii. 10, seq.) As Cambyses advanced at once to Memphis, Pelusium probably surrendered itself immediately after the battle. (Polyben. Strateg. viii. 9.)

3. In n. c. 373, Pharnabazus, satrap of Phrygia, and Iplicrates, the commander of the Athenian armament, appeared before Pelusium, but retired without attacking it, Nectanebus, king of Egypt, having added to its former defences by laying the neighbouring lands under water, and blocking up the navigable channels of the Nile by embankments. (Diodor. xv. 42; Nepr, Iphicr. c. 5.)

4. Pelusium was attacked and taken by the Persians, n. c. 309. The city contained at the time a garrison of 5000 Greek mercenaries under the command of Philophrion. At first, owing to the rashness of the Thebans in the Persian service, the defenders had the advantage. But the Aegyptian king Nectanebus hastily venturing on a pitched battle, his troops were cut to pieces, and Pelusium surrendered to the Thebans, who granted the inhabitants honourable conditions. (Diodor. xvi. 43.)

5. In n. c. 333, Pelusium opened its gates to Alexander the Great, who placed a garrison in it under the command of one of those officers entitled "Companions of the King." (Arrian, Exp. Alex. iii. 1 seq.; Quint. Curt. iv. 33.)

6. In n. c. 173, Antiochus Epiphanes utterly defeated the troops of Ptolemy Philometer under the walls of Pelusium, which he took and retained after he had retired from the rest of Egypt. (Polyben. Legat. § 82; Hieronym. in Daniel. xi.) On the fall of the Syrian kingdom, however, if not earlier, Pelusium had been restored to its rightful owners, since

7. In n. c. 55, it belonged to Aegypt, and Marcus Antonius, as general of the horse to the Roman proconsul Gabinius, defeated the Aegyptian army, and made himself master of the city. Ptolemy Antistes, in whose behalf the Romans invaded Aegypt at this time, seeing that the Pelusian war was over, but his intention was thwarted by Antonius. (Plut. Anton. c. 3; Val. Max. ix. 1.)

In n. c. 31, immediately after his victory at Actium, Augustus appeared before Pelusium, and was admitted by its governor Seleucus within its walls.

Of the six military roads formed or adopted by the Romans in Aegypt, the following are mentioned in the Itinerarium of Antoninus as connected with Pelusium:

1. From Memphis to Pelusium. This road joined the great road from Psephis in Nubia at Babylon, nearly opposite Memphis, and coincided with it as far as Scæna Veteranorum. The two roads, viz. that from Psephis to Scæna Veteranorum, which turned off to the east at Helipolis, and that from Memphis to Pelusium, connected the latter city with the capital of Lower Aegypt, Trajan's canal, and Arisme, or Suez, on the Sinus Hecalepalites.

2. From Acaca to Alexandria, ran along the Mediterranean to sites from Baphia to Pelusium.

Pelusium suffered greatly from the Persian invasion of Aegypt in a. d. 501 (Eutychius, Annul.), but it offered a protruded, though, in the end, an ineffectual resistance to the arms of Amrun, the son of Asi, in a. d. 618. As on former occasions, the surrender of the key of the Delta, was nearly equivalent to the subjugation of Aegypt itself. The khalifs, however, neglected the harbours of their new conquest generally, and from this epoch Pelusium, which had been long on the border of Aegypt and Aethiopia; but Sillig, instead of "Cysten, Penaunam, Gadacalum," reads " Cysten, Macadagalum."

PEINEUS. 1. The chief river of Thessaly. (Thess. Alx.)

2. The chief river of Elis. (Elis.)

PENESTAE, in Thessaly. See Dict. of Antiq. s. v. PENESTAE, a people of Illyricum, who appear
to have possessed a large tract of mountainous country to the N. of the Dassaretæ, and extending to the E., as far as the frontier of Macedonia, while on the W. and N.W. it almost reached to the Libyæ and the dominions of Gætinus. (Liv. xiii. pp. 20, 21, 22, 23, 25, xiv. 11.) The principal city of this Viminallike tribe was Veessas, besides which they had the two fortresses of Draudacion and Oxæeum. [E. B. J.]

PENEL or PENEUL (i.e. "Face of God," Eòs Òeòi, LXX.), a place beyond Jordan, where Jacob wrestled with the angel (Gen. xxix. 30), and where a town was afterwards founded by the tribe of Gad. (Judges, viii. 8.)

PENUS, a small river of Colchis, falling into the Euxine, on which stood a town of the same name. (Plin. iv. 4; Or. de Pont. iv. 10, 47.)

PENNELOCUS, in the Antonine Itin., and PENNOLCUS in the Peutinger Table, is a place in Gallia in the country of the Nantuates, between Viscus (Tereq) and Tarumia (St. Maurice). In the Itin., the distance of Pennelocus from Viscus is marked viii.; but it is uncertain whether they are Roman miles or Gallic leagues. It is generally assumed that Pellene or Pellene is the eastern end of the Lake of Geneva is the site of Pennelocus, but the distance from Vesey does not agree. D'Avalx found in some old maps a place called Penn on the direction of the road, but the position of Pennae does not agree with the distances in the Itin. Pennelocus was in the Vallia Pennina or the Telais. [G.L.]

PENXANAE ALPES. [Alpes, p. 108, a.]

PENOCRUCIUM, a town in the territory of the Cornavi, in Britanni Romana, sometimes identified with Pandridge in Staffordshire, but more probably Stretton. (Hin. Ant. p. 470; Camden, p. 636.)

PENDADEMUTAE (Πενδαμυητα), a tylie of Tenthramna in Mysia, which is mentioned only by Ptolemy (v. 2. § 15). [L. S.]

PENTATOLIS. [Cyrænaca.]

PENTACDYLOCS (Phii. vi. 23. s. 34; Πενταδέκατων έορος, Ptol. iv. 5. § 25), a mountain in Egypt, on the Arabian Gulf, S. of Berenice.

PENTELIC. [Attica, p. 327, a.]

PENTELICUM (Πεντελευν), a fortress near Pheneus, in the north of Arcadia, situated upon a mountain of the same name. For details see PENEUS.

PENTELICUS MONS. [Attica, pp. 322, a., 323, b.]

PENTRI (Πεντρος), a tribe of the Sammites, and apparently one of the most important of the subdivisions of that nation. Their capital city was Boenvianum (Liv. ix. 31), in the very heart of the Samnite territory, and it is therefore probable that they occupied the whole of that rugged and mountainous district which extends from the frontiers of Latium in the valley of the Liris, to those of the Frentani, towards the Adriatic. But it is impossible to determine their exact limits, or to separate their history from that of the remaining Sammites. It is probable, indeed, that, throughout the long wars of the Romans with the Sammites, the Pentri were the leading tribe of the latter people, and always took part in the war, whether specified or not. The only occasion when we hear of their separating themselves from the rest of their countrymen, is during the Second Punic War, when we are told that all the other Sammites, except the Pentri, declared in favour of Hannibal after the battle of Cannae, b.c. 216.

(PEPUZA. (Liv. xxii. 61.) This is the last occasion on which we find their name in history; all trace of the distinction between them and the other Sammites seems to have been subsequently lost, and their name is not even mentioned by Strabo or Pliny. The geographical account of their country is given under the head of Pennelocus, which besides which they had the two fortresses of Draudacion and Oxæeum.
PERAEA.

Hist. Eccl. i. 8, where it is called Petusa; Arist. Gen. Comm. i. 8, where its name is Pessana.) Kiepert (op. Fr. Einschreiben, p. 33) believes that its site may possibly be marked by the ruins found by Arundel (Discoveries in Asia, ii. 101, 127) near Bes-Shehr and Kusheifi, in the south of Us البحر.

PERAEA (Petusa), the name of several districts lying beyond ( persecution) a river or on the other side of a sea.

1. The district of the Palestinian lying beyond the Jordan, and more particularly the country between the Jordan on the W., the city of Pella on the N., the city of Philadelphia and Arabia Petraea on the E., and the land of the Moabites on the S. (Palæstina, p. 532.)

2. (Ἡ τῶν Ποταμῶν περαια, Strab. iv. pp. 651, 652; Polyb. xvi. 2, 6, 8, xxxi. 25; Liv. xxxii. 33, xxxiii. 18. χώρα ἡ τῶν Ρωδιῶν ἢ ἐν τῇ ἤπειρᾳ, Sclav. (p. 38), a portion of the S. coast of Asia, opposite to Rhodes, and subject to it. It commenced at Mt. Phoenix, and extended as far as the frontiers of Lydia. (Strab. l. c.) The peninsula containing Mt. Phoenix was called the Rhodian Chersonesus. (Plin. iii. 2, 20; Diod. v. 60, 62.) For a description of this district, which is very beautiful and fertile, see Vol. I. pp. 519, b, 520, a.

3. (Περαια Τερεδιων, Strab. xiii. p. 596), a small district on the coast of Mycia, opposite to Tenedos, and extending from the promontory Segatium to Alexandria Tat. PERAEA. (Cornelius, p. 685, b.) PERAETHEIΣ. (Megalopolis, p. 310, a.) PERGEIANA (Ibn. Ant. p. 432), a town of Hispania Baetica, lying S. of Merida. For its coins see Sestini, p. 107. [T. H. D.]

PERCOTE (Περκότη: Eth. Περκάτωος), an ancient town of Mycia, on the Hellespont, between Abydos and Lampsacus, and probably on the little river Percotes. (Hieron. ii. ii. 835, xi. 229; Xenoph. Hellen. vi. 1. § 23.) Percote continued to exist long after the Trojan War, as it is spoken of by Herodotus (v. 117), Sclavus (p. 33), Apollonius Rhodius (i. 932), Arrian (Arab. i. 13), Piny (v. 32), and Stephanus Byz. (e. v. Some writers mention it among the towns assigned to Themistocles by the king of Persia. (Plut. Them. 30; Athen. i. p. 29.) According to Strabo (xiii. p. 590) its ancient name had been Percope. Modern travellers are unanimous in identifying its site with Bergas or Barygan, a small Turkish town on the left bank of a small river, situated on a sloping hill in a charming district. (Sismonde's Journal, in Walpole's Turkey, i. p. 91; Richter, Walfahrten, p. 434.) [L. S.]

PERCOTES (Περκότης), a small river of Mycia, flowing from Mount Ida into the Hellespont. (Hom. ii. ii. 835.) It is easily identified as the stream flowing in the valley of the modern town of Bergas. [Comp. Percote.]

PERDICES, a town in Magnesia Caesariensis, 20 M. F. from Silissis, perhaps Roa-of-Ouat. (It. Ant. p. 29, 36; Coll. Epist. c. 121.)

PERGA. (Perga.)

PETRAGUMUM. [LITUM.]

PETRAGUMUM (Περγαμοῦ: Eth. Περγαμῶν, Pergamonas), sometimes also called PEGARUMUS (Ptol. v. 2. § 14, viii. 17. § 10; Steph. B. s. a.), an ancient city, in a most beautiful district of Teuthra in Asia Minor, on the north of the river Caicus. Near the point where Pergamum was situated, two other rivers, the Selinus and Celius, emptied them-
Dolphi by assassins said to have been hired by Perseus; yet at a later period he favoured the cause of the Macedonian king, and thereby incurred the ill-will of the Romans. Pergamum was mainly indebted to Eumenes II. for its embellishment and extension. He widened the vast plain and the arts and sciences; he decorated the temple of Zeus Nicator, which had been built by Attalus outside the city, with walks and plantations, and erected himself many other public buildings; but the greatest monument of his liberality was the great library which he founded, and which yielded only to that of Alexandria in extent and value. (Strab. l. c.; Athen. i. p. 3.) He was succeeded by his son Attalus II., but the government was carried on by the late king's brother Attalus Athenobulphus, from n. c. 139 to 138. During this period the Pergamenes again assisted the Romans against the Pseudo-Philip. Attalus also defeated Bessus, king of the Thracian Caeni, and overthrew Prusias of Bithynia. On his death, his ward and nephew, Attalus III., surnamed Philometor, undertook the ruins of government, from n. c. 138 to 133, and on his death bequeathed his kingdom to the Romans. Soon after, Aristonicus, a natural son of Eumenes II., revolted and claimed the kingdom of Pergamum for himself; soon he was vanquished and taken prisoner, and the kingdom of Pergamum became a Roman province under the name of Asia. (Strab. l. c., xiv. p. 614.) The city of Pergamum, however, continued to flourish and prosper under the Roman dominion, so that Pliny (l. c.) could still call it "longe clarissimum Asiae Pergamum." It remained the centre of jurisdiction for the district, and of commerce, as all the main-roads of Western Asia converged there. Pergamum was one of the Seven Churches mentioned in the First Epistle of Revelation. Under the Byzantine emperors the greatness and prosperity of the city declined; but it still exists under the name of Bergama, and presents to the visitor numerous ruins and extensive remains of its ancient magnificence. A wall facing the south-east of the acropolis, of hewn granite, is at least 100 feet deep, and engraved into the rock; above it a course of large substructions forms a spacious area, upon which once rose a temple marvelled in sublimity of situation, being visible from the plain and the Aegean sea. The ruins of this temple show that it was built in the noblest style. Besides this there are ruins of an ancient temple of Aesculapius, which, like the Niciphorion, was outside the city (Tac. Ann. iii. 63; Paus. v. 13. § 2); of a royal palace, which was surrounded by a wall, and connected with the Calenus by an aqueduct; of a ptya, a theatre, a gymnasium, a stadium, an amphitheatre, and other public buildings. All these remains attest the unusual splendour of the ancient city, and all testify with admiration of her stupendous greatness. The numerous coins which we possess of Pergamum attest that Olympia were celebrated there; a vase found there represents a torch-race on horseback; and Pliny (x. 25) relates that public cock-fights took place there every year. Pergamum was celebrated for its manifold of ointments (Athen. x v. p. 689), pottery (Plin. xxxv. 46), and parchment, which derives its name (epihtara Pergamena) from the city. The library of Pergamum, which is said to have consisted of no less than 200,000 volumes, was given by Antony to Cleopatra. (Comp. Spon and Wheler, Voy. t. p. 260, &c.; Choiseul-Gouffier, Voyage Pittoresque, ii. p. 25, &c.)

[LS.]

COIN OF PEGGAMUM IN MYRIA.

PEGGAMUS (Περγαμος, Herod. vii. 112), a fortress in the Pieric hollow, by which Xerxes passed in his march, leaving Mt. Pangeum on his right. It is identified with Pravinta, where the lower maritime ridge forms a junction with Pangeum, and separates the Pieric valley from the plain of Philippi. (Leake, Northern Greece, vol. iii. p. 178.)

PEGGAMUS (Περγαμος), a town of Crete, to which a mythical origin was ascribed. According to Virgil it was founded by Aeneas (Aen. iii. 133), according to Veilins Paterculus (1. 1) by Agamanon, and according to Servius by the Coman prisoners belonging to the fleet of Agamanon (ad Verg. Aen. l. c.). Lycurgus, the Spartan legislator, was said to have died at this place, and his tomb was shown there in the time of Aristocles. (Plut. Lyce. 32.) It is said by Servius (l. c.) to have been near Cydonia, and is mentioned by Pliny (iv. 12. s. 20) in connection with Cydonia. Consequently it must have been situated in the western part of the island, and is placed by Pashley at Platamé. (Travels in Crete, vol. ii. p. 23.) Sclavias says (p. 18, l. c.) that the Dictytmuea stood in the territory of Pergamum.

PEGGANTUM (Περγαντος; Edh. Πεγγαντος, Steph. B. s. v.), a city of the Ligures. It is the small island named Βεργανας, on the south coast of France. It is separated by a narrow channel from a point on the mainland which is turned towards Mes, one of the Stoecchades or Illes d'Ilhers. [G. L.]

PERGE or P'ERGA (Περγε; Edh. Περγα), an ancient and important city of Pamphylia, between the rivers Carthacites and Cestrus, at a distance of 60 stadia from the mouth of the latter. (Strab. xiv. p. 667; Plin. v. 26; Pomp. Mol. i. 14; Ptol. v. 5. § 7.) It was renowned for the worship of Artemis, whose temple stood on a hill outside the town, and in which honour annual festivals were celebrated. (Strab. l. c.; Callim. Hymn. in Diana, 187; Sclavias, p. 39; Dionys. Per. 854.) The coins of Perge represent both the goddess and her temple. Alexander the Great occupied Perge with a part of his army after quitting Phaselis, between which two towns the road is described as long and difficult (Arrian, Anab. i. 26; comp. Polyb. v. 72, xxi. 25;
PERMULA.

Liv. xxxviii. 37.) We learn from the Acts of the Apostles (xiv. 24, 25) that Paul and Barnabas preached the gospel at Perge. (Comp. Acts, xiii. 13.) In the ecclesiastical notices and in Homerides (p. 679) Perge appears as the metropolis of Pamphylia. (Comp. Steph. B. s. v.; Eckhel, Doct. Num. i. 3, p. 12.) There are considerable ruins of Perge about 16 miles to the north-east of Adalia, at a place now called Eski-Kalesi. (Comp. Leake, Asia Minor, p. 132; Texier, Descript. de l'Azie Min., where the ruins are figured in 19 plates; fellows, Asia Minor, p. 190, &c.)

PERMULA (Περμούλα, Pol. vii. 2, § 5), the name of a town of some commercial importance on the W. side of the Sinus Magnus (or Gulf of Siam), on a tongue of land anciently called the Aurea Chersonesus, and now known by the name of Malacca. Lassen places it in lat. 7° N. In its immediate neighbourhood was a small bay or indentation of the coast, which was called the Sinus Permulicini (Περμοϋλικὸς κόπος). [V.]

PERMULICUS SINUS. (Περμούλικος Σίνος.)

PERINTHUS (ἡ Περίνθος, Pol. iii. 11, § 6, viii. 11, § 7; Xenoph. Anab. vii. 2, § 8; Eth. Perinthus), a great and flourishing town of Thrace, situated on the Propontis. It lay 22 miles W. of Selymbria, on a small peninsula (Plin. iv. 18) of the bay which bears its name, and was built like an amphitheatre, on the declivity of a hill (Diod. xvi. 76). It was originally a Samian colony (Marcian, p. 29; Plut. Qu. Gr. 56), and, according to Syncellus (p. 238), was founded about n. c. 599. Panofka, however (p. 22), makes it contemporary with Samothrace, that is about n. c. 1000. It was particularly renowned for its obstinate defence against Philip of Macedon (Diod. xvi. 74-77; Plut. Phoc. 14). At that time it appears to have been a more important and flourishing town even than Byzantium, and being both a harbour and a point at which several main roads met, it was the seat of an extensive commerce (Procop. de Aed. iv. 9). This circumstance explains the reason why so many of its coins are still extant; from which we learn that large and celebrated festivals were held here (Mionet, i. p. 399-413; Eckhel, Doct. Num., vol. iv. p. 443; Murell, Spec. Rei Num. tab. xiii. 143). According to Tzetzes (Chili. iii. 812), it bore at an early period the name of Mygodonia; and at a later one, not before the fourth century of our era, it assumed the name of Heraclea; which we find sometimes used alone, and sometimes with the additions H. Thracei and H. Perinthus. (Procop. l. c. and B. Varn. i. 12, 2.) Zosim. l. 62; Justin, xvi. 3; Eutrop. iv. 15; Amm. Marc. xxix. 2; Itin. Ant. pp. 179, 176, 323; Journ. de Num. Soc. p. 51, &c. On the variations in its name, see Tschuschke, ad Melam, i. 2, vol. iii. pt. ii. p. 102, seq.) Justinian restored the old imperial palace, and the aqueducts of the city. (Procop. l. c.) It is now called Eski Eregli, and still contains some ancient ruins and inscriptions. (See Clarke's Travels, viii. p. 122, seqq.) [T. H. D.]

PERISAYDES (Περισαῦδης, Περίσαυδη), an Illyrian people, near the silver mines of Damastium, whose name seems to be corrupt. (Strab. viii. p. 326; Kramer and Grockard, ad loc.)

PERITU, a place in Lower Panonia (Itin. Hieros. p. 562), probably the same as the one mentioned in the Peuting. Table under the name of Piretis, and in the Antonine Itinerary (p. 266) under that of Pyrrus or Pyrrum, and situated on the road from Petovio to Siscia. (See Wesseling, ad H. Hieros. l. c.) [L. S.]

PERIZITITES. (Παλαιστίνα, p. 599.)

PERMESSUS. (Πορκιτίτης, p. 413.)

PERNE (Πέρνε), a small island off the coast of Lonia, which, during an earthquake, became united with the territory of Miletus. (Plin. ii. 91.) There was also a town in Thrace of this name, which is mentioned only by Steph. B. (c. v.) [L. S.]

PERNICIACUM, or PERNACUM in the Table, in North Gallia, is placed on a road from Bagacum (Bavai) to Adiutacum (Tongern). The road passed from Bagacum to Geminacum (Gemblon). From Geminacum to Perniciacum is xiii. in the Anton. Itin., and xiii. in the Table; and from Perniciacum to Adiutacum is xiv. in the Itin. and xvi. in the Table. The road is generally straight, but there is no place which we can identify as the site of Perniciacum; and the geographers do not agree on any position. [G. L.]

PERORSI (Περόρσι, Περιορσι, Pol. iv. 6, §§ 16, 17; Polyb. ap. Plin. in l. s. 8, vi. 35), a people of Libya, subdued by Suetonius Paullinus, who inhabited a few fertile spots spread over the long extent of maritime country between Cyrene and Canopus, who dwelt opposite to the Fortunate Islands, and the Pharussi, who occupied the banks of the Sepuul. (Leake, London Geog. Journ. vol. ii. p. 17.) [E. B. J.]

PERPERENA (Περπερένα), a place in Mycia, on the south-east of Adramyttium, in the neighbourhood of which there were copper mines and good vineyards. It was said by some to be the place in which Thucydides had died. (Strab. xiii. p. 607; Plin. in v. 32; Steph. B. s. v. Perpera, from which we learn that some called the place Perene; while Plin. v. 2, § 16, calls it Perpere or Permere; Galen, De ephemeris, p. 358; comp. Sestini, p. 75.) Some, without sufficient reason, regard Perperena as identical with Thesidiopolis, mentioned by Hierocles (p. 661). [L. S.]

PERRANTHES. (Ἀμερία.)

PERIHAEBI, PERIHAEBIA. (Thessalia.)

PERISDAI. (Ἀττικα, p. 390, a.)

PERISABOTTA (Περισαβώττα, Zosim. iii. 17), a very strong place in Mesopotamia, on the W. bank of the Euphrates, to which the emperor Julian came in his march across that country. Zosimus, who gives a detailed account of its siege, states that it was in size and importance second only to Ctesiphon. Aminianus, speaking of the same war, calls the place Piasabota (xiv. c. 2) and Libanius Soph. mentions a city of the same name as the then ruling king of Persia, evidently supposing that it derived its name from its situation (or Sestian). (Orat. Fun. p. 315.) Fortiger has conjectured that it is represented by the present Asbak, and that it was situated near the part of the river Euphrates where the canal Nahr-sarres flows, and no great distance from the Sippura of Ptolemy (v. 18. § 7). [V.]

PERSABORA. 577
PERSEPOLIS.

PERSEPOLIS (Περσεπόλεις, Diod. xvii. 70; Ptol. vi. 4. § 4; Curt. v. 4. 6; Persepolis, Strab. xv. 729; Ekh. Περσεπολίτης), the capital of Persis at the time of the invasion of Alexander, and the seat of the chief palaces of the kings of Persia. It was situated at the opening of an extensive plain (now called Mardavat), and near the junction of two streams, the Araxes (Bendanis) and the Medus (Puseda). The ruins, which are still very extensive, bear the local name of the Chel Minor, or Forty Columns. According to Diodorus the city was originally surrounded by a triple wall of great strength and beauty (xvii. 71). Strabo states that it was, after Susa, the richest city of the Persians, and that it contained a palace of great beauty (xv. p. 729), and adds that Alexander burnt this building to avenge the Greeks for the similar injuries which had been inflicted on them by the Persians (xv. p. 730). Arrian simply states that Alexander burnt the royal palace, contrary to the entreaty of Parmenion, who wished him to spare this magnificent building, but did not mention the name of Persepolis. (Asiah. iii. 18.) Curtius, who probably drew his account from the many extant notices of Alexander's expedition by different officers who had accompanied him, has fully described the disgraceful burning of the city and palace at Persepolis by the Greek monarch and his drunken companions. He adds, that as it was chiefly built of cedar, the fire spread rapidly far and wide.

Great light has been thrown upon the monuments which still remain at Persepolis by the researches of Niebuhr and Ker Porter, and still more so by the interpretation of the concave inscriptions by Colonel Rawlinson and Prof. Lassen. From the result of their inquiries, it seems doubtful whether any portion of the present ruins ascend to so high a period as that of the founder of the Persian monarchy, Cyrus. The principal buildings are doubtless due to Dareius, the son of Hystaspes, and to Xerxes. The palace and city of Cyrus was at Pasagarga, while that of the later monarchs was at Persepolis. (Homer mentions the name of Persepolis in xvi. 2; Lassen, in Erich and Gruber's Encycl. s.v.; Ferguson, Palaces of Nineveh and Persepolis Restored, Lond. 1851.) It has been a matter of some doubt how far Persepolis itself ever was the ancient site of the capital; and many writers have supposed that it was only the high place of the Persian monarchy where the great palaces and temples were grouped together. On the whole, it seems most probable that the rock on which the ruins are now seen was the place where the palaces and temples were placed, and that the city was extended at its feet along the circumjacent plain. Subsequent to the time of Alexander, Persepolis is not mentioned in history except in the second book of the Maccabees, where it is stated that Antiochus Epiphanes made a fruitless attempt to plunder the temples. (2 Maccab. ix. 1.) In the later times of the Muhammedan rule, the fortress of I斯塔khr, which was about 4 miles from the ruins, seems to have occupied the place of Persepolis; hence the opinion of some writers, that I斯塔khr itself was part of the ancient city. (Niebuhr, ii. p. 121; Chardin, Voyages, viii. p. 245; Ker Porter, vol. i. p. 576; Ouseley, Travels, ii. p. 222.)

PERSIS.

PERSIS (ἡ Περσίς, Aschyl. Pero. 60; Herod. iii. 19; Ptol. vi. 23. s. 25; Amm. Marc. xxiii. 6, &c.; ἡ Περσίς, Herod. iv. 39; Ekh. Περσίς, Persa), the province of Persis, which must be considered as the centre of the ancient realm of Persia, and the district from which the arms of the Persians spread over all the neighbouring nations, was bounded on the N. by Media and part of the chain of the Paraeocharis M.; on the W. by Susiana, which is separated from Persia by the small stream Arosis or Oroatis; on the S. by the Persian Gulf, and on the E. by the desert waste of Carmania. In the earlier periods of history this province was altogether unknown, and it was not till the wars of Alexander and of his successors that the Greeks formed any real conception of the position and character of the land, from which their ancient writers (cf. Strab. xvi. 231, vol. iii. p. 319.) The earliest name of the whole province was very mountainous, with few extended plains; it possessed, however, several valleys of great beauty and fertility, as those for instance in the neighbourhood of Persepolis (Strab. xv. p. 727; Arrian, Ind. e. 40; Amm. Marc. xxiii. 6; Chardin, Voy. iii. p. 253); the coast-line appears to have been, as it is now, sandy and hot, and uninhabitable, owing to the poison-bearing winds. (Plin. xii. 20.) The principal mountain chains bore the names of Paraeocharis (Elevend) and Ochas (perhaps Nakhtilla), and were, in fact, prolongations to the sea of the still higher ranges of Media. It was watered by no great river, but a number of smaller streams are mentioned, some of them doubtless little more than mountain torrents. The chief of these were the Araxes (Bendamir), the Medus (Pulsein), and the Cyrus (Kūr), in the more inland part of the country; and along the coast, the Bagrada, Pardargus, Heretebus, Bolognus, Oroatis, &c. (Plin. vi. 23. s. 26; Arrian, Ind. e. 39; Amm. Marc. xxiii. 6; Strab. xvii. 727, &c.) The principal cities of Persis were, Pasargada, its earliest capital, and the site of the tomb of its first monarch, Cyrus; Persepolis, the far-famed seat of the palaces and temples of Dareius the son of Hystaspes, and his successors; Galae, one of the residences of the Persian kings; Taosc, and Aspaddana. The Perses were properly the native inhabitants of Marc Persicum, (Plin. vi. 13. s. 16, the great gulf which, extending in a direction nearly NW. and SE., separated the provinces of Susiana and Persis, and the western portion of Carmania from the opposite shores of Arabia Felix. There are great differences and great errors in the accounts which the ancients have left of this gulf; nor indeed are the statements of the same author always consistent the one with the other. Thus some writers gave to it the shape of the human head, of which the narrow opening towards the SE. formed the neck (Mela, iii. 8; Ptol. vi. 24. s. 28), while in one place states that at the entrance, it was only a day's sail across (xv. p. 727), and in another (xvi. p. 765) that from Harmazna the opposite Arabian shore of Mace was visible, in which Ammianus (xxiii. 6) agrees with him.
of this small district; though in later times the name was applied generally to the subjects of the great king, whose empire extended, under Dareius the son of Hystaspes, from India to the Mediterranean. In the earliest times of the Old Testament they are not mentioned by name as a distinct people, and when, in the later days of the captivity, their name occurs, they must be taken as the inhabitants of the great empire above noticed (Ezek. xxxviii. 5, Esth. i. 3—18; Ezra, iv. 5; 1 Maccab. i. 1, &c.), and not simply of the limited district of Persis. According to Herodotus, the ancient people were divided into three leading classes, warriors, husbandmen, and nomades. In the first class, the Persagaeae, Ma-Kari, and Masqui, were the most important subdivisions. The Achaemenidae, from whom their well-known line of kings descended, was one of the families of the Persagaeae. The tribes of husbandmen bore the names of Panthialaei, Dareusaei, and Germani; those of the nomades were called, Daj, Mardi, Dropici, and Sagartint. (Herod. i. 125.) It was clear from this account that Herodotus is describing what was the state of the Persae but a little while before his own times, and that his view embraces a territory far more extensive than that of the small province of Persis: for the Persians were part of the nomade tribe, that he extended the Persian race over a considerable portion of what is now called Khorasan; indeed, over much of the country which at the present day forms the realm of Persia. In still later times, other tribes or subdivisions are met with, as the Pareutaceni, Messabatae, Stabaei, Suzaei, Hiproppahi, &c., &c. Herodotus states further that the most ancient name of the people was Artaiel (Herod. vii. 61), a form which modern philology has shown to be derived in close connection with the Arii, the earliest title of their immediate neighbours, the Medes. Both alike are derived from the old Zend and Sanscrit arma, signifying a people of noble descent; a name still preserved in the modern Frak (Ariaka). (Muller, Journ. Asiat. iii. p. 299; Lassen, Ind. Alterth. ii. p. 7.) There can be no doubt that the name Persae is itself of Indian origin, the earliest form in which it is found on the cuneiform inscriptions being Parasa. (Lassen, Alt.-Pers. Keil-Inscr. ii. 60.)

The Persian people seem to have been in all times noted for the pride and haughtiness of their language (Aeschyl. Pers. 795; Ann. Marc. xxiii. 6): but, in spite of this habit of boasting, in their earlier history, under Cyrus and his immediate successors, they appear to have made excellent soldiers. Herodotus describes fully the arms and accoutrements of the foot-soldiers, archers, and lancers of the army of Xerxes (vii. 61), on which description the well-known sculptures at Persepolis afford a still living commentary. (Cf. also Strab. xv. p. 734; Xen. Cyrop. vi. 3. § 31.) Their cavalry also was celebrated (Herod. l. c. ix. 79, 81; Xen. Cyrop. vi. 4. § 1). Strabo, who for the most part confines the name of Persae to the inhabitants of Persis, has fully described some of the manners and customs of the people. On the subject of their religious worship Herodotus and Strabo are not at one, and each writer gives separate and unconnected details. The general conclusion to be drawn is that, in the remotest age, the Persians were pure fire-worshippers, and that by degrees they adopted what became in later times a characteristic of their religious system, the Dualistic arrangement of two separate principles of good and evil, Hormuzd and Abriman. (Strab. xv. p. 727—736; Herod. ii. 33, 133; Xen. Cyrop. i. 22.) Many of their ancient religious customs have continued to the present day; the fire-worshippers of India still contending that they are the lineal descendants of the ancient Persians. The language of the ancient people was strictly Indo-Germanic, and was nearly connected with the classical Sanscrit: the earliest specimens of it are the cuneiform inscriptions at Mervah, — the site of Pasargada, and the place where Cyrus was buried,— and those of Dareius and Xerxes at Persepolis and Behistun, which have been deciphered by Colonel Rawlinson and Professor Lassen. (Rawlinson, Journ. As. Soc. vol. ii.; Lassen, Zeitschrift f. Morgen. vii. 1, Hitagi, Grabarchitektur d. Daruis, Zurich, 1847; Denley, Persia, ed. Leipziige 1847.) The government of Persia was a rigid monarchy. Their kings lived apart from their subjects in well secured palaces (Esth. iv. 2, 6), and rejoiced in great parks (pānpāliwara), well stocked with game and animals for the chase (Cyrop. i. 3. § 38, vii. 3. § 8), Arab. i. 2. § 7; Curt. viii. i. § 11), and passed (in later times, when their empire was most widely extended) their summer at Ecbatana, their spring at Susa, and their winter at Babylon. (Nehem. i. 1; Dan. viii. 19, 5; Xen. Anab. i. 12. § 15; Cyrop. viii. 6. § 22.) Like other eastern monarchs, the Persian kings possessed a well-appointed harem, many curious details of which we gather from the history of Esther (cf. also Curt. iii. § 3; Athen. xiii. p. 557; Plut. Artax. c. 43), and they were accustomed to receive from their subjects direct adoration (προσκυνήσεως), as the crowned descendants or representatives of Hormuzd. (Plut. Themist. c. 7; Curt. vi. 6. § 2, viii. 5. § 6.) Their local government was a pure despotism; but in some extraordinary cases a confederate system was called, of the seven chief princes, who stood around the royal throne, like the Amschapsand around the throne of Hormuzd. (Herod. vii. 8, viii. 67; Esth. i. 14, 19, vii. 14.) Whatever document had once passed the king and had been sealed by the royal signet was deemed irrevocable. (Esth. i. 19, viii. 5; Dan. vi. 9, 16; cf. also Chardin, Voy. iii. 418.) Over the individual provinces—which in the time of Dareius were said to have been twenty in number (Her. iii. 89), but were afterwards increased to much more numerous (Esth. i. 11), probably from the subdivision of the larger ones—were placed satraps, whose business it was to superintend them, to collect the revenues, and to attend to the progress of agriculture. (Her. iii. 89, 97; Joseph. Ant. xi. 3, &c.) Between the satraps and the kings was a well-organised system of courtiers, who were called αργυροποιοι οὔδαμοι (Plut. Fort. Alc. vii. p. 294, ed. Reiske), who conveyed their despatches from station to station on horses and had the power, when necessary, to produce horses, boats, and even men into their services. As this service was very irksome and oppressive, the word αργυροποίεω came to mean compulsion or detention under other circumstances. (Joseph. Ant. xiii. 2. § 3; Esth. iii. 13, 15, viii. 10, 14; Bentley's Memander, p. 56.)

The history of the Persian empire need not be repeated here, as it is given under the names of the respective kings in the Dict. of Biogr. [V.]

PERTUSA, a town of the Dorians in Hispum Tarracum, which still exists under the old name of the Aequanund. (Itin. Ant. p. 391.) [T. H. D.]

PERUSIA (Rispovia; Eth. Persicus: Perugia), one of the most important and powerful cities of
Etruria, situated nearly on the eastern frontier of that country, on a lofty hill on the right bank of the Tiber, and overlooking the lake of Trasimenus which now derives from the name of Lake di Perugia. It closely adjoins the frontiers of Umbria, and hence the tradition reported by Servius, that it was originally an Umbrian city, inhabited by the tribe called Sessalines, is at least a very probable one. (Serv. ad Ann. x. 201.) The same author has, however, preserved to us another tradition, which ascribes the foundation of Perusia to a hero named Ausoleus, the brother of Octavius, the reputed founder of Montua. (Ib. x. 195.) Justin's assertion that the Roman origin of Perusia can only be safely rejected as a mere fable; but whatever historical reference may be attached to the statements of Servius, it seems probable that Perusia, in common with the other chief places in the same part of Etruria, was in the first instance an Umbrian city, and subsequently passed into the hands of the Etruscans, under whom it rose to be a powerful and important city, and one of the chief members of the Etruscan confederacy. It is not till n. c. 310, when the Romans took the lead in removing the relations between the Etruscans and the Cinsans, that the name of Perusia is heard of in history; but we are told that at that period it was one of the most powerful cities of Etruria. (Liv. ix. 37.) The three neighbouring cities of Perusia, Cortona, and Arethusa, on that occasion united in concluding a peace with Rome for thirty years (Liv. L c.; id. xxx. 35); but they seem to have broken it the very next year, and shared in the great defeat of the Etruscans in general at the Vulcean lake. This was followed by another defeat under the walls of Perusia itself, which compelled that city to sue for peace; but the statement that it surrendered at discretion, and was occupied with a Roman garrison, is one of those obvious perversions of the truth that occur so frequently in the Roman annals. (Liv. ix. 40.) When we next meet with the name of Perusia, it is still as an independent and powerful state, which in n. c. 295, in conjunction with Clusium, was able to renew the war with Rome; and though their combined forces were defeated by Ca. Püblius, the Roman general, the spirit of the Cinsans burned as brightly as before the next year. On this occasion they were again defeated with heavy loss by Fabius, 4500 of their troops slain, and above 1700 taken prisoners. (Id. x. 30, 31.) In consequence of this disaster they were compelled before the close of the year to sue for peace, and, by the payment of a large sum of money, obtained a truce for forty years, B. c. 294. (Id. x. 37.) At this time Livy still calls the three cities of Perusia, Volturnii, and Arethusa (all of which made peace at the same time) the three most powerful states and chief cities of Etruria. (Id. L c.) We find no other mention of Perusia as an independent state; and we have no explanation of the circumstances or terms under which it ultimately became a dependency of Rome. But during the Second Punic War it figures among the allied cities which then formed so important a part of the Roman power; its cohorts were serving in her armies (Liv. xxiii. 17), and towards the end of the contest it was one of the equal cities of Etruria, which came forward with alacrity to furnish supplies to the fleet of Scipio. Its contribution consisted of corn, and timber for shipbuilding. (Id. xxviii. 45.) With this exception, we meet with no other mention of Perusia till near the close of the republican period, when it bore so conspicuous a part in the civil war between Octavian and L. Antonius, in u. c. 41, as to give to that contest the name of Bellum Perusinum. (Suet. Aug. 9; Tac. Ann. v. 1; Oros. vi. 19.) It was short after the outbreak of hostilities on that occasion that L. Antonius, finding himself pressed on all sides by three armies under Agrippa, Salvinius, and Octavian himself, threw himself into Perusia, trusting in the great natural strength of the city to enable him to hold out till the arrival of his generals, Ventidius and Asinius Pollio, to his relief. But whether from disaffection or incapacity, these officers failed in coming to his support, and Octavian surrounded the whole hill on which the city stands and compelled the inmates of the city to yield the city off from all supplies, especially on the side of the Tiber, on which Antonius had mainly relied. Faninia soon made itself felt in the city; the siege was protracted through the winter, and Ventidius was finally in an attempt to compel Octavian to raise it, and drew off his forces without success. L. Antonius now made a desperate attempt to break through the enemy's lines, but was repulsed with great slaughter, and found himself at length compelled to capitulate. His own life was spared, and he vanished those of most of the Roman nobles who had accompanied him; but the chief citizens of Perusia itself were put to death, the city given up to plunder, and an accidental conflagration having been spread by the wind, ended by consuming the whole city. (Appian, B. C. 32—49; Dion Cass. xlviii. 14; Vell. Pat. ii. 74; Flor. iv. 5; Suet. Aug. 14, 96.) A story told by several writers of Octavian having sacrificed 300 of the prisoners at an altar consecrated to the memory of Caesar, is in all probability a fiction, or at least an exaggeration. (Dion Cass. L c.; Suet. Aug. 15; Sene. de Clem. i. 11; Merivale's Roman Empire, vol. iii. p. 227.)

Perusia was raised from its ashes again by Augustus, who settled a fresh body of citizens there, and the city assumed in consequence the surname of Augusta Perusia, which we find it bearing in inscriptions; but it did not obtain the rank or title of a colony; and its territory was confined to the district within a mile of the walls. (Dion Cass. xlviii. 14; Oros. vi. 23.) In considering this restriction, it appears to have speedily risen again into a flourishing municipal town. It is noticed by Strabo as one of the chief towns in the interior of Etruria, and its municipal consideration is attested by numerous inscriptions. (Strab. v. 226; Plin. ii. 5. s. 8; Iot. iii. i. § 48; Tab. Peut.; Orell. Inscr. 2531, 3739, 4038.) From one of these we learn that it acquired under the Roman Empire the title of Colonia Villa; but the origin of this is unknown, though it is probable that it was derived from the emperor Trebonianus Gallus, who appears to have bestowed some conspicuous benefits on the place. (Verngulio, l.c. Perug. pp. 379—400; Zumpt, de Colon. p. 436.) The name of Perusia is not again mentioned in history till after the fall of the Roman Empire, but its natural strength of position rendered it a place of importance in the troubled times that followed; and it figures conspicuously in the Gothic wars, when it is called by Procopius a strong fortress and the chief city of Etruria. It was taken by Belisarius in A. D. 537, and occupied with a strong garrison; in 547 it was besieged by Totila, but held out against his arms for nearly two years, and did not surrender till after Belisarius had invaded Italy. It was again recovered by Narses in 552. (Procop. B. G. i. 16, 17, iii. 6, 25, 35, iv. 38.)
It is still mentioned by Paulus Diaconus (Hist. Lang. ii. 16) as one of the chief cities of Tuscia under the Lombards, and in the middle ages became an independent republic. *Pergusa* still continues a considerable city, with 15,000 inhabitants, and is the capital of one of the provinces of the Roman states.

The modern city of *Pergusa* retains considerable vestiges of its ancient grandeur. The most important of these are the remains of the walls, which agree in character with those of *Chiusi* and *Todi*, being composed of long rectangular blocks of travertine, of very regular masonry, wholly different from the rude and massive walls of Cortona and *Volterra*. It is a subject of much doubt whether these walls belong to the Etruscan city, or are of later and Roman times. The ancient gates, two of which still exist, must in all probability be referred to the latter period. The most striking of these is that now known as the *Arco d'Augusto*, from the inscription “Augusta Perusia” over the arch: this probably dates from the restoration of the city under Augustus, though some writers would assign it to a much more remote period. Another gate, known as the *Porta Marzia*, also retains its ancient arch; while several others, though more or less modernised, are certainly of ancient construction as high as the imposts. It is thus certain that the ancient city was not more extensive than the modern one: but, like that, it occupied only the summit of the hill, which is of very considerable elevation, and sends down its roots and underfells on the one side towards the Tiber, on the other towards the lake of *Traisymeone*. Hence the lines of circumvallation drawn round the foot of the hill by Octavian enclosed a space of 56 stadia, or 7 Roman miles (Appian, B. C. v. 33), though the circuit of the city itself did not exceed 2 miles.

The chief remains of the ancient Etruscan city are the sepulchres without the walls, many of which have been explored, and one—the family tomb of the *Volumnii*—has been preserved in precisely the same state as when first discovered. From the inscriptions, some of which are bilingual, we learn that the family of the *Volumnii* was of *Vulcius*, which is rendered in Latin by *Volumnius*. Other sepulchres appear to have belonged to the families whose names assumed the Latin forms, Asia, Caeisia, Petronia, Vettia, and Vibia. Another of these tombs is remarkable for the careful construction and regular masonry of its archéd vault, on which is engraved an Etruscan inscription of con siderable length. But a far more important monument of that people is an inscription now preserved in the museum at *Pergusa*, which extends to forty-six lines in length, and is the only considerable fragment of the language which has been preserved to us. [*Etruria*, p. 858.] Numerous sarcophagi, urns, vases, and other relics from the various tombs, are preserved in the same museum, as well as many inscriptions of the Roman period. (*Vermigli, Iscrizioni Etrusche*, 2 vols. 4to, *Pergusa*, 1854; Id. *Il Sepolcro dei Volumni*, 4to, *Pergusa*, 1841; Dennis's *Etruria*, vol. ii. pp. 458—480.)

We learn from ancient authors that *Julia* was regarded as the tutelary deity of *Pergusa* till after the burning of the city in B. C. 40, when the temple of *Vulcan* being the only edifice that escaped the conflagration, that deity was adopted by the surviving citizens as their peculiar patron. (*Dion Cass. xlviii. 14: Appian, B. C. v. 49.*) [*F. H. B.*] *PESCLA* or *PESCLA* (*Not. Imp. c. 28*, vol. i. p. 75, ed. Boëcking), is probably the herder-fortress in the N. of the *Thebaid*, which *Dionysius* (v. 5. § 71) calls *Naocadrum* or *Hercastrium*. Pisa stood on the right bank of the Nile, and was the quarters of a German company (tirman) of cavalry (D'Availly, *Mém. sur l'Égypte*, p. 190). [*W. B. D.*]

*PESSINUM, PESŞINUS (Πήσσινος, Πήσσινος: Eth. Πῆσσινωνικός*) the principal town of the *Tolistobigi*, in the west of *Galatia*, situated on the southern slope of Mount *Dindymus* and *Agdistis*, near the left bank of the river *Sangarius*, from whose sources it was about 15 miles distant. (*Paus. i. 4. § 5; Strab. xiv. 567.*) It was one of the cities of *province of Germa*, on the road from *Ancyra* to *Amorium*. (*It. Ant. pp. 201, 202.*) It was the greatest commercial town in these parts, and was believed to have derived its name from the image of its great patron divinity, which was said to have fallen (*securum*) from heaven. (*Herodian, i. 11; Amm. Marc. xxii. 9.*) *Pessinus* owes its greatest celebrity to the goddess *Rhea* or *Cybele*, whom the natives called *Agdistis*, and to whom an immense rich temple was dedicated. Her temple was one of the rulers of the place; but in later times their honours and powers were greatly reduced. (*Strab. l. c., x. p. 469; Diod. Sic. iii. 58, &c.*) Her temple contained her image, which, according to some, was of stone (Liv. xxxix. 10, 11), or, according to others, of wood, and was believed to have fallen from heaven. (*Apollod. iii. 11; Amm. Marc. l. c.*) The fame of the goddess appears to have extended all over the ancient world; and in B. C. 264, in accordance with a command of the Sybilline books, the Romans sent a special embassy to *Pessinus* to fetich her statue; it being believed that the safety of Rome depended on its removal to Italy. (*Liv. l. c.; Strab. xii. p. 567.*) The statue was set up in the temple of *Victory*, on the *Palatine*. The goddess, however, continued nevertheless to be worshipped at *Pessinus*; and the *Galli*, her priests, sent a deputation to *Manlius* when he was encamped on the banks of the *Sangarius*. (*Liv. xxxviii. 18; Polyb. xx. 4.*) At a still later period, the emperor *Julian* worshipped the goddess in her ancient temple on the very spot where the kings of *Pergegium* adorned the sanctuary with a magnificent temple, and porticoes of white marble, and surrounded it with a beautiful grove. Under the Roman dominion the town of *Pessinus* began to decay, although in the new division of the empire under *Constantine* it was made the capital of the province *Galatia Salutaris*. (*Hieroc. p. 697.*) After the sixth century the town is no longer mentioned in history. Considerable ruins of *Pessinus*, especially a well-preserved theatre, exist at a distance of 9 or 10 miles to the south-east of *Scuri Hissar*, where they were first discovered by *Texier*. (*Descript. de l'Asie Mineure.*) They extend over three hills, separated by valleys or ravines. The marble seats of the theatre are nearly entire, but the scene is entirely destroyed; the whole district is covered with blocks of marble, shafts of columns, and other fragments, showing that the place must have been one of unusual magnificence. (*Hamilton, Researches*, i. p. 438, foll.; *Lekaios*, Acts Minor, p. 82, foll., who seems to be mistaken in looking to *Pessinus* on the right bank of the *Sangarius*. [*L. S.*]

*PETALIAE*, incorrectly called *Petalum* (*Petaulis*) by Strabo (x. p. 444), small islands off the coast of *Euboea*, at the entrance of the *Eniris*, now *Petalia*; (*Plin. iv. 12. s. 23; *Lekaios*, Northern *Greece*, vol. ii. p. 423.*)
PETAVIUM. Tyr.

PETELIA or PETELIA (Πετέλια; Eth. Πετελικα; Petelinus: Strongoli), an ancient city of Bruttium, situated about 12 miles N. of Crotona, and 3 miles from the E. coast of the peninsula. According to the Greek traditions it was a very ancient city, founded by Philoctetes after the Trojan War. (Strab. vi. p. 254; Virg. Aen. iii. 401; Serv. ad Aen. 111. 369.) It is said that it was really a town of the Chones, an Oetanic tribe; as the foundation of Chone, in the same neighbourhood, was also ascribed to Philoctetes. It was only a small place (Virg. l. c.), but in a strong situation. We have no account of its receiving a Greek colony, nor is its name ever mentioned among the Greek cities of this part of Italy; but, like so many of the Oetanic towns, became to a great extent Hellenised or imbibed with Greek culture and manners. It was undoubtedly for a long time subject to Crotona, and comprised within the territories of that city; and probably for this reason, its name is never mentioned during the early history of Magna Graecia. But after the irruption of the Lucanians, it fell into the hands of that people, by whom it was strongly fortified, and became one of their most important strongholds. (Strab. l. c.) It is apparently on this account, that Strabo calls it "the metropolis of the Lucanians," though it certainly was not included in Lucania as the term was understood in his day. Petelia first became conspicuous in history during the Second Punic War, when its citizens remained faithful to the Roman alliance, notwithstanding the general defection of the Bruttians around them, n. c. 216. They were in consequence besieged by the Bruttians as well as by a Carthaginian force under Himilco; but though abandoned to their fate by the Roman senate, to whom they had in vain sued for assistance, they made a desperate resistance; and it was not till after a siege of several months, in which they had suffered exceedingly from the severity of the winter, that they were at length compelled to surrender. (Liv. xiii. 20, 30; Polyb. vii. 1; Appian, Anab. 29; Frontin. Strat. iv. 5, § 18; Val. Max. vi. 6, ext. § 2; Suid. Ital. xii. 431.) The few inhabitants who escaped, were after the close of the war restored to the Romans to their native town (Appian, l. c.), and were doubtless treated with especial favour; so that Petelia rose again to a prosperous condition, and in the days of Strabo was one of the few cities of Bruttium that was still tolerably flourishing and populous. (Strab. vi. p. 254.) We learn from inscriptions that it still continued to be a flourishing municipal town under the Roman Empire (Orell. Inscr. 137, 3678, 3939; Mommsen, Inscr. R. N. pp. 5, 6;): it is mentioned by all the geographers and its name is still found in the Tabula, which places it on the road from Thurii to Crotona. (Mel. ii. 4, § 8; Plin. iii. 10, s. 15; Ptol. iii. 1, § 75; Tab. Pont.) But we are unable to trace its history further; its identification with Strongoli is, however, satisfactorily made out by the inscriptions which have been found in the latter city. Strongoli is an episcopal see, with about 7000 inhabitants; its situation on a lofty and rugged hill, commanding the plain of the Néto (Neuctus), corresponds with the accounts of Petelia, which is represented as occupying a position of great natural strength. There are no ruins of the ancient city, but numerous minor objects of antiquity have been found on the spot, besides the inscriptions above referred to.

The existence of a second town of the name of Petelia in Lucania, which has been admitted by several writers, rests mainly on the passage of Strabo where he calls Petelia the metropolis of Lucania; but he is certainly there speaking of the well-known city of the name, which was undoubtedly in Bruttium. The inscriptions published by Antonini, to prove that there was a town of this name in the Lucanian mountains near Velia, are in all probability spurious (Mommsen, l. R. N. App. 2), though they have been adopted, and his authority followed by Romaeuli and Cramer. (Romaeuli, vol. i. p. 348; Cramer's Italy, vol. ii. p. 367.)

The PETELINI MONTES (τὰ Πετελίνια ἔρημοι), mentioned by Plutarch (Cross. 11), to which Spartacus retired after his defeat by Crassus, are evidently the rugged group of the Apennines S. of the Crathis, between Petelia and Consentia. [E. H. B.]

PETEON (Πέτεων; Eth. Πέτεωνος), a town of Bruttium, situated near the town of Petelia, on the coast between the mouths of the river Petelia and the lake Petelia. (Strab. iii. p. 410.) Strabo contradicts himself in the course of the same passage (l. c.), in one place placing Peteon in the Thebias, and in another in the Halliartia. (Comp. Plut. Narr. Am. 4; Plin. iv. 7, s. 12; Steph. B. s. v.) The position of Peteon is uncertain. Leake supposes it may be represented by some ancient remains at the southern extremity of the lake Paralimnion. (Northern Greece, vol. ii. p. 320.)

PETINESCA, in the country of the Helvetii, is placed in the Itins. between Aventicum (Avenches) and Salodarium (Salothurn); at the distance of xiii. in the Anton. Itin. from Aventium ana xiii. in the Table; and at the distance of x. from Salodarium in both the Itinaries. Some geographers have placed Petinesca at a place named Bivens; but the distance does not agree with that given by the Itins. between Petinesca and Salodarium, as Avenches observes, who also says that the position of Bivens (Bieel) corresponded with the ancient name Pom, we take them to indicate Gallic leagues. Glover also placed Petinesca at Biel. [G. L.]

PETITARUS. [Achelous.]

PETOVIO (Πέτους, or Πατους), Ptol. ii. 15, § 4: Petuion, also called Poetovio (Itin. Ant. p. 262; and in inscriptions ap. Orelli, n. 3592), Patavio, and Petaivos, was an important town in Upper Pannonia, on the river Drava and the frontier of Noricum. In inscriptions it is called a Roman colony, and bears the surname of Ulipa; whereas it may have been that it received Roman colonists from either Trojan or Hadrian, who probably also extended the place. Its importance is sufficiently attested by the fact that it was the station of the Legio xiii. Gemina, and that an imperial palace existed outside its walls. (Tac. Hist. iii. 1; Amm. Marc. xiv. 37; It. Hieros, p. 561; Geogr. Rav. iv. 19.) The modern town of Petuion is situated on the left bank of the Drava; and as coins, inscriptions, and other ancient remains are found only on the opposite side, it is probable that the ancient Petovio was situated on the right bank opposite to the modern Petuion. (Comp. K. Mayer, Versuch uber Steyermarkische Alterthuemer, Griz, 1782, 4to; Munchar. Noricum. i. p. 364.) [L. S.]

PETRA (Πέτρα), "rock," the name of several towns. 1. In Europe. 1. Petra Pertusa, in Umbria. [Intercisa.]
PETRA.

2. (Πέτρα: El. Πέτρων, Petrium: Petroth.)

It was seated between the Dead Sea and the Elatitic gulf; being, according to Diodorus Siculus (xiv. 38), 300 stadia of the former, whilst the Tab. Peut. places it 98 Roman miles of the latter. Its site is a wilderness overtopped by Mount Hor, and diversified by cliffs, ravines, plains, and Wady, or watered valleys, for the most part but ill cultivated. Strabo (xvi. p. 779) describes it as seated in a plain surrounded with rocks, hemmed in with barren and stormless deserts, though the plain itself is well watered. Pliny's description (vi. 92), which states the extent of the plain at rather more than 700 miles, agrees very nearly with that of Strabo, and both are confirmed by the reports of modern travellers. "It is an area in the bosom of a mountain, swelling into mounds, and intersected with gullies." (Ibry and Mangles, ch. viii.) It must not, however, be understood to be completely hemmed in with rocks. Towards the N. and S. the view is open; and from the eastern part of the valley the summit of Mount Hore is seen over the western cliffs. (Robinson, ii. p. 528.) According to the late Mr. C. Petra was a place of great resort for travellers.

Petra was shunned by A. Cornelius Palma, a lieutenant of Trajan's (Dion Cass. xlviii. 14), and remained under the Roman dominion a considerable time, as we hear of the province of Arabia being engrafted by Septimius Severus A. D. 195 (id. lxxvi. 1, 2; Entrop. viii. 18). It must have been during this period that these temples and mausoleums were made, the remains of which still arrest the attention of the traveller; for though the predominant style of the architecture is Egyptian, it is mixed with Beeld and over-loaded Roman-Greek specimens, which clearly indicate their origin. (Robinson, ii. p. 532.)

The valley of Wady Musa, which leads to the town, is about 150 feet broad at its entrance, and is encircled with cliffs of red sandstone, which gradually increase from a height of 40 or 50 feet to 200 or 250 feet. Their height has been greatly exaggerated, having been estimated by some travellers at 700 and even 1000 feet (Ibry and Manges, ch. viii.; Stephens, ii. p. 170; see Robinson, ii. p. 517 and note). The valley gradually contracts, till at one spot it becomes only about 12 feet broad, and is so overlapped by the cliffs that the light of day is almost excluded. The ravine or Sik of Wady Musa extends, with many windings, for a good English mile. It forms the principal, and was anciently the only avenue to Petra, the entrance being broken through the wall. (Diod. Sic. ii. 48, xix. 97; Robinson, ii. p. 516; Labarte, p. 55.) This valley contains a wonderful necropolis hewn in the rocks. The tombs, which adjoining or surmount one another, exhibit now a front with six Ionic columns, now with four slender pyramids, and by their mixture of Greek, Roman, and Oriental architecture remind the spectator of the remains which are found in the valley of Jehoshaphat and in other parts of Palestine. The further side of the ravine is spanned by a bold arch, perhaps a triumphal one, with finely-sculptured niches evidently intended for statues. This, like the other remains of this extraordinary spot, is ascribed by the natives either to the Pharaohs or to the Jins or rub el eini. Along the bottom of the valley, in which it almost vanishes, winds the stream mentioned by Strabo and Pliny, the small but charming Wady Musa. In ancient times its bed seems to have been paved, as many traces still show. Its stream was spanned by frequent bridges, its sides strengthened with stone walls or quays, and numerous small canals derived

PETRA.
from it supplied the inhabitants with water. But
now its banks are overgrown with byacinths, cleaner
and other flowers and shrubs, and overshadowed by
lofty trees.

Opposite to where the Sik terminates, in a se-
cond ravine-like but broader valley, another mo-
ument, the finest one at Petra, and perhaps in all Syr
tria, strikes the eye of the traveller. This is the
Khasneh.—well preserved, considering its age and
site, and still exhibiting its delicate chiselled work
and all the freshness and beauty of its colouring.
It has two rows of six columns over one another,
with statues between, with capitals and sculptured
pillaments, the upper one of which is divided by a
little round temple crowned with an urn. The Arabs
imagine that the urn contains a treasure.—F? Khas-
neh, whence the name,—which they ascribe to Pharaoh
(Robinson, ii. p. 519). The interior does not correspond
with the magnificence of the façade, being a plain
lofty hall, with a chamber adjoining each of its three
sides. It was either a mausoleum, or, more probably,
a temple.

From this spot the cliffs on both sides the Wady
are pierced with numerous excavations, the cham-
bers of which are usually small, though the façades
are occasionally of some size and magnifica-
tence; all, however, so various that scarce two are
exactly alike. After a gentle curve the Wady ex-
pands, and here on its left side lies the theatre, ent-
tirely hewn out of the rock. Its diameter at the
bottom is 120 feet (Irby and Mangles, p. 428), and
it has thirty-three, or, according to another account,
thirty-eight, rows of seats, capable of accommodating
at least 3000 spectators. Strangely enough, it is
entirely surrounded with tombs. One of these is in-
scribed with the name of Q. Praefectus Florantius
(Labrade, p. 59), probably the governor of Arabia
Petraea under Hadrian or Antoninus Pius. Another
inscription with the name of Pharaoh, Upside down.
A striking effect is produced by the bright and lively tints of the
variegated stone, out of which springs the wild fig
and tamarisk, while creeping plants overspread the
walls, and thorns and brambles cover the pedestals
and cornices (Isodaus, xxxiv. 13). Travellers are
agreed that these excavations were mostly tombs,
though some think they may originally have served as
dwellings. A few were, doubtless, temples for the
worship of Baal, but subsequently converted into
Christian churches.

Proceeding down the stream, at about 150 paces
from the theatre, the cliffs begin to expand, and
soon vanish altogether, to give place to a small
plain, about a mile square, surrounded with gentle
eminences. The brook, which now turns to the W.,
traverses the middle of this plain till it reaches a
ledge of sandstone cliffs, at a distance of rather more
than a mile. This was the site of Petra, and is still
covered with heaps of hewn stones, traces of paved
streets, and foundations of houses. There are remains
of several larger and smaller temples, of a bril-
lion, of a triumphal arch of degenerate architecture, and of
the walls of a great public building — Kaiser Faron,
or the palace of Pharaoh.

On an eminence south of this is a single column
(Zub Faron, i. c. hasta virilia Pharaonis), connected
with the foundation-walls of a temple whose
pillars lie scattered around in broken fragments.
Labord (p. 59) thinks that the Acropolis occu-
pied an isolated hill on the W. At the NE. ex-
trmity of the cliffs is the Dror, or cluster, hewn
in the rock. A ravine, like the Sik, with many
windings, leads to it, and the approach is partly by a
path 5 or 6 feet broad, with steps cut in the rock
with inexpressible labour. Its façade is larger
than that of the Khasneh; but, as in that building,
the interior does not answer to it, consisting of a
large square chamber, with a recess resembling the
niche for the altar in Greek ecclesiastical architec-
ture, and bearing evident signs of having been de-
verted from a heathen to a Christian temple. The
destruction of Petra, so frequently prophesied in
Scripture, was at length wrought by the Mahometans.
From that time it remained unvisited, except by some
crushing kings of Jerusalem; and perhaps by the
single European traveller, Thetmar, at the beginning
of the 13th century. It was discovered by Burckhardt,
whose account of it still continues to be the best.
(Robinson, ii. p. 527.) Laborde's work is chiefly
valuable for the engravings. See also Irby and
Mangles, Travels, ch. viii.; Robinson, Bibl. Researches,
vol. ii. p. 512, seq.

PETRAS MINOR.

PETRAS MAJOR (Pteras ος μεγας, Scyl. p. 45; Ptol.
iv. 5, § 3; Stadianus, § 33), a harbour of Marmarica,
a day's sail from Plyni Portus, and the same as the large harbour which Strabo
(xvi. p. 838) places near Ardainis Prom, and
describes as lying 30 stadia from Chersonesus, the dis-
tance of 3000 stadia. It agrees in position with
Port Bardalah, where there are springs to the W.
of Marga Solon. [E. B. J.]

PETRAS MINOR (Pteras ος μερος, Scyl. l.c.;
Ptol. iv. 5, § 2; Stadianus, § 39), a harbour of
Marmarica, half a day's sail from Antipygus.
It has been identified with Meghorebal-Ehebes, where
there are a great number of catacombs remarkable
for their Graeco-Aegyptian style. These curious
excavations, of which plans are given in Pacho
(Livraque dans la Marmarique, Planchê, pl. v.),
are to be identified, according to that traveller
(p. 49), with the sinuous caverns of Bomaha
(Boasena), resembling the Aegyptian "hypogaecas,"
which the Greeks called "Syringes," mentioned by
Symenius (Ep. 104); but Barth (Wanderungen,
p. 512) has shown that the description of the
bishop of Potomaias cannot be applied to these
catacombs and their locality. A coin with the
epigraph BE-PA, which Pellerin referred to this
port in Marmarica, is by Eckeh (iv. 176) assigned
to a Cretan mint. [E. B. J.]
PETRIANA, a fortress in the N. of Britain. Antonine, between the Wall and the river Irthing, where the Ala Petriana was quartered. Camden (p. 17) identified it with Old Penneth; but Horace (Brit. Rom. p. 102) and others fix it, with more probability, at Cumbake Fort or Castle-steads. (Not. Imp.) It is called Barnam by the Geogr. Rev. (Horsley, p. 498.)

PETRINA. [Petra, No. 2.] PETROCORII (Πετροκόρια, Ptol. ii. 7. § 12), a Gallic people, whom Tolomey places in Aquitania. He names the chief city Vesunna, which is Perigord. Caesar mentions them (vii. 75) as sending a contingent of 5000 men to aid in making the siege of Alsea; this is all that he says about them. The passage in Pline (iv. 19. s. 33) in which he describes the position of the Petrocorii is doubtful: “Caducri, Nitobrigae (a correction, see Nitobrigae), Tarrene annes discreti a Telosanis Petrocorii.” This passage makes the Tarins (Tarn) the boundary between the territory of Tolosa (Toulouse) and the Petrocorii, which is not true, for the Caducri were between the Petrocorii and the territory of Toulouse. Seiler proposed to write the passage thus: “Caducri, Nitobrigae, Tarne anni discreti a Telosanis; Petrocorii.” But this is not true, for the Nitobrigae did not extend to the Tarn. Strabo (iv. pp. 190, 191) mentions the Petrocorii among the people between the Garonne and the Loire, and as near the Nitobrigae, Caducri, Lemovices, and Arverni. He says that there are iron mines in the country. The Petrocorii occupied the diocese of Perigoue and Sarlat (D’Anville). Besides Vesunna their territory contained Corterat, Tancatus, Distindum, and some other small places.

PETROMANTALUM, in Gallia, is placed by the Antonine Itinerary on a road which runs from Carcassonne through Rotomagus (Rouen) to Lutetia (Paris). It also appears on a road from Caesarsomnns (Beauvais) to Briva Isarae or Pontoise, on the One, a branch of the Seine. In the Table the name is written Petrumvias. The site is uncertain. The name bears some resemblance to that of Magne; but the site of Magne does not accurately correspond to the distances in the Itineraries.

PETRONII VICUS, in Gallia Narbonensis. Honor Beuche gives an inscription found at Pertuis, on the right bank of the Druentia (Douarn), about 4 leagues north of Aqve Saciae (Aig), in which inscription the place is called “vicus C. Petronii ad ripam Druentiae.” (D’Anville, Notice, &c.) [G. L.]

PETROSACA. [Martineau, p. 262, b.]

PETUARIA. [Paris.]

PECUE (Πέκιε, Ptol. iii. 10. § 2; Strab. vii. p. 305), an island of Moesia Inferior, formed by the two southernmost mouths of the Danube. It derived its name from the abundance of pine-trees which grew upon it. (Eratosth. in Schol. Apollon. iv. 310.) It was of a triangular shape (Apollon. l.c.), and as large as Rhodes. By Martial (vii. 84. 3) it is called a Gothic island; by Valerius Flaccus (viii. 217) a Sarmatian one. It has been identified with the modern island of Picina or St. George, between Badabug and Issenatt; but we must recollect that these parts were but little known to the ancient, and that in the lapse of time the mouths of the Danube have undergone great alterations. (Plin. iv. 12. s. 24; Mela, ii. 7; Avien. Descr. Orb. 440; Dom. Perieg. 401; Claud. IV Cons. Honor. 630.)

PECLELANTITIS (Πεκλελαντίτις, Arrian, Anab.

iv. 22, Indic. 4; Πεκλελαντίτις, Strab. xv. p. 598; Plin. vi. 17. s. 21: Eth. Pencolatias, Plin.; Pencolatis, Dionys. Per. 1142), a district of India on the NW. frontier, along the Copen or Cabul river, in the direction of the Patha, which was probably Penecha, is nowhere found, but the form of the word leaves no doubt that it is, like the majority of the names which have been preserved by Arrian, of genuine Sanscrit or Indian origin. Strabo and Piny both call the city itself Pencolatis. Arrian in one place gives the name to a district (iv. 22), without mentioning that of the capital or chief town; in another he calls the capital Pencolatias, or, according to the Florentine MS, Penecha. (Indic. c. 1.) There can be little doubt that this is the same place or district mentioned in Tolomey under the form of Procias (vii. 1 § 44), and in the Periphus Mar. Ergyth. (c. 47). Both are connected with the Gandaras, the Sanscrit Gandāras, and both are alike placed in NW. India. Prof. Wilson has shown that the Greek name is derived from the Sanscrit Pasikura or Pasabhala, the Phukalakatis of the Hindus, which was placed by them in the country of the Gandhāras, the Gandarītas of Strabo, and which is still represented by the modern Pakehel or Pasbhal, in the neighborhood of Paschau. (Wilson, Ariana, pp. 183, 184.)

PEUCETII (Πευκετίων), a people of Southern Italy, inhabiting the southern part of Apulia. This name was that by which they were known to the Greeks, but the Romans called them Poemculli, which, according to Strabo, was the national appellation employed also by themselves. (Strab. vii. pp. 277, 282.) Their national affinities and origin, as well as the geographical details of the country occupied by them, will be found in the article Apulia. [E. H. B.]

PEUCINI (Πευκετίων, Ptol. iii. 5. § 19, 10. § 9; Strab. vii. p. 305, seq.; Plin. iv. 14. s. 28), a branch of the Bastarnae, inhabiting the island of Peuce. Tacitus (Germ. 46) and Jornandes (Goth. 16) write the name Peuceni, which also appears in several MSS. of Strabo; whilst Arrianus Marcellinus (xxii. 8. § 43) calls them Peuci, and Zosimus (i. 42) Παικαι.

PHABIRANUM (Φαβίρανον), a place in the country of the Chanci Minore, that is, the district between the Albis and Visurgis (Ptol. ii. 11. § 27), is generally identified with the modern city of Bremens; though some, with more probability, look for its site at Bremeroorde. (Wilhelm, Germaniens, p. 163.)

PHACIUM (Φαχίου: Eth. Φαχίες), a town of Thessaly, in the district Petasgios, placed by Leake a little below the right bank of the Peneus at Aliska, but by Kiepert upon the left bank, Brasidas marched through Phacium in b. c. 424. (Thuc. iv. 78.) The town was laid waste by Philip, b. c. 198 (Liv. xxxii. 13), and was occupied by the Roman praetor Baebius in the war with Antiochus, b. c. 191. (Liv. xxxvi. 13.) Phacium is probably the same place as Pucia, which Polybius (xxii. 25) calls a town of Macedonia. (Comp. Step. B. s. v.; Leake, Northern Greece, vol. iv. p. 493.)

PHACIUS (Φαχίου: Eth. Φαχίες), (Plin. iv. 12. s. 23; Φαχιουσα, pl., Steph. B. s. v.), an island in the Aegean sea, one of the Sporades, now Pecussa.

PHAECES. [CORCYRA.]

PHAEDRIADES. [DELPHI, p. 764.]

PHAEDRIAS. [MEGALOPOLIS, p. 309, b.]

PHAENIANA (Φαένια), a town in Rhectia
er Vindekia, on the southern bank of the Dnume
is mentioned only by Ptolemy (ii. 12. § 4). [L.-S.]
PHAEXO (Φαξε, /Eus. Onomast, s. v. Φαξε; Φαξε, Hieroc. p. 723), formerly a city of Idumea,
and afterwards a village of Arabia Petraea, between
Petra and Zoa, containing copper mines, where con
demned criminals worked. It was identified with
Pusa, one of the stations of the Israelites in their
wanderings. (Numb. xxxiii. 42; see Beland, Pha
sestina, p. 951; Wesseling, ad Hieroc. l. c.)
PHAESTUS, I. (Faustus; E/.i, fiaxax), a town in the
S. of Crete, distant 60 stadia from Gortyna,
and 20 from the sea. (Strab. x. p. 479; Plin.
iv. 12. s. 20.) It was said to have derived its name
from an eponymous hero Phaestus, a son of Her-
cules, who migrated from Sicyon to Crete. (Paus.
ii. 6. § 7; Steph. B. s. v.; Eustath. ad Hom. l. c.)
According to others it was founded by Mados. (Diod.
v. 78; Strab. l. c.) It is mentioned by Homer (II.
ii. 648), and was evidently one of the most ancient
places in the island. It was destroyed by the Cor-
tyrians, who took possession of its territory. (Strab.
l. c.) Its port was Matalum, from which it was
distant 40 stadia, though it was only 20 from the
coast. (Strab. l. c.) We also learn from Strabo
that Epimenides was a native of Phaestus. The in-
habitants were celebrated for their sharp and witty
sayings. (Athen. vi. p. 261, c.) Phaestus is men-
tioned also by Sclavus, p. 18; Polyb. iv. 55.
Stephens B. (s. v. Φαστός) mentions in the
territory of Phaestus a place called Lissus, which he
identifies with a rock in the Odyssey (iii. 293),
where in our editions it is not used as a proper name,
but as an adjective,—λασιή, "smooth." Strabo
(l. c.) mentions a place Olysses or Olysee in the
territory of Phaestus (Ολύσσης τῆς Φαστίας);
but this name is evidently corrupt; and instead of it
we ought probably to read Lissus. This place must
not be confounded with Lissus, which was situated
much more to the W. (Kramer, ad Strab. l. c.)

COIN OF PHAESTUS.

2. A town of Tessaly in the district Pelagiotis,
built to the right of the Peneius. It was taken
by the Roman praetor Baebius in B.C. 191.
(Liv. xxxvi. 13.)
3. A town of the Locri Ozalai in the interior,
with a port called the port of Apollo Phaestus.
(Plin. iv. 3. s. 4.) Lekke places Phaestus at Tith
hart, where are the ruins of a fortress of no great
extent, and the port of Apollo near C. Antonioukhiki.
(Leake, Northern Greece, vol. ii. p. 621.)
4. The later name of Phrixus in Trophilia in Elis.
(Phirinx)
PHIAGRES (Φιαγρες, It.ect. ap. Steph. B. s. v.;
Hier. vii. 112; Thuc. ii. 99; Scl. p. 27; Strab.
vii. p. 331, Fr. 33), a fortress in the Pieric hollow,
and the first place after the passage of the Strymon.
It is identified with the post station of Orfanu, on
the great road from Greece to Constantinople, where
Greek coins have been often found, and, among
other small productions of Hellenic art, oval sling
bullets of lead, or the "glances" of which Lucas
(vii. 512) speaks in his description of the battle of
Pharsalia. These are generally inscribed with Greek
names in characters of the best times, or with some
embellishment, such as a thunderbolt. (Leake, Northern
p. 58.)
PHAIA (Φαία, Stadioum. § 43; Φαια, Plut. iv. 5,
§ 2), a harbour of Marmaria, the name of which
Olsbomius (Phoenizische Ortsnamen, in Rhein. Hist.
1852, p. 324) connects with a Phoenician original.
Barth (Reise, p. 505) has identified it with a small
bay upon the coast, a little to the N. of Wady Teminemh.
(P. E. B. J.)
PHALACHTHIA (Φαλαχθια), a town of Thess-
aly in the district Thessaliotis. (Plut. iii. 13.
§ 45.)
PHALACRA (Φαλακρα), a promontory of Mount
Ida, in Mysia, of which the exact position is un-
known. (Eustath. ad Hom. ii. viii. 47; Schol.
ad Nicand. Alciph. 40; Tzetz. ad Lyceph. 40,
1170.) Stephanus Byz., who mentions it under the
name Phalacra, states that all barren and ste-
reile mountains were called Phalacra. [L. S.]
PHALACHINE. [Fala-chine.]
PHALACHUM. [Corcyra, p. 669, b.]
PHALAE (Φαλαεια: Eth. Φαλαινεια), a town of
Arcadia, in the district Maletius on the road to
Megapolis to Sparta, 20 stadia from the
Hermesius towards Belbus. Lekke originally placed
it near Grithiki, but subsequently a little to the
eastward of Bura, where Gell remarked some Hel-
lenic remains among the ruins of the Buaca Ka
bypion. (Paus. viii. 35, § 3; Steph. B. s. v.;
Leake, Morea, vol. ii. p. 298; Pelopommesia, p. 237.)
PHALANNA (Φαλαννα: Eth. Φαλαννανος), a
town of the Pherbabi in Thessaly, situated on the
left bank of the Peneius, SW. of Gonnas. Strabo
says (ix. 440) that the Homeric ortho because
the acropolis of Phalanna; but in the lists of Pliny
(iv. 9, s. 16) Ortho and Phalanna occur as two
distinct towns. Phalanna was said to have derived
its name from a daughter of Tyro. (Steph. B. s. v.)
It was written Phalannus in Ephorus, and was
called Hippa by Hecataeus. (Steph. B.) Phal-
anna is mentioned in the war between the Romans
and Persians, B.C. 171. (Liv. xiii. 34, 63.) Phal-
anna probably stood at Karadjoli, where are the
remains of an ancient city upon a hill above the
village. (Leake, Northern Greece, vol. iii. p. 379,
vol. iv. p. 298.)
PHALANTHUM (Φαλανθυμ: Eth. Φαλανθυς), a
town and mountain of Arcadia, in the district Orcho-
menia, near Methydrium. (Paus. viii. 35, § 9; Steph.
B. s. v.; Leake, Pelopommesia, p. 240.)
PHALARA. [Lamia.]
PHALARUS. [Boreia, p. 412, b.]
PHALASARNA (τα Φάλασαρνα: Eth. Φαλα-
sarneon), a town of Crete, situated on the NW. side
of the island, a little S. of the promontory Cimarus
or Corycus, described by Dicaearchus as having a
closed-up port and a temple of Artemis called Dic-
tynna. Strabo says that Phalasarna was 60 stadia
from Polyrinia, of which it was the port-town; and
Sclavus observes that it is a day's sail across from
Lacedaemon to the promontory of Crete, on
which is Phalasarna, being the first city to the west
of the island. (Strab. x. pp. 474, 479; Sclavus, pp.
17, 18; Dicaearch. Descrip. Graec. 119; Steph. B.
s. v.; Plin. iv. 12. s. 20.) The Cydonians had at

PHALASARNA.
one time taken possession of Phalasarna, but were compelled by the Romans to give it up. (Polyb. xxxii. 15.)

There are considerable remains of the walls of Phalasarna. The most remarkable feature or less degree of preservation from its northern side, where it seems to have reached the sea, to its south-western point, cutting off the acropolis and the city along with it as a small promontory. There are other remains, the most curious of which is an enormous chair on the SW. side of the city, cut out of the solid rock; the height of the arms above the seat is 2 feet 11 inches, and its other dimensions are in proportion. It was no doubt dedicated to some deity, probably to Artemis. Near this chair there are a number of tombs, hewn in the solid rock, nearly 30 in number. (Pashley, Travels in Crete, vol. ii. p. 62, seq.)

PHAERUM. [ATTICA, pp. 304, 305.]

PHALeria (Liv.: Φαλέρον, Φαλέρα, Stephan. B. s. v.; Eth. Φαλερεύς, Φαλερεύτης), a town of Histiaeotis in Thessaly, apparently between Thricca and the Macedonian frontier. Leake places it in one of the valleys which intersect the mountains to the northward of Trisikles, either at Askolos or at Argilos. (Livy, xxxii. 13, xxxiii. 25; Leake, Northern Greece, vol. iv. pp. 528, 529.)

PHALYCMOS (Φαλκυμος), a town of Megaris mentioned by Theophrastus (Hist. Pl. ii. 8), is clearly the same place as the Alycum (Αλυκος) of Plutarch, who relates that it derived its name from a son of Sciron, who was buried there. (Thek. 32.) It perhaps stood at the entrance of the Scironian pass, where Dodwell (vol. ii. p. 179) noticed some ancient vestiges, which have previously supposed to be these of Trypites. [ΤΡΙΠΩΤΙΔΕΣ.]

PHAINE, a town in Aetolia. [PAEANIA.]

PHANAE. [CHRIS, p. 609.]

PHANAGORIA (Φάναγορια, Strab. xi. p. 494; Pos. v. 9 § 6; Φαναγώρεια, Τά Φαναγώρεια, Hecat. ap. Steph. B. s. v.; Strab. xi. p. 495; Sceyn. Ch. 891; Arrian, ap. Eustath. ad Dionys. Per. 306, 549; Φαναγώρεια, Dionys. Per. 552; comp. Piscian. 565; Avien. 753; Φαναγώρεια, Stephan. B. s. v. Taur. Φαναγώρεια, xocolotl, Sceyn. p. 31; Ammian, Pers. P. Ep. xii. p. 2; Phanagoria, Ammian. Marcell. xxii. 8; Φαναγωρία, Procop. B. Goth. iv. 5; Eth. Φαναγωρία, less correctly Φαναγωρίτης, Stephan. B. s. v.), a Greek city on the Asiatic side of the Cimmerian Bosporus, founded by the Teians under Phanagoras or Phanagoras, who fled thither from the Persians. (Eustath. ad Dionys. Per.; Sceyn. Ch., Stephan. B., Peripl. P. Ep. ii. cc.) It was situated upon an island, now called Taman, formed by the main branch of the Antice (Kuban), which flows into the Black Sea, and a smaller branch, which falls into the sea of Azov. The main branch of the Kuban forms a lake before it enters the sea, called in ancient times Corcondamitis (Strab. xi. p. 494), now the Kubenskoı Timan, on the left of which, entering from the sea, stood Phanagoria. (Strab. xi. p. 495; respecting Phanagoria being upon an island, see Stephan. B., Eustath., Ammian. Marcc., l. c.) The city became the great emporium for all the traffic between the coast of the Palus Maeotis and the countries on the southern side of the Cacusus, and was chosen by the kings of Bosporus as their capital in Asia, Panticapaeum being their capital in Europe. (Strab. Stephan. B. L. c.) It was at Phanagoria that the inscription broke out against Mithridates the Great, shortly before his death; and his sons, who held the citadel, were obliged to surrender to the insurgents. (Appian, Mithr. 108; Diet. of Biogr. Vol. ii. p. 1102, b.) In the sixth century of our era, Phanagoria was taken by the neighbouring barbarians and destroyed. (Procop. B. Goth. iv. 3.)

The most remarkable building at Phanagoria seems to have been a temple of Aphrodite, named Apaturus (Ἀπατοῦρος), because the goddess, when attacked by the giants in this place, is said to have summoned Hercules to her aid, and then to have concealed him and to have handed over the giants separately to be slain (Δωλοφανεῖς καὶ ἀπάτους, Strab. xi. p. 495; Stephan. B. s. v. Απατοῦρος ; Böckh, Inscri. No. 2120.) We learn from an inscription that this temple was repaired by Sura-mates, one of the kings of Bosporus. The site of Phanagoria is now only a mass of bricks and pottery; and there is no building above ground. One cause of the disappearance of all the ancient monuments at Phanagoria was the foundation in its neighbourhood at an early period of the Russian colony of Timurabad. Doutor noticed traces of towers towards the eastern extremity of the town, where the citadel probably stood. The town of Taxmone contains several ancient remains, inscriptions, fragments of columns, &c., which have been brought from Phanagoria. There are numerous tombs above the site of Phanagoria, but they have not been explored like those at Panticapaeum. In one of them, however, which was opened towards the end of last century there was found a bracelet of the purest massive gold, representing the body of a serpent, having two heads, which were studded with rubies so as to imitate eyes and also ornamented with rows of gems. It weighed three-quarters of a pound. (Clarke, Travels, vol. i. p. 394, seq.; Pallus, Roman. Antiqu., vol. ii. p. 286, &c.; Dubois, Voyage autour du Caucase, vol. v. p. 64, seq.; Ubert, vol. iii. pt. ii. p. 491.)

PHANAROA (Φαναρώα), a broad and extensive valley in Pontus, watered by the rivers Iris, Lycus, and Scylus, and enclosed between the chain of Paryades to the east, and Mounta Lithus and Opilinus to the west. The soil there was the best in Pontus, and yielded excellent wine and oil and other produce in abundance. (Strab. xiii. 73, xiv. pp. 547, 556, 559; Plin. vi. 4; Ptol. v. 6, § 3, where it is erroneously called Phanagoria.) Phanaroea contained the towns of Euatoria, Cabira, Polemonium, and others. [PONTUS.] [L. S.]

PHANOTE (Εθ. Φανωτεύς, Πολ.), a strongly fortified town of Chasia in Epirus, and a place of military importance. It stood on the site of the modern Gorohiki, which is situated in the midst of a valley surrounded by an amphitheatre of mountains, through which there are only two narrow passes. It lies about halfway between the sea and the Antigonean passes, and was therefore of importance to the Romans when they were advancing from Illyria in b. c. 169. (Liv. xiii. 23; Ptol. xxiv. 14; Leake, Northern Greece, vol. i. p. 72, seq.)

PHANOTUS. [PANOPUS.]
suffered from the attacks of the Atticans and Eleans. Its territory was annexed by Augustus to Patrae, when the latter city was made a Roman colony after the battle of Actium. Pharae contained a large agora, with a curious statue of Hermes. The remains of the city have been found on the left bank of the Kalamitas, near Prenze. (Herod. i. 145; Strab. viii. pp. 386, 388; Paus. ii. 41, iv. 6, 59, v. 94; Paus. vii. 22, § 1, seq.; Plin. iv. 6; Leake, Morea, vol. ii. p. 138.)

2. (Pharai, Strab. Pans.; Φαραί, Hom. II. v. 543; Φάραι, ll. ix. 151; Φαράη, Xen. Hell. iv. § 7; Eth. Φάράης, Strab. viii. p. 388; Φαραών, Paus. iv. 30. § 3: Kalamita), an ancient town of Messenia, situated upon a hill rising from the left bank of the river Neda, and at a distance of a mile from the Messenian gulf. Strabo describes it as situated 5 stadia from the sea (vii. p. 361), and Pausanias 6 (iv. 31. § 3); but it is probable that the earth deposited at the mouth of the river Neda has, in the course of centuries, encroached upon the sea. Pharae occupied the site of Kalamita, the modern capital of Messenia; and in antiquity also it seems to have been the chief town in the southern Messenian plain. It was said to have been founded by Pharis, the son of Hermes. (Paus. iv. 30. § 2.)

In the Iliad it is mentioned as the well-built city of the wealthy Dacules, a vassal of the Atridae (v. 543), and as one of the seven places offered by Agamemnon to Achilles (ix. 151); in the Odyssey, Telamon rests here on his journey from Pylos to Sparta (iii. 490). After the capture of Messene by the Achaeans in B.C. 182, Pharae, Abia, and Thuriia separated themselves from Mesene, and became each a member of the league. (Polyb. xxv. 1.) Pharae was annexed to Laconia by Augustus (Paus. iv. 30. § 2), but it was restored to Messene by Tiberius. (Messen. p. 345.) Pausanias found at Pharae temples of Fortune, and of Niessmachus and Gorgamma, grandsons of Asclepides. Outside the city there was a grove of Apollo Carneius, and in it a fountain of water. (Paus. iv. 30. § 3, seq.; iv. 31. § 1.) Strabo correctly describes Pharae as having an anchorage, but only for summer (v. 361); and at present, after the month of September ships retire for safety to Amyriga, so called from a river strongly impregnated with salt flowing into the sea at this place: it is the θυμός Αμιρίγας, mentioned by Pausanias (iv. 30. § 2) as on the road from Abia to Pharae.

There are no ancient remains at Kalamita, which is not surprising, as the place has always been well occupied and inhabited. The height above the town is crowned by a ruined castle of the middle ages. It was the residence of several of the Latin chief-tains of the Morea. William Villcherdonii I. was born here. In 1685 it was conquered and enriched by the Venetians. It was the headquarters of the insurrection of 1770, and again of the revolution of 1821, which spread from Itea over the whole peninsula. (Leake, Morea, vol. i. p. 342, seq.; Bobbave, Recherchez, ii. p. 104; Curtius, Peloponnese, vol. ii. p. 158.)

3. The later name of the Homerit Phare or Pharis in Laconia. (Phare.)

PHARAN or PHARAN (Φάραν), the name of a desert S. of Palestine, between this country and Aegypt. (Gen. xxx. 21; 1 Kings. xi. 18.) It is usually identified with the Wady Araba, a beautiful and well watered valley, surrounded by mountains, N.W. of Sana, and near the western arm of the

Red Sea. (Niebuhr, Reisebeschreib., vol. i. p. 240, Arabinen, p. 402); but though Feiran may have preserved the ancient name of the desert, it appears from Nahunns (x. 12, 33, xiii. 26) that the latter was situated in the desert of Kadesh, which was upon the borders of the country of the Edomites, and which the Israelites reached after their departure from Mt. Sinai, on their way towards the land of Edom. (Burchardt, Syria, p. 618.)

In the Wady Feiran are the remains of an ancient church, assigned to the fifth century, and which was the seat of a bishopric as early as A.D. 400. (Robinson, Biblical Researches, vol. i. p. 186.)

This city is described under the name of Feiran by the Arabic Edrisi, about A.D. 1150, and by Makrizi about A.D. 1400. (Burchardt, Syria, p. 617.) It is apparently the same as Pharan (Φαράη), described by Stephanus B. (s. v.) as a city between Aegypt and Arabia, and by Ptolem. (v. 17. §§ 1, 3) as a city of Arabia Petraea near the western arm of the Red Sea. A species of amethyst found in this valley had the name of Pharanitis. (Plin. xxxvii. 9. s. 40.) The valley of Pharan mentioned by Josephus (B. J. iv. 9. § 4) is obviously a different place from the Wady Feiran, somewhere in the vicinity of the Dead Sea, and is perhaps connected with the desert of Paran, spoken of above. (Robinson, Biblical Researches, vol. i. p. 52.)

PHARAOETHUS (Φαραοέθος, Ptol. iv. 5. § 52; Stephan. B. s. v.: Eth. Φαραοέθης, Herod. ii. 166; Φαραοέθης, Strab. xvii. p. 892), the capital of the Pharaebithae Nome in Lower Aegypt. (Plin. v. 9. s. 9.) It stood W. of the Pelusian arm of the Nile, 16 miles S. of Tanis. The name was a Paeonitae under the Roman emperors; and under the Pharaohs was one of the districts assigned to the Caiianian division of the Aegyptian army. Pharaoethus is now Horbeyet, where the French Commission found some remains of Aegyptian statuary. (Champollion, l'Egito, vol. ii. p. 99.)

PHARACDON (Φαρακόδων, Φαρακάτως: Eth. Φαρακέτως), a city of Histiaeotis in Thessaly, situated to the left of the Feneus, between Peinnnax and Atrax. It is probably represented by the ruins situated upon the slope of the rocky height above Gratianum. (Strab. iv. p. 488; Steph. B. s. v.; Leake, Northern Greece, vol. iv. p. 316, seq.)

PHARE or PHARIS, afterwards called PHABAE (Φάραι, Φάραης, Φαραῖ), a town of Laconia in the Spartan plain, situated upon the road from Amycla to the sea. (Paus. iii. 20. § 3.) It was mentioned in the Iliad (ii. 582), and was one of the ancient Achaean towns. It maintained its independence till the reign of Teleclus, king of Sparta; and after its conquest, continued to be a Lacceianian town under the name of Pharae. (Paus. iii. 2. § 6.) It was said to have been plundered by Aristomenes in the Second Messenian War. (Paus. iv. 16. § 8.) It is also mentioned in a corrupt passage of Strabo (viii. p. 364), and by other ancient writers. (Lycophr. 552; Stat. Theb. iv. 226; Steph. B. s. v. Phaës.) Pharis has been rightly placed at the deserted village of Bafa, which lies S. of the site of Amycla, and contains an ancient 'Treasury,' like those of Mycenae and Orchomenos, which is in accordance with Pharis having been one of the large cities before the Doric conquest. It is surprising that the French Commission have given no description or drawing of
**PHARMACUS.**

This remarkable monument. The only account we possess of it, is by Mure, who observes that it is, like that at Ceresus, with an intersecting vault, entered by a door on one side, the access to which was pierced horizontally through the slope of the hill. Its situation, on the summit of a knoll, itself of rather conical form, while it increases the apparent size of the tumulus, adds much to its general Leftness and grandeur of effect. The roof of the vault, with the greater part of its material, is now gone, its shape being represented by a round cistern or crater on the summit of the tumulus. The doorway is still evident; 15 feet wide at its upper and narrower part. The stone lintel is 15 feet in length. The vault itself was probably between 30 and 40 feet in diameter. Mure adds; "Mene- laus is said to have been buried at Amyclae. This may, therefore, have been the royal vault of the Spartan branch, as the Mycean monument was of the Argive branch of the Atrid family." But even if we suppose the monument to have been a sepulchre, and not a treasury, it stood at the distance of 4 or 5 miles from Amyclae, if this town is placed at Ephid Kyriaikl, and more than 2 miles, even if placed, according to the French Commission, at Skiavokhori. [AMYCLAE.]—In addition to this, Meneleus, according to other accounts, was buried at Thermopylae. (Mure, Tour in Greece, vol. ii. p. 246; Leake, Morea, vol. iii. p. 3, Peloponnesian, p. 354; Curtius, Pelopo- nnesian, vol. ii. p. 248.)

**PHARMACEUS (Φαρμακεύς),** a small island before the entrance of the bay of Iassus, not far from Cape Poseidon; its distance from Miletus is stated at 120 stadia. In this island Attalus was killed, and near it Julius Caesar was once captured by pirates. (Stadiasmus. Mar. Mag. p. 282; Steph. B. s. v.; Suet. Cais. 4: Plut. Cais. 1.) It still bears its ancient name Farmae. [L. S.]

**PHARMATE'NUS (Φαρματέ'νος),** a small coast river of Pontus, 120 stadia to the west of Pharmacia. (Arrian, Peripl. Pont. Ext. p. 17; Anonym. Peripl. P. E. p. 12.) Hamilton (Researches, i. p. 266) identifies it with the Dazanar Su. [L. S.]

**PHARMACIA (Φαρμακία: Eth. Φαρμακίον),** an important city on the coast of Pontus Pomedonicia, was by sea 150 stadia distant from cape Zephyrium (Arrian, Peripl. Pont. Ext. p. 17; Anonym. Peripl. P. E. p. 12), but by land 24 miles. According to Pliny (vi. 4) it was 80 (180?) miles east of Amisus, and 95 or 100 miles west of Trapezus. (Comp. Tab. Peck, where it is called Carnassus for Cerasus, this latter city being confounded with Pharmacia.) It was evidently founded by one Pharmaces, probably the grandson of Mithridates the Great; and the latter during his wars with the Romans kept his barem at Pharmacia. Its inhabitants were taken from the neighbouring Cotyura, and the town was strongly fortified. (Strab. xi. p. 548; Plut. Lucill. 18.) The place acquired great prosperity through its commerce and navigation, and through the iron-works of the Chalybes in its vicinity. (Strab. xi. pp. 549, 551.) According to Skylax (p. 33) the site of this town had previously been occupied by a Greek colony called Choerades, of which, however, nothing is known. But that he actually conceived Choerades to have occupied the site of Pharmacia, is clear from the mention of the island of Ares (Αρείου νησίου) in connection with it, for that island is known to have been situated off Pharmacia. (Arrian and Anonym. Peripl. L. c.) Arrian is the only one who affirms that Pharmacia occupied the site of Cerasus; and although he is copied in this instance by the anonymous geographer, yet that writer afterwards correctly places Cerasus 150 stadia further east (p. 13). This error probably arose from a confusion of the names Choerades and Cerasus; but in consequence of this error, the name of Cerasus was in the middle ages transferred to Pharmacia, which hence still bears the name of Kerassant or Kerassane. (Comp. Hamilton, Researches, i. pp. 250, 261, foll.; Cramer, Asia Minor, i. p. 281.) Pharmacia is also mentioned by Stephanus Byz. (s. v.), several times by Strabo (ii. p. 156, xi. p. 499, ii. pp. 547, 549, 601, iv. p. 471) and by Justin (v. 6 § 5). Respecting its coins, see Eckel (Doctr. Num. vol. iii. p. 357). Another town of the same name in Phrygia is mentioned by Stephanus Byz. (s. v.).

**PHARODINI. [VARINI.]**

**PHAROS (Φαρός, Ephoros, ap. Steph. B., Fr. 151; Scyl. p. 8; Scymn. p. 427; Diodor. xv. 13; Strab. vii. p. 513), an island off the coast of Il- lyricum, which was colonised by Greek settlers from Paros, who, in the first instance, gave it the name of their own island, which was afterwards changed to Pharos. In this settlement, which took place B.C. 385, they were assisted by the elder Dionysius. When the Romans declared war against the Illyrians B.C. 229, Demetrius, a Greek of Pharos, betrayed his mistress, Queen Tenta, for which he was re-warded with the greater part of her dominions. (Polyp. ii. 11.) The trailer, relying on his connection with the court of Macedon, set the Romans at defiance; he soon brought the vengeance of the republic upon himself and his native island, which was taken by L. Aemilius in B.C. 219. (Polyp. iii. 16; Zonar. viii. 20.) Pliny (iii. 50) and Ptolemy (ii. 17. § 14) speak of the island and city under the same name, PHAROS (Φαροία), and Polybius (l. c.) says the latter was strongly fortified. The city, the ancient capital, stood at Stari Grad or Città Vecchia, to the N. of the island, where remains of walls have been found, and coins with the legend ΦΑΡΟΙΑ. After the fall of the Roman Empire the island continued for a long time in the hands of the Narentine pirates. Its Slavonic name is Hear, a corruption of Pharo; and in Italian it is called Lésina or Lésina. For coins of Pharos see Eckel, vol. ii. p. 160; Sestini, Monct. Vet. p. 42; Mionate, vol. ii. p. 46. (Wilkinson, Dmitriata, vol. i. pp. 245—251; Neugebauer, Die Süd-Streifen, pp. 107—111.)

**PHAROS (Φαρος), Strab. xvi. p. 791 seq.; Steph. B. s. v.; Eth. Φαρόσ), a long narrow strip of rock lying off the northern coast of Aegypt, having the New Port of Alexandria E. and the Old Harbour SW. [ALEXANDRIA, Vol. I. p. 97.]. Its name is said to have been derived from a certain pilot of Menelaus, who, on his return from the Trojan War, died there from a serpent's bite. Pharo is mentioned in the Odyssey (iv. 335), and is described as one day's sail from Aegypt. This account has caused considerable perplexity, since Pharos is actually rather less than a mile from the seaboard of the Delta; and it is not probable that the land, in the course of centuries, has advanced or the sea receded materially. It is perfectly intelligible, however, if we suppose the author of the Odyssey to mean by Aegypt, not the country itself but its river, since the Pharos is even now nearly a day's sail from the Canopic arm of the Nile. Any other theory is untenable; for this portion of the coast of the Delta consists of rocky bar and
Pharsalus was inhabited by fishermen under the Pharnaces of Aegypt; but it first became a place of importance under the Macedonian kings. During his survey of the coast, n. c. 332, Alexander the Great perceived that the island would form, with the help of art, an excellent breakwater to the harbour of his projected capital. He accordingly caused its southern extremity to be connected with the mainland by a stone mole seven stadia, or about an English mile, in length, which from this circumstance was called the Heptastadium or Seven-furlong Bridge. At either end the mole was left open for the passage of ships, and the apertures were covered by suspension bridges. In later times a street of houses, erected on the mole itself, converted the island of Pharsus into a suburb of Alexandria, and a considerable portion of the modern city stands on the foundations of the old Heptastadium.

Yet, long after its junction with the Delta, Pharsus was spoken of as an island (ἡ παλαι ἡφαιτος, Aelian, II. An. ix. 21; τοποτήτων ἡφαιτος, Zonar. iv. 10). The southern portion of this rocky ledge (χοῦρα) was the more densely populated; but the celebrated lighthouse, or the Tower of the Pharsus, stood at the NE. point, directly in a line with point Pharillon, on the eastern horn of the New Port. The lighthouse was erected, at a cost of 800 talents, in the reign of Ptolemy I., but was not completed until that of his successor Ptolemaus Philadelphus. Its architect was Sostratus of Cosbus, who, according to Piny (xxxvi. 12. s. 18), was permitted by his royal patron to inscribe his own name upon its base. There is indeed another story, in which it is related that Sostratus, being forbidden to engrave his name on his work, secretly cut it in deep letters on a stone of the building, which he then aloftly covered with some softer and perishable material, on which were inscribed the style and titles of Ptolemy. Thus a few generations would read the name of the king, but posterity would behold the abstract impress of the architect. (Strab. xvii. p. 791; Suidas, s. v. Φάρος; Steph. B. s. e.; Lucian, de Conspir. Hist. c. 62.) This tower was the seat of several temples, the most conspicuous of which was one dedicated to Phoebus, standing near the northern extremity of the Heptastadium.

That Pharsus, in common with many of the Deltaic cities, contained a considerable population of Jews, is rendered probable by the fact that here the translators of the Hebrew Scriptures resided during the progress of their work. (Joseph. Antiq. xii. 2. § 13.) Julius Caesar established a colony at Pharsus, less perhaps to recruit a declining population than with a view to garrison a post so important as regarded the turbulent Alexandrians. (Caesar, B. C. iv. iii. 112.) Subsequently the island seems to have been comparatively deserted, and inhabited by fishermen alone. (Montfaucon, Sur le Phare d'Alexandrie, Mémos de l'Acad. des Inscrips. ix. p. 925.)

[W. B. D.]

Pharsalus is mentioned by Scylax (p. 25) among the towns of Thessaly. In n. c. 456 it was besieged by the Athenian commander Myronides, after his victory in Bcestra in the Thessalian games. (Thuc. i. 111.) At the commencement of the Peloponnesian War, Pharsalus was one of the Thessalian towns that sent succour to the Athenians. (Thuc. ii. 22.) Medins, tyrant of Larissa, took Pharsalus by force, about n. c. 395. (Diod. xiv. 82.) Pharsalus, under the conduct of Polydamas, resisted Jason for a time, but subsequently formed an alliance with him. (Xen. Hell. vi. i. § 2, seq.) In the war between Antiochus and the Romans, Pharsalus was for a time in the possession of the Syrian monarch; but on the retreat of the latter, it surrendered to the consul Acilius Glabrio, n. c. 191. (Liv. xxxvi. 14.)

Pharsalus, however, is chiefly celebrated for the memorable battle fought in its neighbourhood between Caesar and Pompey, n. c. 48. It is a curious fact that Caesar has not mentioned the place where he gained his great victory; and we are indebted for the name to other authorities. The exact site of the battle has been pointed out by Leake with his usual clearness. (Northern Greece, vol. iv. p. 475, seq.) Merivale, in his narrative of the battle (History of the Romans under the Empire, vol. ii. p. 286, seq.), has raised some difficulties in the
PHARALUS.

Preparation of Caesar's description, which have been commented upon by Leake in an essay printed in the Transactions of the Royal Society of Literature (vol. iv. p. 68, seq., 2nd Series), from which the following account is taken.

A few days previous to the battle Caesar had taken possession of Metropolis, a city westward of Pharsalus, and had encamped in the plain between these two cities. Meantime Pompey arrived at Larissa, and from hence advanced southwards towards Pharsalus; but Caesar having entrenched at the foot of the heights, which are adjacent to the modern Farsala on the east. Caesar's camp, or rather his last position before the battle, was in the plain between Pharsalus and the Enipeus, at the distance of about 3 miles from the still extant north-western angle of the walls of Pharsalus. There was a distance of 30 stadia, or about 4 Roman miles, from the two camps. (Appian, B. C. i. 63.) Appian adds that the army of Pompey, when drawn up for battle, extended from the city of Pharsalus to the Enipeus, and that Caesar drew up his forces opposite to him. (B. C. i. 75.) The battle was fought in the plain immediately below the city of Pharsalus to the north. There is a level of about 2½ miles in breadth between the Enipeus and the elevation or bank upon which stood the northern walls of Pharsalus. Merivale is mistaken in saying that "the plain of Pharsalus, 5 or 6 miles in breadth, extends along the left bank of the Enipeus." It is true that 5 or 6 miles is about the breadth of the plain, but this breadth is equally divided between the two sides of the river; nor is there anything to support Merivale's conjecture that the course of the river may have changed since the time of the battle. Leake observes that the plain of 2½ miles in breadth was amply sufficient for 45,000 men drawn up in the usual manner of three orders, each ten in depth, and that there would be still space enough for the 10,000 cavalry, upon which Pompey founded chiefly his hopes of victory; for the breadth of the plain exceeding too great for Caesar's numbers, he thought himself sure of being able, by his commanding force of cavalry, to turn the enemy's right. At first Pompey drew up his forces at the foot of the hills; but when Caesar refused to fight in this position, and began to move towards Scuttusia, Pompey descended into the plain, and arranged his army in the position already described. His right wing being protected by the Enipeus, which has precipitous banks, he placed his cavalry, as well as all his archers and slingers, on the left. Caesar's left wing was in like manner protected by the Enipeus; and in the rear of his right wing, behind his small body of horse, he stationed six cohorts, in order to sustain the anticipated attack of the enemy's cavalry. Pompey resolved to await the charge. Caesar's line advanced running, halted midway to recover their breath, and then charged the enemy. While the two lines were thus occupied, Pompey's cavalry on the left began to execute the movement upon which he placed his hopes of victory; but after driving back Caesar's small body of horse, they were unexpectedly assailed by the six cohorts and put to flight. These cohorts now advanced against the rear of Pompey's left; while Caesar at the same time brought up to his front the third line, which had been kept in reserve. Pompey's troops now gave way in every direction. Caesar then advanced to attack the foundered camp of the enemy, which was defended for some time by the cohorts left in charge of it; but at length they fled to the mountains at the back of the camp. Pompey proceeded straightway to Larissa, and from thence by night to the sea-coast. The hill where the Pompeians had taken refuge being without water, they soon quitted it and took the road towards Larissa. Caesar followed them with four legions, and, by taking a shorter road, came upon them at a distance of 6 miles. The fugitives now retired into another mountain, at the foot of which there was a river; but Caesar having cut off their approach to the water before nightfall, they descended from their position in the morning and laid down their arms. Caesar proceeded on the same day to Larissa. Leake observes that the mountain towards Larissa to which the Pompeians retired was probably near Scuttusia, since in that direction alone is any mountain to be found with a river at the foot of it.

In the time of Pliny, Pharsalus was a free state (iv. 8, s. 15). It is also mentioned by Hierocles (p. 642) in the sixth century. It is now named Farsala (Ῥά Φάρσαλα), and the modern town lies at the foot of the ancient Acopolis.

PHARUSII. (Φαρουσίς, Strab. ii. p. 131, xvii. pp. 826, 828; Itol. iv. 6, § 17; Polyb. op. Plin. v. 1 s. 8, vol. 35), a people on the W. coast of N. Africa, about the situation of whom Strabo, Pliny, and Ptolemy are in perfect agreement with one another, if the thirty journeys of Strabo (p. 826) between them and Libyca (复习), on the W. coast of Morocco, to the S. of Cape Sparyt, be set aside as an error either of his information or of the text; which latter is not improbable, as numbers in MSS. are so often corrupt. Nor is this mere conjecture, because Strabo contradicts himself by asserting in another place (p. 829) that the Pharsusii had a great desert between them and Mauretania, which they crossed, like natives of the present day, with bags of water hung from the bellies of their horses. (Leake, London Geog. Journ. vol. ii. p. 16.) This locality, extending from beyond Cape Enjador to the banks of the Senegal, was the seat of the many towns of the Tyrians, amounting, according to some (Strab. p. 826), to as many as 300, which were destroyed by the Pharsusii and Nigrates. (Comp. Humboldt, Cosmos, vol. ii. p. 129, note 123, trans.) Strabo reckons this number of 300 commercial settlements, from which this part of the coast of the Atlantic received the name of Sinus Emporium, as an exaggeration. He appears in this to have followed the criticism of Arcentiumus upon Eritothenes, whom Strabo depreciates. The number 300 may be an exaggeration, or one not intended to be literally taken; but it is incredible that Eritothenes should represent a coast as covered with Phenician factories where none existed.

When Ezekiel prophesies the fall of Tyre, it is said (xxvi. 10): "The men of Phere (the common version reads Persia), and Lud, and Phut were in thine armies." These Phere thus joined with the Phut or Mauretaniais, and the Ludim, who were
nomads of Africa (the Septunagint and the Vulgate understand the Lydians), may be reasonably sup-
pended to belong to the same region. Without the
vowel points, the name will represent the powerful
and warlike tribe whom the Greeks call Pharsæi.

The similarity of the names seems to have given rise
to the strange story which Salust (B. J. 18) copied
from earlier books, that there had led an army of
Persians into Africa. ("Pharsæi quondam Persæ," Plin. v. s.; comp. Pomp. Mela, iii. 10. § 3.)

The fierce tribes of Africa thus furnished the Pha-
nicians with inexhaustible supplies of mercenary
troops, as they afterwards did to Carthage. (Ken-
rick, Phoecina, pp. 133, 277.) [L. B. J.]

PHARYGAE. [TAPHE.]

PHARYGHEI (Φάργηγει), a promontory of
Phæcis, with a station for shipping, lying E. of
Anticyra, between Marathus and Myus, now called
Agüia. (Strab. ix. p. 423; Leake, Northern Greece,
vol. ii. p. 549.)

PHASAELIS (Φασαήλης, Joseph., Steph. B.,
v.; Φασηλῆς, Plin. v. 16. § 7; Phæclus, Plin. xiii.
4. s. 19, xxii. s. 11. Eth. Φασηληής), a town of
Palestine built by Herod the Great in the Anon or
Ghor, N. of Jericho, by which it means a tract for-
merly desert was rendered fertile and productive.
(Plin. xvi. 5. § 2, xvii. 11. § 5, xviii. 2. § 2, R.
J. i. 21, § 9.) The name seems still to have
existed in the middle ages, for Brocardus, quoted by
Robinson, speaks of a village named Phasclus,
satellite a league N. of Dâk, and corresponding to
the position of El-Aâjeh, where there are ruins.
(Robinson, Biblical Researches, vol. ii. p. 325.)

PHASELIS (Φασῆλης; Etli. Φασηληής), a mar-
itime town of Lycia, on the Pamphylian gulf,
whence some say that it was a town of Pamphylia
(Plin. v. 36; Steph. B. s. v.; Dionys. Per. 853;
667) distinctly informs us that Phasæis belonged
to Lycia, and that Olbia was the first Pamphylian
town on the coast. The town was a Dorian
colony (Herod. ii. 178), situated on a headland,
and conspicuous to those sailing from Cilicia to
Rhodes. (Ivi. xxxvii. 23; Cic. in Terr. ii. 4.)

Behind it rose a mountain of the same name, prob-
elly the same which is elsewhere called ya Æolos
(Sterioums. Mar. Mag. § 204; Strab. xiv. p. 666);
and in its vicinity there was a lake and a mountain-
pass leading between Mount Climax and the sea-
coast into Pamphylia. Phasæis had three harbours,
and rose to a high degree of prosperity, though it
did not belong to the political confederacy of the
other Lycian towns, but formed an independent state
by itself. It is mentioned by Timæydides (ii. 69,
comp. viii. 88, 89; Polyb. xxx. 9) as a place of
some importance to the commerce of the Athenians
with Phæcisia and Cilicia. At a later period, having
become the haunt of the pirates, it was attacked
and taken by Servilius Bauricius. (Cic. in Terr.
iv. 10; Eutrop. vi. 3; Flor. iii. 6.) Although it
was restored after this disaster, yet it never recov-
ered its ancient prosperity; and Lucian (vii. 249,
&c.) describes it as nearly deserted when visited by
Dionysius the Areopagite. According to
Athenæus (xiv. p. 688) the town was celebrated
for the manufacture of rose-perfume, and Némoter
(op. Athen. p. 683) praised its roses; it was
the common opinion among the ancients that the
phæcis (φάσηλης), a kind of light sailing boats,
were invented at Phasæis, whence all the coins of
the town show the image of such a boat. Phæcis

PHASIAN. [iii. 3. § 6] reports that the spear of Achilles
was exhibited in the temple of Athena at Phas-
elis. In Hierocles (p. 683) the name of the place
is corrupted into Phasæse; and the Acts of Coun-
cil show it to have been the seat of a bishop.

It may also be remarked that Phæcis was the birth-
place of Theocles, a tragic poet and rhapsodist of
some note. (Syll. B. r. c.; comp. Syllax, p. 29;
Plut. v. 3. § 3. § 5 ; Eckeh. Doctr. Num. iii.
p. 6.) There are still considerable remains of the
ancient Phæcis. The lake in its vicinity, says
Beaumont (Corunæa, p. 56), is now a mere swamp,
occupying the middle of the isthmus, and was prob-
able the source of those baneful exhalations which,
according to Livy and Cicero, rendered Phæcis so
unhealthy.

The principal port was formed by a stone pier, at the western side of the isthmus; it projected about 200 yards into the sea, by which it has been entirely overthrown. The theatre is scooped out of the hill, and fronting it are the re-
 mains of several large buildings. There are also
numerous sarcophagi, some of them of the whitest
marble, and of very neat workmanship. The modern
name of Phæcis is Têbrowa. (Comp. Fellows,
Asia Minor, p. 211, foll.; Leake, Asia Minor,
p. 190.)

COIN OF PHASELIS.

PHASIANI (Φασιανί), a tribe in the eastern part
of Pontus, on the river Phasis, from which both
they and the district called Φασιάνι χώρα derived
their names. (Nephaiph, Arab. iv. 6. § 5, viii. 8.
§ 25; Diodor. xiv. 29; Eustath. ad Dionys. Per.
689.)

PHASIS (Φάσης), a navigable river in Colchis,
on the east of the Euxine, which was regarded in ancient
times as forming the boundary between Europe and
Asia, and as the remotest point in the east to which
a sailer on the Euxine could proceed. (Strab. x. p.
497; Eustath. ad Dionys. Per. 687; Arrian, Perip.
iv. 2. § 6.) Subsequently it came to be looked upon
as forming the boundary line between Asia Minor and
Colchis. Its sources are in the southernmost part of the
Mounts Moschí (Plin. vi. 4; Solin. 20); and as these
mountains were sometimes re-
garded as a part of Mount Caucasus, Aristotle and
others place its sources in the Caucasus. (Strab. x.
p. 492, xii. p. 548; Aristot. Met. i. 13; Pro-
pæ. L. c.; Geogr. Ev. iv. 20.) Strabo (xi. p. 497;
comp. Dionys. Per. 694; Schol. ad Apollon. Rhod.
ii. 401) makes the Phasis in a general way flow from
the mountains of Armenia, and Apollonius specifies
its sources as existing in the region of the Ara-
untons, in Colchis. For the first, and part of its course
was it borne by the name Bous (Propæ. Bell. Pers.
i. 29), and after receiving the waters of its tribu-
taries Rhion, Glauces, and Hippus, it discharges
itself as a navigable river into the Euxine, near the
town of Phasis. (Strab. xi. p. 498, 500; Plin.
L. c.) Some of the most ancient writers believed
that the Phasis was connected with the Northern Ocean. (Schoel. ad Apollon. Rhod. iv. 259; Pind. Pyth. iv. 376, Isthm. ii. 61.) The length of the course was also erroneously estimated by some at 800 Roman miles (Jul. Honor. p. 697, ed. Gronov.), but Aethicus (Cosmog. p. 719) states it more correctly to be only 305 miles. The fact is that its course is by no means very long, but rapid, and of such a nature as to form almost a semicircle; whence Agathenerus (ii. 10) states that its mouth was not far from its sources. (Comp. Strab. xii. p. 500; Apollon. Rhod. ii. 401; Ov. Met. vii. 6; Arrian. Marc. xxxii. 8; Pric. 673.) The water of the Phasis is described as very cold, and as so light that it swam like oil on the Euxine. (Arrian, Peripil. Pont. Exc. p. 7, sec.; Procop. Bell. Pers. ii. 30; comp. Heid. Thueg. 340; Hector Fragm. 187; Herod. iv. 57, 45, 86; Sclavus, p. 25; Polya. iv. 56, v. 55; Ptol. v. 10, §§ 1, 2.) The different statements of the ancients respecting the sources and the course of this river probably arose from the fact that different rivers were understood by the same name. Phasis; but the one which in later times was commonly designated by it, is undoubtedly the modern Rioni or Kion, which is sometimes also mentioned under the name Facho, a corruption of Phasis. It has been conjectured with great probability that the river called Phasis by Aeschylus (ap. Arrian. l. c.) is the Hypanis; and that the Phasis of Xenophon (Anab. iv. 6, § 4) is no other than the Araxes, which is actually mentioned by Constantine Porphyry, (de Adais. Imp. 45) under the same names Erax and Phasis. [L. S.]

Phasis (Φαίσις), the easternmost town on the coast of the Euxine, on the southern bank, and near the mouth of the river Phasis, which is said to have received this name from the town having previously been called Arcurus. (Pint. de Fluct. s. v.; Epist. ad Dion. Per. 689.) It was situated in a plain between the river, and a lake, and had been founded by the Milesians as a commercial establishment. (Strab. xi. p. 498; Steph. B. s. v.) The country around it was very fertile, and rich in timber, and carried on a considerable export commerce. In the time of Ammianus Marcellinus (xxxi. 8), the place still existed as a fort, with a garrison of 400 picked men. It contained a temple of Cybele, the great goddess of the Phasiani. (Comp. Arrian, Peripil. Pont. Exc. p. 9; Sclavus, p. 32; Strab. xi. pp. 497, 500; Ptol. v. 10, § 2, viii. 19, § 4; Pomp. Mela. i. 19; Pline. vi. 4; Zosimus, ii. 33.) Some geographers regard Phasis and Sebastopolis as two names belonging to the same place [Sebastopolis]. The name of the town and river Phasis still survives in the languages of Europe in the wood peacocks (phasianae aves), these birds being said to have been introduced into Europe from these regions as early as the time of the Argonauts. (Aristoph. Acharn. 726; Plijn. ii. 39, 44, x. 67; Martial, iii. 57, 16; Serv. Vir. 12; Petron. 93.)

Phasis (Φαίσας), a river of Taprobane or Ceylon. It is possible from the statement of Ptolemy that it was on the N. side of the island; but like other rivers and places in that island, it is hardly possible now to identify it with any modern stream. Forbiger has conjectured that it is the name of the Aswari. Lassen has supposed it to be the Ambi, in that portion of the island which was called Nagadeepa. If this be so, it flowed into the sea, a little to the N. of the mouth of the river which connects Ceylon with the mainland of Hindostan. Forbiger farther supposes that this is the same river which Pliny calls Cydara in his account of the island of Taprobane (vi. 22. s. 24). [V.]

Phaura. [Attica, p. 330, b.]

Phazania. [Garamantes.]

PhaZeMenon (Φαζιμένων), a small town in the west of Puntus, south of Gazelonitis, and north of Anasia; it contained hot mineral springs, which, according to Hamilton (Researches, i. p. 333), are the modern baths of Canossa. (Strab. xii. pp. 553, 560, 561.) Pompey, after his victory over Milriniates, planted a colony there and changed its name into Nepolis, from which the whole district was called Neapolitis, having previously been called Phazemonis. (Strab. xii. p. 560; Steph. B. s. v. Φαζιμένων, for thus the name is erroneously written.) Phazenon is generally supposed to correspond in situation with the modern town of Massjum or Marsifim. [L. S.]

Pheca or Phecaum, a fortress near Gephi in Thrace. (Liv. xxxi. 41, xxxii. 14) [Gomph.] Phegea. [Attica, p. 330, b.]

Phegia. [Psephus,]

Pheia or Pheia (ai Φεία, Hom. II. vii. 135, Od. xx. 297; Φεία, Thuc. Strab; Φεί, Steph. B. s. v.; EH Φείρης, Steph. B.), a city of Elis in the Phisian, situated upon the isthmus connecting the promontory Ithycy (C. of Katokolo) with the mainland. Strabo erroneously speaks of two promontories upon this part of the coast; one called Pheia, from the name of the neighbouring town, and another more to the south, of which he has not given the name. (Strab. viii. 343.) Pheia is mentioned by Homer, who places it near the Iardanus, which is apparently the mountain torrent north of Ithycy, and which flows into the sea on the northern side of the lofty mountain Skopihidi. (Hom. l. c.) Upon a very conspicuous peaked height upon the isthmus of Ithycy are the ruins of a castle of the middle ages, called Pontikokastro, built upon the remains of the Hellenic walls of Pheia. On either side of Ithycy are two harbours; the northern one, which is a small creek, was the port of Pheia; the southern one is the broad bay of Katokolo, which is now much frequented, but was too open and exposed for ancient navigation. The position of these harbours explains the narrative of Thucydides, who relates that in the first year of the Peloponnesian War (n. c. 431), the Athenian fleet, having sailed from Methone in Messenia, landed at Pheia (that is, in the bay of Katokolo), and laid waste the country; but a storm having arisen, they sailed round the promontory Ithycy into the harbour of Pheia. In front of the harbour was a small island, which Poly- bins calls Pheia (Strab. l. c.; Polya. iv. 9). About a mile north of the small creek at Pontikokastro, there is a harbour called Khirotis, which Leake is disposed to identify with the port mentioned by Thucydides, on the ground that the historian describes it "not as the port of Pheia, but as a harbour in the district Phicia (Τον εν τῷ Φεια Αυτοκρατορ), but we think it more probable that the historian intended the creek at the foot of Pontikokastro. In any case Phicia stood on the isthmus of Ithycy, and neither at Khirotis nor at the mouth of the torrent of Skopihidi, but on the other side of Pheia, which is placed by Bohlaye, though at neither are there any ancient remains. (Leake, Morva, vol. ii. p. 189, seq.; Peloponnesias, p. 213, seq.; Bohlaye, Richereres, loc. cit. p. 121; Curtius, Peloponnesius, vol. ii. p. 44, seq.)

Pheilia. [Lacossia, p. 110, a.]

Q Q
Phileus. [Alex.]  

Phileus. [Antiph.]  

Phileus is mentioned by Homer (H. ii. 605), and was more celebrated in mythical than in historical times. Virgil (Aen. viii. 165) represents it as the residence of Evander; and its celebrity in mythical times is indicated by its connection with Hercules. Paussanias found the city in a state of complete decay. The acropolis contained a ruined temple of Athena Tritonia, with a breather statue of Poseidon Hippius. On the descent from the acropolis was the stadium; and on a hill to the north of it was the sepulchre of Iphiclus, the brother of Hercules. There was also a temple of Hermes, who was the principal deity of the city. (Paus. viii. 14. § 4. seq.)

The lower slope of the mountain, upon which the remains of Phileus stand, is occupied by a village now called Fonisi. There is, however, some difficulty in the description of Paussanias compared with the existing site. Paussanias says that the acropolis was precipitous on every side, and that only a small part of it was artificially fortified; but the summit of the insulated hill, upon which the remains of Pheneus are found, is too small apparently for the acropolis of such an important city, and moreover it has a regular slope, though a very rugged surface. Hence Leake supposes that the whole of this hill formed the acropolis of Pheneus, and that the lower town was in a part of the subjacent plain; but the entire hill is not of that precipitous kind which the description of Paussanias would lead one to suppose, and though the acropolis may have been on some other height in the neighborhood, and that the hill on which the ancient remains are found may have been part of the lower city.

There were several roads from Pheneus to the surrounding towns. Of these the northern road to Achaia ran through the Pheneatic plain. Upon this road, at the distance of 15 stadia from the city, was a temple of Apollo Pythius, which was in ruins in the time of Paussanias. A little above the temple the road divided, the one to the left leading across Mt. Grabias to Aegira, and the other to the right running to Pellene: the boundaries of Aegira and Pheneus were marked by a temple of Artemis Pyronia, and those of Pellene and Pheneus by that which is called Porines (ὁ καλότιμος Πορίνος), supposed by Leake to be a river, but by Curtius a rock. (Paus. viii. 15. §§ 5—9.)

On the left of the Pheneatic plain is a great mountain, now called Tartoreia, but which is not mentioned by Paussanias. He describes, however, the two roads which led westward from Pheneus around this mountain,—that to the right or NW., leading to Nonacris and the river Styx, and that to the left to Cleitor. (Paus. viii. 17. § 6.) Nonacris was in the territory of Pheneus. [NONACRS.] The road to Cleitor ran at first along the canal of Hercules, and then crossed the mountain, which formed the natural boundary between the Pheneatic and Cleitorian, close to the village of Lynura, which still bears its ancient name. On the other side of the mountain the road passed by the sources of the river Ladon. (Paus. viii. 19. § 4, 20. § 1.) This mountain, from which the Ladon springs, was called Penteleia (Πεντέλεια, Hesych. and Phot. s. r. t.). The fortress, named Penteleum (Πεντέλειον), which Phutarch says was near Pheneus, must have been situated upon this mountain. (Plut. Aret. 39, Clem. 17.)

The southern road from Pheneus led to Orchoemenus, and was the way by which Paussanias came to the former city. The road passed from the Or-
PHÆRAE, 595

chomenian plain to that of Pheneus through a narrow ravine (σπηρατζ), in the middle of which was a fountain of water, and at the further extremity the village of Caryae. The mountains on either side were named Οὔξυς (Ὄυξις), and Σκιθιάς (Σκιθιάς), and at the foot of either was a subterranean channel, which carried off the water from the plain. (Paus. viii. 13, § 6, 14, § 1.) This ravine is now called Κλάσσες, from a village of this name, which occupies the site of Caryae. The mountains on either side are evidently the Oxyxis and Scithias of Pausanias, and at the foot of either there is a καταβάθρον, as he has remarked.

The eastern road from Pheneus led to Stympalus, across Mt. Gerontium (νῦν Στίρητα), which formed the boundary between the territories of the two cities.

To the left of Mt. Gerontium near the road was a mountain called Τριερους (Τριερ IDD), or the three fountains; and near the latter was another mountain called Σπία (Σπία), where Asopos is said to have perished from the bite of a snake. (Paus. viii. 16, §§ 1, 2.) (Leake, Morea, vol. iii. p. 135, seq.; Curtius, Πελοποννήσιον, p. 385, seq.; Curtius, Πελοποννήσιον, vol. i. p. 183, seq.)

COIN OF PHANEUS.

PHÆRAE (Φῆραι: Eth. Φῆραίος, Pheneus). 1. One of the most ancient cities of Thessaly, was situated in the SE. corner of Pelasgiotis, W. of the lake Bœbēis, and 90 stadia from Pagasae, which served as its harbour. (Strab. ix. 436.) It was celebrated in mythology as the residence of Admetus and his son Enmeus, the latter of whom led from Phææ and the neighbouring towns eleven ships to the Trojan War. (Hom. H. ii. 711—715.) Phææ was one of the Thessalian towns which assisted the Athenians at the commencement of the Peloponnesian War. (Thuc. ii. 22.) At this time, it was under the government of an autocracy; but towards the end of the war Lycurgus established a tyranny at Phææ, and aimed at the domination of all Thessaly. His designs were carried into effect by his son Jason, who was elected Tagus or generalissimo of Thessaly about n. c. 374, and exercised an important influence in the affairs of Greece. He had so firmly established his power, that, after his assassination in n. c. 570, he was succeeded in the office of Tagus by his two brothers Polypyres and Polyphyes. The former of these was shortly afterwards assassinated by the latter; and Polyphyes was murdered in his turn by Alexander, who was either his nephew or his brother. Alexander governed his native city and Thessaly with great cruelty till n. c. 367, when he likewise was put to death by his wife Thebe and her brothers. Two of these brothers, Tisiphones and Lycurgus, successively held the supreme power, till at length in n. c. 362 Lycurgus was deposed by Philip, king of Macedon, and Pherae, with the rest of Thessaly, became virtually subject to Macedonia. (For details and authorities see the Dict. of Biog., under the respective names above mentioned.)

In n. c. 191 Pherae surrendered to Antiochus, king of Syria, but it shortly afterwards fell into the hands of the Roman consul Aculus. (Liv. xxxvi. 9, 14.) Situated at the end of the Pelasian plain, Phææ possessed a fertile territory. The city was surrounded with plantations, gardens, and walled enclosures. (Polyb. xxviii. 3.) Stephano B. (p. v.) speaks of an old and new Pheræ distant 8 stadia from each other.

In the middle of Pheræ was a celebrated fountain called Hydreus. (Τερφεύς, Strab. ix. p. 439; Pind. Ἑρ. iv. 221; Soph. Οἰ. Schol. ad FIND. L. c.; Plin. iv. 8. s. 15.) The fountain Messes was also probably in Pheræ. (Strab. ix. p. 432; Hom. H. ii. 457; Val. Flacc. iv. 374; Plin. l. c.)

The remains of Pheræ are situated at Velestina, where the ancient walls may be traced on every side except towards the plain. On the northern side are two tabular summits, below the easternmost of which on the southern side is the fountain Hydrea, which rushes from several openings in the rock, and immediately forms a stream. Apollodorus says (i. 49; comp. Schol. ad loc.) that Pheræ was situated at the foot of Mt. Chalcidonion (Χάλκεων), which is perhaps the southern and highest summit of Mt. Karadagh. (Leake, Northern Greece, vol. iv. p. 439, seq.)

2. In Messenia. [See Phææ, No. 2.]

PHÆRA, a fortress in Thessaly, of uncertain site. (Liv. xxxvi. 14.)

PHEUGARUM (Φήγαρος), a town in the northern part of Germany, probably in the territory of the Diligmii. (Ptol. ii. 11, § 27.) Its site is commonly assigned to the vicinity of Paderborn in Westphalia (Wilhelm, Germania, p. 134); but nothing certain can be said about it. [L. S.]

PHIALA, [PALLAESTINA, p. 519, b.]

PHIALA, [PALLAGIAS,]

PHIALA or PHLIALA (Φηλάλεια, Φηλάλεια), a town of the district Surgarussa, in Cappadocia (Ptol. v. 6, § 13), appears to be the same as the one mentioned in the Antonine Itinerary (295) under the name of Phiala, which was 56 miles west of Sebastia. [L. S.]

PHIBALIS, [MEGARA, p. 317, a.]

PHICUM, [BOCOTA, p. 412, a.]

PHIGALIA or PHIALIA (Φηγαλία, Φαλία), Psau.; Φηγαλία, Polyb. iv. 3; Φηγαλία, Psau.; Φαλία, ann. Steph. B. s. v.; Φαλία, Psau.; Φαλία, Polyb.; Εθν. Φηγαλία, Φαλία, Φιλαλία), an ancient town of Arcadia, situated in the south-western corner of the country, close to the frontiers of Messenia, and upon the great lake of the Neda, about half-way between the sources and the mouth of this river. The name Phiala was more ancient than that of Phiala, but the original name had again come into use in the time of Pausanias (viii. 39, § 2). The city was said to have derived its more ancient name from Phihagas, a son of Lycon, its original founder, and its later name from Phialus, a son of Lycon, its second founder. (Paus. l. c.; Steph. B.) In n. c. 659 the inhabitants of Phialia were obliged to surrender their city to the Lacedaemonians, but they recovered possession of it again by the help of a chosen body of Orestians, who, according to an oracle, perished fighting against the Lacedaemonians.
PHIGALIA.

(Paus. viii. 39. §§ 4, 5.) In p. 375 Phigalia was rent asunder by hostile factions, and the supporters of the Larisaean party, being expelled from the city, took possession of a fortress in the neighbourhood named Hema, from which they made excursions against Phigalia. (Diod. xv. 48.) In the wars between the Aetolians and Achaean, Phigalia became for some time the head-quarters of the Aetolian troops, who from thence plundered Messenia till they were at length driven out by Philipp of Macedon. (Polyb. iv. 3, seq., 79.) The Phigalians possessed several peculiar customs, respecting which Herculius of Lessing wrote a special work. This author relates that they were given to excess both in eating and drinking, to which their cold and ungenial climate may perhaps have contributed. (Athen. iv. p. 149, x. p. 442.)

Phigalia was still a place of importance when visited by Pausanias. He describes it as situated upon a lofty and precipitous hill, the greater part of the walls being built upon the rocks. There are still considerable remains of the ancient walls above the modern village of Perithia. The city was upwards of two miles in circumference. The rock, upon which it stood, slopes down towards the Neda; on the western side it is bounded by a ravine and on the eastern by the torrent Lymax, which flows into the Neda. The walls are of the usual thickness, faced with masonry of the second order, and filled in the middle with rubble. On the summit of the acropolis within the walls are the remains of a detached citadel, 80 yards in length, containing a round tower at the extremity, measuring 18 feet in the interior diameter. In ancient times a temple of Artemis Ateira stood on the summit of the acropolis. On the slope of the mountain lay the gymnasion and the temple of Dionysus Acrothorpos; and on the ground below, where the village of upper Perithia stands, was the agora, adorned with a statue of the paeoniac Arrachnos, who lost his life in the Olympic games, and with the sepulchre of the Oresthians, who perished to restore the Phigalians to their native city. (Paus. viii. 39. §§ 6, 40. § 1.)

Upon a rock, difficult of access, near the union of the Lymax and the Neda, was a temple of Eurynome, supposed to be a surname of Artemis, which was opened only once a year. In the same neighbourhood, and at the distance of 12 stadia from the city, were some warm baths, traces of which, according to the French Commission, are visible at the village of Treopoli, but the waters have long ceased to flow. (Paus. viii. 41. § 4, seq.)

Phigalia was surrounded by mountains, of which Pausanias mentions two by name, Cotilum (Kotilou) and Elatum (Elatou), the former to the left of the city, at the distance of 30 stadia, and the latter to the right at the distance of 30 stadia. As Cotilum lies to the NE. of Phigalia, and Pausanias in this description seems to have looked towards the east, Mt. Elisium should probably be placed on the opposite side of Phigalia, and consequently to the south of the Neda, in which case it would correspond to the lofty mountain of Kurela. Mt. Elisium contained a cavern sacred to Demeter the Black, situated in a grove of oaks. Of the position of Mt. Cotilum there is no doubt. On it was situated the temple of Apollo Epiceirus, which was built in the Peloponnesian War by Ictinos, the architect of the Parthenon at Athens. It was erected by the Phigalians in consequence of the relief afforded by Apollo during the plague in the Peloponnesian War, whence he received the surname of Epieirus. The temple stood in a place called Bassae, and according to Pausanias excelled all the temples of Peloponnesus, except that of Athena Alea at Tegea, in the beauty of the stone and the accuracy of its masonry. He particularly mentions that the roof was of stone as well as the rest of the building. (Paus. viii. 41. §§ 7, 8.) This temple still remains almost entire, and is next to the Theseum at Athens the best preserved of the temples of Greece. It stands in a glen (whence the name Bassa, Dor, Bjasan, ΒικΣα) near the summit of Mt. Cotilum, in the midst of a wilderness of rocks, studded with old knotty oaks. An eye-witness remarks that "there is certainly no remnant of the architectural splendour of Greece more calculated to fascinate the imagination than this temple, whether by its own size and beauty, by the contrast it offers to the wild desolation of the surrounding scenery, or the extent and variety of the prospect from its site." (Mure, Tour in Greece, vol. ii. p. 270.) A spring rises about 10 minutes SW. of the temple, and soon afterwards loses itself in the ground, as Pausanias has described. North of the temple was the highest summit of the mountain, which one reaches in 10 minutes' time by a broad road constructed by the Greeks. This summit was called Cotilum (Kotilou), whence the whole mountain derived the name of Cotilian. Here was a sanctuary of Aphrodite, of which there are still some traces. The grandeur of the ruins of the temple have given to the whole of the surrounding district the name of the Colonies (στοις στιλαοις ου κολαναιας). The temple is at least two hours and a half from the ruins of the city, and consequently more than the 40 stadia, which Pausanias mentions as the distance from Phigalia to Cotilum; but this distance perhaps applies to the nearest part of the mountain from the city. In modern times the temple remained long unknown, except to the shepherds of the country. Chandler, in
PHIGAMUS

1765, was the first who gave any account of it; it was subsequently visited and described by Gell, Dodwell, and others; and in 1812 the whole temple was very carefully examined by a body of artists and scholars, who cleared away the ruins of the cela, and thus revealed it with the exact form of the interior of the building. The results of these labours are given by Stackelberg, Der Apollotempel zu Bassai in Arkadien, Rom. 1826. The temple was a peripteral building of the Doric order. The stone of which it is built is a hard yellowish-brown limestone, susceptible of a high polish. It faces nearly north and south, was originally about 125 feet in length and 48 in breadth, and had 15 columns on either side, and 6 on either front. There were also 2 columns in the pronao and 2 in the pos-

PHILAE (Φηλαί), a small coast river in Pontus, flowing into the Euxine 100 stadia west of Poseidonium. (Arrian, Perip. Pont. En. p. 16; Anonym. Peripl. P. E. p. 11.) [L. S.]

PHILA, one of the small islands on the south coast of Gallia, which Pliny (iii. 5) enumerates between the Scandiales (Isles d'Hèrère) and Lero and Lerinia. (Le Lérrè.) Pliny's words are: "Tres Scota-

PHILA (Φίλαι), a frontier fortress of Macedonia towards Magnesia, and distant 5 m. from Her-

PHILADELPHIA (Φιλαδελφεία; Eik. Φειδίαλφος). 1. An important city in the east of Lydia, on the north-western side of Mount Tmolus, and not far from the southern bank of the river Cog-

PHILAE (Φηλαί), Strabo. i. p. 40, xviii. pp. 803, 818, 820; Dio. i. 22; Post. iv. 5; 74; Seneca. Quest. Nat. iv. 1; Plin. v. 9. s. 10); was, as the number of the word both in the Greek and Latin denotes, the appellation of two small islands situated in lat. 24° N., just above the cataract of Syene. Grockkari (Strab. vol. iii. p. 399) computes the dis-

cation by the book of Revelations (iii. 7). The town, which is men-

tioned also by Ptolemy (v. 2. § 17) and Hierocles (p. 669), gallantly defended itself against the Turks on more than one occasion, until at length it was conquered by Bajazid in A. D. 1390. (G. Pachym. p. 290; Mich. Duc. p. 70; Chaland. p. 33.) It now bears the name Philadelphia, but it is a mean thing the considerable town. Many parts of its ancient walls are still standing, and its ruined churches amount to about twenty-four. (Chandler, Travels, p. 310, foll.; Richter, Wallfahrten, p. 513, foll.)

2. A town in the interior of Cilicia Aspera, on the river Calydeus, above Aphrodiasis. (Post. v. 8. § 5; Hieroc. p. 710, who mentions it among the episcopal sees of Isauria.) Beaufort (Karanamia, p. 223) supposes the site to be represented by the town of Mount of Mood, which Leake regards as the site once occupied by Claudius (Asia Minor, p. 17).

3. A town of Palestine in the district of Perea, east of Jordan, near the river Jabbok, was the later name of Rabbath-Ammon, sometimes called Rabbah only, the ancient capital of the Ammoni-

ites. (Dion. xiii. 11; Jos. xiii. 25.) It was besieged by Josab and taken by David. (2 Sam. i. 1, xii. 26—31; 1 Chron. xx. 1.) It recovered its independence at a later period, and we find the prophets denouncing its destruction. (Jer. xliii. 3; Ezek. xxv. 5.) Subsequently, when this part of Palestine was subject to Assyry, the city was restored by Ptolemy Philadelphus, who gave it the name of Philadelpheia. (Steph. B. s. v.; Euseb. Onom. s. v. Παυμαθή Αμμούς.) Stephans says that it was originally called Amman, afterwards Astarte, and lastly Philadelpheia. It is frequently mentioned under its new name by Josephus (B. J. i. 6, § 3, 19, § 5, 17; 2. B. 2. p. 157; 17). Pliny (v. 18. s. 163). Hierocles (p. 722), and upon coins. (Eckhel, vol. iii. p. 351.) The old name, however, did not go out of use, for Poly-

bins speaks of the city under the name of Rabbata-

mano (Ῥαββαταμανο, p. 71.); and the ruins are now called Amman, a name which they also bore in the time of Abinid. (Tob. Sbr. p. 91.) Burek-

hardt has given a description of these ruins, with a plan. The most important are the remains of a large theatre. There are also remains of several temples, some of the columns being three feet and a half in diameter. A river flows through the ruins of the town. (Burekhardt, Syria, p. 357.)

PHILAE (Φηλαί), Strabo. i. p. 40, xviii. pp. 803, 818, 820; Dio. i. 22; Post. iv. 5; 74; Seneca. Quest. Nat. iv. 1; Plin. v. 9. s. 10); was, as the number of the word both in the Greek and Latin denotes, the appellation of two small islands situated in lat. 24° N., just above the cataract of Syene. Grockkari (Strab. vol. iii. p. 399) computes the dis-

cation between these islands and Syene at about 63 miles. Philae proper, although the smaller, is, from its numerous and picturesque ruins, the more interesting of the two. It is not more than 1250 English feet, or rather less than a quarter of a mile, long, and about 400 feet broad. It is composed of Sumeite stone; its sides are steep and perhaps escarped by the hand of man, and on their summits was built a lofty wall encompassing the island. For Philae, being accomodated one of the burying-places of Osiris, was held in high reverence both by the Egyptians to the N. and the Aethiopians to the S.; and it was deemed profane for any but priests to dwell therein, and was accordingly sequestered and denominated "the unapproachable" (Δηστας, q q 3)
PHILAE.

Plut. Re. et Osir. p. 359; Diod. i. 22. It was reported too that neither birds flew over it nor fish approached its shores. (Seneque. Quaest. Nat. iv. 2.) These indeed were the traditions of a remote period; since in the time of the Macedonian kings of Aegypt Philae was so much resorted to, partly by pilgrims to the tomb of Osiris, partly by persons on secular errands, that the priests petitioned Ptolemy Phuscon (n. c. 170—117) to prohibit public funerarities at least from coming thither and living at their expense. The ubelsanx on which this petition was engraved was brought into England by Mr. Banks, and its hieroglyphics, compared with those of the Rosetta stone, revealed great light upon the Egyptian phonetic alphabet. The islands of Philae were not, however, merely sacerdotal abodes: they were the centres of commerce also between Meroë and Memphis. For the rapidities of the cataracts were at most seasons impracticable, and the commodities exchanged between Aegypt and Asiathopia were reciprocally landed and re-embarked at Syene and Philae. The neighbouring granite-quarries attracted hither also a numerous population of miners and stonecutters. Indeed the facility of this trade, a gallery or road was formed in the rocks along the E. bank of the Nile, portions of which are still extant. Philae is also remarkable for the singular effects of light and shade resulting from its position near the tropic of Cancer. As the sun approaches its northern limit the shadows from the projecting cornices and mouldings of the temples sink lower and lower down the plain surfaces of the walls, until, the sun having reached its highest altitude, the vertical walls are covered with dark shadows, forming a striking contrast with the fierce light which enlightens all surrounding objects. (Ritter, Erdkunde, vol. i. p. 680, seq.)

The hieroglyphic name of the smaller island is Philrah, or boundary. As their southern frontier, the Pharos of Aegypt kept there a strong garrison, and, for the same reason, it was a barrack also for Macedonian and Roman soldiers.

The most conspicuous feature of both islands is their architectural wealth. Monuments of various ages, extractions from beds of granite to the Caesars, occupy nearly their whole area. The principal structures, however, lie at the S. end of the smaller island. The most ancient, at present discovered, are the remains of a temple of Athor (Aphrodite), built in the reign of Nectanebus. The other ruins are for the most part coeval with the Ptolemaic times, more especially with the reigns of Ptolemy-phinus. Ephyannes, and Philometor (n. c. 282—145), with many traces of Roman work as recent as Claudius I. (A. D. 41—54). The chief temple in Philae, dedicated to Amun Osiris, was approached from the river through a double colonnade. In front of the propyla were two colossal lions in granite, behind which stood a pair of obelisks, each 44 feet high. The propyla were pyramidal in form and colossal in dimensions. One stood between the dromos and propyla, another between the propyla and the peripteros, while a smaller one led into the sekos or aedynum. At each corner of the aedynum stood a marble lion, the cagy of a sacred hawk. Of these shrines one is now in the Louvre, the other in the Museum at Florence. Eight and left of the entrance into the principal court are two small temples or rather chapels, one of which, dedicated to Athor, is covered with sculptures representing the birth of Ptolemy Philometor, under the figure of the god Horus. The story of Osiris is everywhere represented on the walls of this temple, and two of its inner chambers are particularly rich in symbolic imagery. Upon the two great propyla are Greek inscriptions intersected and partially destroyed by Egyptian figures cut across them. The inscriptions belong to the Macedonian era, and are of earlier date than the sculptures, which were probably inserted during that interval of remissence for the native religion which followed the extinction of the Greek dynasty in Aegypt. (n. c. 30.) The monuments in both islands indeed attest, beyond any others in the Nile-rally, the survival of pure Aegyptian paganism. The work of the Pharos had ceased to reign. Great provinces have been taken to mutilate the sculptures of this temple. The work of demolition is attributable, in the first instance, to the zeal of the early Christians, and afterwards to the policy of the Iconoclasts, who carried raving for themselves with the Byzantine court by the destruction of heathen as well as Christian images. The soil of Philae was carefully prepared for the reception of its buildings,—being levelled where it was impracticable, or even where it was crumbling or insecure. For example, the western wall of the Great Temple, and the corresponding wall of the dromos, are supported by very strong foundations, built below the level of the water, and resting on the granite which in this region forms the bed of the Nile. Here and there steps are hewn out from the wall to facilitate the communication between the temple and the river.

At the S. extremity of the dromos of the Great Temple is a smaller temple, apparently dedicated to Isis; at least the few columns which remain of it are surrounded with the head of that goddess. Its portico consists of twelve columns, four in front and three deep. Their capitals represent various forms and combinations of the palm-branch, the dhoun-leaf, and the lotus-flower. These, as well as the sculptures on the columns, the ceilings, and the walls, were painted with the most vivid colours, which, owing to the dryness of the climate, have lost little of their original brilliancy.

Philae was a seat of the Christian religion as well as of the ancient Aegyptian faith. Ruins of a Christian church are still visible, and more than one aedynum bears traces of having been made to serve at different eas the purposes of a chapel of Osiris and of Christ. For a more particular account of the architectural remains of Philae we must refer the reader to the works of Dénon, Gau, Rosellini, Huysegger, and Hamilton (Aegyptia). The latter has minutely described this island—the Lorelei of ancient Aegypt. The Greek inscriptions found there are transcribed and elucidated by Letronne.

A little W. of Philae lies a larger island, anciently called Seum or Somnus, but now by the Arabs Beqeh. It is very precipitous, and from its most elevated peak affords a fine view of the Nile, from its smooth surface S. of the islands to its plunge over the shelves of rock that form the first Cataract. Philae, Beqeh, and another lesser island, divide the river into four principal streams, and N. of them it takes a rapid turn to the W. and then to the N., where the cataract begins. Beqeh, like Philae, was a holy island; its rocks are inscribed with the names and titles of Amunoph III., Rameses the Great, Psammitichus, Apries, and Amasis, together with memorials of the Macedonian and Roman rulers of Aegypt. Its principal ruins consist of the propyla and two
columns of a temple, which was apparently of small dimensions, but of elegant proportions. Near them are the fragments of two colossal granite statues, and also an excellent piece of masonry of much later date, having the aspect of an arch belonging to some Greek church or Saracen mosque.

W. B. D.

PHILAEA (Φιλαια), a fort on the coast of Cilicia, is mentioned only in the Stadiasmus Maris Magni (§§ 167, 168).

[L. S.]

PHILEAENIUM ARAE (Φιλεαιενιεν Αραη), an altar on the Danube, than 3 1/2 its distance from Earth, Plin. vii. p. 253; name of the ancient city of Philae, in the middle of the Great Syrtis. About the middle of the fourth century B.C., according to a wild story which may be read in Sallust (B. J. 79; comp. Val. Max. v. 6. § 4), these monuments commemorated the patriotic sacrifice of the two Philaeii, Carthaginian envoys. These pillars, which no longer existed in the time of Strabo (p. 171), continued to give a name to the spot from which they had disappeared. The locality is assigned to Risa Livonis, a headland a little to the W. of Naxos, the modern frontier between Sirt and Barbca. The Peutingter Table has a station of this name 25 M. P. from Anarabica; and, at the same distance from the latter, the Antinoe Itinerary has a station Benadada-Ary, probably a Punic name for Philenias Alters. As they were named by the Greeks of Cyrene. (Beechev, Expeditio to the Coast of Africa, p. 218; Barth, Viagemenagen, pp. 344, 366, 371.) [E. B. J.]

PHILAIADAE. [Attica, p. 352, b.; Philostratus, p. 1058 a.]

PHILEAE (Mela, ii. ii. § 5), or PHILIAES (Tob. Pent.; Geog. iv. 6. v. 12; Philae, Seymr. v. 722; Steph. B. 698, who, however, has also the forms Pha'lea and Phwca; Phlia, Anon. B. Pers. P. Fux., who also says that it was called Phva, with which name it is likewise found in Arrian, Pers. P. Fux. p. 25; comp. Zosim. i. 34), a town on the coast of Thrace, built by the Byzantines, on a promontory of the same name. It still exists under the slightly altered appellation of Palaee. (T. H. D.)

PHILEROS. [Mygdonia.]

PHILIA (Φιλία) βραχω, Polyl. iii. 11. § 4), a promontory on the coast of Thrace, 310 stadia SE. of Salmydessus (Karva Burnum ?), with a town of the same name.

[T. H. D.]

PHILIPPUS (Φιλίππος; Eth. Φιλίππης, Φιλίππης), a city of Macedonia, which took its name from its founder, Philip, the father of Alexander. Originally, it had been called CHRENIDAE (Κρηνιδας, Strab. vii. p. 351; Appian, B. C. iv. 105, 107; Steph. B. z. v. Φιλίππος), or the "Place of Fountains," from the numerous streams in which the Gangas takes its source. Near Chrenides were the principal mines of gold in a hill called according to Appian (I. c.) DIONYSS COLLIS (Διόνυσος Σταυρωμος), probably the same mountain as that where the Sarrae possessed an oracle of Dionysus interpreted by the Bessi. (Herod. vii. 111.) Chrenides does not appear to have belonged to the Thasians in early times, although it is said to have been the subject of their dominion in the 105th Olympiad (b. c. 360). When Philip of Macedon got possession of the mines, he worked them with so much success, that they yielded 1000 talents in a year, although previously they had not been very productive. (Diodor. xvi. 4—8.) The old city was enlarged by Philip, after the capture of Amphilopis, Pydna, and Potidaea, and fortified to protect his frontier against the Thracian mountainers.

On the plain of Philipps, between Haemus and Pangeus, the last battle was lost by the republicans of Rome. Appian (I. c.) has given a clear description of Philipps, in which Caesar and Brutus encamped. The town was situated on a steep hill, bordered to the N. by the forests through which the Cessian army advanced, —to the S. by a marsh, beyond which was the sea, to the E. by the passes of the Sappae and Corpili, and to the W. by the great plains of Myrmicus, Drabecceus, and the Strymon, which were 350 stadia in length. Not far from Philipps, was the hill of Dionysus, containing the gold mines called Aylas; and 18 stadia from the town, were two other heights, 8 stadia asunder; on the one to the N. Brutus pitched his camp, and Cassius on that to the S. Brutus was protected on his right by rocky hills, and the left of Cassius by a marsh. The river Gangas or Gangites flowed along the front, and the sea was in the rear. The camps of the two leaders, although separate, were enclosed within a common entrenchment, and midway between them was the pass, which led like a gate from Europe to Asia. The galleys were at Neapolis, 70 stadia distant, and the commissariat in Tissa, distant 100 stadia. Dion Cassius (xlvii. 35) adds, that Philipps was near Pangeus and Symbolum, and that Symbolum, which was between Philipps and Neapolis, was so called because it connected Pangeus with another mountain stretching inland; which indentifies it with the ridge which stretches from Prorista to Kareda, separating the bay of Kareda from the plain of Philipps. The Pyre, therefore, could be no other than the pass over that ridge called Kareda. M. Antonius took up his position on the right, opposite to that of Cassius, at a distance of 8 stadia from the enemy. Octavius Caesar was opposed to Brutus on the "left hand of the even field." Here, in the autumn of B. C. 42, in the first engagement, Brutus was successful against Octavius, while Antonius had the advantage over Cassius. Brutus, incompetent to maintain the discipline of his troops, was forced to fight again; and in an engagement which took place on the same ground, twenty days afterwards, the Republic perished. Regarding the battle a curious mistake was repeated by the Roman writers (Manil. i. 908; Ovid, Met. xvi. 824; Flor. iv. 42; Lucan, i. 680, vii. 854, ix. 271; Juven. viii. 242), who represented it as fought on the same ground as Pharsala,—a mistake which may have arisen from the ambiguity in the lines of Virgil (Georg. i. 490), and favoured by the fact of the double engagement at Philipps. (Mercure, Hist. of Roman Empire, vol. iii. p. 214.) Augustus afterwards presented it with the privileges of "a colony," with the name Col. Jul. Aug. Philipps. (Orelli, Inscr. 512. 3658. 3746. 4064; and on coins; Rasche, vol. iii. pt. 2. p. 1120), and conferred upon it the "Jus Italicum." (Dion Cass. li. 4.) It was here, in his second missionary journey, that St. Paul, accompanied by Silas, came into contact with the itinerant traders in popular superstitions (Acts, xvi. 12—15). And the city was again visited by the Apostle on his departure from Greece (Acts, xx. 6.) The Gospel obtained a home in Europe here, for the first time; and in the autumn of A. D. 62, its great teacher, from his prison, under the walls of Nero's palace, sent a letter of grateful acknowledgment to his Macedonian converts. Philipps was
PHILIPPI PROM. (Φιλίππις προμ., Stadionum, vii. § 8; Polyb. vi. 100; Steph. B. s. v.), a town on the coast of the Great Syrtis, identical with the Hippis Prox. of Ptol. (vii. § 14), and with the remarkable projection of high cliff in the sea, on which are traces of a strong fortress, at Ris Boraggadis. Beechey (Expedition, p. 188) identifies this cliff, which he calls Benguredith, with Ephraunthus; but this is a mistake, as is shown by Barth (Wanderungen, p. 367), who refers the station AD Turrem (Pent. Tab.) to this headland. [E. B. J.]

PHILIPPOLEIS. 1. (Φιλιππόλεις, Pol. iii. 11. § 12; Polyb. vi. 100; Steph. B. s. v.), a town of Tarace, founded by Philip of Macedon, on the site of a previously existing town, called Eumolpis or Peneropolis. (Amm. Marc. xxvi. 10. § 4; Plin. iv. 11. s. 18.) From its situation on a hill with three peaks or summits, it was also called Triomontium. (Plin. l. c.; Pol. l. c.) It lay on the SE. side of the Haurus. The Thracians, however, regained possession of it (Polyb. l. c.; Liv. xxxix. 53), and it remained in their hands till they were subdued by the Romans. Its size may be inferred from the fact of the Goths having slaughtered 100,000 persons in it (Amm. Marc. xxxii. 5. § 17), though doubtless many persons from the environs had taken refuge there. The assumption that it likewise bore the name of Hadrianopolis, rests only on an interpolation in Ptolomy. It is still called Philippopolis, and continues to be one of the most considerable towns of Thrace. (Tac. Ann. iii. 33; Itin. Ant. p. 136; Hieroc. p. 635.) [T. H. D.]

2. A city of Arabia, near Bostra, founded by the Roman emperor Philippus, who reigned A.D. 244—249, and who was a native of Bostra. (Amm. Vict. de Caece. 28; Codrington, p. 237; ed. Paris, vol. i. p. 431, ed. Bonn; Zonar. xii. 19.) Some writers suppose that Philippopolis was only a later name of Bostra, and it must be admitted that the words of Codrington and Zonaras are ambiguous; but they are meant as two different places in the Councila. (Labbe, Concill. vol. viii. pp. 644, 675; Wesseling, ad Hieroc. p. 722.)

PHILISTUNI. [Παλαιστίνα.] PHIL JGIOLOPTUS (Φιλιστιόπιτος), a fertile

woody hill in the plain of Elatea in Phocis, at the foot of which there was water. (Plut. Sall. 16.)

This description, according to Leake, agrees with the remarkable insulated conical height between Baskikeni and the Cephissus. (Northern Greece, vol. ii. p. 194.)

PHILOCALAIA (Φιλοκόλαγα), a town on the coast of Pontus Cappadocius, 90 stadia to the east of Argya, and 100 to the west of Corali. (Agrot. Perip. Pont. Eux. p. 17; Anonym. Perip. P. E. p. 13; Plin. vi. 4.) Cramer (Asia Minor, i. p. 283) is inclined to identify it with the modern Helkou, about half-way between Kerchou and Trebizond, while Hamilton (Researches, p. 254) seeks its site near the promontory of Kara Bourow, where a large river falls into the sea, which is more in accordance with Htg's words. [L. S.]

PHILOMELION, PHILOMELZON (Φιλομελείων,  Φιλομελέων), a town in the south-eastern part of Phrygia, which perhaps derived its name from the number of nightingales found in the district. It was situated in a plain not far from the borders of Lyconia, on the great road from Symna to Iconium. (Gic. ad Fam. iii. 8, xv. 4; Strab. xiv. p. 663, comp. with xii. p. 577; Pol. v. 2. § 25; Steph. B. s. v.) Philomelion belonged to the conventus of Symna (Plin. v. 25), and is mentioned in later times as belonging to Pisidia (Hieroc. p. 672; Pol. i. c.), the Pisidians in their pronunciation changing its name into Philomele or Philomene. (Cecrop. Hist. Arc. 18.) The town is often alluded to by the Byzantine historians in the wars of the Greek emperors with the sultans of Iconium. (Anna Comm. p. 473; Procop. l. c.; Nicet. Ann. p. 264.) Col. Leake (Asia Minor, p. 59) believes that the place was situated near the modern Kyam but it is more probable that we have to look for its site at Askheh, where ruins and inscriptions attest the existence of an ancient town. (Hamilton, Researches, i. p. 472, ii. p. 184; Arndell, Discoveries, i. p. 292, foll.)

PHILOTERA. 1. (Φιλότερη, Strab. xvi. p. 769; Steph. B. s. v.; Plin. vi. 29. s. 33; Φιλότερη λαογιός, Pol. iv. § 14; Φιλότερης, Apollod. ap. Steph. B. s. v.; Eth. Φιλότερης, a town in Upper Aegypt in the country of the Traglydotes, on the Arabian Gulf, near Myos-Hormos. It was named after a sister of Ptolomy Philadelphiaus, and was founded by Saturus, who was sent by Ptolomy to explore the country of the Traglydotes. (Strab. l. c.; see Mecene, ad Steph. B. l. c.)

2. (Eth. Φιλότερος), a city in Coele-Syria on the lake of Tiberias. (Steph. B. s. v.; Pol. xvi. p. 70.) Stephens says that in consequence of the Ethnic Φιλότερος some called the city Φιλότερα; and in Polybius it is written Φιλότερα.

PHILOTECA. [ΠΗΛΟΤΕΝΑ.] PHILYREIS (Φιλυρίς), an island off the coast of Pentus, in the Euxine. It must have been situated near Cape Zephyrium, opposite the district inhabited by the Phylories, from which, in all probability, it derived its name. (Apollon. Rhod. ii. 1231; comp. Amm. Marc. xxii. 8; Dionys. Per. 766; Steph. B. s. v. Φιλυρίς.) Hamilton (Researches, i. p. 261) identifies it with the small rocky island 2 miles west of Cape Zephyri, and between it and the island of Keramono Ada. [L. S.]

PHIUSNI (Φιουσνί). [Φευσνί.] PHINOPOLOIS (Φινωπόλις, Pol. iii. 11. § 4; Strab. vii. p. 319), a maritime town of Thrace, not far from the junction of the Beoporas with the
PHILUS. &c.

PHILUS, a town of Phlegraean Campania, a good distance from the sea, situated in the territory of Phlegraean Campania, which contained 3,000 citizens. Phlius was a small city, but it was mentioned by several ancient writers.

The territory of Phlius was divided into two parts, the one to the south, which was called Phlius, and the other to the north, which was called Philon. The city of Philon was situated on a high hill, and was surrounded by a wall. The inhabitants of Philon were said to have been descended from the Phlegraean Campanians.

The city of Phlius was situated on a plain, and was surrounded by a wall. The inhabitants of Phlius were said to have been descended from the Phlegraean Campanians.

Phlius was a small city, but it was mentioned by several ancient writers. The city was said to have been founded by the Phlegraean Campanians, who were the descendants of the Phlegraean Campanians.

The territory of Phlius was divided into two parts, the one to the south, which was called Phlius, and the other to the north, which was called Philon. The city of Philon was situated on a hill, and was surrounded by a wall. The inhabitants of Philon were said to have been descended from the Phlegraean Campanians.
It was at length obliged to surrender through failure of provisions in n. c. 379; and Aeschines appointed a council of 100 members (half from the exiles and half from the besieged), with powers of life and death over the citizens, and authorised to frame a new constitution. (Xen. Hell. v. 3. § 10, seq.; Plut. Ages. 24; Diod. xiv. 20.) From this time the Philians remained faithful to Sparta throughout the whole of the Theban War, though they had to suffer much from the devastation of their territory by their hostile neighbours. The Argives occupied and fortified Tricarum above Phlius, and the Sicyonians Thyamia on the Sicyonian frontier. (Xen. Hell. vii. 2, § 1.) In n. c. 368 the city was nearly taken by the exiles, who made no doubt belonged to the democratical party, and had been driven into exile after the capture of the city by Aeschines. In this year a body of Arcadians and Eleians, who were marching through Nemea to join Epiaminondas at the Isthmus, were persuaded by the Philian exiles to assist them in repulsing the city. During the night the exiles stole to the foot of the Acropolis; and in the morning when the scouts stationed by the citizens on the hill Tricarum announced that the enemy were in sight, the exiles seized the opportunity to scale the Acropolis, of which they obtained possession. They were, however, repulsed in their attempt to force their way into the town, and were eventually obliged to abandon the citadel also. The Arcadians and Argives were at the same time repulsed from the walls. (Xen. Hell. vii. 2, §§ 5—9.) In the following year Phlius was exposed to a still more formidable attack from the Theban commander at Sicyon, assisted by Kaphron, tyrant of that city. The main body of the army descended from Tricarum to the Heraeaum which stood at the foot of the mountain, in order to ravage the Philian plain. At the same time a detachment of Sicyonians and Polimedes were posted NE. of the Acropolis before the Corinthian gate, to hinder the Philians from attacking them in their rear. But the main body of the troops was repulsed; and being unable to join the detachment of Sicyonians and Polimedes in consequence of a ravine (φανάχια), the Philians attacked and defeated them with loss. (Xen. Hell. vii. 2, § 11, seq.)

After the death of Alexander, Phlius, like many of the other Peloponnesian cities, became subject to tyrants; but upon the organisation of the Achaeian League by Aratus, Cleonymus, who was then tyrant of Phlius, voluntarily resigned his power, and the city joined the league. (Polyb. ii. 44.)

Phlius is celebrated in the history of literature as the birthplace of Pratinas, the inventor of the Satyric drama, and who contended with Aeschylus for the prize at Athens. In the agora of Phlius was the tomb of Aristus, the son of Pratinas. (Paus. ii. 15. § 6.)

Pausanias says that on the Acropolis of Phlius was a temple of Hecate Ganyneia, in a cypress grove, which enjoyed the right of asylum. (Comp. Strab. viii. p. 382.) There was also a temple of Demeter on the Acropolis. On descending from the citadel there stood on the right a temple of Asclepius, and below it the theatre and another temple of Demeter. In the agora there were also other public buildings. (Paus. ii. 13. § 3, seq.) The principal place at present in the Phliasian is the village of St George, situated at the southern foot of Tricarum, a mountain with three summits, which bounds the plain to the NE. The ruins of Phlius are situated three quarters of an hour further west, on one of the spurs of Tricarum, above the right bank of the Asopus. They are of considerable extent, but present little more than foundations. On the south-western slope of the height stands the church of our Lady of the Hill (Παναγία 'Παρακλήτσα), from which the whole spot is now called 'το ιερό 'Παρακλήτσαν. It probably occupies the site of the temple of Asclepius. Ross found here the remains of several Doric pillars. Five stadia from the town on the Asopus are some ruins, which Ross considers to be those of Celeae (Κελαία), where Demeter was worshipped. (Paus. ii. 14. § 1.) Leake supposed Phlius to be represented by some ruins on the western side of the mountain, now called Polyfengos; but these are more correctly assigned by Ross to the ancient city of Artemethra; and their distance from the town already described corresponds to the 30 stadia which, according to Strabo, was the distance from Artemethra to Phlius.

On Mt. Tricarum are the remains of a small Hellene fortress called Paleókastron, which is probably the fortress erected by the Argives on this mountain. (Xen. Hell. vii. 2. §§ 1, 5, 11, 13; Dem. Megal. p. 206; Harpocrat. s. v. Τρικαράμος; Steph. B. s. v. Τρικαράμος) Thyamia, which the Sicyonians fortified, as already narrated (Xen. Hell. vii. 2, § 1), is placed by Ross on the lofty hill of Spiritik, the northern prolongation of Tricarum, between the villages Sonooga and Strupiai; on the summit are the remains of a large round tower, probably built by the Franks or Byzantines. In the southern part of the Phliasian is the Diocorion (Διοκορία), which is mentioned only by Polybius (iv. 67, 68, 73), and which lay on the road from Corinth over the mountain Apearon into the Styphalian. (Leake, Morea, vol. iii. p. 339, seq.; Ross, Reisen im Peloponnes, p. 25, seq.; Curtius, Peloponnesos, vol. ii. p. 470, seq.)

3. Paleókastron on Mount Tricarum.
4. The way to Nemea.

PHILYA. [Attica, p. 332, b.]
PHILGYONIUM.

PHILGYONIUM (Φιλγυώνιον), a city of Phocis, of unknown site, destroyed at the end of the Philian War. (Paus. x. 3. § 2; Steph. B. s. v.) Pindar calls it Philgyone, and erroneously represents it as a city of Boeotia (iv. 7. s. 12).

PHOCAEA (Φοικαία; Eth. Φωικαία or Φωικάες), the most northern of the Ionian cities in Asia Minor, was situated on a peninsula, between the Sinus Cyaneus and the Sinus Hermæaus, and at a distance of 200 stadia from Smyrna. (Strab. xiv. p. 632; Plin. v. 51; Pomp. Mela, i. 17.) It was said to have been colonists from Phocis, under the guidance of two Athenian chiefs, Phileocles and Damon. (Strab. i. c. p. 633; Paus. vii. 3. § 5.) The first settlers did not conquer the territory, but received it as a gift from the Cymaeans. The town, however, did not become a member of the Ionian confederacy until it placed princes of the line of Croesus at the head of the government. It had two excellent harbours, Nausathmus and Lampert, and before the entrance into them was situated the little island of Leostini, called from ancient times after the emigrants from Phocis, under the guidance of two Athenian chiefs, Phileocles and Damon. (Strab. i. c. p. 633; Paus. vii. 3. § 5.)

PHOCICUM. [Phocis.]

PHOCIS (ἡ Φώκης; Eth. Φώκερις, Phocensis), a small country in central Greece, bounded on the N. by Dryas, on the SE. and E. by the Locri Epizephyri and Oenitii, on the NE. by Boeotia, on the W. by the

COIN OF PHOCAEA.
Ozolian Locrians, and on the S. by the Corinthian gulf. The Phocians at one period of their history possessed a sea-port, Daphnis, on the Euboian sea, intervening between the Locri Epizephyrii and O Pactii (Strab. x. pp. 424, 425.) Phocis is a mountainous country. The greater part of it is occupied by the lofty and rugged range of Parnassus, the lower portion of which, named Cirphis, descends to the Corinthian gulf between Cirrha and Anticyra: below Cirphis was the fertile valley of Crissa, extending to the Corinthian gulf. On the N.E. and N., were the Locrian mountains, lofty and difficult of access on the side of the Epizephyrii, but less precipitous on the side of the O Pactii. [Locris.] Between Mount Parnassus and the Locrian mountains flowed the river Cephissus, which empties itself into the lake Copais in Boeotia. [Boeotia, p. 410, seq.] In the valley of the Cephissus are some narrow but fertile plains. The only other rivers in Phocias, besides the Cephissus and its tributaries, are the Paeius, flowing by Delphi [Delphi], and the Hacraeius, flowing into the Corinthian gulf near Bulis. [Bulis.]

Phocis is said to have been originally inhabited by several of those tribes who formed the population of Greece before the appearance of the Hellenes. Among the earliest inhabitants we find mention of Leleges (Diencarch. p. 5), Thracians (Strab. ix. p. 401; Thuc. ii. 29; comp. Paus. i. 41. § 8), and Hyantes. (Strab. i. c.) The aboriginal inhabitants were conquered by the Phlegraes from Orchomenus. (Paus viii. 4, § 4, x. 4, § 1.) The country around Tithorea and Delphi is said to have been first called Phocis from Phocus, a son of Ornyton, and grandson of Sisyphus of Corinth; and the name is said to have been afterwards extended to the whole country from Phocus, a son of Aeacus, who arrived there not long afterwards (Paus. ii. 29. § 3, x. 1. § 1.) This statement would seem to show that the Phocians were belief to be a mixed Aeolic and Achaean race, as Sisyphus was one of the Aeolic heroes, and Aeacus one of the Achaeans. In the Trojan War the inhabitants appear under the name of Phocians, and were led against Troy by Schedias and Epistrophus, the sons of Iphitos. (Hom. Il. ii. 517.) Phocis owes its chief importance in history to the celebrated oracle at Delphi, which originally belonged to the Phocians. But after the Dorians had obtained possession of the temple, they disowned their connection with the Phocians; and in historical times a violent antipathy existed between the Phocians and Delphians. [Delphi, p. 762.]

The Phocians proper dwelt chiefly in small towns situated upon either side of the Cephissus. They formed an ancient confederation, which assembled in a building named Phocium, near Danis. (Paus. x. 5. § 1.) They maintained their independence against the Thebans, who made several attempts to subdue them before the Persian War, and upon one occasion they even led a secret arm against the Thebans and Hyampolids (Herod. viii. 27, seq.; Paus. x. 1.) When Nereus invaded Greece, the Thebans were able to wreak their vengeance upon their ancient enemies. They conducted the Persian army into Phocis, and twelve of the Phociot cities were destroyed by the invaders. The inhabitants had previously escaped to the summits of Parnassus or across the mountains into the territory of the Locri Ozoloi. (Herod. viii. 92, seq.) Some of the Phocians were subsequently compelled to serve in the army of Mardonius, but those who had taken refuge on Mt. Parnassus sallied from their fastnesses and annoyed the Persian army. (Herod. ix. 17, 31; Paus. x. 1. § 11.)

It has been already remarked that the oracle at Delphi originally belonged to the Phocians. The latter, though dispossessed by the Delphians, had never relinquished their claims to it. In B. C. 450 the oracle was again in their possession; the Lacedaemonians sent an army to deprive them of it and restore it to the Delphians; but upon the retreat of their forces, the Athetians marched into Phocis, and handed over the temple to the Phocians. (Thuc. i. 112.) In the Peloponnesian War the Phocians were zealous allies of the Athenians. (Comp. Thuc. iii 95.) In the treaty of Nicia (B. C. 421), however, it was expressly stipulated that the Delphians should be independent of the Phocians (Thuc. v. 18); and from this time the temple continued in the undisputed possession of the Delphians till the Sacred War. After the battle of Leuctra (B. C. 371), the Phocians became subject to the Thebans. (Xen. Hell. vi. 5. § 23.) After the death of Epaminondas they deserted the Theban alliance; and the Thebans, in revenge, induced the Amphictyonic Council to sentence the Phocians to pay a heavy fine on the pretext of their having cultivated the Cirrhana plain, B. C. 357. Upon their refusal to pay this fine, the Amphictyonic Council consecrated the Phocian territory to Apollo, as Cirrha had been treated two centuries before. Thereupon the Phocians prepared for resistance, and were persuaded by Philomelus, one of their chief citizens, to seize the temple at Delphi, and appropriate its treasures to their own defence. Hence arose the celebrated Sacred or Phocian War, which is narrated in all histories of Greece. When the war was at length brought to a conclusion by the aid of Philip, the Amphictyonic Council wreaked its vengeance upon the wretched Phocians. It was decreed that all the towns of Phocis, twenty-two in number, with the exception of Albae, should be destroyed, and the inhabitants scattered into villages, containing not more than fifty houses each; and that they should replace by yearly instalments of fifty talents the treasures they had taken from the temple. The two votes, which they had had in the Amphictyonic Council, were taken away from them and given to Philip. (Diod. xv. 60; Paus. x. 3; Dem. de Fals. Leg. p. 383.) The Phocians subsequently rebuilt several of their cities with the assistance of the Athenians and their old enemies the Thebans, who had joined the Athenians in their opposition to Philip. The Phocians fought on the side of Grecian independence at the battle of Chaeroneia and in the Laucic war; and at a later period they resisted the Gauls, when they attempted to plunder the temple at Delphi. (Paus. x. 3. § 3.)

The chief town in Phocis, excepting Delphi, was Elatea, situated upon the left bank of the Cephe- sus, on the highroad from Locri to Boeotia, in the natural march of an army from Thermaipyle into central Greece. Next in importance was Albae, also to the left of the Cephissus, upon the E-ocean frontier, celebrated for its ancient oracle of Apollo. All the other towns of Phocis may be enumerated in the following order. Left of the Cephissus from N. to S. Deymaera, Erochus, Tithonium, Tithara, Hyampollis. Right of the Cephissus, and between this river and Mount Parnassus, Lilea, Chara- deia, Amyticea, Leophon, Neotis, which was sup- pressed by Tithorea (see NEOTIS). PARAPOTAM.
PHOCUSAE.

Between Parthassus and the Bceotic frontier, DAULIS, PANOPETES, TRACHIS. On Mount Parthassus, LYCORIA, DELPHI, CHIONA, ANEMOREIA, CYPRASIA, WEST OF PARTHASSUS, and in the neighbourhood of the Corinthian gulf from N. to S., CHERIB, the port-town of CRISAND DELPHI, CEPHIUS, MEDEON, ECHIDAMEIA, ANTICYRA, AMBRYSSUS, MARATHUS, STRIS, PHILYGONIA, BULIS with its port MYCHUS. (Dodwell, Classical Tour, vol. i. p. 155, seq.; Leake, Northern Greece, vol. ii. p. 69, seq.)

COIN OF PHOECIS.

PHOCUSAE, PHOCUSSEAE (Φωκούσαι, Iol. iv. 5. § 75; Φωκούσσαι, Athen. i. p. 30, d.; Hesych. s. e.; Steph. B.), islands lying off Zephyrium in Marmaria (Meras LABEL), which the Coast-describer (Stadiasmus. § 80) calls Delpheines. [E. B. J.]

PHOEBATAE, PHOEBATIS. [DASSARETAE.]

PHOEBIA. [DUPHIA.]

PHOENICE (Φωνηίς), a city of CASSIA in Epeirus, situated a little inland north of Butrintum (Strab. vii. p. 324), upon a river, the ancient name of which is not recorded. It is described by Polybius, in B.C. 230, as the strongest, most powerful, and richest of the cities of Epeirus. (Polyb. ii. 5, 8.) In that year it was captured by a party of Illyrians, assisted by some Gallic mercenaries; and the Epipots, who had marched to the rescue of the place, were surprised by a sally of the Illyrians from the city, and put to the rout with great slaughter. (Polyb. i. c.) Phoenice continued to be an important city, and it was here that a treaty of peace was negotiated between Philip and the Romans towards the close of the Second Punic War, B.C. 204. (Liv. xxix. 12; Polyb. xxvi. 27.) Phoenice appears to have escaped the fate of the other Epeirac cities, when they were destroyed by order of the senate, through the influence of Charops, one of its citizens. (Polyb. xxvii. 22.) It is mentioned by Ptolemy (iii. 14. § 7) and Hierocles (p. 652), and was restored by Justinian. (Procop. de Aedif. iv. 1.)Procopius says that it was situated in a low spot, surrounded by marshes, and that Justinian built a citadel upon a neighbouring hill. The remains of the ancient city are found upon a hill which still bears the name of Fimiki. "The entire hill was surrounded by Hellenic walls. At the south-eastern extremity was the citadel, 200 yards in length; some of the walls of which are still extant, from 12 to 20 feet in height. About the middle of the height is the employment of a very large theatre, the only remains of which are a small piece of rough wall, which encircled the back of the upper seats; at the bottom, in the place of the scene, is a small circular foundation, apparently that of a town of a later date. Between it and the north-western end of the citadel are the remains of a Roman construction, built in courses of tiles." (Leake Northern Greece, vol. i. p. 66.)

PHOENICIA, a country on the coast of Syria, bounded on the E. by Mount Lebanon.

I. NAME.

Its Greek name was Φωνηίς (Hist. Oli. iv. 83; Herod. iii. 5; Thucyd. i. 69; Strab. p. 736; Polyb. v. 13. § 21, &c.), which in the best Latin writers is, more properly rendered Phoenice (Cic. Acad. ii. 20; Tac. II. v. 6. Mela. i. 12; Plin. v. 13, &c.), and in later authors Phoenicia (Serv. ad Virg. Aen. i. 446; Mart. Capell. vi. 219, &c.), and once in a suspected passage of Cicero. (Fin. iv. 20.) The latter form has, however, prevailed among the moderns. By the Phoenicians themselves, and by the Israelites, their land was called Canaan, or Chna; an appellation which embraced the whole district between the river Jordan and the Mediterranean. In Genesis the name of Canaan only occurs as that of a person, and the country is described as "the land of Canaan." In the tenth chapter of that book the following tribes are mentioned; the Arvadites, Sinites, Arkites, and Zemarites, whose sites may be identified with Aradus, Senna, Arca, and Simyra; whilst the name of Sidon, described as the firstborn of Canaan, marks one of the most important of the Phoenician towns. The abbreviated form Chna (XOC) occurs in a fragment of Heracletus (fragm. Histor. Graec. p. 17, Paris, 1841), and in Stephen Byzantinus (s. v.): and the translation of Sanchuniathon by Philo, quoted by Eusebius (Preep. Evang. i. p. 87, ed. Gaissford) records the change of this appellation into Phoenix. The Septuagint frequently renders the Hebrew Canaan and Canaanite by Phoenicia and Phoenician. In Hebrew, Chna or Canaan signifies a low or flat land, from סלול, "to be low," in allusion to the low land of the coast. Its Greek name Φωνηίς has been variously deduced from the brother of Cadmus, from the palm-tree, from the purple or blood-red dye, Φωοής, which formed the staple of Phoenician commerce, and from the Red Sea, or Mare Erythræum, where the Phoenicians are supposed to have originally dwelt. (Steph. B. s. v.; Sil. Ital. i. 89; Hesych. s. v. φωοής; Ach. Tatus. ii. 4; Strab. i. p. 42, &c.) Of all these etymologies the second is the most probable, as it accords with the practice of antiquity in many other instances.

II. PHYSICAL GEOGRAPHY.

The boundaries of Phœnicia are not very clearly laid down in ancient writers. The Mediterranean sea on the W., and Lebanon on the E., form natural limits; but on the N. and S. they are variously fixed. According to Herodotus the N. boundary of Phœnicia was the bay of Myriandrus, whilst on the S. it terminated a little below Mount Carmel, or where the territory of Judæa touched the sea (iii. 5, iv. 38, vii. 89). Strabo makes it extend from Orthesia on the N., to Pelusium in Egypt on the S. (xvi. pp. 753, 756). But Phœnicia, considered as a political confederation, neither reached so far N. as the boundary of Herodotus, nor so far S. as that of Strabo. Myriandrus was indeed inhabited by Phœnicians; but it appears to have been only a colony, and was separated from Phœnicia, properly so called, by an intervening tract of the Syrian coast. (Xenoph. Anab. i. 4. § 6.) The more accurate boundaries of Phœnicia, and which will be adopted here, are these laid down by Pliny (v. 17), which include it between Aradus on the N., and the river Chores or Crecosilion on the S. The same limits are given in Ptolemy (v. 15. § 4), except

PHOENICIA. 605
that he makes the river Eleutherus the N. boundary, and does not mention Arados, which lay a little to the N. of that stream. There can be no question, however, that Arados belonged to Phoenicia. So, too, at the southern extremity, the town of Doras was unquestionably Phoenician, whilst Caesarea, the first town S. of the Chersones, belonged to Palestine.

Phoenicia, as thus defined, lies between lat. 32° 38' and 34° 52' N., and long. 35—36° E. It forms a narrow slip of land about 120 miles in length, and seldom more, but frequently less, than 12 miles broad. The range of Libannus, which skirts the greater part of its eastern side, throws out spurs which form promontories on the coast, the most remarkable of which are Then-prosopon (Tem- promptum) between the towns of Trieris and Botrys, and the Promontorium Album between Tyre and Kedippa. Further to the S. Mount Carmel forms another bold promontory. The whole of Phoenicia presents a succession of hills and valleys, and is traversed by numerous small rivers which descend from the mountains and render it well watered and fruitful. The coast-line trends in a south-westerly direction; so that whilst its northern extremity lies nearly under long. 36°, its southern one is about under 35°. Arados, its most northerly town, lies on an island of the same name, between 2 and 3 miles from the mainland, and nearly opposite to the southern extremity of Mount Barylus. On the coast over against it lay Antarasus. From this point to Tripolis the coast forms an extensive bay, into which several rivers fall. The principal being the Eleutherus (Nahr-el-Kebir), which flows through the valley between Mount Barylus and Libannus. To the north of the Eleutherus lies the promontory of Simyra and Marathus; to the S. the principal town before arriving at Tripolis was Orthias, close to the seashore. Tripolis stands on a promontory about half a mile broad, and running a mile into the sea. It is washed by a little river now called El-Kadiasha, "the holy." Tripolis derived its name from being the federal town of the three leading Phoenician cities, Tyre, Sidon, and Arados, each of which had its separate quarter. To the S. of Tripolis the country is, for the most part, composed of a series of chalk hills, which press so closely on the sea as to leave no room for cultivation, and scarcely even for a road, and which form the bold promontory already mentioned of Daphneon. (Ros-sa-Shebak.) The chief towns of this district are Calanous and Trieris. To the S. of Then-preon the hills recede a little from the sea, but at a distance of between 20 and 30 miles form another lofty promontory called Chinnax (Ros Walta Selbat), from the circumstance that the steepness of the cliffs renders it necessary to cut steps in them. Along this tract several rivers descend into the sea, the principal of which is the Adonis (Nahr-el-Ibrahim). The chief towns are Botrys, 7 miles S. of Then-preon, and Byblus, a little S. of the Adonis. Pala-biblus lay still farther S., but its site is unknown. Ajjhana, noted for its licentious worship of Venus, was seated in the interior, at the source of the river Adonis in Libannus. The promontory of Chinnax formed the N. point of the bay, now called Kurynameh, S. extremity of which, at a distance of about 12 miles, is formed by the headland Ros-en-Nahr-el-Kelb, on which the town of Berytus formerly stood. At about the middle of this bay the river Lycus (Nahr-el-Kelb) discharges itself into the sea through a narrow chasm the nearly perpendicular cliffs of which are 200 feet in height. At the eastern extremity of the valley of the Lycus rises the Gehel-el-Samnin, the highest summit of Libannus. The southern side of this valley is enclosed by steep and almost inaccessible cliffs, up the face of which traces of a road are still visible, made probably by the Egyptians during their wars in Palestine. A lower and broader road of more gradual ascent was constructed by the emperor M. Aurelius. To the S. of this spot, the plain between Libannus and the sea at Beyruts is of greater length than in any other part of Phoenicia. The land, which consists of gentle undulations, is, very fertile, and produces oranges and mulberry trees in abundance. This plain extends southwards as far as the river Tannurs, a distance of about 10 miles. Beyruts (Beirout) is washed by the river Magoras. From the headland on which it stands—the most projecting point in Phoenicia—the coast again forms a long curve down to Sidon. On this part of the coast stand the towns of Platanus and Phoriphyrum. A little to the N. of Platanus is the river Tamiras (Damour), already mentioned, and between Phoriphyrum and Sidon the river Bostrum (Auleius). To the S. of the Tamiris the country again becomes rugged and barren, and the hills press closely upon the sea. The narrow plain of the Bostrum, however, about 2 miles broad, is of the highest fertility, and produces the finest fruits in Syria. Sidon stands on a small promontory about 2 miles S. of the Bostrum. From Sidon a plain extends to a distance of about 8 miles S., as far as Sarepta, the Zarephath of the Book of Kings (1 Kings, xvii. 9), which stands on an eminence near the sea. From Sarepta to Tyre is a distance of about 9 miles. Nine miles to the N. of Tyre the site of the ancient Ornithomopolis is supposed to be marked by a place called Admon or Atloum. At this place the plain, which had expanded after passing Sarepta, again contracts to about 2 miles, and runs along the coast in gentle undulations to Tyre, where it expands to a width of about 5 miles. The hills which bound it are, however, of no great height, and are cultivated to the summit. At about 5 miles N. of Tyre this plain is crossed by the river Kozanias, supposed to be the ancient Leontes, the most considerable of Phoenicia, and the only one which makes its way through the barrier of the mountain. It rises in the valley of Bekaa, between Libannus and Anti-libannus, at a height of 4000 feet above the level of the sea. The upper part of its course, in which it is known by the name of El-Litani, is consequently precipitous and romantic, till it forces its way through the defiles at the southern extremity of Libannus. Sudden and violent gusts of wind frequently rush down its valley, rendering the navigation of this part of the coast very dangerous. From Tyre, the site of which will be found described under its proper head, the coast runs in a westerly direction for a distance of about 8 miles, to the Promontorium Album (Ros-el-Ablain), before mentioned,—a bluff headland consisting of white perpendicular cliffs 300 feet high. The road from Tyre to its summit seems originally to have consisted of a series of steep ascent; hence it was called Chinnax by the ancient writers, and the Tyrian writers; but subsequently a road was laboriously cut through the rock, it is said, by Alexander the Great. From this promontory the coast proceeds in a straight and almost southerly direction to Ptolemais or Acco (Acre), a distance of between 20 and 30 miles. About midway lay
The Achzib of Scripture (Josh. xix. 29), regarded by the Jews after the captivity as the northern boundary of Judaea. Tmolhaim stands on the right bank of the river Belus (Naaman), but at a little distance from it. To the SE. a fertile plain stretches itself out as far as the hills of Galilee. From Tmolhaim the coast forms a lofty bay, about 8 miles across, the further extremity of which is formed by the promontory of Carmel. It is now called the bay or gulf of Kaifus. The bold and lofty headland of Carmel is only a continuation or spur of the mountain of the same name, a range of no great height, from 1200 to 1500 feet, which runs for 18 miles in a direction from SE. to NW., gradually sinking as it approaches the coast. A current near the cape or promontory is about 582 feet above the sea. On its NE. side flows the Kishon of Scripture, which, when not swollen by rains, is a small stream finding its way through the sand into the sea. Towards the bay the sides of Carmel are steep and rugged, but on the south they slope gently and are more fertile. Carmel was celebrated in Hebrew song for its beauty and fertility; and though its orchards and vineyards no longer exist, the richness of the soil is still marked by the presence of its shrubs and the luxuriance of its wild-flowers. From the promontory of Carmel the coast gradually sinks, and at its lowest point stands Dor, a town celebrated in ancient times for the manufacture of the Phoenician purple. Beyond this point we shall not pursue the description of the coast; for although between Dor and Egypt some towns are found which were inhabited by Phoenicians, yet in their geographical distribution they belong more properly to Palestine.

That part of the Mediterranean which washes the coast of Phoenicia was called by the Greeks το Φωινικικον νησιον (Agasthen. ii. 14), or Συνηθώς "Σαλασσα (Dios. Per. v. 117), and by the Latin Mare Phoenicum. (Plin. v. 13, ix. 12, &c.) Its southern portion, as far as Sidon, is affected by the currents which carry the alluvial soil brought down by the Nile to the eastward; so that towns which were once maritime are now become inland, and the famous harbours of Tyre and Sidon are nearly choked with sand.

The climate of Phoenicia is tempered by the vicinity of Lebanon, which is capped with snow during the greater part of the year, and retains it in its ravines even during the heats of summer. (Tac. Hist. v. 6.) Hence the temperature is much lower than might be expected from the latitude. At Beirut, which lies in the centre of Phoenicia, the usual summer heat is about 90° Fahrenheit, whilst the winter temperature is rarely lower than 50°. In the mountains, however, the winter is severe, and heavy falls of snow take place. The rainy season commences towards the end of October, or beginning of November, from which time till March there are considerable falls of rain or snow. From May till October rain is very unusual.

As Phoenicia, though small in extent, is, from its configuration and natural features, subject to a great variety of climate, so its vegetable productions are necessarily very various. The sides of Lebanon are clothed with pines, firs, and cypresses, besides its famed cedars. The lowlands produces corn of all sorts, peaches, pomegranates, grapes, oranges, citrons, figs, dates, and other fruits. It also yields sugar, cotton, tobacco, and silk. The whole country is subject to earthquakes, the effect of volcanic agency; from which cause, as well as from the action of the currents already mentioned, both Tyre and Sidon have suffered changes which render them no longer to be recognised from ancient descriptions. In some places the coast has been depressed by earthquakes, and at the mouth of the river Lycurus are traces of submerged quarries. (Berton, Topogr. de Tyr. p. 54.) In like manner, the lake Cendevia, at the foot of Carmel, in which Phiny (v. 17) describes the river Belus as rising, has now disappeared; though Shaw (Trav. ii. 33) mentions some pools near its source. The geographical structure of Phoenicia is recent, and consists of chalk and sandstone, the higher mountains being formed of the Jura limestone. The only metal found is iron, which occurs in considerable quantities in the hills above Beirut.

In the sandstone of the same district, bituminous wood and brown coal are found, but in small quantities and impregnated with sulphur.

III. ETHNOLOGICAL RELATIONS OF THE PHOENICIANS.

The Phoenicians were called by the Greeks Φοινικοί (Hon. Od. iv. 84; Herod. i. 1; Thucyd. i. 8, &c.), and by the Romans Phoenices (Cic. N. D. ii. 41; Mela, i. 12; Plin. v. 13, &c.). They were a branch of the great Semitic or Arabic race. The Scriptures give no indication that they were not indigenous; and when the Hebrews settled in Canaan, Sidon and Tyre were already flourishing cities. (Josh. xix. 28, 29.) By classing, however, the Phoenicians, or Canaanites, among the descendants of Ham (Genesis, x. 15), the Scriptures imply an immigration. The reason of this classification, was probably their colour, the darkness of their complexion indicating a southern origin; yet their language, a safer criterion, marks them, as we have said, for a Semitic race. This, though not strictly identical with the Hebrew, was the nearest allied to it of all the Semitic tongues. St. Jerome (Coma, in Jer. xxv. 21) and St. Augustine (Tract. 15 in Evang. Joan.) testify that the Punic language resembled the Hebrew. The same affinity is observable in Punic words preserved in Greek and Roman writers; as in the Phoeniscus of Plautus, especially since the improvement of the text by the collation of Mai. The similarity is also evinced by bilingual inscriptions discovered at Athens, where many Phoenicians were settled, as will be related in the sequel. But perhaps one of the most remarkable proofs is the inscription on the Carthaginian tablet discovered at Marseilles in 1845, of which 74 words, out of 94, occur in the Old Testament.

Profane writers describe the Phoenicians as immigrants from the borders of the Persian Gulf. Thus Herodotus (i. 1, vii. 89) asserts that they originally dwelt on the Erythraean sea; an appellation which, in his language, as well as in that of other ancient writers, embraces not only the present Red Sea, but also the Persian Gulf and Indian Ocean. To the same purpose is the testimony of Strabo (xvi. p. 766), who adds that there were in the Persian Gulf two islands, Tiras and Arbus, the inhabitants of which had temples resembling those of the Phoenicians, and who were placed on the same named islands on the coast of the Mediterranean as their colonies. Heeren (Researches, vol. ii. p. 56, Eng. trans.), who admits that traces of Phoenician workmanship and buildings have lately been discovered in these islands, reverses the parentage, and
makes them to be colonies of their more celebrated neighbours, in opposition to the testimony of Strabo, and without producing any counter authority. The isle of Tylos or Tyros is likewise mentioned by Piny (vi, 92). The account given by Justin is in harmony with these authorities (xvii. 3). He describes the Phœnicians as having been obliged in their native seats by an earthquake, and as migrating thence, first to what he calls the "Assyrian lake," and subsequently to the shores of the Mediterranean. A recent writer (Kerwick, Phœnicia, p. 47) takes this Assyrian lake to have been Gennesaret or the Dead Sea, as there was no other collection of waters in S. Assyria to which the term could be applied. This would have formed a natural resting-place in the journey of the emigrants. It must not, however, be concealed, that the account of these writers has been rejected by several very eminent authors, as Bochart, Hengstenberg, Heeren, Niebuhr, and others, and more recently by Movers, a writer who has paid great attention to Phœnician history, and who has discussed this question at considerable length. (Die Phœnicier, vol. ii. pt. i. pp. 23—62.) His principal arguments are, that the Phœnician traditions, which go back to the primitive chaos, represent even the gods, as well as the invention of all the arts of life; that the Phœnician emigrants, whose testimony is preferable, both on account of its antiquity, and because it arose out of the bosom of the people themselves, make no mention of any such immigration, though at that time its memory could not have been obliterated had it really occurred, and though it would have served the purpose of the Jews to represent the Canaanites as intruders; and that the name of the people, being derived from the character of the land, as well as the appellations of different tribes, such as the Gibli at Byblus, the Sidonians at Sidon, &c., mark them as indigenous. But it may be observed, that the Phœnician traditions rest on the equivocal authority of the pretended Sannioithi, and come to us so questionable a shape that they may evidently be made to serve any purpose. Thus Movers himself quotes a passage from Sannioithi (vol. ii. pt. i. p. 29), to the effect that the Tyrians invented ship-building, because it directly contradicts the statement that they were the descendants of a sea-faring people on the shores of the Persian Gulf; although he had previously cited the same passage (vol. i. p. 143) in proof of the Euhemerism of Philo-Sannioithi, who, it is there said, attributed the invention of navigation to the Cabiri merely because the Phœnician mariners considered themselves as sailing under the protection of their deities. Can such testimony be compared with that of the "loyal-hearted and truthful Herodotus," as Movers characterises him (vol. i. pt. ii. p. 134), who, he observed, besides finds his account on the traditions of the Phœnicians (as apo&iota &abar, vii. 89), and who could have had no possible interest in misrepresented them? Nor could the natural vanity of the Phœnicians have found any gratification in misleading him on this point, since the tradition lessened, rather than enhanced, the splendour of their origin. The testimony of the Scriptures on the subject is merely negative; nor, were it otherwise, could they be taken as a certain guide in ethnological inquiries. They were not written with that view, and we have already adverted to some of the principal heads, and they who wish to pursue the inquiry further are referred to the passage in Movers's work already indicated, and to Mr. Kerwick's Phœnicia (chap. iii.).

IV. HISTORY.

Our knowledge of Phœnician history is only fragmentary. Its native records, both literary and monumental, have almost utterly perished; and we are thus reduced to gather from scattered notices in the Old Testament and in the Greek and Roman authors, and sometimes to supply by inference, the annals of a country which stands the second in point of antiquity, which for some thousands of years played a considerable part in the world, and to which Europe owes the germ of her civilisation.

If we accept the authority of Herodotus, the Phœnicians must have appeared upon the coasts of the Mediterranean at least twenty-seven or twenty-eight centuries before the birth of Christ. In order to ascertain the age of Hercules, respecting which the Egyptian chronology differed very widely from the Greek, that conscientious historian resolved to inquire for himself, and accordingly sailed to Tyre, where he had heard that there was a famous temple of Hercules. It was, therefore, expressly for the purpose of settling a chronological point that he was at the trouble of making this voyage, and it is natural to suppose that he did not adopt the information which he received from the priests without some examination. From these he learned that the temple had existed 2300 years, and that it was coeval with the foundation of Tyre (ii. 43, 44). Now, as Herodotus flourished about the middle of the fifth century before our era, it follows that Tyre must have been founded about 2750 years B.C. The high antiquity of this date is undoubtedly startling, and on that account has been rejected by several critics and historians. Yet it does not appear why it should be regarded as altogether improbable. The chronology of the Jews is carried back more than 2000 years B.C.; yet the Jewish Scriptures uniformly intimate the much higher, and indeed immemorable, antiquity of the Canaanites. Again, if we look at Egypt, this era would fall under the 14th dynasty of its kings. (2750—2631 B.C.), who had had an historical existence, and to whom many conquests are attributed before this period. This dynasty was followed by that of the Hyksos, who were probably Canaanites, and are described by Manetho as skilled in the art of war, and of fortifying camps and cities. (Syn. pp. 113, 114: Schol. in Platon. Tim. vol. vii. p. 288, ed. Tauchn.)

If Sidon was older than Tyre, and its mothercity, as it claimed to be, this would add some difficulty to the question, by carrying back the chronology to a still higher period. But even this objection cannot be regarded as fatal to the date assigned to Tyre. Cities at so short a distance might easily have been planted by one another within a very brief space of time from their origination; and the contest between them in ancient times for priority, not only shows that the question was a very ambiguous one, but also leads to the inference that the difference in their dates could not have been very great. The weight of ancient evidence on either side of the question is pretty nearly balanced. On

* This is the date assigned by Movers; but by some authorities it is placed later.
one side it is alleged that Sidon is styled in Scripture the eldest born of Canaan (Gen. xix. 13), whilst Tyre is not mentioned till the invasion of Palestine by the Israelites. (Josh. xix. 29.) But in the former passage there is nothing to connect the person with the city; and the second argument is at best only negative. It is further urged that the name of Tyre does not occur once in Homer, though the Sidonians are frequently mentioned; and in one passage (Od. xiii. 285) Sidon is used as the general name of Phoenicia. This, however, only shows that, in the time of Homer, Sidonia was the leading city, and does not prove that it was founded before Tyre. The same remark may be applied to the silence of Scripture. That Tyre was in existence, and must have been a flourishing city in the time of Homer, is unquestionable; since, as will be seen further on, she founded the colony of Gadeira, or Cadiz, not long after the Trojan War; and many years of commercial prosperity must have elapsed before she could have planted so distant a possession. Poets, who are not bound to historical accuracy, will often use one name in preference to another merely because it is more sonorous, or for some similar reason; and Strabo (xvi. p. 756), in commenting upon this very circumstance of Homer’s silence, observes that it was only the poets who glorified Sidon, whilst the Phoenician colonists, both in Africa and Spain, gave the preference to Tyre. This passage has been cited in proof of Strabo’s own decision in favour of Sidon; but the ambiguous wording of it, nothing certain can be concluded. Movers (ii. pt. i. p. 118) even constructs it in favour of Tyre; but it must be confessed that the opposite view is rather strengthened by another passage (i. p. 40) in which Strabo calls Sidon the metropolis of the Phoenicians (τὴν μεταρρυθμων αὐτῶν). On the other hand, it may be remarked, that all the most ancient Phoenician traditions relate to Tyre, and not to Sidon; that Tyre is called μαρτφα Φοινίκη by Melaeus the epigrammatist (Anth. Graec. vii. 428. 13), who lived before the time of Strabo; that an inscription to the same effect is found on a coin of Antiochus IV., B.C. 175—164 (Gesen. Mon. Phoen. i. 262); and that the later Roman and Greek writers seem unanimously to have regarded the claim of Tyre to superior antiquity as preferable. Thus the emperor Hadrian settled the ancient dispute in favour of that city (Suidas, s. v. Παλαιός Τύρος), and other testimonies will be found in Orosius (iii. 16), Ulpian (Digest. tit. xxxv.), and Eusebius (Porphyr. p. 7, ed. Wynt.) It may also be remarked that if the Phoenicians came from the Persian Gulf, the name of Tyre shows that it must have been one of their earliest settlements on the Mediterranean. This dispute, however, was not confined to Tyre and Sidon, and Byblos and Berytus also claimed to be regarded as the oldest of the Phoenician cities.

But however this may be, it seems certain that the latest of the Phoenician settlements in Syria, which was, perhaps, Hamath or Epaphonia on the Orontes, preceded the conquest of Canaan by the Jews, which event is usually placed in the year 1450 B.C. The expedition of Joshua into Canaan is one of the earliest events known in the history of the Phoenicians. In order to oppose his progress, the king of Hazar organised a confederacy of the Canaanite states. (Josh. ii. 10.) But the allies were overthrown with great slaughter. Hazor was taken and destroyed, and the territory of the con-

federate kings, with the exception of a few fortresses, fell into the power of the Israelites. The defeated host was pursued as far as Sidon; but neither that nor any other town of Phoenicia, properly so called, fell into the hands of the Jews, nor on the whole does the expedition of Joshua seem to have had much effect on its political condition. Yet there was a constant succession of hostilities between the Phoenicians and some of the Jewish tribes; and in the book of Judges (x. 12) we find the Sidonians mentioned among the oppressors of Israel.

Sidon, then, must have early risen to be a powerful kingdom, as may indeed be also inferred from the Homeric poems, in which its trade and manufactures are frequently alluded to. Yet a year before the capture of Troy, the Sidonians were defeated by the king of Aesclus, and they were obliged to take refuge—or at all events a great proportion of them—at Tyre. (Justin, xviii. 3.) We are ignorant how this conquest was effected. The name of Aesclus probably represents the Phoenician pentapolis of Philistia; and we know that shortly after this event the Philistines were powerful enough to reduce the kingdom of Israel to the condition of a tributary, and to retain it as such till the time of David. Justin, in the passage just cited, speaks of Tyre as founded by the Sidonians (condiderunt) on this occasion. This expression, however, by no means implies a first foundation, since in the next chapter he again uses the same word to denote the restoration of Tyre by Alexander the Great. It has been already said, as will appear at greater length in the account of the Phoenician colonies, that Tyre must have been a city of considerable importance before this period. The account of Justin is corroborated by Josephus, who, in allusion no doubt to the same event, places the foundation of Tyre 240 years before that of Solomon’s temple. (Ant. viii. 3.) If Justin followed the computation of the Parian marble, the fall of Troy took place in the year 1209 B.C.; and if the disputed date of Solomon’s temple be fixed at 969 B.C., the apotheosis of Menes (Phoen. ii. pt. i. p. 149), then 969 + 240 = 1209. Josephus, in the passage cited, uses the word ἀνασκέψις, a dwelling in, and could no more have meant the original foundation of Tyre than Justin, since that city is mentioned in the Old Testament as in existence two centuries and a half before the building of the temple.

From the period of the Sidonian migration, Tyre must be regarded as the head of the Phoenician nation. During the headship of Sidon, the history of Phoenicia is mythical. Phoenix, who is represented as the father of Cadmus and Europa, is a mere personification of the country; Belus, the first king, is the god Baal; and Agenor, the reputed founder both of Tyre and Sidon, is nothing but a Greek epithet, perhaps of Hercules. The history of Tyre also, before the age of Solomon, is unconnected. Solomon’s relations with Hiram, king of Tyre, led Josephus to search the Tyrian histories of Dins and Menander. Hiram succeeded Abibal; and from this time to the foundation of Carthage there is a regular succession of dates and reigns.

Tyre was in fact a double city, the original town being on the continent, and the new one on an island about half a mile from the shore. When the latter was founded, the original city obtained the name of Palae-Tyros, or Old Tyre. The island, however, must have been used as a naval station from the very earliest times, and as a place consecrated to the
PHOENICIA.

worship of the national deities Astaras, Belus, and particularly Melcarth, or the Tyrian Hercules. According to Justin, indeed, the oldest temple of Hercules was in Pala-Tyrus (xi. 10, comp. Curt. iv. 2); but this assertion may have been made by the Tyrians in order to evade the request of Alexander, who wished to gain an entrance into their island city under pretense of sacrificing to that deity.

Hiram succeeded to the crown of Tyre a little before the building of Solomon's temple (1 Kings, xvi. 14). He added to and improved the new city, and by means of substructions even gained space enough to build a large square or place, the circus. He maintained friendly relations with King David, which were confirmed by commerce and by intermarriages. Hiram furnished the Jewish monarch with cedar-wood and workmen to construct his palace, as well as materials for his proposed temple, the building of which, however, was reserved for his son. The Phoenicians, on the other hand, imported the corn and oil of Judah. Under the reign of Solomon this intercourse was cemented by a formal treaty of commerce, by which that monarch engaged to furnish yearly 20,000 eors of wheat, and the like quantity of oil, for the use of Hiram's household, while Hiram, in return, supplied Solomon with workmen to cut and prepare the wood for his temple, and others skilful in working metal and stone, in engraving, dyeing, and manufacturing fine linen. Solomon also gave Tyre a district containing twenty towns. (1 Kings, ix. 13; Joseph. Ant. viii. 5.) In these transactions we perceive the relations of a commercial and an agricultural people; but Hiram was also of great assistance to Solomon in his maritime and commercial enterprises, and his searches after the gold of Ophir, when his victories over the Edomites had given him the command of the Arabian, or eastern, gulf of the Red Sea. The pilots and mariners for these voyages were furnished by Hiram. Except, however, in connection with the Israelites, we know little concerning the reign of this monarch. He appears to have undertaken an expedition against Citium in Cyprus, probably a revolted colony of the Phoenicians, and to have established a festival in honour of Melcarth, or Hercules. (Joseph. l. c.) By his great works at Tyre he entailed an enormous expense upon the people; and his splendid reign, which lasted thirty-four years, was followed at no great interval by political troubles. His dynasty was continued for seven years in the person of his son Baleazar, or Baleesttars. and nine years in that of his grandson Abelahzars. The latter was put to death by the four sons of his nurse, the eldest of whom usurped the supreme power for a space of twelve years. This revolution is connected by Movers (ii. pt. i. p. 342) with the account of the servile insurrection at Tyre given by Justin (xviii. 3), who, however, with his usual neglect of chronology, has placed it a great deal too late. This interregnum, which, according to the account adopted, was a common reign of terror, was terminated by a counter-revolution. The usurper, whose name is not mentioned, either died or was deposed, and the line of Hiram was restored in the person of Astaraz,—the Strato of Justin,—a son of Balesttars. This prince reigned twelve years, and was succeeded by his brother Astaryums, or Asseryums, who ruled nine years. The latter was murdered by another brother, Phides, who, after reigning a few months was in turn assas

* The cor was equal to 73.48, or 52 pecks.
by the Egyptian monarch, and an extensive commerce appears to have been carried on with the coast of Naukratis. The next wars in which we find the Phoenicians engaged were with the Babylonians; though the account of Berosus, that Nabopolassar, who reigned towards the end of the seventh century B.C., held Phoenicia in subjection, and that his son Nebuchadnezzar reduced it when in a state of revolt, must be regarded as doubtful. At all events, however, it appears to have been in alliance with the Chaldeans at this period; since we find it related that Apries, king of Egypt, was killed in war with that nation, conqueror Cyprus and Phoenicia. (Herod. ii. 161; Diod. i. 68.) When Nebuchadnezzar ascended the throne, we find that, after quelling a revolt of the Jews and reducing Jerusalem (B.C. 587), he marched into Phoenicia, took Sidon apparently by assault, with dreadful carnage, and proceeded to invest Tyre. (Ezkiel, xxvii.) For an account of this siege, one of the most memorable in ancient history, we are again indebted to Josephus (v. 11), who extracted it from Tyrian annals. It is said to have lasted thirteen years. Another Ibthoandal was at this time king of Tyre. The description of the siege by Ezekiel would seem to apply to Pala-Tyrus, though it is probable that insular Tyre was also attempted. (Grote, Hist. of Greece, iii. p. 355, note.) The result of the siege is by no means clear. Berosus, indeed, affirms (Ep. Joseph. c. Apion. i. 20) that Nebuchadnezzar subdued all Syria and Phoenicia; but there is no evidence of an assault upon Tyre, and the words of Ezekiel (xxxi. 17) seem to imply that the siege was unsuccessful. The same dynasty continued to reign. Ibthoandal was succeeded by Baal; and the subsequent changes in the government indicate internal revolution, but not subjection to a foreign power. The kings were superseded by judges or suffetes, and after a few years the royal line appears to have been restored; but whether by the spontaneous act of the Tyrians, or by compulsion of the Babylonians, is a disputed point.

Ezekiel's description of Tyre at the breaking out of the Babylonian war exhibits it as the head of the Phoenician states. Sidon and Arados are represented as furnishing soldiers and mariners, and the artificers of Byblus as working in its dockyards. (Ezkiel xxvii. 8, 9, 11.) But that war was a severe blow to the power of the Tyrians, which now began to decline. Cyrus was wrested from them by Amasis, king of Egypt, though a branch of the royal family of Tyre appears to have retained the sovereignty of Salamis for some generations. (Herod. v. 104; Iber. Evag. p. 79, 1, 2, 28.) Mechelus was succeeded by his brother Ezikulon, or Hiram, during whose reign Cyrus conquered Babylon (538 B.C.). When the latter monarch permitted the Jews to rebuild Jerusalem, we find Tyre and Sidon again assisting in the work (Ezra, ii. 7), a proof that their commerce was still in a flourishing state. Xenophon (Cyr. Prop. i. 1. § 5) represents the Cyrus as ruling over Phoenicia as well as Cyprus and Egypt; and though this is not confirmed by any collateral proof, they must at all events have very soon submitted to his son Cambyses. (Herod. iii. 19.)

The relations with Persia seem, however, to have been those of a voluntary alliance rather than of a forced subjection; since, though the Phoenicians assisted Cambyses against the Egyptians, they refused to serve against their colonists the Carthaginians. Their fleet was of great assistance to the Persians, and enabled Darius to make himself master of the island of the coast of Asia Minor. (Thucyd. i. 16; Hist. Mem. c. 9.) Phoenicians at Palestine and Cyprus, formed the fifth of the twenty nations into which the empire of Darius was divided. (Herod. iii. 91.) These names were, in fact, satrapies; but it does not appear that they interfered with the constitutions of the several countries in which they were established; at all events native princes continued to reign in Phoenicia. Although Sidon became a royal Persian residence, it still had its native king, and so did Tyre. (Herod. viii. 67.) When Darius was meditating his expedition against Greece, Sidon supplied two triremes and a store-ship to enable Democedes to explore the coasts. (Ib. iii. 136.) Subsequently the Phoenicians provided the Persians with a fleet wherewith to reduce not only the revolted Ionian cities, but even their own former colony of Cyprus. In the bust of these enterprises they were defeated by the Ionian fleet (Ib. v. 108, 112); but they were the chief means of reducing the island of Melos (Ib. vi. 6), by the defeat which they inflicted on the Ionians off Lade. (Ib. c. 14.) After the subjugation of the Asiatic islands, the Phoenician fleet proceeded to the Thracian Chersonese, where they captured Miletus, the son of Miltiades (Ib. c. 41), and subsequently appear to have scorched the Aegean and to have ravaged the coasts of Boetia. (Ib. c. 118.) They assisted Xerxes in his expedition against Greece, and along with the Egyptians constructed the bridge of boats across the Hellespont. (Ib. vii. 34.) They helped to make the canal over the isthmus of Mount Athos, in which, as well as in other engineering works, they displayed a skill much superior to that of the other nations employed. (Ib. c. 23.) In the naval review of Xerxes in the Hellespont they carried off the prize from all competitors by the excellence of their ships and the skill of their mariners; whilst among the Phoenicians themselves the Sidonians were far the most distinguished (Ib. cc. 44, 96), and it was in a vessel belonging to the latter people that Xerxes embarked to conduct the review. (Ib. c. 100.) The Phoenician ships composed nearly half of the fleet which Xerxes had collected; yet at the battle of Artemision they do not appear to have played so distinguished a part as the Egyptians. (Ib. viii. 17.) When routed by the Athenians at Salamis they consigned to Xerxes, who sat overlooking the battle on his silver-footed throne, that their ships had been treacherously sunk by the Ionians. Just at this instant, however, extraordinary skill and valour were displayed by a Samothracian vessel, and the Great King, charging the Phoenicians with having falsely accused the Ionians in order to screen their own cowardice and ill-conduct, caused many of them to be beheaded. (Ib. c. 90.) At the battle of the Eurymedon (B.C. 466), the Phoenician fleet was totally defeated by the Athenians under Cimon, on which occasion 100 of their vessels were captured (Ibid. xi. 62), or according to Thucydides (I. 100) 200, who, however, is probably alluding to the whole number of their fleet. Subsequently the Athenians obtained such naval superiority that we find them carrying on maritime operations on the coast of Phocis and Phocis itself; though in their unfortunate expedition to Egypt fifty of their triremes were almost entirely destroyed by the Phoenicians. (Thucyd. i. 109.) This disgrace was wiped out by the Athenians under Amazstrates in a great victory gained over

PHOENICIA.
the Phoenicians off Salamis in Cyprus, n.c. 449, when 100 of their ships were taken, many sunk, and the remnant pursued to their own harbours. (Ib. c. 112.) A cessation of hostilities now ensued between the Greeks and Persians. The Phoenician navy continued to be employed by the latter, but was no longer exposed to the attacks of the Athenians. In n.c. 411 the Phoenicians prepared a fleet of 147 vessels, to assist the Spartans against Athens; but after advancing as far as Aspendus in Pamphylia it was suddenly recalled, either because the demonstration was a mere ruse on the part of Tissaphernes, or that the Phoenicians were obliged to defend their own coast, now threatened by the Egyptians. (Thucyl. viii. 87, 108; Dod. xiii. 38. 46.) They next appear as the auxiliaries of the Athenians against the Spartans, who had gained the naval supremacy by the battle of Aegospotami, a preponderance which had changed the former policy of Persia. The allied fleet having been sent by Copon and Phoenicians, and after the defeat of the Spartans the Phoenician seamen were employed in rebuilding the walls of Athens. (Dod. xiv. 81; Nep. Cons. c. 4.) These events led to a more intimate connection between Phoenicia and Athens; Phoenician traders appear to have settled in that city, where three Phoenician inscriptions have been discovered of the date apparently of about 350 B.C. (Gesen. Mon. Pana. i. 111.) A few years later, a decree was passed by the Athenians setting up a preserver between Strato, king of Sidon, and the Athenians; whilst an immunity from the usual burthens imposed on aliens was granted to Sidonians settling at Athens. (Böckh, Corp. Incar. i. 126.) About the same time we find the Phoenicians, as the subjects of Persia, engaged in a disastrous war with Evagoras, prince of Salamis in Cyprus, who ravaged their coasts, and, according to Isocrates (Eroyg. p. 201) and Diodorus (xiv. 98, 110, xv. 2), captured even Tyre itself. But in 356 B.C. Evagoras was defeated in a great naval engagement, and subsequently became a tributary of Persia. (Ib. xiv. 9.) During all this period Sidon appears to have been the most wealthy and prosperous of the Phoenician cities. (Ib. xvi. 41.) The next important event in the history of the Phoenicians is their revolt from Persia, which ended in a disastrous manner. Sidon had been oppressed by the satraps and generals of Artaxerxes Ochus; and in a general assembly of the Phoenicians at Tripolis, in n.c. 352, it was resolved to throw off the Persian yoke. The royal residence at Sidon was destroyed and the Persians massacred. The Phoenicians then fortified Sidon, and invited Nectanebus, king of Egypt, to assist them. In the following year Ochus made great preparations to quell this revolt, and particularly to punish Sidon; when Tennes, king of that city, alarmed at the fate which menaced him, treacherously conciliated to betray it to the Persians. He inveigled 100 of the leading citizens into the enemy's camp, where they were put to death, and then persuaded the Egyptian mercenaries to admit the Persians into the city. The Sidonians, who had burnt their fleet in order to prevent any escape from the common danger, being thus reduced to despair, shut themselves up with their wives and children, and set fire to their houses. Including slaves, 40,000 persons are said to have perished on this occasion. Tennes, however, suffered the merited reward of his treason, and was either put to death by Ochus or committed suicide. This calamity was a great, but not a fatal, blow to the prosperity of Sidon, which even to a much later period retained a considerable portion of her opulence. (Dod. xvi. 41, sqq.; Mela. i. 12.)

The cruelty of the Persians left a lasting remembrance, and was not wholly unrequited. When about twenty years afterwards Alexander entered Phoenicia, Sidon hastened to open her gates to him. The defeat of Darius at Issus, n.c. 333, opened the whole coast of Phoenicia to the Greeks. On his march Alexander was met by Strato, son of Gerostratus, king of Aradus, who surrendered that island to him, as well as some towns on the mainland. As he proceeded southwards he received the submission of Byblos, and entered Sidon at the invitation of the inhabitants. He deposed Strato, their king, a vassal of the Persians; and Abdolonus, who was related to Strato, but who at that time followed the humble occupation of a gardener in the suburbs of the city, was nominated to the vacant throne by Alexander's general Bissephonides. (Curt. iv. 4.) The Tyrians in now sending an embassy, professing submission to the Macedonians, but without any real design of giving up their city. (Arrian, ii. 15.) It was impossible, however, for Alexander to proceed on his intended expedition, whilst so important a place lay in his rear, at least a doubtful friend, and, in case of reverses, soon, perhaps, to become a declared enemy. With a disinclination equal to that of the Tyrians, he sought to gain possession of their town by requesting permission to enter and sacrifice to Hercules, the progenitor of the royal race of Macedon, as well as the tutelary god of Tyre. But the Tyrians perceiving his design, directed him to another temple of Hercules at Palae-Tyros, where he might sacrifice in all liberty and with still greater effect, as the fane, they asserted, was more ancient and venerable than that of the new city in the island. Alexander, however, still hankered after the latter, and made preparations for besieging the new town. (Arrian, ii. 16; Curt. iv. 7, seq.) The means by which he succeeded in now capturing Tyre will be found described in another place. (Tyre.) It will suffice here to say, that by means of a ram-eway, and after a seven months' siege, the city of merchant princes yielded to the arms of Alexander, who was assisted in the enterprise by the ships of Sidon, Byblos, and Aradus. The city was burnt, and most of the inhabitants either killed or sold into slavery. Alexander repudiated it, principally, perhaps, with Carthage, who seem to have been intimately connected with the Phoenicians, since we find Caria called Phoeueis by Corinna and Isaeides. (Athens. iv. p. 174.) After the battle of Arbela, Alexander incorporated Phoecicia, Syria and Cilicia into one province. With the true commercial spirit the Phoenicians availed themselves of his conquests to extend their trade, and their merchants, following the track of the Macedonian army, carried home myrrh and sand from the deserts of Gezireh. (Arrian, vi. 22, Indoc. 18.) Alexander employed them to man the ships which were to sail down the Hyphasis to the Indian Ocean, as well as to build the vessels which were conveyed overland to Thapsacus on the Euphrates, with the view of descending to Babylon. (Ib.) By these means he intended to colonise the islands and coasts of the Persian Gulf; but his schemes were frustrated by his death, n.c. 323. After that event Ptolemy, to whom Egypt had fallen, annexed Phoenicia, together with Syria and Palestine, to his kingdom.
PHOENICIA.

(Deb. xvi. 43.) But in the year 315 B.C. Antigonus, returning victorious from Babylonia, easily expelled the garrisons of Ptolemy from all the Phoenician towns except Tyre, where he experienced an obstinate resistance. Eighteen years had sufficed to restore it in a considerable degree to its ancient wealth and power; and although the mole still remained in the bay of the Punic port, it was not reduced till after a siege of fifteen months. From this period down to near the end of the third century B.C. there was an almost constant succession of struggles for the possession of Phoenicia between the Ptolemies on one side and the Seleucidae on the other. Ptolemy Euergetes succeeded in reducing it, and it was held by him and his son Philopator down to the year 218 B.C.; when Antiochus the Great, taking advantage of the indolent and sensual character of the latter, and the consequent disorders of his administration, undertook its recovery. Tyre and Ace were surrendered to him by the treachery of Theodotus, the lieutenant of Philopator, and the Egyptian army and fleet were defeated and driven to take refuge at Sidon. In the following year, however, Philopator defeated Antiochus at Raphia near the frontiers of Egypt, and regained possession of Phoenicia and Syria, which he retained till his death, n. c. 205. The reign of Antiochus I. was almost as imperious under the stipations of Antiochus. He succeeded in reducing Phoenicia, and after repulsing an attempt of the Egyptians to regain it in n. c. 198, firmly established his dominion, and bequeathed it to his sons. Notwithstanding these struggles, Tyre appears to have still enjoyed a considerable share of commercial prosperity, in which, however, she had now to encounter a formidable rival in Alexandria. At first, indeed, that city did not much interfere with her prosperity; but the foundation of Berenice on the Red Sea by Ptolemy Philadelphus, the making of a road between that place and Coptos, and the re-opening of the canal which connected the gulf of Suez with the Pselias branch of the Nile (Strab. p. 781) inflicted a severe blow upon her commerce, and converted Alexandria into the chief emporium for the products of the East.

The civil wars of the Seleucidae, and the sufferings which they entailed, induced the Syrians and Phoenicians to place themselves under the protection of Tigranes, king of Armenia, in the year 88 B.C. (Justin, x. 1; Appian, Syr. 48.) Ace, or Ptolemais, was the only city which, at the instigation of Selene, queen of Antigonus, refused to open its gates to Tigranes. That monarch held Phoenicia during fourteen years, when the Seleucidae regained it for a short time in consequence of the victories of Lucullus. Four years later Pompey reduced all Syria to the condition of a Roman province. During the civil wars of Rome, Phoenicia was the scene of many struggles between the Roman generals. Just previously to the battle of Philippi, Cassius divided Syria into several small principalities, which he sold to the highest bidders; and in this way Tyre had again a king called Marion. Antony presented the whole country between Egypt and the river Euphrates to Cleopatra, but, in spite of her intrigues to the contrary, secured Tyre and Sidon in their ancient freedom. (Joseph. Ant. xx. 4. § 1.) But when Augustus visited the East, n. c. 20, he deprieved them of their liberties. (Dion Cass. litt. 7.) Although the Roman dominion put an end to the political existence of Tyre and Sidon, they retained their manufactures and commerce for a considerable period. Mela, who probably wrote during the reign of Claudius, characterises Sidon as "ad urbem opulentam" (i. 12); and Pliny, at about the same period, adverts to the staple trade of Tyre as being still in a flourishing condition ("nunc omnis ejus nobilitas conchyli aquis purpurae constat," v. 17). At the capture of the American Punic colony by the Carthaginians we have already mentioned, granted to Tyre the title of metropolis. It was the residence of a preconsul, and the chief naval station on the coast of Syria. During the contest of Septimius Severus and Pescennius Niger for imperial power, A. D. 193, Beritovs favoured the cause of Niger, Tyre that of Septimius; in consequence of which, it was taken and burnt by the light Mauritanian troops of Niger, who committed great slaughters. (Herod. iii. 9. § 10.) Severus, after his success, recruited the population of Tyre from the third legion, and, as a reward for its attachment, bestowed on it the Jus Italicum and the title of colony. (Ulpian, Dig. Leg. de Cens. tit. 15; Eckhel, vol. iii. p. 387.) In the time of St. Jerome, towards the end of the fourth century, it was still the first commercial city of the East (Comm. ad Ech. xxvi. 7, xxvii. 2); and after the destruction of Byzantium by an earthquake in the reign of Justinian, it monopolised the manufacture of imperial purple, which it had previously shared with that city. Beyond this period it is not necessary to pursue the history of Phoenicia. We shall only add that Tyre continued to flourish under the mild dominion of the caliphs, and that, in spite of all the violence which it suffered from the crusaders, its prosperity was not utterly annihilated till the conquest of Syria by the Ottoman Turks, A. D. 1516; a result, however, to which the discovery of the New World, and of a route to Asia by the Cape of Good Hope, likewise contributed.

V. Political Constitution.

Phoenicia consisted of several small independent kingdoms, or rather cities, which were sometimes united with and sometimes opposed to one another, just as we find Canaan described at the time when it was invaded by the Israelites. (Strab. xvi. p. 754; Josua, x.) We have but little information respecting the constitution of these kingdoms. The throne was commonly hereditary, but the people seem to have possessed a right of election. (Justin, xviii. 4.) The chief priests exercised great power, and were next in rank to the king. Thus Sichabas, or Sicheaus, chief priest of the temple of Hercules, was the husband of Dido, and consequently the brother-in-law of king Pygmalion. There seems also to have been a powerful aristocracy, but on what it was founded is unknown. Thus a body of nobles, who are called senators, accompanied the emigration of Dido. (Justin, l. c.) During the interregnum at Tyre after the servile insurrection, the government was carried on by elective magistrates, called judges or scribes. (Joseph. e. Ap. i. 21.) This institution also obtained at Gades and Cartage, and probably in all the western colonies of Tyre. (Liv. xxxviii. 37; comp. Movers, ii. p. i. p. 534.) Kings existed in Phoenicia down to the time of Alexander the Great. (Arr. ii. 24.) The federal constitution of Phoeneica resembled a Grecian hegemony; either Tyre or Sidon was always at the head, though Aradus and Byblos likewise had kings. During the earliest period of its history, Sidon appears to have been the leading city; but after its capture by the king

r. 3
of Ascalon, and the emigration of its inhabitants, as already related, Tyre became dominant, and retained the supremacy till the Persian conquest. Confedera-
tions among the Phoenician cities for some common object were frequent, and are mentioned by Joshua as early as the time of Moses (xxi. 26). Subsequently, the great council of the Phoenicians assembled on these occasions at Tripolis (Diod. xvi. 41), where, as we have already said, the three leading towns, Sidon, Tyre, and Aradus, had each its separate quarter; from which circumstance, the town derived its name. Aradus, however, does not appear to have obtained this privilege till a later period of Phoenician history; as in the time of Ezekiel it was subordinate to Tyre (xxvii. 8, sqq.); and Byblus, though it had its own king, and is sometimes men-
tioned as furnishing mariners, seems never to have had a voice in the confederate councils. The popu-
lation of Phoenicia consisted in great part of slaves. Its military force, as might be supposed from the nature of the country, was chiefly naval; and in order to defend themselves from the attacks of the Assyrness and Persians, the Phoenicians were com-
pelled to employ mercenary troops, who were perhaps mostly Africans. (Diod. L c.; Ezekiel, xxviii.)

VI. RELIGION.

The nature of the Phoenician religion can only be gathered from incidental allusions in the Greek and Roman writers, and in the Scriptures. A few coins and idols have been found in Cyprus, but connected only with the local Phoenician religion in that island. The most systematic account will be found in the 

Praeparatio Evangelica of Eusebius, where there are extracts from Sanchoniatho, prophet to 
have lived in the time of Moses, who was entertained in Crete by Zeus, the god of Byblus. It would be too long to enter here into his fabulous cosmogony, which was of an atheistic nature, and was characterised chiefly by a personification of the elements. From the wind Kol-pis, and Baan, his 

wife, were produced Aeon and Protonorus, the first metals. These had three sons, Light, Fire, and Flame, who produced a race of giants from whom the mountains were named,—as Castus, Libanus, Anti-
hibamus and Brathy, —and who with their descend-
ants discovered the various arts of life. In later 
times a human origin was assigned to the gods, that is, they were regarded as deified men; and this new theology was abundantly grafted on the old cosmogony. Elinn and his wife Beruth are their progenitors, who dwelt near Byblus. From Elinn descends Ouranos (Heaven), who weds his sister Ge (Earth), and has by her four sons, Hris (or Cronos), Betoius, Dagon, and Atlas; and three daughters, Astarte, Rhea, and Diane. Cronos, grown to man's estate, despoils his father, and puts to death his own son, Suid, and one of his daughters. Ouranos, returning from banishment, is treacherously put to death by Cronos, who afterwards travels about the world, establishing Athea in Attica and making Taut king of Egypt. (Kenrick, Phoen. p. 295.)

Baal and Asharoth, the two chief divinities of 
Phoenicia, were the sun and moon. The name of 
Baal was applied to Phoenican kings, and Belus is 
the first king of Assyria and Phoenicia. At a later 
period Baal became a ditinct supreme god, and the 
sun obtained a separate worship (2 Kings, xxiii. 5).

As the supreme god, the Greeks and Romans iden-
tified him with their Zeus, or Jupiter, and not with 
Apollo. Bel or Baal was also identified with the planet 
Saturn. We find his name prefixed to that of other 
deities, as Baal-Phegor, the god of licentiousness, 
Baal-Zebub, the god of flies, &c.; as well as to that 
of many places in which he had temples, as Baal-
gal, Baal-Hasmon, &c. Groves on elevated places 
were dedicated to his worship: human victims were 
sometimes offered to him as well as to Moloch. (Jerem. xix. 4, 5.) He was worshipped with 
fanatical rites, his votaries crying aloud, and cutting 
themselves with knives and lancets. Asharoth or 
Astarte, the principal female divinity, was identified 
by the Greeks and Romans sometimes with Juno, 
sometimes with Venus, though properly and origi-
nally she represented the moon. The principal 
seat of her worship was Sidon. She was symbolised 
by a heifer, a figure with a heifer's head, and 
horns resembling the crescent moon. The name of 
Astarte was Phoenician (Ps. Lucian, de Dea Syr. 
e. 4; but she does not appear with that appellation 
in the early Greek writers, who regard Aphrodite, 
or Venus Urania, as the principal Phoenician god-
dess. Herodotus (i. 105, 131, iii. 8) says that 
her worship was transferred from Ascalon, its oldest 
seat, to Cyprus and Cythera, and identifies her with 
the Babylonian Melittia, the character of whose wor-
ship was depicted in a temple at Byblus. Her original image or sym-
bol, like that of many of the oldest deities, was a 
conical stone, as in the case of the Paphian Venus 
(Tac. H. ii. 3; Max. Tyr. Diss. 38), of the Cybele 
of Pessinus (Liv. xxix. 11), and others. In Cyprus 
she worship degenerated into licentiousness, but the 
Cyprian coins bear the primitive image of the conical 
stone. In Carthage, on the contrary, she appeared 
as a virgin, with martial attributes, and was wor-
shipped with severe rites. She must be distinguished 
from Astarte-Margat, or Dercesto, who had also a temple 
in Cyprus. As she was identified with Baal of Byblus, 
she was a goddess of war. The worship of Tyre, 
where, according to the description of Diodorus, 
was dedicated to her, was of the utmost licentiousness, 
and was accompanied by animal worship. (1 Macc. 
ii. 38; 2 Macc. xvii. 5.) She was abjured by the 
Christian church, in the time of Eusebius, who 
assumed to himself the title of Asstarchus.

The worships of Phoenicia were so different from 
each other, that they could not be identified, even 
in common places of abomination. (Euseb. 
V. Const. iii. 55.)

Cronos, or Saturn, is said by the Greek and Latin writers to have been one of the principal 
Phoenician deities, but it is not easy to identify him. 
Human victims formed the most striking feature of 
his worship; but he was an epicure difficult to 
please, and the most acceptable offering was an only 
child. (Porphyry, de Abs. ii. 56; Euseb. 
Laud. Const. i. 4.) His image was of bronze (Diod. xxi. 
14), and, according to the description of Diodorus, 
resembled that of Moloch or Milcom, the god of 
the Ammonites; but human sacrifices were offered 
to several Phoenician deities.

The gods hitherto described were common to all 
the Phoenicians; Melkarth*, whose name literally 

* It is singular that the name of Melkarth read 
backwards is, with the exception of the second 
and last letters, identical with Hercules.
PHOENICIA.

denotes "king of the city," was peculiar to the Tyrians. He appears in Greek mythology under the slightly altered appellation of Melchior. Cicero (N. D. ii. 16) calls the Tyrian Hercules the son of Jupiter and Asteria, that is of Baal and Asharoth. There was a festival at Tyre called "The Awakening of Heracles," which seems connected with his character as a sun-god. (Joseph. Ant. viii. 5.) In his temple at Gades there was no image, and his symbol was an ever-burning fire.

Another Phoenician deity was Dagon, who had a fish's tail, and seems to have been identical with the Dannes of Babylonia.

The Phoenician goddess Onca was identified by the Greeks with Athena. One of the gates of Tyre was named after her, and she was also worshipped in Corinth. (Eustath. ad Epict. Ecg. s. v.; Hombr. s. v.; Tzetza, &c., Lycoph. Cosm. 658.) It is even probable that the Athena Polias of Athens was derived from Tyre. The Palladium of Troy was also of Phoenician origin.

As might be expected among a maritime people, the Phoenicians had several marine deities, as Poseidon, Nereus, and Pontus. Poseidon was worshipped at Berytus, and a marine Jupiter at Sidon. The present deities of navigation were, however, the Cabeiri, the Phoenician Zeus, and whose images, under the name of Pataces, were placed on the prows of Phoenician ships. (Herod. iii. 37.) They were the sons of Hephaestos, or the Egyptian Ptah, and were represented as ridiculous little piggish figures. By the Greeks and Romans they were identified with their Anaces, Lares, and Penates. Aesculapius, who was identified with the air, was their brother, and also had a temple at Berytus. (Paus. vii. 29. 6.)

We know but little of the religious rites and sacred festivities of the Phoenicians. They practised circumciseion, which they learned from the Egyptians; but, owing to their intercourse with the Greeks, the rite does not seem to have been very strictly observed. (Herod. ii. 104; Aristoph. A. r. 304.) We are unable to trace their speculative opinions; but, as far as can be observed, they seem to have been material and atheistic, and, like the other Semitic nations, the Phoenicians had no idea of a future state of existence.

VII. MANNERS, LITERATURE, AND ART.

The commercial habits of the Phoenicians did not impair their warlike spirit, and Chariton (vii. 2) represents the Tyrians as ambitious of military glory. Their reputation for wisdom and enterprise peeps out in the jealous and often ironical bitterness with which they are spoken of by Hebrew writers. Their wealth and power was envied by their neighbours, who made use of their services, and abused them in return. (Ezech. xxxvii. 2, 12; Isaiah, xxiii. 18.) The Greeks expressed their opinion of Phoenician subtlety by the proverb Σώροι πρός Φοινικαρ (Suid.), which may be rendered by our "Set a thief to catch a thief;" and their reputation for cunning was marked by the saying Φωινίκη μεν κατείχε "a Phoenician lie." (Strab. iii. p. 170.) But a successful commercial nation is always liable to imitations of this description. In common, and sometimes in confusion, with Syria, Phoenicia was denounced by the Romans for the corruption of its morals, and as the nursery of mountebanks and musicians. (Hor. Sat. i. 2. 1; Juvi. iii. 62, viii. 159; Athen. x. v. 53.) The mines of Tyre and Berytus were renowned far and wide. (Ezech. lot. Mundi, Hudson, Geogr. Min. iii. p. 6.)

Ancient authority almost unanimously attributes the invention of an alphabet to the Phoenicians. Lucan (Pharsa. iii. 220) ascribes the use of writing to them before the invention of the papyrus in Egypt. The Phoenician alphabet was at first a mnemonical device the use of writing among the Liouies, and Herodotus says that he saw the Cudmenian letters at Tyre. (Herod. v. 58, 59; Plin. vii. 57; Diod. v. 24; Tac. Ann. xi. 14; Mela, i. 12, &c.) The inscriptions found in Thera and Melos exhibit the oldest form of Greek letters hitherto discovered; and these islands were colonised by Phoenicians. No inscriptions have been found in Phoenicia itself; but from several discovered in Phoenician colonies — none of which, however, are older than the fourth century B.C. — the Phoenician alphabet is seen to consist, like the Hebrew, of twenty-two letters. It was probably more scanty at first, since the Greek alphabet, which was borrowed from it, consisted originally of only sixteen letters (Plin. l. c.); and, according to Irenaeus (Adv. Haeres. ii. 41), the old Hebrew alphabet had only fifteen. The use of hieroglyphics in Egypt was, in all probability, older. (Tac. l. c.) The connection of this Phoenetic system with the Phoenician alphabet cannot be traced with any certainty; yet it is probable that the latter is only a more simple and practical adaptation of it. The names of the Phoenician letters denote some natural object, as aleph, an ox, beth, a house, daleth, a door, &c., whence it has been conjectured that the figures of these objects were taken to represent the sounds of the respective letters; but the resemblance of the forms is rather fanciful.

Phoenician blacks, inscribed with Phoenician characters, have long been known, and indicate the residence of Phoenicians at Babylon. In the recent discoveries at Nineveh other black bricks have been found with inscriptions both in the Phoenician and cuneiform character. Phoenician inscriptions have also been discovered in Egypt, but in an Aramaean dialect. (Gesen. Mon. Phoen. lib. ii. c. 9.) The purest examples of the Phoenician alphabet are found in the inscriptions of Malta, Athens, Cyprus, and Sicily, and on the coins of Phoenicia and Sicily.

The original literature of the Phoenicians has wholly perished, and even in Greek translations but little has been preserved. Their earliest works seem to have been chiefly of a philosophical and theological nature. Of their two oldest writers, Sanchoniatho and Mochus, or Moschus, of Sidon, accounts will be found in the Dictionary of Biography and Mythology, as well as a discussion of the question respecting the genuineness of the remains attributed to the former, on which subject the reader may also consult Lobeck (Aphorismen, ii. p. 1264, &c.). Orelli (Sanchoniathonis Fragm. p. xiii. sqq.), Creuzer (Symbolik, pt. i. p. 110, 3rd edit.), Movers (Die Phönizier, i. p. 120, &c.), and in the Jahr- bücher für Theologie u. christl. Philosophie, 1836, vol. vii. pt. i.), and Kenrick (Phoenicia, ch. xi.). Later Phoenician writers are known only under Greek names, as Theduditas, Hyphasis, Philostratus, &c., and belong to Greek legends or their native authorities. We learn from Josephus (c. Apion. l. 17) that there were at Tyre public records, very carefully kept, and extending through a long series of years, upon which the later histories seem to have been founded; but unfortunately these have all perished. Thus we are deprived of the
PHOENICIA.

annals of one of the oldest and most remarkable people of antiquity: and, by a perverse fate, the inventors of letters have been deprived of that benefit which their discovery has bestowed on other, and often less distinguished, nations which have borrowed it.

The arithmetical system of the Phoenicians resembled that of the Egyptians. The units were marked by simple strokes, whilst 10 was denoted either by a horizontal line or by a semicircle; 20 by the letter $; and 100 had also a special mark, with strokes for the units denoting additional hundreds. (Gesen. Mon. Phoen. i. 1. c. 6.) Their weights and measures were nearly the same as those of the Jews.

The Phoenicians, and more particularly the Sidonians, excelled in the glyptic and plastic arts. Their drinking vessels, of gold and silver, are frequently mentioned in Homer: as the silver vase which Achilles proposed as the reward of the victor in the funeral games in honour of Patroclus (Iliad, xxiii. 743), and the bowl given to Telemachus by Menelaus. (Od. iv. 618 ; comp. Strab. xvi. p. 757.) The Phoenicians probably also manufactured贝壳和glass vessels; but the origin of the vases called Phoenician, found in Southern Italy, rests on no certain authority. They particularly excelled in works in bronze. Thus the pillars which they cast for Solomon's temple were 18 cubits in height and 12 in circumference, with capitals 5 cubits high. From the nature of their country their architecture must have consisted more of wood than of stone; but they must have attained to great art in the preparation of the materials, since those designed for the temple of Solomon required no further labour, but only to be put together, when they arrived at Jerusalem. The internal decorations were carvings in olive-wood, cedar, and gold. The Phoenicians do not appear to have excelled in sculpture. This was probably owing to the nature of their religion. Their idols were not, like those of Greece and Rome, elaborate representations of the human form, but mere rude and shapeless stones called Baals; and frequently their temple was entirely empty. Figures of the Phoenician Venus, but of very rude sculpture, have, however, been found in Cyprus. The Phoenicians brought to great perfection the art of carving and inlaying in ivory, and the manufacture of jewellery and female ornaments, which proved of such irresistible attraction to the Grecian and Jewish women, as may be seen in the story of Eumaeus in Homer (Od. xv. 415), and in the indignant denunciations of Isaiah (iii. 19). They likewise excelled in the art of engraving gems. (2 Chron. ii. 14.) Music is said to have been an invention of the Sidonians (Sachau, p. 32, ed. Orelli), and a peculiar sort of cithara was called ζύγων. (Athen. iv. 183.)

VIII. MANUFACTURES, COMMERCE, AND NAVIGATION.

The staple manufacture of Phoenicia was the celebrated purple dye; but it was not a monopoly. Ezechiel (xxvii. 7) characterises the purple dye ascending from Greece; and Egypt and Arabia also manufactured it, but of vegetable materials. The peculiarity of the Phoenician article was that it was obtained from fish of the genus buccinum and murex, which were almost peculiar to the Phoenician coast, and which even there were found in perfection only on the rocky part between the Tyrian Climax and the promontory of Carmel. The liquor is con-

tained in a little vein or canal which follows the spiral line of these molluscs, and yields but a very small drop. The fluid, which is extracted with a pointed instrument, is of a yellowish white, or cream colour, and smells like garlic. If applied to linen, cotton, or wool, and exposed to a strong light, it successively becomes green, blue, red, and deep purple; and when washed in soap and water a bright and permanent crimson is produced. The buccinum, which is so named from its trumpet shape, is found on rocks near the shore, but the murex must be dredged in deep water. The latter, in its general form, resembles the buccinum, but is not so smooth and spiral. They also found on the Phoenician coast, yields a similar fluid. The superiority of the Tyrian purple was owing to the abundance and quality of the fish, and probably also to some chemical secret. The best accounts of these fish will be found in Aristotle (H. Anim. lib. v.) and Pliny (iv. 61. s. 62); and especially in a paper of Recanini in the Mémoires de l'Academie des Sciences, 1711; and of the manufacture of the purple in Amati, De Restitutione Purpurea, and Den Michaele Rosa, Dissertazione delle Porpora e delle Materie lveiatrici presenti-gli Antichi. The trade seems to have been confined to Tyre, though the poets speak of Sidonian purple. (Ovid, Tr. iv. 27.) Tyre, under the Romans, had the exclusive privilege of manufacturing the imperial purple, and decrees were promulgated prohibiting its use by all except magistrates. (Flav. Vopisc. Aurel. c. 45.; Suet. Nero, 32.) The manufacture seems to have flourished till the capture ofConstantine by the Turks.

As Tyre was famed for its purple, so Sidon was renowned for its glass, which was made from the fine sand on the coast near Mount Carmel. Pliny (xxxvi. 65) describes its discovery as accidental. Some merchants who had arrived on this coast with a cargo of natron, employed some lumps of it, instead of stones, to prop up their cauldron, and the natron being melted by the heat of the fire, produced a stream of glass on the sand. It is probable, however, that the art of making glass was known to the Egyptians and Phoenicians, and was re-introduced in very ancient times. The Sidonians made use of the blowpipe, the lathe or wheel, and the graver. They also cast glass mirrors, and were probably acquainted with the art of imitating precious stones by means of glass. (Plin. l. c.) The Phoenicians were also famous for the manufacture of cloth, fine linen, and embroidered robes, as we see in the description of those brought from Sidon by Paris (περίη λαμπρων, ἑρυτρα γραναντος Σιδωνιων. Iliad, vi. 289), and in Sapphonic allusions. (2 Chron. ii. 14, &c.) Phoenicia was likewise celebrated for its perfumes. (Juven. viii. 159; Plin. xi. 3. s. 2.)

Assyria and Egypt, as well as Phoenicia, had reached a high pitch of civilisation, yet the geographical position of the former, and the habits and policy of the latter, prevented them from communicating it. On the Phoenicians, therefore, devolved the beneficent task of civilising mankind by means of commerce, for which their maritime situation on the borders of Europe and Asia admirably fitted them. Their original occupation was that of mere carriers of the produce and manufactures of Assyria and Egypt (Herod. i. 1); but their maritime superiority led them to combine with it the profession of piracy, which in that age was not regarded as disgraceful. (Thucyd. i. 5; Herod. Od. xvi. 415, &c.) They were especially noted as slave-dealers. (Herod.
PHOENICIA.

which have thus been brought to them overland. (Hered. i. 1.) At a later period, however, they seem to have themselves engaged in the caravan trade, and we have already mentioned their journeys in the track of Alexander. Their peddlars, or retail dealers, probably traversed Syria and Palestine from the earliest times. (Proc.eca, xxxi. 24: Isaiah, xxiii. 8.) In some foreign towns the Phoenicians had factories, or settlements for the purposes of trade. Thus the Tyrians had a fish-market at Jerusalem (Nehemiah, xiii. 16), chiefly perhaps for the salted tunny which they brought from the Euxine. They had also a settlement at Memphis (Hered. ii. 112), and, after the close of the wars between the Greeks and Persians, at Athens, as already related, as well as in other places.

In their original seats on the Persian Gulf the Phoenicians used only rafts (Plin. vii. 57); but on the coasts of the Mediterranean they constructed regular vessels. In their early voyages, which combined piracy with trade, they probably employed the pentecenter, a long and swift vessel of 50 oars. (Comp. Herod. i. 163.) The trireme, or ship of war, and gaulos, or tub-like merchantman adapted for stowage, which took its name from a milk-pail, were later inventions. (Ibid. iii. 136.) The excellent arrangements of a Phoenician vessel are described in a passage of Xenophon before cited. (Oecon. 8: cf. Heliodor. v. 18: Isaiah, ii. 16.) We have already described the Pataei, or figure-heads of their vessels. The Phoenicians were the first to steer by observation of the stars (Plin. vii. 56: Manil. i. 297, sqq.) and could thus venture out to sea whilst the Greeks and Romans were still creeping along the coast. Astronomy indeed had been previously studied by the Egyptians and Babylonians, but the Phoenicians were the first who applied arithmetic to it, and thus made it practically useful. (Strab. xvi. 757.) Herodotus (iv. 42) relates a story that, at the instance of Necho, king of Egypt, a Phoenician vessel circumnavigated Africa, setting off from the Red Sea and returning by the Mediterranean; and though the father of history doubted the account himself, yet the details which he gives are in themselves so probable, and the assertion of the circumnavigators that they had the sun on their right hand, or to the N. of them, as must really have been the case, is so unlikely to have been invented, that there seems to be no good reason for doubting the achievement. (Comp. Reimund, Geogr. of Herodotus, p. 653, sqq.; Grote, Hist. of Greece, iii. pp. 367, sqq.)

IX. Colonies.

The foundation of colonies forms so marked a feature in Phoenician history, that it is necessary to give a general sketch of the colonial system of the Phoenicians, although an account of each settlement appears under its proper head. Their position made them a commercial and maritime people, and the nature of their country, which would not admit of a great increase of inhabitants, led them to plant colonies. Before the rise of the maritime power of the Greeks they had the command of the sea for many centuries, and their colonisation thus proceeded without interruption. Their settlements, like those of the Greeks, were of the true nature of colonies, and not, like the Roman system, mere military occupations; that is, a portion of the population migrated to and settled in these distinct possessions. Hence they resembled our own colonies in America or
PHOENICIA

Australia, as re.usermodel from the report of India. A modern writer has, with much force and ingenuity, endeavoured to trace the precepts of Phoenician colonisation from the threefold cycle of ancient myths respecting the wanderings of Bel or Baal—the Crónes of the Greeks, and patron god of Byblus and Berytus; of Astārī or Io (Venus-Tyrra), who was especially worshipped at Sidon; and of Melkart or the Demeter of Thessaolony (Phoence, vol. ii. pl. iv. ch. 2.) With these myths are combined the legends of the rape of Europa, of the wanderings of Cadmus and Harmonia, of Helen, Dido, &c. That some portion of historical truth may lie at the bottom of these myths can hardly be disputed; but a critical discussion of them would require more space than can be here devoted to the subject, and we must therefore content ourselves with giving a short sketch of what seems to be the most probable march of Phoenician colonisation.

Cyprus, which lay within sight of Phoenicia, was probably one of the first places colonised thence. Its name of Chittim, mentioned in Genesis (xv.), is preserved in that of Citium, its chief town. (Cic. Fin. iv. 20.) Paphos and Palaepaphos, at the SW. extremity of the island, and Golgos, near the SE. point, were the chief seats of the worship of Venus-Una, the propagation of which marked the progress of Phoenician colonisation. The origin of the colony is not, however, from the legend of the compact of Cyprus by Belus, king of Sidon (— tum Belus olimium Vastatbat Cyprum, et victor ditione tenebat," Virg. Aen. i. 621, & ib. Serv.), who was the reputed founder of Citium, Laphthus, and other Cyprian towns. (Alex. Ephes. in Stephan. v. Abydos.) A great many Phoenician inscriptions have been found in this island. Hence the Phoenicians seem to have proceeded to the coast of Aia Minor, the islands of the Greek Archipelago, and the coast of Greece itself. Phoenician myths and traditions are interwoven with the earliest history of Greece, and long preceded the Trojan War. Such are the legends of Aegeus in Colicia, of Europa in Rhodes and Crete, of Cadmus in Thessal, Boeotia, Ephesia and Thera. Rhodes seems to have been early visited by the Phoenicians: and, if it did not actually become their colony, there are at least numerous traces that they were once predominant in the island. It is mentioned in Genesis (x. 4.) in connection with Citham and Ararat. (C. J. Ephraim, ed. Athens, i. p. 248, note 127.) Conon, a writer who flourished in the Augustan period, mentions that the Heliodes, the ruling dynasty in Rhodes, were expelled by the Phoenicians (Eub. 47, op. Phot. p. 187.), and numerous other traditions testify their occupation of the island. The traces of the Phoenicians may also be found in Crete, though they are less visible than at Rhodes. It is the scene of the myth of Europa, the Solomonic Astārī; and the towns of Ilonos, which also bore the name of Arados (Strabo H. I. c. x. i. p. 352.), are associated with these. (Herod. § 11; A. c. xxvi. 12.) Lebann, and Phoen.). were reputed to have been founded by them. We learn from Thucydides (i. 8.) that the greater part of the Cyclades were colonised by Phoenicians. There are traces of them in Crete, Mykon, and Caria. We have already alluded to their intimate connection with the last-named country, and Thucy-
PHOENICIA.

latter in Sardinia, where Claudian (Bell. Gild. 520) mentions Caralis as founded by the Tyrians, in contradistinction to Sulki, founded by the Carthaginians. And the coins of Abussus (Iberia) seem to denote the occupation of it by the Phoenicians, since they have emblems of the Caeariae worship.

The very early intercourse between Phoenicia and the south of Spain is attested by the mention of Tarshish, or Tartessus, in the 10th chap. of Genesis. To the same purport is the legend of the expedition of Hercules against Chrysaor, the father of Geryon, which was of course naval, and which sailed from Crete. (Herod. iv. 8; Diod. iv. 17, sqq. v. 17, &c.) The account of Dioscorus leads us to conclude that this was an earlier colony than some of the immediately situated ones. The Phoenicians had no doubt carried on a commercial intercourse with Tartessus long before the foundation of Gadeira or Cadiz. The date of the latter event can be ascertained with very remarkable accuracy. Velbus Paterculus (i. 2) informs us that it was founded a few years before Utica; and from Aristotle (de Mirabil. Ansel. c. 146) we learn that Utica was founded 297 years before Carthage. Now as the latter city must have been founded at least 800 years B. C., it follows that Gadeira must have been built about eleven centuries before our era. The temple of Hercules, or Merlinth, at this place remained, even down to the time of Silius Italicus, the primitive rites of Phoenician worship; the fire had no image, and the only visible symbol of a god was an ever-burning fire; the ministering priests were barefooted and clad in linen, and the entrance of women and swine was prohibited. (Punic. iii. 22, seq.) Long before this period it had ceased to be a Phoenician colony; for the Phoenacists who sailed to Tartessus in the time of Cyrus, about 550 B. C., found it an independent state, governed by its own king Argianchus. (Herod. i. 163.) Many other towns were doubtless founded in the S. of Spain by the Phoenicians; but the subsequent occupation of the country by the Carthaginians renders it difficult to determine which were Punic and which genuine Phoenician. It is probable, however, that those in which the worship of Hercules, or of the Cabiri, can be traced, as Carteia, Malaca, Sexti, &c., were of Tyrian foundation. To this early and long continued connection with Phoenicia we may perhaps ascribe that superior civilization and immemorable use of writing which Strabo (iii. 139) observed among the Tardulii and Turdantii.

Farther in the Atlantic, it is possible that the Phoenicians may have had settlements in the Carri- tors, or tin districts on the coast of Cornwall and the Scilly Islands; and that northwards they may have extended their voyages as far as the Briton in search of amber. (Britannicae Ins. Vol. i. p. 433, seq.) (Comp. Heeren, Researches, &c. ii. pp. 53, 68.) But these points rest principally on conjecture. There are more decided traces of Phoenician occupation on the NW. or Atlantic coast of Africa. Abyss, like Calpe, was one of the Pillars of Hercules, and its temple at Utica in Mauretania was said to be older even than that at Gadeira. (Plin. xiv. 4, s. 22.) Tinga was founded by Antaeus, with whom Hercules is said to have combated (Mela, i, 5; Strab. iii. p. 140); and the Sinus Emporicius (κωλον Ευρωπαιος, Strab. xvii. 827.), on the W. coast of Mauretania, seems to have been so named from the commercial settlements of the Phoenicians. Cerne was the limit of their voyages on this coast; but the situation of Carthage is still a subject of discussion. [Cerne.] With regard to their colonies on the N. or Mediterranean coast of Africa, Strabo (i. p. 45) tells us that the Phoenicians occupied the middle parts of Africa soon after the Trojan War, and they were probably acquainted with it much sooner. Their earliest recorded settlement was Itace, or Utica, on the western extremity of what was afterwards called the gulf of Carthage, the date of which has been already mentioned. Pliny (xvi. 79) relates that the cedar beams of the temple of Apollo at Utica had lasted since its foundation, 1178 years before his time; and as Pliny wrote about 78 years after the birth of Christ, this anecdote corroborates the date before assigned to the foundation of Gades and Utica. The Phoenicians also founded other towns on this coast, as Hippo, Hadrumetum, Leptis, &c. (Sall. Jug. c. 19), and especially Carthage, on which it is unnecessary to expatiate here. [CAR- THAGO.]

The principal modern works on Phoenicia are, Bocchart's Geographia Sacra, a performance of unequalled learning, but the conclusions of which, from the defective state of critical and ethnographical science at the time when it was written, cannot always be accepted; Gesenius, Monumenta Pho- nica; Movers, article Phönizien, in Ersch and Gruber's Encyclopädie, and especially his work Die Phönizier, of which two volumes are published, but which is still incomplete; and Mr. Kenrick's Phoenicia, Svo. London, 1835, to which the compiler of this article is much indebted. The reader may also consult with advantage Hempson's, De Rebus Tyriorum, Berlin, 1832, and Beitrage zur Einleit ung in das Alte Testament; Heeren, Historical Researches, &c. Vol. ii. Oxford, 1833; Grote, History of Greece, vol. iii. ch. 18; Forbiger, Handbuch der alten Geographie, vol. ii. p. 659; sqq.; Russegger, Reisen; Barckhardt, Syria; Robinson, Biblical Researches, &c. [T. L. D.]

PHOENICE. [PHILA.]

PHOENIX. [M. 3.]

PHOENICUS MONS. [BOREOTIA, p. 412, a.]

PHOENICUS (Φωινίκιος). 1. A port of Ionia, at the foot of Mount Mimas. (Thucyd. viii. 34.) Livy (xxxvi. 45) notices it in his account of the naval operations of the Romans and their allies against Antiochus (comp. Steph. B. s. v.); but its identification is not easy. Leake (Asia Minor, p. 263) regarding it as the same as the modern port of Tosome, and Hamilton (Researches, ii. p. 5) as the port of Egypt-Linum.

2. A port of Lycia, a little to the east of Patara; it was scarcely 2 miles distant from the latter place, and surrounded on all sides by high cliffs. In the war against Antiochus a Roman fleet took its station there with a view of taking Patara. (Liv. xxxvi. 16.) Beaufort (Karamante, p. 7) observes that Livy's description answers accurately to the bay of Kalamaki. As to Mount Phoenicus in Lycia, see OLYMPS, Vol. i. p. 468. [L. S.]

PHOENICUS [Phoenicius.]

PHOENICUS (Φωινίκιος Μάριος, Strab. xvii. p. 799; Pol. iv. 5, § 7; Studium. § 12), a harbour of Marmarica, off which there were two islands Didymae, which must not be confounded with those which Ptolemy (iv. 5, § 76) places off the Chersonesus Tarra on the coast of Egypt. Its position must be sought between P Uni etes, [Payaes,
PHOENIXUS PORTUS.

Strab. i. c.; Ptol. i. c.; Stadiasmus 1. c.), which is identified with Vía Tasab, and Bós-tal-Kenans. [E.B.I.]

PHOENICUS PORTUS (Αμφί-Φωκάνων). 1. A harbour of Messenia, W. of the promontory Arcas, and in front of the islands of Oenusae. It seems to be the inlet of the sea opposite the E. end of the island Sikliza, which island is called by the Italians Capri, or Cabrera. (Paus. iv. 34. § 12; Leake, Morea, vol. i. p. 454.)

2. A harbour in the island of Cythera. [Vol. i. p. 459, b.]

PHOENICUS. [Αἰγαλία Ἰσλαμᾶ].

PHOENIX (Φωκᾶ). 1. A river of Malia, flowing into the Aegeus, S. of the latter, and at the distance of 15 stadia from Thermopylae. (Herod. vi. 198; Strab. ix. p. 428; Leake, Northern Greece, vol. ii. p. 32.)

PHOENIX. [Ρουσά]. [Ptolemaic]. [Vita].

PHOGEZON. [Μαρτεινα, p. 264, a.]

PHOLEGANIDOS (Φωλεγάνθρος, Strab. x. p. 484, seq.; Steph. B. s. r.; Φολεκάκιδος or Φολεκαθρός, Ptol. iii. § 31; Eth. Φωλεγανθρος, Φωλεγανθράδης: Πολυκάδρου), an island in the Aegean sea, and one of the smaller of the Cyclades, lying between Melos and Siphnos. It was said to have derived its name from a son of Mineos. (Steph. B. s. r.) It was called the iron Pholegandros by Aratus, on account of its ruggedness, but it is more fertile and better cultivated than this epithet would lead one to suppose. The modern town stands upon the site of the ancient city, of which there are only a few remains, upon the northern side of the island. (Ross, Reisen auf die Griech. Inseln, vol. i. p. 146.)

PHIOLOE. [Ελις, p. 817.]

PHIOBIA. [Μυκόνος].

PHOTICE (Φωτίκη), a city in Epirus, mentioned only by later writers, was restored by Justinian. Procopius says that it originally stood in a marshy situation, and that Justinian built a citadel upon a neighbouring height. It is identified by Völki, in the ancient Melosia, which now gives title to a bishop, but there are no Hellenic remains at this place. (Procop. iv. 1; Hieroc. p. 652, with Wesseling's note; Leake, Northern Greece, vol. iv. p. 96.)

PHRA (Φρά, Isidor. Mass. Parth. c. 16). a town in Ariana, mentioned by Isodorus in his brief summary of the principal stations between Mesopotamia and Arachis. There can be little doubt that this place corresponds with the Fervah or Fervah of modern times (Wilson, Ariana, p. 153), on the river called the Fervah-rud. (Ritter (vii. 120) has supposed that this is the same place which Plutonemy mentions by the name of Phara, in Drenagiana (vi. 19, § 3); and Droysen (ii. p. 610) imagines that it is the same as the Phra of Stephanus B., which was also a city of Drenagiana. Both conjectures are probable. [V.]

PHRAATA (Φραάτα), Appian, Parth. pp. 80, 99, ed. Schw.; Φράατα, Dou Curs. xix. 25; Steph. B. s. r.; Φωκάλα, Ptol. vi. 2, § 10), a place in ancient Media, which seems to have served as a winter residence for the Parthian kings, and at the same time as a stronghold in the case of need. Its position is doubtful. Förster imagines that it is the same as the citadel described by Strabo, under the name of Vera (xi. p. 529); and there seems some ground for supposing that it is really the same place. If the name Phraata be the correct one, it is likely that it derived its name from Phraates. (Plut. Auton. c. 38.) (See Rawlinson On the Atropatene Eclectic, R. Geog. Journ. vol. x. part 1, 1840.) [V.]

PHIRAGANDAE. [Ιάβδη].

PHIREA (Φίριες), that is, the Wells, a place in the district of Garsaruritis in Cappadocia. (Ptol. vi. 6. § 14.) The name is an indication of the fact noticed by ancient writers, that the country had a scarcity of water. (Wesseling, ad Hieroc. p. 700.) [L. S.]

PHIRCHIUM (Φίρχιον), a mountain of Locris, above Thermopylae. (Strab. xiii. pp. 582, 621; Steph. B. s. r.)

PHIRICONIS. [Κυνε].

PHIRXIA (Φίρχια, Παύς, et aliis; Φίρχα, Herod. iv. 148; Eth. Φίρχιος), a town of Triphylia in Elis, situated upon the left bank of the Alpheus, at the distance of 30 stadia from Olympia. (Strab. viii. p. 21; Steph. B. s. r.) It was founded by the Minyae (Herod. L. C.), and its name was derived from Phraestus. (Steph. B. s. r. Μάκαιες.) Phirixia is rarely mentioned in history; but it shared the fate of the other Triphylian cities. (Comp. Xen. Hell. iii. 2, § 30; Polyb. iv. 77, 80.) Its position is determined by Pausanias, who says that it was situated upon a pointed hill, opposite the Leucanias, a tributary of the Alpheus, and at a ford of the latter river. (Paus. vi. 21. § 6.) This pointed hill is now called Pediophanamara, and is a conspicuous object from both sides of the river, whence the city received the name of Phirnaius in later times. (Steph. B. s. r. Φαρέωτος.) The city was in ruins in the time of Pausanias, who mentions there a temple of Athena Cydonia. Upon the summit of the hill there are still remains of Hellenic walls. (Leake, Morea, vol. ii. p. 210; Bobbey, Recherches ge. p. 136; Ross, Reisen im Peloponnes, p. 108; Curtius, Peloponnes, vol. ii. p. 99.)

PHIRXUS (Φίρχυς), a tributary of the Erasium, in the Arga. [Argos, p. 201, a.]

PHIRUSIDES. [Υρίδη].

PHIRUR (Φιρῷρ), a Scythian people in Serica, described as cannibals. (P Lin. vii. 17. s. 20; Dionys. Per. 752 and Enesth. ad loc.)

PHRYGIA (Φρυγία; Eth. Φρύγες, Phryges), one of the most important provinces of Asia Minor. Its inhabitants, the Phrygians, are to us among the most obscure in antiquity, at least so far as their origin and nationality are concerned. Still, however, there are many indications which seem calculated to lead us to definite conclusions. Some regard them as a Thracian tribe (Briges or Bryges), who had immigrated into Asia; others consider them to have been Armenians; and others, again, to have been a mixed race. Their Thracian origin is mentioned by Strabo (vi. p. 295, s. 471) and Stephanus B. (s. r.); and Herodotus (vii. 73) mentions a Macedonian tradition, according to which the Phrygians, under the name of Bikes, were the neighbours of the Macedonians before they migrated into Asia. This migration, according to Xanthus (ap. Strab. xiv. p. 680), took place after the Trojan War, and according to Conon (ap. Phot. Cod. p. 130, ed. Bekk.) 90 years before that war, under King Midas. These statements, however, can hardly refer to an original migration of the Phrygians from Europe into Asia, but the migration spoken of by these authors seems to refer rather to the return to Asia of a portion of
the nation settled in Asia; for the Phrygians are not only repeatedly spoken of in the Homeric poems (H. ii. 862, iii. 185, xvi. 717, xxiv. 535), but are generally admitted to be one of the most ancient nations in Asia Minor (see the story in Herod. ii. 2), whence they, or rather a portion of them, must at one time have migrated into Europe; so that in our tradition they are mentioned by both authors, as in many other cases. The geographical position of the Phrygians points to the highlands of Armenia as the land of their first abode, and the relationship between the Phrygians and Armenians is attested by some singular coincidences. In the army of Xerxes these two nations appear under one commander and using the same arms; and Herodotus (vii. 73) adds the remark that the Armenians were the descendants of the Phrygians. Endeans (ap. Steph. B. s. v. 'Apouvia, and Etatnth. ad Dion. Per. 694) mentions the same circumstance, and moreover alludes to a similarity in the languages of the two peoples. Both are said to have lived in subterraneous habitations (Vitr. ii. 1; Xenoph. Anab. iv. 5. § 25; Diod. xiv. 28); and the names of both, lastly, are used as synonyms. (Aeolic. Græc. Oxon. iv. p. 257, ed. Cramer.) Under these circumstances it is impossible not to come to the conclusion that the Phrygians were of Armenian race; though here, again, the account of their migration has been reversed, the Armenians not being descended from the Phrygians, but the Phrygians from the Armenians. The time when they descended from the Armenian highlands cannot be determined, and unquestionably belongs to the remotest ages, for the Phrygians are described as the most ancient inhabitants of Asia Minor. (Paus. i. 14. § 2; Claudian, in Extrop. ii. 251, &c.; Appulei. Meton. xi. p. 762, ed. Oud.) The Phrygian legends of a great flood, connected with king Annacus or Annacas, also are very significant. This king resided at Iconium, the most eastern city of Phrygia; and after his death, at the age of 300 years, a great flood overwhelmed the country, as had been foretold by an ancient oracle. (Zosim. vi. 10; Suid. s. v. Ναυσανος; Steph. B. s. v. Ιδονας; comp. Ox. Met. viii. 620, &c.) Phrygia is said to have first risen out of the flood, and the ark and the crowds of Armenians mentioned in connection with the Phrygians were of Celaenae. After this the Phrygians are said to have been the first to adopt idolatry. (Orac. Sybyll. i. 196, 262, 266, vii. 12—13.) The influence of the Old Testament upon these traditions is unmistakable, but the identity of the Phrygians and Armenians is thereby nevertheless confirmed. Another argument in favour of our supposition may be derived from the architectural remains which have been discovered in modern times, and are scarcely noticed at all by the ancient writers. Vitruvius (ii. 1) remarks, that the Phrygians hollowed out the natural hills of their country, and formed in them passages and rooms for habitations, so far as the nature of the hills permitted. This statement is most fully confirmed by modern travellers, who have found such habitations cut into rocks in almost all parts of the Asiatic peninsula. (Hamilton, Researches, ii. p. 250, 283; Texier, Description de l'Asie Mineure, i. p. 310, who describes an immense town thus formed out of the natural rock.) A few of these architectural monuments are adorned with inscriptions in Phrygian. (Texier and Stuart, A Description of some ancient Monuments with Inscriptions still existing in Lydia and Phrygia, London, 1842.) These inscriptions must be of Phrygian origin, as is attested by such proper names as Mida, Ate, Areages, and others, which occur in them, though some have unsuccessfully attempted to make out that they are Greek. The impression which these stupendous works, and above all the rock-city, make upon the beholder, is that he has been transported by four hundred years out of his remote period, not, as Vitruvius intimates, because there was a want of timber, but because the first robust inhabitants thought it safest and most convenient to construct such habitations for themselves. They do not contain the slightest trace of a resemblance with Greek or Roman structures; but while we assert this, it cannot be denied, on the other hand, that they display a striking resemblance to those structures which in Greece we are in the habit of calling Pelasgian or Cyclopian, whence Texier designates the above mentioned rock-city (near Boghaghkien, between the Blys and Iris) by the name of a Pelasgian city. (Comp. Hamilton, Researches, i. pp. 48, 490, ii. pp. 226, &c., 209.) Even the lion gate of Mycene reappears in several places. (Ainsworth, Travels and Researches, ii. p. 58; Leake, Asia Minor, p. 28.) These facts throw a surprising light upon the legend about the migration of the Phrygians into Asia Minor, and the tombs of the Phrygians in Celaenae, mentioned by Athenaeus (xiv. p. 625). But yet much remains to be done by more systematic exploration of the countries in Asia Minor, and by the interpretation of their monuments. One conclusion, however, can even now be arrived at, viz. that there must have been a time when the race of the Phrygians formed, if not the sole population of Asia Minor, at least by far the most important, bordering on the east on their kinmen, the Armenians, and in the south-east on tribes of the Semitic race. This conclusion is supported by many facts derived from ancient writers. Independently of several Greek and Trojan legends referring to the southern coasts of Asia Minor, the name of the Phrygian mountain Olympus also occurs in Cilicia and Lydia; the north of Bithynia was in earlier times called Bebrycia, and the town of Otroda on the Ascanian lake reminds us of the Phrygian chief Orteus. (Hom. II. iii. 186.) In the west of Asia Minor, the country about Mount Sipylos was once occupied by Phrygians (Strab. xii. p. 571); the Trojan Thbe also bore the name Mydonia, which is synonymous with Phrygia (Strab. xii. p. 588); Mydonians are mentioned in the neighbourhood of Miletus (Aelian, V. H. vili. 5); and Polyaeus (Strateg. viii. 37) relates that the Bebryces, in conjunction with the Phocaeans, carried on war against the neighbouring barbarians. From all this we infer that Trojans, Myrians, Mysians, Macedonians, Mydonians, and Dolianians were all branches of the great Phrygian race. In the Iliad the Trojans and Phrygians appear in the closest relation, for Helen is a Phrygian princess (xvi. 718). Priam is the ally of the Phrygians against the Amazons (iii. 184, &c.); the name Hector is said to be Phrygian (Hesych. s. v. Δεμοσ). The names Paris and Scamandria seem likewise to be Phrygian for the Greek Alexander and Aytanax. It is also well known that both the Greek and Roman poets use the names Trojan and Phrygian as synonyms. From the Homeric hymn on Aphrodite (113) it might be inferred that Trojans and Phrygians spoke different languages; but that passage is equally clear, if it is taken as alluding
only to a dialectic difference. Now as the Trojans throughout the Homeric poems appear as a people akin to the Greeks, and are even called Hellenes by Dionysius of Halicarnassus (Ant. Rom. i. 61), it follows that the Phrygians also must have been related to the Greeks. This, again, is further supported by direct evidence; for, looking apart from the tradition about Pelops, which we have already alluded to, king Midas is said to have been the first of all foreigners to have dedicated, about the middle of the eighth century B.C., a present to the Delphic oracle (Herod. i. 14); and Plato (Cratyl. p. 410) mentions several words which were common to the Greek and Phrygian languages. (Comp. Jablonski, Opera, vol. iii. p. 64, &c. ed. Te Water; and, lastly, the Armenian language itself is now proved to be akin to the Greek. (Schroeder, Thesaur. Ling. Arm. p. 51.) The radical identity of the Phrygians, Trojans, and Greeks being thus established, we shall proceed to show that many other Asiatic nations belonged to the same stock. The name of the Mygdonians, as already observed, is often used synonymously with that of the Phrygians (Paus. x. 27. § 1), and in Homer (II. iii. 186) the leader of the Phrygians is called Mygdon. According to Stephanus of Byzantium, the Phrygians were a district of the name. The Mygdonians, who extended westward as far as the Aegeus, were separated from the Mygdonians by the river Rhynchos. (Strab. xiv. p. 681; Schol. ad Apollon. Rhod. i. 936, 943, 1115.) At a later time they disappear from history, their name being absorbed by that of the Phrygians. The Mygdonians are easily recognisable as a Phrygian people, both from their history and the costume of the Phrygians. They inhabited Thrace, and their language is said to have been a mixture of Phrygian and Lydiaan (Strab. xii. p. 572), and Mygdonians and Phrygians were so intermingled that their frontiers could scarcely be distinguished. (Strab. xii. p. 564; Eustath. ad Hom. Il. ii. 862, ad Dionys. Per. s. 10; Suid. s. v. Ὄμιας Ἀρμ. τούτων.) As to the Macedonians, see LYDIA. The tribes of Asia Minor, which are usually designated by the name Pelasgians, thus unquestionably were branches of the great Phrygian stock, and the whole of the western part of the peninsula was thus inhabited by a variety of tribes all belonging to the same family. But the Phrygians also extended into Europe, where their chief seats were in the central parts of Emathia. (Herod. viii. 138; comp. Strab. xiv. p. 680.) There we meet with Phrygians, or with a modification of their name, Brygians, in all directions. Mardonius, on his expedition against Greece, met Brygians in Thrace. (Herod. vi. 43; Stephan. B. s. v. Μάρδονιος; Plin. iv. 18, where we have probably to read BRYGE for BRYGE.) The Phrygian population of Thrace is strongly attested by the fact that many names of places were common to Thrace and Troas. (Strab. xiii. p. 590; comp. Thucyd. ii. 99; Suid. s. v. Βρυγ-γιανος; Solin 15; Itzet. Chit. ili. 812.) Traces of Phrygians also occur in Chalcidice. (Lycoph. 1404; Stephan. B. s. v. Μάρδονιος.) Further south they appear about Mount Oeta and even in Attica. (Thucyd. ii. 22; Strab. xiii. p. 621; Stephan. B. s. v. Φρυγειας and Φρύγος; Eustath. ad Thuc. i. 810.) Mount Olympus, also, was perhaps only a repetition of the Phrygian name. In the west of Eoeass in Macedonia, about lake Lychnis, we meet with Bryges (Strab. vii. pp. 326, 327; Stephan. B. s. v. BRYGE), and in the same vicinity we have the towns of Brygion, Brygias, and Mutatio Brucida. (Steph. B. s. pp. 74, 84; H. Hieroi. p. 607.) The westernmost traces of Brygians we find about Dyrachium. (Strab. l.c.; Appian, Bell. civ. ii. 39; Scymn. 433, 436.) It is difficult to determine how far Phrygian tribes extended northward. The country beyond the part of Mount Idaeus seems to have been occupied at all times by Thracians; but Phrygians extended very far north on both sides of Mount Scarpus, for Pannonia and Moesia seem to be only different forms for PARONIA and MYRIA; and the Burens on the Savus also betray their origin by their name. It is possible also that the DARDANI were Phrygians, and descendants of the Thracians in Troas; at least they are clearly distinguished from the Illyrians. (Polyb. ii. 6.) Strabo, lastly, connects the Illyrian Hetaotes with those of Asia Minor who are mentioned by Homer (II. ii. 852), and even the Dalmatians are in one passage described as Armenians and Phrygians. (Gramer, Anecd. Graec. Or. iii. p. 257.) If we sum up the results thus obtained, we find that at one time the Phrygians constituted the main body of the population of the greater part of Thrace, Macedonia, and Illyricum. Allusions to their migrations into these countries are not wanting; for, independently of the migrations of the Thracians and Mygdonians, Strab. Fragm. 37; Lycophr. 741, &c., we have the account of the migration of Midas to the plains of Emathia, which evidently refers to the same great event. (Athen. xii. v. p. 603; Lycophr. 1397, &c.) The great commotions which took place in Asia and Europe after the Trojan War were most unfortunate for the Phrygians. In Europe the Illyrians pressed southwards, and from the north-east the Scyths and Thracians, which had inhabited Thrace, and all the country east of the river Axios; Hellenic colonies were established on the coasts, while the rising state of the Macedonians drove the Phrygians from Emathia. (Synecell. pp. 198, 261; Justin, viii. 1.) Under such circumstances, it cannot surprise us to find that the great nation of the Phrygians disappeared from Europe, where the Pannonians and Parthians were their only remnants. It is probable that at that time many of them migrated back to Asia, an event dated by Xanthus ninety years before the Trojan War. It must have been about the same time that Lesser Mysea and Lesser Phrygia were formed in Asia, which is expressed by Strabo (xii. pp. 565, 571, 572, xiii. p. 586) in his statement that the Phrygians and Mygdonians conquered the ruler of the country, and took possession of Troas and the neighbouring countries.

But in Asia Minor, too, misfortunes came upon the Phrygians from all quarters. From the south-east the Semitic tribes advanced farther and farther; and Diadoras (ii. 2, &c.) represents Phrygia as subdued even by Ninus; but it is an historical fact that the Assyrian Cappadocians forced themselves between the Armenians and Phrygians, and thus separated them. (Herod. i. 72, v. 49, vii. 72.) Strabo also (xii. p. 559) speaks of structures of Semirams in Pontus. The whole of the south coast of Asia Minor, as far as Caria, received a Semitic population at a very early period. The ancient Phrygian and Phrygian people were in some parts reduced to the condition of Helots. (Athen. iv. p. 271.) The latest of these Syro-Armomian immigrants seem to have been the Lydians (LYDIA), whose struggles with the Mygdonians are expressly mentioned. (Strab. xiii. p. 612; Scylas, p. 36.) This victorious progress of the
Semitic races exercised the greatest influence upon the Phrygians; for not only was their political importance weakened, but their national independence was lost, and their language and religion were so deeply affected that it is scarcely possible to separate the foreign elements from what is original and indigenous. In the north also the Phrygians were hard pressed, for the same Thracians who had driven their kinsmen from Europe, although Homer does not distinctly mention Thracians in Asia, yet, in the historical ages, they occupied the whole coast from the Hellespont to Heraclea, under the names of Thyni, Bithyni, and Mariandyi (Comp. Herod. vii. 75). The conflicts between the ancient Phrygians and the Thracians are alluded to in several legends. Thus king Midas killed himself when the Thracian army ravaged Asia Minor as far as Phaphagonia and Cilicia (Strab. i. p. 61); the Mariandyi are described as engaged in a war against the Mygdonians and Bebryces, in which Mygdon, the king of the latter, was slain. (Apollod. i. 9. § 23, ii. 5. § 9; Apollon. Rhod. ii. 752, 780, 786, with the Schol.; Tzetzs. Chil. iii. 808, &c.) The brief period during which the Phrygians are said to have exercised the supremacy at sea, which lasted for twenty-five, and, according to others, only five years, and which is assigned to the beginning of the ninth century B.C., is probably connected with that age in which the Phrygians had reached their most powerful state. (Diod. viii. 13; Synes. p. 181; and it may have been about the same time that Phrygians from the Scamander and from Troy migrated to Sicily. (Paus. v. 25. § 6.)

It was a salutary circumstance that the numerous Greek colonies on the coast of Asia Minor counteracted the spreading influence of the Semitic race; but still the strength of the Phrygians was broken; they had withdrawn from all quarters to the central parts of the peninsula, and Carians incorporated them with their own empire. During the conquests of Cyrus, Greater and Lesser Phrygia are already distinguished (Xenoph. Cyrop. i. 5. § 3, vi. 2. § 10, vi. 4. § 16, viii. 6. § 7), the former being governed by a satrap (ii. 1. § 5), and the latter, also called Phrygia on the Hellespont, by a king, (vii. 4. § 8).

After having thus reached the period of authentic history, we are enabled to turn our attention to the condition of the Phrygians, and the country which they ultimately inhabited. As to the name Phryges, of which Bryges, Briges, Breoci, Bebryces, and Bebrycetae are only different forms, we are informed by Hesychius (ε. Βούργης) that in the language of the kindred Lydians (that is, Macedonians) it signified "freemen." The nation bearing this name appears throughout of a very peaceable disposition, and unable to resist foreign impressions and influences. None of their many traditions and legends point to a warlike or heroic period in their history, but all have a somewhat mystic and fantastic character. The whole of their early history is connected with the names Midas and Gordius. After the conquest of their country by Persia, the Phrygians are generally mentioned only with contempt, and the Phrygian names Midas and Manes were given to slaves. (Cic. in. Fines. 27; Curt. vi. 11; Strab. viii. 304.) But their civilization increased in consequence of their peaceful state. Agriculture was their chief occupation; and whoever killed an ox or stole agricultural implements was put to death. (Nicol. Damasc. p. 148, cd. Orelli.) Gordius, their king, is said to have been called from the plough to the throne. (Arrian, Anab. ii. 3. § 1; Justin, xii. 7.) Pliny (vii. 6) calls the biga, an invention of the Phrygians. Great care also was bestowed upon the cultivation of the vine; and commerce flourished among them in the very earliest times, as we must infer from their well-built towns mentioned by Homer (II. iii. 400). The foundation of all their great states, which were at some time connected with the Phrygian empire, belongs to the mythical ages, as, e.g., Pessinus, Gordium, Celaenae, and Apamea. The religious ideas of the Phrygians are of great interest and importance, and appear to have exercised a greater influence upon the mythology of the Greeks than is commonly supposed, for many a mysterious tradition or legend current among the Greeks must be traced to Phrygia, and can be explained only by a reference to that country. Truly Phrygian divinities were Cybele (Libae or Archeis), and Sabazius, the Phrygian name for Dionysus. (Strab. x. p. 470, &c.) With the worship of these deities were connected the celebrated orgiastic rites, accompanied by wild music and dances, which were subsequently introduced among the Greeks. Other less important divinities of Phrygian origin were Olympus, Hygnis, Lityeres, and Marsyas. It also deserves to be noticed that the Phrygians never took or exacted an oath. (Nicol. Damasc. p. 145.) But all that we hear of the religion of the Phrygians during the historic times appears to show that it was a mixture of their own original form of worship, with the less pure rites introduced by the Syro-Phoeniciab tribes.

The once extensive territory inhabited by the Phrygians, had been limited, as was observed above, at the time of the Persian dominion, to LESSER PHRYGIA, on the Hellespont, and GREATER PHRYGIA. It is almost impossible accurately to define the boundaries of the former; according to Scylax (p. 33; comp. Pomp. Mela, i. 19) it extended along the coast of the Hellespont from the river Cius to Sestus; but it certainly embraced Troas likewise, for PtolemY marks the two countries as identical. Towards the interior of the peninsula the boundaries are not known at all, but politically as a province it bordered in the east on Bithynia and Great Phrygia, and in the south on Lydia. GREAT PHRYGIA formed the central country of Asia Minor, extending from east to west about 400 geographical miles, and from south to north about 35. It was bounded in the north by Bithynia and Phaphagonia, and in the east by Cappadocia and Lycaonia, the river Halys forming the boundary. (Herod. v. 52.) The southern frontier towards Pisidia and Cilicia was formed by Mount Taurus; in the west Mounts Tmolhs and Messages extend to the western extremity of Mount Taurus; but it is almost impossible to define the boundary line towards Mysia, Lydia, and Caria, the nationalities not being distinctly marked, and the Romans having intentionally obliterated the ancient landmarks. (Strab. xii. p. 564, xiii. p. 629.) The most important part in the north of Phrygia was the fertile valley of the Sungarius, where Phrygians lived in the time of Homer (II. ii. 187, xvi. 719), and where some of their most important cities were situated. Ionium, the easternmost city of Phrygia, was situated in a fertile district; but the country to the north-west of it, with the salt lake Tt Faucina barren and cold, forming a high plateau, which was only fit for pasture, and suffered from frequent droughts. The southern portion of Phrygia, surrounded by Mount Taurus, a
branch of it turning to the north-west, and by the mountains containing the sources of the Maeander, bore the surname Parobious: it was a table-land, but, to judge from the many towns it contained, it cannot have been as barren as the northern plateau. In the west Phrygia comprised the upper valley of the Maeander, and it is there that we find the most beautiful and most populous parts of Phrygia; but that district was much exposed to earthquakes in consequence of the volcanic nature of the district, which is attested by the hot-springs of Hierapolis, and the Plutonium, from which suffocating exhalations were sent forth. (Chlaudian, in Eclog. ii. 276, &c.; Strab. xii. pp. 578, &c., 629, &c.; Herod. vii. 30; Vitr. viii. 3.)

Phrygia was a country rich in every kind of produce. Its mountains seem to have furnished gold; for that metal plays an important part in the legends of Midas, and several of the Phrygian rivers are called "auriferi." (Chlaudian, l.c. 258.) Phrygian marble, especially the species found near Smyrna, was very celebrated. (Strab. xii. p. 579; Paus. i. 18. § 8, &c.; Or. Fast. v. 529; Stat. Silv. i. 5. 36.) The extensive cultivation of the vine is clear from the worship of Dionysus (Salzurius), and Homer (II. ii. 184) also gives to the country the attribute ἀμπελοκτείνα. The parts most distinguished for their excellent wine, however, were subsequently separated from Phrygia and added to neighbouring provinces. But Phrygia was most distinguished for its sheep and the fineness of their wool (Strab. xii. p. 578). King Amyntas is said to have kept no less than 300 flocks of sheep on the barren table-land, whence we must infer that sheep-breeding was carried on there on a very large scale. (Comp. Suid. s. a. Φρυγών ἀπολκ. Aristoph. Are. 493; Strab. l. c. p. 568.)

When Alexander had overthrown the Persian power in Asia Minor, he assigned Great Phrygia to Antigonus, b. c. 333 (Arrian, Arab. i. 29); and during the first division of Alexander's empire that general retained Phrygia, to which were added Lycia and Pamphylia, while Leonnatus obtained Lesser Phrygia. (Dexipp. ap. Phot. p. 64; Curt. x. 10; Dod. xviii. 3; Justin. xiii. 4.) In the beginning of b. c. 321, Perdiccas assigned Greater Phrygia, and probably also the Lesser, to Eumenes (Justin. xiii. 6; Corn. Nep. Eum. 3.), but in the new division of Thrace, Perdiccas recovered his former provinces, and Archelaus obtained Lesser Phrygia, which, however, was taken from him by Antigonus as early as b. c. 319. (Diod. xviii. 39, xix. 51, 52, 75; Arrian, ap. Phot. p. 72.) After the death of Antigonus, in b. c. 301, Lesser Phrygia fell into the hands of Lysimachus, and Great Phrygia into those of Seleucus (Appian, Syr. 55), who, after conquering Lysimachus, in b. c. 282, united the two Phrygias with the Syrian empire (Appian, Syr. 62, 65, Justin. xvi. 2; Memnon, Hist. Herod. 9.) Soon two other kingdoms, Bithynia and Pergamum, were formed in the vicinity of Phrygia, and the Gauls or Galatae, the most dangerous enemy of the Asiatics, took permanent possession of the north-eastern part of Phrygia, the valley of the Sangarius. Thus was formed Galatia, which in our maps separates Greater Phrygia from Paphlagonia and Bithynia; and the ancient towns of Gordium, Ancyra, and Pessinus now became the seats of the Galatae. To the east also Phrygia lost a portion of its territory, for Lycaonia was extended so far westward as to embrace the whole of the above-mentioned barren plateau. (Strab. xiv. p. 663.) It is not impossible that Attalus I. of Pergamum may have taken possession of Lesser Phrygia as early as b. c. 240, when he had gained a decisive victory over the Gauls, seeing that the Trocmi, one of their tribes, had dwelt on the Hellespont (Liv. xxxviii. 16; but his dominion was soon after reduced by the Syrian kings to its original dimensions, that is, the country between the Siusi Eluesus and the bay of Antioch.) However, after the defeat of Antiochus in the battle of Magnesia, in b. c. 191, Eumenes II. of Pergamum obtained from the Romans the greater part of Asis Minor and with it both the Phrygias. (Strab. xiii. p. 624; Liv. xxxvii. 54, &c.) Eumenes on that occasion also acquired another district, which had been in the possession of Prusias, king of Bithynia. Livy (xxxviii. 39) calls that district Mysia, but it must have been the same country as the Phrygia Epipetús of Strabo (xiii. pp. 563, 564, 571, 575, 576). But Strabo is certainly mistaken in regarding Phrygia Epipetús as identical with Lesser Phrygia on the Hellespont,—the former, according to his own showing, nowhere touching the sea (p. 564), but being situated south of Mount Olympus (p. 575), and being bounded in the north and partly in the west also by Bithynia (p. 563). The same conclusion must be drawn from the situations of the towns of Azani, Misaém, and Dorylaeum, which he himself assigns to Phrygia Epipetús (p. 576), and which Prokeon also mentions as Phrygian towns. These facts clearly show how confused Strabo's ideas about those countries were. The fact of Livy calling the district Mysia is easily accounted for, since the names Phrygia and Mysia are often confounded, and the town of Cadni is sometimes called Mysian, though, according to Strabo, it belonged to Phrygia Epipetús. It was therefore unquestionably this part of Phrygia about which Eumenes of Pergamum was at war with Prusias, and which by the decision of the Romans was handed over to the Pergamene king, and hence obtained the name of Phrygia Epipetús, that is, "the acquired in addition to." (Polyb. Excerpt. de Legat. 128, 129, 135, 136: Liv. xxxiv. 51; Strab. p. 563.) After the death of Attaius III., b. c. 133, all Phrygia with the rest of the kingdom of Pergamum fell into the hands of the Romans. A few years later, when the kingdom of Pergamum became a Roman province, Phrygia was assigned to their future provinces, and Attaius the name of Phrygia Epipetús, (Liv. xxviii. 1; Appian, Bell. Mithr. 57), but after his death in b. c. 120 it was taken from his son and successor, Mithridates VI., and declared free. (Appian, l. c.) This freedom, however, was not calculated to promote the interests of the Phrygians, who gradually lost their importance. The Romans afterwards divided the country into jurisdictions, but without any regard to tribes or natural boundaries. (Strab. xiii. p. 629; Plin. v. 29.) In b. c. 88 the districts of Nysa and Amasia, in Phrygia, and in Bithynia seem to have been added to the province of Cilicia. (Gic. in Verr. i. 17, 37.) But this arrangement was not lasting, for afterwards we find those three districts as a part of the province of Asia, and then again as a part of Cilicia, until in b. c. 49 they appear to have become permanently united with Asia. The east and south of Phrygia, however, especially the towns of Apollonia, Antiochia, and Phidonium, did not belong to the province of Asia. In the new division of the empire made in the 4th century A. D., Phrygia Parorios was added to the province of Phisidia, and a district on the Maeander to Caisia.
PHYSCELLA. 625

The remaining part of Physchia was then divided into Physchia Salutans, comprising the eastern part with Syenea for its capital, and Physchia Pataciana (sometimes also called Capitana), which comprised the western part (described to the north of Caria. (Vslt. Imp. c. 2); Herod. pp. 664, 676; Constant. Porphy. de Them. i. 1; Ducas, p. 42; see the excellent article Physquia in Pauly's Realencyklopadeie, by O. Abel; Cramer, Asia Minor, ii. p. 1, &c.; Niebuhr, Lect. on Anc. Hist. i. p. 83, &c., ii. p. 382. [L. S.]

PHYSCLA. 626

PHYSCLA. [Thessalia.]

PHITHA. [Phalas.]

PHITHIA. [Thessalia.

PHITHOIOS [Phanai, Stephen. B. s. v.; written Phlo in Meineke's edition of Stephanus], a mountain in Caria, inhabited by the Phithres, is evidently the same as the Phlepsos of Homer (Il. ii. 868), which, according to Hecataeus, was identical with Mt. Latmus, but which others supposed to be the same as Mt. Gris, running parallel to Mt. Latmus. (Strab. xiv. 232.)

PHITON/OPHAGI [Phaeophyta], i. e. "locust-eaters," a Scythian people, so called from their frig and diet (αι των σατανων και των κτισεων, Strab. xi. p. 449). Some modern writers endeavour to derive their name from θηριο, the fruit of the πύθος or fir-tree, which served as their food (Ritter, Vorhalle, p. 349); but there can be no doubt, from the explanation of Strabo, of the sense in which the word was understood in antiquity. This savage people is variously described by different writers. According to Strabo they inhabited the mountains of Causacus (Strab. xi. pp. 492, 499), and according to other writers different parts of the coasts of the Black Sea. (Arrian, Per. P. Eux. p. 18; Mela, i. 18; Plin. vi. 4). Ptolemy places them in Asiatic Sarmatia beyond the Rhum. (v. 9, § 17). According to Pliny (vi 4) they were subsequently called Sahac. The Bodini are also said to have ate lice (βυτηροκύκωσις), Herod. vii. 100).

PHINTHERUS [Phileus, Steph. B. s. v.], a river of Mauretania, which has been identified with the Wady Tensift. In the ethnographic table of Genesis (x. 6), Phut is reckoned among the sons of Ham. This immediate descent of Phut (a name which is generally admitted to indicate Mauretanians) from Ham indicates, like their Greek name, the depth of colour which distinguished the Mauretanians. In Ezekiel (xxvii. 16) the men of Phut are represented as serving in the Tyrian armies (comp. xxx. 5, xxxviii. 5); as also in Jeremiah (xiv. 9) they are summoned to the hosts of Assyrd; and in Nahum (iii. 9) they are the helpers of Nineveh. (Winer, Reconstrüctur, s. v.; Kenrick, Phoenix, pp. 137, 277.) [E. B. J.]

PHINDUSI (Φινδούσια), a tribe mentioned by Ptolemy (ii. 11, § 12) as inhabiting the Cheronesus Cimbria in the north of Greece, and dwelling north of the Colani and Chali. Zeus (lie Deut. ad Pol., 132), without satisfactory reasons, regards them as the same with the Selusi mentioned by Caesar (B. G. i. 31, 37, 51). [L. S.]

PHURGISATIS [Φυργισατης], a town in the south of Greece, mentioned only by Ptolemy (ii. 11, § 30); it was situated in the country of the

Vol. II.

Quadi, and Wilhelm (Germania, p. 250) believes that it existed in Moravia, in the neighbourhood of Znoian. [L. S.]

PHUSIPARA (Φυσιπάρα), a town of the district of Melitene in Armenia Minor, between Cinyara and Euenezara, is mentioned only by Ptolemy (v. 7, § 7). [L. S.]

PHYCUS (Φυκός, Strab. viii. p. 363, xvii. p. 837; Ptol. iv. 4, § 5; Plin. v. 5), the most northerly point of the Libyan coast, 2800 stadia from Tanaeum (330 M. P., Ptol. l.c.), and 125 M. P. from Crete. (Ptol. l.c.) Cato touched at this point in Africa after leaving Crete, but the natives refused to receive his ships. (Lucan, ix. 40.) Syenea, who has given in his letters (Ep. 51, 100, 114, 129) several particulars about this spot, states that it was dangerous to live here because of the stagnant waters, and their filthy exhalations. It had a harbour situated to the W., which is confirmed by the Coast-describer (Stadiasmus, § 53, where it is by an error called Phoenicis). Sylax (p. 46) placed the garden and lake of the Hesperides near this headland, now Blass-al-Rezat or Blass Sen, where Smyth (Mediterraneum, p. 435) marks the coast bold and steep, rising gradually to Cyanere. (Pacho, Topogr. p. 169; Barth, Wanderungen, p. 498.) [E. B. J.]

PHYLACE (Φύλαξ; Eth. Φυλαζόντα, 1. A. town of Phthiotis in Thessaly, one of the places subject to Proteusians, and frequently mentioned in the Homeric poems. (Il. ii. 695, xiii. 966, xx. 335, Od. xi. 290; comp. Apoll. Rhod. i. 45; steph. B. s. v.) It contained a temple of Proteus. (Pind. Ism. l. 84.) Pliny erroneously calls it a town of Magnesia (iv. 9, s. 10). Strabo describes it as standing between Pharsalus and Philetic Thebes, at the distance of about 100 stadia from the latter (ix. pp. 433, 435). Leake places it at about 40 minutes from Chichèck, in the descent from a pass, where there are remains of an ancient town. The situation near the entrance of a pass is well suited to the name of Phylace. (Leake, Northern Greece, vol. iv. pp. 332, 364.)

2. A town of Mokossis in Epeirus, of uncertain site. (Liv. xiv. 26.)

3. A place in Arcadia, upon the frontier of Teges and Laconia, where the Alpheius rises. (Paus. v. 4. § 1.)

4. A town of Pieria in Macedonia (Ptol. iii. 13, § 40), the inhabitants of which are mentioned by Pliny under the name of Phylacelae (iv. 10, s. 17).

PHYLACIUM (Φυλακίου or Φυλακίου), a town of western Physgia, at a short distance from Themidianum. (Ptol. v. 2, § 26; Tubb. Pent.; Geogr. Ital. i. 18, where it is called Plication. The Phrygian tribe of the Phylacei, mentioned by Ptolemy (v. 2, § 27), undoubtedly derived its name from this place. [L. S.]

PHYLE. [Attica, p. 329, b.]

PHYLEMION, PHYLLEUS. [Asterium.]

PHYLIS (Φυλίς), a district of Thrace in the neighbourhood of Mt. Pangaeus, bounded by the Apugetes on the W., and by the Strymon on the S. (Herod. vii. 113; Steph. B. s. v.)

PHYRITES, a small tributary of the Caystrus, having its origin in the western branch of Mount Tmolus, and flowing in a southern direction through the Pegaean marsh (Stagnum Pegaeum), discharges itself into the Caystrus some distance above Epheusis. (Plin. v. 31.) [L. S.]

PHYSICA, PHYSCLUS. [Eoreae.]

PHYSCELLIA. [Gallesius.]
PHYSCUS.

PHYSCUS (Φύσκος; Eth. Φύσκεσσά), a town of Caria, in the territory of the Rhodians, situated on the coast, with a harbour and a grove sacred to Leto. (Strab. xiv. p. 652; Stadium. Mar. Mag. § 245; Ptol. v. 2 § 11, where it is called Φώσκα.) It is impossible to suppose that this Physcus was the port-town of Mylasa (Strab. xiv. p. 659); we must rather assume that Pasaula, the port of Mylasa, also bore the name of Physcus. Our Physcus was the ordinary landing-place for vessels sailing from Rhodes to Asia Minor. (Strab. xiv. p. 653; comp. Steph. B. s. v.) This harbour, now called Maronice, and a part of it Physco, is one of the finest in the world, and in 1801 Lord Nelson’s fleet anchored here, before the battle of the Nile. [L. S.]

PHYSCUS, a tributary of the Tigris. [Tigris.]

PHYTHEUM (Φυθεύμ, Pol. v. 7; Φόταων, Steph. B. s. v.; Garaba), a town of Aetolia, probably on the northern shore of the lake Trichosia. (Leake, Northern Greece, vol. i. p. 153.)

PHYEIL or PHOETELAE (Φοιείλ, Thuc. iii. 106; Φοίτεινα, Pol. iv. 63; Φοίτεινος, Steph. B. s. v.; Eth. Φοίτευς, Φόταως, Φοίταν, Φοίτον πορτα; Porta), a town in the interior of Acaamia, situated on a height, W. of Stratus, and strongly fortified. It lay on the road from Stratus to Medeon and Limnas. Before the time of Alexander the Great it fell into the hands of the Aetolians, together with the other towns in the W. of Acaamia. It was taken by Philip in his expedition against Aetolia in B. c. 219; but the Aetolians, doubtless, obtained possession of it again, either before or after the conquest of Philip by the Romans. It is mentioned as one of the towns of Acaamia in a Greek inscription found at Punta, the site of Actium, the date of which is probably prior to the time of Augustus. In this inscription the ethnic form δυτίαν occurs, which is analogous to Ἀκρανία, Άνω, Άταντα, Αθανά, Αγάρ. (Thuc., Pol., H. c.; Liv. h. c. Corpus Inscriptionum, No. 1739; Leake, Northern Greece, vol. iii. p. 574, seq.)

PHIALA (Φιαλά), a town in the interior of Pontus Galaticus, mentioned only by Ptolemy (v. 6 § 9). [L. S.]

PHIALA (Φιαλά or Πιδάδα), Pol. vi. 16. § 6), a town of Serica, from which the people Phiae (Φιαδα or Πιδαδα) dwelling as far as the river Oedurus, derived their name. (Pol. vi. 16. § 4.) In some MSS. of Piny (vi. 17. s. 15) the Phiae are mentioned as a people in Scythia intra Lunam, but Strabo reads Deuce.

PHIALA. [L. S.]

PHIALIA (Φιαλία), a town of Histiaeta in Thessaly, at the foot of Mt. Cerectium, probably represented by the Hellenic remains either at Selita-tina or Ardheim. (Steph. B. s. v.; Leake, Northern Greece, vol. iv. p. 528.)

PHANE SNI (Φάναςη, Pol. iii. 10. § 9), a people of Moesia Inferior, adjoining its southern or Thracian boundary. [T. H. D.]

PHICARIA (Φεκαρία). [L. S.]

PHICARIA (Φίκαρια, Pol. iii. 9. § 2), a people seated in the NE. part of Moesia Superior, on the river Tinarus. [T. H. D.]

PICECETES. [Picecum.]

PICECENTIA. [Picecturn.]

PICECETIN (Πικεστίν, Pol. : Picecetio, Strab.), a tribe or people of Central Italy, settled in the southern part of Campania, adjoining the frontiers of Lucania. Their name obviously indicates a close connexion with the inhabitants of Picensum on the opposite side of the Italian peninsula; and this is explained by Strabo, who tells us that they were in fact a portion of those people who had been transported by the Romans from their original abodes to the shores of the Tyrrhenian sea. (Strab. v. p. 251.) The period of this transfer is not mentioned, but it in all probability took place on or shortly after the conquest of Picensum by the Romans, B. c. 268. During the Second Punic War, the Picentini espoused the cause of Hannibal, for which conduct they were severely punished after the close of the war, being, like the Lucanians and Bruttians, prohibited from military service, and employed for the interior duties of public messengers and couriers. They were at the same time compelled to abandon their chief town, which bore the name of Picentia, and to disperse themselves in the villages and hamlets of the surrounding country. (Strab. l. c.) The more effectively to hold them in check, the Romans in B. c. 154 founded in their territory the colony of Salernum, which quickly rose to be a flourishing town, and the chief place of the surrounding district (Strab. l. c.; Liv. xxxiv. 45; Vel. Pat. i. 15). Picentia, however, did not cease to exist: Florus indeed appears to date its destruction only from the period of the Social War (Flor. iii. 18); but even long after this it is mentioned as a town both by Mela and Pliny, and its name is still found in the Tabula rustica as late as the 4th century. (Mel. ii. 4, § 9; Plin. iii. 5, s. 9; Tab. Peut.) The name of Picentia is still borne by a hamlet on the road from Salernum to Ephel, and the stream on which it is situated is still called the Picenton; but it is probable that the ancient city was situated rather more inland. (Romanelli, vol. iii. p. 610; Zannoni, Carta del Regno di Napoli.)

The boundaries of the Picentini are clearly marked both by Strabo and Pliny. They occupied the southern slope of the ridge of mountains which separates the gulfs of Posidonia from that of Naples, extending from the promontory of Minerva to the mouth of the Silarus. Ptolemy alone extends their confines across the range of question as far as the mouth of the Sarnus, and includes Surrentum among their towns. (Ptol. iii. 1. § 7) But there is little doubt that this is inaccurate.

The name of Picentini is generally confined by geographers to the petty people in question, that of Picentes being given to the people of Picensum on the Adriatic. But it is doubtful how far this distinction was observed in ancient times. Picentinius is used as an adjective form for "belonging to Picenum," both by Pompey (ap. Cic. ad Att. viii. 12, c.) and Tacitus (Hist. iv. 63); while Strabo uses Picentinius for the people of Picensum, and Picentetis for those in Campania. The latter are indeed so seldom mentioned that we can barely determine what was the general usage in regard to them. [E. H. B.]

PICENTYNAX, a place in Pannonia, on the left bank of the Sarus, on the road from Scud to Sirmium. (H. Ant. p. 260.) It is possible that some ancient remains now called Kula may mark the site of the ancient Picentynax. [L. S.]

PIECUM (η Πιεκεμ, Pol., Strab.: Eth. Picecetin, Strab.; Picecetio, Pol.; Picecetio, Picentes, Cic., Varr., Plin., &c., but sometimes also Picentini and Pireni), a province or region of Central Italy, extending along the coast of the Adriatic from the mouth of the Aricia to that of the Matrinus, and inland as far as the central ridge of the Apennines. It was thus bounded on the W. by the Umbrians and Sabines, on the S. by the Vestini, and on the E. by...
The Picentes reaped the advantages of this long peace in the prosperity of their country, which became one of the most populous districts in Italy, so that according to Pliny it contained a population of 360,000 citizens at the time of the Roman conquest. (Plin. l. c.) Nevertheless they seem to have offered but little resistance to the Roman arms, and were reduced by the consul Sempronius Pilatus Claudius in a single campaign, b. c. 268. (Flor. i. 19; Liv. Epit. xvi; Oros. iv. 4; Eutrop. ii. 16.) The causes which led to the war are unknown; but the fact that the Picentes and Sallentines were at this time the only two nations of Italy that remained unsubdued is quite sufficient to explain it.

From this time the Picentes hapsed into the ordinary condition of the subject allies of Rome; and though their territory is repeatedly mentioned as suffering from the ravages of the Second Punic War (Pol. iii. 86; Liv. xii. 9, xxvii. 43), the name of the people does not again occur in history till the great outbreak of the nations of Italy in the Social War, b. c. 90. In that memorable contest the Picentes bore a prominent part. It was at Asculum, which seems to have been always regarded as their capital, that open hostilities first broke out; the massacre of the consuls Q. Servilius and his legate Fonteius in that city having, as it was, given the signal of the general insurrection. (Appian, B. c. i. 38; Liv. Epit. lxxii; Vell. Pat. ii. 15; Diod. xxxvii. 2.) The first attempt of Cr. Pompeius Strabo to reduce Asculum was repulsed with loss; and it was with difficulty that that general could maintain his footing in Picenum while the other Roman armies were occupied in hostilities with the Marsi, Peligni, and other nations nearer Rome. It was not till the second year of the war that, having obtained a decisive victory over the allies, he was enabled to resume the offensive. Even then the Picentine general Judacillus maintained a long struggle against Pompeius, which was at length terminated by the surrender of Asculum, and this seems to have been followed by the submission of the rest of the Picentes, n. c. 89. (Appian, B. c. i. 47, 48; Liv. Epit. lxxiv., lxxvi; Oros. v. 18; Flor. iii. 18.) There can be no doubt that they were at this time admitted, like the rest of the Italian allies, to the Roman franchise.

Picenum was occupied almost without opposition by Caesar at the commencement of the Civil War, n. c. 49 (Caes. B. C. i. 11—15), the inhabitants having universally declared in his favour, and thus compelled the officers of Pompey to withdraw from Auvium and Asculum, which they had occupied with strong garrisons. In the civil war between Vitellius and Vespasian A. D. 69, it was occupied in like manner without resistance by the forces of the latter. (Tac. Hist. iii. 42.) Picenum appears to have continued to be a flourishing province of Italy throughout the period of the Roman Empire; and though Pliny speaks of it as having much fallen off in population compared to earlier times ("quodam uberrime multitudinis," Plin. iii. 13. 8.; 18), it still contained a large number of towns, and many of these preserved their consideration down to a late period. It is probable that its proximity to Ravenna contributed to its prosperity during the latter ages of the Empire, after that city had become the habitual residence of the emperors of the West. Under Augustus, Picenum became the Fifth Region of Italy (Plin. i. c.), but at a later period we find it combined for administrative purposes with the district of...
called Flaminia; and the two together constituted a province which comprised all the strip of Umbria along the coast of the Adriatic, as well as the territory of the Salumenses, Vestini, Peligni, and Marsi. Hence we find the Liber Coloniae including the whole of this extensive district under the name of Picenum, and enumerating not only Alba and Nursia, but even Nomentum, Fidenae, and Tibur, among the "civitates Piceni." (Lib. Colom., p. 252—259.) But this arrangement did not last long. Flaminia and Valeria were again separated from Picenum, and that province was subdivided into two: the one called "Picenum suburbicarium," or simply Picenum, which was the original district of that name, as far as it extended to the Fifth Region of Augustus; while the name of "Picenum Anfundatum" was given to the tract from the Aeisis to the Irpinian, which had been originally known as the "Gallicus Acer," and in the days of Augustus was comprised under the name of Umbria. (Lib. Colom., pp. 225—227; Mommsen, Die Lib. Col., pp. 208—214; Notit. Dign. ii, pp. 64, 65; Böckh, ad Not. pp. 432, 443; P. Diss. ii, 19.)

In the wars between the Goths and the generals of Justinian, Picenum repeatedly became the immediate theatre of hostilities. Anxium in particular, which was at this time the chief city or capital of the province, was regarded as one of the most important fortresses in Italy, and withheld for a long time the arms of Belisarius. (Procop. B. G. ii, 10, 23—27.) After the expulsion of the Goths, Picenum became one of the provinces of the exarchate of Ravenna, and as such continued subject to the Greek emperors until the final downfall of the empire. It was this Picenum that crossed the geographical division of the Peutapollia, for a province which comprised the greater part of Picenum, together with the maritime district of Umbria as far as Ariminum. The province of this name was one of those bestowed on the see of Rome by king Pepin after the defeat of the Lombard king Astolphus (A.D. 754), and has ever since continued to form part of the States of the Church.

Picenum is a district of great fertility and beauty. Extending in a broad band of nearly uniform width from the central ranges of the Apennines, which form its boundary on the W., and which here attain their greatest elevation in the Monte Corno and Monti della Sibilla, it slopes gradually from thence to the sea; the greater part of this space being occupied by great hills, the underfalls of the more lofty Apennines, which in their more elevated regions are clothed with extensive forests, while the lower slopes produce abundance of fruit trees and olives, as well as good wine and corn. (Strab. v. p. 240; Liv. xiii. 9.) Even Horace and Juvenal extol the excellence of its apples, and Pliny tells us its olives were among the choicest in Italy. (Hor. Sat. ii. 3, 272, 4, 70; Juv. xi. 72; Plin. xv. 8, s. 4.) The whole district is furrowed by numerous streams, which, descending with great rapidity from the lofty ranges of the Apennines, partake much of a torrent-like character, but notwithstanding serve to irrigate the whole country, which is in part a great mass of extensive meadows. These streams pursue nearly parallel courses, the direct distance from their sources to the sea in no case much exceeding 40 miles. They are, proceeding from S. to N., as follows: (1) The Matrinus, now called La Plumbra, a small stream which formed the southern limit of Picenum, separating it from the territory of the Veientes; (2) the Vomano, still called the Vomana, which separated the district of Adria from that of the Praetutti; (3) the Batinus, now called the Taurino, but sometimes also the Truentius, which flows by Terni (Interamnium); (4) the Truentius (Tronto), the most considerable of all these streams, which flows under the walls of Ascoli (Ascolum); (5) the Tinna, still called the Tenna; (6) the Flusus, now the Chienti; (7) the Potentia, still called the Potenza; (8) the Miso or Missus, now known as the Musone. These last names are known only from the Tabula: on the other hand Pliny mentions a stream called Alcella, to which are added in some MSS. the names of Suina, Suinus, and Suinum; but the Alcella, which rises at the intersection between the river Truentus and the town of Cupra Marziana; but besides the uncertainty of the reading, the whole description of this region in Pliny is so confused that it is very unsafe to rely upon his order of enumeration. The Alcella cannot be identified with any certainty, but may perhaps be the stream now called the Solineo, and the other two names are probably mere corruptions. 9. The Assisi (Estino), a much more considerable stream, flowing into the seas between Ancona and Senigallia, and forming the boundary which separated Picenum from Umbria.

The towns of Picenum are numerous, and, from the accounts of the populousness of the country in early times, were probably many of them once considerable, but few have any historical celebrity. These on the sea-coast (proceeding as before from S. to N.) were: (1) Matrinum, at the mouth of the river of the same name, serving as the port of Adria (Strab. v. p. 245); (2) Castrium Numid, at the mouth of the Batinus near Giulia Nova; (3) Castrium Truentum or Truenti, at the mouth of the river of the same name; (4) Cupra Maritima, at Le Grota di Mare, about 3 miles N. of S. Benedetto; (5) Castrium Firmum, now Porto di Fermo, at the mouth of the little river Leta; (6) Potentia (Sta Maria a Potenza), at the mouth of the river of the same name; (7) Numana, still called Umana, at the southern extremity of the country, and called Monte Conte or Monte Cono, now Ancona, at the northern end of the same promontory. This last was by far the most important of the maritime towns of Picenum, and the only one that possessed a port worthy of the name; with this exception all the most important cities of the region were situated inland, on hills of considerable elevation, and thus enjoyed the advantage of strong positions as fortresses. The most important of these were Aixium (Ostino), about 12 miles S. of Ancona; Cingulum (Cingoli), in a very lofty situation, between the valleys of the Aeis and Potentia; Fiumum (Fermo), on a hill about 6 miles from the sea; Ascolum (Ascoli), the ancient capital of Picenum, in a very strong situation on the river Truentus, about 22 miles from its mouth; Isernia (Ternano), the chief city of the Praetutes; and Adria (Atria), almost close to the southern frontier of Picenum. The minor towns in the interior were Berregna, which may perhaps be placed at Corteils d'Il Tronto not far from Ascoli; Cupra Montana, so called to distinguish it from the maritime city of the same name, supposed to have occupied the site of Ripatransone; Clunana, at S. Eligio di Mare, about 4 miles from the sea, and a little to the N. of Fermo; Novana, probably at Monte di Nore, near Montalto; Faleria (Fallerone), in the upper valley of the Treia; Urbis Salvia (Urbiglia) and Tolentini.
PICTAVI.

PICTAI. [PICTONES.]

PICTAI. The names of the Picti and Scoti appear only in late writers, by whom they are spoken of as two allied people. The Picti seem to have been identical with the ancient Caledonians ("Calde- numolorumque Pictorum, silvae et paludes," Ernem. Pan. vi. 7), and dwelt N. of the Firth of Forth (Bed. II. Excl. i. 1). Anmunnus Marcellinns represents the Picti as divided, in the time of the emperor Constans, into two tribes, the Deiduliones and Vecturiones, and as committing fearful ravages in conjunction with the Attacoti and Scotii (xxvii. 8. § 4.) Their ethnological relations have been already discussed [Britannicae Insulae, Vol. I. p. 438]. The name of Picti, or painted, is commonly supposed to be derived from their custom of painting their bodies, and would thus be only a translation of the British word Brith, signifying anything painted, and which, according to Camden (Gae. Descr. p. 336.), is the root of the name Briton. Such an etymology favours the notion that the Picti were an indigenous race; but on this point nothing positive can be affirmed. (Comp. Anton. Marc. xx. 1, xxvi. 4; Beda, II. Excl. iii. 4. v. 21.) [T. H. D.]

PICTONES (PICTAI), and, at a later period, PICTAVER, were a Gallic nation, south of the Loire and on the coast of the Atlantic. Pictomy (ii. 7. § 6) places them in Celtogalatia Aquitania, and mentions two of their towns, Limonum or Lemonum (Polaris) and Estiuntan. "They occupy," he says, "the most northern parts of Aquitania, those on the river (Liger), and on the sea." Strabo (iv. 190, 191) makes the Loire the boundary between the Nannetes and the Pictones. South of the Pictavi he places the Santones, who extend to the Garonne.

The Pictones are mentioned by Caesar. He got ships from them for his war against the Veneti (B. G. iii. 11). The Pictones joined Vercingetorix in B. C. 52, when he was raising all Gaul against Caesar. In B. C. 51 C. Cnannius, a legatus of Caesar, marched into the country of the Pictones to relieve Lemnos, which was besieged by Dumnannes (B. G. viii. 26). [Lemnonum.]

Lucan (i. 436) says that the Pictones were "immunes," or paid no taxes to the Romans:—

"Pictones immunes subignui sua rura."

His authority is not worth much; and besides that, this verse and the four verses which follow are probably spurious. (Notes in Ogdenorp's edition of Lucan.)

The territory of the Pictones was bounded on the east by the Tarunes and Bituriges Cubi. It corresponded to the diocese of Poitiers. [G. L.]

PICTONIUM PROMONTORIUM, as it is now generally written, but in Ptolemy (ii. 7. § 1) Pec- tonium (Πηκτόνων έκσηρ), is placed by him on the coast of Gallia Aquitana, between the mouth of the river which he names Canetanus [CARANTONI S] and the port secor or Sisor. It is impossible to de- termine what point of land is Pectonium. D'Anville supposes it to be L'Aigüelles near the mouth of the Sère Noirtaise; and Gosselin takes it to be La Pointe de Bousinnet. [G. L.]

PIDA (Πίδα), a town in Pontus Galaticus, on the road leading from Amaia to Neocaesarea. (Ptol. v. 6. § 9; Tab. Peut., in which it is called Pidae.) [L. S.]

PIENGITAE (Πεινηγητα), Ptol. iii. 5. § 20), a people in European Sarmatia, supposed by Schaf- rik to be the inhabitants of the river Piena, which falls into the Prigitt near Pina (Slavische Alter- thümer, vol. i. p. 207.)

PIERIA. [CIREIUM.]

PIERES (Πιερες), a Thracian people, occupying the narrow strip of plain land, or low hill, between the mouths of the Peneius and the Haliconamon, at the foot of the great woody steeps of Olympus. (Thuc. ii. 99; Strab. vii. p. 331, Fr. 22, ix. p. 410; Liv. xiv. 9.) This district, which, under the name of PIERIA or PIERES (Πειρεία, Πιερία), is mentioned in the Homeric poems (xii. 225), was, according to legend, the birthplace of the Muses (Hesiod. Theog. 53) and of Orpheus, the father of song. (Apoll. Argon. i. 23.) When this worship was introduced into Bceotia, the names of the mountains, grots, and springs with which this poetic religion was connected, were transferred from the N. to the S. Afterwards the Piers were expelled from their original seats, and driven to the N. beyond the Scymnus and Mount Pangaeus, where they formed a new settlement. (Herod. vii. 112; Thuc. i. c.) The boundaries which historians and geographers give to this province vary. In the systematic geography of Ptolemy (iii. 13. § 15) the name is given to the extent of coast between the mouths of the Ladias and the Haliconamon. Pieria was bounded on the W. from the contiguous district of the Thessalian Per- rhaeia by the great chain of Olympus. An offshoot from Olympus advances along the Pierian plain, in a NW. direction, as far as the ravine of the Haliconamon, where the mountains are separated by that chasm in the great eastern ridge of Northern Greece from the portion of it anciently called Bermnis. The highest summit of the Pierian range called PIERES MONS (Pier. iv. 15; comp. Pausan. ix. 29. § 3; x. 13. § 5) rises about 8 miles to the N. of Vla- kothanvalta, and is a conspicuous object in all the country to the E. It would seem that there was a city called PIEREA (Πιερεία: Elk. Πιερία, Phe-
PIE'RIA. [Ciehria.]

PIE'RIAN. [Cierium.]

PIG'UNTIA. [Dalmatia.]

PILO'TUS (Πηλωρος, Herod. vii. 122; Steph. B.), a town of Sitioxia in Macedonia, upon the Ssngite gulf, between Sane and Cape Ampelus, which probably occupied V師ewrt, or one of the harbours adjacent to it on the N. (Leake, Northern Greece, vol. iii. p. 415.)

PI'MOLISAla (Πιμωλισία), a fort in the western part of Pontus, on the river Halis. (Steph. B. s. v.) In Strabo's time (xii. p. 562, where it is called Pi'molison) the fortress was destroyed, but the district on both sides of the river was still called Pi'modione. [L.S.]

PI'MPLEIA (Πίμπλεια, Strab. ix. p. 410; Apod. i. 23; Lyenn. 273), a place in Pieria, where Oxeus was said to have been born, and from which the stream, which flows from its foot of Pindus and P. αμπληδει among the Alexandrian poets. (Orph. Fragn. 46: "Pimpea dukis," Horat. Carv. i. 26. 9; Stat. Sil. i. 4. 26.) Leake (Northern Greece, vol. iii, p. 422) identified it with the elevated situation of Litikhora and its commanding post. [E.B.J.]

PI'MPRAMA (Πιμπράμα, Arrian, Anab. v. 22), a place which appears to have been the capital of the tribe of Adrian, a nation mentioned by Arrian as existing about a day's journey from the Hydrames (ιτρατυ). The name has an Indian form and sound, but has not, so far as we know, been identified with any existing place. [V.]

PI'NAKA (τὰ Πίνακα: Eth. Πινακού). 1. A large city of Lydia, at the foot of Mount Cragus, and not far from the western bank of the river Xanthus, where the Lycean hero Pandurus was worshipped. (Strab. xiv. 655; Steph. B. s. v.; Arrian, Anab. v. 24; Plin. v. 24; Ptol. v. 3. § 5; Herod. p. 684.) This city, though it is not often mentioned by ancient writers, appears, from its vast and beautiful ruins, to have been, as Strabo asserts, one of the largest towns of the country. According to the Lycean history of Meneceus, quoted by Stephanus Byz. (s. v. Αρήτωρος), the town was a colony of Xanthus, and originally bore the name of Artymnus, afterwards changed into Pinara, which, in the Lycean language, signified a round hill, the town being situated on an elevated eminence. In 8 B.C. it was discovered by Sir Charles Fellows, near the modern village of Minara. "From amidst the ancient city," he says (Lyceia, p. 139), "rises a singular round rocky cliff (the pinara of the Lyceans), literally specked all over with tombs." Beneath this cliff lie the ruins of the extensive and splendid city. The theatre is in a very perfect state; all the seats are remaining, with the slanting sides towards the prosenium, as well as several of its doorways. The walls and several of the buildings are of the Cyclopean style, with massive gateways, formed of three immense stones. The tombs are innumerable, and the inscriptions are in the Lycean characters, but Greek also occurs often on the same tombs. Some of these rock-tombs are adorned with fine and rich sculptures. (See the plate in Fellows facing p. 141.)

2. A town of Cicilia (Plin. v. 22), perhaps the same as the one mentioned by Ptolemy (v. 15. § 12) as situated in Pieria, a district of Syria; though it should probably be identified with Pinara (v. 19) in the district of Lycia, a people as Celosyria. [L.S.]

PINARUS. [ltsars.]

PIN DASUS, a mountain in the south of Mycia, a branch of Mount Tenassees, stretching towards the Sinus Euxyn, and containing the sources of the river Cetus. (Plin. v. 33.)

PIN DENISSIUS (Att. Findensissae), a town of the Eleuther-Cilices, situated upon a commanding height of Mt. Ammus, which was taken by Ciceron, when he was governor of Cicilia, after a siege of fifty-seven days. (Cic. ad Att. v. 20, ad Fam. ii. 10, xv. 4.)

PINNDUS (Πινδος, Herod. i. 56, vii. 129; Strab. ix. pp. 428, 430, et alli), a long and lofty range of mountains in Northern Greece, running from north to south about midway between the Ionian and Aesean seas, and forming the back-bone of the country, like the Apennines of the Italian peninsula. It is in fact a continuation of the same range which issues from the Western Mountains of Asia Minor, and from the location of Pindus which first intercepts the northern boundary of Hellas Proper at the 40th degree of latitude. Pindus forms the boundary between Thessaly and Epirus. In its northern part it is called Lacmon or Laucrus, and here the five principal rivers of Northern Greece rise,—the Haliacmon, Peneus, Achelous, Arachthons, and Aous. [LACMON.] To that part of the range S. of Lacmon the name of Cercetum was given. (Κηρετρος, Steph. B. s. v. Πινδος; Κηρετρος σφός, Ptol. iii. 13. § 19; Liv. xxiii. 14; Plin. iv. 8. s. 15.) Mount Cercetum is probably the main ridge of Khasias; and one of the principal passes from Epirus into Thessaly lay across this mountain. (Leake, Northern Greece, vol. iv. pp. 528, 529.) Still further south, at the 39th degree of latitude, a point in the range of Pindus is called Tymphrestus (Τιμφρέστος, Strab. ix. p. 433), now Velestik, and from it branch off the two chains of Othry and Sept, the former running nearly due east, and the latter more towards the south-west. A little S. of Tymphrestus the range of Pindus divides into two branches, and no longer bears the same name. [See Vol. I. p. 1012.]

PIN DUS (Πινδος), one of the towns of the tri-
PISII. 631

name, which flows into the Cephissus near Lilia.
[Detis.] It was also called Ancyphas (Ancyphas), as
we learn from Strabo and from Theopompus (ap.
Steph. B. s. a. Ancyphas). In one passage Strabo says
that Pindus lay above Ermenus, and another place
it in the district of Ocesta; it is, therefore,
probable that the town stood in the upper part of
the valley, near the sources of the river in the
mountain. (Strab. ix. pp. 427, 434; Seymm. Ch.
391; Schol. ad Find. Pyth. i. 121; Mol. ii. 3;
Plin. iv. 7. s. 13; Leake, Northern Greece, vol. ii.
92.)

PINEUS (PINEUS, Pol. ii. b. § 39), a town
of Lusitania, on the road from Bracara to Asturica
(Proc. Ant. p. 422). Pindus places it between
the Durins and the Minus, and consequently in
the territory of the Gallaei; but, according to the
Itinerary, it must have lain S. of the former river.
Various identified with Pinel, Pinheira, and Miran-
della. [T. H. D.]

PINGUS, a river of Upper Moesia, in the terri-
itory of the Dardani. (Plin. iii. 26. s. 29.) It
was probably an affluent of the Marus, and is com-
monly identified with the Ziorek. [T. H. D.]

PINNA (PINEA: Eth. Pinennis; Cirtia de
Penne), a city of the Vestini, situated on the eastern
slope of the Apennines, about 15 miles from the
sea. It is noticed both by Pliny and Ptolemy, as well
as by Silius Italicus, among the cities of the Vestini,
and seems to have been a municipal town of
importance; but the only mention of its name in
history is during the Social War, when its inhabitants
distinguished themselves by their fidelity to Rome,
and withstood all the efforts of the Italian allies to
shake their constancy. (Diod. xxxvii. Exc. Vales.
p. 612, Exc. Vat. p. 120.) The circumstances are
evidently misrepresented by Valerius Maximus (v. 4.
§ 7). Numerous inscriptions attest its local con-
ideration; and it appears to have received a colony,
or at least an accession of citizens, under Augustus.
(Plin. iii. 12. s. 17; Plol. iii. 1. § 59; Lib. Colon.
pp. 227, 237; Sil. Ital. viii. 517; Insocr ap.
R. N. i. p. 9.) Vitruvius narrates, as a by-result of
the war, the discovery of some mineral waters in its neighbourhood, which
ressembled those at Cutiline (vii. 3. § 5). It early
became an episcopal see, a dignity which it still
retains; and the modern city undoubtedly occupies
the same site with the ancient one. Some remains
of ancient buildings are extant, but they are of little
importance. The name of Pisa is found in the
Tacular, where it is marked as a place of importance;
but the distances annexed are confused and erro-
aneous. [E. H. B.]

PINTIJA (PINTIA, Pol. ii. 6. § 50). 1. A town
of the Vaceani in Hispamia Tarraconensis, and ac-
cording to the Itinerary (p. 443), on the road from
Asturica to Caesaraugusta. It is usually identified
with Talladolid (Mariana, x. 7; Nonius, Hist.
Callalici Lucenses in Hispamia Tarraconensis,
between Libunca and Carmona. (Pol. ii. 6. § 23.)

PINTUISA INE. [FORTUNATAE INSULAE.]

PION (PIONE), a hill in the neighbourhood of
Ephesus, at the foot of which that city was situated.
(Plut. vi. 5. § 5; Plin. v. 31; Strab. xiv. p. 635,
where it is called Proion.) [L. S.]

PIONIA (PIONIA: Eth. Pionita), a town in the
interior of Mysia, on the river Sathanis, to the north-
west of Antandrus, and to the north-east of Gar-
gara. (Strab. xiii. p. 610.) Under the Roman
dominion it belonged to the jurisdiction of Ancyryti-
tium (Plin. v. 32). and in the ecclesiastical notices
it appears as a bishopric of the Helleponte prov-
ince. (Hieros. p. 663; Sebast. p. 75.) [L. S.]

PIRAEOUS or PIRAEUS. [Athenaeum, p.
306.]

PIRAEU, or PIRAEUM, in Corinthia.
(p. 685, b.)

PIRAEU or PIRAEUS, in Corinthia.
(p. 683, a.)

PIRATHON (Pirathon, Joseph., LXX.), a town
in the land of Ephraim, and in the mount of the
Amalekites, to which Abson, one of the judges of
Israel, belonged, and where he was buried. (Jos.
xi. 13. 15.) It was repaired and fortified by Lus-
cides, in his campaign against the Jews (1 Macc.
ix. 50; Joseph. Ant. xiii. 1. § 3.)

PIRENE or PIRENE FONS. [Corinthius,
p. 680, b.]

PIRESEIAE. [Asterium.]

PIRUS or PEIRUS. [Achaea, p. 13, b.]

PIUS (Pius: Eth. Piurias, Piurias), a town
in Peloponnesus, was in the most ancient times the
capital of an independent district, called Pisa-
tes (§ Piurias), which subsequently formed part of
the territory of Elia. It was celebrated in mythology
as the residence of Oeumans and Pelos, and was
the head of a confedcracy of eight states, of which,
said Pisa, the following names are recorded:----
Salme, Heraclea, Harpax, Cycesium, and Dys-
 pentum. (Strab. viii. p. 356, seq.) Pisa had orin-
ially the presidency of the Olympic festival, but
was deprived of this privilege by the Eleians.
The Pisians, however, made many attempts to re-
cover it; and the history of their wars with the Eleians,
which were at last terminated, by the division of
Pisa in n. c. 572, is narrated elsewhere. (Elis. Vol.
i. p. 818, b.) Although Pisa ceased to exist as
a city from this time, the Pisians, in conjunc-
tion with the Arcadians, celebrated the 104th
Olympic festival, n. c. 364. [See Vol. i. p. 819, b.] Pisa
was said to have been founded by an epony-
ymous hero, Pisan, the son of Perieres, and grandson
of Aeodus (Pans. vii. 22. § 2); but others derived
its name from a fountain Pian. (Strab. viii. p. 356;
Eustath. ad Dionys. Per. 409.) Modern writers
connect its name with Pious, a low marshy ground,
or with Piao, the name of the black fir or pine-
tree. So completely was Pisa destroyed by the
Eleians, that the fact of its having existed was a
disputed point in the time of Strabo (i. c.); and
Pausanias found its site converted into a vineyard
(vii. 22. § 1). Its situation, however, was perfectly
well known to Pindar and Heraclides. Pindar fre-
quently identifies it with Olympia (e. g. Od. ii. 3); and
Heraclides refers to Pisa and Olympia as the
same point in computing the distance from the altar
of the twelve gods at Athens (ii. 7). Pisa appears
from Pausanias to have occupied a position between
Harpia and Olympia, which were only 20 stadia
asunder (Lucian, de Mort. Pergyr. 35); and the
Scholiast on Pindar (Od. xi. 31) says that Pisa
was only 6 stadia from Olympia. It must therefore
be

O
placed a little cast of Olympia, and its acropolis probably occupied a height on the western side of the rivulet of Minakri, near its junction with the Alpheus. Strabo (L.c.) says that it lay between the mountains Olympus and Os sia, which can only have been heights on different sides of the river. See its position marked in the map in Vol. II. p. 477. (Leake, Morea, vol. ii. p. 211, Peloponnesiacs, p. 6. More, Tour in Greece, vol. ii. p. 283; Curtius, Peloponnesus, vol. ii. p. 51.)

PISEA (Pisae, Strab. Pol.; Pisea, Pol.; Pisea, Lycurph.: Eibh, Pismus: Pisc), an important city of Etruria, situated on the N. bank of the river Arno, a few miles south. All authorities agree in representing it as a very ancient city, but the accounts of its early history are very confused and uncertain. The identity of its name with that of the city of Elis naturally led to the supposition that the one was derived from the other; and hence the foundation of the Italian Pisea was ascribed by some authors to Peps himself (Plin. iii. 5, 8), while others assigned it to a body of settlers from the Peloponnesian Pisa who had accompanied Nestor to Troy, and were to return and settle in that part of Italy. (Strab. v. p. 222; Serv. ad Aen. x. 179.)

Eques, the reputed founder of Metapontum, was, according to some writers, that of Pisea also. (Serv. l.c.) The Elean, or Albean, origin of the city is generally adopted by the Roman poets. (Virg. Aen. x. 179; Claudian, B. Gild. 483; Rutili. Itin. i. 563.) Cato, however, followed a different tradition, and represented the city as founded by the Etruscans under Tarchon, though the site was previously possessed by a people called the Tentanes, who spoke a Greek dialect. (Cato, ap. Serv. l. c.) Virgil also calls it distinctly an Etruscan city, though he derives its more remote origin from Elis; and the tradition reported by Cato seems to prove at least that it was one of the cities of which the Etruscans claimed to be the founders, and which must therefore have been at one period a genuine Etruscan city. On the other hand, Deynysius mentions it among the cities founded or occupied by the Pelasgi in conjunction with the Aborigines (Dionys. ii. 39), and there seems to be some reason to regard it as one of the early Pelasgic settlements on the coast of Etruria, which fell at a later period under the power of the Etruscans.

We know almost nothing of Pisea as an Etruscan city, nor are there any remains of this period of its history. But Strabo still found vestiges of its past greatness, and the tradition of its foundation by Tarchon seems to point to it as one of the principal cities of Etruria. Its inhabitants were trained to arms by frequent contests with their neighbours the Ligurians, while they appear to have been one of the principal maritime powers among the Etruscans, and, like most of their countrymen, combined the pursuits of commerce and piracy. (Strab. v. p. 223.) We have no account of the period at which it became a dependency of Rome; but the first historical mention of its name is in B.C. 225, when the consul C. Atius hands there with two legions from Sardinia, with which he shortly after attacked and defeated the Carthaginian army near Telamon. (Pol. ii. 27.) It is clear therefore that Pisea was at this time already in alliance with Rome, and probably on the same footing as the other dependent allies of the republic. Its port seems to have been much frequented, and became a favourite point of departure for the Roman fleets and armies whose destination was Gaul, Spain, or Liguria. Thus it was from hence that the consul P. Scipio sailed to Massilia at the outbreak of the Second Punic War (B.C. 218), and thither also that he returned on finding that Hannibal had already crossed the Alps. (Pol. iii. 43, 56; Liv. xxi. 39.) The long-continued wars of the Romans with the Ligurians added greatly to the importance of Pisa, which became the frontier town of the Roman power, and the customary headquarters of the generals appointed to carry on the war. (Liv. xxxiii. 43, xxxv. 22, xl. 1, cce.) It was not, however, exempt from the evil consequences incident to the occupation of a position. In B.C. 193 it was suddenly attacked and besieged by an army of 40,000 Ligurians, and with difficulty rescued by the arrival of the consul Minucius (Liv. xxxiv. 3); and on several other occasions the Ligurians had waste its territory. Hence in B.C. 180 the Pisans themselves invited the Romans to establish a colony in their territory, which was accordingly carried out, the colonists obtaining Latin rights. (Liv. xl. 43.) From this time we hear but little of Pisea; its colonial condition became merged, like that of the other colonies, in that of the town, which was soon afterwards established by virtue of the Lex Julia (Fest. v. Municipium): but it seems to have received a fresh colony under Augustus, as we find it bearing the colonial title in a celebrated inscription which records the funeral honours paid by the magistrates and senate of Pisa to the deceased grandchildren of Augustus, C. and L. Caesar. (Orell. Inscri. 642, 643.) It is here termed "Colonia Olausques Julia Pisana:" Tityius also gives it the title of a colony (Plin. iii. 5, 8), and there seems no doubt that it was at this period one of the most flourishing towns of Etruria. Strabo speaks of it as carrying on a considerable trade in timber and marble from the neighbourhood mountains, which were sent to Rome to be employed there as building materials. Its territory was also very fertile, and produced the fine kind of wheait called silico, as well as excellent wine. (Strab. v. p. 223; Strab. iv. 3, 4, xvii. 9, 20.) We have no account of the fortunes of Pisea during the declining period of the Roman republic, but during the wars of Narses it is still mentioned as a place of importance (Agath. B. G. i. 11), and in the middle ages rose rapidly to be one of the most flourishing commercial cities of Italy.

There is no doubt that the ancient city stood on the same site with the modern Pisa, but natural causes have produced such great changes in the locality, that it would be difficult to recognise the site as described by Strabo, were not the identity of the modern and ancient cities fully established. That anchor (as well as Rutillius and other writers) describes the ancient city as situated at the confluence of the rivers Arno and Auser (Sericchio), and distant only 20 stadia (21 miles) from the sea. (Strab. v. p. 222; Plin. iii. 8, 14; Rutili. Itin. i. 565—570.) At the present day it is more than 6 miles from the sea, while the Serchio does not flow into the Arno at all, but has a separate channel to the sea, the two rivers being separated by a tract of 5 or 6 miles of marsh, formed partly by the accumulation of alluvial soil from the rivers, partly by the sand heaped up by the sea. There are no remains of the Etruscan city visible; it is probable that all such, if they still exist, are buried to a considerable depth by the alluvial soil. The only vestiges of Roman antiquity which remain are some mean traces of baths, and two marble columns with
an ancient city, probably belonging to the vestibule of a temple of the age of the Antonines, now embedded in the wall of the ruined citadel of S. Felice.” (Dennis, Etruria, vol. ii. p. 89.)

Among numerous sarcophagi of Roman date, some of them of very superior workmanship, and some fragments of statues are preserved in the Campo Santo, as well as numerous inscriptions, of which the most interesting are those already alluded to, recording the honours paid by the colony to the deceased grandsons of Augustus. These have been published with a learned and elaborate commentary by Cardinal Norris (Commentar. Pont. Etruriae, vol. 1641); as well as by Gori (Inscript. Etruriae, vol. i. p. 10, &c.), and more recently by Haubold (Monumenta Legallia, p. 179) and Orelli (L. c.).

The Maritime Itinerary mentions the Portus Pisanus as distinct from Pisa itself, from which it was no less than 9 miles distant. (Itin. Marit. p. 50L.) Rutulius also describes the port of Pisa, which was in his day still much frequented and the scene of an active commerce, as at some distance from the town; 531—540, 558—565, i. 12.) But the exact site has been a subject of much controversy. Cluverius and other writers placed it at the mouth of the Arno, while Mansoert and Mr. Dennis would transfer it to the now celebrated port of Leghorn or Livorno. But this latter port is distant 10 miles from the mouth of the Arno, and 14 from Pisa, which does not agree with the distance given in the Maritime Itinerary; while the mouth of the Arno is too near Pisa, and it is unlikely that the entrance of the river could ever have been available as a harbour. Rutulius also describes the port (without any mention of the river) as formed only by a natural bank of sea-weed, which afforded shelter to the vessels that rode at anchor within it. Much the most probable view is that advocated by a local writer (Targioni Tozzetti), that the ancient Portus Pisanus was situated at a point between the mouth of the Arno and Leghorn, but considerably nearer the latter city, near an old church of St. Stefaa. The distance of this spot agrees with that of the Itinerary, and it is certain from mediæval documents that the Porto Pisanu, which in the middle ages served as the port of Pisa, when it was a great and powerful republic, was situated somewhere in this neighbourhood. (Targioni Tozzetti, Viaggi in Toscana, vol. ii. pp. 225—240, 378—420; Zumpt, ad Rut. l. 527.) Roman remains have also been found on the spot, and some ruins, which may very well be those of the villa called Triturrica, described by Rutulius as adjoining the port, designated in the Tabula as Turrita. (Rutii. Itin. l. 527; Tab. Peut.) There is every probability that the Porto Pisanu of the middle ages occupied the same site with the Roman Portus Pisanus, which is mentioned by P. Duscamus as still in use under the Lombard kings, and again by a Frankish chronicler in the days of Charlemagne (P. Duscamus, Hist. Lang., v. 61; Anonii Iter. Francorum 9), and there is no doubt that the medieval port was quite distinct from Livorno. The latter city, which is now one of the most important trading places in Italy, was in the 13th century an obscure village, and did not rise to consideration till after the destruction of the Porto Pisanu. But it seems probable that it was occasionally used even in ancient times, and is the Larno noticed by Cicero (ad Q. Fr. ii. 6) as a seaport near Pisa. It has been supposed also to be already mentioned by Zosi-
Aciaum, p.c. 31. (Plut. Ant. 60.) It appears, however, to have been restored, and peopled with fresh colonists by Augustus. for we find it bearing in inscriptions the titles of “Colonia Julia Felix;” and though Pliny does not give it the title of a colony, its possession of that rank under the Empire is abundantly proved by inscriptions. (Plin. ii. 14. s. 19; Orell. Inscr. 51, 3143, 3698, 4069, 4084.) From the same authority we learn that it was a place of some trade, and that vessels were built there, so that it had a “Collegium Fabrum Na-
valium.” (Ib. 4084.) The port was undoubtedly formed by the mouth of the river, which still affords a harbour for small vessels. Its position on the great Flaminian Way also doubtless secured to Pisaurum a certain share of prosperity as long as the Roman empire continued; but it was always inferior to the neighbouring Fannum Fortune. (Mel. i. 4. § 5; Pol. iii. 1. § 22; Itin. Ant. pp. 100, 126; Itin. Hier. p. 615; Tab. Peut.)

PISCEAE, enumerated by Pliny (ii. 4. § 3) among the Oppida Latina of Gallia Narbonensis. It is generally assumed to be represented by Pessana in the district of Aquita (Aquit.) near the Avarris (Hérald.) Pliny (xvii. 48. s. 73) speaks of a wool that was grown about Pessana, which was more like hair than wool.

PISGAIL. [Near.] PISIDA, a municipality and station on the Roman road running along the coast-line of Syrricus, 20 M. P. from Glaussa (Dubhans), and 20 M. P. from Villa Magna (Khoah). (Itin. Anton.; Peut. Tab.) Polesen" has a harbour, Pissandos Portus (Πισσανδός Πόρτος, iv. 3. § 12), on the coast, which is represented by the harbour of Barcii or Bircus. (Barth. Wanderungen, p. 271.) [E. B. J.] PISIDIA (ἡ Πίσιδα; Epb. Pisiada, Pisida), a province in the south of Asia Minor, which was in the earlier times always regarded as a part of Phry-
 gia or Pamphylia, but was constituted a separate province in the division of the Roman empire made by Constantine the Great. It bordered in the east on Isauria and Cilicia, in the south on Pamphylia, in the west on Lycia, Caria, and Phrygia, and in the north on Phrygia Parthica; but it is almost impossible to mark the exact boundary lines, espe-
cially in the north and north-west, as the northern parts of Pisidia are often treated as parts of Phry-gia, to which they originally belonged, and from which they are sometimes called Phrygia Pissida, or Πρυγία πίσιδα Πολιάθων; but Augustus separated them from Phrygia and united them with Pisidia. (Strab. xii. p. 570, &c.; Pol. v. §§ 4, 8; Dionys. Per. i. 38, &c.; Plin. v. 24; Hier. pp. 662, &c., 579, &c.) The country, which was rough and mountains-
tious, though it contained several fertile valleys and plains, which admitted of the cultivation of olives (Strab. L.c.), was divided into several dis-

another adjoining it bore the name of Cabala. The mountains traversing Pisidia consist of ramifications of Mount Taurus, proceeding from Mount Cadmus in Phrygia, in a south-eastern direction, and assum-
ing in the neighbourhood of Termessus the name of Sardesinian (Pomp. Mel. i. 14; Plin. v. 26), and on the borders of Milyas that of Climax. (Polyb. v. 72; Strab. xiv. p. 666.) These mountains contain the sources of the rivers Cattaractes and Cestrus, which flow through Pisidia and Pamphylia into the bay of Myra. The principal products of Pis-
dia were the bell, the root iris, from which perfumes were manufactured, and the wine of Abmalaia, which was much recommended by ancient physicians. (Plin. xii. 55, xxi. 19, xxxi. 39; Strab. xii. p. 570.) Pisidia also contained several lakes, some of which are assigned to Phrygia or Lycaonia, e. g. Corahis and Trogitis (Strab. xiv. p. 568), the great salt lake Ascania, and Piscum or Puncus, which is mentioned only by Byzantine writers. (Nicet. Chron. x. 12; Climax. Hist. ii. 8.)

The inhabitants of Pisidia must in a great mea-
sure have belonged to the same stock as the Phrygians, but were greatly mixed with Cilicians and Isaurians. They are said to have at first been called Solyms (Steph. B. s. e. v.); they were warlike and free mountaineers who inhabited those parts from very remote times, and were looked up upon by the Greeks as barbarians. They were never subdued by neighbouring nations, but frequently harassed the adjoining countries by irregular incursions. (Xenoph. Anab. i. 1. § 11, i. § 4, &c.; Strab. ii. p. 130, xiii. p. 569, xiv. pp. 670, 678; Liv. xxxv. 13.) Even the Romans were scarcely able to subdue these people, protected as they were by their mountains and ravines. After the defeat of Antiochus, Pisidia was, with the rest of Asia, given to Eumenes, but had to be conquered by the Romans themselves, and then formed the beginning of what subsequently came to be the province of Cilicia, to which, about A. C. 88, the three Phrygian districts of Laodicea, Apamea, and Pisidia, were added. (Liv. Epit. 77; Cic. in Terr. i. 17, 38.) Still, however, the Romans never established a garrison or planted a colony in the interior; and even the submission of the towns seems to have consisted mainly in their paying tribute to their rulers. The principal towns of Pisidia were, Antiochis, Sagalassus, Termis-
isses, Selge, Paeonaeus, Cotylus, Elaeussa, and Dussion. The mountainous parts of Pisidia are now inhabited by the Karimantas, a wild and rapacious people, whose country is little visited by travellers, and consequently little known; but Pisidia in general corresponds to that portion of Asia Minor comprised within the government of Isauria.

[ L. S. ] PISILIS (Πισίλης), a small town of Caria, be-

between Caunus and Caunos, of uncertain site. (Strab. xiv. p. 651.) [ L. S. ] PISINGARA or PINSIGARA (Πισιγγάρα or Πισσίγγαρα), a town of uncertain site in Armenia Minor. (Itin. v. 7. § 4.)

PISORACA, according to an inscription (Florae, Exp. Svor. v. p. 37), a southern affluent of the river Darius in Hispania Tarraconensis, now the Dun-
gera. (UKert, vol. iii. p. 1. p. 290.) [T.H.D.] PISSAEUM (Πισσαίαμ), a town of Pelagonia in Epeirus, the exact site of which is unknown. (Po-
yb. v. 108; Steph. B. s. e. v.)

PISANTINIL. [Dassaretar.]
PISTORIA (Πιστορία; Eth. Pistoierienis; Pis-
PISTYRUS. is not noted by any other writer; but it may possibly be the river Pitunus, spoken of by Ptolemy (iii. 2. § 8), and which seems to derive its name from the town of Pitunus. [L. S.]

PISTANE. [SPARTA.]

PITHECUSAE INSULAE. [AEGINA.]

PITHOM. [PATUMOS.]

PITNIXU [Torre di Pitino], a town of the Vestini, known only from the Tabula Peutingeriana, which places it on a line of road from Lutereca (Antrodoco) to Aveia. But the stations on each side of it, Priemenum and Eruli, are both unknown, and the distances probably corrupt. Hence, this itinerary affords us no real clue to its position. But Holstenius has pointed out that the name is retained by the Torre di Pitino, about 2 miles N. of Aquila, and has also shown that in the middle ages Pitinum still subsisted as a city, and was an episcopal see. (Tab. Peut.; Holsten. Not. ad Clerum, p. 139; Romanelli, vol. iii. p. 280.) [E. H. B.]

PITULUM (Pitalanus: Pitoio), a town of Umbria, mentioned only by Pliny (iii. 14. s. 19), who enumerates among the towns of that region the "Pitulani, cognates withqui ut vidimus," but names otherwise unknown, but according to Cluverius there is a village called Pitoio in the Apennines between Camerino and Matticola, which probably retains the name of one or the other. (Cluver. Ital. p. 614.) [E. H. B.]

PITYEIA (Piteia: Eth. Pitewe), a town of Mysea, on the coast of the Propontis, between Parium and Priapias. It is mentioned even in the time of Homer. (II. ii. 829; comp. Apollo. Rhod. i. 933; Strab. xiii. 558; Steph. B. s. v.) It is said to have derived its name from the fire which grew there in abundance, and is generally identified with the modern Skanlid. [L. S.]

PITYODES (Pitodes), a small island in the Propontis off the coast of Bithynia, near Cape Hyris, and 110 stadia to the north of Cape Acritas. (Plin. v. 44; Steph. B. s. v. Pitonuessa, who speaks of several islands of this name, which is the same as Pityodes.) The island is probably the one now called Bofuk Ada, or, as it is now called, "Pityodes," which is the road which leads to the town of Pitunus, as Pliny says. (Steph. B. s. v.) It is said to have found remains of an ancient town. [L. S.]

PITYONE'SOS, a small island in the Saracen gulf, lying between Aegina and the coast of Epi- daurus, and distant 6 miles from the latter. (Plin. iv. 12. s. 19.)

PITYUS (Pitouses: Pitsunda), a Greek town in Asiatic Sarmatia, on the north-eastern coast of the Black Sea, N. of Dioscurias, from which it was distant 800 stadia according to Artemidorus, and 300 according to Arrian. The real distance, however, is underrated by these writers; for from C. Iakarion (Dioscurias) to Pitsunda is not less than 400 stadia in a straight line. (Artemidor. ap. Strab. xi. p. 496; Arrian, Per. P. Eum. p. 18.) Artemidorus described it as the great Pitius, and Pliny as an "oppidum opulentissimum," but between the time of Arrian and Pliny it was destroyed by the Herihochi (Plin. v. 5), whence Arrian mentions it only as a place for anchorage, and the name does not occur at all in Ptolemy. The town was afterwards rebuilt by the Romans, and is described by Zosimus (j. 32), in the history of Gallienus, as a fortress surrounded with a very great wall, and having a most excellent harbour. (Comp. Procop. B. Goth. iv. p. 473, ed. Bonn; comp. C. Müller, ad Arrian. l. c. ap. Geogr. Græc. Min. vol. i. p. 392.)

PIITUUSA (Piteusa or Pitousua), a coast of
PITYUSAE.

IITofWafen, literally, "abounding in pine-trees." 1. An island off the promontory Scyllaenum, or Ba-
ciphala, in Troezenia in Argolis. (Paus. ii. 34. § 8.)

Pliny mentions (iv. 12. s. 19) an island Pityusa in
the Argolic gulf, but from the order in which it occurs in Pliny, it would seem to be a different island
from the preceding. 2. One of the Demonesia in the Propontis, according to Hesychius (s. v.).

[DEMONESSE.]

PITYUSAE (ΠΙΤΥΥΑΣΕ or ΠΙΤΥΥΑΣΑ), Strab. iii. p. 167; Ptol. ii. 6: § 77). two islands on the S.
coast of Spain, 700 stadia, or nearly 100 miles from Dinianum (Pinn. iii. 3. s. 11; Liv. xxviii.
37). Their position is thus defined by Diodorus (v. 17): they are three nights' and days' sail from
the Columns of Heracles, one day's sail from Berca, and one day and night from Lilaea; whilst, according
to the Itinerary (p. 511), they were 500 stadia from
the Balareas, and 400 from Carthageo Sparta-
tia, or Carthagoynes. The larger of the two islands
was called Ebusus ('Eβυσσος, Ptol. l. c.); the smaller
Ophiussa (Oφίυσσα, Id.); and as they are only
separated by a narrow strait, and as Ophiussa, from
its small size, was unimportant, they are sometimes
confounded together as one island by the ancients
(Diod. v. 16; Liv. l. c. Dioscor. i. 92, &c.). Their
name of Pityusa, was derived, like that of many
other ancient places, from the abundance of pine-
trees which grew upon them. They were 46 miles in
extent. Diodorus (l. c.) compares Ebusus with
Coreysa for size; and according to Strabo (l. c.)
it was 400 stadia in circumference, and of about
equal length and breadth. It was billy in some
parts, and not very fruitful, producing but little oil
and wine; but its figs were good, and it afforded
excellent pasturage. Snakes and noxious animals
were not found upon it, whilst, on the contrary, the
smaller island, abounded in serpents to such a de-
cree that it seems to have taken its name from them
(Pinn. iii. 14. xv. 21, xxvi. 59, &c.; Mela, ii. 7; Avien. Decr. Orb. 621, &c.). The chief
town, also named Ebusus, which lay on the SE.
side of the island, was a civitas foderata, and had a
mint. (Ramus, Cat. Num. vet. Græc. et Lat. Mus. Reg. Danube, i. p. 13.) It was a well-built city
with a good harbour, and was the resort of many
mansionaries and traders. (Strab. Mela, Diod. Il. c.) The larger island is now Porto, the smaller,
Formentara. [T. II. D.]

PLACENTIA (ΠΛΑΣΚΕΝΙΑ: Eth. Placentiunus; Placentia), a city of Gallia Cispadana, situated near
the S. bank of the Padus, just below the point where
it receives the waters of the Trebia. It was on the
Via Aemilia, of which it originally formed the ter-
mination, that road being in the first instance carried
from Aeminium to Placentia; and was 40 miles distant
from Parma. We have noticed the existence of a
town on the spot previous to the establishment of
the Roman colony, which was settled there in
n. c. 219, after the great Gaulish war, at the same
time with Cremona. (Liv. Epit. xx; Vell. Pat. 1. 14;
Ptol. iii. 40; Ascon. in Plac. 3.) It consisted of not
less than 6000 colonists, with Latin rights.
But the new colony was scarcely founded, and its
walls hardly completed, when the news of the ap-
proach of Hannibal produced a general rising of the
neighbouring Gauls, the Boians and Insubrians, who
attacked Placentia, ravaged its territory, and drove
many of the colonists to take refuge at Mutina; but
were unable to effect anything against the city
itself, which was still in the hands of the Romans
in the following year, and became the head-quarters
of the army of Scipio both before and after the battle
of the Trebia. (Pol. iii. 40, 66; Liv. xvi. 25, 56,
59, 63; Appian, Hann. 3. 7.) At a later period of
the same war, in n. c. 209, Placentia was one of the
colonies which proved faithful to Rome at its great-
est need, and came forward readily to furnish its
quota of supplies for the war, when twelve of the
older colonies failed in doing so. (Liv. xxvii. 10.)
Shortly after this it withstood the arms of Has-
drual, who was induced to lay siege to it, after
he had crossed the Alps and descended into Cis-
alian Gaul, and by so doing lost a great deal of
valuable time. After a protracted siege he was
compelled to abandon the enterprise, and continue
his march into Italy, leaving Placentia behind him.
(Id. xxvii. 39, 43.) A few years later it was less
fortunate, having been taken by surprise by the
sudden insurrection of the Gauls in n. c. 200, who
plundered and burnt the town, and carried off the
greater part of the inhabitants into captivity. (Id.
xxxi. 10.) After the victory of the consul L. Fu-
rius, about 2000 of the prisoners taken on this
occasion were restored to the colony; and a few
years afterwards L. Valerius Flaccus, who wintered
at Cremona and Placentia, restored and repaired as
far as possible the buildings which had suffered during
the war. (Id. xxxi. 21, xxxiv. 22.) But they
were still exposed to the ravages of the Gauls and
Ligurians; and in n. c. 193 their territory was laid
waste by the latter up to the very gates of the city.
(Id. xxxiv. 56.) Hence we cannot wonder to find
them, in n. c. 190, complaining of a deficiency of
settlers, to remedy which the senate decreed that a
fresh body of 3000 families should be settled at
each of the old colonies of Placentia and Cremona,
while new ones should be established in the district
of the Boi. (Id. xxxvii. 46, 47.) A few years
later the consul M. Aemilius, having completed the
subjection of the Ligurians, constructed the cele-
brated road, which was ever after known by his name,
from Ariminum to Placentia (Id. xxxix. 2); and from
this time the security and tranquillity enjoyed by
this part of Italy caused it to rise rapidly to a state
of great prosperity. In this there can be no
doubt that Placentia fully shared; but we hear
little of it during the latter part of the Roman
Republic, though it appears to have been certainly one of the principal
towns of Cispadane Gaul. In the civil war of
Mar Scett and Sulla, a battle was fought near Pla-
centia, in which the partisans of Carbo were de-
feated by Lucullus, the general of Sulla, n. c. 82
(Appian, B. c. i. 92); and in that between Caesar and
Pompey, n. c. 49, it was at Placentia that a
mutiny broke out among the troops of the former,
which at one time assumed a very formidable as-
pect to the security of the Roman provinces, and
with which the two ex-consuls, Sallustius and
Cato, were oppressed by the flurry and the pro-
mises and authority of the dictator. (Appian, B. c. ii.
47; Dion Cass. xii. 26.) Placentia, indeed, seems
to have been at this period one of the places com-
monly selected as the head-quarters of Roman
troops in this part of Italy. (Cic. ad Att. vi. 9.)
It was again the scene of a somewhat similar
mutiny of the legions of Augustus during the Parthian
War, n. c. 41. (Dion Cass. xlvii. 8.)

In the civil war Placentia towards the close of the
republican period as a municipium; its colonial
rank must have been merged in the ordinary munic-
ipal condition in consequence of the Lex Julis,
n. c. 90. (Cic. in Pisones 23; Fest. s. v. Munic.
pium.) But under the Empire it reappears as a
colony, both Pliny and Tacitus giving it that title (Plin. iii. 15, s. 20; Tac. Hist. ii. 19): it had probably received a fresh colony under Augustus. We learn from Tacitus (I. c.) that it was one of the most flourishing and populous cities of the district of Gallia Cispadana; and though of no natural strength, being situated in an open plain, it was well fortified. For this reason it was occupied in A. D. 63 by Spurinna, one of the generals of Otho, and successfully defended by him against Caecina, the general of Vitellius, who had crossed the Padus, and had siege to Placentia, but was compelled to abandon it and withdraw to Cremona. (Tac. Hist. ii. 17—23.) During the assaults of Caecina, the amphitheatre, which is said to have been the largest provincial edifice of the kind in Italy, and was situated without the walls, was accidentally burnt. (Ib. 21.) From this time we meet with no further mention of Placentia in history till the reign of Aurelian, when that emperor sustained a great defeat from the Marcomanni, under its walls, (Vopisc. Anecd. 21.) But the city still continued to be one of the most considerable places on the line of the Via Aemilia; and though it is noticed by St. Ambrose, (St. Amb. 23.) towards the close of the fourth century, as sharing in the desolation that had been befallen the whole of this once flourishing province (Ambros. Ep. 39), it survived all the ravages of the barbarians; and even after the fall of the Western Empire was still a comparatively flourishing town. It was there that Orestes, the father of the unhappy Augustus, was put to death by Oloferne, in A. D. 476. (P. Diac. Hist. Mission. vi. p. 558.) Tropopius also mentions it during the Gothic wars as a strong fortress and the chief city of the province of Aemilia. It was only taken by Totila, in A. D. 546, by famine. (Procop. B. G. iii. 13, 17.) Considerably later it is still noticed by P. Diacosius among the "opulent cities" of Aemilia (Hist. Long. ii. 18); a position which it preserved throughout the middle ages. At the present day it is still a flourishing and populous place, with about 30,000 inhabitants, though partially eclipsed by the superior importance to which Parma has attained since it became the capital of the reigning dukes. There are no remains of antiquity. Placentia was undoubtedly indebted for its prosperity and importance in ancient times, as well as in the middle ages, to its advantageous situation for the navigation of the Po. Strabo (v. p. 215) speaks of the navigation from thence to Ravena, as if the river first began to be navigable from Placentia downwards; but this is not quite correct. The city itself lay at a short distance from the river; but it had an emporium or port on the stream itself, probably at its confluence with the Trebia, which was itself a considerable town. This was taken and plundered by Hannibal in B. C. 218. (Liv. xxxi. 57; Tac. Hist. ii. 19.) It has been already mentioned that the Via Aemilia, as originally constructed, led from Ariminum to Placentia, a distance of 178 miles. It was afterwards continued from the latter city to Dertona, from whence a branch proceeded across the Apennines to Genoa (Strab. v. p. 17); while another line was carried from Placentia across the Padus direct to Mediolanum, a distance of 40 miles; and thus communicated with the whole of Gallia Transpadana. (Itin. Ant. pp. 98, 127, 288; Itin. Hier. p. 616; Tab. Pent.) [E. H. B.] PLACIA (Πλακία; Eth. Πλακασιά), an ancient Pelasgian town in Myssia Olympea, at the foot of Mount Olympos, and on the east of Cyzicus. The place seems to have decayed or to have been destroyed at an early time, as it is not mentioned by later writers. (Herod. i. 57; Sev. lab. p. 35; Dionys. Hal. i. p. 23; Steph. B. s. v. Plakia.) PLACUS (Πλάκος), a woody mountain of Myssia, at the foot of which These is said to have been situated in the illi. (vi. 397, 425, xxii. 479); but Strabo (xiii. p. 614) was unable to learn anything about such a mountain in that neighbourhood. [See PELECAS.] [L. S.] PLAGIARIA. [LUSITANIA.] PLANARIA IN. [FORTUNATAE INSULAE.] PLANASIA (Πλανάσια). PLANAXIA (Πλανάξια). PLANASIA (Πλανάσια; Πικένου), a small island in the Tyrrenian sea, about 10 miles SW. of Ivia (Ellon), and nearly 40 from the nearest point on the coast of Etruria. It is about 3 miles long by 2½ in width, and is low and flat, from whence probably it derived its name. (Plin. iii. 6. s. 12; Ptol. iii. I. § 79; Itin. Marit. p. 513.) The Maritime Itinerary reckons it 90 stadia from Ivia, while Pliny calls the same distance 38 miles; but this is evidently a mistake for its distance from the mainland. It is remarkable that Pliny mentions Planaria and Planasia as if they were two distinct islands, enumerating the one before the other and after Ivia; but it is certain that the two names are only forms of the same, and both refer to the same island. (Cluer. Ital. p. 504; Harduin. Not. ad Plin. l. c.) In Varro's time it seems to have belonged to M. Piso, who kept large flocks of peacocks there in a wild state. (Varr. R. R. iii. 6.) It was not subsequently used as a place of banishment, and among others it was there that Postumus Agricola, the grandson of Augustus, spent the last years of his life in exile. (Tac. Ann. i. 3, 5; Dion Cass. v. 32; Suet. Aug. 65.) Some ruins of Roman buildings still remain in the island: and its quarries of granite seem to have been certainly worked in ancient times. It is now inhabited only by a few fishermen. [E. H. B.] PLANESIA (Πλανεσία, Strab. iii. p. 139), an island in the Sinus Hilicitanus, on the coast of Hispania Tarraconensis, new Isola Plana. [T. H. D.] PLATAEA. [PLATEA.] PLATEA or PLATEAE (Πάτρα, Hom. Herod.; Πάτρας, Thuc. Strab. Paus., &c.; Eth. Πάταρεις, Plateasensis), an ancient city of Boeotia, was situated upon the frontiers of Attica at the foot of Mt. Cithaeron, and between that mountain and the river Asopus, which divided its territory from that of Thebes. (Strab. i. p. 411.) The two cities were about 61 miles apart by the road, but the direct distance was little more than 5 geographical miles. According to the Thebans Platea was founded by them (Thuc. iii. 61); but Pausanias represents the Plateans as indigenous, and according to their own account they derived their name from Platea, a daughter of Aso- pus. (Paus. i. 1. § 1.) Platea is mentioned in Homer among the other Boeotian cities. (Ili. 504.) In B. C. 519 Platea, unwilling to submit to the supremacy of Thebes, and unable to resist her powerful neighbour with her own unaided resources, formed a close alliance with Athens, to which she continued faithful during the whole of her subsequent history. (Herod. vi. 108; Thuc. iii. 68.) She sent 1000 men to the assistance of Athens at Marathon, and shared in the glories of that victory. (Herod. l. c.) The Plateans also fought at Artemision, but were
not present at Salamis, as they had to leave the fleet in order to remove their families and property from the city, in consequence of the approach of the Persian army. (Herod. viii. 44.) Upon the arrival of the Persians shortly afterwards their city was burnt to the ground. (Herod. viii. 50.) In the following year (n. c. 479) their territory was the scene of the memorable battle, which delivered Greece from the Persian invaders. The history of this battle illustrates so completely the topography of the Platæan territory, that it is necessary to give an account of the different positions taken by the contending forces (See accompanying Map). Mardonius proceeded from Attica into Boeotia across Mount Parnes by the pass of Decelina, and took up a position on the bank of the Asopus, where he caused a fortified camp to be constructed of 10 stadia square. The situation was well selected, since he had the friendly city of Thebes in his rear, and was thus in no danger of falling short of provisions. (Herod. ix. 15.) The Grecian army crossed over from Attica by Mt. Cithaeron; but as Pausanias did not choose to expose his troops to the attacks of the Persian cavalry on the plain, he stationed them on the slopes of the mountain, near Erythrae, where the ground was rugged and uneven. (See Map, First Position.) This position did not, however, altogether preserve them; but, in an attack made by the Persian cavalry, a body of 300 Athenians repulsed them, and killed their leader Mosistius. This success encouraged Pausanias to descend into the territory of Platæa, more especially as it was better supplied with water than his present position. Marching from Erythrae in a westerly position along the route of Mt. Cithaeron, and passing by Ibyssus, he drew up his army along the right bank of the Asopus, partly upon hills of no great height and partly upon a lofty plain, the right wing being near the fountain Gargaphia, and the left near the chapel of the Platæan hero Androcrites. (Herod. ix. 25—30.) Mardonius drew up his army opposite to them on the other side of the Asopus. (See Map, Second Position.) The two armies remained in this position for some days, neither party being willing to begin the attack. The Persians assaulted the Greeks at a distance with their missiles, and prevented them altogether from watering at the Asopus. Meanwhile the Persian cavalry intercepted the convoys of provisions proceeding to the Grecian camp, and on one occasion drove away the Laciedemomians, who occupied the right wing from the fountain Gargaphia, and succeeded in choking it up. This fountain had been of late the only watering-place of the Greeks; and as their ground was now untenable, Pausanias resolved to retreat in the night to a place called the Island (πειρόμα), about 10 stadia in the rear of their present position, and halfway between the latter and the town of Platæa. The spot selected, improperly called an island, was, in fact, a level meadow, comprised between two branches of the river Oerot, which, rising from distinct sources in Mt. Cithaeron,

and running for some space nearly parallel with one another, at length unite and flow in a westerly direction into the gulf of Corinth. (Herod. ix. 51.)

The nature of the ground would thus afford to the Greeks abundance of water, and protection from the enemy's cavalry. At last, however, through for so short a distance, was effected in disorder and confusion. The Greek centre, chiefly composed of Megarians and Corinthians, probably fearing that the island would not afford them sufficient protection against the enemy's cavalry, did not halt till they reached the temple of Hera, which was in front of the town of Plataea. The Laecdemonians on the right wing were delayed till the day began to dawn, by the obstinacy of Amompharetus, and then began to march across the hills which separated them from the island. The Athenians on the left wing began their march at the same time, and got round the hills to the plain on the other side on their way to the island. After marching 10 stadia, Pausanias halted on the bank of the Molocis, at a place called Agripius, where stood a temple of the Eleusinian Demeter. Here he was joined by Amompharetus, and here he had to sustain the attack of the Persians, who had rushed across the Asopas and up the hill after the retreating foe. As soon as Pausanias was overtaken by the Persians, he sent to the Athenians to entreat them to hasten to his aid; but the coming up of the Boeotians prevented them from doing so. Accordingly the Laecdemonians and Tegaeans had to encounter the Persians alone without any assistance from the other Greeks, and to them alone belongs the glory of the victory. The Persians were defeated with great slaughter, nor did they stop in their flight till they had again crossed the Asopas and reached their fortified camp. The Thebans also were repulsed by the Athenians, but they retreated in good order to Thebes, being covered by their cavalry from the pursuit of the Athenians. The Greek centre, which was nearly 10 stadia distant, had no share in the battle; but hearing that the Laecdemonians were gaining the victory, they hastened to the scene of action, and, coming up in confusion, numbered 5000 were cut to pieces by the Theban force. Meantime the Laecdemonians pursued the Persians to the fortified camp, which, however, were unable to take until the Athenians, more skilled in that species of warfare, came to their assistance. The barricades were then carried, and a dreadful carnage ensued. With the exception of 40000 who retreated with Artabazus, only 3000 of the original 300000 are said to have escaped. (Herod. ix. 50—73.) On the topography of this battle, see Leake, Northern Greece, vol. ii. p. 335, seq.; Grote, History of Greece, vol. v. p. 212, seq.

As this signal victory had been gained on the soil of Plataea, its citizens received especial honour and rewards from the confederate Greeks. Not only was the large sum of 80 talents granted to them, which they employed in erecting a temple to Athena, but they were charged with the duty of rendering every year religious honours to the tombs of the warriors who had fallen in the battle, and of celebrating every five years the festival of the Eleutheria in commemoration of the deliverance of the Greeks from the Persian yoke. The festival was sacred to Zeus Eleutherius, to whom a temple was now erected at Plataea. In return for these services Pausanias and the other Greeks swore to guarantee the independence and inviolability of the city and its territory. (Thuc. ii. 71; Plut. Arist. c. 19—21; Strab. ix. p. 412; Paus. ix. 2 § 4; for further details see Dict. of Ant. art. ELECTHERIA.)

Plataea was of course now rebuilt, and its inhabitants continued unmolested till the commencement of the Peloponnesian War. In the spring of B.C. 431, before any actual declaration of war, a party of 300 Thebans attempted to surprise Plataea. They were admitted within the walls in the night time by an oligarchical party of the citizens; but the Plataeans soon recovered from their surprise, and put to death 180 of the assailants. (Thuc. ii. 1, seq.)

In the third year of the war (B.C. 429) the Peloponnesian army under the command of Archidamus laid siege to Plataea. This siege is one of the most memorable in the annals of Grecian warfare, and has been narrated at great length by Thucydides. The Plataeans had previously deposited at Athens their old men, women, and children; and the garrison of the city consisted of only 400 citizens and 80 Athenians, together with 110 women to manage their household affairs. Yet this small force set at defiance the whole army of the Peloponnesians, who, after many fruitless attempts to take the city by assault, converted the siege into a blockade, and raised a circuit of walls round the city, consisting of two parallel walls, 16 feet asunder, with a ditch on either side. In the second year of the blockade 212 of the besieged during a tempestuous winter's night succeeded in scaling the walls of circumvaliation and reaching Athens in safety. In the course of the ensuing summer (B.C. 427) the remainder of the garrison were obliged, through failure of provisions, to surrender to the Peloponnesians. They were all put to death, and all the private buildings and the temple were burned by the Greeks. While the materials erected a sort of vast barricade round the temple of Hera, both for the accommodation of visitors, and to serve as an abode for those to whom they let out the land. A new temple, of 100 feet in length (πενήνεκακτιμένες), was also built by the Thebans in honour of Hera. (Thuc. ii. 71, seq., iii. 20, seq., 52, seq., 68.)

The surviving Plataeans were kindly received by the Athenians. They would appear even before this time to have enjoyed the right of citizenship at Athens ('Ἀθηναίων ἵμαμαχοι καὶ πολίται', Thuc. iii. 63). The exact nature of this citizenship is uncertain; but that it was not the full citizenship, possessed by Athenian citizens, appears from a line of Aristophanes, who speaks of certain slaves, who had been engaged in sea-fights, being made Plataeans (καὶ Πλαταιῶν εἶχον εἶλαὶ διῆλθαν δεσπότας, Ran. 706; comp. Schol. ad Aristoph. Ran. 33; Büschh, Public Econ. of Athens, p. 262, 2nd ed.). Diochorus, in relating their return to Athens at a subsequent time, says (xx. 46) that they received the ἀνασκόπησις; but that some of them at any rate enjoyed nearly the full privileges of Athenian citizens appears from the decree of the people quoted by Demosthenes (c. Neer, p. 1380). On the whole subject, see Hermann, Staatsalterth. § 117.

In B.C. 429 the Athenians gave the Plataeans the town of Sceiae as a residence. (Thuc. iii. 32; Isocr. Paneg. § 108; Plut. Lycur. xii. 76.) At the close of the Peloponnesian War, they were able to march forth and to evacuate Sceiae (Plut. Lycur. 14), and again found a hospitable welcome at Athens. Here they were living at the time of the peace of Antalcidas (B.C. 387), which guaranteed the autonomy of the Grecian cities; and the Laecdemonians, who were now auxilius to humble the power of Thebes, took ad-
PLATAEA.

The ruins of Plataea are situated near the small village of Kókkhí. The circuit of the walls may still be traced in great part. They are about two miles and a half in circumference; but this was the size of the city restored by Philip, for not only is the earlier city, before its destruction by the Thebans, described by Thucydides (ii. 77) as small, but we find at the southern extremity of the existing remains more ancient masonry than in any other part of the ruins. Hence Leake supposes that the ancient city was confined to this part. He observes that "the masonry in general, both of the Acropolis and of the town, has the appearance of not being so old as the time of the battle. The greater part is that of the fourth order, but mixed with portions of a less regular kind, and with some pieces of polygonal masonry. The Acropolis, if an interior inclosure can be so called, which is not on the highest part of the site, is constructed in part of stones which have evidently been taken from earlier buildings. The towers of this citadel are so formed as to present flanks to the inner as well as to the outer face of the intermediate walls, whereas the town walls have towers, like those of the Turks, open to the internal. Above the southern wall of the city are foundations of a third inclosure; which is evidently more ancient than the rest, and is probably the only part as old as the Persian War, when it may have been the Acropolis of the Plataeans of that age. It surrounds a rocky height, and terminates to the S. in an acute angle, which is only separated by a level of a few yards from the foot of the great rocky slope of Corinth. This inclosure is in a situation higher than any other part of the ancient site, and higher than the village of Kókkhí, from which it is 500 yards distant to the E. Its walls are traceable on the eastern side along a torrent, a branch of the Omós, nearly as far as the south-eastern angle of the main inclosure of the city. In a church within this upper inclosure are some fragments of an inscribed marble." (Northern Greece, vol. ii. p. 325.) (Compare Friederich, Specimen Rerum Plataic. Berol. 1841; Münchser, Diss. de Rebus Plataeae. 1841.)

PLATANUS.

The Platanus has been mentioned by Pausanias, who notices three temples, one of Hera, another of Athena Areia, and a third of Demeter Eleusinia. Pausanias speaks of only one temple of Hera, which he describes as situated within the city, and worthy of admiration on account of its magnitude and the offerings with which it was adorned. It was apparently the temple built by the Thebans after the destruction of Plataea. (Thuc. iii. 68.) It is probable that the old temple of Hera mentioned by Herodotus, and which he describes as outside the city (i. 52), was no longer repaired after the erection of the new one, and had disappeared before the visit of Pausanias. The temple of Athena Areia was built according to Pausanias (i. 4. § 1) out of a share of the spoil of Marathon, but according to Plutarch (Alex. 290) with the 80 talents out of the spoils of Plataea, as mentioned above. The temple was adorned with pictures by Polygnotus and Onatas, and with a statue of the goddess by Phidias. Of the temple of Demeter Eleusinia we have no details, but it was probably erected in consequence of the battle having been fought near a temple of Demeter Eleusinia at Argiopis. (Herod. iii. 57.) The temple of Zeus Eleutherus (Strab. i. p. 413) seems to have been erected in the place of Plataea to an altar and a statue. It was situated outside the city. (Paus. i. 2. §§ 5—7.)

Plataea is mentioned in the sixth century by Herodotus (p. 645, Wesseling) among the cities of Bœotia; and its walls were restored by Justinian. (Procop. de Aedif. iv. 2.)

The ruins of Plataea are situated near the small village of Kókkhí. The circuit of the walls may still be traced in great part. They are about two miles and a half in circumference; but this was the size of the city restored by Philip, for not only is the earlier city, before its destruction by the Thebans, described by Thucydides (ii. 77) as small, but we find at the southern extremity of the existing remains more ancient masonry than in any other part of the ruins. Hence Leake supposes that the ancient city was confined to this part. He observes that "the masonry in general, both of the Acropolis and of the town, has the appearance of not being so old as the time of the battle. The greater part is that of the fourth order, but mixed with portions of a}

COIN OF PLATAEA.

PLATAMO Den (Messenia, p. 341, b.)

PLATANISTAN (Spauta.)

PLATANISTON (Πλατανίστων). 1. A fountain in Messenia, near Korone. (Paus. iv. 34. § 4.)

 Mehrfachgebrauch.

2. A river of Arcadia, and a tributary of the Neda, flowing westward of Lycosa, which it was necessary to cross in going to Phigalia. (Paus. viii. 39. § 1.) Leake, Morca, vol. ii. p. 10.)

PLATANISTUS (Πλατανίστος). 1. The northern promontory of Cythera. (Paus. iii. 23. § 1.)

2. Another name of Macistus or Macistum, a town of Triphylia in Elis. (Machistus.)

PLATANUS (Πλατανός), a river of Boeotia, flowing by Coreisa into the sea. (Corisell.)

PLATANUS (Πλατάνως), according to the Stadtnamen (§§ 178, 179), a coast-town of Chios Aspera, 350 stadia west of Anemurium. This distance is incorrect. Beaufort remarks that "between the plain of Scutari and the promontory of Anamur, a distance of 30 miles, the ridge of bare rocky hills forming the coast is interrupted but twice by narrow valleys, which conduct the mountain torrents to the sea. The first of these is Kharadra; the other is halfway between that place and Anamur." The latter, therefore, seems the site of Platanus, that is, about 150 stadia from Anemurium. The whole of that rocky district, which was very dangerous to navigators, seems to have derived the name of Platanus (Strab. xiv. p. 669) from Plataea. (Leake, Asia Minor, p. 200.)

PLATANUS (Πλατάνος, Polyb. v. 68; Step. B. s. v. Πλατανός). Joseph. Ant. xvi. 11. § 1; Eth. Πλατανεύς), a town of Phocis, described by Isodorus (E. C.) as a village of the Sikonesian, and situated upon a pass between Mount Leetan and
PLETAE INS.

1. Old Pleuron (ἡ πλήθα Πλευρών, Strab. x. p. 451), was situated in the plain between the Acheans and the Eueans, W. of Calydon, at the foot of Mount Curium, from which the Curetes are said to have derived their name. Pleuron and Calydon were the two chief towns of Aetolia in the heroic age, and are said by Strabo (x. p. 450) to have been the ancient ornament (σημαίνα) of Greece. Pleuron was originally a town of the Curetes, and its inhabitants were engaged in frequent wars with the Aetolians of the neighbouring town of Calydon. The Curetes, whose attack upon Calydon is mentioned in an episode of the Iliad (ix. 529), appear to have been the inhabitants of Pleuron. At the time of the Trojan War, however, Pleuron was an Aetolian city, and its inhabitants sailed against Troy under the command of the Aetolian chief Theseus, the son (not the grandson) of Oeneus. (Homo. ii. ii. 639, comp. xiii. 217, xiv. 116.) Ephorus relates that the Curetes were expelled from Pleuron, which was formerly called Curetis, by Aetolians (ap. Strab. x. p. 465); and this tradition may also be traced in the statement of Thucydides (iii. 102) that the district, called Calydon and Pleuron in the time of the Peloponnesian War, formerly bore the name of Aetolus. Since Pleuron appears as an Aetolian city in the later period of the heroic age, it is represented in some traditions as such from the beginning. Hence it is said to have derived its name from Pleuron, a son of Aetolus; and at the very time that some legends represent it as the capital of the Curetes, and engaged in war with Oeneus, king of Calydon, others suppose it to have been governed by the Aetolian Theseus, the brother of Oeneus. Theseus was also represented as a descendant of Pleuron; and hence Pleuron had an heroon or a chapel at Sparta, as being the ancestor of Leda, the daughter of Thesius. But there are all kinds of variations in these traditions. Thus we find in Sophocles Oeneus, and not Theseus, represented as king of Pleuron. (Apollod. i. 7. § 7; Paus. iii. 14. § 8; Soph. Trach. 7.) One of the tragedies of Phrynichus, the subject of which appears to have been the death of Meleager, the son of Oeneus, and the classical Peleus was, or the “Pleuron to Women;” and hence it is not improbable that Phrynichus, as well as Sophocles, represented Oeneus as king of Pleuron. (Paus. x. 31. § 4.) Pleuron is rarely mentioned in the historical period. It was abandoned by its inhabitants, says Strabo, in consequence of the ravages of Demetrius, the Aetolian, a surname probably given to Demetrius II., king of Macedonia (who reigned n. c. 239—229), to distinguish him from Demetrius Poliorcetes. (Strab. x. p. 451.) The inhabitants now built the town of

2. New Pleuron (ἡ νεωτερὰ Πλευρών), which was situated a short distance from Mt. Arcadyanus. Shortly before the destruction of Corinth (n. c. 146), we find Pleuron, which was then a member of the Achaean League, petitioning the Romans to be discovered from it. (Paus. vii. 11. § 3.) Leake supposes, on satisfactory grounds, the site of New Pleuron to be represented by the ruins called τὸ Κάστρον τῆς Κυπαρής Ἐφέσου, or the Castle of Lady Irene about one hour’s ride from Mesolonghi. These ruins occupy the broad summit of one of the steep and rugged heights of Mt. Zygus (the ancient Arcadyanus), which bound the plain of Mesolonghi to the north. Leake thinks the walls of a town of which was daily in circumference, but Mare and Dodwell describe the circuit as nearly two miles. The most remarkable T T
remains within the ruined walls are a theatre about 100 feet in diameter, and above it a cistern, 100 feet long, 70 broad, and 14 deep, excavated on three sides in the rock, and on the fourth constructed of masonry. In the acropolis Leake discovered some remains of Doric shafts of white marble, which he conjectures to have belonged to the temple of Athena, of which Dicaearchus speaks (1. 55); but the temple mentioned by Dicaearchus must have been at Old Pleuron, since Dicaearchus was a contemporary of Aristotle and Theophrastus, and could not have been alive at the time of the foundation of New Pleuron. Dotwell, who visited the ruins of this city, erroneously maintains that they are those of Oroseum, which were, however, situated among the marshes on the other side of the Achelous. Leake places Old Pleuron farther south, at a site called Chylo-Kostra, on the edge of the plain of Meso-boughhi, where there are a few Hellenic remains.

**PLINTHINE**

(Πλινθίνη, Strab. xvii. p. 799; *Ptol. iv. 5. § 8; Steph. B. s. v.*), the frontier town of Aegypt towards Libya. It stood at the head of the somewhat long bay in latitude 30° 30' N. just within the Maeotic sea, but beyond the limits of the Delta proper. There are no remains enabling us to determine the exact site of this town; but it cannot have been far from Taposiris (Abousor), of which the ruins are still visible about 25 miles W. of Alexandria. An inferior kind of wine was produced in this region of Aegypt; and Hellenicus (Fr. 155) says that the people of Plinthine originally discovered the virtues of the grape. ( Athein. i. p. 34.)

(W. B. D.)

**PLINTHINETICUS SINUS**

(Πλινθινετικής ρέματος, Herod. ii. 6), the westernmost of the Mediterranean harbours of Aegypt. It was indeed little more than a sandbank, and was exposed to the N. and NW. winds. W. of the Sinus Plinthineticiens the region Marcomarica.

(W. B. D.)

**PLISTIA**

(Prestia), a town of the Sammites, mentioned only by Livy (ix. 21, 22) in a manner that adorns but little clue to its position. It was besieged by the Sammites in B. c. 315, with the view of drawing off the Romans from the siege of Saticiana; they failed in this object, but made themselves masters of Plistia. The site is probably indicated by a village still called *Prestia*, about 4 miles from St Agata dei Galli, at the foot of the Monte Taburnus.

(E. H. B.)

**PLITTUS.**

(Delph.)

**PLITTENUS.**

(a Thesára, Arrian, *Per. Mar. Evagri*, p. 29, Iudas, p. 294, ed. C. Müller, who reads *Páthára*), an important emporium in the *Duchinades* in India, from which many only stones were exported. It is called by Ptolemy (Vit. i. § 82) *Bathana* (Baithana), the royal residence of Siro-polomeaus. In Ptolemy it is also called *Fathana*, in *Samscrit Pratthodana*: it is the modern town of *Pythian*, or *Palinuk* upon the river Godavari. (Vincent, *Voyage de *Newcouth*, vol. ii. p. 412; Lasson, *Ind. Abhcr*, vol. i. p. 177; C. Müller, *ad Geogr. Græc. Min.* vol. i. p. 294.)

**PLOTAE INSULAE.**

(strophades).*

**PLOTHIA.**

(Attica, p. 330, b.)

**PLOTINOPOLIS.**

(Πλοτινόπολις, *Ptol. iii. 11. § 13*), a town of Thrace, on the road from Trajanopolis to Hadrianopolis, and connected with Hercules by a by-road. (*Itin. Ant.* pp. 175, 322.) According to the Itinerary, it was 21 miles distant from Hadrianopolis. It was probably founded by Trajan at the same time with Trajanopolis, and named after his censor Plotina. It was restored by Justinian. (*Procop. Aed. iv. 11.*). Variously identified with *Hjsìs-erike, Illudia, and Demetria*; but Pococke (iii. c. 4) thinks that the ruins near *Lan Kinyr* belong to it. [T. H. D.]

**PLUMBARKA.**

(Πλυμβάρκα, Strab. iii. p. 159), a small island on the S. coast of Spain, probably off C. St. Martin. [T. H. D.]

**PLUVIA.**

(Ποτφίντατα ίσοιλαι). PLUVINA, a town of Pelagonia, to which the consul Sulpicius retired in his campaign against Philip, B. C. 200. (*Liv. xxxi. 39*). Its position must be looked for in one of the valleys watered by the Erigon and its branches. [E. B. J.]

**PNEGEUS.**

(*Phoenic.*)

**POCRINUM,** in Gallia, a name which appears in the Table on a route from *Aqua Borinensis* (*Bourbon* *L'Archambault*) to *Augustodunum* (*Auteum*). D'Anville finds a place named *Perrigni*, on the right bank of the *Loire* E. of *Bourbon L'Archambault*, and he thinks that both the name and the distance agree well enough with the Table. A French writer, cited by Uerton (*Galliennes*, p. 467), places Pocrimum 15 leagues from Perrigny, near the village *La Brosse*, where old ruins have been found; and the place is called in old documents *Pont Bercoune* on the Loire. [G. L.]

**PODALAKA.**

(Ποδάλακα, Ποδάλλα, Ποδάλλα, or Ποδάλλης; *Eth. Ποδάλλως*), a town of *Lycia*, situated in the neighbourhood of Limyra (Steph. B. s. r.). but according to Ptolemy (v. § 7) not far from the sources of the *Xanthus* in the north of *Lycia*. (*Comp. Pin. v. 28; Hieroc. p. 683*). Sir C. Fellows (*Lycia*, p. 392, &c.) looks for its site further east towards Mount *Solida*, where remains of an ancient town (*Cyclopian walls and rock-tombs*) near *Aullea*, are still found, and are known by the name of *Eski Hissar*, i. e. old town. [L. S.]

**PODANDUS.**

(Ποδανδός, Basil. Ep. 74, 75; *It. Auton.*, p. 143, i Podandos, Const. Porphyr. de Theor. i. p. 19, Bonn; Podandos, Const. Porphyr. *Vit. Basil. c. 36; Opodanda, ii. Hieros*, p. 578). a town of *Cappadocia* distant 16 Roman miles from *Faustinopoli*, according to the Antonine Itinerary (*i. e.*), but 29 according to the Jerusalem Itinerary (*i. e.*). It was situated near the Pyla Ciliciae. It is frequently mentioned by the Byzantine writers, and is said to have taken its name from a small stream which flowed near it. (*Constant. Porphyr. *Vit. Basil. c. 36; Cedron*, p. 575; Joann. Scluiz. pp. 829, 844.) It is described by Basil as a most miserable place. "Figure to yourself," he says, "a Lacanian Crasso, a Charonius breathing forth pestilential vapours; you will then have an idea of the wretchedness of Podandus." (Ep. 74.) It is still called *Podand.* (Cramer, *Asia Minor*, vol. ii. p. 15.)

**POPOYCA.**

(Ποπόγκα or Ποπόκκα, Ptol. vii. 1. § 14; *Podacena, Perip. Mar. Evagri*, p. 60), a place near the coast of *Molatul* not far from the *Cumary* river. According to Boden (*Ind. vol. i. p. 26*), the name is a corruption of *Podkern* (the new town). (*Comp. ad litter*, vol. v. p. 516.) It is not unlikely that the name has been preserved in the
POLA. 643

that the city was considered as an ancient one, and
certainly existed before the Roman conquest of Istria
in A.D. 177, though its name is not mentioned on
that occasion. It was undoubtedly the advantages
of its excellent port that attracted the attention of
the Romans, and led Augustus to establish a colony
there, to which he gave the name of iuventus.
(Mel. L.C.; Plin. iii. 19. s. 29.) Several of the still
existing remains prove that he at the same time
adorned it with public edifices; and there is no
doubt that under the Roman Empire it became a
considerable and flourishing town, and, next to
Tereste (Trieste), the most important city of Istria.
(Strab. l. c.; Plut. iii. 1. § 27; Gruter, Inscr.
p. 263. 7, p. 360. 1, p. 432. 8.) It is mentioned in
history as the place where Crispus, the eldest son
of Constantine the Great, was put to death by order
of his father; and again, in A.D. 534, the Caesar
Gallus underwent the same fate there by order of
Constantius. (Ann. Maj. xiv. 11.) After the
fall of the Roman Empire in the West it continued
to be a place of importance, and in A.D. 544 it was
there that Belisarius assembled the fleet and army
with which he was preparing to cross over to Ia-
venna. (Procop. B. C. ii. 10.) It probably partook
of the prosperity which was enjoyed by all Istria
during the period that Ravenna became the seat of
empire, and which was continued throughout the
period of the Exarchate; we learn from the Itineraries
that it was connected by a road along the coast
with Tereste, from which it was 77 miles distant, while
the direct communication by sea with labour (Zoro)
seems to have been in frequent use, though the
passage was 450 stadia, or 56 Roman miles. (Hin.
Aed. pp. 271, 496.)

Pola is remarkable for the importance and
preservation of its ancient remains. Of these far
the most important is the amphitheatre, one of the
most interesting structures of the kind still extant,
and remarkable especially for the circumstance that
the external circumference, usually the part which
has suffered the most, is in this case almost entirely
perfect. It is built on the slope of a hill, so that on
the E. side it has only one row of arches, and on
the opposite side facing the bay, it has a double tier,
with an additional story above. It is 436 English
feet in length by 346 in breadth, so that it exceeds
in size the amphitheatre of Nimes, though considerably
smaller than that at Verona. But its position and
the preservation of its more architectural portions
render it far more striking in aspect than either of
them. Considerable remains of a theatre were also
preserved down to the 17th century, but were
destroyed in 1636, in order to make use of the ma-
terials in the construction of the citadel. There
still remain two temples; one of which was dedicated
to Rome and Augustus, and though of small size, is
of very elegant design and execution, corresponding
to the Augustan age, at which period it was un-
doubtedly erected. It has thence become a favourite
model for study with Italian architects from the
time of Palladio downwards. The other, which was
consecrated to Diana, is in less complete preserva-
tion, and has been converted into a modern habitation.
Besides these, the Porta Areia, a kind of triumphal
arch, but erected by a private individual of the
name of Sergius, now forms the S. gate of the city.
Another gate, and several portions of the ancient
walls are also preserved. The whole of these monu-
ments are built of the hard white limestone of the
country, closely approaching to marble, which adds

PONTICЉАM.

PODEM. - 197.

present Ponidcherry (written in the Tamil language
Puducherry). Potelemy mentions another place of
the same name in the northern part of the island of
Taphroane (vii. 4. § 10). [V.]

POECILIAE, POECILIAS (Ποικίλασας, Plut. i. 15. § 3; Ποικίλεσσας, Stadium. Magni Mar. p. 299, ed. Hoffman), a town on the S. coast of Crete, placed by Potemny E. of Tarrha, between this place and the promontory Hermaca; but in the Stadiasmus W. of Tarrha, between this place and Syna, 60 stadia from the former and 50 from the latter. It is probably represented by the ruins near Trypeta, situated between the places mentioned in the Stadiasmus.

(Paschley, Crete, vol. ii. p. 264.)

POECILE (Ποικιλή), a rock on the coast of Cilicia, near the mouth of the Cydnus, and on the east of Cape Sarpedon, across which a flight of steps cut in the rock led from Cape Zephyrium to Seleucia. (Strab. xiv. p. 670; Stadiasmus. Mar. M. § 161.) Its distance of 40 stadia from the Cydnus will place it about Pershendi. Instead of any steps in the rock, Beamfort here found extensive ruins of a walled town, with temples, arcades, aqueducts, and tombs, built round a small level, which had some appearance of having once been a harbour with a narrow opening to the sea. An inscription copied by Beamfort from a tablet over the eastern gate of the ruins accounts for the omission of any notice of this town by Strabo and others; for the inscription states it to have been entirely built by Flurius, archon of the eparchia of Isauria, in the reigns of Valentinian, Valens, and Gratian. [L. S.]

POECILUM (Ποικιλώμ, Pana. i. 37. § 8), a mountaint in Attica, on the Sacred Way. [See Vol. i. p. 298. a.]

POEDICULI. [PEFECULI.

POEDICUM (Ποιδίκωμ), a place mentioned only by Potemny (ii. 14. § 3) as situated in the southward of Noricum; it is commonly identified with the modern Adelsberg, on the river Poisly. [L. S.]

POEEESA. [CEROS.]

POEMANÈNUS (Ποιμανηνός), a town in the
south of Cyzicus, and on the south-west of lake
Aphitins, which is only mentioned by very late
authors. It belonged to the territory of Cysicus,
was well fortified, and possessed a celebrated temple
of Asclepius. (Steph. B. s. v. Ποιμανηνών; Nicef.
Chrm. Chron. p. 296; Conili. Constant. III. p. 503; Conili. Nicen. Iii. p. 572; Hieroc. p. 662, where it is called Poemanemus.) Its inhabitants are called Poemanenii (Ποιμανηνοί, Plin. v. 32). Hamilton (Researches, ii. p. 108. &c.) identifies it with the modern Manipe, near the lake bearing the same name. [L. S.]

POENI. [CARIAGHO.

POENITENÆ ALPES. [ALPES, p. 108. a.]

POETÌVIO. [PETITOVI.

POGON. [Τρότης.]

PÔLA (Πόλα: It. Pola; Præf. Pola), one of
the principal towns of Istria, situated near the S.
extremity of that peninsula, on a landlocked bay,
forming an excellent part, which was called the
Sinus Polaticus. (Mel. ii. 3. § 13.) According to
a tradition mentioned by several ancient authors, its
foundation was ascribed to a band of Celchians, who
had come hither in pursuit of Medea, and afterwards
settled in the country. (Strab. i. p. 46, v. p. 216; Plin. iii. xix. s. 23; Mel. l.c.; Tzetz. ad Lyegoph. 1022.) It is impossible to explain the origin of this tale, which is already mentioned by Callimachus (ap. Strab. i. c.); but it may be received as proving
POLEMONIUM.  

much to their effect. Dante speaks of the environs of Pola, as in his time remarkable for the numerous sarcophagi and ancient tombs with which they were almost wholly occupied. These have now disappeared. (Dante, Inf. ix. 13.)

The antiquities of Pola have been repeatedly described, and illustrated with figures; among others, in the fourth volume of Stuart and Revett's Athens, fol. Lond. 1816, and in the Voyage Pittoresque de l'Istrie et de la Dalmatien, fol. Paris, 1802; also in Allason's Antiquities of Pola, fol. Lond. 1819.

The harbour of Pola is completely backwatered, so as to have the appearance of a small basin-shaped lake, communicating by a narrow channel with the sea. Off its entrances lies a group of small islands called the Isola Brioni, which are probably those called by Pliny Cissa and Follaria. (Plin. iii. 26. s. 30.)

The southernmost promontory of Istria, about 10 miles distant from Pola, derived from it the name of Pollentiacum Promontorium. It is now called Capo Promontore. [E. H. B.]

POLEMONIUM (Πολέμωνιον), a town on the coast of Piraeus, at the mouth of the small river Eligumus, 10 stadia from Phaidiane, and 130 from Cape Jasionum. (Arrian, Perip. p. 16; Anonym. Perip. p. 11, &c.; Plut. v. 6. § 4; Steph. B. s. r.) Pliny (vi. 4) places the town 120 Roman miles from Amisus, which seems to be too great a distance. (Comp. Amm. Marc. xxii. 8; Hieroc. p. 702, where it is erroneously called Polémwion; Tab. Peiting.) Neither Strabo nor any writer before him mentions this town, and it is therefore generally believed that it was built on the site of the town of Soli, which is not noticed by any writer after Strabo. Its name intimates that it was founded, or at all events was named, after one Polemon, perhaps the one who was made king of that part of Pontus, about B. C. 36, by M. Antonius. It had a harbour, and seems to have in the course of time become a place of considerable importance, as the part of Pontus in which it was situated received from it the name of Pontus Polemoniacus.

The town was situated on the western bank of the Solus, where its existence is still attested by the ruins of an ancient church, and the remains of a massive wall; but the ancient name of the place is preserved by the village of Polirome, on the opposite side of the river. (Hamilton, Researches, vol. i. p. 270.)

POLICHNE (Πολιχνα). 1. A town of Laconia, mentioned only by Polybius (iv 36), is placed by Leake in the interior of the country on the eastern slope of Mt. Parnon at Kéandía (τά Κέανδα), where, among the ruins of a fortified town of the lower empire, are some remains of Hellenic walls. (Leake, Pélograφia, p. 364.)

2. Near the NW. of Messenia on the road from Andania to Dorium and Cyparissus. (Paus. iv. 33. § 6.)

3. A town of Arcadia, mentioned only in a line of Homer, quoted by Strabo, for which the Athenians substituted another to prove that Salamin at the time of the Trojan War was a dependency of Athens. (Strab. i. 9. p. 394.)

4. (Eth. Polichnítos), a town of Crete, whose territory bordered upon that of Cydonia. (Thuc. ii. 85.) In B. C. 429 the Athenians assisted the inhabitants of Pollinum in making war upon the Cydonians and Cretans. (Thuc. i. 6.) Herodotus also mentions the Palioge, and says, that this people and the Prasii were the only people in Crete who did not join the other Cretans in the expedition against Camiens in Sicily in order to revenge the death of Minos (vii. 170; Steph. B. s. v.). Cramer (Ancient Greece, vol. iii. p. 380) supposes the ruins at Polis S. of Armogastro to be those of Polichné, which Phaselis, however, regards as those of Lappo or Lampe. (Cramer, Hist. Lang. iv. 8.)

POLICHNE (Πολιχνη), a small town in the upper valley of the Aesopus in Troas (Strab. xiii. p. 605; Plin. v. 32; Steph. B. s. v.; Hieroc. p. 662.) Respecting a place bearing the same name near Clazomenae, see Clazomenae. [L. S.]

POLIANTHUS (Bomarzo), a town of Etruria, not far from the right bank of the Tiber, and about 12 miles E. of Viterbo. The name is not found in any writer earlier than Paulinus Diaconus (Hist. Lang. iv. 8), and there is therefore no evidence of its antiquity; but it is certain that there existed an ancient Etruscan city about 2 miles N. of the present village of Bomarzo. Some ruins and other slight vestiges of ancient buildings still remain, and numerous sepulchres have been discovered, some of which have yielded various objects of interest. One of them is adorned with paintings in the Etruscan style, but apparently not of early date. (Dennis's Etruria, vol. i. p. 214—226.)

POLIS (Πόλις), a village of the Hyaea in Locris, which Leake supposed occupied the site of Karbés, where he found an inscription. (Thuc. iii. 101; Leake, Northern Greece, vol. ii. p. 620.)

POLISMA (Πόλισμα), a small place on the river Simeos in Troas, was originally called Polion; but it was situated in an unsuitable locality, and soon decayed. (Strab. xiii. p. 601.)

POLITORIUM (Πολιτόριον: Eth. Politóριον), an ancient city of Latium, destroyed at a very early period of the Roman history. The account of its capture and destruction by Ancus Marcius comprises indeed all we know concerning it; for the statement cited from Cato (Serv. ad Aen. v. 564), which ascribed its foundation to Polites, the son of Priss, is evidently a mere etymological fiction. According to Livy and Dionysius, it was a city of the Frisci Latin, and was the fifth which was attacked by the Romans, who made himself master of it with little difficulty, and transported the inhabitants to Rome, where he settled them upon the Aventine. But the Latins having soon after re-colonised the deserted city, Ancus attacked it again, and having taken it a second time, entirely destroyed it, that it might not for the future afford a shelter to his enemies. (Liv. i. 33; Dionys. iii. 37, 38, 43.)

The destruction appears to have been complete, for the name of Politorium never again occurs, except in Pliny's list of the cities of Latium which were utterly extinct. (Plin.iii. 3. s. 5.) Its site is consequently involved in the same uncertainty; the only clue we have is the circumstance that it appears in the above narrative associated with Tellene, which is equally uncertain, and with Ficana, the position of which at Dragomello, on the Via Ostiensis, may be considered as well established. (Ficana.) Nibby would place Politorium at a spot called La Torretta near Decumana, on the Via Laurentina; while Gell considers the remains of an ancient city that have been discovered at a place called La Giostra, on the right of the Via Appia, about a mile and a half from Fiorano and 18 miles from Rome, as those of Politorium. There can be no doubt that the ruins at La Giostra—consisting of considerable fragments of walls, built in a very massive and ancient style, and enclosing a long and
POLLENTIA. narrow space, bordered by precipitous banks—are those of an ancient Latin city; but whether they mark the site of Pollentium, as supposed by Gell, or of Tellerias, as suggested by Nibby and adopted by Abeken, we are wholly without the means of determining. (Gell, Top. of Rome, p. 280; Nibby, Diatomi, vol. ii. p. 571, vol. iii. p. 142—152; Abeken, Die Alter. Italien, p. 69.) The sites at Laos and Gostra are more fully noticed under the article TELLERAS.

POLLENTIA. 1. (Πολεωτια; Eth. Pollentinus. Polenza), a city of Liguria, situated in the interior of that province, at the northern foot of the Alpes Maritimae, near the confluence of the Stura and Tanaro. It was about 7 miles W. of Alba Ponpeia. It was probably a Ligurian town before the Roman conquest, and included in the territory of the Statieli; but we do not meet with its name in history until near the close of the Roman republic, when it appears as a town of importance. In n. c. 43, M. Antonius, after his defeat at Mutina, withdrew to Vada Sabata, intending to proceed into Transalpine Gaul; but this being opposed by his troops, he was compelled to repress the Apennines, with the view of seizing on Pollentia; in which he was, however, anticipated by Decimus Brutus, who had occupied the city with five cohorts. (Cic. ad Fam. xi. 13.) Under the Roman Empire, Pollentia is mentioned by Pliny among the "nobilis opigae" which adorned the tract of Liguria between the Apennines and the Alps. (Plin. iii. 5. 7.) It had considerable manufactures of pottery, and the wool produced in its territory enjoyed great reputation, having a natural dark colour. (Plin. viii. 48, s. 73, xxxv. 12, s. 46; Sil. Ital. viii. 597; Martial, xiv. 157.) It is incidentally mentioned as a municipal town under the reign of Tiberius, having been severely punished by that emperor for a tumult that occurred in its forum. (Suet. Tib. 37.) But its name is chiefly noted in history as the scene of a great battle fought between Stilicho and the Goths under Alaric, in a. d. 403. The circumstances of this battle are very imperfectly known, but its event is variously related; for while Claudian celebrates it as a glorious triumph, Orosius describes it as a dubious success, and Cassiodorus and Jornandes boldly claim the victory for the Goths. (Claudian, B. Get. 580—647; Prudent. in Symmach. ii. 696—749; Oros. vii. 37; Prosper. Chron. p. 199; Cassiod. Chron. p. 450; Jornand. Get. 30.) But it seems certain that it was attended with great slaughter on both sides, and that it led to a temporary retreat of the Gothic king. No subsequent mention is found of it, and we have no account of the circumstances of its decay, or destruction, but the name does not reappear in the middle ages, and the modern Pollenza is a poor village. Considerable remains of the ancient city may still be traced, though in a very decayed condition: they include the traces of a theatre, an amphitheatre, a temple, and other buildings; and various inscriptions have also been discovered on the spot, thus confirming the evidence of its ancient prosperity and importance. (Milini, Voyage en Piemont, q. c. vol. ii. p. 55.) The ruins are situated two miles from the modern town of Cherasco, but on the left bank of the Tanaro. It was mentioned only by Pliny, who among the "populi" of that region, enumerates the Pollentini, whom he unites with the Urbs Salvia in a manner that seems to prove the two commu- nities to have been united into one. (Urbis Salvia, now Urbisaglia, is well known; and the site of Pollentia must be sought in its immediate neighbourhood. Holstenius places it at Monte Melone, on a hill on the left bank of the Chienti between Masserata and Toniimento, about 3 miles from Urbisaglia on the eastern side of the valley. (Holsten. Not. ad Clar. p. 138.) [E. II. B.]

POLLENTIA. [BALEARES.]

POLUSCA or POLUSCA (Πολούκασ), Polluscan; Casal della Mandria, a city of Latium, which appears in the early history of Rome inseparably connected with Longula and Corioli. Thus, in n. c. 493, we find the three places enumerated in succession as reduced by the arms of Postumus Camusius; and again in n. c. 488 all three were recovered by the Volscians under the command of Coriolanus. (Liv. ii. 33, 39; Dionys. vi. 91, vii. 36.) No subsequent mention of Pollusca occurs, except that its name is found in Pliny, among the cities of Latium of which all trace had disappeared. (Plin. iii. 5, 9.) As its name is there given among the places which had once shared in the sacrifices on the Alban Mount, it is probable that it was originally a Latin city, and had fallen into the hands of the Volscians; whence it is called, when first noticed in history, a Volscian city. Livy, indeed, appears to regard Longula and Pollusca as belonging to the Volsci Antates, and therefore at that time more dependencies of Antium. The position of Pollusca, as well as that of Longula, must be in great measure matter of conjecture, but the site suggested by Nibby, on a hill adjoining the Osteria di Circei, about 22 miles from Rome, on the road to Porto d' Anzo, has at least a plausible claim to that distinction. The hill in question which is included in the farm of the Casal della Mandria, stands just at the bifurcation of the two roads that lead to Porto d' Anzo and to Corona: it was noticed by Sir W. Gell as the probable site of an ancient town, and suggested as one of those which might be selected for Corioli, if we place the latter city at Monte Gore, the site more generally adopted. Pollusca may very well have been at the Osteria di Circei; but the point is one which can never be determined with certainty. (Gell, Top of Rome, p. 183; Nibby, Diatomi, vol. i. p. 402; Abeken, Mittel Italien p. 72.) [E. H. B.]

POLYTOPHIA. [ALENUS.]

POLYAEUS (Πολύαιος), a desert island in the Aegean sea, near Melos. (Ptol. ii. 15. § 28; Plin. iv. 12. s. 23; Mela, ii. 7.) It is either Polybous, or perhaps Antinobos with its wild goats. (Ross, Reise auf den Griech. Insula, vol. iii. p. 26.)

POLYANTHES. [AMANTIA.]

POLYANUS (Πολύανος) a mountain in Epirus mentioned by Strabo (vii. p. 327) along with Tomarus.

POLYBOTUS (Πολύβωτος), a place in the west of Phrygia Major, a little to the south-east of Symna, is mentioned only by Hierocles (p. 677) and a few Byzantine writers (Procop. Hist. Arc. 18; Anna Commen, p. 324; Cencl. Nicaen. ii. p. 358.), who, however, do not give the name correctly, but call it Polybous or Polygous. Col. Leake (Asia Min. 2. p. 55) identifies Polybous with the modern Bolvandar, which he regards as only a Latin corruption of the ancient name. [L. S.]

POLYGÜM. A place on the south coast of Gallia mentioned in the Ora Maritimis of Avienus (v. 611):
POLYMEDUM.

"Tenuisse censu civitas Polygium est, "Tum Mansa viciss oppidumque Naustalo." There is nothing to say about a place for whose site there is no sufficient evidence. Menard supposed it to be Bourgoin on the Entou de Tou. The names seem to be Greek, and the place may be one of the Massilia settlements on this coast. [NAUSTALO].

POLYRHENIA (Πολυρρηνία, Ροδ. i. 17, § 10; Πολυρρήνα, Πολυρρήνα, Steph. B. s. v., corrected by Meineke into Πολυρρηνία; Πολυρρηνία, Sevylas, p. 18, corrected by Cali; Πολυρρηνία, Zenob. Prov. v. 50; Polyrrheneum, Plin. iv. 12, s. 29; Eth. Πολυρρηνία, Polyb. iv. 53, 55; Strab. x. p. 479), a town in the NW. of Crotæ, whose territory occupied the whole western extremity of the island, extending from N. to S. (Sevylas, p. 18.) Strabo describes it as lying W. of Cydonia, at the distance of 30 stadia from the sea, and 60 from Phiala-saron, and as containing a temple of Dictyæu. He adds that the Polyrrhenians formerly dwelt in villages, and that they were collected into one place by the Achaæans and Lacedæmonians, who built a strong city looking towards the south. (Strab. x. p. 479.) In the civil wars in Crotæ in the time of the Achaean League, B. C. 219, the Polyrrhenians, who had been subject allies of Cnossus, deserted the latter, and assisted the Lyctians against that city. They also sent auxiliary troops to the assistance of the Achaæans, because the Gæcians had supported the Aetolians. (Polyb. iv. 53, 55.) The rains of Polyrrheia, called Palaokastro, near Kianamo-Kasteli, exhibit the remains of the ancient walls, from 10 to 18 feet high. (Pashley, Crotæ, vol. ii. p. 46, seq.)

POLYTIMEUS. [Οξία Παλμ.]

POMETIA. [Συβέγκα Πομετέα.]

POMPEII (Πομπηία, Strab.; Πόμπηια, Dion Cass.: Ἐθν. Πομπειανος, Pompeii), an ancient city of Campania, situated on the coast of the beautiful gulf called the Crater or Bay of Naples, at the mouth of the river Sarnus (Sarnus), and immediately at the foot of Mount Vesuvius. It was intermediate between Herculanæum and Stabiae. (Strab. v. p. 247; Pliny, iii. 5. s. 9; Mel. ii. 4. § 9.) All accounts agree in representing it as a very ancient city: a tradition recorded by Solinus (2. § 3) ascribed its foundation to Hercules; but Dionysius, who expressly notices him as the founder of Herculanæum, says nothing of Pompeii (Dionys. i. 44). Strabo says it was first occupied by the Oscans, subsequently by the Tyrrhenians (Tarquins) and Pelasgians, and afterwards by the Samnites (Strab. i. c.). It continued in the hands of these last, that is, of the branch of the nation who had assumed the name of Campanians [CAMPANIA], till it passed under the government of Rome. It is probable that it became from an early period a flourishing town, owing to its advantageous situation at the mouth of the Sarnus, which rendered it the port of Nola, Nuceria, and all the rich plain watered by that river. (Strab. i. c.) But we meet with no mention of its name in history previous to the Roman conquest of Campania. In A. D. 310 it is mentioned for the first time, when a Roman fleet, under P. Cornelius Bassus, landed there, and the troops on board proceeded from thence to ravage the territory of Nucera. (Liv. ix. 38.) No sub-

segment notice of it occurs till the outbreak of the Social War (n. c. 91), in which it appears to have taken a prominent part, as the Pompeians are mentioned by Appian apart from the other Campanians, in enumerating the nations that joined in the insurrection. (Appian, B. C. i. 39.) In the second year of the war (n. c. 90) the Pompeians were in the vanguard of the insurgents, and it was not till after repeated engagements that L. Sulla, having defeated the Samnite forces under L. Cluentius, forced them to take refuge within the walls of Nola, was able to form the siege of Pompeii. (Appian, ib. 50; Oros. v. 18; Vell. Pat. ii. 16.) The result of this is nowhere mentioned. It is certain that the town ultimately fell into the hands of Sulla; but whether by force or a capitulation we are not informed; the latter is, however, the more probable, as it escaped the fate of Stabiae, and its inhabitants were admitted to the Roman franchise, though they lost a part of their territory, in which a military colony was established by the dictator, under the guidance and patronage of his relation, P. Sulla. (Cic. pro Sull. 21; Zumpt, de Colon. pp. 254, 468.) Before the close of the Republic, Pompeii became, in common with so many other maritime towns of Campania, a favourite resort of the Roman nobles, many of whom had villas in its immediate neighbourhood. Among others, Cicero had a villa there, which he frequently mentions under the name of "Pompeianum," and which appears to have been a considerable establishment, and one of his favourite residences. (Cic. Acad. ii. 3; ad Att. i. 20, ad Fam. vii. 3, xii. 20.) Under the Empire it continued to be resorted to for the same purposes. Seneca praises the pleasantness of its situation, and we learn both from him and Tacitus that it was a populous and flourishing town ("celebre oppidum," Tac. Ann. xvi. 22; Sen. Nat. Qu. vi. 1.) In addition to the colony which it received (as already mentioned) under Sulla, and which is alluded to in an inscription as "Colonia Veneria Cornelia" (Mommusen, Insgr. R. N. 2201), it seems to have received a colony at some later period, probably under Augustus (though it is not named by Pliny), as it bears that title in several inscriptions (Cic. Naus. c. 22—24.) In the reign of Nero (A. D. 59) a tumult took place in the amphitheatre of Pompeii, arising out of a dispute between the citizens and the newly-settled colonists of Nucera, which ended in a conflict in which many persons were killed and wounded. The Pompeians were punished for this outbreak by the prohibition of all gladiatorial and theatrical exhibitions for ten years. (Tac. Ann. xiv. 17.) Only four years after, the city suffered severely from an earthquake, which took place on the 5th of February, A. D. 63. The expressions both of Seneca and Tacitus would lead us to believe that it was for a part utterly destroyed; and we learn from existing evidence that the damage done was unquestionably very great, the public buildings especially having suffered most severely. (Sen. Nat. Qu. vi. 1; Tac. Ann. xv. 22.) The city had hardly recovered from this calamity, when it met with one far greater; being totally overwhelmed by the famous eruption of Vesuvius in A. D. 79, which buried Pompeii, as well as Herculanæum, under a dense bed of ashes and cinders. The loss of life in the former city was the greater, because the inhabitants were assembled in the theatre at the time when the Pompeii was still in the hands of Cornels Bassus. (Dion. Cass. iv. 23.) The younger Pliny, in his celebrated letters describing the eruption (Ep. vi. 16, 20), does not even notice the destruction of Pompeii or Hor-
culaueum; but his attention is directed principally to the circumstances of his uncle's death and the phenomena which he had himself witnessed.

From this time the name of Pompeii disappears from history. It is not noticed by Ptolemies; and it is certain that the city was never rebuilt. But the name is again found in the Tabula; and it thus appears that a small place must have again arisen on the site, or, more probably, in the neighbourhood of the buried city. But all trace of Pompeii was subsequently lost; and in the middle ages its very site was entirely forgotten, so that even the learned and diligent Olivierius was unable to fix it with certainty, and was led to place it at Scufati on the Sarno, about 2 miles E. of its true position. This difficulty arose, in great measure, from the great physical changes produced by the catastrophe of A.D. 79, which diverted the course of the Sarno, so that it now flows at some distance from Pompeii,—and at the same time pushed forward the line of the coast, so that the city is now above a mile distant from the sea, which in ancient times undoubtedly bathed its walls.

There is no reason to suppose that Pompeii in ancient times ever rose above the rank of a second-rate provincial town; but the re-discovery of its buried remains in the last century has given a celebrity to its name exceeding that of the greatest cities. The circumstances of its destruction were peculiarly favourable to the preservation of its remains. It was not overthrown by a torrent of lava, but simply buried by a vast accumulation of volcanic sand, ashes, and cinders (called by the Italians lapilli), which forms a mass of a very light, dry, and porous character. At the same time, it is almost certain that the present accumulation of this volcanic deposit (which is in most places 15 feet in depth) did not take place at once, but was formed by successive eruptions; and there is little doubt that the ruins were searched and the most valuable objects removed soon after the catastrophe took place. This seems to be proved by the small number of objects of intrinsic value (such as gold and silver plate) that have been discovered, as well as by the fact that comparatively few skeletons have been found, though it appears certain, from the expressions of Dion Cassius, that great numbers of the inhabitants perished; nor have any of these been found in the theatre, where it is probable that the greatest loss of life occurred.

It was not till 1748 that an accidental discovery drew attention to the remains of Pompeii; and in 1755 regular excavations on the site were first commenced by the Neapolitan government, which have been carried on ever since, though with frequent intervals and interruptions. It is impossible for us here even to attempt to give any account of the results of these excavations and the endless variety of interesting remains that have been brought to light. We shall confine ourselves to those points which bear most immediately on the topography and character of the town of Pompeii, rather than on the general habits, life, and manners of ancient times. More detailed accounts of the remains, and the numerous objects which have been discovered in the course of the excavations, especially the works of art, will be found in the great work of Mazois (Les Ruines de Pompeii, continued by Gaun, 4 vols. fol., Paris, 1812—1838), and in the two works of Sir W. Gell (Pompeiana, 1st series, 2 vols. 8vo. Lond. 1824; 2nd series, 2 vols. 8vo. 1850); also in the little work published by the Society of Useful Knowledge (Pompeii; 2 vols. 12mo. 1831). A recent French publication by Breton (Pompeii, 8vo. Paris, 1853) also gives a good account of the whole progress and results of the discoveries (including the most recent excavations) in a moderate compass and inexpensive form. The still more recent work of Overbeck (Svo. Leipzig, 1856), of which the first part only has yet appeared, contains an excellent compendium of the whole sub-
ject, with especial attention to the works of art discovered.

The area occupied by the ancient city was an irregular oval, about 2 miles in circumference. It was surrounded by a wall, which is still preserved round the whole of the city, except on the side towards the sea, where no traces of it have been found, and it seems certain that it had been pulled down in ancient times to allow for the extension of houses and other buildings down to the water's edge. The wall itself is in many places much ruined, as well as the towers that flank it, and though this may be in part owing to the earthquake of 63, as well as the eruption of 79, it is probable that the defences of the town had before that time been allowed to fall into decay, and perhaps even intentionally dismantled after the Social War. There were seven gates, the most considerable and ornamental of which was that which formed the entrance to the city by the high road from Herculanum; the others have been called respectively the gate of Vesuvius, the gate of Capua, the gate of Nola, the gate of the Sarnus, the gate of Stabiae, and the gates of the Theatres. The entrances to the town from the side of the sea had ceased to be gates, there being no longer any walls on that side. All these names are of course modern, but are convenient in assisting us to describe the city. The walls were strengthened with an Agger or rampart, faced with masonry, and having a parapet or outer

**PLAN OF PART OF POMPEII.**

POMPEII.

wall on its external front; they were further fortified at intervals with square towers, which in some parts occur regularly at about 100 yards from each other, in other parts are added much more sparingly. These towers seem to have been subsequent additions to the original walls, being of a different and less solid style of construction. The walls themselves are very solidly built of large blocks of travertine, in horizontal courses, but presenting considerable irregularities of construction: the upper part is more regularly finished, and consists of peperino. But both walls and towers are in many places patched with coarser masonry and reticulated work; thus showing that they had been frequently repaired, and at distant intervals of time.

The general plan of the city is very regular, and the greater part of the streets run in straight lines; but the principal line of street, which runs from the gate of Herculanenum to the Forum, is an exception, being irregular and crooked as well as very narrow. Though it must undoubtedly have been one of the chief thoroughfares of the city, and the line followed by the high road from Capua, Naples, and Rome itself, it does not exceed 12 or 14 feet in width, including the raised trottoirs or footpaths on each side, so that the carriageway could only have admitted the passage of one vehicle at a time. Some of the other streets are broader; but few of them exceed 20 feet in width, and the widest yet found is only about 30. They are uniformly paved with large polygonal blocks of hard lava or basalt, in the same manner as were the streets of ancient Rome, and the Via Appia, and other great highways in this part of Italy. The principal street, already noticed, was crossed, a little before it reached the Forum, by a long straight line of street which, passing by the temple of Fortune, led direct to the gate of Nola. In the angle formed by the two streets stood the public baths or Thermes, and between these and the temple of Fortune a short broad street led direct to the Forum, of which it seems to have formed the principal entrance. From the Forum two other parallel streets struck off in an easterly direction, which have been followed till they cross another main line of street that runs from the gate of Venus directly across the city to the gate adjoining the theatres. This last line crosses the street already noticed, leading from the gate of Nola westward, and the two divide the whole city into four quarters, though of irregular size. Great part of the city (especially the SE. quarter) has not yet been explored, but recent excavations, by following the line of these main streets, have clearly shown its general plan, and the regularity with which the minor streets branched off at intervals in parallel lines. There is also little doubt that the part of the city already excavated is the most important portion, and includes the Forum, with the principal public buildings adjoining to it, the theatres, amphitheatre, &c.

The Forum was situated in the SW. quarter of the city, and was distant about 400 yards from the gate of Herculanenum. As was commonly the case in ancient times, it was surrounded by the principal public buildings, and was evidently the centre of the life and movement of the city. The extent of it was not, however, great; the actual open space (exclusive of the porticoes which surrounded it) did not exceed 160 yards in length by 55 in breadth, and a part of this space was occupied by the temple of Jupiter. It was surrounded on three sides by a Greek-Doric portico or colonnade, which appears to have been surmounted by a gallery or upper story, though no part of this is now preserved. It would seem that this portico had replaced an older arcade on the eastern side of the Forum, a portion of which still remains, so that this alteration was not yet completed when the catastrophe took place. At the north end of the Forum, and projecting out into the open area, are the remains of an edifice which must have been much the most magnificent of any in the city. It is commonly known, with at least a plausible foundation, as the temple of Jupiter; others dispute its being a temple at all, and have called it the Senaculum, or place of meeting of the local senate. It was raised on a podium or base of considerable elevation, and had a portico of six Corinthian columns in front, which, according to Sir W. Gell, are nearly as large as those in the portico of St. Paul's. From the state in which it was found it seems certain that this edifice (in common with most of the public buildings at Pompeii) had been overthrown by the earthquake of 63, or, at least, so much damaged that it was necessary to restore, and in great part rebuild it, and that this process was still incomplete at the time of its final destruction. At the NE. angle of the Forum, adjoining the temple of Jupiter, stood an arch which appears to have been of a triumphal character, though now deprived of all its ornaments; it was the principal entrance to the Forum, and the only one by which it was accessible to carriages of any description. On the E. side of the Forum were four edifices, all unquestionably of a public character, though we are much in doubt as to their objects and destination. The first (towards the N.) is generally known as the Pantheon, from its having contained an altar in the centre, with twelve pedestals placed in a circle round it, which are supposed to have supported statues of the twelve chief gods. But no traces have been found of these, and a more plausible conjecture is, that it was consecrated to Augustus, and contained a small temple or aedicula in honour of that emperor, who lived in the court and surrounding edifices were appropriated to the service of his priests, the Augustales, who are mentioned in many inscriptions as existing at Pompeii. Next to this building is one which is commonly regarded as the Curia or Senaculum; it had a portico of fluted columns of white marble, which ranged with those of the general portico that surrounded the Forum. South of this again is a building which was certainly a temple, though it is impossible now to say to what divinity it was consecrated; it is commonly called the Temple of Mercury, and is of small size and peculiar form. Between this and the street known as the Street of the Silversmiths, which issued from the Forum near its SE. angle, was a large building which, as we learn from an inscription still existing, was erected by a female priestess named Eunuchia. It consists of a large and spacious area (about 130 feet by 63) surrounded by a colonnade, and having a raised platform at the end with a semicircular recess similar to that usually found in a Basilica. But though in this case the founder of the edifice is known, its purpose is still completely obscure. It is commonly called the Chalcidice, but inscriptions prove that the term (which is found in the inscription above noticed) designates only a part of the edifice, not the whole building.
The S. end of the Forum was occupied by three buildings of very similar character, standing side by side, each consisting of a single hall with an apse or semicircular recess at the further extremity. The most probable opinion is that these were the courts of justice, in which the tribunals held their sittings.

The western side of the Forum was principally occupied by a Basilica, and a large temple, which is commonly called (though without any authority) the Temple of Venus. The former is the largest
POMPEII.

building in Pompeii; it is of an oblong form, 220 feet in length by 80 in breadth, and abutted endwise on the Forum, from which it was entered by a vestibule with five doorways. The roof was supported by a peristyle of 28 Ionic columns of large size, but built of brick, coated with stucco. There is a raised tribunal at the further end, but noapse, which is usually found in buildings of this class. Numerous inscriptions were found scratched on the walls of this edifice, one of which is interesting; as it gives the date of the consilium of M. Lepidus and C. Catulus (B.C. 78), and thus proves the building to have been erected before that time. Between this edifice and the temple is a street of greater width than usual, which extends from the Forum in a westerly direction, and probably communicated with the portico. The Temple of Venus, on the N. side of this street, was an extensive building consisting of a peripteral temple with a small cela, elevated on a podium or basement, surrounded by a much more extensive portico, and the whole again enclosed by a wall, forming the peribolos or sacred enclosure. All parts of the building are profusely decorated with painting. The temple itself is Corinthian, but the columns of the portico seem to have been originally Doric, though afterwards clumsily transformed into Corinthian, or rather an awkward imitation of Corinthian. This is only one among many in structures found at Pompeii of very defective architecture, as well as of the frequent changes which the buildings of the city had undergone, and which were still in progress when the city itself was destroyed. The buildings at the NW. corner of the Forum are devoid of architectural character, and seem to have served as the public granaries and prisons.

TEMPLE OF VENUS.

(The Forum and Temple of Jupiter in the background.)

The open area of the Forum was paved, like that of Rome, with broad slabs of a kind of marble, thus showing that it was never designed for the traffic of any kind of vehicles. It is moreover probable that the whole space, including the porticoes which surrounded it, could be closed at night, or whenever it was required, by iron gates at the several entrances. It was adorned with numerous statues, the pedestals of which still remain: they are all of white marble, but the statues themselves have uniformly disappeared. It is probable either that they had not been re-erected during the process of restoration which the Forum was undergoing, or that they had been searched for and carried off by excavations soon after the destruction of the city.

The remaining public buildings of the city may be more briefly described. Besides the temples which surrounded the Forum, the remains of four others have been discovered; three of which are situated in the immediate vicinity of the theatres, a quarter which appears to have had more of architectural ornament than any other part of the city, except the Forum. Of these the most interesting is one which stood a little to the S.W. of the great theatre, near the wall of the city, and which is evidently much more ancient than any of the other temples at Pompeii: it is of the Doric order and of pure Greek style, but of very ancient character, much resembling that of Neptune at Paestum and the oldest temples at Schium. Unfortunately only the basement and a few capitals and other architectural fragments remain.

It is commonly called the Temple of Heracles, but it is obvious that such a name is purely conjectural. It stood in an open area of considerable extent, and of a triangular form, surrounded on two sides by porticoes; but this area, which is commonly called a Forum, has been evidently constructed at a much later period, and with no reference to the temple, which is placed very awkwardly in relation to it. Another temple in the same quarter of the town, immediately adjoining the great theatre, is interesting because we learn with certainty from an inscription that it was consecrated to Isis, and had been rebuilt by N. Popidius Celsinus "from the foundations" after its overthrow in the great earthquake of A.D. 63. It is of a good style of architecture, but built chiefly of brick covered with stucco (only the capitals and shafts of the columns being of a soft stone), and is of small size. Like most of the temples at Pompeii, it consists of a cela, raised on an elevated podium, and surrounded externally by a more extensive portico. Adjoining this temple was another, the smallest yet found at Pompeii, and in no way remarkable. It has been variously called the temple of Asculapius, and that of Jupiter and Juno.

The only temple which remains to be noticed is one situated about 60 yards N. of the Forum at the angle formed by the long main street leading to the gate of Nola, with a short broad street which led from it direct to the Forum. This was the Temple of Fortuna, as we learn from an inscription,
and was erected by a certain M. Tullius, a citizen and magistrate of Pompeii, who has been supposed to be of the family of Cicero; but the absence of the cognomen renders this highly improbable. The edifice of a Forum Augustan shows that the temple and its inscription are not earlier than the time of Augustus. It is much in ruins, having probably suffered severely from the earthquake of 63; and has little architectural effect.

Pompeii possessed two Theatres and an Amphitheatre. The former were situated, as seems to have been usual in Greek towns, close together; the larger one being intended and adapted for theatrical performances properly so called; the smaller one serving as an Odeum, or theatre for music. Both are unquestionably of Roman date: the larger one was erected (as we learn from an inscription found in it) by two members of the same family, M. Holocmus Rufus and M. Holocmus Celer, both of whom appear to have held high civil offices in the municipal government of Pompeii. The period of its construction may probably be referred to the reign of Augustus. The smaller theatre seems to be of earlier date, and was erected at the public expense under the direction of the Duumviri or chief magistrates of the city. The large Theatre is to a considerable extent excavated out of the side of a hill, on the slope of which it was situated, thus saving a considerable amount of the expense of construction. But the exterior was still surrounded by a wall, a part of which always rose above the surface of the soil, so that it is singular it should not have long before led to the discovery of the buried city. Its internal disposition and arrangements, without exactly coinciding with the rules laid down by Vitruvius, approach sufficiently near to them to show that it was constructed on the Roman, and not the Greek model. Its architect (as we learn from an inscription) was a freedman of the name of M. Ar- torius Primus. It seems to have been almost wholly excised or lined with marble, but the greater part of it is now covered by other occupations. The building has been carried away by former excavations, probably made soon after the catastrophe. The interior diameter of the building is 223 feet; it had 29 rows of seats, divided into three stories by galleries or proeccitiones, and was capable of containing about 5000 spectators. The smaller Theatre, which communicated with the larger by a covered portico on the level of the orchestra, was not above a fourth of the size of the other, being adapted to receive only about 1500 spectators. We learn from an inscription that it was covered or permanently roofed in, a rare thing with ancient theatres, and doubtless owing to its small size. Its chief architectural peculiarity is that the seats are cut off by the walls at the two sides, so that it is only the lower seats of the cavea, of which the semicircle is complete.

Adjoining the two theatres, and arranged so as to have a direct communication with both, is a large quadrangular court or area (183 feet long by 148 wide), surrounded on all sides by a Doric portico. Its destination is very uncertain. It has been called a provision market (Forum Num- dinarium); but is more generally regarded as having served for the supply of provisions to the soldiers. Perhaps a more plausible conjecture is that it was a barrack, not of soldiers but of gladiators. On the W. of this, as well as of the great theatre, was the triangular area or forum already noticed, in which the Greek temple was situated. The opening of this on the N., where it communicated with the street, was ornamented by a portico or PropyIaeum composed of eight Ionic columns of very elegant style, but consisting of the common volcanic tufa, capped with stones.

The theatre here is situated at the distance of above 500 yards from the Theatres, at the extreme SE. angle of the city. It offers no very remarkable differences from other edifices of the same kind: its dimensions (430 feet by 335) are not such as to place it in the first rank even of provincial structures of the class; and from being in great part excavated out of the soil, it has not the imposing architectural character of the amphitheatres of Verona, Nemausus, or Pula. It had 24 rows of seats, and about 20,000 feet of sitting-room, so that it was adapted to receive at least 10,000 spectators. From one of the inscriptions found in it, it appears that it was built, or at least commenced, by two local magis- trates, named C. Quinctius Valsus and M. Parnius, after the establishment of the colony under Augustus, and probably in the reign of that emperor.

The only public building which remains to be noticed is that of the Thermæ or Baths, which were situated in the neighborhood of the Forum, adjoining the short street which led into it from the Temple of Fortune. They have no pretence to vie with the magnificent suites of buildings which bore the name of Thermæ at Rome, and in some other great cities; but are interesting as containing a complete suite of all apartments really required for bathing, and from their good preservation throw much light upon all similar remains. The details of their construction and arrangement are fully given in the Dictionary of Antiquities [art. BALNEAE], as well as in the works specially devoted to Pompeii.

It is impossible here to enter into any details concerning the results of the excavations in regard to the private dwellings at Pompeii, though these are, in many respects, the most interesting, from the light they throw on the habits and life of the ancient inhabitants, their manners and usages, as well as from the artistic beauty and variety of the objects discovered. A few words on the general character of the houses and other private buildings of Pompeii are all that our space will admit of. As these are almost the only remains of a similar kind that have been preserved to us, it must be borne in mind that they can hardly be regarded as representing in their purity the arrangements either of the Greek or Roman mode of building. On the one hand Pompeii, though strongly tintured with Greek civilization, was not a Greek city; on the other hand, though there is no doubt that the houses at Pompeii present much more the Roman plan and arrangement than that of the Greeks, we must not conclude that they represent them in all respects. We know, at least, that Rome itself was built in many respects in a very different manner. Cicero, in a well-known passage, contrasts the narrow streets, the lofty houses, and irregular construction of the capital with the broad streets and regular arrange- ment of Capua, resulting from its position in a level plain; and it is clear that, in some respects, Pompeii resembled the capital of Capua rather than the imperial city. Its streets indeed (as already stated) were narrow, but with few exceptions straight and regular, and the houses were certainly low, seldom exceeding two stories in height; and even of these the upper story seems to have consisted
POMPEII.

only of inferior rooms, a kind of garrets, probably serving for the sleeping-rooms of slaves, and in some cases of the females of the family. From the mode of destruction of the city the upper stories have indeed been almost uniformly totally destroyed; but this circumstance itself, as well as the few traces which occasionally remain, seems to prove that they were built wholly of wood, and could never have formed an important part of the houses. It is only on the W. side of the city, where the ground slopes steeply towards the sea, that houses are found which consisted of three stories or more. Externally the houses had little or nothing of an ornamental character; not a single instance has been found of a portico before a private house; and towards the street they presented either dead walls, with here and there a few small and scanty openings as windows, or ranges of shops, for the most part low and mean in character, even when they occupied (as was often the case) the front of dwellings of a superior description. The interior of the houses of the more wealthy class was arranged apparently on the same model as those at Rome: its disposition is given in detail in the Dictionary of Antiquities under the article Domus where a plan is given of the House of Paons, one of the most extensive and complete of those found at Pompeii. In this case the single house with its garden and appurtenances, including as usual several shops, occupied the whole of an insula or the space bounded by four streets or alleys; but this was unusual; in most cases each insula comprised several houses even where they were of a better description, and must have been the residence of persons of some wealth. Among the most remarkable of these may be mentioned the dwellings known as the House of Sallust, that of the Tragic Poet, of Castor and Pollux, of the Labyrinth, &c. The work of Dr. Overbeck (above cited) gives a very interesting series of these houses, selected so as to afford examples of every description of house, from the humblest dwelling, consisting of only two rooms, to the richly decorated and spacious mansions of Sallust and Paons.

The style of decoration of these houses presents a very general uniformity of character. The walls are almost invariably ornamented with painting, the atrium and peristyle being decorated with columns; but these are composed only of a soft and coarse stone (volcanic tufa) covered with stucco. The prodigious use of marble, both for columns and slabs to encrust the walls, which had become so general at Rome under the first emperors, apparently not having yet found its way to Pompeii. The floors are generally enriched with mosaics, some of which possess a very high degree of merit as works of art. The most beautiful yet discovered adorned the house known as the House of the Faun, from a bronze statue of a dancing Faun which was also found in it. The illustrations to Gell's Pompeiana (2nd series, Lond. 1835) will convey to the reader a sufficient idea of the number and variety of the artistic decorations of the private houses at Pompeii; though several of the most richly ornamented have been discovered since the date of its publication.

Outside the gate leading to Herculanenum, in a kind of suburb, stands a house of a different description, being a suburban villa of considerable extent, and adapted to have been the abode of a person of considerable wealth. From the greater space at command this villa comprises much that is not found in the houses within the town; among others a large court or garden (Xystus), a complete suite of private baths, &c. The remains of this villa are of much value and interest for comparison with the numerous ruins which occur elsewhere of similar buildings, often on a much more extensive scale, but in a far less perfect state of preservation; as well as for assisting us to understand the descriptions given by Pliny and Vitruvius of similar structures, with their numerous appurtenances. (For the details of their arrangements the reader is referred to the article Villa, in the Dictionary of Antiquities, and to the work on Pompeii, Lond. 1832, vol. ii. ch. 11.) Between this villa and the gate of the city are the remains of another villa, said to be on a larger scale and more richly decorated than the one just described; but its ruins, which were excavated in 1764, were filled up again, and are not now visible. It has been called, though without the slightest authority, the Villa of Cicero. The one still extant is commonly known as the Villa of Arrius Dionedes, but for no other reason than that
a sepulchre bearing that name was discovered near its entrance; a very slight argument, where almost the whole street is bordered with sepulchral monuments, extending with only occasional interruptions for above 400 yards. Many of them are on a very considerable scale, both of size and architectural character; and though they cannot vie with the enormous mausoleum which-bordered in a similar manner the line of the Via Appia near Rome, they derive additional interest from the perfect state of preservation in which they remain: and the Street of the Tombs, as it is commonly called, is perhaps one of the most interesting streets at Pompeii. The monuments are for the most part those of persons who had held magistracies, or other offices, in the city of Pompeii, and in many cases the site was assigned them by public authority. It is therefore probable that this place of sepulture, immediately outside the gate and on one of the principal approaches to the city, was regarded as peculiarly honourable.

Besides the tombs and the two villas already noticed, there have been found the remains of shops and small houses outside the gate of Herculaneum, and there would appear to have been on this side of the city a considerable suburb. This is supposed to have been designated in the sepulchral inscription of M. Arcius Domnedes as the "Pagus Augustus Felix Suburbanus." We have as yet no evidence of the existence of any suburbs outside the other gates. It is evident that any estimate of the population of Pompeii must be very vague and uncertain; but still from our accurate knowledge of the space it occupied, as well as the character of the houses, we may arrive at something like an approximation, and it seems certain that the population of the town itself could not have exceeded about 20,000 persons. This is in accordance with the statements of ancient writers, none of whom would lead us to regard Pompeii as having been more than a second or third rate provincial town.

The inscriptions found at Pompeii, which are often incorrectly given in the ordinary works on the subject, are carefully edited by Mommsen, in his Inscriptiones Regni Neapolitani (pp. 112—122). These do not, however, include a class of much interest, and peculiar to Pompeii, the inscriptions of a temporary kind which were rudely painted on the walls, or scratched on the plaster of the houses and public buildings. It is remarkable that several of these are in the O-cano dialect, and seem to prove that the use of that ancient language must have continued down to a much later period than is commonly supposed. [Oscil]. But the public or official use of the Oscan seems to have ceased after the Social War, and the numerous inscriptions of a public character which belong to the age of Augustus and his successors are uniformly in the Latin language.

POMPEII PRAESIDIUM (Tab. Peut.; Pompei, Itin. Ant. p. 134; I Pompeii, Itin. Hieros. p. 566), a place in Muses Superior, between Horrenae Marci and Nicasus, identified either with Curelana (Reichard) or Boutryon (Lampe).

POMPEIOPOLIS (Πομπηίωπολις), a town of Phaphosia, on the southern bank of the river Annias, a tributary of the Halys. (Strab. xii. p. 562; Steph. B. s. v.). Its name seems to indicate that it was founded by Pompey the Great. In the Itinerary it is marked as 27 miles from Sinope; accordance to which its site may be looked for in the valley of the Annias, about the modern Tash Kupri, where Captain Kinmis (p. 286) found some ancient remains. In the vicinity of the place was a great mine of the mineral called Sundarache. (Strab. b. c.) Pompeiopolis is often referred to by late writers as an episcopal see of Phaphosia (Norcat. iii. 39, &c.; Hieroc. p. 695; Constant. Porph. de Them. i. 7; Justinian, Novell. xxix. i; Tab. Peut).

The name Pompeiopolis was borne temporarily by several towns, such as Soli in Cilicia, Amasias and Ephatha in Cappadocia, as well as by Pompeian in Tarraco in Spain. [L. S.]

POMPEII (Πομπηίϊ), Ptol. ii. 6 § 67; Strab. iii. p. 161, who makes the name equivalent to Pompeioupolis), the chief town of the Vassalla in Tarraco in Spain, on the road from Asturia to Burdigala (Itin. Ant. p. 455), and a civitas stipendiaria in the jurisdiction of Caesarodusta. (Phin. iii. 3. 4) Now Pamplona. [T. H. D.]

POMPONIANA. Pliny (iii. 5) says that Pompeiana is the same as Messe, the middle island of the Stoechades or Iles d’Hères [Stoquetades], which lie close to the French coast east of Toulon. D’Anville, following the Maritime itinerary, which places Pompeian near Telo (Toulon) and Heracleia Cucabaria [Heraclea], thinks that Pompeiana is the peninsula of Cucabaria, which is opposite to the western point of Provence (Porquerolles), the most western of the Stoechades. He remarks that the part of Civis which is on the land side is almost covered by a lagoon, from which there are channels to the sea on both sides, so that the peninsula may be considered as an island. [G. L.]

POMPONIA’NIS PORTUS. [Portus Pompeianus.]

POMPTINE PALUDES (Πομπτινα παλαῖς; Patulei Ponticis) was the name given to the extensive tract of marshy ground in the S. of Latium at the foot of the Velician mountains, extending from the neighbourhood of Castena to the sea at Terracina. They occupy a space of about 30 miles in length by 7 or 8 in breadth; and are separated from the sea on the W. by a broad tract of sandy plain, covered with forest, which is also perfectly level, and intersected with marshy spots, and pools or lagoons of stagnant water, so that it is almost as unhealthy as the regular marsh, and the whole tract is often comprised under the name of the Pontine Marshes. The extremely low level of this whole tract, affording scarcely any natural outfall for the waters which descend into it from the Velician mountains, together with the accumulation of sand along the seashore from Asturia to the Circean promontory, readily accounts for the formation of these extensive marshes; and there can be no doubt that the whole of this low alluvial tract is of very recent origin compared with the rest of the adjoining mainland. Still there is the strongest reason from physical considerations to reject the notion very generally entertained by the Romans, and adopted by Pliny, that the whole of this accumulation had taken place within the period of historical record. This idea seems indeed to have arisen in the first instance from the assumption that the Menis Circean was the island of Circe mentioned by Homer, and was therefore in the time of that poet really an island in the midst of the open sea. [CIRCEIUM MONS.]

But it is far more strange that Pliny should assert, on the authority of Theophrastus, that the accumulation had taken place in great part since the
POMPTINAE PALURES.

time of that writer; though Theophrastus himself tells us distinctly that the island was in his days united to the mainland by the accumulated deposits of certain rivers. (Theophr. H. P. v. 8, § 3; Flin. iii. 5, sq.) Another tradition, preserved to us also by Pliny (L. c.), but wholly at variance with the last, asserted that the tract then covered by marshes, and rendered uninhabitable by them, had formerly been occupied by no less than 24 (or, according to some MSS., 33) cities. But no trace of this fact, which he cites from Mucianus, an author contemporary with himself, is to be found in any earlier writer; and not even the name of one of these supposed cities has been preserved; there can therefore be little doubt that the whole story has arisen from some misconception.

The Pontine Marshes are generally represented as deriving their name from the city of Suessa Pometa, which appears to have been situated somewhere on their borders, though we have no clue to its precise position. [Sessa Pometa]. The "Pomtinus ager," which is repeatedly mentioned by Livy, and which was cultivated with corn, and part of it portioned out in lots to Roman colonists (Livy. ii. 34, iv. 25, vi. 5, 21) was probably rather the district bordering on the marshes than the actual swampy tract, which does not appear to have been ever effectually reclaimed; though a very marked amount of industry must at any time have sufficed to bring into cultivation considerable portions of the adjoining plain. As early, however, as the year 312 B.C. the Appian Way appears to have been carried through the midst of the marshes (Livy. ix. 29; Dion. xxi. 36), and a canal conducted along with it from Forum Appii to Terracina, which became also much resorted to as a mode of traffic. [Via Appia.] The institution of the Pontpine tribe in B.C. 358, and of the Uentine tribe in B.C. 318 (Livy. vii. 13, ix. 20), would seem also to point to the existence of a considerable population in the neighbourhood at least of the Pontpine Marshes; but still we have uncontroverted testimony of the continued existence of the marshes themselves in all periods of antiquity. (Sil. Ital. viii. 380; Strab. v. p. 233, &c.) The very circumstance that the plain is bordered throughout by a chain of considerable and populous towns situated on the mountain front, while not one is recorded as existing in the plain itself, is a sufficient proof that the latter was in great part uninhabitable.

The actual marshes are formed principally by the stagnation of the waters of two streams, the Amasenius and the Ufens, both rising in the Volscian mountains. (Strab. v. p. 233.) Of these the latter was the most considerable, and appears to have been regarded as the principal stream, of which the Amasenius was only a tributary. The Ufens is described as a slow and sluggish stream; and Silius Italicus, amplifying the hints of Virgil, draws a dreary picture of its waters, black with mud, winding their slow way through the pestiferous Pomptine plains. (Virg. Aen. vii. 801; Sil. Ital. vi. 572—582; Claudian. Prob. et ol. Cons. 257.) But, besides these, several minor streams either flow down from the Volscian mountains, or rise immediately at their foot in copious springs of clear water, as is commonly the ease with all limestone mountains. The Nymphaeus, which rises at the foot of the hill at Norba, is the most remarkable instance of this. Thus the whole mass of waters, the stag-

nation of which gives rise to these marshes, is very considerable; and it is only by carrying these off in artificial channels to the sea that any real progress can be made in the drainage of the district.

Various attempts were made in ancient times to drain the Pontine Marshes. The first of these was in B.C. 160, by the consul Cornelius Cethegus, which, according to the brief notice transmitted to us, would seem to have been for a time successful (Liv. Epit. xiv.); but it is probable that the result attained was in reality but a partial one; and we find them relapsing into their former state before the close of the Republic, so that the drainage of the Pontine Marshes is noticed among the great public works projected by the dictator Caesar, which he did not live to execute. (Suet. Cass. 44; Plut. Cass. 58; Dion Cass. xiv. 5.) It would appear that on this occasion also some progress was made with the works, so that a considerable extent of land was reclaimed for cultivation, which M. Antonius proposed to divide among the poorer Roman citizens. (Dion Cass. xiv. 9.) Horace alludes to a similar work as having been accomplished by Augustus (Hor. A. B. Art. 65; Schol. Crug. ad loc.); but we find no mention of this elsewhere, and may therefore probably conclude that no great success attended his efforts. Juvenal alludes to the Pontine Marshes as in his time a favourite resort of robbers and highwaymen (L. vii. 301); but a sufficient proof that the district was one thinly inhabited. The enterprise seems to have been resumed by Trajan in connection with his restoration of the Appian Way through the same district (Dion Cass. Ievii. 15); but we have no particular account of his works, though inscriptions confirm the account given by Dion Cassius of his renovation of the highroad. The next serious attempt we hear of to drain this marshy tract was that under Theodoric, which is recorded both by Cassiodorus and by an inscription still extant at Terracina. (Cassiodor. Var. ii. 32, 33; Gruter. lacer. p. 132. 8.) But in the period that followed the works naturally fell into decay, and the whole tract relapsed into an uninhabitable state, which continued till the close of the middle ages. Nor was it till quite modern times that any important works were undertaken with a view to reclaim it. Pope Pius VI. was the first to reopen the line of the Appian Way, which had been abandoned for centuries, and restore at the same time the canal by its side, extending from Treponiti to Terracina. This canal takes the place of that which existed in the time of Horace and Strabo, and formed the customary mode of transit for travellers proceeding from Forum Appii to Terracina. (Hor. Sat. i. 5. 10 — 24; Strab. v. p. 233; Lucan. iii. 85.) It is evidently the same which is called by Procopius (B. G. i. 11) the Decennovium, a name which could only be applied to an artificial cut or canal, though that author terms it a river. The "nineteen miles" indicated by the name commenced from Tripontium (Treponiti), from whence the canal was carried in a straight line to within 3 miles of Terracina. It was this portion of the road which, as we learn from an inscription, was restored by Trajan; and the whole was doubtless completed and restored at the same time. Hence Cassiodorus applies the name of "Decennovii paludes" to the whole tract of the Pontine Marshes. (Cassiod. Var. ii. 32, 33.)

The Saturnae Palus, mentioned both by Virgil and Silius Italicus in connection with the river
PONS AENI.

Ufens (Verg. Aen. vii. 801 ; Sil. Ital. viii. 380), must have been situated in the district of the Pontine Marshes, and was probably merely the name of some portion of the swamps included under that more general designation.

The line of the Appian Way was carried in a perfectly straight line through the Pontine Marshes from the station Sub Luuvio, at the foot of the Alban Hills, to within a short distance of Tarracina. The stations along its course and the distances are differently given in the Itineraries; but they may all be readily determined with the assistance of inscriptions and Roman milestones still existing. At the beginning of the marches, and rather more than the intermediate stations, there was the station of Tres Tabernae, distant 17 miles from Aricia, at a point where a branch road from Antium fell into the Appian Way. The site of this was fixed by the Abbé Chaupy and other writers at a place called Le Castellet, 2 miles on the Roman side of Cisterna; but there seems no reason to reject the distances given in the Antonine Itinerary, which would place it 5 miles further from Rome, or 3 miles beyond Cisterna, where some ruins still remain, referred by Chaupy to the station Ad Sponsas of the Jerusalem Itinerary, but which would suit equally well for that of Tres Tabernae. [Tres Tabernae.] Six miles from this spot, and just 39 miles from Rome (as shown by a milestone still remaining there), is a place still called Torre di Treponl, marking the site of the computer of the Decennovium commenced, and from which the 19 miles from which it derived its name were measured. Four miles farther on considerable remains mark the site of Forum Appii, which in the Augustan age was a busy and thriving town; but in the fourth century had sunk to a mere Mutatio or post station. The Antonine Itinerary gives the distance from Rome to Forum Appii at 43 miles, which is exactly correct; from thence to Tarracina it reckons 18 miles; the Jerusalem Itinerary makes the distance 19 miles, and gives an intermediate station called Ad Medias (Paludes), which was 9 miles from Forum Appii and 10 from Tarracina. The site of this is still marked by a spot called Torre di Mosa, where a striking Roman monument still remains; but the real distance from Forum Appii is only 8 miles, which coincides with the Antonine Itinerary. [Itin. Ant. p. 107; Itin. Hier. p. 611.] The whole of this part of the road has been carefully examined, and described by the Abbé Chaupy (Découverte de la Maison d’Horace, vol. iii. pp. 382–432); and the distances discussed and corrected by Westphal, (Rom. Kampaign, pp. 67–70). [E. H. B.]

PONS AENI, or, as it is called in the Peutinger Table, Ad Aennum, was a frontier fort in Vindelicia on the river Aeunus, and was garrisoned by a detachment of cavalry. (It. Ant. pp. 236, 257; Not. Imp.) It is commonly believed that its site is now marked by the village of Tynzeun, which in the middle ages bore the name of Pontana; but Moehau (Norvicium, i. p. 285) identifies it with Ensfonte in Friesland. [L. S.]

PONS AEARIUS, in Gallia Narbonensis, is placed in the Jerusalem Itin. on the road from Nemausus (Nîmes) to Areola (Arles), at the distance of xii. from Nemausus and vii. from Areola. The Antonine Itin. marks xix. from Nemausus to Areola in one distance. The road must therefore have been straight between these two places. D’Anville fixes the Pons at Bellegarde, where there is a bridge over a canal which comes from the Etanche at Uperinn (Beaucaire) and extends to Aigues Mortes. This canal separates the old dioceses of Nimes and Arles, and probably divided the territories of Nemausus and Areola. D’Anville conjectures that the name Aelius may be owing to the fact that a toll was paid at the bridge, which was a common practice in the Roman period. (Dig. 19, tit. 2, s. 60. § 8; "Redemptor ejus pontis portorium ab eo exigebat.") [G. L.]

PONS ALUTI, a town in Dacia on the road from Egeta to Apula, near Robesti, below Strassbourg. (Th. Del. 73.)

PONS ARGENTENS. [Argenteus.]

PONS AFRIDI. [Afredes.]

PONS AUGUSTI (Tab. Peut.), a town in Dacia, on the road from Tissicen to Surmatege (usually called Zarniezeghousa), identified by Mannert with the Zemguia (Zoërya, Ptol. iii. § 10) of Ptolemy, and placed near Ionizar at the passage over the river Bistra; by others near Murggy. (Ubert, vol. iii. pt. ii. p. 516.)

PONS AUREOLI (Pontirolo), a place on the highroad from Mediolanum to Bergomum, where the road crossed the river Addua (Addo) by a bridge. It is mentioned as a station by the Jeru
salem Itinerary, which places it 20 M. P. from Mediolanum and 13 from Bergomum. (Itin. Hier. p. 558.) It derived its name from the circumstance that it was here that the usurper Aureolus was de
teated in a pitched battle by the emperor Gallienus, and compelled to take refuge within the walls of Milan, a. d. 268. (Vic. Cæs. 33. Epit. 33.) After the death of Aureolus, who was put to death by the soldiers of Claudius, he was buried by order of that emperor close to the bridge, which ever after retained the name of Aureolus. (Treb. Poll. Troj. Tyr. 10.) [E. H. B.]

PONS CAMPAVIA, a bridge on the Via Appia, by which that celebrated road crossed the little river Sava, a short distance from its mouth. It was 3 miles distant from Sinussa (erroneously given as 9 in the Jerusalem Itinerary), and evidently derived its name from its being the frontier between Campania and Latium, in the more extended sense of the latter name. It is mentioned by Pliny (xiv. 6. 8.), as well as the Itineraries (Tab. Peut.; Itin. Hier. p. 611); and Horace tells us that Maecenas and his companions halted for the night in a villa adjoining it, on their journey from Rome to Brundisium. (Hor. Sat. i. 5. 45.) [E. H. B.]

PONS DUBIS, in Gallia, a bridge over the Dubis (Dobs), is marked in the Table on the road from Cabillonum (Chalon) to Vesontio (Besancon), and from Cabillonum. D’Anville supposes that the site may be a place called Pontozza, where it is said that when the water in the Dobs is low, the remains of an old bridge are visible at which several roads met. (Ubert, Gallien, p. 301.) [G. L.]

PONS MANUSUTENA or PONS SOCIOFRUM, a place in Pannonia, on the road leading from Sepon
tum to Augusta, but no further particulars are known. (It. Ant. pp. 264, 267.) [L. S.]

PONS MILVIUS, or MULVIVS (Pons Molle), a bridge on the Via Flaminia, by which that road crossed the Tiber just about 2 miles from the gate of Rome called the Porta Flaminia. It is probable that a bridge existed on the spot at an early period, and there must certainly have been one from the time when the Via Flaminia was constructed. The first
mention of the name in history occurs in the Second Punic War, when Livy tells us that the Roman people poured out in a continuous stream as far as the Milvian Bridge to meet the messengers who brought the tidings of the defeat of Hasdrubal, b.c. 207. (Livy xxvii. 51). Hence, when Aurelius Victor mentions—as it among the works constructed by Caesar in his censorship (b.c. 110)—it is evident that this can refer only to its rebuilding or restoration. (Vict. de Vir. Illustr. 72.) It is very possible that there was no stone bridge before that time. At the time of the conspiracy of Catiline, the Milvian Bridge was selected as the place where the ambassadors of the Allobroges were arrested by the orders of Cicero. (Sall. Cat. 45; Cic. in Cat. iii. 5.) It is probable that under the Empire, if not earlier, a suburb extended along the Via Flaminia as far as the Milvian Bridge. Hence we are told that it was the point from which Caesar (among his other gigantic schemes) proposed to divert the course of the Tiber, so as to carry it further from the city (Cic. ad Att. xiii. 33); and again, the emperor Gallienus is said to have proposed to extend the Flaminian portico as far as the Milvian Bridge. (Trebl. Poll. Gallien. 18.) In the reign of Nero the neighbourhood of the bridge was occupied by low taverns, which were much resorted to for purposes of debauchery. (Tac. Ann. xiii. 47.) Its proximity to Rome, to which it was the principal approach from the N., rendered the Milvian Bridge a point of importance during civil wars. Hence it is repeatedly mentioned by Tacitus during those which followed the death of Nero (Tac. Hist. i. 87, ii. 89, iii. 82): and again, in A.D. 193, it was there that Diflius Julianus was defeated by Severus (Eutrop. viii. 17; Vict. Caes. 19). At a later period also, it witnessed the defeat of Maxentius by Constantine (A.D. 312), when the usurper himself perished in the Tiber. (Vict. Caes. 40; Eutrop. x. 4; Zosim. ii. 16.) Its military importance was recognized also in the Gothic Wars, when it was occupied by Vitiges during the siege of Rome, in A.D. 537; and again, in 547, when Totila destroyed all the other bridges in the neighbourhood of Rome, he spared the Milvian alone. (Procop. B. G. i. 19, iii. 24.) The present bridge is in great part of modern construction, but the foundations and principal piers are ancient.

PONS MOSAEL, in northern Gallia, is mentioned by Tacitus (Hist. iv. 66), but there is nothing said to show where this bridge was. A Roman road ran from Anastaus (Tomaron) across the Mosela (Mosa) past Juliaicum (Juliers) to Colonia (Cologne). It is very probable that the Pons Mosae was on this route, and that it was at Münstertich. The termination tricht is a corruption of the Roman word Trajectum. (Trajectum.) [G.L.]

PONS NAIRTLAE. [Gallacia, p. 934, b.]

PONS NETRIVAM. [Gallacia, p. 934, b.]

PONS NOMENTAANUS. [Nomentum.]

PONS SALARIUS (Ponte Salara), a bridge on the Via Salaria where that highway crossed the Anio (Teronre) about 23 miles from Rome. From its position this is certainly the bridge meant by Livy under the name of Pons Anienis, on which the single combat of Marcus Marcius, distinguished with the Gaul, is described as taking place. (Livy vii. 9.) The name is not again mentioned in history, but we learn from an inscription still remaining that the present bridge was constructed by Nurses, in the room of the more ancient one which had been destroyed by Totila

PONTES TESSENI. 657 in A.D. 547, when he broke up the siege of Rome and withdrew to Tibur. (Procop. B. G. iii. 24; Nibby, Dintorni, vol. ii. p. 594.) [E. H. B.]

PONS SARAVI, a bridge over the Sarusus (Sarre) in Gallia on the road from Divodurum (Metz) to Argentoratum (Strasbourg). The Table of Ponses mentions 10 from Decum-pagi (Dinnae) to Tabernae (Saxerun.) Though the distances are not quite correct, it is clear that Sarrebruck on the Sarre must be the Pons Saravi; and it cannot be Sarrebruck on the Sar, for Sarrebruck is more than 30 miles north of Sarrebruck, and quite out of the way. This is an instance in which a hasty conclusion has been derived solely from the sameness of name. [G. L.]

PONS SCALDH, or bridge over the Schelde in North Gallia, is placed both by the Table and the Antonine Itin. on the road from Turnaciun (Tourna) to Bregium (Boulogne). There is a place on the Schelde named Escas-pont between Valenciennes and Comelé which may represent the Pons.

PONS SERVILII. [Illyricum, vol. ii. p. 36, b.]

PONS TILURI, a station on the road from Sirmium to Salona, in the interior of Dalmatia. (Itin. Anton.; Tilirium, Punt. Tab.; Geogr. Rav. iv. 16.) It may be identified with the passage of the river Cettina or Tactitina (Tibaris), at Trigl, with the opposite height of Girvan, where there are vestiges of a Roman town, which was probably the colony of Acquis (Acquiscolon), Poil. iii. 16 (17), § 11; Itin. Anton.; Punt. Tab.; Orelii, Inscri. 502), where an inscription has been found commemorating the restoration of the bridge under the name of Pons Hippi, a Graecized form of the Latin name of the town, which was sometimes spelt as Equmnum. (Wilkinson, Dalmatia, vol. i. p. 238; Niegeber, Die Sud-Slaven, p. 178.) [E. B. J.]

PONS ZITHA, a station on the Roman road running along the coast-line of Sytrica, and a municipium. (Itin. Anton.; Geogr. Rav.) In the Pentinger Table it is wrongly called Litus Burch (Wanderungen, p. 263) has fixed its site at the promontory opposite to Meninx, where he found remains of a stone bridge or mole connecting the mainland with the island of the Lotophagi. [E. B. J.]

PONTEM, AD, a town of Britain, on the road from Londinium to Lindum (Itin. Ant. p. 477), identified by Camden (p. 560) with Peanton on the Witham, in Lincolnshire, where a great many Roman coins and antiquities have been discovered. Others take it to have been Farndon, near Southwell, in Nottinghamshire. [T. H. D.]

PONTES, in North Gallia, is placed in the Ant. Itin. on a road from Samarobriva (Amiens) to Geosracum (Boulogne); it is 36 M. P. from Samarobriva to Pontes, and 39 M. P. from Pontes to Geosracum. The Table, which marks a road between Samarobriva and Geosracum, does not place Pontes on it, but it has another place, named Duroceregum, supposed to be Donieres on the Authie. D Avenue concludes that Pontes is Ponches on the Authorie, at which place we arrive by following the traces of the old road which still exists under the name of Chaussee de Branchaut. [G. L.]

PONTES, a Roman station in the territory of the Attebates, seated on the Thames, on the road from Calleva (Silchester) to Londinium (Itin. Ant. p. 478). It was at or near Old Windsor. [T. H. D.]

PONTES TESSCNII (Diesen), a place in u u
PONTUS.

Vindelicia, on the coast from Amber to Parthamumnum. (Ht. Ant. p. 273; comp. Muchar, Noricum, i. p. 284.)

[1. S.]

PONTIA or PONTIAE (Pontia: Pontus), an island in the Tyrrhenian sea, situated off the coast of Italy, nearly opposite to the Circenian promontory. It is the most considerable of a group of three small islands, now collectively known as the Ilide di Ponta; the ancient names of which were, Palmaria, now Palmarola, the most westerly of the three, Pontia in the centre, and Sisonia (Zonnone) to the NE. (Plin. iii. 6. s. 12; Mel. ii. 7. § 18.) They are all of volcanic origin, like the Pithecusae (Pithecusia), nearer the coast of Campania, and the island of Pandataria (now called Pandateria), about midway between the two groups. Strabo places Pontia about 250 stadia from the mainland (v. p. 233), which is nearly about the truth, if reckoned (as he does) from the coast near Ciaeta; but the distance from the Circenian promontory does not exceed 16 georg. miles or 160 stadia. We have no account of Pontia previous to the settlement of a Roman colony there in n. c. 313, except that it had been already inhabited by the Volscians. (Liv. ix. 28.; Diodor. xix. 101.) The colonization of an island at this distance from the mainland offers a complete anomaly in the Roman system of settlements, of which we have no explanation, and this is the more remarkable, because it was not, like most of the maritime colonies, a "colonia maritima civium," but was a Colonia Latina. (Liv. xxi. 10.) Its insular situation preserved it from the ravages of war, and hence it was one of the eighteen which during the most trying period of the Second Punic War displayed its zeal and fidelity to the Roman senate, when twelve of the Latin colonies had set a contrary example. (Ibid.) Strabo speaks of it as in his time a well peopled island (v. p. 233). Under the Roman Empire it became, as well as the neighbouring Pandataria, a common place of confinement for state prisoners. Among others, it was here that Nero, the eldest son of Germanicus, was put to death by order of Tiberius. (Suet. Tib. 54., Cal. 15.)

The island of Pontia is about 5 miles long, but very narrow, and indented by irregular bays, so that in some places it is only a few hundred yards across. The two minor islands of the group, Palmarola and Zonnone, are at the present day uninhabited. Varro notices Palmaria and Pontia, as well as Pandataria, as frequented by great flocks of turtle doves and quails, which halted there on their annual migrations to and from the coast of Italy. (Var. R. R. iii. 5. § 7.)

PONTIAE (Pontias viscus, Sulp. p. 46), three islands off the coast of the Greater Siret. Phokium (iv. 3. § 36 ; comp. Stad. ass. §§ 72-73) calls these Mysianis, Pontia, and Gaea. They may be identified with the reefs of Ghara. (Beresby, Expedition to the N. Coast of Africa, p. 238, App. p. x.; Smyth, Mediterraneum, p. 435.)

PONTIUS. [Aulus, p. 201, a.]

PONTUS (Piôros), a large country in the north-east of Asia Minor, which derived its name from its being on the coast of the Pontus Euxinus, extending from the frontiers of Colchis in the east, to the river Halys in the west. In the earlier times the country does not appear to have borne any general appellation, but the various parts were designated by names derived from the different tribes by which they were inhabited. Xenophon (Anab. v. 6. § 15) is the first ancient author who uses Pontus as the name of the country. Pontus formed a long and narrow tract of coast country from the river Phasis to the Halys, but in the western part it extended somewhat farther south or inland. When its limits were finally fixed, it bordered in the west on the Phaphian, where the Halys formed the boundary; in the south on Galatia, Cappadocia, and Armenia Minor, the Antitauran and Mount Paryadres being the boundaries; and in the east on Colchis and Armenia, from which it was separated by the river Phasis. Pontus thus embraced the modern pashahs of Trebizond and Scione. Although the country was surrounded byJulius Caesar, he sent their remittances into Pontus itself, the plains on the coast, and especially the western parts, were extremely fertile (Strab. xii. p. 548), and produced excellent fruit, such as cherries, apples, pears, various kinds of grain, olives, timbers, aconite, &c. (Strab. xii. p. 545, &c.; Theophrast. Hist. Plant. iv. 5, viii. 4, &c., ix. 16, xix. 17; Plin. xiv. 19.) The country abounded in game (Strab. xii. p. 548), and among the animals bees are especially mentioned, and honey and wax was an important article of commerce. (Xenoph. Anab. iv. 8. §§ 16, 20; Diodor. ii. 103; Plin. xxiii. 43; Strab. iii. 163.) The mineral wealth of the country consisted chiefly in iron (Xenoph. Anab. v. 4. § 1; Strab. xii. p. 549; Steph. B. s. v. Xenus; Pliny vii. 57) and salt. The chief masts of Pontus are the Paryadres, and on the east of it the Scordises, two ranges of Antitauras, which they connect with Mount Caucasus. The Paryadres sends two branches, Littusus and Orthillis, to the north, which form the eastern boundary of the plain of Phanaerea. Another mountain which terminates in a promontory 100 stadia to the west of Trapaeus was called the Ocean Hapen (Athen. Pyr. 1. 13; Apollon. Rhod. ii. 1014, with Schol.), and Teches is a mountain mentioned in the south-east of Trapaeus. The promontories formed by these mountains, if we proceed from west to east, are: the Heracleum, Iasonium, and Zephyrium. These projecting headlands form the bays of Amisos and Ctyora. The mountains in the south contain the sources of numerous streams and rivers, such as the Halys, Lycaeus, Chadsius, Iris, Syllax, Lycaen, Themnerod, Bera, Thaorion, Oenius, Phagens, Suleus, Genethes, Melanithus, Pharnauthus, Hyssus, Oxybius, Ascarus, Alenius, Zagalus, Prytanes, Pappites, Archaia, Apaurus, Acampa, Baolith, Arbasia, Isis, Mogrus, and the Phasis. The only lake in Pontus noticed by the ancients is the Stiphane Palus, in the west, north of the river Syllax.

Pontus was inhabited by a considerable number of different tribes, whose ethnological relations are either entirely unknown or extremely obscure. The most important among them, if we proceed from west to east, are: the Leucosyri, Thaerei, Chalybes, Mosynocrates, Hettacomata, Dihara, Bi- chres, Byzeres, Colchi, Macrones, Matae, Taochi, and Phasistria. Some of these tribes were wild and savage to the last degree, especially those of the interior; but on the coast Greek colonies continued to be established ever since the middle of the 7th century n. c., and rose to great power and prosperity, spreading Greek culture and civilisation around them.

As to the history of the country, tradition stated that it had been conquered by Numbis, the founder of the Assyrian empire (Diod. ii. 2); after the time of Cyrus the Great it certainly was, at least nominally,
under the dominion of Persia (Herod. iii. 94, vii. 77, &c.), and was governed by hereditary satraps belonging to the royal family of Persia. In the time of Xenophon, the tribes of Pontus governed by native chiefs seem to have still enjoyed a high degree of independence. But in n. c. 365, in the reign of Artaxerxes II., Ariobarzanes subdued several of the Pontian tribes, and thereby laid the foundation of an independent kingdom in those parts. (Diod. xx. 96.) He was succeeded in n. c. 337 by Mithridates II., who reigned till n. c. 302, and who, by skilfully availing himself of the circumstances of the times during the struggles among the successors of Alexander, considerably enlarged his kingdom. After him the throne was occupied by Mithridates III., from n. c. 302 to 266; Ariobarzanes III., from n. c. 266 probably till 240. The chronology of this and the following kings, Mithridates IV., Pharnaces I., and Mithridates V., is very uncertain. Under Mithridates VI., from n. c. 120 to 65, the kingdom of Pontus attained the height of its extent and power, but his wars with the Romans led to its subjugation and dismemberment. Pompey, the conqueror of Mithridates, in n. c. 65 annexed the western part of Pontus as far as Ischiopolis and the frontiers of Cappadocia to Bithynia (Dion Cass. xiii. 45; Strab. xii. pp. 541, 543; Vell. Pat. ii. 38; Liv. Epit. 102), and gave away the remaining parts to some of the chiefs or princes in the adjoining countries. A portion of the country between the Iiris and Halys was given to the Galatian Deitourus, which was henceforth called Pontus Galaticus (Strab. xii. p. 547; Dion Cass. xiii. 63, xiii. 45; Prot. v. 6. §§ 3, 9.) The Cilicians and other tribes in the south-east of the Euxine received a king of their own in the person of Aristarchus. (Appian, Mithrid. 114; Eutrop. vi. 14.) Pharmaces II., the treacherous son of Mithridates, received the Crimea and some adjoining districts as an independent kingdom under the name of Bosphorus (Appian, Mithrid. 110, &c.); and the central part, from the Iiris to Pharmacis, was subsequently given by M. Antonius to Polemon, the son of Pharmaces, and was henceforth designated by himPontus Galaticus (Strab. xii. pp. 547, 549; Dion Cass. xiii. 63, xiii. 45; Prot. v. 6. §§ 4, 10; Eutrop. vii. 9; Aurel. Vict. de Caes. 15), which it retained afterwards, even when it had become incorporated with the Roman empire. The eastern part, which had likewise been ceded to Polemon, was transferred by his widow Pythodória to king Archelaus of Cappadocia, who married her, and was henceforth called Pontus Cappadocicus. In Pontus Polemoniacus, Pythodória was succeeded by her son Polemon II., who resigned his kingdom into the hands of the emperor Nero (Soest. Ner. 18; Eutrop. vii. 14.) Polemon was then killed at Byzantium in a revolt against the name of Polemon. Neither was the administration of which was sometimes combined with that of Galatia. In the new arrangements under Constantine, the province was again divided into two parts; the southern-western one, which had borne the name of Pontus Galaticus, was called Helenopontus, in honour of the emperor's mother Helen; and the eastern portion, to which Pontus Cappadocicus was added, retained the name of Pontus Polemoniacus. (Aurell. xxviii. 1; Hieroc. p. 792.) Besides these provincial divisions, there also exist a number of names of smaller separate districts, such as Cazarea, Sarameni, Themiscyra, Sidene; and in the interior Phaiakmonitai, PitMiliseni, Deocopene, Chilidocome, Daximontai, Zeleitos, Ximeni, and

MEGALOPOULITIS. These, as well as the most important towns, Amisos, Polemonium, Cottoura, Pharmacis, Cesareas, Trapezus, Aparnus, Cadima, Gaziera, Zela, Comana Pontica, Neokarearia, Sebastia, Themiscyra, Phazemon, &c., are described in separate articles. [L. S.]

PONTUS EUXINUS. [Euxinus Pontus.]

POULI or POPOLI, a small place in the west of Parmania, on the road from Jovia to Aquaviva, on the south of the river Draves. (It. Hieroc. p. 561; Geogr. n. v. 19; Tob. Penting.) [L. S.]

POPULONUM or POPULONIA (Ποπολέων; Eth. Populonisimia: Populonina), an ancient city of Etruria, situated on the sea-coast, nearly opposite the island of Eiva (Eliba), and about 5 miles N. of the modern city of Piombino. It stood on a lofty hill, rising abruptly from the sea, and forming the northern extremity of the detached and almost insular promontory, the southern end of which is occupied by the modern town of Piombino. This promontory (the Ποπολέων ἱππὸς of Polemy) is separated from the hills in the interior by a strip of flat marshy ground, about 5 miles in width, which in ancient times was occupied in great measure by lagunes or peduli; so that its position is nearly analogous to that of the still more striking Monte Argentario. The Maritime Itinerary places it 50 miles S. of the Vada Volaterrana, which is just about the truth (Ilin. Marit. p. 501). Strabo says it was the only one of the ancient Etruscan cities which was situated on the sea-shore (Strab. v. p. 223), and the remark is repeated by Pliny; thus apparently excluding Eusa as well as Pyrgi and other smaller places from that designation. It is probable at least that Populonium was the most considerable of the maritime cities of Etruria; but there are no grounds for regarding it as one of the Twelve Cities of the League, or as ever rivalling in importance the great cities of the interior. Virgil indeed represents it as one of the Etruscan cities which sent forces to the assistance of Aeneas (Aen. x. 172), a statement that seems to prove his belief in its antiquity; but other accounts represent it as a colony of Volaterrae, and therefore of comparatively recent date. Servius tells us that it was first founded by the Corsicans, from whom it was afterwards wrested by the Volaterrans; and distinctly represents it as of later date than the twelve chief cities of Etruria. (Serv. ad Aen. l. c.) It probably derived its chief prosperity from its connection with the neighbouring island of Eiva, the iron produced in the latter being all conveyed to Populonium to be smelted, and thence exported to other regions. (Strab. l. c. Ps.-ead. Arist. de Mirab. 95, Varr. ap. Serv. ad Aen. x. 174.) Hence, in n. c. 295, when Scipio was fitting out his fleet for Africa, and the Etruscan cities came forward with their voluntary contributions, the Populonians undertook to supply him with iron. (Liv. xxviii. 45.) This is the first occasion on which the name is mentioned in history, a few years later (n. c. 292) we are told that the consul Claudius Nero, on his voyage to Sardinia, took refuge with his fleet in the port of Populonium from the violence of a storm. (id. xxx. 39.) No further mention of it occurs in history; but we learn from Strabo that it sustained a siege from the forces of Sulla at the same time with Volaterrae, and it appears to have never recovered the blow it then received; for in the time of that geographer the city itself was almost desolate, only the temples and a few houses remaining. The port, however, was still

POPOLUS.
frequented, and a town had grown up around it at the foot of the hill. (Strab. v. p. 233.) Its name is still mentioned as an existing town by all the other geographers, and Polybius especially notices the city. He places it promontory of Populonium (Vit. ii. 4, § 9; Plin. iii. 5, s. 8; Polyb. iii. 1, § 4); but this is the last evidence of its existence; and before the close of the Western Empire it had fallen into complete decay. It is described by Rutilius at the beginning of the fifth century as entirely desolate, nothing remaining but fragments of its massive walls and the fallen ruins of other edifices. Gregory the Great also describes it towards the close of the sixth century as in a state of complete decay, though retaining an episcopal see; but at a later period of the middle ages a feudal castle was erected on the site, which, with the few adjacent houses, still bears the name of Populonia, and is a conspicuous object from a distance. (Rutil. Hist. i. 401—414; Gregor. Ep. ap. Cloer. Ital. p. 514.)

The only Etruscan remains now existing at Populonium (with the exception of a few tombs of no interest) are those of the ancient walls, which may be traced in fragments all round the brow of the hill, throughout the entire circuit of the city. This did not exceed a mile and a half in circumference; it was of an irregular form, adapted to the requirements of the ground. The walls are constructed of rude masses of stone, arranged, like those of Volterra, in horizontal layers, but with little regularity; they are not, however, nearly so gigantic in character as those of Volterra, Fiesole, or Cortona. Within the circuit of the walls are to be seen some vaulted chambers, six in a row (which have been erroneously called an amphitheatre) a mosaic pavement, and some reservoirs of water, all unquestionably of Roman date. (Dennis's Etruria, vol. ii. p. 236—238.)

On the highest point of the hill, in the days of Rutilius, stood a lovely watch-tower, serving at the same time as a beacon for ships. (Rutil. Hist. i. 407.) It rises from this point that, according to Strabo, the view comprised not only Corsica (which is visible from many points of the mainland), but Sardinia also. (Strab. l. c.) But this last assertion, though it has been repeated by many writers, is certainly erroneous, as, even if the distance were not too great, the nearer mountains of Elba would effectually conceal those of Sardinia from the view. (Dennis, vol. ii. p. 239.)

We learn from the Tabula that there were hot springs in the territory of Populonium, which had given rise to a bathing-place called the Aqua Populoniana (Fig. Plafz.). These were evidently the same now known as Le Calabro, at the foot of Campiglia, about 6 miles from Populonium, which have been identified by some writers with the "aqua calidae ad Vetuloniem" mentioned by Pliny (ii. 10. s. 106); but there is no authority for placing Vetulonia in this neighbourhood. (Dennis, vol. ii. p. 225.)

Populonium was the only city of Etruria which had a silver coinage of its own, of a very peculiar style, the reverse being generally quite plain, without type or legend, and not inscribed or indented, as on the earliest Greek coins. The obverse type is a Gorgon's head or mask; similar to that on many Etruscan monuments. The copper coins give the Etruscan name of the city "Puplana" at full—PITTHYATNA. It is not improbable (as suggested by Millingen) that the Populonians derived the art of coinage from the Phocaeans of Corsica; but there is certainly no ground for admitting the existence of a Phocaean colony at Populonium itself. (Millingen, Nummus, de l'anc. Italie, p. 163; Eckhel, Num. Vet. Anecul. pp. 10—18.)

POPHYRIS.

PORCIFERA (Pofercera), a river of Liguria, flowing into the sea about 2 miles W. of Genua. The name is written Porecire by Pliny (ii. 5. 7), the only one of the geographers who mentions it; but in a curious inscription found near Genua, it is variously written PORCIFERA and PORECERA.

POPORSELENI (Poropseleym; Phth. Popo- seleym^n), the chief of the Heathenese, a group of small islands lying between Lesbos and the coast of Asia. It contained a town of the same name (Sey lax, p. 36, Hudson; Strab. xiii. p. 618; Steph. B. s. e.). Strabo says (l. c.) that some, in order to avoid the dirty allusion presented by this name, called it Poroselene (Poropseleym^n), which is the form employed by Polybius (v. 2. § 5), Pliny (v. 31. s. 38), and Aelian (N. An. ii. 6). At a still later time the name was changed into Poroselene, under which form the town appears as a bishop's see. (Hierol. p. 556; Concil. Chalced. p. 530.)

PORINAS. [Phoen.]

POROSELENE. [Poroseleke.]

PORPHYREON (Porophereon; Eth. Porophy- reon, Phophereon), a city of Phocis, mentioned by Sehais (p. 42, Hudson) between Berytus and Sidon, and marked in the Jerusalem Itinerary (where it is written Parphirion, p. 583, Wesseling) as 8 Roman miles N. of Berytus. Porosculus calls it a village upon the coast. (Hist. Are. c. 30, p. 164, Bonn.) It is mentioned by Polybius (v. 68), from whose narrative we learn that it was in the neighbourhood of Phatanaus. (Platanus.) Hence it seems to be correctly placed at the Kbin Nby Vnns, where Poroscke relates (vol. ii. p. 432) that he saw some broken pillars, a Corinthian capital, and ruins on each side of a mountain torrent. In the side of the mountain, at the back of the Kbin, there are extensive excavated tombs, evidently once belonging to an ancient city. The Crusaders regarded Hetk as the ancient Poppyreon; but there is no authority that a city of this name ever stood in the bay of Akka. Justinian built a church of the Virgin at Poppyreon (Procop. de Aed. v. 9, p. 328); and it was a place of sufficient importance to be made a bishopric under the metropolitan of Tyre. (Robinson, Biblical Researches, vol. iii. p. 432.)

PORPHYRIS. [Nisius.]
PORPHYRITES MONS.

PORPHYRITES MONS (Porphyrites Mons, l.Tol. iv. 5. § 27), a long but not very lofty range of mountains which ran along the western shore of the Arabian Sea, nearly from lat. 26° to 27° N. Towards the sea its sides were abrupt, although occasionally scooped into serviceable harbours, e.g. the Portus Albus and Philibera. On the land side it sloped more gradually, breaking, however, the eastern desert with numerous bluffs and ridges, and sending forth its spurs as far as Tentura and Antaresillum S. and N. respectively. [W. B. D.]

PORTULAE: another name for Maximianopolis [Maximianopolis].

PORTA AUGUSTA (Porta Augusta, Tol. ii. 6. § 50), a town of the Vaccaei, in Hispania Tarraconensis; perhaps Torquemada. [T. H. D.]

PORTIMUS (Porfyro), a harbour in Euboea, belonging to Eretria, described by Demosthenes as opposite to Attica, is the modern Porto Buido, immediately opposite to Rhambus, in the narrowest part of the Euboean channel, where the breadth is only two miles. It was destroyed by Philip, after expelling the Eretrians; but its advantages position close to the coast of Attica gave it importance for many centuries afterwards. (Dem. Phil. iii. pp. 119, 125. iv. p. 123, de Cor. p. 248. Plin. iv. 12. s. 21; Hieroc. p. 645; Harpocrat. Phot. Suid. s. v. Porphys; Leake, Northern Greece, vol. ii. p. 435.)

PORTUS ABUCINI, is mentioned in the Notitia of the Gallic provinces as a place in "Provincia Maximorum Sequanorum." It appears to be Porta-seuinae. The district about Port was once called Pagus Portisilurus, whence the modern name Le Portois.

PORTUS ACHAEORUM, a harbour in European Sarmatia, upon the coast of the Euxine, and upon the strip of land called the Dromos Achilles. (Plin. iv. 12. s. 26.) [See Vol. i. p. 20, s.]

PORTUS AEMINES, on the south coast of Gallia, is mentioned in the Maritime Itin. It is supposed to be near the small island Eubius. (Urt. Gallici, p. 428.) [G. L.]

PORTUS AEPATIACI, is mentioned in the Notitia Imperii as being in Belgica Secunda; "Tribunam militiae Nerviorum portu Aepatiana." It is uncertain what place is meant. D'Anville (Geogr. s. v.) gives an article on it. [G. L.]

PORTUS AGASSUS. [Garganus.]

PORTUS ALBURNUS. [Alburni Mons.]

PORTUS ARGOUS. [Itea.]

PORTUS ARTABRORUM. [Artabrorum.]

PORTUS.

PORTUS AUGUSTI. [Ostia.]

PORTUS COSANUS. [Cosas.]

PORTUS DELPHINI (Plin. iii. 5. s. 7.; Delphinis, Itin. Ant. p. 298), a small port on the coast of Liguria, still called Porto Fino, situated at the S.E. extremity of a great mountain promontory, which projects into the sea between Genoa and Sanremi, and forms one of the most striking natural features of this part of the Ligurian coast. [E. H. B.]

PORTUS ERCIS. [Luna.]

PORTUS GARNAE. [Garganus.]

PORTUS HANNIBALIS, a town on the S. coast of Lusitania, not far from Lucobriga (Mela, iii. 1.; Isid. Or. xv. 9.), near Alvor, where there are traces of Iunian ruins. (Flores, Exp. S. XIV. p. 211.) [T. H. D.]

PORTUS HERCULIS. [Costa.]

PORTUS HERCULIS LIBURIN. [Pisa.]

PORTUS HERCULIS MONOECLII. [Monocclus.]

PORTUS VENERIS. 661

PORTUS ITIUS. [Itius.]

PORTUS JULIUS. [Lucius.

PORTUS LUNAE. [Luna.]

PORTUS MAGNUS. [Magnus Portus.]

PORTUS MAURITII. [Liguria, p. 187.]

PORTUS OLIVULA. [Nicaea.]

PORTUS PISANUS. [Pisa.]

PORTUS POMPIONIANUS, of the Maritime Itin., seems to be one of the bays formed by the Pompionian Peninsula, and rather that on the east side or that on the west side of the peninsula of Grèce. The name Pompianus Portus seems to confirm D'Anville's opinion about Pompioniana [Pompioniana]. [G. L.]

PORTUS SYMBOLOI. [Symbolon Portus.]

PORTUS TELEMONIS. [Telamo.]

PORTUS TRAJANI. [OSTIA.]

PORTUS VENERIS (Port Vénère), on the south coast of France near the borders of Spain. The passage about Portus Veneris in Mela (ii. 5) is thus (ed. M. Vossius): "Tum inter Pyrenaeorum Portus Veneris insigne fama. The words "insignis fama" are a correction of Vossius without any authority, which he has substituted for the words of the best MS., "in sinu salvo." Port Vénère is in France, near Collioure, a few miles south of the mouth of the Tech.

Ptolemy (ii. 10. § 2) fixes the boundary of Narbonensis at the promontory on which stood the Aphrodisium or temple of Venus. Pliny (iii. 3) in his description of Hispam Citerior, after mentioning Emporiae (Ampurias), says: "Flumen Tichis. Alb es Pyrenaica Venus in latero promontori veteri alto x. M." This river Tichis is the river which is near the site of Emporiae (Ampurias) in Spain. D'Anville concludes that the promontory of Pliny is the Promontorium Pyreneum of the Table, the modern Cap Creutz, which projects into the Mediterranean. This would be a fit place for the temple, for it was an ancient practice to build temples on bold headlands. But Pliny says "on the other," that is on the Gallic side of the promontory; and the distance of x. M. P. from the river of Ampurias brings us to the position of Port Vénère. Accordingly D'Anville concludes that the temple of Venus was near the port of Vénère; and this would seem likely enough. This temple is apparently mentioned by Stephania (s. v. Aampurias); and certainly by Strabo (iv. p. 178), who makes the coast of the Narbonensis extend from the Var to the temple of the Pyrenean Venus, the boundary between Narbonensis and Iberia; but others, he adds, make the Trepeca Pompeii the boundary of Iberia and Celtica. The Trepeca Pompeii were in a pass of the Pyrenees not far from the coast. In this passage Strabo simply says that the temple of the Pyrenean Venus was fixed as the boundary of Gallia and Hispania by some geographers, but this passage does not tell us where the temple is; and the distances which he gives in the same place (iv. p. 178) will not settle the question. But in another passage (iv. p. 181) he makes the Galatians Simus extend from a point 100 stadia from Massilia "to the Aphrodisium, the promontory of Pyrene." It is plain that his promontory of Pyrene is Cap Creutz, for this is a marked natural limit of the Gallic bay on the west; and he also places the temple there. Cap Creutz is a natural boundary between Gallia and Hispania, and we may conclude that it was the ancient coast boundary. We know that Cervarina, which is south of Portus Veneris and
POSEIDONIUM.

north of Cap Creus, is in Galicia [Cerviaria]. It appears then that there is no authority for placing this temple of Venus at Portus Venere except the passage of Pliny, which leads to this conclusion, if the distance xvi. is right. The passage of Mela has been corrupted by Vossius. It is even doubtful if "inter Pyraenae promontoria" is the true reading. Some editions have "in Pyraenae promontorium," but if that reading is right, the promontorium of Mela is not Cap Creus. [G. L.]

POSEIDONIUM, or POSIDIUM (Poseidonios, Thuc. iv. 129; Posidium, Liv. xiv. 11), the SW. cape of Pallene, probably so called from a temple to Poseidon, which still retains its name vulgarly pronounced Positihi. (Leake, Northern Greece, vol. iii. p. 156.) Millier (Geog. Grecii Min. vol. i. p. 52) identifies it with the Thembeiros of Sylax (p. 26; comp. Θεμβέρος, Herod. vii. 123; Θεμβέρος: Etr. Θεμβέρος, Steph. B.; Lycophr. 1405), which Leake and Kiepert place near the Cannastrum Prom.; but as Sylax interposes Scione between them, Thembeiros corresponds better with Positihi. [E. B. J.]

POSIDIUM or POSEIDONIUM (Poseidion), the name of several promontories sacred to Poseidon.

1. In Europe. 1. A promontory on the coast of Lucania, opposite to the little island of Leucosia, from which it is still called PUNTA della Lecosa. [Leucosia]

2. The SW. cape of Pallene in Macedonia, also called Poseidionium. [Poseidionium]

3. A promontory in Chanonia in Epeirus, between Ochthusus and Butyrhontos, opposite the NE. of Corea. (Strab. vii. p. 324; Ptol. iii. 14 § 4; Leake, Northern Greece, vol. i. p. 92.)

4. A promontory in Thessaly, in the district Pthitheiós, described by Strabo as lying between the Malac and Pactasian gulfs, is the promontory closing the Pactasian gulf on the S. It is called Zelasium by Livy, now C. Scauros (Strab. vii. p. 330, Fr. 32; Ptol. iii. 13 § 17; Liv. xxxii. 46; Leake, Northern Greece, vol. iv. p. 331).

5. POSIDIUM or POSIDIUM (Poseidion). II. In Asia. 1. The easternmost promontory of the island of Samos. (Strab. xiv. p. 657.)

2. A promontory on the eastern coast of the island of Chios (Strab. xiv. p. 644; Ptol. vi. 2 § 30), now called Cape Helene.

3. A promontory of Bithynia, at the northern extremity of the bay of Cios or Myleia, forming the termination of Mount Arachnanthus, is now called Cape Bodrum, in the Sea of Marmora. (Ptol. vi. 1 § 4; Marcian, p. 70; Sylax, p. 30, where it is called simply σύλαξ τοῦ Καραμέλου.)

4. A promontory on the coast of Cilicia, 7 stadia to the west of the town of Mandane, is now called C. Kizilnarin. (Stadiasmus. Mar. Magn. § 175.)

5. A promontory on the south-west coast of Caria, south of Miletus, to the territory of which it belonged. It forms the northern extremity of the Iasian bay, and also contained a small town of the same name. (Polyb. xvi. 1; Strab. xiv. pp. 632, 631, 638; Plin. v. 31; Pomp. Mel., l. 17; Stadiasmus. Mar. Magn. §§ 273, 275, 276.) Its modern name is Ç. Balıa or dür Arbaa. [L. S.]

6. A promontory in Arabia, on the cast side of the entrance of the gulf of Hormoz, where was a grove of palm-trees, and an altar to Poseidon, which was erected by Ariston, whom one of the Ptolemies had sent to explore the Arabian gulf. This promontory is now called Ras Mohammed. (Artemid. ep. Strab. xvi. p. 776; Diod. iii. 42.) Strabo, or POTENTIA.

his copyist, erroneously says that it lies within the Aethalian recesses. (See the notes of Groskurd and Kramer.)

7. A promontory in Aulonia, E. of the Straits of the Red Sea (Bob-el-Manbeh), Ptol. vi. 7 § 8, which must not be confounded with No. 6, as some modern writers have done.

8. A town on the coast of Syria, in the district Cassiots, lying S. of Mt. Casius. There are still remains of this town at Poseda. (Strab. xxii. pp. 751, 753; Ptol. v. 15 § 3; Plin. v. 20. § 18.)

PODISION, POSIDIONATES SINUS. [Pak-stum.]

POSTUMIA or POSTUMIA XA CAESTRA, a fortress in Hispania Baetica, seated on a hill near the river Salsum (Hist. B. Hist. 8), probably the modern Salado, between Omnius and Antequera. (Marciana, iii. 2; Florio, Esp. S. p. 150, xii. p. 14.) [T. H. B.]

POTAMI (Potamai), a fort on the north-eastern part of the coast of Paphlagonia, with a harbour for small craft. According to Arrian (Peripl. E. p. 15) it was 150 stadia to the NE. of Stephanos, but according to others only 120. (Marcian, p. 72; Anonym. Peripl. E. p. 7, who places it 100 stadia to the SW. of Cape Syrias.) [L. S.]

POTAMIA (Potamia), a district in the SW. of Paphlagonia mentioned by Strabo (xii. p. 82), but without defining its extent or limits. [L. S.]

POTAMUS, or POTAMI. [Attica. p. 331, &c.]

POTANA (Potana, Agatharche, de Mar. Etythr., § 104, ed Paris, 1855), a place mentioned by Agatharchides, which Alexander the Great founded at the mouth of the Indus. Diodorus calls it Pofanea (iii. 46). It has been suspected, with some reason, that the name in both of these authors is an error for Pattala (the present Tatara), which is spoken of in similar terms by Arrian (Annab. v. 4, vi. 17, Indic. c. 2) and by Pliny (ii. 75). On the other hand, the name may readily be conceived as a Graecism for Potan, a common Indian word for a town or city. [V.]

POTENTIA. 1. (Potentia; Eth. Potentlich, Ste Maria a Potenza), a town of Piacenza, situated on the coast of the Adriatic, at the mouth of the river of the same name, still called the Potenza, and 18 miles S. of Ancona. We have no means of determining whether or not there was an ancient town on the spot previous to the Roman conquest of Piacenza; but in the 184 a Roman colony was settled there, at the same time with that at Pissanum in Umbria. (Liv. xxxix. 41; Vell. Pat. i. 15. The elder editions of Livy have Pollentia, but there seems no doubt that the true reading is Potentia.) It was, as well as the latter, a "colonia civium," but does not seem to have ever risen to a position of importance; and with the exception of an incidental notice in Cicero of an earthquake that occurred in its territory (Cic. de Harap. Resp. 28), no mention of its name is found in history. It is, however, mentioned by all the geographers as one of the towns of Piacenza, and at a later period its name is still found in the Itineraries. (Strab. v. 241; Mel. ii. 4 § 6; Plin. iii. 13. 18; Ptol. iii. 1 § 1; Itin. Ant. pp. 101, 313; Tab. Peut.) From the Liber Coloniarum we learn that it had received a new body of colonists, though it is uncertain at what period (Lib. Cod. pp. 226, 257); but there is no evidence of its having retained the rank of a colony under the Roman Empire. (Zumpt, de Col. p. 336.) It became an
episcopal see in the early ages of Christianity; and the time of its decay or destruction seems to be unknown; but the site is now wholly deserted. Considerable remains of the ancient city were still visible in the time of Holstenius in the plain on the right bank of the Potenza, near its mouth; and the name is still retained by an ancient church and abbot called St. Maria a Potenza, about a mile from the Porto di Recanati. (Holsten. Not. ad Chzer. p. 134.)

2. (Potentia, Ptol.: Eth. Potentium: Potenza), a city of the interior of Lucania, situated in a valley of the Casentus or Basiento, not far from its source, and above 60 miles from the gulf of Tarentum. No mention of it occurs in history, and though it is noticed by Pliny, Pollennus, and the Liber Coloniarum, among the municipal towns of Lucania, we have no indication of its superior importance. But from the numerous inscriptions discovered there, it is evident that it was, under the Roman empire, a flourishing municipal town, and must at that period have been one of the most considerable in Lucania, the towns of that province having for the most part fallen into great decay. The Itineraries give us two lines of road passing through Potentia, the one from Venusia southwards towards Grumentum and Neronia, the other from Salernum and the valley of the Silarus, which appears to have been continued in the direction of Tarentum. (Plin. iii. 11. s. 15; Ptol. iii. 1. § 76; Eth. Col. p. 209; Itin. Ant. p. 104; Tsch. Punt.; Norrm. i. R. N., pp. 23, 24.) The modern city of Potenza is the capital of the Basilicata, a province which comprises the greater part of the ancient Lucania: it does not occupy precisely the site of the ancient city, the remains of which are visible at a place called La Murate, in the valley below the modern city. (Romanelli, vol. i. p. 435.) [E. H. B.]

POTHEREUS, a river of Crete mentioned by Vitruvius (i. 4), is identified by some with the Catarrhacites of Pollennus. (Catarrhacites.)

POTIDAEA. (Cassandreia.) Steph. s. c.; Pliny xxv. 8. s. 53; Virg. Georg. iii. 268; Or. Ibis, 557; Dict. of Biogr. art. Glaucus.) According to Strabo (p. 412) some authorities regarded Potidæa as the Hy pothæae of Homer (ii. ii. 505). Gell places Potidæa in the neighbourhood of the modern village of Taki. (Gell, Itinerary, p. 110; comp. Leake, Northern Greece, vol. ii. p. 323.)

PRAEASA. (Praescola.)

PRACTIUS (Praetius), a small river in the north of Tressa, flowing from Mount Ida, and discharging itself into the Hellespont a little below Derbys. (Hom. II. ii. 19. Strab. xiii. p. below Arrian, Anat. i. 12. § 6.) Some identify it with the modern Borgas, and others with the Muskolosus.

PRAENESTE, Dion Cass. : Eth. Praenestivos, or Praenestivos, Praenestimous, Polotestinos, one of the most ancient, as well as in early times one of the most powerful and important, of the cities of Latium. It was situated on a projecting point or spur of the Apennines, directly opposite to the Alban Hills, and nearly due E. of Rome, from which it is distant 27 miles. (Strab. v. p. 238; Itin. Ant. p. 302; Westphal, Römische Kompagnie, p. 106.) Various mythical tales were current in ancient times as to its founder and origin. Of these, that adopted by Virgil ascribed its foundation to Caeculus, a reputed son of Vulcan (Virg. Aen. vii. 678); and this, we learn from Solinus, was the tradition preserved by the Praenestines themselves (Solin. 2. § 9). Another tradition, obviously of Greek origin, derived its name and foundation from Praenestus, a son of Latmus, the offspring of Ulysses and Circe (Steph. B. s. c.; Solin. l. c.). Strabo also calls it a Greek city, and tells us that it was previously called Potastrophos (Strab. v. p. 238). Another form of the same name is given by Pliny (iii. 5. s. 9), who tells us its original name was Stephane. And finally, as if to complete the series of contradictions, its name is found in the lists of the reputed colonies of Alba, the foundation of which is ascribed to Latmus Silvius (Vict. Orig. Gent. Rom. 17; Dion. vii. ap. Euseb. Arm. p. 185). But there seems no doubt that the earlier traditions were those which assigned it a more ancient and independent origin. The first mention of its name in history is in the list of the cities of the Latin League, as given by Dionysius, and there can be no doubt of its having formed an important member of that confederacy. (Dionys. v. 61.) But as early as B. C. 499, according to Livy, it quitted the cause of the confederates and joined the Romans, an event which that historian places just before the battle of Regillus. (Liv. ii. 19.) Whether its separation from the rest of the Latina was permanent or not, we have no information; but on the next occasion when the name of Praeneste occurred it was still in alliance with Rome, and suffered in consequence from the ravages of the Aquinians and Volscians, B. C. 462 (Liv. iii. 5). The capture of Rome by the Gauls seems, however, to have introduced a change in the relations of the two cities. Shortly after that event (B. C. 383) the Praenestines are mentioned as making hostile incursions into the territories of the Gabians and Labicians: the Romans at first treated this breach of faith with neglect, apparently from unwillingness to provoke so powerful an enemy; but the next year, the Praenestines having sent an army to the support of the revolted colonists of Volsinii, war was formally declared against them. The Praenestines now joined their former enemies the Volscians, and, in conjunction with them, took by storm the Roman colony of Satricum. (Liv. vi. 21, 22.) The next year the Volscians were defeated in a great battle by Camillus, but no mention is made of the Praenestines as taking part in it. The following season, however (B. C. 380), they levied a large army, and taking advantage of the domestic dissensions at Rome, which impeded the levy of troops, they advanced to the very gates of the city. From thence they withdrew to the banks of the Alenn, where they were attacked and defeated by T. Quintius Cincinnatus, who had been named in all haste dictator. So complete was their rout that they not only fled in confusion to the very gates of Praeneste, but
Cincinnatus, following up his advantage, reduced eight towns which were subject to Praeneste by force of arms, and compelled the city itself to submission (Livy. vi. 26—29). There can be little doubt that the statement of Livy which represents this as an unqualified surrender (delitio) is one of the exaggerations so common in the early Roman history, but the inscription noticed by him, which was placed by Cincinnatus under the statue of Jupiter Imperator, certainly seems to have claimed the capture of Praeneste itself as well as its dependent towns. (Fast. s. v. Tricentum. p. 363.)

Yet the very next year the Praenestines were again in arms, and stimulated the other Latin cities against Rome. (Livy. vi. 30.) With this exception we hear no more of them for some time; but a notice which occurs in Diodorus that they concluded a truce with Rome in B. C. 351, shows that they were still acting an independent part, and kept aloof from the other Latins. (Diod. xvi. 45.) It is, however, certain that they took a prominent part in the great Latin War of B. C. 340. In the second year of that war the Latin forces to the assistance of the Pedani, and, though defeated by the consul Aurelius, they continued the contest the next year together with the Tiburtines; and they were the final defeat of their combined forces by Camillus at Pedum (B. C. 338) that eventually terminated the struggle. (Livy. viii. 12—14.) In the peace which ensued, the Praenestines, as well as their neighbours of Tibur, were punished by the loss of a part of their territory, but in other respects their position remained unchanged: they did not, like the other cities of Latium, receive the Roman franchise, but continued to exist as a nominally independent state, in alliance with the powerful republic. They furnished, like the other "socii" their quota of troops on their own separate account, and the Praenestine auxiliaries are mentioned in several instances as forming a separate body. Even in the time of Polybius it was one of the places which retained the Jus Exilii, and could afford shelter to persons banished from Rome. (Vol. vi. 14.)

On the arrival of Pyrrhus in Italy the fidelity of the Praenestines seems to have been suspected, and the Romans compelled them to deliver hostages. (Zonar. viii. 3.) Shortly afterwards Pyrrhus was driven from their territory and his march turned back on his advance to Rome. There is no probability that he took the town. Enroquis says merely that he advanced to Praeneste; and the expression of Florus that he looked down upon Rome from the citadel of Praeneste is probably only a rhetorical flourish of that inaccurate writer. (Flor. ii. 18; Enroquis. ii. 12.) In the second Punic War a body of Praenestine troops distinguished themselves by their gallant defence of Castilium against Hannibal, and though ultimately compelled to surrender, they were rewarded for their valour and fidelity by the Roman senate, while the highest honours were paid them in their native city. (Livy. xxi. 19, 20.) It is remarkable that they refused to accept the offer of the Roman franchise; and the Praenestines in general retained their independent position till the period of the Social War, when they received the Roman franchise together with the other allies. (Appian, B. C. i. 65.)

In the civil wars of Marius and Sulla, Praeneste bore an important part. It was occupied by Cinna when he was driven from Rome in B. C. 87 (Appian, B. C. i. 65), and appears to have continued in the hands of the Marian party till B. C. 82, when it afforded a shelter to the younger Marius with the remains of his army, after his defeat by Sulla at Sacciportus. The natural strength of the city had been greatly increased by new fortifications, so that Sulla abandoned all idea of reducing it by force of arms, and was content to draw lines of circum-vallation round it, and trust to the slower process of a blockade, the command of which he entrusted to Lucrinus Oellus. While he himself carried on operations in the field against the other leaders of the Marian party. Repeated attempts were made by these generals to relieve Praeneste, but without effect; and at length, after the great battle at the Colline Gate and the defeat of the Sannite general Pontius Teleseinus, the inhabitants opened their gates to Oellus. Marius, despairing of safety, after a vain attempt to escape by a subterranean passage, put an end to his own life. (Appian, B. C. i. 87—94; Plut. Mar. 46, Sull. 28, 29, 32; Vell. Pat. ii. 26, 27; Liv. Epit. ixxvii. 11, ixxviii.) The city itself was severely punished; all the citizens without distinction were put to the sword, and their towns given up to plunder; its fortifications were dismantled, and a military colony settled by Sulla in possession of its territory. (Appian, l. c.; Lucan. ii. 194; Strab. v. p. 239; Flor. iii. 21.) The town seems to have been at this time transferred from the hill to the plain beneath, and the temple of Fortune with its appurtenances so extended and enlarged as to occupy a great part of the site of the ancient city. (Nibby, Diniorni, vol. ii. p. 481; but see Bormann, Al. Lat. Chorogr. p. 207, note 429.)

But the citadel still remained, and the natural strength of the position rendered Praeneste always a place of importance as a stronghold. Hence, we find it mentioned as one of the points which Catiline was desirous to occupy, but which had been skilful guarded by Cicero (Cic. in Cat. i. 3); and at a later period L. Antonius retired thither in B. C. 41, on the first outbreak of his dispute with Octavian, and from thence endeavoured to dictate terms to his rival at Rome. Fulvia, the wife of M. Antonius took refuge there at the same time. (Appian, B. C. v. 21, 23, 29.) From this time we hear but little of Praeneste in history; it is probable from the terms in which it is spoken of both by Strabo and Appian, that it never recovered the blow inflicted on its prosperity by Sulla (Strab. l. c.; Appian, B. C. i. 94); but the new colony established at that time rose again into a flourishing and considerable town. Its proximity to Rome and its elevated and healthy situation made it a favourite resort of the Romans during the summer, and the poets of the first century of the Empire abound in allusions to it as a cool and pleasant place of suburban retirement. (Juv. iii. 190, xiv. 88; Martial. x. 30. 7; Stat. Nai. iv. 2. 15; Plin. Ep. v. 6. § 45; Flor. i. 11.) Among others it was much frequented by Augustus himself, and was a favourite place of retirement of Horace. (Suet. Aug. 72; Hor. Carm. iii. 4. 23, Ep. i. 2. 1.) Tibullus also recovered there from a dangerous attack of illness (Gell. N. A. xvi. 13); and Hadrian built a villa there, which, though not comparable to his celebrated villa at Tibur, was apparently on an extensive scale. It was there that the emperor M. Aurelius was residing when he met his son Annius Verus, a child of seven years old. (Jul. Capit. M. Ant. 21.)

Praeneste appears to have always retained its
PRÆNESTE.

colonial rank and condition. Cicero mentions it by the title of a Colonia (Cic. in Cat. i. 3); and though neither Pliny nor the Liber Coloniarum give it that appellation, its colonial dignity under the Empire is abundantly attested by numerous inscriptions. (Zumpt, de Colon. p. 234; Lib. Colon. p. 236; Orell. Inscr. l.c.) It is important to notice that the Praenestines applied to Tiberius as a favour to be changed from a colony into a Municipium; but if their request was really granted, as he asserts, the change could have lasted for but a short time. (Gell. N. A. xvi. 13; Zumpt, l.c.)

We find scarcely any mention of Praeneste towards the decline of the Western Empire, nor does its name figure in the Gothic wars which followed: but it appears again under the Lombard kings, and bears a conspicuous part in the middle ages. At this period it was commonly known as the Civitas Praenestina, and it is this form of the name—which is already found in an inscription of A.D. 408 (Orell. Inscr. 160)—that has been gradually corrupted into its modern appellation of Palestro.

The modern city is built almost entirely upon the site and gigantic substructions of the temple of Fortune, which, after its restoration and enlargement by Sulla, occupied the whole of the lower slope of the hill the summit of which was crowned by the ancient citadel. This hill, which is of very considerable elevation (being not less than 2400 feet above the sea, and more than 1200 above its immediate base), projects like a vast buttress or bastion from the angle of the Apenines towards the Alban Hills, so that it looks down upon and seems to command the whole of the Campagna around Rome. It is this position, combined with the great strength of the citadel arising from the elevation and steepness of the hill on which it stands, that rendered Praeneste a position of such importance. The site of the ancient citadel, on the summit of the hill, is now occupied by a castle of the middle ages called Castel S. Pietro: but a considerable part of the ancient walls still remains, carried out in the massive style of polygonal blocks of limestone; and two irregular lines of wall of similar construction descend from thence to the lower town, which they evidently served to connect with the citadel above. The lower, or modern town, rises in a somewhat pyramidal manner on successive terraces, supported by walls or facings of polygonal masonry, nearly resembling that of the walls of the city. There can be no doubt that these successive stages or terraces at one time belonged to the temple of Fortune; but it is probable that they are of much older date than the time of Sulla, and probably formed part of the ancient city, the streets of which may have occupied these lines of terraces in the same manner as those of the modern town do at the present day. There are in all five successive terraces, the highest of which was crowned by the temple of Fortune properly so called,—a circular building with a vaulted roof, the ruins of which remained till the end of the 13th century, when they were destroyed by Pope Boniface VIII. Below this was a hemicycle, or semi-circular building, with a portico, the plan of which may be still traced. In the interior terraces were still remains a mosaic, celebrated as one of the most perfect and interesting in existence. Various attempts have been made to restore the plan and elevation of the temple, an edifice wholly unlike any other of its kind; but they are all to a great extent conjectural. A detailed account of the existing remains, and of all that can be traced of the plan and arrangement, will be found in Nibby. (Diot. torni, vol. ii. p. 494—510.)

The celebrity of the shrine or sanctuary of Fortune at Praeneste is attested by many ancient authors. (Ov. Trist. vii. 556; Sili. Ital. viii. 366; Lucan, i. 194; Strab. v. 612, 279; Pliny, H. N. 37.) It is without doubt that it derived its origin from an early period. Cicero, who speaks of the temple in his time as one of great antiquity as well as splendour, gives us a legend derived from the records of the Praenestines concerning its foundation, and the institution of the oracle known as the Sortes Praenestinae, which was closely associated with the worship of Fortune. (Cic. de Div. ii. 41.) So celebrated was this mode of divination that not only Romans of distinction, but even foreign potentates, are mentioned as consulting them (Val. Max. i. 3. § 1; Liv. xlv. 44; Propert. iii. 24. 3); and though Cicero treats them with contempt, as in his day obtaining credit only with the vulgar, we are told by Suetonius that Tiberius was deterred by religious scruples from interfering with them, and Domitian consulted them every year. Alexander Severus also appears, on one occasion at least, to have done the same. (Suet. Tib. 63, Domit. 15; Lamp. Alex. Serv. 4.) Numerous inscriptions also prove that they continued to be frequently consulted till a late period of the Empire, and it was not till after the establishment of Christianity that the custom fell altogether into disuse. (Inscr. ap. Borrmon, pp. 212, 213; Orelli, Inscr. 1756—1759.)

The Praenestine goddess seems to have been specially known by the name of Fortuna Primigenia, and her worship was closely associated with that of the infant Jupiter. (Cic. de Div. i. c.; Inscr. at sup.) Another title under which Jupiter was specially worshipped at Praeneste was that of Jupiter Imperator, and the statue of the deity at Rome which bore that appellation was considered to have been brought from Praeneste (Liv. vi. 29).

The other ancient remains which have been discovered at Palestro belong to the later city or the colony of Sulla, and are situated in the plain at some distance from the foot of the hill. Among these are the extensive ruins of the villa or palace of the emperors, which appears to have been built by Hadrian about A.D. 134. They resemble much in their general style those of his villa at Tivoli, but are much inferior in preservation as well as in extent. Near them is an old church still called Sta. Maria della Villa.

It was not far from this spot that were discovered in 1773 the fragments of a Roman calendar, supposed to be the same which was arranged by the grammerian Verrius Flaccus, and set up by him in the forum of Praeneste. (Suet. Gramm. 17.) They are commonly called the Fasti Praenestini, and have been repeatedly published, first by Foggiini (fol. Romae, 1779), with an elaborate commentary; and again as an appendix to the edition of Suetonius by Wolf (4 vols. 8vo. Lips. 1802). Also in Orelli (Inscr. vol. ii. p. 379, &c.). Notwithstanding this evidence, it is improbable that the forum of Praeneste was so far from the foot of the hill, and its site is more probably indicated by the discovery of a number of pedestals with honorary inscriptions, at a spot near the SW. angle of the modern city. These inscriptions range over a period from the reign of Tiberius to the fifth century, thus
tending to prove the continued importance of Preece-
tus throughout the period of the Roman Empire. (Nobby, vol. ii. pp. 513—515; Fageget, I.c. pp. v.—
) Other inscriptions mention the existence of a
theatre and an amphitheatre, a portico and curia,
and a spadarium; but no remains of any of these
cities can be traced. (Gruner, Inscr. p. 152; Oviri,
Inscr. 2532; Barnum, note 434.)

The celebrated grammarian Verrius Flaccus, al-
ready mentioned, was probably a native of Preece-
teus, as was also the well-known author Athenian,
who, though he wrote in Greek, was a Roman citi-
zen by birth. (Suid. s. a. v. Alaman.) The family of
the Anicin also, so illustrious under the Empire,
seems to have derived its origin from Praeneste, as
a Q. Anicin is mentioned by Cato. (Pline. Hist.
of that city as early as n. c. 304. (Pline. xxiii. 1.
6.) It is probable also that in Livy (xxiii. 19)
we should read M. Anicin for Manicins. It is
probable that the Praenestines appear to have had
certain dialectic peculiarities which distinguished
them from the other Latins; these are more than
once alluded to by Plautus, as well as by later
grammarians. (Plaut. Trinum. iii. 1. 8, Truc. iii.
2. 23; Quintil. Inst. 1. 3. § 56; Fest. s. v. Nephran-
dis, ld. s. v. Tongere.)

The territory of Praeneste was noted for the ex-
cellence of its nuts, which are mentioned by Ovid.
(R. R. S. 143; Pline. xvii. 15. 21; Navicius, on
Macrobi. Sat. iii. 18.) Hence the Praenestines
themselves seem to have been nicknamed Nicanii;
though another explanation of the term is given by
Festus, who derives it from the walnuts (nuces)
with which the Praenestiae garrison of Caesunium
is said to have been fed. (Cic. de Or. ii. 62; Fest.
s. v. Nicaniae.) Pliny also mentions the roses of Prae-
esteas as among the most celebrated in Italy; and
its wine is noticed by Athenaeus, though it was ap-
parently not one of the choicest kinds. (Pline.
xxi. 4. x. 10; Athen. i. p. 26, f.)

It is evident from the narrative of Livy (vi.
29) that Praeneste in the days of its independence,
like Tivoli, had a considerable territory, with at
least eight smaller towns as its dependencies.
but the names of none of these are preserved to us,
and we are wholly unable to fix the limits of its
territory.

The name of Via Praenestina was given to the
road which, proceeding from Rome through Gabini
direct to Praeneste, from thence rejoined the Via
Latina at the station near Anagnia. It will be
considered in detail in the article Via Praenesi-
tina. (E. H. B.)

PRAENETUS (Praevenus), a town on the coast
of Bithynia, on the north side of Mount Arganto-
nius, and at the southern entrance of the Sinus
Asiacus. It was situated 28 Roman miles to the
north-west of Nicea; and Stephanus B., who calls
it Praevenos, states that it was founded by the
Phocicians. If this be true, it would be a very
ancient place, which can scarcely be conceived, as
it is mentioned only by very late writers. (Pallad.
Tit. Chrys. p. 75; Socrat. vi. 16; Hieroc. p. 691,
where it is called Prusia; Tab. Peutig., where it is
written Praevia; according to Celsus (Gr. 457),
it was destroyed by an earthquake. Its site seems
to answer to that of Debrondo. [J. S.]

PRAESIDIUM, the name of several fortified
places established by the Romans.

428.)

PRAESUS.

2. In Bactria, on the road from the month of
the Anas to Emerita (Ib. 431); thought by some to be
S. Lucar de Guadalsa.

3. In Gallacia, not far from the Douro. (Ib.
422.)

4. In Britannia Romana, in the territory of
the Cornovii (Not. Imp.), supposed to be Warwick.
(Camden, p. 602.)

PRAESEDIUM, a military post on the Great
Syrtis, between Tagulae or Togulæ (Ksar-el-Atech)
and Ad Turrem. (Pet. Tab.) The result of
Barth's (Wanderungen, pp. 372—377) laborious
researches upon the ancient topography of the Great
Syrtis, is to place this station at Jehovah, where
there are remains of antiquity. [E. B. J.]

PRAESEDIUM. [Tarrachiae.]

PRAESEDIUM POMPEII. [Pompeii Prae-
seidum.]

PRAEOLI. [PrasIaca.]

PRAESTI (Cart. x. 8. § 11), a people of the
Punjab, who were conquered by Alexander the
Great. Their king is stated by Curtius to have been
named Oxycamus. He would seem to have
been the same ruler who is called by Strabo Par-
ticaus (iv. p. 701). His name, however, occurs in
Artian. (Anab. vi. 16.) As Curtius calls the
Praesti a purely Indian nation, it is not unlikely,
from the resemblance of the names, that they formed
the western portion of the great empire of the
Prasi. [PrasIaca.]

PRAEUS, or PRÆUS (Praisos; in the MSS.
of Strabo Præasos, but in inscriptions Præos, Bickh.
Inscr. vol. ii. p. 1102: Euth. Præosios, more rarely
Praisos, Steph. B. s. v.), a town in Crete, be-
longing to the Eteocretes, and containing the temple
of the Dictaean Zeus, for Mr. Dicti was in the terri-
itory of Præus. (Strab. x. pp. 475, 478.)

There is a difficulty in the passage of Strabo, describing
the position of this town. He first says (p. 478)
that Praeus bordered upon the territory of Leben,
and was distant 70 stadia from the sea, and 180
from Gortyn; and he next speaks of Praesus as lying
between the promontories Samionum and Cherso-
nus, at the distance of 60 stadia from the sea.
It is evident that these are two different places, as
a town, whose territory was contiguous to that of
Leben, must have been situated in the southern part
of the island; while the other town, between the
promontories of Samionium and Chersonesus, must
have been at the eastern end. The latter is the
town of the Eteocretes, possessing the temple of
the Dictaean Zeus, and the Præus usually known
in history; the former is supposed by Mr. Pushley
(Crete, vol. i. p. 259 seq.) to be a false reading for
Prænus, a town mentioned in coins and inscriptions,
which he accordingly places on the southern coast
between Bienna and Leben. In this he is followed
405) that Præos, or Præos was the primitive
form of the name, from which Præusos, or Præasos
(a form in Steph. B. s. v.), and subsequently Præos,
were derived, just as in the Aeolic dialect Pana
became Phaen, and in the Attic dialect Pana.
Kramer (ed. Strab. l. c.) adopts the opinion of Böck.
Upon the whole we must leave uncertain what town
was intended by Strabo in the former of the above-
mentioned passages.

The territory of Praesus extended across the is-
land to either sea. (Synxh, p. 18, Huds.) It is
said to have been the only place in Crete, with the
exception of Polichna, that did not take part in the
PRAETORIA AUGUSTA.

expedition against Camicans in Sicily, in order to avenge the death of Minos (Herod. vii. 170). It was destroyed by the inhabitants of Hierapytum. (Strab. x. p. 479.) Agathodoe, the Babylonian, related that the Praetorius were accustomed to sacrifice swine before marriage. (Athen. ix. p. 376.) The ruins of Praetorius are still called Praetoria. (Pashley, Crete, vol. i. p. 290, seq.; Hick, Krete, vi. p. 413, seq.)

PRAETORIA AUGUSTA. [Augusta Praetoria.]

PRAETORIUM. There were places of this name in Gallia, Hispania, and in other countries which the Romans occupied. A Praetorium is the residence of a praetor and the seat of the supreme court. The word was also used to signify a magnificent judicial building. The Table marks a Praetorium in Gallia, on a road from Augustorium (Liguriae). At the Praetorium the road divides, one branch going to Augustonemetum (Clermont Ferrand in the Auvergne) and the other to Avaricum (Bourges). It is not possible to fix the site of this Praetorium.

PRAETORIUM. 1. A town in the territory of the Lacetani, in the NE. of Hispamia Tarraconensis, and on the road from Tarraco, in Gaul, to Barcino. (Itin. Ant. p. 398.) Usually identified with La Rocca, where there are still considerable Roman remains. (Marc, Itap. ii. 20.)

2. (Praesigia, Pol. ii. 3, § 17), a place in the most N. part of Britannia Romana, in the territory of the Parisi, whence there was a separate road from the Roman Wall to Eboracum (Itin. Ant. pp. 464, 465.) It is supposed by Camden (p. 871) to be Beverley in Yorkshire; by others it has variously been identified with Patrington, Hebberton, Hornsea, Kingston, and Flamborough. Some writers distinguish the Pe- tuaria of Paternia from the Praetorium of the Itinerary; and Gale (Itin. p. 24) identifies the former place with Audley in the Derwent. [T.H.D.]

PRAETORIUM, AD (Praetorium), a place in Upper Pannonia, south of the Savus, on the road from Sciclia to Sirmium. (Tab. Peuting.; Pol. ii. 15, § 6.) It was probably a place where a court of justice was held for the inhabitants of the surrounding district, or it contained an imperial palace where the emperors put up when travelling in that country.

PRAETORIUM AGrippinae. This Praetorium appears in the Table, and is distinguished by the representation of a large building. D'Anville conjectures that it may have taken its name from Agrippina, the daughter of Germanicus and the mother of Nero, who gave her name to the Colonia Agrippinensis (Cologne). The Praetorium is placed above Lugdunum Batavorum (Leiden) at the distance of 11. D'Anville concludes that it is Leominster near Leiden, where it is said that many Roman antiquities have been found. (Ubert, Gallien, p. 533.)

PRAETORIUM LATovicrucrum, a place in Upper Pannonia, on the site now occupied by Neul- enstein, on the river Gurk. (Her. Ant. p. 259, Tab. Peuting.; called simply Praetorium.)[L.S.]

PRASIAEA (Prasia; Eth. Prasirro;), a town of Pthiotides in Thessaly, a little S. of Pharsalus. For its position see ACHTHICUM. (Xen. Hell. iv. 3, § 9, Ages. 2, § 5; Steph. B. s. v.)

PRASIACA (Prasiach; Pol. vii. 1, § 53), a very extensive and rich district in the centre of Illyricum, along the banks of the Ganges and the Saua, whose chief town was the celebrated Balkis- turia. The name of its inhabitants, which is written with slight differences in different authors, is most correctly given as Prasii by Strabo (xv. p. 702, 703), and by Pliny (vi. 19, s. 22), who states that their king supported daily no less than 150,000 foot, 30,000 horse, and 9,000 elephants. Dioscorides calls them Prasii (xvii. 93), as does also Plutarch. (Alex. 62.) In Curitius again they occur under the term of Pharsias (ix. 2, § 3). It was to the king of the Prasii, Sandorocatus (Chandragupta), that the famous mission of Megasthenes by Seleucus I. took place. (Plin. l. c.; Curti. ix. 2; Jahn, Sygr. 55; Plut. Alex. 62; Justin, xv. 4.) All authors concur in stating that this was one of the largest of the Indian empires, and extended through the richest part of India, from the Ganges to the Panjib. There can be no doubt that Prasii is a Graecised form for
the Sanscrit Prachinas (meaning the dwellers in the east). (Bohlen, Alte Indien, i. p. 33; Ritter, Erdkunde, vol. v. p. 460.)
